WASHINGTON
GOVERNMENT PRINTING OFFICE
1922

A 42
1922

LETTER OF TRANSMITTAL.

UNITED STATES VETERANS' BUREAU,
Washington, D. C., December 4, 1922.

To the President of the Senate and the Speaker of the House of Representatives of the Sixty-seventh Congress:

Pursuant to the provisions of section 14 of the act of August 9, 1921 (Public 47, 67th Cong.), I have the honor to submit the following report of activities of the United States Veterans' Bureau for the fiscal year ending June 30, 1922.

This is the first report covering all World War veteran relief activities of the United States Government in a single volume, and it has therefore been made a historical record of the statistics, appropriations, disbursements, and the principal events leading to consolidation of all Government agencies that have administered the laws for relief of veterans of the World War.

Respectfully,

C. R. FORBES,
Director, U. S. Veterans' Bureau.

LIST OF CHARTS.

Page.

CHART No. 1.—United States Veterans' Bureau beneficiaries. Actual number of patients remaining in all hospitals, by weeks, from October 9, 1919, to June 30, 1922 31

CHART No. 2.—Patients in all hospitals (Government and contract) and available unoccupied Government beds as of June 30, 1922 35

CHART No. 3.—Total number of contract hospitals versus number of contract hospitals used from July 1, 1921, to June 30, 1922 39

CHART No. 4.—Opening, closing, and reopening dates of United States Veterans' hospitals 54

CHARTS Nos. 5 TO 13, INCLUSIVE.—Per cent of patients hospitalized longer than any specified number of days for each type of disease, type of hospital, and class of disposition, patients discharged from United States Veterans' and United States Marine hospitals during the fiscal year 1922 212

CHART No. 14.—Vocational training, actual number of men "entered training," by months, from November, 1918, to June, 1922 282

CHART No. 15.—Comparison of the number of beneficiaries who "entered training" and the number now "in training" monthly from January, 1919, to June 30, 1922 291

CHART No. 16.—Compensation, death and disability claims, filed monthly from October, 1917, to June 30, 1922 408

CHART No. 17.—District offices. Total number of compensation claims received and acted upon as of June 30, 1922 414

CHART No. 18.—Disability compensation awards. Comparison of dates awards were made and beginning dates of awards active on June 30, 1922 416

CHART No. 19.—Analysis of active compensation disability awards, monthly from March, 1918, to June 30, 1922 419

CHART No. 20.—Duration and degree of active disability awards in all districts, foreign countries, and central office 431

CHART No. 21.—Total active disability awards, by class of disability and age of disabled ex-service persons 448

CHART No. 22.—Insurance claims received monthly from October, 1917, to June 30, 1922 458

CHART No. 23.—Insurance claims filed, awarded, pending, and disallowed, from October, 1917, to June 30, 1922 467

CHART No. 24.—Death and disability awards, monthly from January, 1918, to June, 1922 469

CHART No. 25.—Number of active death and disability insurance awards, monthly from December, 1917, to June 30, 1922 471

CHART No. 26.—Analysis of amount of United States Government life insurance. Amount of term, converted, and total insurance in force as of end of month from April, 1921, through June, 1922 474

CHART No. 27.—Amount of yearly renewable term insurance premiums received versus amount paid out in benefits, cumulative monthly from June, 1918, to date 476

CHART No. 28.—Map of districts and district and subdistrict offices 499

LIST OF TABLES.

Page.

TABLE No. 1.—Total cases rated, central and district offices, September, 1919, to June 30, 1922 56

TABLE No. 2.—Total medical and dental examinations made by all examining physicians, including fee basis designated examiners, classified by district and month, for fiscal year 1922 57

TABLE No. 3.—Total medical and dental out-patient treatments furnished by all physicians, including fee basis designated examiners, classified by district and month, for fiscal year 1922 58

TABLE No. 4.—Classification of examinations given beneficiaries and claimants of the United States Veterans' Bureau, by kind of examination and by district, for the period April 1 to June 30, 1922 .. 59

TABLE No. 5.—Total physical examinations given beneficiaries and claimants of the United States Veterans' Bureau, by months, from January 1, 1922, to June 30, 1922 (medical and dental) 60

Total out-patient treatments given beneficiaries of the United States Veterans' Bureau, by months, from January 1, 1922, to June 30, 1922 (medical and dental) 60

TABLE No. 6.—Physical examinations of United States Veterans' Bureau beneficiaries and claimants, by source of examination, by districts and by months, from January 1, 1922, to June 30, 1922 (medical and dental) (absolute numbers) 61

TABLE No. 7.—Percentages of physical examinations, by source for each district and for each month, from January 1, to June 30, 1922 (medical and dental) 63

TABLE No. 8.—Dental vouchers forwarded to central office for payment, examinations only. January 1, 1922, to June 30, 1922 65

Dental vouchers forwarded to central office for payment (examinations and treatments) 65

TABLE No. 9.—Treatments given beneficiaries of the United States Veterans' Bureau, by kind of treatment and by district, for the period April 1 to June 30, 1922 66

TABLE No. 10.—Treatments given United States Veterans' Bureau beneficiaries, by source of treatment, by districts and by months, from January 1 to June 30, 1922 (medical and dental) (absolute numbers) 67

TABLE No. 11.—Percentage of treatments, by source for each district and for each month, from January 1 to June 30, 1922 (medical and dental) 69

TABLE No. 12.—Total number of medical and dental treatments given beneficiaries of the United States Veterans' Bureau, from January 1 to June 30, 1922, authorized by section 13 of the act of August 9, 1921 71

TABLE No. 13.—United States Veterans' Bureau dispensaries: Class "A," Class "B," Class "C" 72

TABLE No. 14.—Hospital in-patient days of treatment furnished United States Veterans' Bureau beneficiaries by districts and by branches of service administering hospitals including civil institutions, for the fiscal year 1922 74

TABLE No. 15.—Total artificial arms and legs supplied by the United States Veterans' Bureau to beneficiaries as of June 30, 1922 74

TABLE No. 16.—Military population versus Government beds by districts as of June 30, 1922 75

TABLE No. 17.—Total admissions to all hospitals by months from September, 1919, to June 30, 1922 75

TABLE No. 18.—Patients remaining in hospitals at the end of each month 76

TABLE No. 19.—Patients in hospitals monthly from July, 1921, to June 30, 1922. Comparing patients in Government hospitals with patients in contract hospitals 77

Page.

TABLE No. 20.—Total admissions to hospitals by months for fiscal year 1922, classified by districts 77

TABLE No. 21.—Total admissions to hospitals by months for fiscal year 1922 and classified by branch of service administering the hospitals 78

TABLE No. 22.—Status of patients in all hospitals showing by class of disease, percentage treated in Government facilities, fiscal year 1922. 78

TABLE No. 23.—Contract hospitals available to beneficiaries of the United States Veterans' Bureau and in use during the fiscal year 1922 79

TABLE No. 24.—Hospital construction under second Langley Act. Status as of July 1, 1922 79

TABLE No. 25.—Treasury Department; consultants on hospitalization, status of hospital construction as of July 1, 1922. Funds provided for from Public Act 384 (66th Cong.) (first Langley Act) 80

TABLE No. 26.—Hospital facilities, United States Veterans' hospitals, showing existing facilities and development of facilities under present appropriations only 81

TABLE No. 27.—Report of relief furnished by the United States Veterans' hospitals during the fiscal year ending June 30, 1922 84

TABLE No. 28.—Hospital facilities by branches of service for United States Veterans' Bureau patients as of June 30, 1922 86

TABLE No. 29.—Hospital facilities by districts for United States Veterans' Bureau patients as of June 30, 1922 90

TABLE No. 30.—Tabulation of cases and relief days by class of disease and class of disposition, giving average period of hospitalization, discharges of Veterans' Bureau patients from United States Veterans' and United States Marine hospitals, fiscal year 1922 97

TABLE No. 31.—Veterans' Bureau patients remaining in United States Veterans' and United States Marine hospitals as of June 30, 1922, classification by hospital, sex, and color 99

TABLE No. 32.—Veterans' Bureau patients remaining in United States Veterans' and United States Marine hospitals as of about July 1, 1922, by hospital and class of disease 101

TABLE No. 33.—Yearly turnover of patients in United States Veterans' hospitals, fiscal years 1920, 1921, 1922 107

TABLE No. 34.—Replacements, average number of patients in hospital, and turnover of patients United States Veterans' hospitals, fiscal year 1922 108

TABLE No. 35.—Anæsthetics by hospitals—United States Veterans' Bureau patients treated in United States Marine and United States Veterans' hospitals during fiscal year 1922 109

TABLE No. 36.—Report of relief furnished United States Veterans' Bureau beneficiaries by the United States Marine hospitals, fiscal year ending June 30, 1922 110

TABLE No. 37.—Tabulation of cases and relief days by hospital and class of disposition, United States Veterans' Bureau patients discharged from United States Veterans' and United States Marine hospitals, fiscal year 1922 111

TABLE No. 38.—Discharges by months according to class of disease, United States Veterans' and United States Marine hospitals, fiscal year 1922. All classes of disposition 116

TABLE No. 39.—Discharges by months according to class of disease, United States Veterans' and United States Marine hospitals, fiscal year 1922—Transfers 116

TABLE No. 40.—Discharges by months according to class of disease, United States Veterans' and United States Marine hospitals, fiscal year 1922—Discharges against advice 117

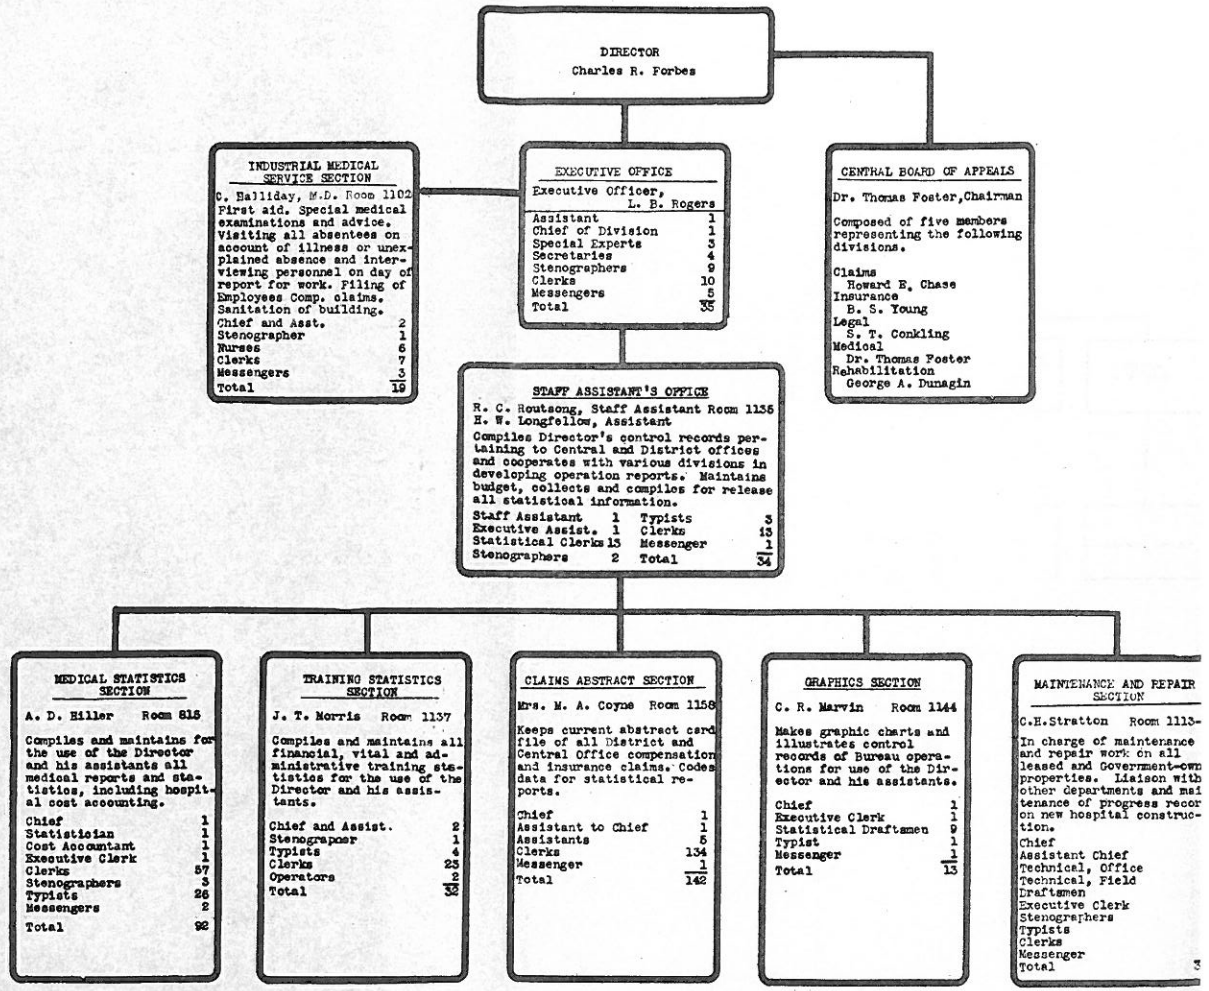
U. S. VETERANS' BUREAU

18174—22. (Face p. 1.) No. 1

DIRECTOR'S OFFICE



18174—22. (Face p. 1.) No. 2

ANNUAL REPORT FOR THE FISCAL YEAR ENDING JUNE 30, 1922.

INTRODUCTION.

The United States Veterans' Bureau is the Government agency charged by Congress with full responsibility for the administration of laws for the relief of disabled veterans of the World War.

The director of this independent bureau has full authority, subject to the general direction of the President of the United States, to administer and enforce the laws relating to compensation, insurance, rehabilitation, and medical care and treatment of veterans who are entitled to these services.

Compensation is awarded to all veterans disabled by injury or disease, to a degree of 10 per cent or more, and to dependents of veterans who died as a result of service in the World War. Over 850,000 claims for compensation have been filed. Compensation claims were received during the past fiscal year at the rate of approximately 16,000 per month. There must be compiled for each case the proper evidence to show service connection of the disability, relationship of dependents, and degree of disability. On June 30, 1922, all but 45,000 of these claims had been adjudicated. In addition to the original adjudication each case may require numerous additional adjudications due to the reopening of disallowed claims and to the frequent reexamination of beneficiaries who have been awarded disability compensation.

Insurance benefits are awarded to veterans who are totally and permanently disabled, and to beneficiaries of veterans who have died, if application was made for insurance during the period of service and insurance premiums were maintained to the date of total permanent disability or death. Complete insurance records are maintained for more than 575,000 insurance policies averaging over 377,000 premium payments per month during the past year. More than 179,000 insurance claims had been filed, practically all of which had been adjudicated, and current payments were being maintained upon approximately 142,000 active insurance claims.

Rehabilitation is available to every veteran who is in need of vocational rehabilitation as a result of injury or disease due to service during the World War, and courses of training are available to veterans injured under conditions entitling them to compensation. Persons entitled to vocational rehabilitation are given any course of training which they may choose and for which they are qualified. More than 630,000 persons have applied for vocational training and all but 56,000 of these claims have been adjudicated. Over 318,000 veterans have been rated eligible for vocational education, and of this number approximately 156,000 have entered

training. During the past fiscal year the average number in training was more than 101,000. Approximately 2,700 schools and colleges and 30,000 business establishments cooperated with the United States Veterans' Bureau in giving beneficiaries vocational training. Forty-seven Government vocational schools were also providing vocational training for beneficiaries. Four hundred and forty-five trades and professions were being taught. During the entire period of training the progress of beneficiaries is closely supervised, and whenever necessary they are given vocational advice and courses are continuously adapted to the needs of the individual. When beneficiaries are rehabilitated remunerative employment is secured for them by representatives of the bureau.

Medical care and treatment is available to veterans having disabilities, rated 1 per cent or more, that are connected with service. During the past fiscal year approximately 1,800,000 outpatient treatments were given to beneficiaries, and there were over 134,000 admissions to hospitals. Medical examinations are given to claimants whenever they make application for compensation or rehabilitation and at frequent intervals to beneficiaries drawing compensation. During the fiscal year over 1,400,000 medical examinations were given. Medical ratings showing the degree of disability in each case are necessary before the proper action can be taken in awarding compensation and vocational training. Medical ratings are also necessary to determine eligibility for medical care and treatment. During the past year approximately 865,000 medical ratings were given. There were at the close of the fiscal year 95 Government hospitals in operation. During the fiscal year the number of beneficiaries in Government hospitals averaged more than 19,000. It was necessary also for the Veterans' Bureau to utilize 761 civil hospitals, in which the number of beneficiaries hospitalized averaged approximately 9,000. In all hospitals the total number of hospital patient days was over 10,100,000 for the fiscal year. During the entire period of hospitalization conditions are closely supervised in all hospitals by the bureau's hospital inspection staff, and after dehospitalization beneficiaries are given whatever medical after care and treatment may be necessary.

The numerous activities of the United States Veterans' Bureau require a personnel of 29,746 technical and clerical employees; the administrative offices of the bureau require the rental of 1,176,000 square feet of floor space; and during the past fiscal year the United States Veterans' Bureau disbursed approximately $480,000,000 for all purposes.

ESTABLISHMENT OF BUREAU.

The United States Veterans' Bureau was established on August 9, 1921, by Public Act No. 47, Sixty-seventh Congress (H. R. 6611, Sweet bill). Previous to that date compensation and insurance had been administered by the former Bureau of War Risk Insurance in the Treasury Department; medical and hospital services had been administered by the United States Public Health Service, also in the Treasury Department but an entirely distinct organization having other functions than the care of disabled veterans; rehabilitation had been administered by the Federal Board for Vocational

Education, an independent bureau which had been charged with fostering vocational education in public schools throughout the United States and also the rehabilitation of persons disabled in industry. The medical care and rehabilitation of World War veterans were the predominant activities of the United States Public Health Service and the Federal Board for Vocational Education during the period following the armistice, and resulted in greatly expanding each of these organizations until the divisions handling veteran relief work overshadowed the parent organizations. The new work demanded freedom of action to meet emergencies. Organizations built up for other purposes were cumbersome in situations that could not be anticipated, and frequent delays were occasioned by conflicts with established methods of procedure which were inadequate but which could not be ignored entirely. The Director of the former Bureau of War Risk Insurance was responsible to the Secretary of the Treasury, who delegated his work to an assistant secretary in charge of the bureau. Such an organization made administration cumbersome, and many regulations necessary for the proper functioning of the bureau were lost in the process of being approved by numerous ranking officials.

The original act (Public, No. 90) of October 6, 1917, creating in the Bureau of War Risk Insurance a division of military and naval insurance, placed in that bureau all of the services that are now administered by the United States Veterans' Bureau, namely, compensation, medical and hospital services, rehabilitation, and insurance. Article 3, section 300, of that act provided:

> For death or disability resulting from personal injury suffered or disease contracted in the line of duty * * * compensation as hereafter provided.

Section 302, subsection 3, provided:

> In addition to the compensation above provided, the injured person shall be furnished by the United States such reasonable governmental medical service and hospital services, and such supplies, including artificial limbs, trusses, and similar appliances, as the director may determine to be useful and reasonably necessary.

Section 304 provided:

> In cases of dismemberment or the injuries to sight or hearing and other injuries commonly causing permanent disability, the injured person shall follow such course or courses of rehabilitation, reeducation, and vocational training as the United States may provide.

Article 4 of this act provided:

> In order to give to every commissioned officer and enlisted man greater protection for themselves and their dependents than is provided in article 3, the United States, upon application, shall grant insurance against the death or total permanent disability of any such person in any multiple of $500, and not less than $1,000, or more than $10,000, upon payment of the premiums as hereinafter provided.

Article 2 of the above act provided for paying to dependents of men in the armed forces of the United States certain allotments from the soldier's pay and certain allowances to be appropriated by Congress.

The administration of the act providing for allotments and allowances required a large force of employees and the development of an organization to adjudicate claims and maintain an unbroken series of payments, so that dependents of men who were in the service might, at least, have the necessities of life. The work of making current pay-

ments on allotments and allowances terminated July 31, 1921. Since that date only payments necessary for the incompleted cases have been carried forward.

During the time when allotment and allowance payments were at their height the Bureau of War Risk Insurance was in the midst of perplexing problems in connection with establishing adequate records of insurance in force and premiums paid, awarding insurance claims for casualties during the war, and preparations for carrying forward insurance in its permanent form, known as United States Government converted life insurance. At the same time equally serious problems were encountered in adjudicating claims for compensation, thousands of which had been submitted to the bureau for action. With all of these activities in a single bureau demanding the attention of officials and requiring decisions in so many new procedures it was the practical thing to turn to other existing organizations to develop two other phases of the veterans' relief program, those of rehabilitation and of medical and hospital services.

On June 27, 1918, Congress passed the vocational rehabilitation act (Public, No. 178, 65th Cong.), which provided under section 2:

> Every person who is disabled under circumstances entitling him to compensation * * * and who after his discharge in the opinion of the board is unable to carry on a gainful occupation, to resume his former occupation or to enter upon some other occupation; or having resumed or entered upon such occupation is unable to continue the same successfully, shall be furnished by the said board, where vocational rehabilitation is feasible, such course of vocational rehabilitation as the board shall prescribe and provide.

This section was later amended by the act of July 11, 1919, to read:

> Every person * * * having a disability incurred, increased or aggravated while a member of such forces, or later developing a disability contracted while serving with such forces, and who in the opinion of the Federal Board for Vocational Education is in need of vocational rehabilitation to overcome the handicap of such disability, shall be furnished by the said board, where vocational rehabilitation is feasible, such course of vocational rehabilitation as the board shall prescribe and provide.

It is interesting to note that the law as originally passed required that only cases of dismemberment and other injuries commonly causing permanent disability were to be eligible for rehabilitation. When the applications were in, it was found that the number of men under these classes of injuries was relatively small as compared with the number of men who had vocational handicaps due to mental and physical diseases, and as the board progressed in the solution of its problems the act was modified to the extent that disabled persons who in the opinion of the board were in need of vocational rehabilitation could be furnished training to overcome their vocational handicaps.

During the period that rehabilitation was under the administration of the Federal Board for Vocational Education methods of instruction were developed that have been followed, in the main, by the United States Veterans' Bureau. In administering the rehabilitation act the Federal board developed what is known as the decentralized plan of supervision, which, together with adjudicating claims for rehabilitation in 14 regional offices, proved to be very satisfactory.

Development of the medical care and treatment phase of the veteran relief program was intrusted to the Public Health Service, which bureau by the act of March 3, 1919 (Public, No. 326, 65th Cong.), received an appropriation of $9,050,000 to be expended under the direction of the Secretary of the Treasury to provide hospital facilities for patients of the Bureau of War Risk Insurance, and in section 11 of the same act there was appropriated $785,333 for medical and hospital services for the fiscal year ending June 30, 1919. In developing the medical relief program the Public Health Service utilized every available Government hospital, and in addition entered into contracts with civil hospitals for the care of beneficiaries of the War Risk Bureau. With hospital and dispensary facilities scattered over the United States it was inevitable that a supervisory force would be necessary, and there resulted 14 district offices, together with numerous relief stations and medical centers that were of service in supervising the kind of treatment accorded beneficiaries of the bureau, and were also of service in supplying information necessary to adjudicate compensation claims.

As these three organizations developed procedures adequate to meet the numerous difficulties encountered in every phase of the veterans' relief program, it was natural that each should establish administrative policies and procedures that conflicted in a measure with the other two organizations. While each organization was efficient in its operation and had been indispensable in the early stages, it was inevitable that the activities performed by each organization would be combined into a single bureau in order that administrative policies might be unified, that the necessity of establishing claims based upon the same facts and in practically the same manner might not be duplicated, and that the necessity of claimants and beneficiaries making contact with several organizations having offices in widely separated parts of the same city might be eliminated.

The Bureau of War Risk Insurance was not at liberty to expand its field organization beyond eight small offices, which were maintained for the purpose of making contact with beneficiaries of the bureau. A provision was included in the act appropriating salaries and expenses for the fiscal year ending June 30, 1921, for the Bureau of War Risk Insurance which stipulated that not more than $500,000 could be spent for branch offices outside of the District of Columbia. These eight offices were single rooms with perhaps three or four employees, and were not effective in maintaining the liaison between beneficiaries and the bureau that should have been in existence early in the history of the bureau. In attempting to overcome this handicap of lack of field personnel, the Bureau of War Risk Insurance utilized the supervisory organization of the Public Health Service known as district offices. All requests for hospitalization and treatment, and all physical examinations ordered were routed through this organization. Due to delays in the adjudication of claims, that were attributed to administrative difficulties causing considerable inconvenience to ex-service men, the Secretary of the Treasury issued an order effective April 19, 1921, transferring the district office functions of the Public Health Service to the Bureau of War Risk Insurance. This was made possible by the fact that salaries and expenses for Public Health Service district organizations were paid from an appropriation "Medical and Hospital Services, 1921," which Congress had given the Bureau of War Risk Insurance, and from which allotments were made to the United States Public Health Service. This organization operated as the field force of the Bureau of War Risk

Insurance until the passage of the act of August 9 forming the United States Veterans' Bureau.

On August 1, 1921, the supervision of medical treatment in all contract hospitals was transferred from the United States Public Health Service to the Bureau of War Risk Insurance.

CONSOLIDATION.

Approximately three months prior to the forming of the United States Veterans' Bureau a closer working agreement had been reached between the field forces of the Federal Board for Vocational Education and of the Bureau of War Risk Insurance. In one or two instances the district offices which were located in the same cities were moved to the same buildings, and the files of the two bureaus were consolidated. Many difficulties arose in carrying out the spirit of this closer working agreement, and the passage of the act of August 9, which legalized the order of April 19 and transferred the rehabilitation functions of the Federal Board for Vocational Education and all activities of the Bureau of War Risk Insurance to the new bureau, came as a relief to all concerned. Beneficiaries were assured that there could be no further avoiding of responsibility because of dealing with separate organizations, and officials of the bureau concerned were relieved to conduct the consolidation of all veterans' relief activities upon the basis of legal authority rather than upon working agreements and decisions of the Comptroller General as they previously had been trying to do.

The establishment of the United States Veterans' Bureau is one of the epochs of veteran relief. Col. Charles R. Forbes was appointed as director of the new bureau, and he immediately began taking steps to place in effect the provisions of the new act for the establishment of a single organization charged with the responsibility of administering all phases of the service rendered to the disabled veterans. His purpose immediately to establish an organization that could carry out the program as outlined was clearly set forth in the following statement issued by him on assuming his duties as director:

DIRECTOR'S STATEMENT ON ASSUMING DUTIES IN THE VETERANS' BUREAU.

"The Government of the United States has generously undertaken the rehabilitation and care of its heroes injured in the performance of the highest public service that anyone can render his Government.

"The Congress of the United States has just enacted a law coordinating and broadening the powers of agencies dealing with ex-service men. It is fitting at such a time that we express our understanding of the situation in order that those who are concerned in this event may be reassured and that we may set our standards before becoming engrossed in the details of operations.

"In his speech accepting the nomination for the Presidency Mr. Warren G. Harding, speaking of the Nation's defenders, said, 'they command our pride, they have our gratitude, which must have genuine expression. It is not only a duty, it is a privilege to see that the sacrifices made shall be requited, and that those still suffering from casualties and disabilities shall be abundantly aided and restored to the highest capabilities of citizenship and its enjoyment.'

"In response to the interest of President Harding the Congress of the United States, by speedily establishing the Veterans' Bureau, has clearly and unmistakably expressed the wish of the country that there shall be no further delay in caring for veterans of the World War. Congress has embodied in this legislation two main features which it is our pleasant duty to place in effective operation. First, we must speedily consolidate all activities of the Veterans' Bureau, and secondly, we must bring all activities of the Veterans' Bureau closer to the men they serve.

"We will undertake these duties of reorganization so energetically and systematically that claimants and beneficiaries of the Veterans' Bureau will speedly obtain the care and attention that is rightfully theirs but has not been obtained because of administrative difficulties.

"As Director of the Veterans' Bureau, an independent establishment directly responsible to the President, our decisions once made become effective immediately. I shall inaugurate a system of responsible subordinates to whom I shall look for direct action and with whom you may deal in the greatest confidence, knowing that their actions are authoritative. Having made this promise of direct action and fair dealings with claimants and beneficiaries of the Veterans' Bureau, may I not ask in return that the beneficiaries of this bureau assist me in avoiding any irregularities that may occur from time to time? There are a few who have accepted unmerited awards. It is my hope that by coming in closer contact with the great body of disabled veterans we can eliminate that small percentage who call forth criticism upon a meritorius work.

"By meeting our claimants and beneficiaries face to face we shall be able to make awards that will at once be in strict conformity with the terms of the law and yet influenced by the understanding that can come only by personal contact.

"There are those who think that the Government is too liberal with its disabled heroes. When I hear such a remark there comes to my mind the picture of a man taken suddenly from his surroundings and business associations; going into crowded camps, marching and drilling long hours each day, eating army food, ordered here and there, crowded into transports, hastily trained for combat, a few hours of intensive fighting, wounded, long hours in a first-aid station, months in hospitals staring at four plain walls, undergoing operations, and finally spending long days of homesickness in convalescent centers.

"When we consider the changed lives and restricted activities of those wounded in battle we can not consider any benefits that the Veterans' Bureau can give as being too liberal. It is my intention that the employees of the Veterans' Bureau shall take a sympathetic attitude toward each claimant and that the burden of proof shall not be entirely upon the claimant.

"In our zeal to bring the benefits of the Veterans' Bureau immediately to the disabled ex-service men we will be mindful of the fact that the Nation has before it at this time the problem of judiciously expending public funds. We will take no hasty action in decentralizing the activities of the Veterans' Bureau. Every move will be in

accordance with carefully made plans. After decentralization has been effected in a few of the districts, it will be placed in effect simultaneously in the remaining districts, unless problems arise that would make such a step impossible.

"In carrying out our program of decentralization the primary object we will keep in mind is the perfecting of an organization with personnel and equipment adequate to care for the disabled veterans. Every precaution will be taken to avoid unnecessary expenditures. Expensive offices and elaborate equipment are not essential, but a personnel trained for service and fully aware of our responsibilities to ex-service persons and to the bureau, we consider to be of first importance.

"To those cooperating agencies interested in our program we extend a word of thanks for past services and hope that their burdens will be lightened by our increased activities. Our wish is that you will continue to point out to us our shortcomings and convey to our beneficiaries that human interest we feel toward them. It is our aim to speedily establish, by an efficient performance of our duties, that confidence which this bureau should command for so great a work."

ORGANIZATION OF DISTRICT OFFICES.

In conformity with the law, the director established a central office in Washington, D. C., and 14 district offices in the following cities:

District Office No. 1—Boston, Mass.
District Office No. 2—New York City, N. Y.
District Office No. 3—Philadelphia, Pa.
District Office No. 4—Washington, D. C.
District Office No. 5—Atlanta, Ga.
District Office No. 6—New Orleans, La.
District Office No. 7—Cincinnati, Ohio.
District Office No. 8—Chicago, Ill.
District Office No. 9—St. Louis, Mo.
District Office No. 10—Minneapolis, Minn.
District Office No. 11—Denver, Colo.
District Office No. 12—San Francisco, Calif.
District Office No. 13—Seattle, Wash.
District Office No. 14—Dallas, Tex.

The districts served by the district offices were as follows:

District No. 1.—The States of Maine, New Hampshire, Vermont, Massachusetts, and Rhode Island.
District No. 2.—The States of New York, Connecticut, and New Jersey.
District No. 3.—The States of Pennsylvania and Delaware.
District No. 4.—The States of Maryland, Virginia, West Virginia, and the District of Columbia.
District No. 5.—The States of North Carolina, South Carolina, Tennessee, Georgia, and Florida.
District No. 6.—The States of Alabama, Mississippi, and Louisiana.
District No. 7.—The States of Indiana, Ohio, and Kentucky.
District No. 8.—The States of Michigan, Wisconsin, and Illinois.
District No. 9.—The States of Nebraska, Iowa, Kansas, and Missouri.
District No. 10.—The States of Minnesota, North Dakota, South Dakota, and Montana.
District No. 11.—The States of Wyoming, Utah, Colorado, and New Mexico.
District No. 12.—The States of California, Arizona, and Nevada.
District No. 13.—The States of Washington, Idaho, and Oregon, and the Territory of Alaska.
District No. 14.—The States of Texas, Oklahoma, and Arkansas.

The following Territories and insular possessions are under the direct supervision of the Veterans' Bureau in Washington, D. C.: The Philippine Islands, Virgin Islands, and the islands of Porto Rico, Guam, Hawaii, Samoa, and the Panama Canal Zone.

As rapidly as the proper locations for subdistrict offices were determined and the proper facilities could be made available, 126 subdistrict offices were established throughout the United States.

By the terms of the act authorizing the bureau, the district offices were given all of the functions previously performed by central office—

for examining, rating, and awarding compensation to claimants; giving surgical, dental, medical, and hospital care, convalescent care, and the necessary and reasonable after care; making insurance awards; granting vocational training, and all other matters delegated to them by the director.

In delegating powers to district offices, it was recognized at once that there would be no difficulty in connection with awarding vocational training and in giving medical and hospital care to beneficiaries because for each kind of service the man was required to be present in person, but in connection with awarding compensation, it was possible that a man might make application from more than one district and receive payments of compensation from each district in which application had been made. To avoid this, a copy of each application is forwarded immediately to central office in Washington where the application is checked against an index containing the names of all persons who have ever made application for compensation. If the application is a duplicate of one filed previously, the district forwarding the duplicate is notified and any further action on a separate claim stopped. If the claim is a new one, a compensation number is assigned and the district office notified that this number should be used in all correspondence relative to that particular claim. By this method duplicate payments have been avoided, and the awarding of claims in district offices has not been delayed by the procedure since it is performed in central office during the time in which service medical records are being searched in the War Department or Navy Department to determine service connection of the disability.

The awarding of compensation claims for death and permanent total disability was not delegated to district offices. These awards involve awards of insurance for death, and permanent total disability, and because of the difficulty in determining permanent total disability, and also because all insurance records are in Washington, awards for death and permanent disability are made in central office, the cases being compiled in the district offices and immediately forwarded to Washington, where they are adjudicated by a board of review.

After a complete investigation of the situation it was decided that awarding of insurance claims would not be delegated to district offices. Complete insurance records, showing that insurance was in force through the payment of all insurance premiums, whether all or part of the insurance was converted, and of converted insurance whether loans were outstanding, must be in the hands of an examiner before any insurance claim can be decided. Insurance awards for converted insurance are paid in lump-sum amounts when the insured elects that form of payment, and errors made in such payments would be difficult if not impossible to correct. In addition to these difficulties it was shown that insurance awards were practically

current, and that very little, if any, time could be gained by decentralizing insurance claims. The only functions that district offices and suboffices have performed in connection with these claims have been the compilation of evidences of death and disability, and in this phase of the work they have been of great assistance.

Suboffices may not award compensation insurance or grant vocational training. These powers are reserved for the district offices and the central office in Washington. Suboffices have been established for the purpose of making contact with beneficiaries and claimants. Employees of the bureau in suboffices supervise vocational training, administer out-patient medical care and treatment, give physical examinations, receive compensation, insurance and rehabilitation claims, and compile data necessary to establish these claims. Suboffices are the outposts of the United States Veterans' Bureau, where all functions are performed that are necessary to carry the work of the bureau closer to the beneficiaries served.

The district and subdistrict offices of the United States Veterans' Bureau were formed by the consolidation of the offices established by the Federal Board for Vocational Education and those established by the United States Public Health Service, to which were added from time to time the personnel necessary to adjudicate compensation and insurance claims, medical referees to give medical ratings upon compensation and rehabilitation cases, and the personnel required by the decentralization of financial payments.

In consolidating the field offices there were a number of administrative problems of first magnitude to be decided. The problem of how to handle the case file was probably the predominant administrative problem. Handling as the bureau did thousands of claims in each office, any small defect in filing procedure became magnified to such an extent that it involved a large number of personnel and thousands of dollars for equipment and supplies. Practically all the activities of the bureau hinged around the case files, since the case file was necessary before any decision could be reached in regard to benefits to be given beneficiaries, and most of the serious difficulties occurring in the bureau have been traceable to faulty handling of case files. Between the two agencies previously conducting the field offices all possibilities of procedure were followed. The United States Public Health district office files were arranged in alphabetical order, and the district office files of the Federal Board for Vocational Education were arranged in numerical order according to a number assigned in the district office. This necessitated two rehabilitation numbers, one for the district office and one for the central office in Washington. In addition to the two vocational rehabilitation numbers, each claimant might have the following numbers assigned to a case: Compensation claim number, term insurance claim number, converted insurance claim number, term insurance number, and Government life insurance number. All these numbers were very confusing to the claimant, and in dealing with the separate agencies he was ever at a loss to know which number to present. Under the United States Veterans' Bureau the compensation claim number was adopted for reference in all correspondence regarding a claimant's case. By this procedure much confusion was eliminated and considerable time saved in corresponding and in locating cases. After studying the many

intricate phases of filing problems, the officials of the United States Veterans' Bureau decided that the district office case files should be arranged numerically by claims numbers.

Problems in connection with the case files and other procedures were standardized in the first few months of the United States Veterans' Bureau's existence, so that all the districts throughout the United States would have uniform methods; that cases might be located with the greatest expediency possible; and so that any interchange of cases between districts would not cause confusion in handling them. The actual consolidation of files in a way that would not interfere with routine procedure was a difficult undertaking that required months of strenuous work and a large number of extra employees.

The physical consolidation of offices was completed within a few months after the formation of the United States Veterans' Bureau, but there remained a number of details that were not explicitly followed by all offices, and those failures to standardize the procedure were largely eliminated during the later months of the year by an investigating committee chosen by the director to visit each district office and make such changes in the procedure as were necessary. By the close of the fiscal year all officials in the field understood that it was for the good of the service that procedure be uniform throughout the United States, thus eliminating the possibility of dealing with claimants in one district by methods different from those in operation in other districts.

Concurrent with the consolidation of district offices, the United States Veterans' Bureau was also busy with the enormous problem of decentralizing the awarding of compensation. Anticipating that Congress would pass legislation decentralizing the awarding of compensation, officials of the Bureau of War Risk Insurance had perfected procedure to be followed, and on August 10, 1921, the Director of the United States Veterans' Bureau issued General Order No. 5, which established a general administrative procedure for receiving and adjudicating claims in district offices. Medical examiners, claims examiners, and the necessary clerks were sent immediately to the district offices and began functioning at once by passing upon all claims submitted to the bureau after August 9. All claims forwarded to central office after that date were returned to the districts from which submitted with the request that claimants correspond with those offices and not with central office. For a time central office continued to adjudicate compensation claims submitted to the former Bureau of War Risk Insurance prior to August 9, when the United States Veterans' Bureau was formed. Compensation claims were examined and awarded according to the same rules and regulations in district offices as had previously been followed in central office, so that most of the difficulties that arose were in connection with supplying district offices with a sufficient number of trained personnel and in avoiding every unnecessary step in the handling of claims.

DECENTRALIZATION.

As soon as district offices had sufficient experience in the handling of new claims the bureau began decentralizing all active compensation claims that had been filed in central office prior to August 9, 1921.

Active cases were taken from the files of central office and from the divisions where the cases were being adjudicated, checked to make sure that central office retained accurate records, and were then forwarded to the districts in which the claimants resided.

Decentralization of active and pending claims was begun the latter part of November by the shipment of cases to district 13 and was finally completed on April 19, 1922. Disallowed cases remaining on file in central office were forwarded to district offices as the cases became active through the submission of additional evidence or when requested by district managers or claimants.

District offices have very successfully handled the adjudication of compensation claims, due to the fact that these offices are near the subdistrict offices, which are the main sources of contact with beneficiaries and claimants. If additional data are required to support a claim, the district office may require that the subdistrict office get in touch with the claimant either through requesting that the claimant come into the subdistrict office for personal contact with the bureau's representatives or by sending an employee of the bureau to the claimant when it is manifestly impossible for the claimant to travel. Numerous contacts with beneficiaries and claimants have resulted. Injecting the personal touch into the business conducted by the United States Veterans' Bureau has eliminated many of the faults due to the correspondence method of adjudicating claims. Previously when a claimant was notified by mail that his compensation claim had been disallowed due to "insufficient evidence," "failure to prosecute," and numerous other stereotyped phrases he was at a loss to know what further steps were necessary to establish his rights to benefits under the compensation act, and consequently the bureau while centralized in Washington received much unnecessary correspondence from the fact that awards were not made as speedily as they should have been to deserving disabled veterans. Under decentralization an employee of the bureau meets a claimant face to face and explains the situation to him, many times performing the clerical work in connection with the filing of the claim, and claimants are very much relieved, which results in their bearing a more friendly attitude toward the bureau.

Decentralization of financial payments to beneficiaries of the bureau and to the various private enterprises that supply the United States Veterans' Bureau with services and facilities was one of the beneficial steps made possible by decentralization of other activities. Auditing and disbursing offices were organized in the administration division of each district office. In the first stages of decentralizing, payments were made in district offices for the initial payment of compensation and for administrative expenses when the validity of the accounts could not be questioned. Payments of compensation after the initial payment and all doubtful payments for administrative purposes were made from central office in Washington.

Payments made in district offices resulted in so much satisfaction to beneficiaries and business men that initial payments for rehabilitation maintenance allowances, together with practically all of the payments in connection with services and expenses, were gradually decentralized. Toward the close of the fiscal year plans were formulated for the decentralization of current payments of trainees' allowances, and only the necessity of providing additional facilities in the district offices had delayed this step toward complete decentralization of payments.

With many of the former duties of central office being performed successfully in district offices the functions of central office have become mainly those of supervision and coordination, excluding, of course, the Insurance Division, which still conducts all phases of the insurance problem in central office.

The act of August 9, 1921, provided that "regional offices and suboffices, with all authority to establish such offices, shall terminate on June 30, 1926." Supervision of rehabilitation must be conducted from district and subdistrict offices so long as the rehabilitation problem exists if the supervision is to be thorough and comprehensive. The practical way to handle admissions and discharges of patients is through district offices in close proximity to the hospitals. Outpatient medical care and treatment can be conducted in no other way than through the district and subdistrict offices. Conducting the rehabilitation and medical services is very much simpler if the claims cases are immediately available whenever decisions are to be made, and so long as these activities exist the claims cases should remain in the district offices. All claims will have received an initial adjudication by the time set for centralization under the act of August 9, but this will not mean that all of the activities in connection with these claims will have ceased. The experience of the Federal Board for Vocational Education and of the United States Veterans' Bureau has shown that district office cases should not be forwarded to central office until all supervisory activities in connection with the beneficiaries have terminated. As a result of the first year's activities of the United States Veterans' Bureau it can confidently be predicted that there will be a need for district offices for some time after the date set by the act for terminating district offices, and it is believed that they should not arbitrarily be terminated on any future date unless the supervisory duties in connection with rehabilitation and medical and hospital care shall have terminated before that time.

CLEAN-UP CAMPAIGN.

The experience of all agencies that have dealt with veteran relief work has been that many of the men who are entitled to benefits are very poor correspondents. Hundreds of ex-service men have failed to make application for compensation, vocational training, and medical care through not being familiar with the ordinary methods of communication. Army records indicate that approximately 34 per cent of the men in the armed forces of the United States were illiterate. These men could not become familiar with their rights through reading literature in regard to Government benefits available to ex-service men. Many disabled men were discharged from the Army without being told what steps should be taken to secure allowances from the Government. Thousands of men who did make application were unfamiliar with the fundamental statements and affidavits necessary to support a claim. When the men were discharged from the Army many of them signed statements to the effect that they were in good health in order to reach their homes as soon as possible, and later when disabilities developed that were connected with service they believed that these previous statements canceled any rights that they had under the law. Hundreds of the

men were situated in such out-of-the-way places that they lost contact with what was being done for disabled veterans, and consequently did not receive the benefits to which they were entitled. These and other conditions made it evident that a systematic survey of the whole United States was desirable for the purpose of acquainting the disabled men with their rights under the law, and for this purpose what were commonly known as "clean-up squads" were organized in each of the districts of the United States Veterans' Bureau, and immediately after the formation of the bureau these squads began visiting every city and nook of the country where it had been reported that ex-service men needed attention.

Extensive advertising was done in the communities before these clean-up squads arrived, and other cooperative agencies were requested to take a census of the communities, so that when the representatives of the bureau arrived all disabled men that had not made applications or had not received adjudication of previous claims could appear before the squads. This campaign was practically completed by June 30, 1922. During the time these clean-up squads were active they made contact with 179,868 claimants and beneficiaries; 48,598 new compensation claims were filed as the result of their activities; 35,038 appeals on previous compensation claims were received; 74,113 physical examinations were made by the doctors who accompanied the clean-up squads; 5,001 men were hospitalized; 2,232 out-patient treatments were given beneficiaries who were in need of this service when they appeared before the clean-up squads; 27,617 new claims for vocational training were filed, and 3,990 appeals on previous vocational training claims resulted from these face-to-face contacts with beneficiaries and prospective beneficiaries. The total cost of the campaign was estimated to be $332,404. The expenditure was more than justified by the results, for hundreds of men who should have been beneficiaries of the bureau were suffering because they were not fully acquainted with their rights; and as the result of this campaign the United States assumed the responsibilities for the care of these men very much sooner than would have been possible had the ordinary procedure for filing applications been depended upon. Through these activities the bureau has quieted many of the causes for complaint that previously existed due to the fact that the centralized bureau in Washington was unable to meet the men who should have been its beneficiaries on a personal rather than on a correspondence basis.

An effort has been made during the year to reduce the pending claims of all kinds to as nearly a current basis as possible. This was done by a campaign for the reduction of claims in which all offices endeavored to speed up the work of the Claims Division by every possible method. During these drives to make the work of the bureau current, employees showed a devotion to their work that has vividly recalled the strenuous time of the war period. Employees and officials of the bureau have always kept before them the idea that the services they were rendering were planned to alleviate the suffering of those disabled by the ravages of war, and that it was their duty to carry forward the work to the limit of human endeavor so that the number of disabled men who would be unable to receive the benefits they had merited by the supreme service to their country would be reduced to the minimum. With a firm and constant resolution to render maximum services, employees have shown an uncommon loyalty and devotion to their work, and beneficiaries are coming to realize through personal contact with representatives of the bureau the enormous effort that is being made for their welfare.

There have been criticisms of the bureau which officials have attempted to answer, not with the thought of hiding any faults or weaknesses, but with the intent of acquainting all those who were interested with the limitations under which the bureau was operating and to place before the ex-service men and the public straightforward accounts of the bureau's activities, so that the impression might not be gained that a meritorious work was entirely unsuccessful because of the much-discussed cases where the bureau had failed to meet its responsibilities.

HOSPITALIZATION.

The United States Public Health Service began the extension of Government hospital facilities for World War veterans with an appropriation of $9,050,000, which was appropriated March 3, 1919. All the Government beds available at that time were grossly inadequate, and in order to give hospital care to the disabled men, contracts were made with civil hospitals and State institutions. In the civil hospitals the usual price was $3 per day per patient, and in the State hospitals the average rate was approximately $1 per day per patient. Beneficiaries in contract hospitals in many instances did not have the advantage of the facilities for care and treatment that were available in the Government hospitals, so that Congress was urged to make further provision of hospital facilities, and on March 4, 1921, an appropriation of $18,600,000, for additional hospital facilities was approved. Both of the appropriations mentioned were under the control of the Secretary of the Treasury, and a large part of the construction work under the latter appropriation was done through the Supervising Architect's Office, which is in the Treasury Department.

That there was considerable delay in carrying out the program for additional hospital facilities may be judged from the fact that on January 1, 1922 (10 months after the appropriation of March 4, 1921, was available), the Supervising Architect's Office had expended only $437,682 out of the $12 240,000 finally allotted to this service for construction purposes. There were numerous delays occasioned by difficulties in deciding upon and securing locations, and when the plans were finally prepared, it was discovered that Government hospital facilities could not be depended upon to completely evacuate contract hospitals because the Government institutions were not located near the homes of the patients, and the patients themselves objected to being transported to hospitals located at great distances from their friends and relatives. As examples of the discrepancies in the location of hospitals, only 5 per cent of the Government beds were located in the New York district, where it was estimated that practically 15 per cent of the veteran population resided, while in the Atlanta district there were 14 per cent of the Government beds, and it was estimated that approximately 8 per cent of the veteran population resided in that district. More extreme discrepancies were found in the Denver and San Francisco districts, where the percentages of Government beds were 12 and 11 per cent, respectively, as compared with the estimated

veteran population of 2 per cent in the Denver district, and 3 per cent in the San Francisco district. Medical authorities have agreed that the climate is a secondary factor in the treatment of tuberculosis, and therefore patients can not be ordered from contract hospitals to Government hospitals which are available in distant districts on the basis of improving conditions for treatment unless clinical facts indicate in an individual case that benefits would be derived from a change. It is therefore necessary that as far as practicable the proper facilities be constructed near the centers of veteran population. In the main, State institutions have not provided the treatment for neuropsychiatric cases desired by the bureau, and Government facilities for those mentally disabled are less adequate to the bureau's needs than for any other diseases. The peculiar nature of diseases of this character requires special hospital construction which has necessitated some delay because practically all neuropsychiatric hospitals required complete renovation or entire new construction.

To remedy the lack of hospital facilities Congress appropriated on May 11, 1922, $12,000,000 to enable the Director of the United States Veterans' Bureau to provide for the construction of additional hospital facilities. Immediately after the appropriation became available the director announced a comprehensive hospital construction program which was planned to provide beds for the neuropsychiatric and tuberculous beneficiaries in the districts where the needs were greatest. In addition to the appropriation the director was authorized to make obligations for the same purposes to the extent of $5,000,000. This appropriation is to be expended by the United States Veterans' Bureau in accordance with Public Act 194, Sixty-seventh Congress, which was approved April 20, 1922, and it is planned that any delays will be those necessary in connection with hospital construction, and not those delays occasioned by administrative hesitancy.

TRANSFER OF HOSPITALS.

On April 29, 1922, the President of the United States transferred from the United States Public Health Service to the United States Veterans' Bureau 57 hospitals that had been operated for the care of disabled veterans, to be under the control of the Director of the United States Veterans' Bureau effective May 1, 1922. In the same Executive order the President directed that nine hospitals then under construction by the Treasury Department be transferred to the United States Veterans' Bureau when completed. Forty-six of the hospitals transferred had a total of 12,069 patients, who were by that order placed directly under the care of the United States Veterans' Bureau. There were in those hospitals 11,006 employees, 10,251 of whom were transferred to the rolls of the United States Veterans' Bureau, and 755 of whom were commissioned officers of the United States Public Health Service detailed to the United States Veterans' Bureau for duty.

During the past fiscal year consistent effort was made to remove patients from contract hospitals to Veterans' Bureau hospitals where vacant beds were available. Because of objection on the part of the patients to being transferred away from their home localities, this program has been considerably handicapped. The bureau encountered two obstacles that hindered the program, the obvious impossibility of transferring patients from contract to Government hospitals where an adequate number of Government beds did not exist, and a persistent opposition to removal from contract hospitals, where transfer would remove the claimant to a greater distance from his home than while in a contract institution, or where other prejudices existed against transfers.

A phase of the hospital problem that must be considered is the fact that nine hospitals, having 3,714 beds, are of the cantonment type of temporary construction. These hospitals were erected to last approximately five years, and the time has almost arrived when deterioration will be so complete that repair and restoration will be impossible and they must be abandoned. Ten hospitals, containing 3,382 beds, are leased by the United States Veterans' Bureau, and must ultimately be abandoned.

DISPENSARIES.

On February 1, 1922, the dispensaries and out-patient clinics operated by the United States Public Health Service for the treatment of United States Veterans' Bureau beneficiaries were transferred to the United States Veterans' Bureau.

During the past fiscal year the United States Veterans' Bureau paid to doctors for fee-basis work $307,277 for medical treatment, $470,864 for physical exaimations, $3,137,100 for dental examinations and treatment, $889,223 for X-ray examinations, and $140,782 for laboratory services, making a grand total for fee-basis medical work paid to physicians who were not employees of the United States Veterans' Bureau of $4,945,246. These disbursements were payments for bills submitted and paid during the fiscal year regardless of when the services were rendered. Many of these services performed on a fee basis cost the bureau more than they would have cost had the work been done by employees regularly on the roll of the United States Veterans' Bureau, and in order to eliminate this enormous expenditure to private practitioners, the bureau has developed a program for establishing dispensaries and dental clinics in each of the district and subdistrict offices equipped with the proper facilities for giving physical examinations, out-patient treatments, dental examinations and treatments, X-ray examinations, and laboratory services. While all of these dispensaries had been authorized during the fiscal year, not all of the necessary facilities had been installed, so that their work was not reflected by a reduction of disbursements on a fee basis, due to the fact that bills were paid for medical services performed several months previously. Where dispensaries have been established, investigations have shown that they render beneficiaries better services at a smaller cost than can be secured from fee-basis work and future disbursements will be reduced by United States Veterans' Bureau dispensaries. By the end of the fiscal year 19 "class A" dispensaries, fully equipped with dental clinics and X-ray equipment, had been established, and most of these had been in operation some time. There were 12 "class B" dispensaries and 62 "class C" dispensaries which had recently received their equipment.

AWARDS FOR SERVICE DEATHS AND DISABILITIES.

It has been estimated that the total men who saw service in the armed forces of the United States during the war period numbered 5,338,475.[1] Of the total number of men in the service, there were 129,745 deaths.[2]

On June 30, 1922, there had been 58,875 death compensation claims allowed by the United States Veterans' Bureau. Payments upon these awards are made to dependents of men who died in the service. It is presumed that a large part of the remainder of the men who died in the service did not have dependents. During the past fiscal year there were 4,984 claims filed for death compensation. On June 30, 1922, there were 51,339 active death compensation cases, the value of these monthly payments being $1,350,564, averaging $26.31 per case.

It has been estimated that 87 per cent of the men in the service made application for United States Government term insurance, so that it is probable that at least that percentage of the beneficiaries of men who have died in service are receiving insurance payments. Many of the dependents of men who died in service are receiving payments for death compensation and for insurance. On June 30, 1922, there were 135,963 active death insurance claims having a commuted value of $1,197,073,370. It must be remembered that these active insurance cases include many men who died after discharge from the service from causes not connected with military service. After making generous allowances for all data which are not available, it is probable that dependents and beneficiaries of practically all men who died in service are receiving payments of insurance or compensation.

The total number of men wounded in all branches of the service was 208,526. The number of admissions to hospitals (Army) and sick list (Navy) due to diseases was 4,784,440. Allowances must be made for duplicate admissions to hospitals, but after these allowances are made it can be seen that the possible number of beneficiaries of the United States Veterans' Bureau due to wounds and diseases for which service men were treated by the Army and Navy is very large. There were 211,285 men discharged from the service from disabilities due to diseases. There were also 40,631 men discharged from the service from disabilities due to injuries (including battle injuries) and all causes other than diseases, making a total of 251,916 discharged from the service from disabilities due to diseases, injuries, and other causes. The United States Veterans' Bureau had allowed 351,940 disability compensation claims to June 30, 1922, of which number 174,024 awards were active on that date, the value of these monthly payments being $6,365,205, or an average of $36.58 per award. The active disability compensation cases do not include that portion of the 92,597 men most of whom are entitled to compensation but who were taking vocational training under section 2 on June 30, 1922. Section 2 trainees receive maintenance allowances during the period of training, and during that time are discontinued from the compensation roll. When they have been rehabilitated they will be replaced upon the compensation roll.

[1] The Adjutant General of the Army had not completed the task of sending all individual Army records to the adjutant generals of the several States. Congress recently appropriated money to complete the work, so that a final figure for the Army will be available during the next year.

[2] Figures in regard to deaths and casualties are final figures, compiled by the War and Navy Departments.

It will be seen at a glance that not all of the men receiving compensation were discharged from the service for disabilities or diseases. Many of the beneficiaries receiving compensation developed diseases that were connected with service but which were not serious enough during the period of service to cause discharge for disability. A large number of men with tuberculous and neuropsychiatric disabilities developing within two years from discharge from service have been automatically granted compensation under the terms of section 13 of the act of August 9. Other beneficiaries have secured affidavits from doctors who treated them soon after discharge, and from comrades who had a knowledge of their condition in the service. It is these affidavits required of men whose Army and Navy medical records do not show sufficient evidence that have caused so much of the criticism of the bureau. Many claimants do not realize that a certain amount of definite evidence is necessary before officials of the bureau can be justified in awarding compensation, and that if service records are inadequate the information must be supplied in affidavit form from those who have a knowledge of the facts, and that these facts must be on file in the bureau as a permanent record of the basis upon which compensation was granted.

MEDICAL EXAMINATIONS AND RATINGS.

Section 303 of the war risk insurance act provides:

> Every person applying for or in receipt of compensation for disability under the provisions of this article shall, as frequently and at such times and places as may be reasonably required, submit himself to examination by a medical officer of the United States or by a duly qualified physician designated or approved by the director.

Pursuant to the law, the United States Veterans' Bureau has required beneficiaries drawing temporary compensation to be examined by a medical officer at least once every six months. During the past fiscal year medical examiners gave 1,480,155 physical examinations to claimants and beneficiaries of the United States Veterans' Bureau. The estimated value of these examinations, based upon the rate paid for examinations on a fee basis, totals more than $7,000,000. In addition to the estimated amount for examiners' fees there is an item of more than $2,000,000 for the transportation of beneficiaries from their homes to the places of examination (including travel of patients to and from hospitals). Authorities administering the pension act of Great Britain have found that disabled men may safely be given permanent ratings after four years have elapsed from the date of discharge from the service. The giving of permanent ratings to cases not only eliminates expenses in connection with examinations but also clerical work in connection with the changed medical ratings, awards and payments. From an administrative standpoint it is much more economical to give permanent ratings to cases than to give temporary ratings. The morale of beneficiaries is greatly improved by the assignment of permanent ratings with the probability that they will extend throughout life. Nearly four years after the close of the war the United States Veterans' Bureau has 22,693 active permanent-partial and permanent-total cases. Thirteen per cent of the active disability compensation cases have been rated as being permanent. According to the best medical opinions, all other cases have not reached a maximum degree of

improvement and must be rated temporary until further treatment has demonstrated that there will probably be no further change of condition. This procedure will involve a large administrative expense for a number of years.

REHABILITATION IN SCHOOLS.

The United States Veterans' Bureau in carrying out the vocational rehabilitation act has utilized the services of the best educational institutions in the country. During the fiscal year the Veterans' Bureau has made a careful investigation of the character of training received in all schools having United States Veterans' Bureau trainees. Only those schools giving the proper kind of instruction are being retained. New contracts are not being made with newly established schools. Only those institutions which have been established a sufficient period of time to have developed a proper standard of instruction are permitted to receive Veterans' Bureau trainees. The bureau has also followed the policy during the past year of concentrating students into the schools that are best fitted to the trainees' needs. The San Francisco district, in following this policy, discontinued fully 50 per cent of the schools having Veterans' Bureau students in that district at the beginning of the fiscal year.

On October 10, 1921, the United States Veterans' Bureau began the repair and alteration of certain buildings in Camp Sherman, Chillicothe, Ohio, for the purpose of utilizing a former Army cantonment as a vocational school to give training in certain vocations that were not being adequately handled in other institutions and in placement training. The vocations to be taught were several of the building trades and agriculture. Before December 1, 1921, a group of buildings was prepared to receive a maximum of 500 trainees, and another group of buildings, formerly used as warehouses, was remodeled and fitted with proper equipment to be used as shops. On December 1, 300 trainees were received in the school from the Boston, New York, Philadelphia, Washington, and Cincinnati districts. The plan was to have men trained in the essential trades so that they might assist in the construction of cottages and quarters to be occupied by other trainees to be engaged in the study of agriculture. Building materials already on the grounds were to be utilized whenever possible. The bureau's activities at the school were severely criticized from the standpoint that the school did not have adequate equipment for instruction purposes and that there was an insufficient number of teachers. It was also argued that the men were being taken away from their homes to a dilapidated Army cantonment in connection with which ex-service men had unpleasant associations. Before the school had had an opportunity to demonstrate what could be done in such a situation under favorable conditions, a proviso inserted in the deficiency appropriation which was approved December 15, 1921, provided that no construction work "except necessary minor repairs" might be done in an "Army camp acquired by the Veterans' Bureau for use as a training center." This clause prohibiting construction materially affected the original plans to have three to five thousand trainees accommodated by the school. The effect of such a limitation can be realized from the fact that the cost of operating the school with its 1,900 buildings scattered over 4 square miles; with its roads

to be repaired; its water system, electric-lighting system, and telephones to be maintained; with its fire hazard requiring a permanent fire-fighting force; and with the large amount of Government property which required a permanent police force, was approximately as great with a small number of trainees as it would have been with the larger number of trainees originally planned. When the limitation was placed upon the construction of housing facilities the school was forced to operate with an average of about 400 trainees during the remainder of the fiscal year while endeavoring to reduce the maintenance and operating costs to a size proportionate with the number of students.

The United States Veterans' Bureau maintains 13 resident vocational schools. While all of the schools are not organized exactly like vocational school No. 1, there is very little difference in the general aspect of the training, the main difference being the size of the institution that had been planned for Chillicothe. The trainees are away from their homes in all of these schools, and their quarters at Chillicothe are as adequate and as homelike as they are in any of the other schools. The resident vocational schools have demonstrated that they have a definite place in the scheme of vocational training that can not be duplicated in any other institution, and that the number of these schools should be enlarged to accommodate more of the trainees on the United States Veterans' Bureau pay rolls who require instruction that can not be successfully given at existing schools.

PLACEMENT TRAINING.

The United States Veterans' Bureau is endeavoring to rehabilitate 37 per cent of its section 2 trainees by what is known as "placement training." Due to inadequate school facilities for teaching certain trades, trainees have been placed in shops, factories, farms, and other places where training opportunities exist, so that by performing the required duties of the job they may gradually learn the trades chosen. Placement training would be a desirable method of training if serious difficulties were not encountered in the practical workings of the plan. There are two great advantages, namely, that when a man is trained he has already established his connection with the trade and the employer, and the second is that he has received his training under production conditions. The disadvantages have been that those under whom trainees worked in placement training had little or no time for instruction purposes. They have been forced by the necessity of securing production and by the necessity of making profit from their business to neglect opportunities for teaching the men, even though they were inclined to perform this service as a patriotic duty. There is a further disadvantage of placing men under workmen who are not teachers in any sense of the word. It has been practically impossible to secure regular attendance from trainees in placement training because the bureau has had no full-time representatives constantly on the job.

Progress of trainees in placement training has been unduly slow, due to the lack of opportunity for advancing from step to step in the trades as rapidly as possible. All of these difficulties will be eliminated when the training policies adopted by the United States Veterans' Bureau are in full operation. Training policies are discussed in

detail in the rehabilitation section of this report. It is anticipated that this procedure will result in rehabilitating men much sooner than would be accomplished by a continuation of the previous system of placement training with its inadequate supervision and instruction.

PROGRESS TOWARD REHABILITATION.

One of the most serious problems that the bureau has in connection with the rehabilitation of disabled veterans is that of training beneficiaries in the shortest practicable time so that they may successfully perform the duties required of normal individuals in the new trades or professions which they have chosen. Some idea of the progress that has been made in rehabilitation may be gained from a study of the date of entrance of all trainees in training at the close of the fiscal year. Of the total number of men in training on June 30, 1922, 2,370 entered training during the fiscal year ending June 30, 1919, which was the first year of operation for the Federal Board for Vocational Education. The total number of persons who entered training during that period was 3,606. Sixty-five per cent of the trainees who entered training during the first fiscal year were in training at the close of the fourth fiscal year. During the second fiscal year, ending June 30, 1920, 42,808 persons entered vocational training, and of that number 20,207, or 47 per cent, were in training at the close of the past fiscal year. During the fiscal year ending June 30, 1921, 62,083 entered vocational training, and of this number 38,839, or approximately 62 per cent, were in training June 30, 1922. During the past fiscal year 46,994 entered vocational training, and of this number 38,196, or approximately 80 per cent, had been reported in training at the close of the year.

On July 1, 1921, 9,110 trainees had been "rehabilitated," "completed," "permanently discontinued," and "deceased." On June 30, 1922, a total of 27,125 trainees had been "rehabilitated" from "section 2 training," "completed" from "section 3 training," "permanently discontinued," and "deceased," making a total for the fiscal year of 18,015, or approximately twice as many as had terminated training prior to the past fiscal year. It has only been in the last few months of the fiscal year that the number who "terminated training" exceeded the number who "entered training."

EMPLOYMENT.

The vocational rehabilitation act reads, in part, as follows: "That the board shall have the power and it shall be its duty to provide for the placement of rehabilitated persons in suitable or gainful occupations." To the close of the fiscal year 15,321 beneficiaries had been "rehabilitated" from section 2 training, and 1,645 beneficiaries "completed" courses under section 3 training, making a total of 16,966 beneficiaries for whom the bureau was obligated by law to provide employment. During the year the bureau organized in the Rehabilitation Division an employment service with one or more representatives in each district and subdistrict office. These employment representatives are assigned to the task of securing employment for rehabilitated men, and to follow up the placement of beneficiaries to determine that they are properly placed.

Employment representatives of the bureau have experienced some difficulty in finding the right kind of employment for rehabilitated men, due to the variety of training objectives of beneficiaries, and to the reluctance of employers to assume the responsibility of carrying on the pay roll men who have not been accustomed to industrial conditions. It would seem logical that rehabilitated men should be given employment in the line for which they have been trained and when beneficiaries have been offered positions in other lines they have refused such appointments in many instances. Employers who were willing to absorb rehabilitated men into their establishments have appealed to the employment representatives of the bureau for a number of men, for certain types of employment, who were not at the time available. Employers have failed in some instances to understand that the bureau employment representatives are under the necessity of locating employment for beneficiaries at the time their courses are completed, and that under no circumstances could the trainees be required to enter employment before employment objectives had been reached. When the employment objective is finally reached, there is very often a short period when there are no openings in the exact position for which the beneficiary has been trained, and it is not very satisfactory to the rehabilitated man to be discontinued from the maintenance pay roll and not be able to locate remunerative employment. One hundred and fifty-five thousand four hundred and ninety-one beneficiaries have "entered training," and there are more than 300,000 who have been rated "eligible to enter training." It is inevitable that large numbers of those who have entered training will become eligible for employment in the near future, and employment representatives throughout the United States will undoubtedly experience considerable difficulty in placing all these men promptly.

The bureau has been obligated by Congress to find employment for rehabilitated persons. At the close of the training period the maintenance allowance must stop. The employment service is charged with the responsibility of having an employment opportunity for the trainee on the date training is completed so that there will be no intervening period between rehabilitation and employment. It is interesting to study the methods of European countries in overcoming employment difficulties through giving a bonus to men upon rehabilitation, through compulsory employment laws requiring employers to have upon their pay rolls a certain percentage of disabled veterans, and through authority to set aside certain positions that are especially adapted for rehabilitated veteans.

In Italy every employer who employs more than 10 men is bound to employ 1 man disabled in the war for every 20 men or fraction employed after the first 10. Austria requires that 1 disabled man be employed for each 25 employees. In Germany every private employer is bound to employ 1 disabled man for each 50 employees. In addition to this, the authorities have the power to require private employers to reserve for disabled men certain kinds of vacancies which are specially suitable for such men. The French Chamber of Deputies has passed a compulsory employment act requiring the employment of 1 disabled man per 10 workers. France also gives a bonus to rehabilitated men, which makes it easier for the Government to terminate training and gives the men financial assistance

during the readjustment period between training and employment. England has a system of voluntary cooperation with the Government whereby every employer is invited to undertake to employ 1 disabled ex-service man for every 20 workers, but this voluntary system has been inadequate, and the Government has been considering the advisability of making the employment of disabled men compulsory.

TERM INSURANCE.

When legislation was under consideration that later established in the Bureau of War Risk Insurance a division of military and naval insurance, those who favored the legislation desired to establish a complete system of relief that would adequately care for the dependents of service men while they were in the service and also provide protection for service men that would replace the existing inadequate system of pensions. Service men upon entering the war lost their insurability with private insurance companies, except at a very high additional premium to cover the war hazard. In order to place the American soldier on the same footing with civilians in regard to life insurance, the act of October 6, 1917, provided that persons in the active military and naval service of the United States could, upon application, be insured for amounts between $1,000 and $10,000 upon the payment of a net premium based upon the American Experience Table of Mortality, and interest at 3½ per cent per annum.

The city of Toronto, Canada, had insured its first contingent entering the war with one of the large commercial life insurance companies. That first contingent was unfortunate enough to be under such strenuous fire that it was almost annihilated, and this occasioned such a tremendous loss that no further insuring of men from Toronto would be undertaken by that company. Failing in this, the city of Toronto carried its own responsibility by offering insurance to the men, the losses from which were borne by the city.

When the war risk insurance act was under consideration, one of the largest life insurance companies of the United States expressed its willingness to insure men in the service for one year on a renewable term plan at an average of $58 per thousand for $300,000,000 of insurance. This would only be an average of $5,000 for 60,000 men a wholly inadequate proposal.

The law as passed permitted the Director of the War Risk Insurance Bureau to issue yearly term renewable insurance to the men in the active military and naval service of the United States, at premiums based on the American Experience Table of Mortality and 3½ per cent interest. Most of the men in the service were between the ages of 21 and 31. At age 21 the sum of 12 monthly premiums for United States Government term insurance is $7.80 per thousand; at age 31 the sum is $8.40; at age 25 the sum is $7.92 per thousand dollars of insurance. Each man in the Army who was 25 years of age, and who applied for $10,000 insurance, paid $79.20 per year for that insurance.

The Government's liability under yearly renewable term insurance on account of total permanent disability and death is $1,339,764,83[illegible] (commuted value on a 3½ per cent interest basis), and the total amount of premiums received on this form of insurance is $388,739,131; therefore the commuted value of the claims exceeds the amount of premiums received by approximately $951,025,704. Benefits under

term insurance are payable in monthly installments of $5.75 for each $1,000 of insurance covering a period of 240 months. The Government will ultimately pay in benefits $1,380 for each $1,000 of insurance, the total payments aggregating a sum of $1,460,136,404 more than the amount received in premiums on account of yearly renewable term (war-time) insurance. This sum represents excess loss which is directly due to the hazards of war.

When Congress was framing the insurance features of the war risk insurance act, it was hoped by those who favored the law that every man in the service would take advantage of the opportunity to be insured, but a prominent actuary estimated that only 25 per cent of the men in the service would avail themselves of the opportunity to take insurance to the extent of $2,500 each. When given the opportunity to take insurance, the response of the soldiers was remarkable, for 87 per cent of all persons in the armed forces of the United States applied for United States Government insurance, aggregating approximately forty billions of dollars. This amount of insurance considerably exceeded the total amount of insurance in force with all the commercial life insurance companies of the United States at that time. Eighty per cent of these applications for term insurance were for $10,000 each.

It was not expected that this tremendous volume of war-time insurance would be continued in normal times of peace. On June 30, 1922, there were 575,932 policies of all forms of United States Government insurance in force. Ten per cent of all persons who were in the service are now continuing their Government insurance, either term, converted, or both. There are several reasons for the great reduction in the number and amount of insurance policies in force. For instance, the emergency need for insurance caused by the war had passed; the men were young and many had no dependents; they were struggling for readjustment in civil life, and readjustment was frequently difficult because of the period of depression following the abnormal conditions incident to the war; some veterans were without sufficient funds to properly care for themselves, and only those more prosperous had the money available for the payment of premiums; also many of the veterans converted their term insurance to the more expensive permanent forms. It is also true that a large number of veterans left the service uninformed of their insurance rights; and the benefits and advantages of Government insurance, particularly in its permanent forms, have never been clearly understood.

When the original insurance act was passed on October 6, 1917, an appropriation of $23,000,000 for military and naval insurance was made. It was estimated that this amount would be expended the first year. Fourteen million dollars of this appropriation were disbursed to April, 1919, though enough premiums had been paid to the War and Navy Departments, which had not been transferred to the Bureau of War Risk Insurance, to have paid all term insurance disbursements to that date. Premiums paid by veterans and deposited in the Treasury to the credit of the military and naval insurance appropriation have been used for the payment of insurance benefits to beneficiaries. The large amount of insurance awards due to the war hazard, and the reduced amount of insurance premiums through lapses, will probably result in exhausting the term insurance funds during the next fiscal year, and it will be necessary to ask Congress for an appropriation for "Military and naval insurance."

MEDICAL DIVISION.

On July 1, 1921, the Medical Division of the Bureau of War Risk Insurance was restricted in its activities almost solely to the consideration of rating of compensation claims, furnishing prosthetic appliances, special medical treatments, and to the general supervision of medical services to beneficiaries through the field agencies of the bureau. The actual field medical service was carried on through 14 district offices transferred to the bureau on April 19, 1921, from the United States Public Health Service. Decentralization of the bureau and consolidation of all Government agencies established to carry out the provisions of the war risk insurance act and the vocational rehabilitation act had been anticipated by the Bureau of War Risk Insurance, the Public Health Service, and the Federal Board for Vocational Education in the latter part of the year 1920 and early in the year 1921. A tentative plan of consolidation had been made and orders drawn to accomplish this consolidation and decentralization in February, 1921, at which time there was established in the Medical Division a "district organization section" and a "hospital section." However, actual consolidation was forestalled by reason of the fact that a careful study of the laws under which these agencies were then functioning precluded a legal fusion of these several agencies and a decentralization of certain of their functions.

On July 1, 1921, the bureau was nearing the completion of a "drive," or concentration of effort, to place the work of the bureau on a "current basis." Approximately 50 physicians from the district offices had been called in to central office and trained in rating claims. The drive was in full swing on July 1, and was completed as planned July 22. At that time there were less than 5,000 cases in the Medical Division, this number being less than one day's load. The extra rating officers were accordingly returned to their respective stations. Efforts were directed toward the anticipation of amendatory legislation then pending which would authorize the decentralization of the bureau, so that the final enactment of the act establishing the United States Veterans' Bureau, August 9, 1921, found the Medical Division prepared to meet the change and carry on its work under a decentralized plan. The 14 Bureau of War Risk Insurance district offices, organized to supervise medical care and treatment of beneficiaries, were consolidated with the field offices of the Federal Board for Vocational Education and converted into district offices of the United States Veterans' Bureau, each under the direction of a district manager, this official being the administrative representative of the Director of the United States Veterans' Bureau in the field. The functions of district offices now included the rating and adjudication of claims, the supervision of vocational training, and the supervision of medical services. The medical work in the districts was administered by a district medical officer in charge of a medical division in each district office. Rating boards were created by assignment of medical officers familiar with the rating

of claims from the central office, district office physicians who had previously done work of this sort, and medical rating officers previously with the Federal Board for Vocational Education. Subdistrict offices in charge of subdistrict managers were also created as rapidly as the need for such offices was shown, the medical work in these offices being in charge of the subdistrict medical officer.

In order to accomplish decentralization promptly and with as little disturbance to the efficiency of the organization as possible, the districts were authorized to adjudicate all new claims filed after August 9, 1921, to arrange for immediate examination of claimants, and to collect such other evidence as might be necessary to rate cases. No action was taken on old claims previously filed in central office. As soon as the districts were functioning and could take care of additional cases, all active cases or claims where the ex-service men were receiving compensation or where final decision had not yet been rendered, were forwarded en bloc from central office to district headquarters of the districts where the claimants resided for further consideration and final adjustment. Decentralization was practically complete by April 19, 1922, over 300,000 cases having been sent from central office to the 14 district offices. In some instances this enormous additional load of work for the districts resulted in serious delays in handling claims, but by unremitting effort and overtime duty June 30, 1922 (the end of the fiscal year) found the districts on a practically current basis. Case actions are no longer delayed unnecessarily or unreasonably by reason of congestion in the district offices. At this time practically the only cause for delay in the adjudication of any claim is the failure of the claimant to produce evidence to show that within a reasonable probability his disability was incurred in or aggravated by his military or naval service.

Dr. Haven Emerson, medical adviser of the bureau, resigned September 15, 1921, and the administration of the Medical Division was assumed by Lieut. Col. Robert U. Patterson, detailed to the United States Veterans' Bureau by the Surgeon General, United States Army.

The consolidation of the agencies in charge of the administration of benefits provided for disabled ex-service men and the decentralization of the United States Veterans' Bureau necessitated a considerable expansion of functions and modification of the organization of the Medical Division of central office. Prior to that time the bulk of this work was concerned with the rating of claims. After decentralization the rating of individual cases was reduced to a minimum and central office was concerned with ratings mainly as a central supervising and coordinating agency for the establishment of rating procedure and policies and for the general direction of all rating activities in the field.

A rating section was created in the Medical Division, central office, for the general supervision of policies governing ratings, the rating of individual cases being made by the medical board of review. The hospital section had assumed additional supervisory duties and was enlarged proportionately. The district medical service section in charge of the general direction of medical relief as carried on through the regional offices was increased proportionately to its increased importance and the assumption of numerous new functions. The rehabilitation medical section was established by transfer of the Medical Division of the Federal Board for Vocational Education to

this bureau, to act in an advisory capacity in rehabilitation problems of a medical nature. The foreign relations section was undisturbed and was not affected by decentralization. In accordance with the terms of section 9, amendatory act, there was created in the Medical Division an inspection section, this section being created and established October 20, 1921. To assist the Chief of the Medical Division in the administration and supervision of technical and professional work of the bureau, a board of consultants was established—one consultant in general medicine and surgery, one tuberculosis specialist (later a second tuberculosis specialist was added), and one specialist in neuropsychiatry.

On February 1, 1922, all dispensaries and out-patient clinics operated by the United States Public Health Service for the treatment of Veterans' Bureau beneficiaries were transferred to the United States Veterans' Bureau under the direct supervision of the district offices and general supervision of the district medical service section, Medical Division, central office.

On May 1, 1922, in accordance with an Executive order dated April 29, 1922, the hospitals of the United States Veterans' Bureau, formerly operated by the United States Public Health Service, were transferred to the immediate control of the Director of the United States Veterans' Bureau. Such portions of the hospital division of the Public Health Service as had been formerly in charge of that work were transferred to the United States Veterans' Bureau by the transportation of the personnel and equipment from the United States Public Health Service, Seventh and B Streets SW., to the Arlington Building, to become a part of the hospital section, Medical Division.

The functions of the several sections of the Medical Division are under the direct supervision of the assistant director, Medical Division, through the executive officer of the division. It is properly the function of this division to serve in an advisory capacity to the director of the bureau in all medical matters incident to the administration of the laws governing the bureau and to carry out the policies of the director as laid down by regulations and orders governing the provision of medical, surgical, and hospital care, prosthetic appliances, dental treatment, physical examinations for claimants, and the rating of claims and administration of United States Veterans' hospitals, dispensaries, and other treatment facilities.

MEDICAL RATINGS.

From the date of establishment of the United States Veterans' Bureau, August 9, 1921, to April 29, 1922, the rating section consisted of a chief of section and a medical board of review. After that date the chief of the rating section was in charge of the general supervision of policies governing ratings in central office and in the district offices. The actual rating of claims is not a proper function of the rating section, all such ratings being made by the district rating sections or by the medical board of review, central office.

The medical board of review was under the immediate supervision of the chief of the rating section prior to April 29, 1922. On that date the board of review was detached from immediate relation to the chief of the rating section and made an advisory medical board for the central board of appeals. On the medical board of review are

physicians in the several medical specialties, including general medicine and surgery; neuropsychiatry, eye, ear, nose, and throat; tuberculosis; and dentistry. It is the duty of this board to render opinions and ratings on medical facts in cases of compensation or insurance involving permanent total disability or death and to act as an advisory medical body to the board of appeals in claims appealed from the districts. The medical personnel of this board comprises nine physicians, one of whom acts as chairman in charge of the administration of the board. Technical questions coming before the board are decided by the concurrence of at least two members, one of whom is a specialist in the medical branch properly dealing with diseases of the type under consideration. Cases appealed from the districts are reviewed and the concurrent opinion of at least three members of the medical board of review is required before the case is transmitted to the board of appeals for consideration. Cases are assigned, according to the classification of the disability, to the board member (physician) conversant with the rating of such disabilities. Cases where questions arise which can only be decided by weight of medical opinion are submitted to the entire board and the majority opinion of the entire board constitutes the ruling.

Cases completed by the board of review from July 1, 1921, to June 30, 1922, are as follows:

1921:	
July	5,312
August	4,279
September	1,771
October	3,823
November	6,822
December	3,331
1922:	
January	3,295
February	2,863
March	4,947
April	3,771
May	2,870
June	2,456
Total	45,540

All permanent total cases, most of which involve disability insurance, are referred from the districts to central office for rating. It was impracticable to decentralize the insurance files and it is accordingly necessary to have these cases rated in central office where insurance files are available. Whenever a compensation case is rated as permanent total the file remains in central office; however, the district offices are empowered to afford medical relief for such claimants in the same manner as in cases where the files are decentralized.

During the year ending June 30, 1922, there was created in the Medical Division a permanent "ratings board." It is the duty of this board to consider the official rating schedule of the bureau from time to time and recommend such changes in that schedule as may be indicated in the light of experience of the bureau as required in paragraph 4, section 302, Article III, of the war risk insurance act, as amended. It is the duty of this board to receive suggestions from bureau employees or other persons who desire to suggest changes in the rating schedule or additions to this schedule. During the year this ratings board promulgated an entire new schedule of ratings for

dental disabilities which was approved by the director and is the official dental rating table. Changes were made in the table of ratings for pulmonary tuberculosis to meet the requirements of section 18 of the amendatory act, August 9, 1921, holding that active pulmonary tuberculosis of 10 per cent degree developing within two years from the date of separation from active service should be presumed to have been incurred in or aggravated by service. Changes have also been made in the ratings of epilepsies, representing in the aggregate a general increase from 15 to 25 per cent for disability from epilepsy. Numerous changes were made in the schedule of ratings for fractures and amputations, necessitating the reissuance of that table in October, 1921. Slight changes have been made in ratings of certain surgical and medical disabilities. Regulation 11 was issued as a result of study by the ratings board, indicating that to insure justice in the rating of chronic constitutional diseases, these diseases would be considered as service incurred if arising within one year from the date of discharge, unless there was a definite and demonstrable intercurrent disease or injury, subsequent to and unrelated to service, responsible for the constitutional disease in question.

HOSPITALS.

The hospital subdivision of the Medical Division of the United States Veterans' Bureau is in charge of the location, construction, operation, and control of hospitals, the formulation of standards for hospitals and treatment, hospital programs, the allocation of patients, liaison with Government services, the approval of contracts and leases for hospitals, physiotherapy and occupational therapy, bed status, disciplinary regulations, etc.

These activities are divided into six main sections and eight subsections, as follows:

Sections.—Clinical neuropsychiatry, clinical tuberculosis, miscellaneous, tuberculosis, neuropsychiatry, general medicine and surgery.

Subsections.—Laboratory and X-ray, physio and occupational therapy, personnel, nursing, dietetics, library, supply, mail, and record.

The outline of the duties of the several sections and subsections of the hospital subdivision, and the work performed in these sections and subsections during the fiscal year ending June 30, 1922, is hereinafter presented.

CLINICAL NEUROPSYCHIATRY.

The duties of the clinical neuropsychiatry section comprise the supervision of the character and quality of treatment of neuropsychiatric cases in hospitals, dispensaries, etc. It acts as consultant on all neuropsychiatric problems, and as instructor and adviser to staffs of neuropsychiatric hospitals in charge of the supervision of training of medical officers, nurses, and special attendants in neuropsychiatric work.

This section was established June 22, 1922, and was placed in charge of Dr. Frank F. Hutchins, professor of neurology and psychiatry, Indiana University, nationally known in the field of this medical specialty. Practically the entire time of this section during

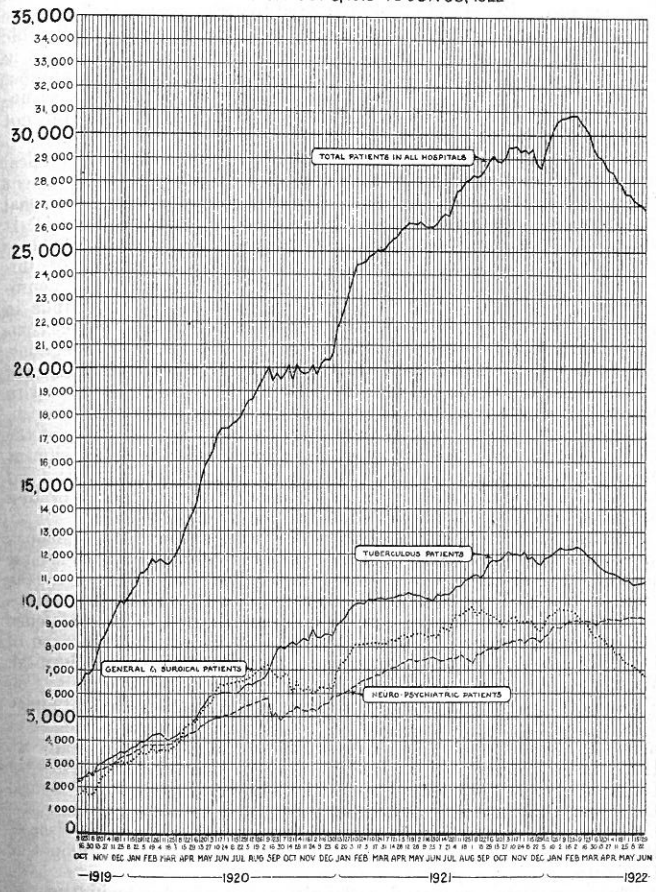
BY WEEKS FROM OCT 9, 1919 TO JUN 30, 1922



its period of activity from June 22, 1922, to June 30, 1922, was consumed in making a general survey of the neuropsychiatric needs of the bureau by an estimation of the number of beneficiaries falling in this clinical group and the study of the treatment facilities then available to determine their standard and to determine the need for expansion and increase of these facilities. An intensive study of hospital plans was begun for the information of the director in locating and erecting neuropsychiatric hospitals authorized in the second Langley bill. Plans were also instituted to arrange details of a course of training for neuropsychiatrists, so that the bureau would be able to train qualified physicians in general medicine for special work in neuropsychiatry in order to have at its disposal a sufficient number of trained neuropsychiatrists, inasmuch as such personnel was unobtainable from other sources owing to the fact that it did not exist in this country.

It is believed that the establishment of the section of clinical neuropsychiatry in charge of all phases of neuropsychiatric treatment will result in great benefit to the bureau by elevating the professional standards of treatment for this class of cases to the highest level. It will enable the bureau to establish treatment facilities in accordance with modern standards, and by continuous supervision of this service to keep it thoroughly up-to-date. The scope of neuropsychiatry is hardly understood or appreciated by the public in general, or even by the medical profession itself. This subject comprises almost all that is in general medicine, plus the mental reactions, the behavior, the social adjustment, the legal responsibility and the reeducation of the individual. It is brought into close relation with several of the divisions of the United States Veterans' Bureau, especially the Legal and Rehabilitation Divisions. In view of the wide scope of neuropsychiatry, it is believed that the establishment of a special section in the Medical Division to direct the activities and to study neuropsychiatric questions was an important step toward a proper solution of the bureau's neuropsychiatric problem.

In view of the importance of the proper disposition of the numerous questions continually arising in the bureau in connection with mental and nervous diseases, a conference was called and arranged by the bureau in which representative neuropsychiatrists from the various sections of the country were invited to participate. This conference lasted from February 10 to 13, 1922. This board was composed of Dr. William A. White, superintendent of St. Elizabeths Hospital, Washington, D. C., chairman, and the following members: Col. Thomas W. Salmon, chief neuropsychiatrist, American Expeditionary Forces, during the World War; Dr. Albert M. Barrett, professor of neurology and psychiatry, University of Michigan; Dr. Fank F. Hutchins, professor of neurology and psychiatry, University of Indiana; Dr. S. W. Hamilton, Philadelphia, Hospital for Mental Diseases; Dr. Edwin G. Zabriskie, New York Neurological Institute; Dr. Geo. M. Kline, commissioner, department of mental disease, Boston, Mass.; Dr. W. F. Lorenz, director, Wisconsin Psychopathic Institute.

This committee prepared a definition for "neuropsychiatric disease" as that term is used in section 18 of the amendatory act of August 9, 1921, studied and approved the neuropsychiatric rating

table of the bureau, and considered the hospital needs and the necessary hospital construction that the bureau would require to afford proper treatment to its neuropsychiatric beneficiaries. The recommendations of this conference were embodied in a report for the director of the bureau, and this report has been considered by the bureau at all times when neuropsychiatric questions have required consideration.

CLINICAL TUBERCULOSIS.

The duties of the clinical tuberculosis section are the supervision of methods of treatment of tuberculosis cases in hospitals, of medical officers, nurses, and attending specialists in tuberculosis work, and advising the division chief on tuberculosis problems.

The section was created June 21, 1922, and placed under the direction of Dr. S. M. Rinehart and Dr. John W. Turner, assistant, both specialists of note in the field of tuberculosis. During the brief period of the existence of this section, June 21, 1922, to June 30, 1922, a careful study of the problems of the bureau with special reference to tuberculosis was begun, and a survey to determine the existing facilities for treatment and the necessity for expansion was made. Preparation of a pamphlet regarding the general management and treatment of tuberculous patients in hospitals was begun and a manual containing suggestions for the guidance of the patient on Hygiene and Efficiency for the Tuberculous was prepared. Schools for the training of physicians and nurses for special duty in tuberculosis hospitals were considered, but the plans had not been completed at the end of the fiscal year.

On May 2, 1922, at the request of the bureau, a conference of nationally known experts in tuberculosis was held at bureau headquarters. This conference was attended by Dr. E. R. Baldwin, Saranac Lake, N. Y., chairman, and the following members: Dr. C. S. Rockhill, Cincinnati, Ohio; Dr. D. R. Lyman, Wallingford, Conn.; Dr. Leroy Dunn, Asheville, N. C.; Dr. James A. Miller, New York City, N. Y.; Dr. J. W. Pettit, Chicago, Ill.; Dr. H. A. Pattison, New York City, N. Y.

The tuberculosis problems of the bureau were carefully considered and discussed at this meeting, and a report was submitted to the director embodying the committee's recommendations.

SUPERVISION OF MISCELLANEOUS ACTIVITIES.

The duties of the miscellaneous section comprise the supervision of work at hospitals prior to opening and after closing, the collection and study of information relative to proposed hospital sites, the consideration of matters affecting the hospital subdivision that are not of a clinical nature, the supervision of disciplinary discharge and rehospitalization of patients discharged for disciplinary reasons, the transfer of patients, review of contracts for burial expenses and arrangements for shipping the remains of claimants to territorial and insular possessions, arrangements for institutional care of claimants upon discharge from the Army and the Navy, and the authorization of special surgical, medical, or nursing care.

ADMINISTRATION OF TUBERCULOSIS HOSPITALS.

The duty of the tuberculosis section is the administrative control of tuberculosis hospitals. From July 1, 1921, to May 1, 1922, the tuberculosis section of the hospital subdivision, United States Veterans' Bureau, was a section of the hospital division, United States Public Health Service. The activities of the tuberculosis section, hospital division, United States Public Health Service, were largely concerned with the general policies relating to the examination and treatment of tuberculous patients, the training of medical officers in the specialty of tuberculosis, the standardization of treatment in tuberculosis hospitals, and the consideration of plans for tuberculosis hospitals of a standard type. In addition to this service, a large amount of correspondence and general business indirectly relating to hospitals but bearing upon the general subject of tuberculosis was disposed of by the tuberculosis section.

A special school of instruction for physicians and nurses in the diagnosis and treatment of tuberculosis was given in September, 1921, at United States Public Health Hospital No. 60, Oteen, N. C., now United States Veterans' Hospital No. 60. The course was conducted by teachers selected from the United States Public Health Service and by local tuberculosis specialists in the city of Asheville, N. C., and was available for service officers and nurses interested in this specialty on duty east of the Mississippi River. Lectures and didactic work were given and clinical demonstrations and discussions of modern methods of diagnosis and treatment for tuberculosis were covered in this intensive course of training.

In accordance with the provisions of an Executive order, dated April 29, 1922, that part of the hospital division of the United States Public Health Service concerned with the treatment of beneficiaries of the United States Veterans' Bureau was transferred to the immediate control of the Director of the United States Veterans' Bureau. Thirteen hospitals for the special treatment of tuberculosis, situated in the various parts of the United States, were transferred. Some of them are not permanent structures, and as rapidly as possible the temporary buildings are being replaced by permanent construction. The professional personnel of the hospitals is obtained largely by assignment of the reserve officers of the United States Public Health Service, practically all of whom are ex-service men and many of whom are recognized as tuberculosis specialists.

In June, 1922, the United States Veterans' Bureau conducted a course of training in the diagnosis and treatment of tuberculosis similar to the course previously given under the United States Public Health Service. This course was carried out at United States Veterans' Hospital No. 60, Oteen, N. C., and was conducted by teachers selected from the United States Public Health Service group and physicians of the United States Veterans' Bureau, and by tuberculosis specialists not officially connected with Government service. The courtesy of attending these courses was extended to State health officers throughout the United States, and physicians from several parts of the country availed themselves of this opportunity to review modern methods of treatment and handling of tuberculosis. Letters have been received from the State health officers expressing their appreciation and complimenting the instruc-

CHART No. 2.

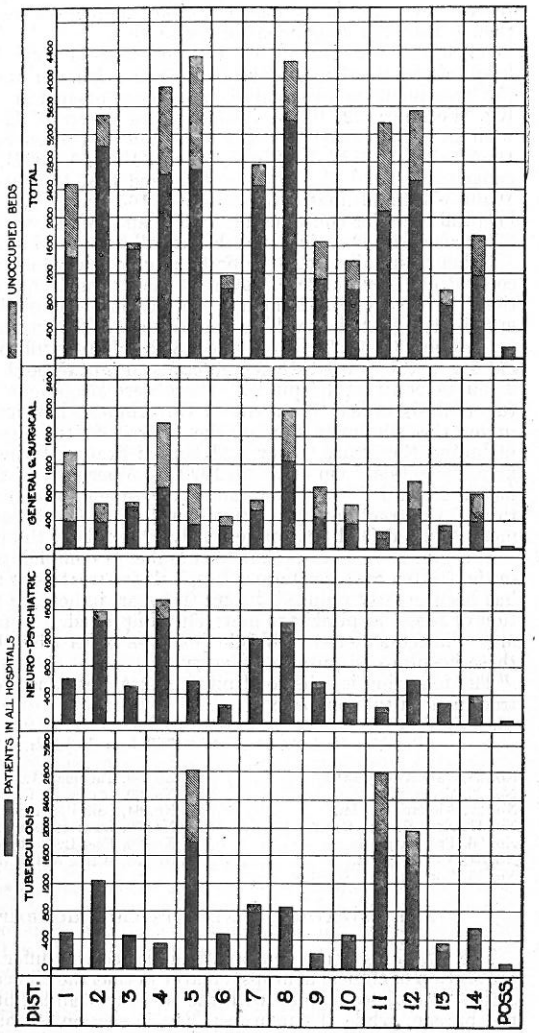
PATIENTS IN ALL HOSPITALS (GOVERNMENT & CONTRACT) AND AVAILABLE UNOCCUPIED GOVERNMENT BEDS

AS OF JUNE 30, 1922.



tion given in these courses. United States Veterans' Hospital No. 60, Oteen, N. C., one of the largest tuberculosis hospitals of the bureau, is being used as a training center where physicians may receive several months' instruction in tuberculosis treatment prior to their permanent assignment in the service.

Since the transfer of the United States Public Health Service hospitals to the United States Veterans' Bureau new hospitals for the treatment of tuberculosis have been opened at Dawsonsprings, Ky. (February 22, 1922), United States Veterans' Hospital No. 79, with an initial capacity of 405 beds, and at United States Veterans' Hospital No. 85, Walla Walla, Wash. (May 10, 1922), with an initial capacity of 122 beds. It is anticipated that the capacity at Walla Walla will be ultimately increased to 165 beds. A new tuberculosis hospital is under construction at Rutland, Mass., with a capacity of 220 beds and it is anticipated that it will be opened in the near future.

Other hospitals under the first Langley bill, which were under the control of a committee known as the "consultants on hospitalization," Treasury Department, are nearing completion, and it is anticipated that they will be opened during the ensuing year.

On June 30, 1922, there were 5,882 patients suffering with tuberculosis in the United States veterans' hospitals and approximately 2,759 in contract hospitals. There were also about 2,208 cases of tuberculosis under treatment in Government hospitals not directly under the administration of the United States Veterans' Bureau, including the Army, Navy and United States Marine, and soldiers' home hospitals. On June 30, 1922, 74.5 per cent of the tuberculosis patients of this bureau were under treatment in Government institutions. Contract hospitals are only utilized when there are no Government hospital facilities conveniently situated for the patients.

It is gratifying to note that the number of complaints from patients in the United States veterans' hospitals for treatment for tuberculosis has been greatly reduced during the year, indicating that the condition of these hospitals has materially improved. In fact, complaints are so infrequent that it would justify a belief that the condition of these hospitals is quite satisfactory.

The following is a list of United States Veterans' hospitals for the treatment of tuberculosis:

ADMINISTRATION OF NEUROPSYCHIATRIC HOSPITALS.

The functions of the neuropsychiatric section differ from those of the section of clinical neuropsychiatry in that the clinical neuropsychiatric section is concerned with the treatment and clinical facilities of the bureau, while the neuropsychiatric section is charged with the administration of neuropsychiatric hospitals under the jurisdiction of the United States Veterans' Bureau.

From July 1, 1921, to May 1, 1922, the administration of neuropsychiatric hospitals operated for the treatment of beneficiaries of the United States Veterans' Bureau was carried on through the office of the Surgeon General, United States Public Health Service. During the period from July 1, 1921, to August 1, 1921, the duties of the neuropsychiatric section of the hospital division, United States Public Health Service, were modified by certain changes in the administration inaugurated by the Director of the Bureau of War Risk Insurance. On August 1, 1921, contract hospitals were transferred to the immediate control of the Bureau of War Risk Insurance, and on August 9, 1921, to the United States Veterans' Bureau, the responsibility for the proper supervision of this work being vested in the several district managers. On February 1, 1922, the control of United States Public Health Service dispensaries, including out-patient neuropsychiatric offices, was transferred to the district offices of the Veterans' Bureau. Since that date the neuropsychiatric section of the hospital subdivision has been concerned solely with the administration of United States Veterans' hospitals. In accordance with the terms of an Executive order, effective May 1, 1922, this section was transferred from the office of the Surgeon General, United States Public Health Service, to the Veterans' Bureau as the neuropsychiatric section of the hospital subdivision, Medical Division. The transfer was accomplished without interruption to work and there was no material change in the personnel or the duties of the section.

It has been the duty of this section to provide personnel for the neuropsychiatric hospitals of the bureau and this has been one of the most difficult problems, inasmuch as a sufficient number of qualified neuropsychiatrists for the bureau's needs is not available in the country. Not only is the Veterans' Bureau suffering through lack of neuropsychiatric personnel, but both public and private institutions for the treatment of mental and nervous diseases have been unable to maintain an adequate staff for several years. To meet this need the neuropsychiatric section of the United States Public Health Service, prior to its transfer to the United States Veterans' Bureau, had made plans to conduct training classes at United States Public Health Service Hospital No. 37, Waukesha, Wis.; United States Public Health Hospital No. 44, West Roxbury, Mass.; and tentative arrangements were made for conducting such a course at the hospital at Bronx, N. Y., later known as United States Veterans' Hospital No. 81. The course at Waukesha included instruction in anatomy, pathology, organic neurology, and arrangements were made for utilizing facilities in certain institutions in Chicago, Ill. The course at United States Public Hospital No. 44, West Roxbury, Mass., included training at the Boston Psychopathic Hospital, where an out-patient clinic of the United States Public Health Service was located. The first class at each hospital completed a five months' course April 30, 1922.

Believing that the emergency requirements for neuropsychiatric hospital facilities had in a measure been met, the neuropsychiatric section advocated the abandonment of the previous practice of acquiring already existing properties for conversion into neuropsychiatric hospitals. Experience had shown that the conversion of these properties was at best only accomplished with partially successful results, and it was therefore advocated that hereafter hospital facilities should be provided by new construction. New

construction was planned and begun at United States Public Health Hospital No. 24, Palo Alto, Calif., capacity 500 beds. Construction was started at United States Public Health Hospital No. 42, Perryville, Md., capacity 300 beds, this project being one unit of a proposed 1,200-bed hospital. Construction was also begun at United States Public Health Hospital No. 62, Augusta, Ga., capacity 265 beds. This construction was authorized by the first Langley Act and the allocation of the funds was supervised by the White committee, Treasury Department.

During the fiscal year ending June 30, 1922, there was an increase of 809 beds in bureau hospitals for the exclusive treatment of neuropsychiatric patients. An increase in neuropsychiatric beds in general hospitals and in tuberculosis hospitals was also made, amounting to approximately 350.

The following is a list of neuropsychiatric hospitals:

United States Veterans' Bureau hospitals.

No. 37, Waukesha, Wis.

No. 57, Knoxville, Iowa.
No. 62, Augusta, Ga.
No. 74, Gulfport, Miss.
No. 78, North Little Rock, Ark.
No. 81, Bronx, N. Y.
No. 86, Sheridan, Wyo.

ADMINISTRATION OF GENERAL HOSPITALS.

From July 1, 1921, to May 1, 1922, the section of general medicine and surgery was operated as a section of the hospital division, United States Public Health Service, the fusion of this section of surgery and the section of general medicine having been accomplished prior to the beginning of the fiscal year. On May 1, 1922, this section became the general medicine and surgery section of the Medical Division, United States Veterans' Bureau. It is the duty of this section to supervise the administration of hospitals for the treatment of general medical and surgical cases, including the supervision of treatment facilities and the provision of personnel for these hospitals. This section also serves in an advisory capacity in matters pertaining to construction, repairs, and alterations of hospitals, requisitioning of supplies, and proposals for leases and contracts. Frequent inspections of general hospitals were made with a view to studying the professional standards of treatment at these institutions and to determine the most advantageous and economical method of administration. Repairs and alterations to hospitals have been made and the personnel has been reorganized to meet the special needs of the individual station with a view to furnishing the best medical, surgical, dental, X-ray, physiotherapy, and occupational therapy treatment and to making the hospitals comfortable and cheerful. From January 16, 1922, to February 13, 1922, a special course in gastroenterology was given at United States Veterans' Hospital No. 56, Fort McHenry, Md.

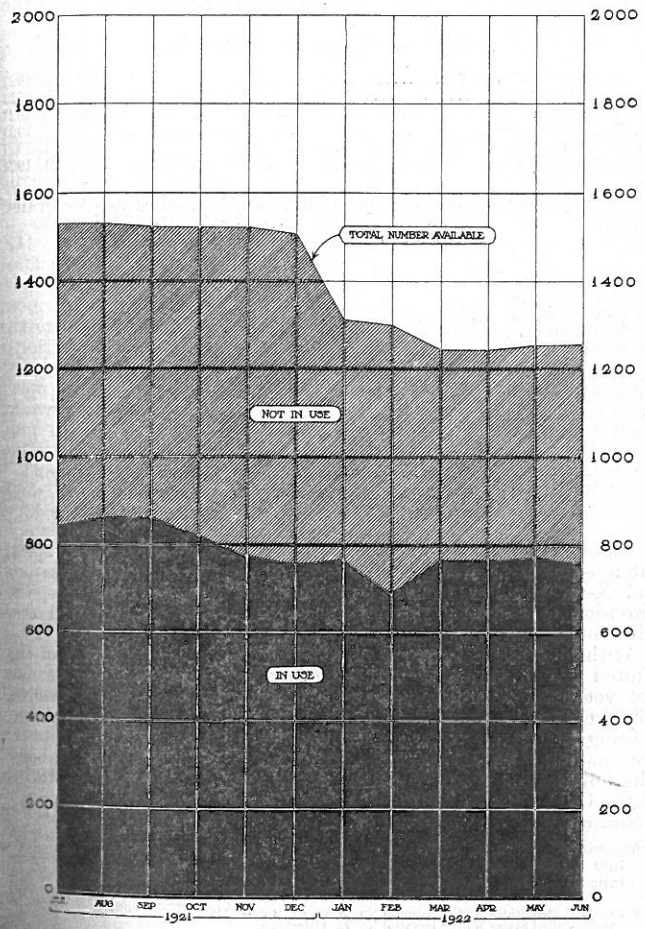
To meet the requirements of the budget a system of allotment and cost accounting was established at all hospitals with satisfactory results. It is now possible to determine the actual cost of operating each hospital, department by department, and the per diem cost for each patient. In allotting funds for these hospitals estimate

CHART No. 3.

U.S VETERANS' BUREAU

TOTAL NUMBER OF CONTRACT HOSPITALS VERSUS NUMBER OF CONTRACT HOSPITALS USED

FROM JULY 1, 1921, TO JUNE 30, 1922.



are made in advance of the allotment and a strict check is kept on all expenditures.

United States Veterans' Hospital No. 38, New York, N. Y., was closed March 9, 1922; United States Veterans' Hospital No. 61, Fox Hills, N. Y., was closed April 30, 1922; and United States Veterans' Hospital No. 71, Sterling Junction, Mass., was closed June 30, 1922. The patients were transferred to other hospitals or discharged from hospital treatment according to the physical needs of the individual cases.

Six hospitals for the care of general cases were opened during the year as follows:

LABORATORY AND X-RAY SERVICE.

The duties of the laboratory and X-ray subsection of the hospital subdivision, Medical Division, include the supervision of laboratory and X-ray supplies, general supervision of X-ray laboratories, the provision of technical personnel, the installation, repair, and distribution of laboratory and X-ray equipment.

At the end of the fiscal year, June 30, 1922, all laboratories of the United States veterans' hospitals were well equipped, but it had not yet been possible to secure technical workers of the desired efficiency and experience in some cases. This difficulty, however, is being rapidly overcome, as thoroughly qualified technical assistants are making application for appointment in increased numbers. The following is a list of personnel on duty in X-ray laboratories of the United States Veterans' Bureau under the jurisdiction of the laboratory and X-ray subsection:

Commissioned personnel on duty:	
July 1, 1921	39
June 30, 1922	57

[1] Formerly United States Marine Hospital No. 13, annex, Mobile, Ala.
[2] Formerly United States Marine Hospital No. 24, Algiers, La.

Technical personnel on duty:	
July 1, 1921	192
June 30, 1922	149
Veterans' hospitals having X-ray laboratories:	
July 1, 1921	58
June 30, 1922	47
X-ray cases (examinations)	142,629
X-ray exposures	304,375

PHYSIOTHERAPY AND OCCUPATIONAL THERAPY.

The duties of the physiotherapy and occupational therapy subsection consist of the supervision of physiotherapy and occupational therapy activities, including the assignment of personnel and furnishing of supplies for both physio and occupational therapy in United States veterans' hospitals.

The activities of the reconstruction section of the United States Public Health Service from July 1, 1921, to May 1, 1922, the date all Veterans' Bureau hospitals were placed under the immediate direction and supervision of the United States Veterans' Bureau, were carried on in 61 stations of the service. The number of patients in occupational therapy treated during this period reached a total of 5,248 per week; the number of patients treated in physiotherapy reached a total of 4,297 per week. The hours of work per week in occupational therapy reached a total of 44,540. The total personnel reported as engaged in this work in the field was 285 in occupational therapy, and 231 in physiotherapy. These figures do not include the reports indicating the work carried on under the direct supervision of the Veterans' Bureau in the hospitals as prevocational training. From May 1, 1922, to the end of the fiscal year what was formerly known as "prevocational training" in Public Health hospitals from June 1, 1921, to May 1, 1922, was indicated under the head of "Occupational therapy."

The progress of prevocational training carried on under the immediate direction of the United States Veterans' Bureau, June 30, 1921, to May 1, 1922, is indicated as follows:

Stations.	Number of institutions.	Number of staff.	Number of patients enrolled.
United States Veterans' Bureau hospitals	35	203	3,770
National soldiers' homes	7	74	1,553
United States naval hospitals	3	32	348
United States Marine hospitals	9	23	599
Contract hospitals	51	159	2,735
Total	105	491	9,005

The work formerly carried on as occupational therapy treatment in the United States Public Health Service was continued in 46 hospitals of the United States Veterans' Bureau, which were transferred by an Executive order of May 1, 1922 The occupational therapy treatment in the marine hospitals was continued under the immediate direction and supervision of the Surgeon General of the United States Public Health Service.

The following facts indicate the progress of the work in the 46 hospitals of the Veterans' Bureau as of June 30, 1922:

Physiotherapy personnel on duty in Veterans' hospitals	188
Number of patients treated per week in physiotherapy	2,955
Number of treatments per week in physiotherapy	24,548
Occupational therapy personnel on duty in Veterans' hospitals	244
Number of patients treated per week in occupational therapy	3,414
Number of hours of work in occupational therapy per week	32,935

Condition of occupational therapy (prevocational training) under Veterans' Bureau on June 30, 1922.

Stations.	Number of institutions.	Number of staff.	Number of patients enrolled.
United States Veterans' Bureau hospitals	36	219	3,590
National soldiers' homes	7	67	1,521
United States Marine hospitals	4	12	304
Contract hospitals	45	162	2,854
Total	92	460	8,269

NOTE.—Occupational therapy in United States naval hospitals was transferred to the jurisdiction of the Navy May 1, 1922.

Considerable progress has been made during the year in differentiating types of occupational therapy projects considered most suitable for occupational therapy treatment in the tuberculosis, neuropsychiatric, and general hospitals. Projects presented to central office for exhibition purposes indicate in a measure the development of certain standardizations necessary to establish occupational therapy on a scientific basis.

The by-products of occupational therapy, which belong to the Government, have been disposed of in accordance with special regulations approved under date of September 22, 1920. The amount turned over to the Government from this source for the fiscal year ending June 30, 1922, totaled $35,310.24. This does not include the value of the articles which were given to the patients in accordance with regulations providing that when a patient makes two articles, similar in value, one remains the property of the Government, and the other becomes the property of the patient.

In connection with the progress indicated in this report, it should be noted that occupational therapy is a therapeutic measure, this form of treatment being prescribed by the medical officer in charge of the work. Therapy is the primary consideration, the by-products which result therefrom are the secondary consideration. The commercial aspect, therefore, is not emphasized.

Until May 1, 1922, physiotherapy activities in the Veterans' Bureau were confined to contract hospitals and work done in clinics directly under the control of the bureau, and to the furnishing of physiotherapy aids and equipment to the national soldiers' homes and the United States Navy. On May 1, 1922, the soldiers' homes and the Navy took over their own activities along these lines. On the same date the Veterans' Bureau took over from the Public Health Service the operation of the veterans' hospitals and such clinics as remained under its control. Since that date the physiotherapy and the occupational therapy activities in these hospitals and clinics have been under the direct control of the Veterans' Bureau.

Prior to January 1, 1922, comparatively little organized physiotherapy work had been done in the district clinics. Two full-time and five part-time district supervisors of physiotherapy had been appointed. As late as January 19, 1922, although authority existed for the employment of 100 physiotherapy aids, there were but 7 on duty in all of the districts. This was due, in a measure, to the lack of eligibles on the civil-service register.

After January 1, 1922, an active campaign of organization was instituted, which resulted in furnishing physiotherapy personnel and equipment to the district and larger subdistrict offices, a number of the increased personnel having been furnished through the courtesy and cooperation of the Public Health Service through transfers of aids from hospitals to the district clinics. There has existed, both before and since decentralization, the closest cordiality and cooperation between central office and the district organizations in connection with this work.

PERSONNEL.

The duties of the personnel subsection consist of the general supervision of the arrangement of details of appointment, promotion, and assignment of medical and professional personnel in hospitals, contact with civil service, and liaison between the hospital subdivision, Medical Division, and the personnel subdivision, administration division.

An average of 7,000 pieces of personnel matter has been received each week in this subsection, each piece requiring preliminary action before being sent to the personnel subdivision, the field, or the various branches of the hospital subdivision.

The personnel subsection has at all times endeavored to keep a complete file of personnel in hospitals, both alphabetically and by stations. At the end of each month a consolidated personnel report is made for general distribution, showing personnel of all hospitals by grades. In the two months in which the subsection functioned, the total personnel of hospitals was as follows:

May	11,047
June	10,416

The total number of nurses on duty in the hospitals since the transfer of the hospital section to the Veterans' Bureau has been as follows:

	Nurses.	Patients.
May	1,316	12,488
June	1,224	12,239

These figures show that since the transfer of the hospitals, 92 nurses have been lost to the service. During the same period there has been a decrease of 249 patients. If the ratio of nurses to patients is considered, the normal reduction in the nurse corps should have been about 25. We have, therefore, lost over three times the number

of nurses which we should have lost normally, compared with the loss of patients. When it is considered that the hospitals are running below the generally accepted ratio for nurses, the service is extremely low in its quota.

NURSES.

The duties of the nurses' subsection comprise the general supervision of the United States Veterans' Bureau nurses, including the determination of professional standards, qualifications for nurses, appointments, assignments, and transfer of nurses.

With the Executive order of May 1, 1922, transferring the United States Veterans' hospitals from the United States Public Health Service to the United States Veterans' Bureau, came the necessity for the establishment of a nursing service in the United States Veterans' Bureau. Fourteen hundred and twenty nurses were included in this transfer. A superintendent of nurses and assistant superintendents of nurses were appointed to have supervision of the nurses in hospitals and in the field. The Veterans' Bureau nursing service, in addition to the 1,420 nurses transferred in accordance with the Executive order of May 1, 1922, consists of 400 graduate nurses doing follow-up work in the district and subdistrict offices of the bureau.

The nurses' service of the United States Veterans' Bureau is a civilian organization. The nurses are appointed under the regulations of the United States Civil Service Commission. The requirements are as follows: United States citizenship, graduation from a recognized school for trained nurses requiring a residence of at least two years in a hospital having a daily average of 30 patients or more and giving a thorough practical and theoretical training, and evidence of State registration. Nurses doing follow-up work in the district and subdistrict offices, in addition to the foregoing requirements, are required to have had at least four months of post-graduate training in public-health nursing at a school of recognized standing or, in lieu of such training, one to two years of experience in public-health nursing under a nurse supervisor.

Beginning June 1, 1922, an intensive course of training in tuberculosis nursing was conducted at United States Veterans' Hospital No. 60, Oteen, N. C., with an attendance of 32 nurses—15 of these being nurses on hospital duty, 15 from the group doing follow-up work, and 2 from the United States Navy Nurse Corps. The course comprised instruction in the treatment of tuberculosis, the prevention of tuberculosis from a standpoint of public health and personal hygiene, the hazards of occupations, and the nurse's relation to responsibility in prevention of tuberculosis.

There are 502,904 beneficiaries under the supervision of the follow-up nurses. The following is a summary of the work done by the follow-up nurses:

Number of beneficiaries needing social adjustment	12,17
Number cases needing medical care	141,6
Number visited at home	76,6
Number office, placement, and school interviews	502,3
Number tuberculosis cases under supervision	140,2
Number neuropsychiatric cases under supervision	75,9

DIETETICS.

The duties of the dietetic subsection comprise the general supervision of hospital diets, the appointment, assignment, and transfer of dietitians; the approval of requisitions for subsistence supplies, authorization of cooked rations; and the standardization of kitchen equipment for hospitals. The following is a list showing the number of dietitians in the employ of the United States Veterans' Bureau:

Superintendent of dietitians	1
Assistant superintendent of dietitians	1
Chief dietitians	37
Assistant chief dietitians	60
Dietitians	52
Total number of dietitians on duty	151

LIBRARIES.

The duties of the library subsection comprise the administration and supervision of libraries in hospitals, the preparation of requisitions for books, periodicals, book reviews, etc., and assignment of librarians to United States veterans' hospitals.

On July 1, 1921, library work for ex-service men was recognized as a Government function, and the work which had been previously carried on by the American Library Association was transferred to the Government. Due to lack of funds, the work of the American Library Association had been carried without sufficient personnel and without an adequate supply of books. The congressional appropriation for books and magazines became available July 1, 1921, and it was possible to rectify the shortage of books. Gradually there is being built up in the hospitals of the service small working libraries suited to the needs of the various types of patients.

On October 1 the Civil Service Commission gave certified status to all librarians and assistants who were in the employ of the American Library Association when the work was transferred. This made it possible to continue the work without a break. As was natural, the development of the work has been slow; it was new in hospitals and few doctors had given much thought to it as a therapeutic agency. Before the war, hospital library work had meant the medical library solely, but the work as now carried on means not only the medical library but a well-administered central library room for patients and personnel and direct service to patients in the wards unable to go to the central library. When library work has been well done the doctors in the majority of cases have been prompt to acknowledge its value. In mental hospitals its therapeutic value has been especially emphasized. Even where they have been loath to acknowledge its therapeutic value to an individual patient, its effect upon the hospital as a whole has been recognized.

A statistical report showing the activity of this subsection follows:

1. Personnel:	
Librarians transferred from American Library Association	32
Resignations during the year	12
New appointments	17
Present staff	37
Salaries	$47,450

2. Book collections:	74
Number of hospitals served	91,125
Number of volumes (estimated) in hospital libraries	$53,000
Amount spent for books and periodicals (approximate)	

NOTE.—A number of the hospitals started the year with collections of books already formed under the American Library Association administration. The total number of volumes given above includes these books. The expenditure covers additions to such collections and new collections for hospitals not already supplied with books.

3. Circulation (statistics available for 20 hospitals):	
Total circulation for 20 hospitals for 10 months, July 1, 1921, to May 1, 1922	227,309
Average monthly circulation	22,730
Largest total circulation reported (hospital No. 55, Fort Bayard, N. Mex.)	21,163
Smallest total circulation reported (hospital No. 18, St. Louis, Mo.)	2,310

SUPPLIES.

The duties of the supply subsection consist of the approval of requisitions and proposals for supplies for United States Veterans' hospitals in quantities considered sufficient to meet the needs of the hospitals. Requisitions for supplies for hospitals about to be opened are prepared in this subsection. Standardized lists of hospital equipment and supplies are in process of preparation in this subsection. This subsection was established May 17, 1922, and from that date to June 3, 1922, consisted of a personnel of one medical officer and two stenographers. During this period requisitions were approved as follows:

May 15 to May 19	295
May 20 to May 25	441
May 27 to June 2	566
June 3 to June 9	497
June 10 to June 16	376
June 17 to June 23	467
June 24 to June 30	420
Total	3,062

MAIL AND RECORDS.

The mail and records subsection, hospital subdivision, Medical Division, is a clearing house for all mail and records of the United States veterans' hospitals. This subsection receives all incoming mail, records all outgoing mail, files all original correspondence, and maintains a record of the action taken thereupon. Between May 15, 1922, the date of establishment of this subsection, and June 30, 1922, the end of the fiscal year, the activities of this subsection are shown as follows:

Letters received	17,03[illegible]
Letters mailed	9,87[illegible]
Telegrams received	96[illegible]
Telegrams sent out	67[illegible]
Correspondence filed	23,61[illegible]
Total	52,1[illegible]

DISTRICT MEDICAL SERVICE.

The medical organization of the 14 districts of the United States Veterans' Bureau has three major functions to perform. These are the rating of claims for disabilities due to military service, the furnishing of medical relief to beneficiaries, and the inspection of personnel, space, equipment, and methods. The district medical service subdivision is directly concerned with relief, or, in other words, is responsible for every form of medical service to beneficiaries within the districts. This embraces medical examinations to determine the validity of claims, the advisability of hospitalization, or the feasibility of vocational training, treatment in any specialty in medicine or surgery (including dentistry), the furnishing of prosthetic appliances to cripples, arranging for hospitalization, and other special medical care and home visitation by nurses for follow-up observation and social service.

Prior to the establishment of subdistrict offices much of the examination work and considerable treatment had been provided through the use of individual physicians designated for the purpose. The success of the few dispensaries which had been established in connection with district offices, in furnishing better service at greater economy, indicated the policy of extending the formation of such agencies throughout the country. Accordingly, with the passage of the act of August 9, 1921, which provided for the creation of subdistrict offices at the important points in every district, the opportunity was presented and it was determined to establish clinical facilities in every district and subdistrict office. The dispensaries of the United States Public Health Service which had handled ex-service cases were transferred to the jurisdiction of the United States Veterans' Bureau, and plans were formulated for the standardization of personnel, space, and equipment for a complete system of 140 dispensaries. Three types of dispensary were established, according to the size and needs of the community to be served. These were as follows:

Type A.—Consists of a complete unit, comprising clinics in internal medicine, general surgery, tuberculosis, neuropsychiatry, ophthalmology, diseases of the ear, nose, and throat, urology, orthopedics, physiotherapy, dentistry (six clinics), X-ray, clinical laboratory and pharmacy, with facilities for administration and social service, occupying approximately 8,500 square feet of floor space.

Type B.—Consists of a similar unit in which the surgical clinic embraces urology and orthopedics; the dental clinic has two chairs instead of six, and the section of physiotheraphy is omitted, the floor space occupying 4,216 square feet.

Type C.—Consists of clinics in medicine, surgery, and eye, ear, nose, and throat, with a small clinical laboratory, one dental chair and an X ray (if X-ray contracts justify its establishment), occupying 2,352 square feet.

Dispensaries of the type of class A were designed for the 19 leading cities of the United States, including the 14 district headquarters; 17 dispensaries of the type of class B were planned for the remaining cities which exceed 200,000 population, and 103 class C dispensaries for the remaining subdistrict offices. By such a system the process of decentralization of medical service is made more perfect, all of the advantages of group diagnosis are furnished the claimant, and the responsibility for action is removed from an individual part-time examiner and shared by a group of full-time officers whose activities are under constant supervision.

The comprehensive program described above was completed and formally approved in January, 1922. It was then presented to each

district manager with instructions to study the conditions of his district with the idea of its adoption or modification to suit local conditions. The district managers were then urged to acquire the necessary space, to requisition the equipment and nominate the personnel. It was estimated that with the time necessarily consumed in the completion of leases and contracts, the shipping and installation of equipment, and the choice of qualified physicians and other technical personnel, it would be 18 months before the program would be complete. However, on June 30, 1922, all class A dispensaries and all but 4 of class B dispensaries and 62 of the class C dispensaries were in operation, with every prospect of the entire system being in operation by October 1.

The opening of the dental clinics in connection with the dispensaries referred to has been an important factor in providing better service to beneficiaries, with considerable economy to the Government. Dental clinics make possible a uniformity of standards in treatment by providing all of the modern facilities with the advantage of consultations in the clinics; thus the expensive and unsatisfactory procedure of using scattered designated dental examiners on a fee basis is being discontinued. There are now 87 dental clinics in operation, of which 19 are class A, equipped with the most modern facilities, 8 are class B, and 60 are class C, furnished with equipment from the United States Army Dental Corps.

The authorizations for dental treatment increased with the passage of the Sweet Act from 50 per cent of all claims for dental treatment to 70 per cent. During the past two months, however, there has been a notable decrease in the amount of dental treatment authorized by district managers.

In connection with the furnishing of prosthetic appliances to the districts, orthopedic shops have been opened in the third, fourth, and tenth districts, and the saving effected through their activities fully justifies the establishment of similar shops in the remaining districts. In addition to the economic factor, the improvement in the service was highly gratifying in affording beneficiaries complete satisfaction by having their appliances made to order and by keeping the same in repair with a minimum of inconvenience and delay.

Nursing activities cover service in dispensaries and training centers and follow-up visitation in the homes of beneficiaries. The diversity of such work requires the choice of special personnel having experience in public-health and social-service activities with especial reference to tuberculosis and neuropsychiatry. In the dispensaries and training centers the nurses are responsible for certain routine duties in connection with the examination and treatment of patients, the care of instruments and supplies, and response to emergencies. The follow-up work includes the preparation of patients for hospitalization or treatment, the observation of convalescents after discharge from hospital in order to prevent relapse, the response to emergencies in the home and the follow-up of physicians' sick calls.

A tabulation of the nursing activities throughout the 14 districts for the fiscal year follows:

Number of cases which received nursing care	141,69[illegible]
Number visited at homes	76,68[illegible]
Number of office, placement, and school interviews	502,33[illegible]
Number of tuberculosis cases supervised	140,22[illegible]

Number of neuropsychiatric cases supervised	75,965
Total under supervision (including present cases)	502,904
Number of follow-up reports made	192,128
Number of training reports made	4,859
Number treated in dispensaries	74,775
Number of social adjustments made	12,175

Personnel:	
Superintendent of nurses	1
Neuropsychiatric chief nurses	1
Chief nurses, district offices	12
Follow-up nurses	321
Dispensary nurses	45
Total number of nurses on duty June 30, 1922	380
Number of appointments pending oath of office, June 30, 1922	23

In the office of the subdivision 2,000 proposals and 1,370 requisitions for drugs, medical supplies, surgical instruments, and office equipment have been acted upon. New forms were devised which indicate the quantity of material on hand as well as that desired, with classification of equipment by unit and item.

In the tabulations it will be seen that for the last half of the fiscal year the number of physical examinations which have been made throughout the various districts shows an increase in districts 1, 2, 3, 4, 8, 9, 10, and 13, while in districts 5, 6, 7, and 14 there has been a decrease in the number of physical examinations. There has been a marked increase in the number of treatments given beneficiaries in all of the districts except districts 5, 6, and 7.

A review of the figures for dental vouchers submitted to central office since January 1, 1922, shows that the number of dental examinations and total costs of same has increased in districts 1, 5, 8, 9, 10, 11, 12, 13, and 14, while there has been a decrease in districts 2, 3, 4, and 7.

The tabulation of medical and dental examinations according to their source, i. e., district offices, subdistrict offices, salaried examiners and designated examiners on a fee basis, gives a general increase for the totals of such groups throughout all districts from January 1 to June 1. The districts having the highest number of examinations are districts 7 and 8, in the order named. The lowest number of examinations was made in district 13, the next lowest in district 12. The number of examinations performed in district offices is on the increase in districts 1, 3, 4, 5, 8, 9, 10, 11, 12, 13, and 14, while there has been a slight decrease in districts 2, 6, and 7. The number of examinations in subdistrict offices has increased in every district except districts 5, 6, 9, 12, 13, and 14. There has been a decrease in the number of examinations performed by designated examiners on a fee basis in districts 4, 6, 11, 12, and 13, the remaining districts showing a stationary condition or an increase. The districts in which the percentage of examinations performed on a fee basis is highest are district 12 (15.88 per cent), district 5 (14.32 per cent), and district 14 (13.92 per cent), while the lowest percentages for fee-basis work are in district 1 (2.97 per cent), district 2 (4.24 per cent), and district 4 (4.58 per cent).

Over 50 per cent of the physical examinations made within the districts were made in district offices 1, 2, 3, and 11. The district offices performing the lowest percentage of examinations, compared

with the total for the district were districts 14, 7, and 5. The districts in which the greatest number of examinations was performed in subdistrict offices were district 10 (65.7 per cent) and district 6 (64.9 per cent), while the district having the lowest percentage for subdistrict examinations was district 11 (23.94 per cent).

The greatest number of treatments was given in district 7 (198,443), with district 8 (169,426) and district 12 (140,823) following. The lowest number of treatments was given in district 14 (32,071), with district 13 (39,001) and district 6 (53,411) following.

A study of the tabulation of reports of examinations according to the various specialties shows that district 8 is making the greatest number of general physical examinations; district 3 is making the greatest number of eye, ear, nose, and throat examinations; district 2 leads for neuropsychiatric examinations; district 3 for surgical examinations; for tuberculosis examinations; district 7 for urological examinations; district 13 for X-ray examinations; district 14 for physiotherapy examinations; district 9 for dental examinations. The leading districts in treatment according to specialties are as follows: General, district 7; eye, ear, nose, and throat, district 9; neuropsychiatry, district 2; tuberculosis, district 3; surgical, district 2; urology, district 8; X-ray, district 8; physiotherapy, district 12; dental, district 11.

FOREIGN RELATIONS.

The activities of the foreign relations subdivision of the Medical Division are concerned with the care of this bureau's beneficiaries outside the territorial jurisdiction of the United States and in the insular possessions.

Bureau beneficiaries are provided for through Government agencies throughout the world, generally by representatives of the Department of State on foreign service, upon authority from this bureau, as well as by medical officers of the United States Public Health Service, Army, and Navy when available on foreign service.

It is a real pleasure to bear testimony to the cordial and satisfactory relationship existing between this Government and the Canadian Government under the articles of reciprocity now existing regarding service to their respective ex-service men, and the working arrangement between the United States Veterans' Bureau and the Department of Soldiers' Civil Reestablishment of Canada has been along the most satisfactory lines. An interchange of visits between the officers of this bureau and the department has resulted in a much better understanding of the problems in evidence. The Canadian Government has been prompt in authorizing service when it is shown that the Canadian ex-service man is eligible for treatment and a proper beneficiary of the department, and the service given the Veterans' Bureau beneficiaries through the Canadian department has been most satisfactory.

Cable, radio, and telegram services are in daily use for this bureau's beneficiaries when it is found necessary to expedite service in this way. As an illustration of the elimination of the "red tape" with which the bureau is sometimes charged, it may be interesting to know that in some instances when this bureau has requested service by telephonic communication with the Department of State, which is immediately confirmed by letter, the Department of State, which has cabled its representative on authority of the telephonic request from the bureau, has received a reply by wire for the bureau from distant parts of the world prior to receipt of the official letter from the bureau requesting the service. This, too, indicates the prompt service given through the Department of State, which has always been of a high order.

Service by this bureau to all allied Governments' ex-service men is given upon authority in each case by the Government under whose flag the man served, and the conditions under which this service is furnished are outlined under appropriate heads in the "Instructions governing the treatment of discharged members of the military and naval forces of those Governments which have been associated in war with the United States since April 6, 1917."

Reimbursement is made to the United States Veterans' Bureau for this service of any actual expenditures not including overhead charges. For instance, if an examination is made by one of this bureau's medical officers who is employed on a salary basis, there is no charge for such examination nor for medical or surgical service.

HOSPITAL INSPECTION.

The inspection subdivision consists of the central office inspectors and one or more inspectors in the 14 district offices. The work of this subdivision is directed by the chief of the inspection subdivision. During the year ending June 30, 1922, inspections were made in each district as follows:

District 1	188	District 8	101
District 2	72	District 9	106
District 3	114	District 10	109
District 4	97	District 11	52
District 5	92	District 12	76
District 6	97	District 13	84
District 7	107	District 14	32

At the end of the fiscal year terminating June 30, 1922, there were in operation 47 United States veterans' hospitals and 1,257 hospitals under contract with the United States Veterans' Bureau. Inspections and investigations of these hospitals during the year have been made as follows:

Special investigations	390
Special hospital inspections	111
Contract hospital inspections	826
Total Nov. 1, 1921, to June 30, 1922, inclusive	1,327

The following table indicates the number of stations visited and mileage traveled from November 1, 1921, to June 30, 1922:

LEGISLATION.

Prior to the passage of the amendatory act of August 9, 1921, medical treatment was supplied by the Bureau of War Risk Insurance only to veterans separated from service under honorable conditions and who were suffering from disabilities, incurred in line of duty, of a compensable degree. At that time the bureau was authorized to supply treatment under the terms of article 3, section 302, paragraph 3 of the war risk insurance act. Under the terms of this section of the act the right to treatment was made contingent upon the right to compensation. Persons not entitled to compensation could not receive treatment. The only exception to this was emergency treatment provided by the bureau in urgent cases before the claim had been adjudicated, which was a humanitarian measure instituted to safeguard the lives of claimants who were seriously ill. Such treatment was authorized until the claim was adjudicated. In the event of disallowance of compensation treatment was no longer furnished, and if the claimant was receiving hospital care, discharge from the hospital was required as soon as practicable after disallowance.

However, the amendatory act of August 9, 1921, extended the authority of the bureau so that treatment of all disabilities of service origin not due to willful misconduct could be given even though the disability might not be of a compensable degree. The following is quoted from this act:

SEC. 13. In addition to the care, treatment, and appliances now authorized by law, said bureau also shall provide without charge therefor hospital, dental, medical, surgical, and convalescent care and treatment and prosthetic appliances for any member of the military or naval forces of the United States separated therefrom under honorable conditions disabled by reason of any wound or injury received or disease contracted, or by reason of any aggravation of a preexisting injury or disease, specifically noted at examination for entrance into or employment in the active military or naval service, while in the active military or naval service of the United States on or after April 6, 1917: *Provided*, That the wound or injury received or disease contracted, or aggravation of a preexisting injury or disease, for which such hospital, dental, medical, surgical, and convalescent care and treatment and prosthetic appliances shall be furnished, was incurred in line of duty and not caused by his own willful misconduct: *Provided further*, That application for such care and treatment and appliances provided for in this section shall be made within one year from date of separation from service or from the date this act goes into effect, whichever is the later.

From this it will be seen that the United States Veterans' Bureau is authorized to provide necessary hospital care, medical, surgical, and dental treatment, prosthetic appliances, etc., to disabled members of the military or naval forces of the recent war who were discharged under honorable conditions. The right to this treatment, however, is contingent upon the actual application for treatment by the disabled veteran prior to August 9, 1922, or within one year from date of discharge, whichever is the later date.

In accordance with the bureau's general policy, under section 13 referred to, 161,323 medical and dental treatments were provided during the last half of the fiscal year 1922, through dispensaries and hospitals of the bureau and other Government agencies.

TABLE No. 13—*United States Veterans' Bureau dispensaries, as of June 30, 1922.*

CLASS A DISPENSARIES.

Boston, Mass.	Equipment complete; dental clinic established.
New York, N. Y.	Equipment complete; dispensary moved into Grand Central Building, with all space and facilities required for every clinic and department.
Philadelphia, Pa.	Equipment complete; dental clinic established; prosthetic shop established.
Washington, D. C.	
Atlanta, Ga.	Equipment complete; dental clinic established.
New Orleans, La.	Dispensary being transferred to more adequate quarters; drugs and dental equipment received.
Cincinnati, Ohio	Equipment complete; dental clinic established.
Chicago, Ill.	Equipment complete; dental clinic established. Additional space acquired.
St. Louis, Mo.	Equipment complete; dental clinic established; dispensary transferred to more adequate quarters.
Minneapolis, Minn.	X-ray department being established; prosthetic shop established.
Denver, Colo.	Complete equipment; dental clinic established; negotiating for physiotherapy.
San Francisco, Calif.	Equipment complete; dental clinic established; physiotherapy being enlarged.
Seattle, Wash.	Equipment complete; dental clinic established; new building undergoing erection, to be completed Sept. 15, 1922.
Dallas, Tex.	Space acquired, personnel authorized; drugs furnished, other equipment to be sent on notice.
Pittsburgh, Pa.	Equipment complete, including dental clinic.
Baltimore, Md.	
Detroit, Mich.	
Kansas City, Mo.	Equipment complete, including dental clinic; will be in full operation Aug. 15.
Los Angeles, Calif.	Equipment complete, including dental clinic.

CLASS B DISPENSARIES.

Providence, R. I.	Physiotherapy equipment and drugs received.
Albany, N. Y.	Complete equipment.
Buffalo, N. Y.	Not established.
Rochester, N. Y.	Complete equipment.
Newark, N. J.	Complete equipment, negotiating for more adequate space.
Indianapolis, Ind.	Physiotherapy, dental received; full operation July 20.
Louisville, Ky.	Physiotherapy, drugs received.
Cleveland, Ohio	
Columbus, Ohio	Drugs received.
Milwaukee, Wis.	Physiotherapy, pharmacy, X-ray, drugs.
Des Moines, Iowa	Equipment complete.
Omaha, Nebr.	Not established.
Salt Lake City, Utah	Complete facilities, surgical, pharmacy, dental, received.
Portland, Oreg.	Facilities established.
Spokane, Wash.	X-ray, pharmacy.
Oklahoma City, Okla.	Not established.
Houston, Tex.	

CLASS C DISPENSARIES.

Bangor, Me.	Functioning, drugs received.
Portland, Me.	Functioning, physiotherapy, drugs received.
Lawrence, Mass.	Functioning, drugs received.
New Bedford, Mass.	
Springfield, Mass.	Functioning, physiotherapy equipment received.
Hartford, Conn.	Functioning, complete equipment; negotiating for more adequate space.
New Haven, Conn.	

Binghamton, N. Y.	Functioning; complete equipment.
Poughkeepsie, N. Y.	
Syracuse, N. Y.	
Utica, N. Y.	
Camden, N. J.	
Wilmington, Del.	No activities reported.
Allentown, Pa.	Functioning.
Erie, Pa.	
Harrisburg, Pa.	
Johnstown, Pa.	
Scranton, Pa.	
Williamsport, Pa.	
Hagerstown, Md.	
Norfolk, Va.	
Richmond, Va.	
Roanoke, Va.	
Bluefield, W. Va.	
Charleston, W. Va.	
Clarksburg, W. Va.	
Wheeling, W. Va.	
Jacksonville, Fla.	Space acquired; complete equipment.
Macon, Ga.	
Savannah, Ga.	Space pending.
Charlotte, N. C.	
Raleigh, N. C.	Space acquired; complete equipment.
Columbia, S. C.	
Chattanooga, Tenn.	
Jackson, Tenn.	
Knoxville, Tenn.	Space pending; complete equipment.
Memphis, Tenn.	Space acquired; complete equipment.
Nashville, Tenn.	
Mobile, Ala.	Functioning; using Southern Infirmary out-patient office.
Centralia, Ill.	Functioning; drugs received.
Danville, Ill.	Functioning; physiotherapy, X-ray, pharmacy received.
Peoria, Ill.	
Rockford, Ill.	
Springfield, Ill.	Functioning; physiotherapy, X-ray, pharmacy and drugs received.
East St. Louis, Ill.	Space acquired, equipment, including X-ray sent.
Grand Rapids, Mich.	Functioning, physiotherapy, X-ray, pharmacy received.
Marquette, Mich.	Functioning, drugs received.
Saginaw, Wis.	Functioning, physiotherapy, X-ray, pharmacy received.
Eau Claire, Wis.	
Green Bay, Wis.	
Colorado Springs, Colo.	Functioning, eye, ear, nose and throat; laboratory equipment received.
Pueblo, Colo.	Laboratory, X-ray.
Albuquerque, N. Mex.	Functioning.
Casper, Wyo.	Laboratory, X-ray.
Phoenix, Ariz.	Hospital equipment, drugs.
Tucson, Ariz.	Hospital equipment.
Tacoma, Wash.	Functioning, drugs and dispensary facilities.
Fort Smith, Ark.	Space acquired, personnel authorized.
Little Rock, Ark.	
Texarkana, Tex.	
Tulsa, Okla.	
El Paso, Tex.	
Fort Worth, Tex.	
San Antonio, Tex.	
Waco, Tex.

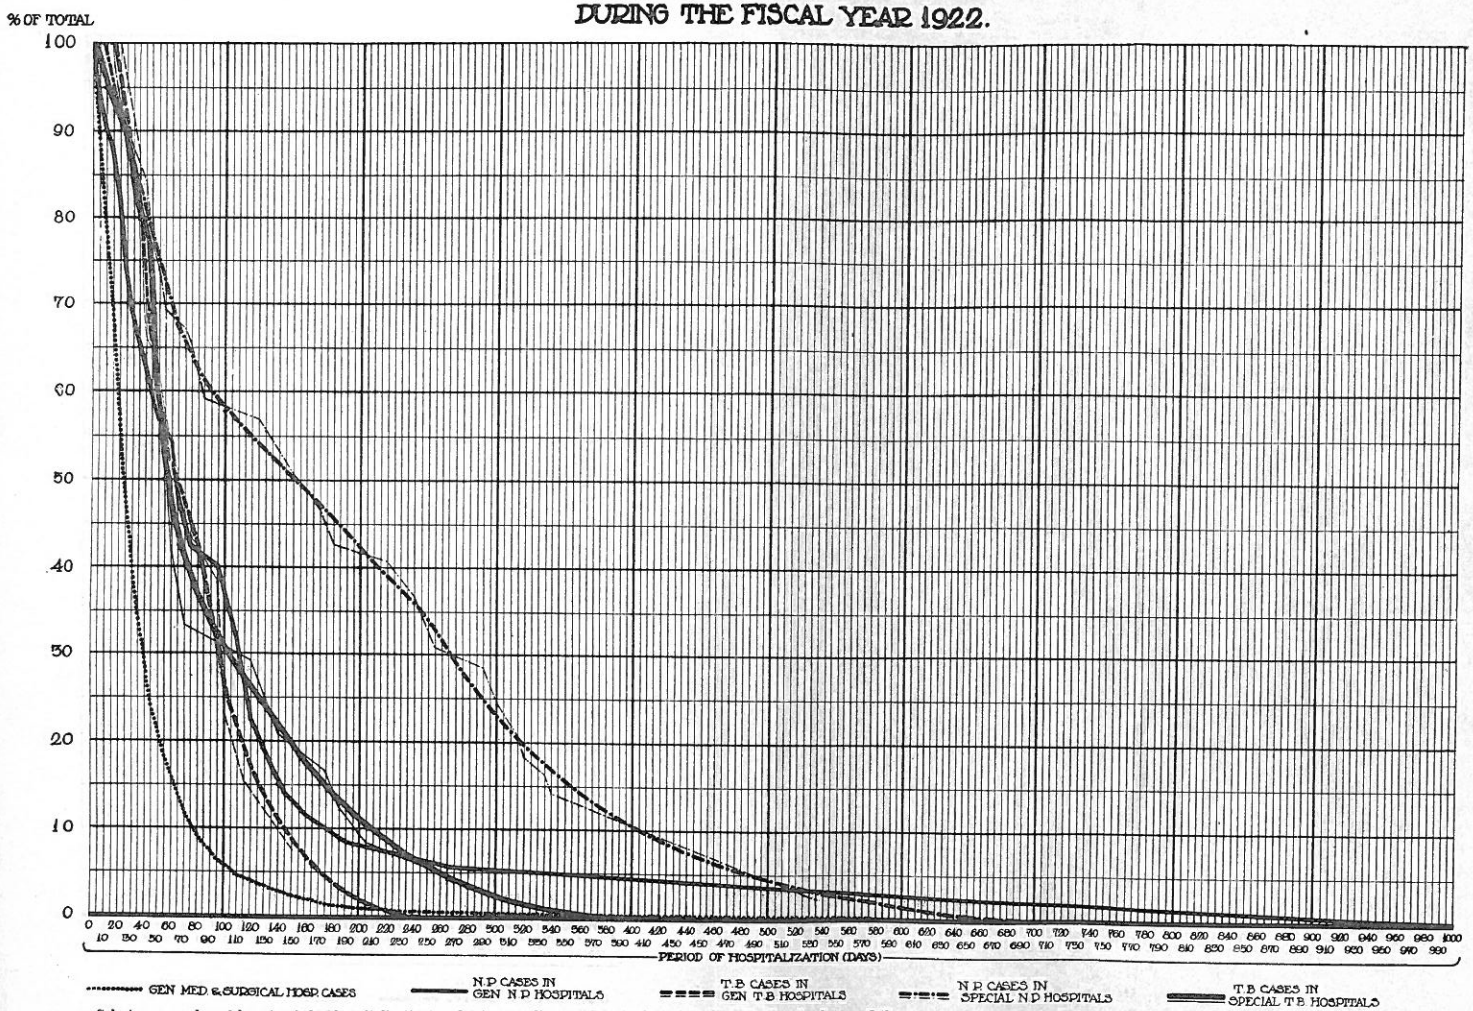
[1] Eleven months only. [2] Report not yet received.

PER CENT OF PATIENTS HOSPITALIZED LONGER THAN ANY SPECIFIED NUMBER OF DAYS FOR EACH TYPE OF DISEASE, TYPE OF HOSPITAL AND CLASS OF DISPOSITION.

Patients Recovered IN U.S. VETERANS AND U.S. MARINE HOSPITALS DURING THE FISCAL YEAR 1922.



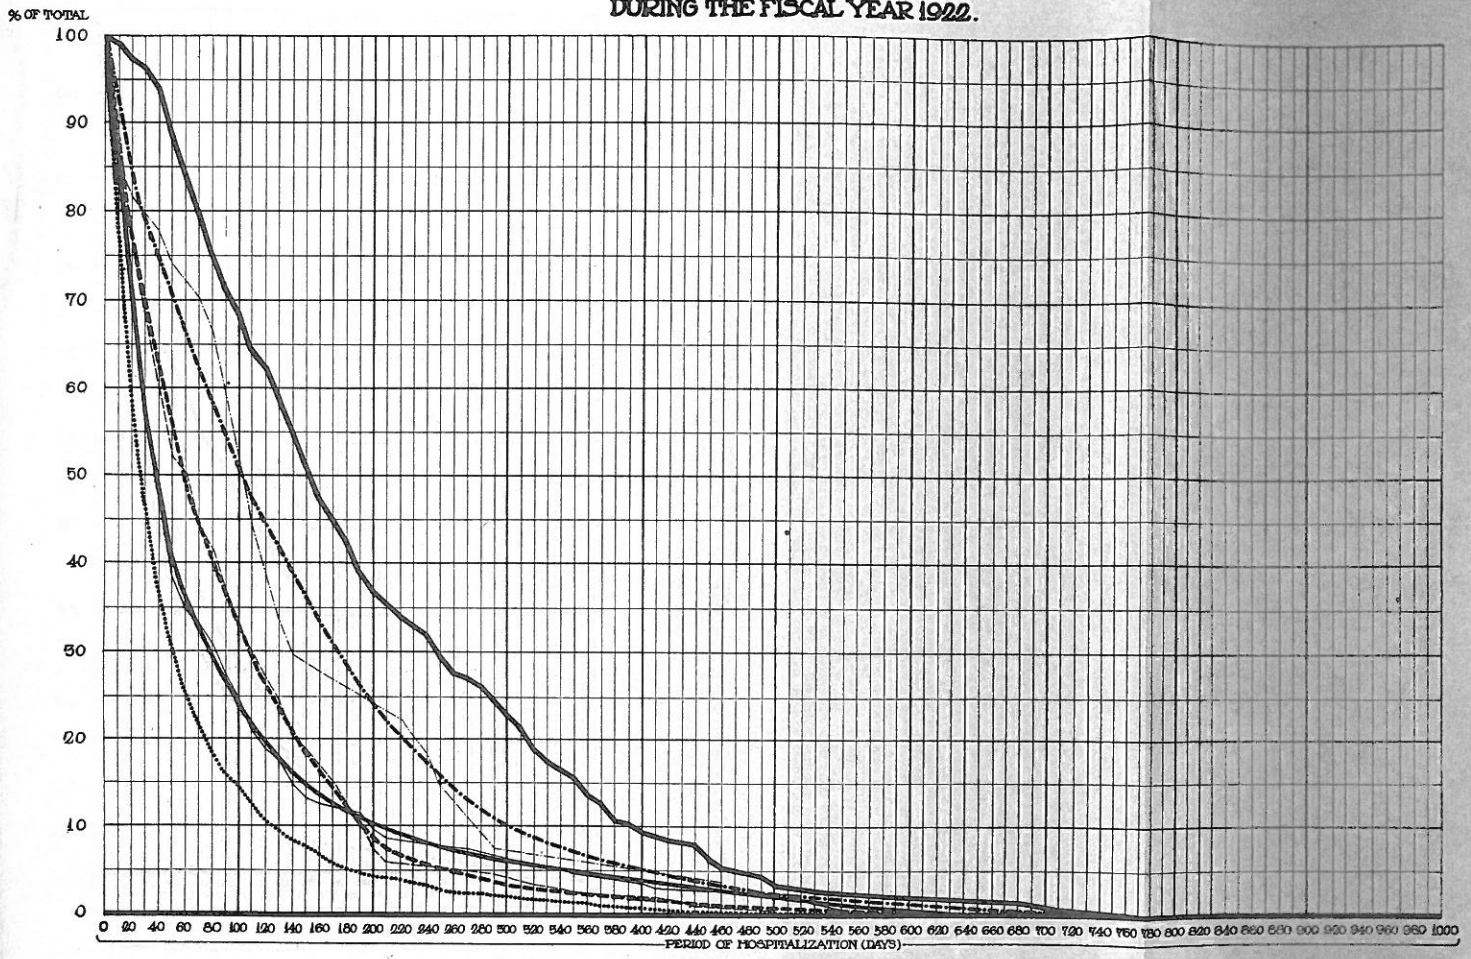
Select any number of days (period of hospitalization) and a type of disease. Locate the point where the line for days and the curve for disease meet. From this point locate the percentage of patients hospitalized longer than the number of days selected. E. g.: 1. Select 40 days. 2. Select general medical and surgical hospital cases. 3. Locate point where lines meet. 4. Read—Of all the patients recovered, 30 per cent of the general medical and surgical hospital patients were in hospital longer than 40 days.

18174—22. (Face p. 212.) No. 1

CHART NO. 7.

PER CENT OF PATIENTS HOSPITALIZED LONGER THAN ANY SPECIFIED NUMBER OF DAYS FOR EACH TYPE OF DISEASE, TYPE OF HOSPITAL AND CLASS OF DISPOSITION.

Patients Transferred to Out Patient Office FROM U.S. VETERANS AND U.S. MARINE HOSPITALS DURING THE FISCAL YEAR 1922.

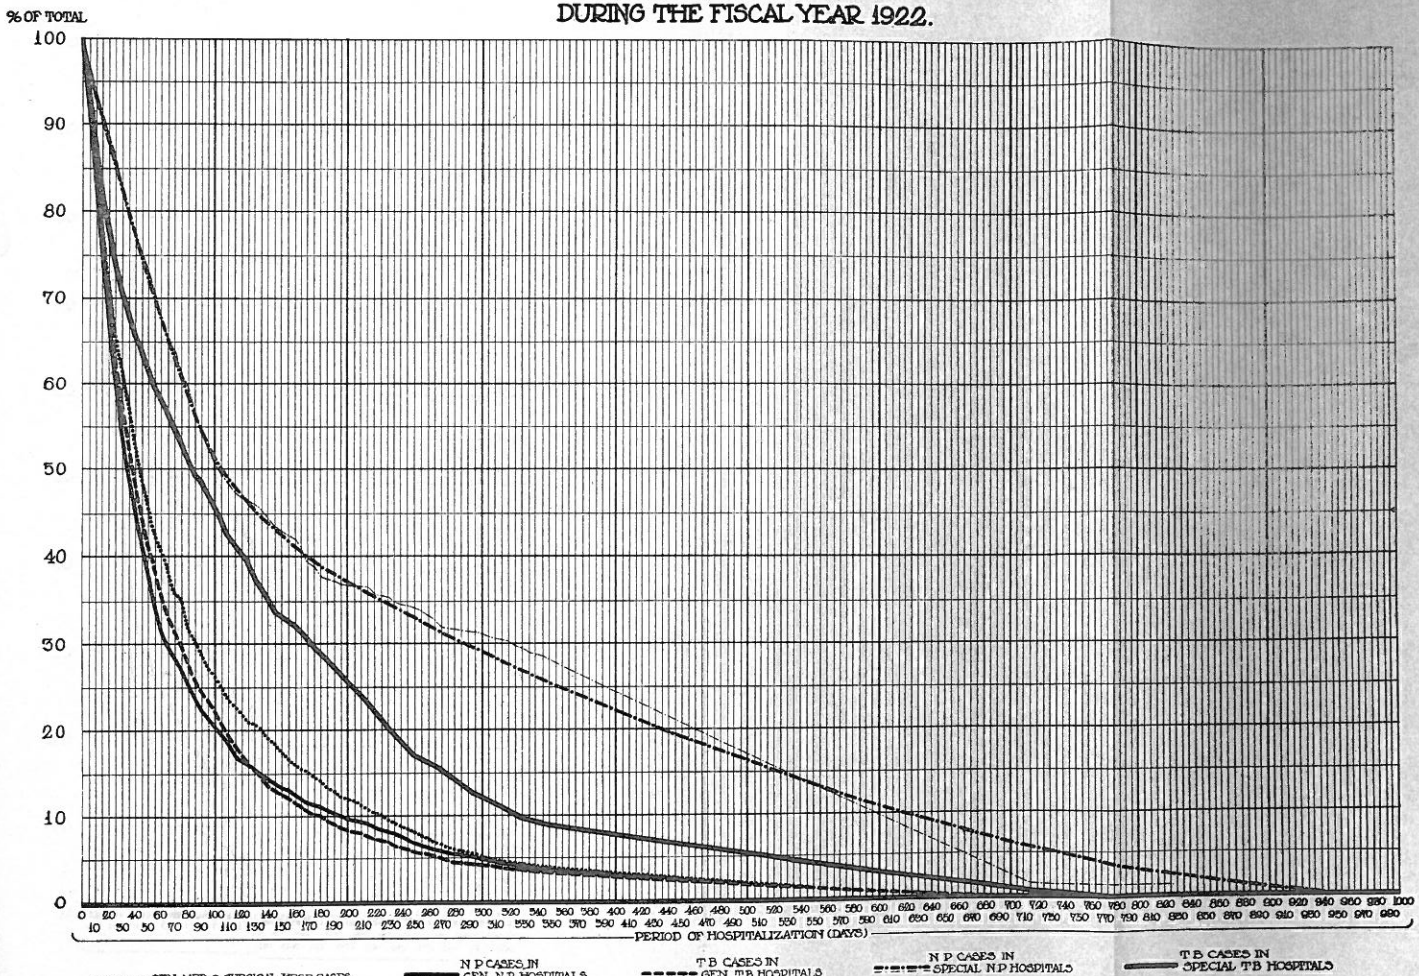


Select any number of days (period of hospitalization) and a type of disease. Locate the point where the line for days and the curve for disease meet. From this point locate the percentage of patients hospitalized longer than the number of days selected. E. g.: 1. Select 100 days. 2. Select general medical and surgical hospital cases. 3. Locate point where lines meet. 4. Read—Of all the patients transferred to out-patient offices, 15 per cent of the general medical and surgical hospital patients were in hospital longer than 100 days.

CHART NO. 8.

PER CENT OF PATIENTS HOSPITALIZED LONGER THAN ANY SPECIFIED NUMBER OF DAYS FOR EACH TYPE OF DISEASE, TYPE OF HOSPITAL AND CLASS OF DISPOSITION.

Patients Transferred★ FROM U.S. VETERANS AND U.S. MARINE HOSPITALS DURING THE FISCAL YEAR 1922.



★ TO U.S.V.H., U.S. MARINE HOSPITALS OR OTHER INSTITUTIONS

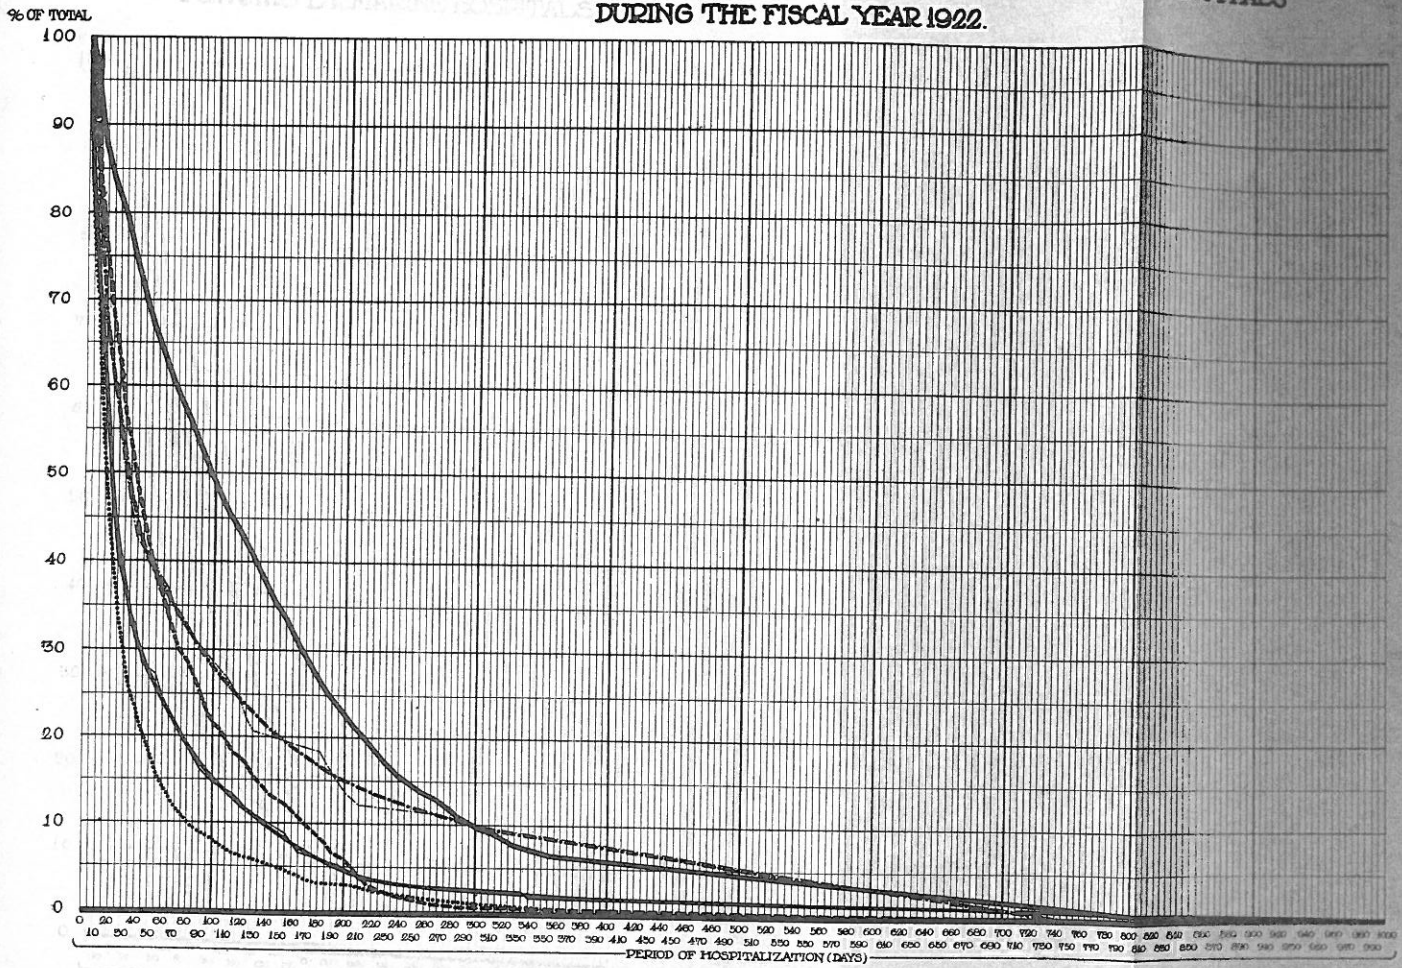
Select any number of days (period of hospitalization) and a type of disease. Locate the point where the line for days and the curve for disease meet. From this point locate the percentage of patients hospitalized longer than the number of days selected. E. g.: 1. Select 300 days. 2. Select tuberculous cases in general tuberculosis hospitals. 3. Locate point where lines meet. 4. Read—Of all the patients transferred, 4 per cent of the tuberculous cases in general tuberculosis hospitals were in hospital longer than 300 days.

18174—22. (Face p. 212.) No. 4

CHART NO. 9.

PER CENT OF PATIENTS HOSPITALIZED LONGER THAN ANY SPECIFIED NUMBER OF DAYS FOR EACH TYPE OF DISEASE, TYPE OF HOSPITAL AND CLASS OF DISPOSITION.

Patients Discharged Against Advice FROM U.S. VETERANS AND U.S. MARINE HOSPITALS DURING THE FISCAL YEAR 1922.

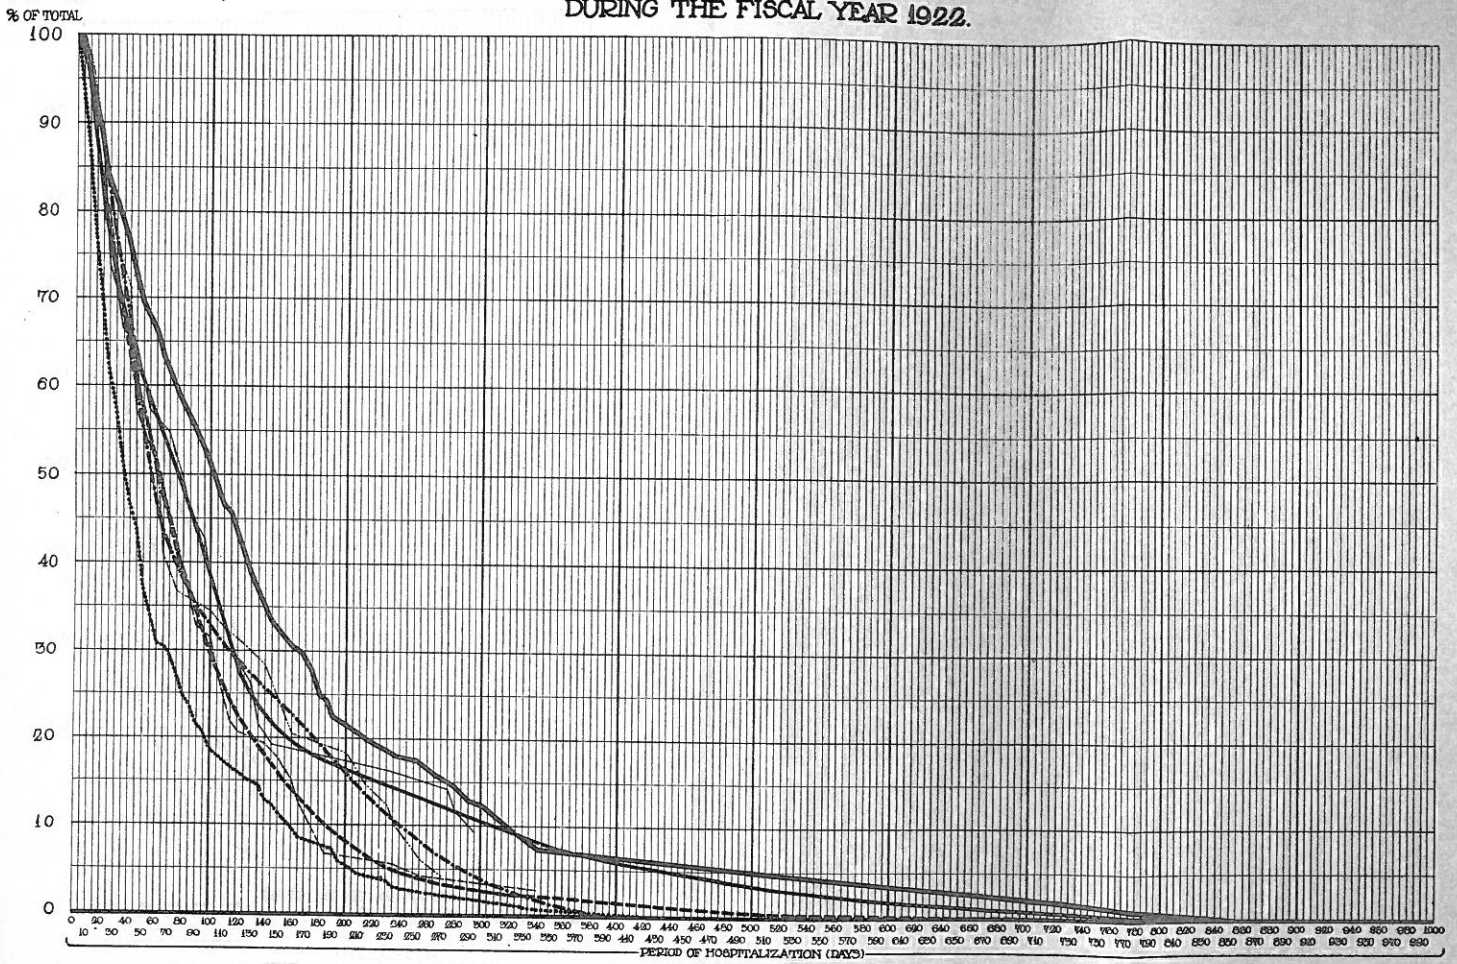


Select any number of days (period of hospitalization) and a type of disease. Locate the point where the line for days and the curve for disease meet. From this point locate the percentage of patients hospitalized longer than the number of days selected. E. g.: 1. Choose 500 days. 2. Choose neuropsychiatric cases in special neuropsychiatric hospitals. 3. Locate point where lines meet. 4. Read—Of all the patients discharged against advice, 5 per cent of the neuropsychiatric patients in special neuropsychiatric hospitals were in hospital longer than 500 days.

CHART NO. 10.

PER CENT OF PATIENTS HOSPITALIZED LONGER THAN ANY SPECIFIED NUMBER OF DAYS FOR EACH TYPE OF DISEASE, TYPE OF HOSPITAL AND CLASS OF DISPOSITION

Patients Discharged for Disciplinary Reasons FROM U.S. VETERANS AND U.S. MARINE HOSPITALS. DURING THE FISCAL YEAR 1922.



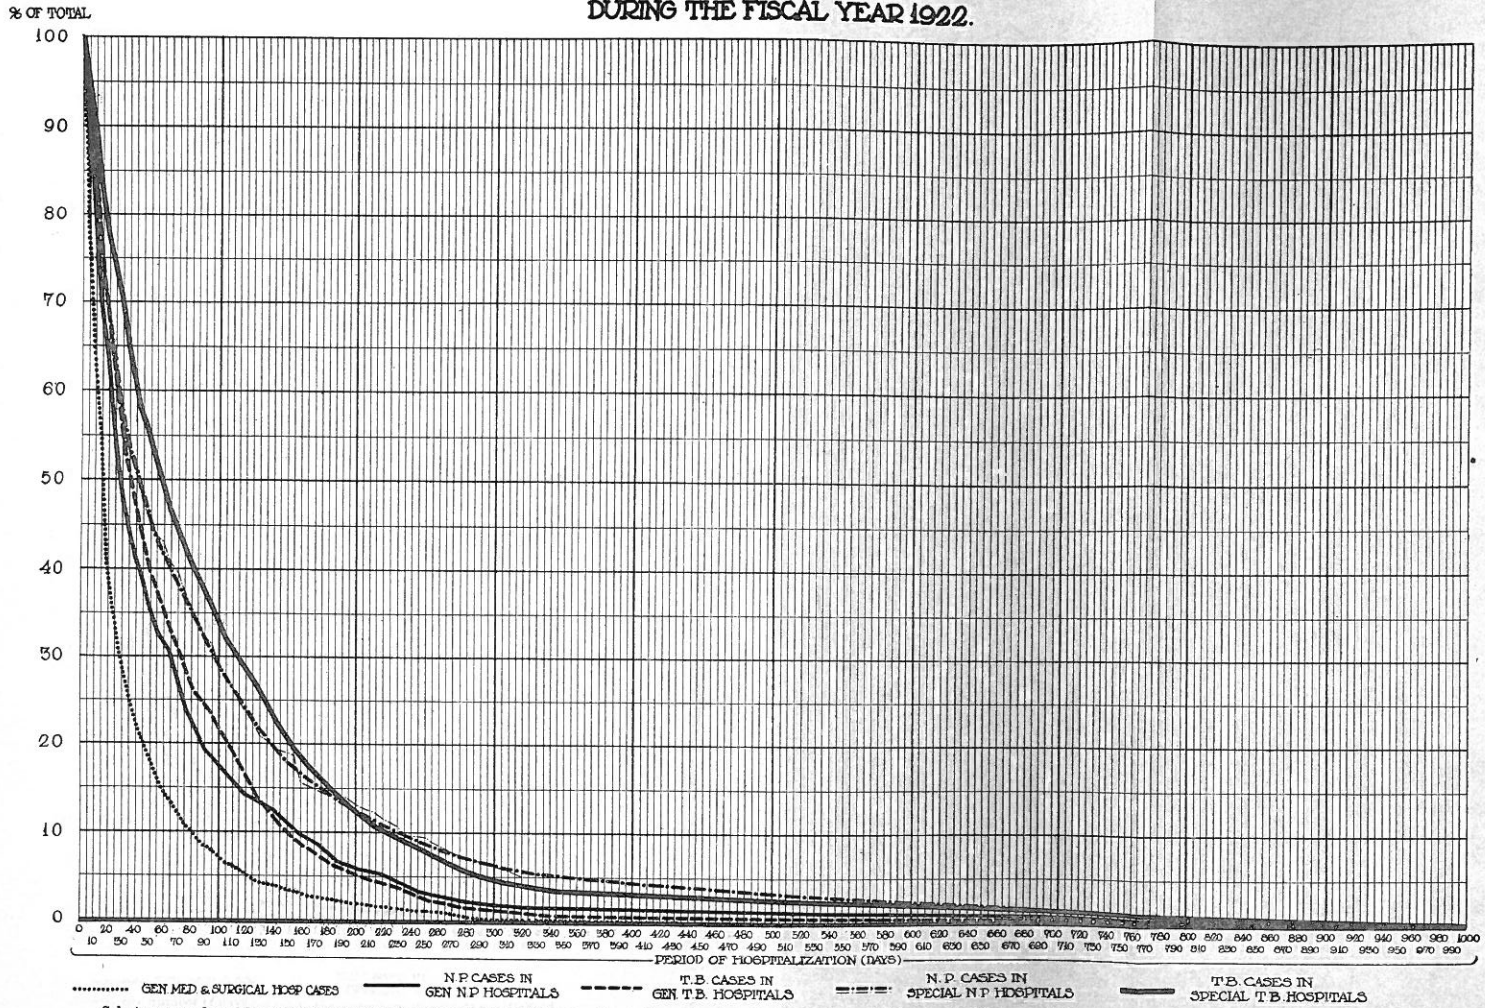
Select any number of days (period of hospitalization) and a type of disease. Locate the point where the line for days and the curve for disease meet. From this point locate the percentage of patients hospitalized longer than the number of days selected. E. g.: 1. Choose 100 days. 2. Choose tuberculous cases in special tuberculosis hospitals. 3. Locate point where lines meet. 4. Read—Of all the patients discharged for disciplinary reasons, 50 per cent of the tuberculous patients in special tuberculosis hospitals were in hospital longer than 100 days.

18174—22. (Face p. 270.)

CHART NO. 11.

PER CENT OF PATIENTS HOSPITALIZED LONGER THAN ANY SPECIFIED NUMBER OF DAYS FOR EACH TYPE OF DISEASE, TYPE OF HOSPITAL AND CLASS OF DISPOSITION

Patients A.W.O.L. FROM U.S. VETERANS AND U.S. MARINE HOSPITALS DURING THE FISCAL YEAR 1922.



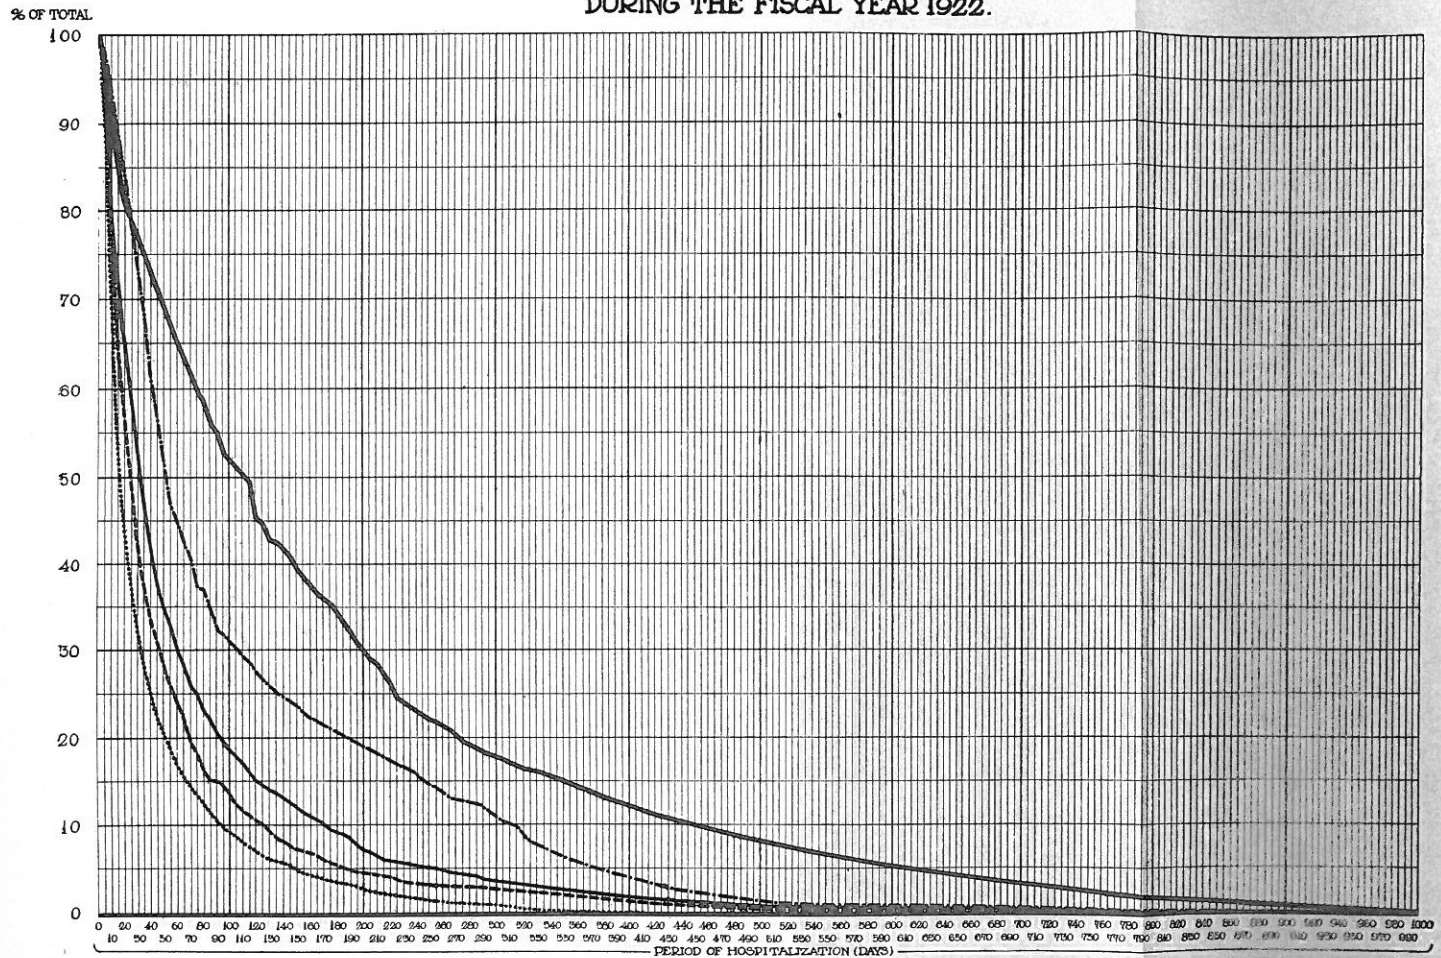
Select any number of days (period of hospitalization) and a type of disease. Locate the point where the line for days and the curve for disease meet. From this point locate the percentage of patients hospitalized longer than the number of days selected. E. g.: 1. Choose 20 days. 2. Choose neuropsychiatric cases in general neuropsychiatric hospitals. 3. Locate point where lines meet. 4. Read—Of all the patients absent without leave, 60 per cent of the neuropsychiatric patients in general neuropsychiatric hospitals were in hospital longer than 20 days.

CHART NO. 12.

PER CENT OF PATIENTS HOSPITALIZED LONGER THAN ANY SPECIFIED NUMBER OF DAYS FOR EACH TYPE OF DISEASE, TYPE OF HOSPITAL AND CLASS OF DISPOSITION

Patients Discharged Unimproved FROM U.S. VETERANS AND U.S. MARINE HOSPITALS.

DURING THE FISCAL YEAR 1922.



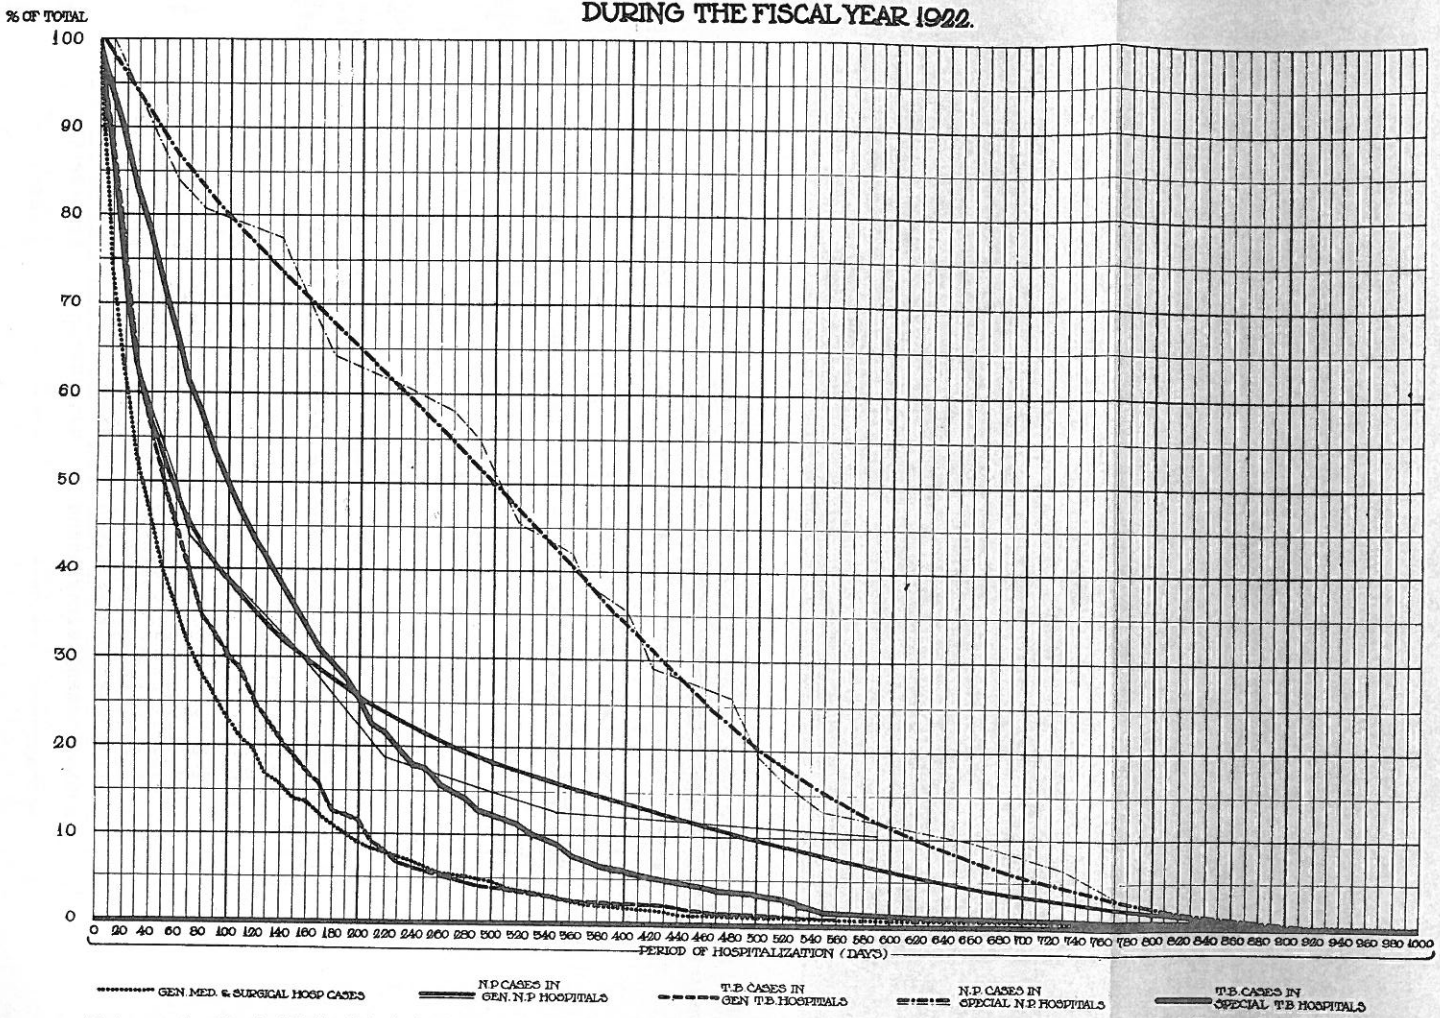
Select any number of days (period of hospitalization) and a type of disease. Locate the point where the line for days and the curve for disease meet. From this point locate the percentage of patients hospitalized longer than the number of days selected. E. g.: 1. Select 600 days. 2. Select tuberculous cases in special tuberculosis hospitals. 3. Locate point where lines meet. 4. Read—Of all the patients discharged unimproved, 5 per cent of the tuberculous patients in special tuberculosis hospitals were in hospital longer than 600 days.

18174—22. (Face p. 212.) No. 7

CHART NO. 13.

PER CENT OF PATIENTS HOSPITALIZED LONGER THAN ANY SPECIFIED NUMBER OF DAYS FOR EACH TYPE OF DISEASE, TYPE OF HOSPITAL AND CLASS OF DISPOSITION.

Patients Died IN U.S. VETERANS AND U.S. MARINE HOSPITALS DURING THE FISCAL YEAR 1922.



Select any number of days (period of hospitalization) and a type of disease. Locate the point where the line for days and the curve for disease meet. From this point locate the percentage of patients hospitalized longer than the number of days selected. E. g.: 1. Select 300 days. 2. Select neuropsychiatric cases in special neuropsychiatric hospitals. 3. Locate point where lines meet. 4. Read—Of all the patients who died, 50 per cent of the neuropsychiatric patients in special neuropsychiatric hospitals were in hospital longer than 300 days.

18174—22. (Face p. 212.) No. 9

REHABILITATION DIVISION.

The responsibilities for the vocational rehabilitation of persons disabled in the World War were transferred from the Federal Board for Vocational Education to the United States Veterans' Bureau on August 9, 1921. These responsibilities consisted of caring for 238,746 beneficiaries who had been declared eligible for vocational training, which number is exclusive of all those who had declined or terminated training. Beneficiaries who had entered training had been given promises relative to the kind and extent of vocational training that would be given them. Many of these promises were verbal, due to the exigencies arising when large numbers of trainees were enrolling. It was necessary for the United States Veterans' Bureau to ascertain what these promises were and to fulfill them if practicable, so that the Government might keep faith with its vocationally handicapped veterans.

When the Federal Board for Vocational Education began the work of enrolling ex-service persons for courses in vocational training, it was very difficult to get the disabled veterans to realize the value of the opportunity to secure training, and the early registrations were comparatively few. Later, when the vocational act had been modified, registrations were so numerous that the board had difficulty in meeting the demands for immediate training because of the lack of training facilities and the absence of adequate courses for the numerous training objectives requested by trainees. The efforts spent in the solution of these problems merit the commendation of all who are interested in the welfare of disabled veterans, but their solution was relatively easy when compared with the problem confronting the United States Veterans' Bureau of completing the vocational education of beneficiaries to enable them to successfully follow gainful occupations.

From July 1, 1918, to August 15, 1921, only 5,793 trainees had finished courses of training. The bureau recognized that strenuous efforts would be necessary to prevent the prolongation of the training period for many of its trainees. Training programs must be made more definite; training facilities in educational institutions must be modified to meet industrial conditions; placement training in shops, factories, and on farms must be more closely supervised; and additional training facilities must be established if trainees were to be adequately fitted for vocations in the shortest practicable time. All these things and more were to be accomplished at once if the bureau's administration of vocational rehabilitation was to succeed in giving the proper training to thousands of trainees and if millions of dollars of Government funds were to be conserved.

THE PROBLEM.

Generally speaking, every World War ex-service man or woman suffering from a disability incurred, aggravated, or traceable to service which has resulted in a vocational handicap or a compen-

sable disability of not less than 10 per cent, is entitled to a course of training at the expense of the Government, if such training is desired and feasible. Trainees having a vocational handicap as a result of a service connected disability get vocational training and a monthly maintenance allowance ranging from $80 to $100 (with several dependents it is possible for a trainee to receive $170). Trainees vocationally handicapped are referred to as section 2 trainees from the section of the act providing training. Trainees with compensable disabilities that are not vocational handicaps are entitled to a course in vocational training but do not receive the training allowance. These are referred to as section 3 trainees. There is one other group. This is composed of those who have not been discharged from the Army, Navy, or Marine Corps, and they are classed as section 6 trainees. The bureau is required to secure for all rehabilitated trainees a suitable or gainful occupation.

On June 30, 1922, the veterans awarded training were distributed as follows:

In considering the problem it must be borne in mind that these figures represent trainees of both sexes; ages from 18 to over 50 (averaging 26); practically every nationality; practically every creed, every race or color; all disabilities including large groups of major amputations, tuberculous, neuropsychiatric or mental cases, blind, deaf, and speech defects; education ranging from illiterates to post-graduate students. Truly this is a cross-section of American society.

To accomplish the rehabilitation of veterans, the bureau has about 3,000 employees engaged exclusively on vocational rehabilitation duties, and several thousand others engaged on other bureau problems who cooperate on rehabilitation work. All employees are subject to the Government's methods as to selection, appointment, dismissal, and limitation of salaries.

In accomplishing rehabilitation the bureau must utilize colleges, universities, schools, offices, mills, factories, ships, and other industrial plants, thousands of them, so that a large number of its employees must be engaged in obtaining these training facilities.

Everyone appreciates that all large groups contain the good, the indifferent, and the bad, even though the groups are carefully selected. It must therefore be acknowledged that the bureau's group of employees, as well as its group of training facilities and its larger group of beneficiaries, contains these elements. True, the elements are con-

CHART NO. 14.

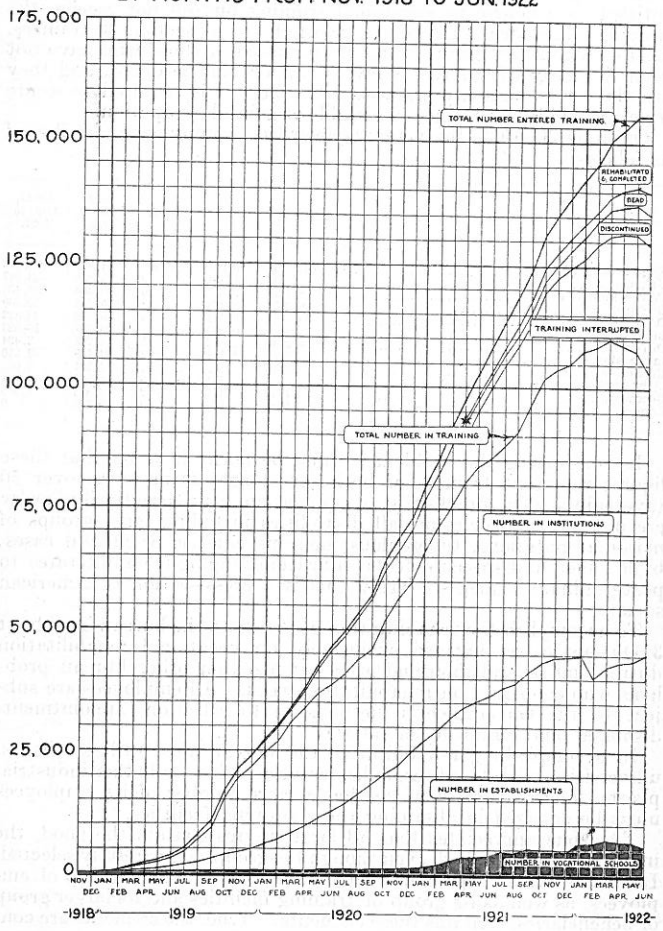
VOCATIONAL TRAINING

ACTUAL NUMBER OF MEN ENTERED TRAINING

BY MONTHS FROM NOV. 1918 TO JUN. 1922



★ FIRST REPORT APRIL 1921

stantly changing, and in the case of employees and facilities the indifferent and the bad are constantly being discovered and eliminated, but for its beneficiaries the bureau must do the greatest possible good for the worst among them.

To assign a man or woman a course of training is not a simple matter, for the bureau's responsibilities include an assurance that the given course is the most suitable considering the beneficiaries' desires and his physical and mental limitations. Application and study are essential if any course of training is to be accomplished. This part of the problem must be solved by the beneficiaries. If they do not lend themselves to the tasks, no good can come from the assignments. The bureau must strive to obtain this required application and study or stop the expense when it is found wasteful.

One factor that makes rehabilitation a difficult problem is that the maintenance allowance is insufficient to meet the needs of many trainees who are taking training in educational centers where living is expensive, and for many other trainees the allowance is more than sufficient to meet their expenses, and is also more income than they ever received or will be fitted to receive upon completon of training. Trainees who are receiving more than they could earn are inclined to procrastinate in their training courses, and by this means to prolong the training period and the maintenance allowance.

CAUSE FOR PAST CONCERN.

The bureau has a vast group of beneficiaries to be given courses of training who must perform the application and study—which is at least 90 per cent of the job—if they are to complete their training. About 50 per cent of these beneficiaries know that if they apply themselves and complete their training their Government allowances will stop and they will receive less money as initial pay in their new vocations. It is not reasonable to expect all of the group to voluntarily apply themselves to reduce their incomes, especially when they can readily discover the indifferent employees and school officials who will condone their harmful tendencies.

Without doubt, the fault was the erroneous premise that this problem could be met with methods which assumed that the three groups—employees, training facilities, and beneficiaries—were perfect and to be kept active by a handful of inspectors or supervisors, when there was more immediate money for a large number of them in their being otherwise.

A NEW METHOD FOR REHABILITATION.

Without retarding the work under the old system, but always correcting faults as rapidly as possible, the bureau established its "training policies," which received the approval of acknowledged educators of the country, of our cooperating veteran associations, and of representatives of the public, before final adoption and issuance. These training policies require that for each beneficiary in training there shall be fixed an "employment objective," and that a "training program" shall be outlined that is based upon that objective. To arrive at the items of the training program the "job" represented by the "employment objective" must be analyzed and the training program must be written to include each edu-

cational and manipulative item necessary for such employment. The program must be written so that training will proceed in logical sequence and an average time for completion be given for each item. Making training programs is an enormous job, but it has been progressing rapidly. The "training policy" is not a "cure all." There will always be room for improvement. However, it will lessen the load of useless work and accomplish the following which were not possible under previous policies, viz:

The training promises of the Government to each beneficiary will be in writing.

The bureau will know when these promises are not being kept.

Actual progress of the beneficiaries on their training programs will become the criterion of efficiency for continuance in service of employees and training facilities.

The payment of the maintenance allowance to trainees who can not earn as much will shorten rather than lengthen the training period. The beneficiary wants to retain the allowance; to retain it he must make progress on his training program to assure the bureau that the expense is justifiable; continued progress on the program must result in its completion; such completion ends the allowance period, and the result is a rehabilitated beneficiary.

The "training policy" hits at the source of greatest possible waste to the Government and harm to the beneficiary. Other great sources of possible waste are faulty "advisement" and improper "employment." Advisement, or the work of getting the beneficiary without false starts into the "employment objective" for which he is best fitted, is now being intensely followed by the bureau. A new employment service, to obtain the greatest possible returns to the beneficiary from an honest application to his course of training, recently has been organized and is functioning throughout the country.

CONSOLIDATION.

The consolidation of the three agencies administering the veteran relief activities into the United States Veterans' Bureau resulted in the bureau's contacting 227,302 new prospective training beneficiaries in 10½ months, whereas the Federal board, working alone, contacted 404,396 in 37½ months. Although it is not possible to show it so conclusively, it is believed that improvements quite as great as occurred in the contact work resulted in the finance work, the procurement of supplies, medical examinations, and claims work of the Federal board, all of which were transferred from the Rehabilitation Division to groups specializing on those subjects when the Rehabilitation Division was transferred to and consolidated with the other work in the United States Veterans' Bureau. The reorganization left to the Rehabilitation Division of the bureau: (1) The awarding of training; (2) supervising training; and (3) securing employment of vocationally rehabilitated trainees.

AWARD OF TRAINING.

When it is known that 18,700 claimants during the last month of the past fiscal year registered applications for training, and that each award of training involved a possible Government obligation of about $3,000, the importance of this step in the bureau's work is

appreciated. Discovering the claimants, interviewing them as to their privileges under the law, obtaining their claims, reviewing and building them up with substantiating evidence, such as a copy of the claimant's service discharge certificate, service medical history, a medical examination, medical opinion as to the existence of a vocational handicap, medical opinion as to the mental or physical feasibility for training, and obtaining the pre-war and post-war vocational history of the claimant, are the essentials to getting a claimant's case to the point of deciding eligibility for training. All these duties are now responsibilities of specialists in the Medical and Claims Divisions of the bureau. After the Claims Division decides that claimants are eligible for training, the Rehabilitation Division assumes responsibility for further action.

To be eligible under existing law, the claimant must make application by midnight of December 16, 1922—that is, within 18 months from June 16, 1921, the date of the approval of the act containing the limiting clause. On July 1, 1922, there were 56,289 cases pending eligibility. Awards were being made as to eligibility at the rate of 18,000 cases per month at the close of the fiscal year. If the new case rate continues, a total of approximately 748,699 claims for training will have been filed by December 16, 1922. Deciding eligibility will not cease on December 16, 1922, because 44.7 per cent of all rehabilitation claims have been denied to date, and a continuation of this rate to the closing date will give 334,668 claims that have been denied, but which must be reconsidered each time a claimant submits new evidence which warrants a review of the denied claim.

Any award of compensation by the Claims Division entitles the beneficiary to section 3 training, provided the person is receiving compensation at the time of entering training. Except for findings of fraud, changes in compensation status subsequent to entering training, even a discontinuance of compensation, do not affect the training status of a man in training. Based upon the findings of the Claims Division the Rehabilitation Division assigns persons to training. In the section 2 cases, after the Claims Division has certified that the claimant is eligible, if in need of such training, the Rehabilitation Division awards the claimant training only when evidence exists that the claimant is in need of training to overcome a vocational handicap. Section 6 training is awarded to those who are still in the country's service, but who would be entitled to either section 2 or section 3 training if not in that service, provided their commanding officers approve of their training.

Section 2 training, with its monthly maintenance allowance, costs the Government about five times the cost of the section 3 training, where the Government only meets the cost of the course of training. One might assume that all section 2 trainees have compensable disabilities, plus the vocational handicap. That such an assumption is erroneous is aptly illustrated by the case of the man who lost one joint of the small finger of his left hand in the service. Such a loss was not compensable, but proof that his pre-war vocation was that of violinist gave him a vocational handicap as a result of his service and entitled him to section 2 training.

Making the award of training a responsibility of the Rehabilitation Division was the result of a very thorough search for the best method

of preventing abuse of the law, and it provides a very thorough review and check of all steps leading to the bureau's assuming these large training expenses, and this without undue delay of the claimant's interests.

In making the award of section 2 training, the division considers the abilities that were used by the claimant in any of his previous occupations, also those abilities which were potential but not used, and definitely decides whether the physical limitations resulting from his disability have destroyed those used abilities to the extent of making necessary a change in his pre-war vocation, and also determines whether his physical limitations permit a use of his nonaffected potential abilities to the extent of his obtaining other employment with as promising a future as existed in his pre-war vocation. It has been decided that an individual is in need of vocational rehabilitation under the terms of the law when he possesses a service disability resulting in a handicap which necessitates the changing of his pre-war vocation.

As the awarding of training is the source of all obligations of the Government on account of vocational training, its importance is realized and it is made a specific responsibility of a corps of experts charged with seeing that the interests of both the Government and the claimants are carefully considered with each claim. Public zeal and intelligent sympathy with the interests of beneficiaries are essentials to employment on this phase of the work.

Beneficiaries eligible but unassigned.

	Sec. 2.	Sec. 3.	Sec. 6.	Total.
July 1, 1922	1,925	1,913	0	3,838
Aug. 15, 1921	11,097	22,850	0	33,947

After the award of training, which is, under the law, decided in the district offices, or in central office on appeal, the cases are assigned to sub-district offices for induction into training. There are always a number of cases that can not be assigned to a suboffice that are in the status "eligible unassigned." Eligible unassigned figures include the cases in the mail between offices, and not only between offices in the same district but often they are cases on which decisions are pending between different districts where the successful applicant can only obtain his desired course in another district. It is difficult to reduce "eligible unassigned" statistics, but the bureau is ever trying to keep this figure as near zero as conditions permit, and is making increasing progress in this effort.

Beneficiaries in process of induction.

	Sec. 2.	Sec. 3.	Sec. 6.	Total.
July 1, 1922	8,222	32,155	6	40,383
Aug. 15, 1921	13,763	40,637	9	54,409

The law requires that a course of training be prescribed for each person eligible, and that the prospective trainee be offered the prescribed course. If advantage is not taken of the offer within one year from the date offered, the privilege of training is forfeited. Vocational advisement enters at this stage. It is one of the most important steps of the entire program. Ideal advisement would mean getting the beneficiary into the best employment objective for which he can be equipped. Ideal advisement would mean the greatest possible returns on the investment to both the Government and the beneficiary, with a resulting least requirement of effort on the part of the bureau and the trainee. Fathers and mothers have been more or less successful with family advisement problems. Group advisement as a vocation is relatively new and trained men in this field are in great demand in industry. With the Government's limitation on salaries the bureau can only select its most promising employees and train them for this important work. Training employees in vocational advisement is in progress and as a result conditions are improving. Experiences in advisement are being collected and studied, with a view to obtaining the most practical "advisement policy" which the conditions confronting the bureau permit. That the bureau has its special conditions to meet in this work is well indicated in the following statement of an experienced training officer:

> The majority of those suffering from tuberculosis are hopeful and optimistic and are excellent students who, if they live, will become courageous citizens, while many with light catarrh and bronchitis have neurasthenia and flunk their courses because of indefinite fears and pessimism. Some who were seriously wounded at the front and have suffered major amputations are more easily managed and encouraged than some who had influenza. Many paradoxes appear. The cultured invariably seem to want rough outdoor life. The illiterate and uncultured often want indoor work. The strong want light work as an objective. The weak often disown their disabilities and want to train for rigid work.

The bureau, working in cooperation with the desires of the beneficiary, prescribes the course of training. Advisement requires a rehabilitation officer and a medical officer experienced in vocational conditions. With the beneficiary present, and the history of the beneficiary's claim before them, all possible information is obtained on the following phases of the claimant's problem: (1) Present physical status, (2) educational background, (3) mental ability, (4) industrial stability, (5) vocational experience, (6) vocational ambitions, (7) economic status, (8) social status, (9) occupational health conditions, (10) possibilities for continuous employment, (11) employment possibilities in community where beneficiary will reside.

For the course and employment objective selected there must be available, or made at the time of advisement, an analysis of all the requirements for such employment, as to education, manipulation, and actual performance required for the group to review from their respective angles, to avoid overlooking an essential. After agreement on an employment objective the training program is prepared and the beneficiary goes into training. Of course, not all cases in process of induction require advisement or go directly into training, as 25 per cent of all section 2 and 67 per cent of all section 3 beneficiaries first decline or defer their privilege.

The bureau is constantly trying to decrease the "in process" load, and is making progress. To appreciate the task it should be known

that the claimants are constantly moving about making their discovery difficult. A few were in this status before the United States Veterans' Bureau commenced the rehabilitation work. September and October have been and always will be the main months for reducing this part of the load, due to the custom of our educational institutions of setting periods for registration and accepting no students except at the beginning of semesters. As beneficiaries average about 26 years of age, and time is a most important element to them, there has been inaugurated a system of between-semester courses to increase the number of entrance dates. Many of our institutions have met this phase of the bureau's problem, and the number entering training between semesters is increasing monthly, and time is thus being gained for the disabled veterans.

Declined training.

	Sec. 2.	Sec. 3.	Sec. 6.	Total.
July 1, 1922	8,325	29,916	0	38,241
Aug. 15, 1921	6,740	14,220	0	20,969

About 1 out of every 25, section 2 trainees and 1 out of every 3.6, section 3 trainees have declined the training privileges offered by the law. Of course, declination by the beneficiary does not take away any of his rights, except when he fails to accept the training within one year after the date it was offered, and many of those who first decline reconsider and enter into training. The majority of section 2 people in the "declined" group are in employment, and their employment conditions largely will determine whether they will return for training within the year allotted. Many section 3 people decline training because the maintenance allowance is not available to them.

Deferred training.

	Sec. 2.	Sec. 3.	Sec. 6.	Total.
July 1, 1922	35,748	19,644	4	55,396
Aug. 15, 1921	31,226	12,613	3	43,842

Practically the same ratio, 1 to 5.4 trainees, of section 2 and section 3 trainees defer their training. A number in this group defer entrance into training during summer months or pending the beginning of a new semester at a college, university, or school. Others are in circumstances which they hesitate to disturb in return for the training status. Under the law they can not defer their entrance into training more than 12 months. There is also in this group quite a large number of cases which the medical officers have decided are not feasible to undergo any training, due to their physical and mental condition, and these are under the care of the Medical Division until certified as feasible for training or dropped from training status and placed upon a compensation status as permanently nonfeasible for training. It is believed that most of the cases now being hospitalized under the Medical Division are carried in this "deferred" or the "interrupted" training status.

Training interrupted.

	Sec. 2.	Sec. 3.	Sec. 6.	Total.
July 1, 1922	19,641	6,593	24	26,258
Aug. 15, 1921	13,644	3,148	31	16,823

July and August are peak months in this status as all beneficiaries are given authorized summer vacations, provided such action will not interfere with their training program; also provided they are dropped from the maintenance allowance rolls while absent. The total "interrupted" increased 2,528 for June, 1922, and it is believed that most of these were on vacation. This group is watched with extreme care, as it contains the "breakdown" group, or those becoming ill while in training. Medical Division personnel is in constant contact with the entire student body, giving them necessary medical care and treatment. Family and other personal reasons often make it necessary for a beneficiary to interrupt his training at his own request, and although the bureau attempts to limit them, such applications are approved when circumstances make such action advisable.

Training discontinued.

	Sec. 2.	Sec. 3.	Sec. 6.	Total.
July 1, 1922	4,260	2,018	5	6,283
Aug. 15, 1921	1,411	1,079	4	2,494

The term "discontinued" as commonly used implies discipline, but these trainees are not really in such status. To date the bureau has attempted to operate without a discipline manual, to avoid any inclination of its employees to the extended use of such practices, without first trying every other means of benefiting the beneficiary. About 2 per cent, or 84, of these cases are misconduct cases, and the policy of the bureau is only to allow the beneficiary to be discontinued for misconduct after he has had his training interrupted several times for that reason and interruption appears of no further benefit. However, a study of the situation has proved that a manual on discipline is essential in the interests of the beneficiary, and one based upon those interests is being prepared.

The present disciplinary needs are aptly described by the following statement taken from the blackboard in the automotive training shop at the bureau's vocational school at San Antonio, Tex. It is understood that this was written by a trainee during the absence of the class:

> Nobody had to send a truant officer for Abraham Lincoln. When we eliminate the word "discipline" from our school vocabulary we take off our chains on a rainy day. Discipline has been the dominant factor in every worth-while individual. Discipline is low gear on the human engine—a last resort, but a reserve power by which we make the hill. We have pretty generally discarded it, and so the hollows of life are filled with stalled people.

The two large groups in the "discontinued" status are those for whom employment has not yet been found (to cover this the more complete employment service of the division has been organized) and those who reach a period in their employment objectives where

they obtain employment at greater salaries than their Government maintenance allowance and they accept employment, declining further assistance from the bureau.

In training.

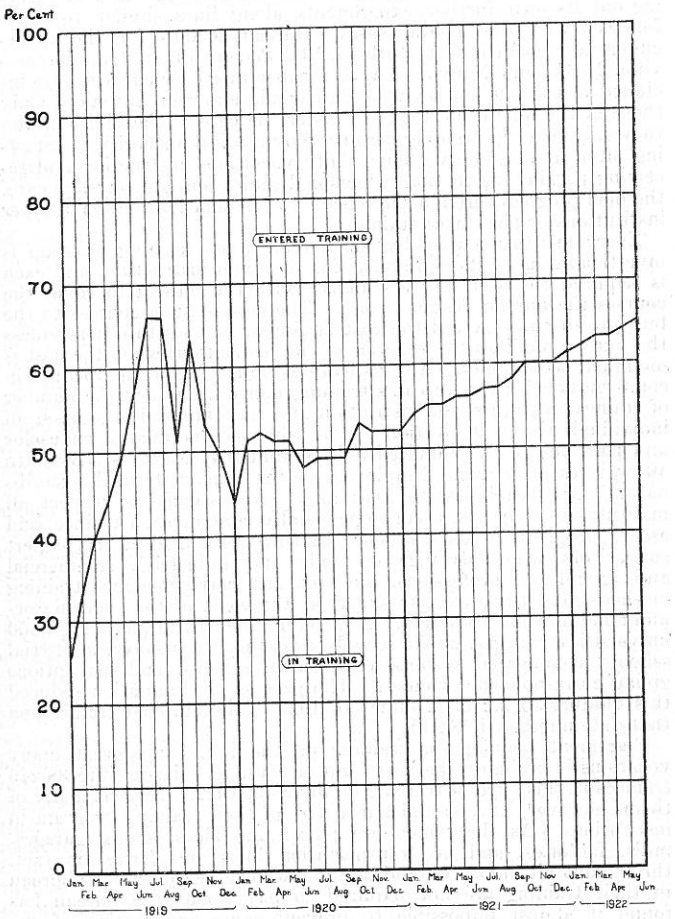
	Sec. 2.	Sec. 3.	Sec. 6.	Total.
July 1, 1922	92,597	9,488	23	102,108
Aug. 15, 1921	81,476	7,720	54	89,250

The bureau is quite confident that the peak of the "in training" load was reached during March, 1922, on the last day of which 109,476 were in training. On June 30, 1922, "in training" had dropped to 102,108. Rehabilitations and completions should almost keep pace with new entrances after the close of the fiscal year.

There are 372 beneficiaries ranging from 10 per cent vision to total blindness in this "in training" status. Practically all of these are required to take their preliminary instruction at the bureau's Evergreen School for the Blind at Baltimore, Md., 85 being there under instruction June 30, 1922. There are 466 deaf trainees "in training," some of whom are also afflicted with speech defects, and there are 254 speech defect trainees "in training." These blind, deaf, and speech defect cases are special problems of the bureau and are studied and trained by specialists as a separate problem all through our organization. The total number of training claims filed was 625 blind, 602 deaf, and 346 speech defects, and the total number rehabilitated to June 30, 1922, was 31 blind, 27 deaf, and 15 with speech defects.

At four of the resident bureau vocational schools—Port Jefferson, N. Y.; Silver Spring, Md.; Chick Springs, N. C.; and Bellevue, Nebr.—special studies for the vocational rehabilitation of neuropsychiatrics are progressing. This type of beneficiary is also included at the bureau schools at Pascagoula, Miss., and San Antonio, Tex., where the experiments cover such work combined with similar work for the tuberculous and others. There are thousands of these neuropsychiatric or mentally disabled beneficiaries who have been declared eligible for training and no expense or effort is being spared to solve the problem they present. To get the greatest variety of studies and experience each school to date has been allowed to develop its own methods, but it is believed that results now make advisable a standardization of methods, comprising the best at each school, and such action is in progress with a view to carrying forward this work in all districts, as each district has hundreds of such beneficiaries. In addition to the school work, psychiatrists, psychologists, and medical officers in each of the districts are specializing in this work. It is our most costly problem, but it is hoped the bureau's efforts in this direction will be of inestimable value to the country. Our most successful school is equipped for initial instruction in a great many of the vocations; it makes no effort at complete vocational rehabilitation within the school; the beneficiaries are required to reside at the institution; they are accepted direct from hospitals or other institutions when all that is possible has been done for them there. The school gains their confidence while at the same time allowing

CHART NO. 15.



them to discover their vocational bent on the premises. This school is averaging a graduation period of three months, the men leaving to immediately commence vocational courses, with very few recurrences to the neuropsychiatric status.

Vocational rehabilitation of tuberculous persons was in progress through the efforts of the National Tuberculosis Association before the war. The bureau is using that experience but is also carrying out its own further experiments along lines similar to those followed with the mental cases. Bureau schools for the tuberculous are operating at Rutland, Vt., Pocono Pines, Pa., Waynesville, N. C., and Nauvoo, Ill., and tuberculous beneficiaries are included in the student body at Pascagoula and San Antonio. Only those in the quiescent stage are under the care of the division, and they only take the training permitted by medical authorities. Starting often at one or two hours daily vocational instruction and receiving parallel instruction in personal sanitation and physical care, the men progress through the schools to full-time instruction in other institutions or placement training.

Every institution used by the bureau in its training program is investigated as to its equipment for thorough instruction, and each is required to enter into a contract with the bureau to cover the courses the bureau desires to use. The cost of such courses to the bureau must not exceed the cost of similar courses to others unless the bureau modifies the practice of the institution, when the cost is modified accordingly. All institutions must agree to operate in comformity with the bureau's training policies. Where the number of trainees warrants, the institution and the bureau decide upon an individual of the institution's staff who is appointed a counselor and paid one to five hundred dollars annually to act as adviser to all trainees attending. Employees of the bureau, termed "coordinators" or "rehabilitation assistants," are assigned to inspect all institutions, to permit them to personally contact each trainee, and assure progress in his training. In turn each district has expert supervisors who specialize on trade and industrial, commercial and agricultural professions, the arts, and correspondence training methods, and these experts supervise the work of the coordinators and rehabilitation assistants. At one time the bureau was using 3,300 universities, colleges, public schools, State normal schools, industrial schools, commercial schools, professional schools, and institutions giving correspondence courses. The process of elimination reduced this number to 2,210 on June 30, 1922. The enrolled trainees on that date numbered 58,240.

Placement training, or training on the job, for a great many vocations is probably the best form of training. There were 38,246 trainees in this type of training on June 30, 1922. A great many of them, however, have completed a part of their training program in institutions. As these men are placed in offices, shops, garages, mills, factories, and on transportation lines and farms, in fact, throughout all industry—and as those who agree to assist the bureau in their training are not required to pay them—the bureau has found it almost impossible to prevent some exploitation of the trainees through faulty selections of opportunities by its training officers. Others, misunderstanding the requirements of the bureau, which call for complete and thorough training, place the trainees at

specific work and pay them for its performance. It is hoped that both of these faulty practices will be rapidly corrected by the new written training programs, which will require actual progress through each step of the training necessary to finish in the beneficiary's previously determined employment objective.

In a great many cases institutional training must be followed by placement, or training on the job, to make the trainee employable. However, this must be a matter for consideration from the standpoint of the needs of each individual, and the training program must be completed for such placement training before the individual leaves the institution, in time to provide the placement opportunity and to care for the change in assignment of the individual to his new training officer.

Other school facilities which the bureau has found it necessary to establish and maintain are used by advisement officers and called vocational preparatory or try-out schools. These are equipped with vocational instruction equipment and instructors and the beneficiaries are required to attend these schools, while they are being studied to discover the most suitable employment objectives. Incidentally such schools are used for special instruction in related subjects or rudimentary education for men in placement training.

About 10,000 veterans are taking correspondence courses, most of them being men in placement training who are getting the educational side of their employment objective by correspondence.

It was the difficulties encountered in obtaining proper training in the trades and agriculture through placement training that determined the commencement of the bureau's vocational school No. 1, at Chillicothe, Ohio. The site of old Camp Sherman, including over 4,000 acres, was obtained from the War Department on November 1, 1921, for this purpose. The work was opposed from all sides, mainly by the misinformed or others who thought the Government could not successfully conclude such a project. Before the first year passed this school was giving as thorough trade and agricultural training as the Government obtains elsewhere, the beneficiaries there were better cared for physically than elsewhere, and all at less cost per trainee than other institutions were averaging. The old Army cantonment buildings have already almost disappeared and next spring about 500 men will be training in agriculture there with their fattening cattle, dairy herds, and fully equipped dairy, and a large part of the acreage will be planted in crops which will be cared for by trainees, with their orchards, bees, swine, and poultry for related training subjects. At the entrance to the school grounds are the shops for training 500 men in the 18 different trades. Before next Christmas all but one of the objections to this school will have disappeared; the remaining one, that it takes the men away from their homes, can not be serious, as there are 58,240 men at other institutions of their own selection and nearly all of them are away from their homes. The fact to be remembered about this school is that several thousand men, who without the school would be open to probable exploitation in placement training establishments, will be given thorough training under sound conditions.

A matter of no small concern to the bureau is that of keeping the instruction of the men within their home districts, and avoiding constant changes of residence of the trainees while undergoing train-

ing. In some cases the best advisement calls for an employment objective, the training for which can not be given in the home district, and the bureau is compelled to meet the transportation expense to the nearest district where the training is available. However, it has been necessary to rule that, where training is obtainable in the home district, the trainee insisting upon a course in another district must pay the transfer expenses. Fifty-one per cent of all trainees "in training" are at their first institution or placement facility, 25 per cent have had one change, and 12 per cent two changes, the remaining 12 per cent having more than two changes.

About 445 distinct employment objectives are covered by trainees. In the past, the employment objective was the only part of their agreement with the Government that was placed in writing. This limited number of employment objectives is becoming a serious problem for the bureau in its employment work, as the beneficiaries have, through error, been lead to understand that they were to be carried on the maintenance allowance rolls until employed in their employment objective. To illustrate, in accountancy the industries employ accountant helpers, junior accountants, senior junior accountants, junior senior accountants, senior accountants, and certified public accountants. All of these are covered by the single employment objective "accountant" on the records of the bureau, and, as a result, hundreds of cases must be decided on their individual merits to determine just what nature of employment will fulfill the Government's obligations to these men, it being evident that they can not all be found employment in the highest or certified public accountant grade. Many people are under the impression that this vast group of trainees is constantly changing from objective to objective and getting nowhere; 65 per cent of all trainees in training are on their first objectives; 23 per cent on second objectives; and only 12 per cent are on more than two objectives; a really enviable record for so large a disabled group.

That the bureau's training problem is unique is readily seen when it is known that the average age of its students is 26, whereas all courses of study and trade apprentice systems of industry before the advent of this work were based upon students in their teens or early twenties. To put these veterans in institutions away from industry for four years, the time of the usual student course, or even to place them as apprentices for the usual four years required by industry, would be an injustice to the veteran. They have development and breadth of experience never before contemplated by such systems, but we must use the facilities planned for those systems if the work is to be done. The educational systems are more than meeting us with the problem, and the bureau is progressing more and more in its attempts to gain the support of industry in this phase of its work. To aid schools and industry, the bureau is developing comprehensive courses of study or training to serve as guides for instructing veterans. It is intended that all the employment objectives embracing any considerable group of trainees shall be covered, and include (*a*) brief informational matter regarding the particular vocation; (*b*) outline of the purpose of the course and how it is to be used; (*c*) specifications of the objectives as they pertain to the physical requirements, working conditions, knowledge and skill requirements, and mental requirements; (*d*) the training content

with its related and supplementary material, technical training, and manipulative training; and (*e*) the time schedule. To date the following pamphlets have been completed: Accountancy; Baker and Bakery Superintendent; Battery Repairing and Rebuilding; Commercial Courses; Cleaning, Dyeing, and Pressing; Dental Mechanics; Engraving; General Auto Mechanics; General Machinist—Machine Hand; Ignition, Starting, and Lighting; Jewelry Repairing; Manipulative Tailoring, Designing, and Cutting; Music Outline (Revised); Photography, Motion Pictures, and Photo-Engraving; Project Outline in Poultry; Shoe Repairing; Structural Drafting; Vulcanizing and Tire Repairing; Watch Repairing.

The summer schools have been a specialty of the bureau's efforts. The desire and real need of veterans to "carry on" to the earliest possible employment stage is being met by a constant increase in the number of educational institutions starting summer courses and thus advancing the date of rehabilitation. All the bureau's courses of study cover a summer instruction period. In the higher professions and the arts the intensive instruction has not been found feasible, but it is the aim of the bureau to have each such student during the summer months in placement work with a practitioner in his employment objective, to insure his yearly contact with industry and business life. Some vacations are always granted, but the bureau must meet the wishes of the veteran desiring to continue at his course.

Supervision of the men in training is one phase of our work which, if faulty, can destroy the wisest of methods. The supervision methods of our system must be capable of intelligent application by our lowest salaried rehabilitation assistant, and the bureau must maintain one of these assistants for practically every 75 men in training. The work of each beneficiary must be inspected every 15 days on placement training courses and every 30 days on institutional training courses. Each report on a man must cover the following:

The objective:
- Is advisement proper—
  - In terms of disability.
  - In terms of mental ability.
  - In terms of vocational interest.
  - In terms of employment probability.

The opportunity:
- Effectiveness in reaching objective—
  - Definite training program and indications it is being followed.
- Willingness to cooperate.
- Employment probability—
  - Limitations—
    - As regards the man.
    - As regards the objective.

The man:
- Total time in training.
  - Changes in objective.
- Is attendance satisfactory?
- Causes of absences—
  - If physical—is man receiving medical care?
- Periods in interrupted status.
  - Reasons for interruptions.
- Is man's application satisfactory?
  - Toward his objective.
  - Toward his training.
  - Toward his opportunity.

Implications in the disability:
- Will an abnormal training period be necessary?
- Is supplementary training necessary or desirable?

The institution or placement opportunity:
- Date of induction.
- Training program.
- Amount of program completed.
- Amount of program to be completed.
- Opinions of instructors as to man's—
  - Adaptability.
  - Attitude.
  - Progress.

It will be seen that every officer of the rehabilitation force must know men, instructors, institutions, and jobs. In addition, he must exercise intelligent sympathy, as any other attitude will be injurious to the man and to the Government; and also he must exercise good judgment, as his 75 charges represent a $225,000 investment of his Government, the success of which depends largely upon his actions. The bureau in the past has been fortunate in obtaining personnel for this work, but it is somewhat short of requirements, running about 1 to 89 beneficiaries. A high type of employee is required, and the salaries are the lowest at which men are obtainable, making the large and constant personnel turnover a grave problem.

No amount of work of the bureau employees alone can make a success of the supervisory work. The schools and their entire personnel must cooperate in supervising those in institutional training. That this cooperation has been given by almost all the schools must be acknowledged by the bureau, and it must further be said that a vast majority of these schools have the bureau's principal aids in solving rehabilitation problems. Too much praise can not be given these institutions for their voluntary efforts in behalf of our veterans. To industry and the men in it who are helping in our supervision of the men in offices, mills, factories, shops, etc., our aims are new, but the majority are giving us intelligent aid and the others are improving rapidly.

Even if bureau, school, and industrial personnel were 100 per cent efficient in all respects, they could at most accomplish but 10 per cent of the work in hand. The remaining 90 per cent of the effort, the application and study, must come from the beneficiaries, and there are thousands delivering their full 90 per cent. They deserve the highest praise this country is able to bestow for the manner in which they are meeting the country's wishes to have them restored as quickly as possible, and as nearly as possible to their pre-war, or for many of them better than pre-war, economic status. However, it is a true concern of the bureau that the interests of those beneficiaries are being harmed by a few of their comrades who give only enough application and study to be a constant question before the bureau as to how to avoid a waste of Government funds and at the same time meet the wishes of the country for all of these veterans. The situation demands plain words, for these misguided men know it is impossible for the bureau to hand them a completed course of vocational training followed immediately by steady and gainful employment in industry, yet their actions indicate that they and their friends understand that to be the law and the bureau's problem. A solid front and the help of all America truly is needed to enlighten this minority, in its own interest, and to insure their deserving comrades against unwarranted damage in the way of public criticism.

The deceased.

	Sec. 2.	Sec. 3.	Sec. 6.	Total.
July 1, 1922	3,403	471	2	3,876
Aug. 15, 1921	1,729	206	3	1,938

Of the section 2 cases, 647 died while in training, and of section 3 cases and 6 cases, 102 died. The 3,127 others died while in the various other steps, many being in the "deferred" status and never feasible physically for training. As before stated, the Medical Division of the bureau has its representatives stationed throughout the entire training organization guarding against overtaxing the veterans in training. This total of 3,876 is the accumulated total of deaths since October, 1918, from 301,557 claimants assigned training. The bureau does all in its power to insure in each case a ceremony befitting the burial of a disabled veteran.

Lapsed eligibility.

	Sec. 2.	Sec. 3.	Sec. 6.	Total.
July 1, 1922	5,162	4,566	0	9,728
Aug. 15, 1921	0	0	0	0

The law requires that all eligibles must commence training within one year after the receipt of a "notice to begin training." Under this law, 4,132 of section 2 and 3,801 of section 3 trainees have forfeited their rights. The others in this class are 964, whose compensable disabilities were improved and whose Government compensation was discontinued before they accepted the offered training. In such cases the right to training is lost. There are also 810 section 2 and 21 section 3 cases carried in this total who have been declared permanently not feasible for training and they, as a result of such decision, pass from training to the compensation status.

Rehabilitated.

July 1, 1922	15,321
Aug. 15, 1921	5,072

In the statistics of the bureau the word "rehabilitated" is used to describe a beneficiary who has completed his course of training under section 2 of the law. The section 3 and section 6 cases are termed in the statistics "completed." The bureau is not entirely satisfied with this rehabilitated group, as it realizes that some of them fall under the old training policies and were rehabilitated by "time in training" methods more than by actual completion of a vocational course. For those persons a board of appeals in the district offices and a final board of appeals in the central office at Washington have been set up to adjudicate any claims they may have for further training. This provision will clear the record as well as reveal any faults for further study and amplification of the new "training policy." However, the country has every reason to be proud of the vast majority of these veterans who have reentered

industry with increased earning power and prospects above previous expectations. A negro, who before the war relied entirely upon his muscles to compete for a living in the common labor market, on being rehabilitated as a "shoe repairman" was advised that a position awaited him. He proudly replied to the effect that the Government's work was finished and that he was paying for his own establishment from his Government training allowance savings and employing others to work for him. This well illustrates how the country's provisions for these veterans are progressing.

Completed.

	Sec. 3.	Sec. 6.	Total.
July 1, 1922	1,636	9	1,645
Aug. 15, 1921	715	6	721

These veterans have completed their courses of training under section 3 or section 6 of the law, which means that the Government paid all their instruction costs, but that they supplied their maintenance while taking their courses. All were at least 10 per cent disabled incident to service when they entered the courses, but they were not disabled to the extent of having a vocational handicap. The statistics on this class indicate that 6,593 had to interrupt their courses, 2,018 discontinued training, 102 died, 9,488 are in training, and 1,636 have completed training, a total of 20,206 who strived to obtain the training under this provision of the law, out of 111,204 declared eligible to the privilege.

EMPLOYMENT.

Sound advisement, thorough training, and proper employment are essential to the success of the work of this division. Investigations proved that the old methods of leaving employment entirely to the training officer responsible for the veterans' training were faulty. In one district as many as 15 per cent of 100 of the beneficiaries rehabilitated for more than six months were not in employment. Although started in June, 1922, this service already is so thorough that two districts early in August reported practically every rehabilitated man in employment, and they were keeping current with rehabilitation.

ORGANIZATION OF DIVISION.

The following organization has been developed to meet the division's problem:

(*a*) ASSISTANT DIRECTOR, in charge of the division.

(*b*) EXECUTIVE OFFICER, charged with the coordination of the divisional work with the work of all other agencies of the bureau.

(*c*) SERVICE SUBDIVISION, charged with the distribution of all incoming and outgoing papers, divisional personnel and supplies, records and files, divisional contracts, and the personnel pool. Its responsibilities are distributed to the following sections:

Distribution section, charged with the distribution within the division of all incoming and divisional papers, the dispatch of all papers leaving the division, and the installation and maintenance of the necessary "incoming" and "outgoing" correspondence baskets on desks throughout the division.

Divisional personnel and supply section, charged with keeping the records of all divisional personnel and supplies, for the rendition of all reports and returns required by the bureau in this connection, and with the operation of the divisional information desk.

Records and files section, charged with the maintenance and operation of the records and files system of the division.

Divisional contracts section, charged with passing upon all divisional contracts and leases from a professional training standpoint only; that is, decides the necessity for contracting for a given service at a given institution, verifies the presence of trainees necessary to support such a contract, and fixes the charges that from an educational viewpoint would be reasonable.

Central personnel section, charged with the supply of the stenographic, typing, clerical, messenger, or other similar services required by all units of the division.

(*d*) REGISTRATION SUBDIVISION, charged with the proper registration of all trainees, advisement, adjustments of training status, review of all rehabilitation appeals, and retroactive training problems. Its responsibilities are distributed to the following sections:

Training registration and adjustment section, charged with the proper registration of all trainees, adjustments of training status, and all retroactive training problems.

Rehabilitation appeals review section, charged with the review of all rehabilitation appeals.

(*e*) TRAINING SUBDIVISION, charged with the development of methods and standardization of all training facilities and courses, supervision of all institutional, tutorial, and placement training duties, the standardization of training equipment and supplies, and the supervision of all vocational and miscellaneous schools. Its responsibilities are distributed to the following sections:

Methods and standardization section, charged with the development of methods and standardization of all training facilities and courses.

Training facilities section, charged with the supervision of all institutional, tutorial, and placement training duties and the standardization of supply and training equipment.

Vocational and miscellaneous school section, charged with the supervision of all vocational and miscellaneous schools.

(*f*) EMPLOYMENT SERVICE SUBDIVISION, charged with procuring employment opportunities, establishing all necessary contacts to accomplish this purpose, following up the rehabilitated veteran, aiding him in meeting the difficulties of his new position, promoting the good will of the public toward the veteran, controlling placement pay, and adjusting maintenance allowance rates.

(*g*) CONTROL SUBDIVISION, responsible, under the direct supervision of the assistant director, for a constant survey of all training facilities, personnel and methods, all field investigations, and the compilation of the divisional manuals, regulations, and orders.

DISTRICT OFFICE ORGANIZATION.

For the more efficient administration of the work, the United States has been subdivided into 14 regions, each with a district office. A chief of rehabilitation in each district is directly responsible to the district manager for all matters relating to the training of the disabled ex-service men, such as the execution of policies and procedure established by central office, the development and supervision of the rehabilitation work in the suboffices, providing training facilities to meet the needs of the district, and effecting the proper coordination of functions of other divisions affecting the work of rehabilitation. The chief of rehabilitation in each district, so far as possible, has assistants specially qualified by training and experience in agriculture, commercial subjects, trades, and industries, and any other assistants that may be necessary, including professional assistants and clerical help. The registration, training, and employment groups are all represented there.

SUBOFFICE ORGANIZATION.

Each district has several suboffices. The suboffice organization includes a rehabilitation assistant who is responsible for the training of all eligible persons within its territory. The functions of the suboffice as they relate to training include all rehabilitation work except the award of training, which, under the law, can not be decided by any authority below the district office.

LEGISLATION.

The law under which the United States Veterans' Bureau is authorized to provide vocational training to ex-service persons is known as the vocational rehabilitation act, passed June 27, 1918, which amended article 3 of the war risk insurance act.

This act provided three classes of training, known as section 2, section 3, and section 6 training.

The distinction between section 2 and section 3 training is that a disabled veteran in section 2 training receives, in addition to free instruction, support for himself and dependents during his period of training, while a disabled veteran in section 3 training receives only free instruction and the compensation awarded on account of his disability under Article III of the war risk insurance act. Section 6 training is that training which is given to disabled veterans who are not yet discharged from the service, provided the training arrangements are approved by the Veterans' Bureau and the veteran's commanding officer. A section 6 trainee receives only free instruction and his service pay.

As originally enacted, three conditions of eligibility were established to insure training under section 2. First, the disability must have been suffered in the service and incurred under circumstances entitling the disabled veteran, after discharge, to compensation under Article III of the war risk insurance act; second, the injury must have been such as to prevent him from carrying on in a gainful occupation, from resuming his former occupation, or from entering upon some other occupation successfully; third, training must be physically feasible. While undergoing training under this section every person received monthly compensation equal to the amount of his monthly pay for the last month of his active service, or equal to the amount to which he would be entitled under Article III of the war risk insurance act, whichever amount was the greater. If such person was an enlisted man at the time of his discharge, his family received compulsory allotment and family allowance, according to the terms of Article II of said act, in the same manner as if he were an enlisted man while undergoing such training.

To insure training under section 3 a disabled veteran must be entitled to compensation under Article III of the war risk insurance act, and must not be included in section 2.

In order to secure training under section 6, a disabled veteran must be in the service and his training arrangements must be approved by the Veterans' Bureau and his commanding officer.

On July 11, 1919, on petition by the Bureau of War Risk Insurance and the Federal Board for Vocational Education, Congress amended the law as passed June 27, 1918, thereby placing upon the Federal Board for Vocational Education the sole responsibility for establishing the conditions of eligibility. One of the conditions of the first law prohibited placing in training any person until after the Bureau of War Risk Insurance had rendered a decision on his claim for compensation. In addition to this change four conditions of eligibility were set up in order to establish training under section 2:

1. The disabled man must have been separated from the military or naval forces of the United States under honorable conditions since April 7, 1917.
2. He must have a disability that was incurred, increased, or aggravated while he was a member of such forces or that is traceable in the opinion of the board to service in such forces.
3. His disability in the opinion of the board must be such as to cause him to be in need of vocational rehabilitation to overcome the handicap of his disability.
4. Training must be physically feasible.

This amendment also provides that every person electing to follow a course of vocational rehabilitation under section 2 shall, while following the same, be paid monthly by the said board such sum as in the judgment of the said board is necessary for his maintenance and support and for the maintenance and support of persons depending upon him; provided, however, that in no event shall the sum so paid such person while pursuing such course be more than $80 per month for a single man without dependents or more than $100 per month plus the several sums prescribed as family allowances under section 204 of Article II of the war risk insurance act for a man with dependents. This amendment did not change the conditions of eligibility for training under section 3 and section 6 of the act as originally enacted. The results of this amendment enabled the Federal Board for Vocational Education to determine the eligibility for training under the vocational rehabilitation act without awaiting a decision on the disabled man's claim for compensation by the Bureau of War Risk Insurance; and, second, it allowed more men to enter training than the first law would have ever permitted. It also provided that the payments of maintenance and support allowance for men undergoing training under section 2 of the act should be made by the Fed-

eral Board for Vocational Education and increased the allowance to the amount above stated.

On June 5, 1920, an amendment was added to this act that the board might, after June 30, 1920, pay, subject to the conditions and limitations prescribed by section 2 of the vocational rehabilitation act as amended, to all trainees undergoing training under said section, and residing where the maintenance and support is above the average and comparatively high, such sum as in the judgment of the said board is necessary for the maintenance and support of persons depending upon them, if any; provided, however, that in no event shall the sum paid such person while pursuing such course be more than $100 per month for a single man without dependents or for a man with dependents $120 per month, plus the several sums prescribed as family allowances under section 204 of Article II of the war risk insurance act. This amendment also provided that while a person was undergoing training under section 2 of the vocational rehabilitation act such person would not receive compensation under Article III of the war risk insurance act unless the amount of compensation due him under said Article III exceeded the amount due him under section 2 of the vocational rehabilitation act as amended, in which case such person would receive from the Bureau of War Risk Insurance such amount in addition to his maintenance and support allowance as might be necessary to equal the total compensation due under Article III of the said act.

About a year later the question arose as to how much time should be allowed the disabled veteran who was declared eligible for training before taking up his training. On March 4, 1921, Congress passed an amendment to the vocational rehabilitation act covering this point. This amendment specifically states that the disabled veteran declared eligible for training and having been notified to commence training must commence such course of training within a reasonable length of time after the notice has been sent to him by the bureau; except when such failure is due, in the opinion of the bureau, to physical incapacity such time shall not be longer than 12 months after the passage of the amendment for persons already declared eligible and notified to begin training, and 12 months after notice is given for persons thereafter declared eligible and notified to begin training.

Three months later Congress made another important amendment to the vocational rehabilitation act. On June 16, 1921, it passed an amendment stating that any person entitled to the provisions of the vocational rehabilitation act to take vocational training must make application therefor within 18 months from the date of the passage of the amendment. In other words, all applications received for training subsequent to December 16, 1922, will be considered null and void under the present law.

Provisions were also made at this time for a revolving fund of $500,000, for the purpose of lending money to trainees to carry them over the period from the time they entered training to the date they received their first maintenance allowance check, and for the purpose of helping them over other emergency periods which might arise during their training for which they needed immediate financial aid in addition to their regular training check, such as unexpected sickness in the family. This fund has been carefully administered and has provided an emergency fund of great value to the trainee.

The Veterans' Bureau consolidating the functions of the War Risk Insurance, the Rehabilitation Division of the Federal Board, and the district office activities of the Public Health Service pertaining to ex-service men was created by an act of Congress approved August 9, 1921.

TRAINING THE BLIND AND THOSE WITH DEFECTIVE VISION.

Of the many problems confronting the United States Veterans' Bureau when it took over the work of rehabilitation, none have been given greater attention or more serious thought than the problem of training those handicapped by blindness or seriously defective vision. The work was still in the process of organization and was under the direct control of central office.

In the past year this phase of work has been completely organized and decentralized to the districts, although still closely supervised by central office. There is in charge a vocational expert, who is responsible for the supervision of the training of men with eye, ear, and speech defects. Under him are six regional field officers with experience in work for the blind and deaf, three having been added to the staff during the year.

In addition to the general problems incident to the work as a whole, of which mention has already been made, there are special problems attached to the work for the blind. Among these have been the lack of training facilities, the difficulty of securing experienced field officers under the salary limitations, the lack of understanding and belief by the public and by the blind themselves in the possibility of vocational training for the blind, and unwise and sentimental sympathy shown the blind by the public. It may be added that this kind of sympathy is often shown to those least deserving of it and that it seldom extends to the practical point of giving the man a job.

The cases of men having defective vision may be roughly divided into three general classes: Those totally blind or with light perception only, those partially blind but with less than one-fifth vision in the better eye, and those with a serious visual defect who have more than one-fifth vision in the better eye.

An important phase of this work is the effort being made to conserve the vision of the men in the third class: the majority of these will probably never become totally blind, but they need advice in regard to their employment objectives and careful supervision during training by trained experts.

It will be noted that there are no trainees in section 3 status; the reason for this is that all men with seriously defective vision are considered to be vocationally handicapped and therefore are eligible for training with maintenance pay under section 2 of the law. The one man under section 6 was taught Braille and typewriting and given a correspondence course in poultry husbandry while still in the hospital. Upon discharge he returned home, declined further training, and is now carrying on as manager of his own farm.

(1) REGISTRATION.

Under the caption "Registration" is given the total number of cases of men and women with defective vision referred to the Supervisor for the Blind or the Regional Officers for advice in regard to training. These cases are discovered in various ways. The nucleus was those sent home from France to the special hospital for the blind in Baltimore, Md., which later developed into the Red Cross Institute for the Blind. A large number have been referred to us by Red Cross workers, some by various veterans' organizations and some by the relatives of the men themselves. The majority, however, have been discovered by officers of the bureau, particularly by the regional field officers.

These field workers have visited every part of the United States from the slums of New York City to remote mining villages in the mountains of northern California, and have traveled on every sort of conveyance, from an express train to a mule, in their endeavor to bring to these blind war veterans new hope and cheer. One of our most important accomplishments has been the education of the family and the community. It has often been difficult to convince the family of a totally blind man, especially if he was receiving compensation and insurance benefits, that training was possible. Many had the fixed idea that to accept training would mean the loss of compensation. This is not the case, as a man awarded a permanent rating because of blindness or seriously defective vision receives his compensation as long as he lives. Neither compensation nor insurance benefits are affected by training in these cases.

Equally difficult at times has been the effort to convince men whose eyesight is defective of the need of conserving the vision they have. Men have been found in occupations necessitating the use of the eyes to a great extent. A few men who have been awarded training because of defective vision have been started in accountancy and bookkeeping; these mistakes have been rectified, and the close supervision of the regional field officers will prevent their recurrence.

(2) DECLINED.

Of these there are two principal groups: One consists of those totally or almost blind, who are receiving from $100 to $177.50 per month in compensation and insurance and whose refusal of training is due to their own inertia and the influence of members of their families. These are mainly negroes, mountain whites, and others with little education whose former occupations paid them less than the compensation they now receive. The other and larger group is composed of men with partial vision who have jobs in which they can still carry on without much difficulty.

(3) DEFERRED.

The men in this group have deferred training for various reasons. About half are unable to take training at present on account of their physical condition due to other disabilities. Some of them will never be able to take training and may be regarded as permanently nonfeasible. Others are only waiting for their physical condition to improve in order to enter. Some refuse to believe that blindness is inevitable, and defer training until they have exhausted every resource to regain their sight. Still others remain in employment until forced by failing vision to give up. It is only when all hope is gone that these two groups turn to the bureau for training. Those remaining have deferred training on account of personal and family reasons.

(4) TRAINING.

Every man who is blind, or every man with seriously defective vision, needs from 6 to 12 months of prevocational training. This prevocational training consists of courses in the reading of Braille, the writing of Braille, using both Braille slate and Braille writer, touch typewriting, music, and various kinds of hand training, such as basketry, woodworking, hammock making, and the like. While this manual has some therapeutic value, its main object is to teach the newly blinded adult to use his hands in place of his eyes—i. e., to be blind.

It has long been an established policy in the training of the blind to give both juvenile and adult blind training in instrumental and vocal music. The purpose of this instruction is to train the senses of hearing and touch, to furnish an occupation for leisure moments during which a sighted man would occupy his time by reading, to enable him to fit into the social life of the community to which he will return, and to help him to overcome his natural discouragement and gain confidence in his ability to perform in spite of his blindness.

The majority of the trainees have been and are still being sent for this prevocational training to the Evergreen School for the Blind. This school was an outgrowth of United States General Hospital No. 7, which was established to care for blinded soldiers and sailors upon their return from France. In May, 1919, the hospital was taken over by the American Red Cross as a school for the training of blind ex-service men, under contract first with the Federal Board for Vocational Education and later with the United States Veterans' Bureau. On January 1, 1922, the school was taken over by the United States Veterans' Bureau and has been operated by the bureau since that date as one of its vocational schools.

In addition to the prevocational training mentioned above, the following vocational courses are given: Poultry husbandry, massage, storekeeping, commercial basketry, cigar making, and music. Music as a vocation is only given to students having the necessary qualifications. Vulcanizing was tried by the Red Cross as an experiment; it has been proved that a blind man can vulcanize a tire successfully, but this has not been found practicable as a means of rehabilitation. Poultry raising, massage, and commercial basketry have so far proved to be the most successful courses given. The market for basketry is restricted at present, but it is felt that it can be developed. The men are being trained to make a wide variety of artistic baskets of

excellent quality. The fact that the head instructor is totally blind is convincing proof of the feasibility of the occupation for a blind man.

The poultry department has also made good progress and was an interesting sight this spring. There were 10 laying pens, each cared for by one of the trainees. To see a totally blind man go into the laying pen, take the hen out of the trap nest, feel the Braille number on her leg band, and record the same on the Braille writer which he carries with him, and do it all entirely unassisted and as a matter of course, is a convincing demonstration of the value of applied Braille. The man is also given entire charge of the incubation and brooding of his flock, under the supervision of the instructor. The blind man, who has 300 baby chicks waiting to be fed by him, has no time to think about his other troubles. Last December, in the Baltimore Poultry Show, to which birds are sent from all over the East, the trainees at Evergreen entered eight birds in the utility class. These eight birds, judged entirely upon their merits by men who did not know that they were entered by blind men, received six prizes—three firsts, one second, one third, and one fifth.

There is a students' store, which serves in the double capacity of a post exchange and a practical training opportunity for the men taking the storekeeping course, and a cigar factory in which the students are given training and which is run on a production basis.

The number of applications from civilian blind for admission to Evergreen proves beyond question the need of some sort of a national school for the adult blind. There is only space to mention two striking examples of men benefited by Evergreen. The case of Carl Bronner, totally blind and with both hands gone, is familiar to all. Only at a national school could the problem of his training be successfully solved and the evolvement of an attachment enabling him to use an ordinary typewriter be worked out. Carl will enter the University of Maryland as a law student this fall. William H. Craig, totally blind, left leg off and right arm useless above the elbow, presents another striking case. By means of a sling suspended from an upright fastened to his chair he is enabled to use his arm to write with pen or pencil and to use the typewriter.

As shown by the statistics, 25 trainees are in training in other schools and workshops for the blind throughout the country. This number includes the negro trainees at the Maryland Workshop for the Blind in Baltimore, and the School for Colored Deaf and Blind in Austin, Tex. These men are being given training in broom making, rug weaving, and other industrial occupations which they can carry on in their own homes.

Those trainees in schools and colleges who are unable to read or whose vision must be conserved are furnished with a reader or special tutor to read their lessons and give such special assistance as is necessary. Placement training is furnished, when necessary, in factories, workshops, or commercial establishments, with the understanding that the men will be given employment upon completion of training. The regional expert cooperates in every way with the placement and employment officers in the district to obtain satisfactory placement training and employment.

It will be readily seen that a man totally or almost blind can carry on more successfully in his own business, where he can be independent,

than in working for some one else, provided he has the necessary ability. When feasible, training is given a man on his own project, i. e., on his own small poultry farm or in a cigar stand, or other small business enterprise. This project training follows institutional and placement training, and is closely supervised. The success of this kind of training depends on the judgment used in selecting the men and the thoroughness with which the training is supervised. Failures in the past have been due entirely to neglect of these two vital principles.

(5) INTERRUPTED STATUS.

The number of men in interrupted status at the close of the fiscal year is partly due to the fact that many of them have returned home for vacations during the summer months. Many men are still suffering from other disabilities due to wounds and disease, and have been obliged to interrupt their training for rest and treatment. Trainees are not allowed to remain in training until there is a physical or mental breakdown, but are carefully watched and advised to discontinue training temporarily when it is felt that their physical condition makes this necessary.

(6) DISCONTINUED.

Three of these men have been discontinued as permanently nonfeasible and two because of failure to profit by any training.

(7) REHABILITATED.

Taking into account the time consumed in the necessary prevocational training, it is felt that the record of 31 rehabilitated men is one of which the bureau may well be proud. All but four of these men are totally or almost blind. Men are carrying on successfully in the following lines: Massage, storekeeping, business management, salesmanship, insurance, poultry husbandry, assembling, piano tuning, agriculture, field work for the blind.

The stories of how these men have successfully overcome their handicaps are vivid with human interest. One man, totally blind and without hands, is the manager of a successful drug business in the Middle West. Several men, totally blind, are successfully carrying on in poultry raising on their own small farms. Four men are successful masseurs—two in Government hospitals, one in a private hospital, and one in business for himself. One man is employed as a piano tuner earning $25 a week. One veteran, who lost both eyes in the Battle of Chateau-Thierry, is employed by the Veterans' Bureau as teacher of storekeeping and manager of the student's store at the Evergreen School for the Blind. Another is successfully carrying on as regional officer. Two are employed in factories.

(8) CONCLUSION.

In conclusion, it should be thoroughly understood that the value of the work which is being done for the men with seriously defective vision can not be measured in dollars and cents. Many of the men

receive compensation and insurance sufficient for their material needs, but money alone can not prevent a blind man from becoming a burden to himself and the community. He must be taught to be independent and given an occupation, in order that he may live a normal life under normal conditions.

It is recognized that some of the men will never be rehabilitated in the sense that they will become economically independent as a result of their own earnings, although there is no question that the great majority will receive training which will enable them to earn their own living if they so desire. The great value of the work, however, lies in the fact that these men are shown that blindness alone is no handicap to success.

TRAINING THE DEAF.

The problem of training the deaf and those with seriously defective hearing, viewed superficially, presents some of the same difficulties that are found in the training of the blind. A closer study, however, reveals many essential differences. The attitude of the public is entirely different, whereas the blind are apt to receive too much sympathy and consideration, the deaf usually receive far too little. Shut off from social intercourse to a large extent, it is no wonder many of them become suspicious and irritable. This is particularly true of the partially deaf, the seriousness of whose handicap is seldom recognized. While the work with the deaf is more advanced than the work with the blind, we have found difficulty in securing competent teachers and supervisory specialists. This work has been thoroughly reorganized and placed under the supervision of a staff of trained experts who are assigned as regional officers between two or more districts.

Statistics.

	Aug. 15, 1921.	June 30, 1922.
Registration	506	602
In training for lip reading	205	104
In vocational training	371	466
Interrupted training	15	25
Rehabilitated	13	27
Completed lip-reading course	222	319
Deferred lip-reading training (for completion of vocational training or because physically unfit)	38	20
Deceased	2	4

(1) REGISTRATION.

At the present time the case of every man in need of training in lip reading, because of defective hearing, is referred to central office for registration and record. The case is then followed up by the regional officer to insure that proper training is given.

(2) TRAINING.

The following are the principal steps in the training of a man with seriously defective hearing:

(*a*) To determine the employment objective, giving consideration to the man's interest, aptitude, occupational experience, his physical condition and his disability.

(*b*) To provide an intensive course in lip reading, which shall be closely correlated with the training that is to follow, in order to familiarize the trainee with his trade vocabulary.

(*c*) To supervise the training closely to determine when the man has progressed sufficiently in lip reading to be able to take vocational training. Periodic reports from the man's instructor and training supervisor are required.

(*d*) On completion of training the man is placed in employment and during the early stages again followed up to make certain that he has been restored to his pre-war economic status or that rehabilitation has been effective.

The employment objective is determined largely by the ability of the trainee to read lips. It must be realized that lip reading demands intense concentration and that some men, through no fault of their own, are absolutely unable to become lip readers. Defective vision also handicaps a deaf man to a great extent.

(3) COMPLETED LIP READING.

These men have completed a course in lip reading satisfactorily and the majority are either in vocational training or in employment. A few are in interrupted status on account of physical condition.

(4) REHABILITATED.

Every endeavor is made to rehabilitate these men in occupations which do not require them to meet the public to any great extent, although naturally the list of occupations in which a deaf man can carry on successfully is far larger than that for the blind.

The bureau has on record many examples of rehabilitation. Perhaps the most striking is that of an ex-sailor, totally deaf from spinal meningitis, who, after completing a course in lip reading and a normal course in the teaching of lip reading, became copartner in a school for the deaf.

TRAINING SPEECH-DEFECT CASES.

Few people realize what a serious handicap defective speech is. It is not only extremely difficult for a man, unable to talk intelligently, to secure employment, but there are few jobs or positions that do not require some talking. Even a laborer who wishes to become gang foreman must be able to speak so that he can be readily understood. In addition to being vocationally handicapped, a man with a defect of speech is handicapped socially to an extent which is dependent on the severity of the defect; he becomes self-conscious and diffident and is regarded as "queer."

In dealing with men and women having defects of speech the cooperation of the skilled physician and the vocational expert is essential. The majority of those found to be in need of speech correction during the past year have been stammerers or stutterers. In many cases this defect of speech is only one of the symptoms of a nervous or mental condition which must be treated by a neuroiogical expert.

Statistics.

	Aug. 15, 1921.	June 30, 1922.
Registration	279	346
In vocational training	178	254
In training for speech correction	88	66
Interrupted training	32	27
Rehabilitated	2	15
Completed speech correction	59	136
Discontinued training	27	6
Deceased	2	2

(1) REGISTRATION.

Those in need of speech correction are referred to the Rehabilitation Division by the medical officers in the district and subdistrict offices. Often they are discovered by training officers supervising their vocational training or by the regional field experts of the bureau.

(2) TRAINING.

Even more than with the deaf, it is difficult to find competent teachers of speech correction. The correction of speech defect depends more largely on the cooperation of the man than perhaps any other course of training given by the bureau.

One of the most successful schools combines medical and neurological treatment with training in coordination, self-confidence, and self-expression. A trainee who for a time seemed more interested in what he could get out of the Government than in his own betterment, after a three months' course at this school reported back to the district office, "Just forget about that compensation; I am going out to get a job; I can talk now."

CONCLUSION.

Unless a practical and sympathetic study of the problems of deafness and unintelligible speech is made, the seriousness of such handicaps can not be conceived. When the future of these men is considered from the standpoint of employability, the hazards to life, and the limited opportunities both for work and play, the difficulty of complete rehabilitation in each individual case is realized.

TRADE SCHOOLS.

Trade training as provided by the United States Veterans' Bureau is of two types. One is the so-called job training or placement training, the other is institutional training. The name of the former is indicative of the plan. It is akin to the apprenticeship system, although the learner is usually of an older age group than the usual apprentice. The individual student, or learner, or trainee, is placed in an industrial establishment under the direction of a counselor for the purpose of receiving training toward a specific employment opportunity. This training requires wholehearted cooperation from the employer and from the several foremen and the counselor under whom the trainee is placed. It requires, also, a carefully worked

out training program covering the various operations in the given trade.

The institutional trade training is usually given in a trade school or a trade school department in a larger institution. The aim in such trade schools is to teach individuals both the theory and the practice of specific vocations or trades. The training offered varies with the need of the communities in which the schools are located, as well as with the number of persons seeking training in a given line. These trade schools are largely a recent development in American education. Some of these schools have been so organized as to give emphasis to the engineering and technical sides of the trades. Such schools should, perhaps, be more closely classified as industrial engineering schools. In such schools less emphasis is given to shop practice than to related and technical subjects. Other trade schools have been organized as to equipment, personnel, and program so that the greater percentage of time is allotted to shop practice. The aim is to teach specific occupations. So much of related subject matter is given as will furnish the student with a readily workable technical background without minimizing the shop skill required in production.

The investigation and the plans made for the rehabilitation of the disabled ex-service man contemplated the utilization of industrial establishments in so far as it might be possible for much of the trade training. Industry, however, was interested primarily in production, not in training producers, even though such training might be under its direction. Nevertheless, industry accepted the patriotic duty and received many disabled men for training. The number of men requiring such training so far exceeded all expectations or predictions that it was soon found that industry could not provide a sufficient number of such training opportunities to meet the needs of the men. The trade schools which were in operation had for the most part been organized to provide training for an age group somewhat younger and with less of world experience than the disabled ex-service men have. These schools had furnished training to an age group under 20 years. In other words, the function of the trade school usually was to provide definite training for the large number of boys and girls who, by force of circumstances, could not be accommodated in the regularly organized secondary institutions or high schools. These trade schools, therefore, did not have either sufficient facilities or personnel to meet the specific needs of the bureau.

The lack of opportunities in industry and of facilities and organization in trade schools forced the United States Veterans' Bureau not only to assist in the reorganization and enlargement of the scope of existing trade schools, but to aid in the development of additional trade schools. The number of men who were declared eligible for training far exceeded the number originally estimated. This meant that provision had to be made to take care of the men en masse and with rapidity. Hence, in the early stages at least some of these trade schools developed very rapidly, so rapidly, in fact, that with the limited experience of previous vocational training in the country, supplemented though it was by valuable knowledge gained as a result of war training, both Army and Navy, it was difficult to replan courses expeditiously and at the same time thoroughly, or to impro-

vise new courses to meet the situation. Many of these schools were organized to meet an emergency. Many schools have met and are meeting the need. Other schools have failed utterly to grasp the aim of the bureau to rehabilitate disabled men. All furnish a background for educational study for the training of adults such as had not existed previous to veteran rehabilitation.

The one aim of the Rehabilitation Division of the Veterans' Bureau is to replace men in civil life fitted for occupations in which they can carry on successfully, in spite of the fact that they may be suffering from physical handicaps. Great care was exercised in planning with the trade schools for these courses. The Veterans' Bureau has in mind the employment objective; the aim being to reach that employment objective as soon as consistent with the man's previous training, education, disability, and personal characteristics. The school had in mind the training by skilled instructors utilizing these courses of study. The presumption was set up that men receiving the training outlined by these courses would be able to function in employment on jobs compatible with the training they had received. The trainee and the bureau determined the goal or employment objective; the institution, with the aid of the bureau, furnished the means of reaching that objective through courses of study organized for the purpose.

An illustration of one of the problems which must be met is that of training for a machinist objective through courses in machine-shop practice. A careful analysis of the trade brings out the fact that in machine trades there are the following groups of workers: Inspector, assembler, erector, and fitter; machine hand, machine operator, machine setter, machinist, both general and toolmaker. And again, each of these groups of workers is further subdivided to such an extent that there may be a great variety of jobs for rehabilitated men. Certain courses, however, will lead more directly to jobs as inspectors or machine hands or machine operators than will other and more generalized courses. For example, in the machinist group there is a journeyman all-around machinist. Then there is a layout man, who lays out the jobs and follows them through the production processes; the general machine repairman, the machine-tool repairman, the toolmaker, whose work may involve that of a die maker or die sinker or gauge maker or jig and fixture man. It is an accepted fact that there are different intelligence requirements for the several groups. The machine operator tending an automatic machine, such as a screw machine, will need training on automatic machines only, rather than the general training given the general machinist.

It has not yet been demonstrated that the machine-shop practice course in an institution, which is based upon the idea of giving certain basic principles of operation of machines, will actually function in the practice of the operator when left to himself to do a commercial job in a commercial shop. This thought enabled the trade schools to require that the learner give by far the largest percentage of his time to work which is in the nature of production or shopwork. The man who is being trained as a toolmaker is given a definite percentage of shopwork, with another definite percentage of related subject matter. It may be found, however, that the objective (toolmaker) is beyond the capacity of the individual student, and the objective takes on a more restricted form. As the intellectual requirements for the given objective decrease, the percentage of shop training increases, and that

of the related subject material decreases. Courses have been organized in our trade schools so that the toolmaker is given 65 per cent shop practice, the lathe hand 70 per cent shop practice, and the drill-press operator 75 per cent shop practice, even though the training time required for all these objectives may be exactly the same.

Previous investigations have demonstrated that 60 per cent of the man's time should be given to shop work. The trade courses in the various schools under the Veterans' Bureau make possible a higher percentage of shop work, depending upon the trades, reaching in some instances as high as 84 per cent. To this, however, is added a definite percentage of time for related subject matter which has to do with the trade theory, mathematics, and drawing necessary for the trade. The total amount of time spent on work which leads directly toward the objective is not far from 90 per cent, provided the related subject matter is definitely accepted and adopted as part of the trade training. The other 10 per cent is purely academic, and includes, among other items, additional working knowledge of the elementary English and informational subjects.

One school for show-card writing provides for 2,730 shop hours for the course, or 84 per cent of the time, with 180 hours of related subject matter, or 4.9 per cent, and 360 hours of academic subjects, or 11.1 per cent. In the same school the course in mechanical drawing requires 2,148 shop hours, or 68.9 per cent; 414 shop hours of purely related subjects, or 13.2 per cent; and 558 shop hours of academic subjects, in the latter of which are included certain courses in mathematics and questions regarding strength of material, etc., which may well be regarded as a part of the related subject matter, so that the 17 per cent of the academic matter would be very perceptibly reduced in this course, were a closer line of cleavage drawn between related and academic subjects.

The work in the trade schools is organized on what is known as a short unit course basis. This makes possible definite accomplishments at the end of any given unit, for the disabled ex-service man who has taken that unit has an increment of knowledge which he can apply to a certain specific job within the scope of the subject matter of the unit. These units in turn are subdivided into jobs. To illustrate: "Unit No. 1" in pattern making may be divided into making layout boards, layout of simple solid patterns, layout of simple boarded patterns. The making of layout boards will include measuring, sawing, block edges, surfaces, planing, boring, countersinking, screwing, gauging, and scribing. The projects may still be for actual use in production rather than for sample work. Nevertheless, if this be impracticable, the jobs in the units should be accomplished by the production of the sample on a shop basis. "Unit No. 1" of a shoe-repair course in a trades school, to be carried on for approximately a period of three months, consists of the study of a shoe and its building up, with the following jobs: Production of inner sole, channel, welt, upper, toe cap, tongue. "Unit No. 2" consists of the following jobs: Repairing of broken welt, cutting the channel and stitching on the welt, repairing and replacing of toe cap, patching, utilizing either hand sewing or the foot-power machine sewing.

The unit basis for these courses makes intensive training possible. It enables the instructor to limit his instruction to meet the needs of the individual. It enables the learner to progress rapidly or

slowly as his capacity and skill require. Both are sure to know why progress is made and results are obtained. The combination of a unit course plan with a definite allotment of time for a given unit, and a definite allotment of time for the elements within the unit, namely, shop practice, related subjects, academic subjects, makes it possible for both learner and instructor to measure progress. This is definitely recorded in one school by the use of the job card, the grade card, and the rehabilitation card, the latter of which is a summary of the other two, showing definite stages of progress through the successive units. It is the practice in this school to grant a certificate of accomplishment whenever all of the units of shop work have been satisfactorily accomplished, even though there is a lack of similar accomplishment in the related subjects or the academic subjects.

The shop practice has established the presumption that the learner can carry on successfully in the given trade, although he may not have a complete working knowledge of all of the theory connected with that trade. This is in accord with the conditions in industry, where the worker is required to know only the specific operations he is called upon to perform.

The success of these unit courses is evidenced by the fact that of a group of 29 automobile mechanics so trained, or rehabilitated, 25, or 85 per cent, are carrying on successfully in the automobile industry. Studies of other similar groups in agriculture and machine shop practice show a similar result.

The disabled ex-service men who have been granted vocational training were handicapped for production in their pre-war occupations. Their new vocation then must be one in which they can become productive in spite of such a handicap. They must reenlist for a new job in industry. This requires a new, intensive apprenticeship if they are to be trained in industry.

The all-day trade schools carrying on industrial training work are giving special intensive apprentice courses with the "scene of operation" transferred from the industrial shop to the school shop. The selection of the apprentice in industry is made largely by interview and readjustment. The public schools have more recently set up the prevocational schools, often as a part of the junior high schools, where the pupil has an opportunity to try more than one type of occupation. It was from both of these experiences that the trade schools for the rehabilitation of disabled ex-service men profited in assisting the man and the Veterans' Bureau in selecting a suitable employment objective.

It was found that the men themselves were often without sufficient personal experiences to make satisfactory choice. This is illustrated by the classification which has been made of a thousand trainees who have received training in one of the trade schools. When classified as to nationality, it was found that 20 per cent were native born of native-born parents; 27 per cent were native born of foreign parents; and that the balance, or 53 per cent, were foreign born. This same group classified as to previous occupations as follows: 25 per cent, coal miners; 23 per cent, unskilled laborers; 29 per cent, skilled laborers; 3 per cent, clerks; 3 per cent, farmers; 16 per cent, miscellaneous; and as to previous education, 20 per cent were illiterates; 50 per cent, grades 1 to 5; 26 per cent, grades 6 to 8; 4 per cent, high school one or two years.

The trade schools, which were organized especially for the work of the Veterans' Bureau, without traditions and without preconceived notions as to what must be done, solved the problems by organizing trade try-out unit courses, which proved far more positive than did the use of intelligence and trade tests among such a group as indicated above. The man had the opportunity to get the experiences; the instructor, the counselor and the adviser knew the man. A reasonable selection could be made. The success of this plan is more apparent as the men near the point of rehabilitation. In such schools the number of men wishing to change objectives is much less than in other schools operating without the trade try-out plan in choosing the objective.

Thus it will be noted that the final success of rehabilitation depends, in no small measure, upon the successful choice of vocations for men without previous education, occupational or intellectual background, quite as much as upon the training which is finally received in the vocations chosen. Here again have the trade schools, operating to assist the Veterans' Bureau, furnished a basis for future educational study and practice.

COMMERCIAL TRAINING.

Commercial-training facilities necessary to meet the needs of rehabilitation must provide for intensive and practical training. Every course of study a trainee pursues is fundamental and essential and contributes to the factors of employment in a specific objective. Only such courses are offered as are of real value to the individual and as will enable him to reach a definite employment objective in the shortest practicable time consistent with thorough training. These courses are broad enough and contain a sufficient amount of general, specific, and related subject matter to enable the trainee to grow and develop after he enters upon his initial job, and they will enable him to visualize the promotional possibilities which lie ahead.

There are certain aspects of training which are generally recognized as fundamental and common to practically all of the commercial occupations. Common or general training suffices until it reaches the time when it becomes necessary to differentiate in the training and specialize in some specific branch of business which will enable the trainee to enter upon an initial job as a substantial beginning point.

There is a necessity for creating business contact and business association in training these men. Therefore it was advisable to select commercial training facilities where the transition from the schoolroom to a business office may be made with the least possible disturbance in the man's training.

In securing adaptation of commercial training facilities to meet the needs of commercial rehabilitation, facilities offered by universities as well as private business colleges have been adapted to meet the particular needs of the Veterans' Bureau. The success of such adaptation is best measured by the accomplishments of the graduates the institutions have trained.

Business colleges in the United States have been for years training men for bookkeeping and stenographic positions, and since there has been a sufficient business demand to absorb most of the students completing these courses there has arisen little necessity for broad-

ening or extending these courses of study to other lines of commercial occupations. Only a few exceptions to this general principle have been noted. The overcrowded condition of the bookkeeping and stenographic branches of business during the industrial depression demonstrated the need for training men for other branches of commercial work where the overcrowded condition was less noticeable. Numerous schools therefore have been urged to add to their curriculums certain courses of study to meet the needs of various specific positions of the business world not previously covered in such institutions, such as courses for training general clerks, file clerks, superintendents of files, information clerks, mail clerks, stock clerks, receiving clerks, shipping clerks, traffic managers, entry clerks, ledger clerks, statement clerks, machine bookkeepers, auditors, billing clerks, clerk-typists, pay-roll clerks, general office machine operators, time clerks, teller clerks, production cost clerks, assistant bookkeepers, bookkeepers, accountants, private secretaries, dictaphone operators, commercial representatives, and correspondents. These are intensive courses organized by the bureau, with the cooperation of the institutions, to meet the special demands of business.

The training content required by the bureau for these positions has been developed in a syllabus of commercial courses. This syllabus outlines in detail the training content essential to qualify a trainee for the specialized positions enumerated above. In developing this training content, the needs and requirements of the jobs are always kept in mind as well as the needs and capacity of the trainee.

Adaptation of training in private schools of accountancy, commerce, and finance has been less marked than in the private business schools. The facilities of these schools, for the most part, were designed to meet every specific business demand. In a few instances, it was necessary to intensify training offered by these schools. In other instances, it frequently became necessary to broaden the courses by adding new subjects. The necessity for broadening and making more extensive certain courses offered by these schools created the necessity for developing a comprehensive outline for training in accountancy. This outline was developed by the Bureau for the purpose of coordinating the major subject of accountancy with the related subjects, such as economics, business law, corporation finance, etc.

No more constructive work has been accomplished in any group of institutions than in the universities of higher learning in their organization of commercial training facilities to meet the needs of rehabilitation. At the same time, in no other institutions was the bureau confronted with greater difficulty in getting educators to appreciate the bureau idea of vocational education. The adaptation of facilities in these institutions has been very marked in a number of instances. In many cases courses have been reduced from four to two years, making the program intensive, the courses being arranged so that all the subjects related to the major subject are designed to lead the man to a specific objective. In developing this program such courses in the four-year program were drawn out and organized into a two-year intensive course, so that the trainee would be thoroughly trained in commerce in approximately two years instead of devoting four or five years to a program a large portion of which was purely academic. Such a program means that the trainee is able to enter upon employment two years sooner than he would ordinarily if he were to pursue the regular commerce course outlined by the university.

TRAINING IN THE MUSICAL ARTS.

Training in music has been in great demand by disabled ex-service men who have always considered it an easy means of livelihood. From the first it has been a difficult task to make a proper decision with regard to these requests. Men without any ability or background whatsoever have demanded that they be trained for some musical vocation and a large number have insisted on training for the vaudeville stage.

It must be recognized, of course, that music is a big field and that there is excellent opportunity for training. On the other hand, there is very little opportunity for the mediocre musician.

Men who have requested training in music have had to show a good educational foundation for the same. In most instances it has been necessary for them to show aptitude and talent. It is well to state that not over 1 of 10 applicants for training in music has been granted his request.

There are three general objectives which have always been kept in mind:

1. Training for concert work.
2. Training for orchestral vocations.
3. Training for vaudeville stage.

A tentative decision is first made with regard to this training for the man, which has been arrived at by artists in this field after a performance test. This is followed by a trial period of from 30 to 90 days. If the man is successful during this time, he is allowed to continue.

As the place of training is of great importance, it was decided from the first to use the best existing schools of music. In certain instances training has been given on the job. Many difficulties presented themselves with regard to training in the old-line school.

The cost of instruction when paid for on the half-hour basis was high. It was also true that with the $500 maximum allotted for tuition the man received only four to six half-hour lessons per week. It was necessary for the United States Veterans' Bureau to supply him with a piano or other musical instrument, it then being necessary for him to practice at his rooming house, which was ordinarily done under unfavorable conditions. It was also a fact that trainees under this arrangement were not profiting as they should.

After using the existing institutions for training for a long period, it was found that rehabilitation under the conditions referred to would be difficult, if not quite impossible. As a result, the United States Veterans' Bureau School of Music was established in Chicago. In this school it has been possible for the same expenditure of money to give from 20 to 30 periods of instruction per week. The school has been open from early morning till late at night and facilities for practice have always been available under the proper conditions. Here, too, it has been possible to have practice under supervision.

One of the greatest plans for the advancement of rehabilitation came with the organization of the trainee orchestra. Men through this means have developed skill and talent rapidly. Monthly concert programs have been given and a large number of engagements have been secured. This has made possible the right kind of practice.

Each man in training at the present time has a definite training program. This is arranged according to hours of instruction in the

various subjects, as well as a definite time for supervised practice. While the training program is somewhat more difficult to arrange for music than for other courses, it is necessary from an administrative standpoint.

The supervision of this work throughout the district is carried on by a specialist from the district office. The supervisor works in close cooperation with the training officer from the subdistrict office. Very little musical instruction is given outside of the music school. Students requiring special training, however, may be given training elsewhere, provided satisfactory facilities are available.

AGRICULTURAL TRAINING.

Agriculture is conceded to be of paramount importance in America. More citizens of the United States have practical knowledge of agriculture than of any other occupation. However, the proportion engaged in agricultural pursuits is well known to be decreasing.

These two facts would indicate, as has been found true, that a large percentage of United States citizens drawn into the war have agriculture as a preservice occupation, or at least sufficient farm experience for a valuable background that should have been most carefully considered in determining, to their personal advantage, as well as that of their country, their vocational training objective. The number of agricultural trainees would have been largely increased, many changes of objective avoided, and the men sooner rehabilitated, had the agricultural experience as an asset to training been carefully weighed.

Returning from the war, numerous disabled men, with handicaps which would not interfere seriously with the lighter agricultural pursuits, contemplated agricultural training, as they had become enthusiastic over the European intensive small farming in gardening, floriculture, poultry, fruits, and orcharding. However, the discouragement in securing land and credit, and the lure of high wages and salaries for even disabled and inefficient men, militated against agricultural training. In fact, any kind of training was deferred by a large number of men while the profitable demand for services continued. Influenced by the high prices of products, agricultural men farmed as best they could with their handicaps, if they were owners of or able to control land. Nearly all disabled farmers continued another year to pursue the dollar, but changed financial conditions caused them to lose what they had made. Training was deferred until discouragement in their favorite vocation influenced their selection of other objectives when they were inducted into training. As a result a much lower percentage of men selected training in agriculture.

Agriculture is now receiving proper advisement consideration as a result of personal contact through decentralization, additional agricultural officers, and a definite knowledge of vocational training objectives. Formerly, advisement officers seldom had any knowledge of agriculture and were not sufficiently supplied with information as to the objectives in which disabled men could train so that their disabilities would not interfere with their operating in the prospective occupation.

Great stress was placed, especially in the beginning, on the soldiers' disabilities, then more in evidence. The likelihood of their continuing to be handicapped was overestimated in considering training for

agricultural occupations. This resulted in the discouragement of men who actually desired agricultural training.

Other prominent reasons, in the beginning, for the small number training in agriculture were the experiences of many men reared on the farm in other vocations which yield larger returns. Even if some of these other experiences were of short duration, probably begun with and carried through the war, they established a background which had warranted a try out. Therefore, thousands of veterans selected training in various lines of industry notwithstanding their important experience on the farm. Agriculture probably would have been their most valuable objective, which they have since realized as indicated by the large number who have changed from their first objective to agriculture.

Another reason for less attention to agriculture in the beginning was that all farming has been looked upon by medical advisers as hard work, not to be recommended for men with serious disabilities. This idea has prevented many advisements for those with disabilities that would not have interfered with their following some phase of the vocation. In the early rehabilitation work, related and special objectives in agriculture were not favorably considered; frequently not at all by agricultural institutions, especially if for illiterate men or those having little educational training. Special objectives were more promptly organized in industrial and trade schools and made inviting with "training on the job" and without prevocational or parallel elementary studies. Commercial courses also were attractive, as the work is light, and the schools sought the men, if they had sufficient schooling to take the courses offered.

In the last year there has been a change of policy, and advisement has been more carefully directed so that all men with agricultural background have been given the opportunity of considering agriculture. Many districts have done much readvising, following careful resurvey and medical examination and recommendation, resulting in numerous changes from other objectives to those in agriculture. Due to modified conditions which resulted in poorer prospects in certain objectives, there have been many changes in the inclinations of the men toward agricultural training. The reports of committees investigating unsatisfactory training have recommended transfers to agricultural training as being better adapted to the men and their conditions. Preparation for the future that would carry men back to the land and the old relations, and the development of opportunities for tenancy or good employment when scientifically trained, have influenced many changes to agriculture.

With the development of occupational therapy, the medical officers have recommended, in addition to other subjects, gardening, floriculture, greenhouse operation, bee and poultry husbandry, farm mechanics, etc., for tuberculous men undergoing hospitalization. This gives those contemplating training in agriculture opportunity for preliminary practical work with the elementary related studies.

The "training policies" of the bureau, referred to under "A new method," are especially applicable to placement and project training in agriculture, by means of which greater efficiency will be acquired and a higher type of rehabilitation reached.

With the cooperation of agricultural institutions of all kinds, special agricultural training has been provided to meet every demand, and objectives have been authorized for the specialties approved as feasible. New specialties have been developed in which men have been rehabilitated and are making good in the occupations.

The combination of various objectives is desirable for the trainee who contemplates operating independently his farm, garden, or poultry plant, as it enables him to provide scientifically the many things needed in the operation of his plant and the support of his family. In almost any line of agriculture it is necessary to have a knowledge of gardening, floriculture, poultry, and animal husbandry. Under the combinations so important to trainees and sought by so large a number, a provision has been made in the training manual Miscellaneous 150, paragraph 94, for training to the objective "operation of a small self-sustaining farm home." This has been specifically planned for men possessing average mental and physical ability. Men are trained in a combination of objectives that will fill the requirements when they own or rent.

It has always been conceded heretofore that institutional training is the first step toward agricultural objectives, and that such training should precede placement or project training. The fact that trainees found eligible were approved and advised at all seasons of the year made it necessary to give men placement and project training in agriculture immediately, paralleling this training with related instruction of a definite nature. With the institutional training, practical training has been associated through demonstrations of the technical instruction.

Placement training in agriculture is training on the farm "in which the trainee acquires the knowledge and masters the routine tasks necessary to enable him in competition with average workers to enter satisfactory employment." Placement training is in reality the practical performance of the work as indicated in the technical instruction. It likewise contemplates training into employment at a profitable wage or salary. Notwithstanding the discouragement to farm laborers and the disinclination to training for objectives in agriculture that did not lead to independent operations, many trainees seek instruction through placement training in such objectives as the following: Agriculturist; horticulturist; florist; farm foreman or manager; gardener; dairyman; herdsman, dairy; herdsman, swine; herdsman, beef cattle; grain graders; grain inspectors; cotton classers; tobacco graders.

The bureau endeavors to secure the practical training with successful men conducting businesses in which trainees desire employment when rehabilitated.

Placement training in agriculture is procured for men who are training for salaried positions. It was found that there was a greater demand for such employment objectives than had been anticipated, due to the better salaries paid men scientifically trained in agriculture. Therefore men determined to return to the farm in some capacity consistent with their abilities and men who had no land in prospect sought these lines of agricultural training. Farmers, stockmen, dairy farmers, market gardeners, orchardists, florists, and others knowing the value of trained men seek specially trained veterans, hoping to retain them in permanent employment.

The United States Veterans' Bureau has had the fullest cooperation from agricultural institutions, which have offered special courses and have encouraged the men to the highest possible efficiency to lead them eventually to the better positions and higher salaries. Many of these men will mount the agricultural stepladder through employment partnership, tenancy and long-time payments to land ownership. This attractive goal is visualized by the institutions, but probably long before it was suggested the trainees had focused their efforts toward having profitable and happy farm homes.

Project training, for the trainee aspiring to independent farming, gardening, poultry raising, or other agricultural occupation, is the ideal means of acquiring an organized economic status. Careful study indicates that project training is the best means by which an agricultural trainee may acquire "knowledge and skill" in vocational training, provided he can arrange for a place by renting or by purchase upon which to carry on projects related to his objective.

The bureau has defined project training as "a definite and practical educational undertaking in which the trainee's scientific knowledge is applied and directed toward the establishment of a satisfactory business for himself." Project training may be stated as "earning and learning," which is being most effectively applied to the wonderful advantage of agricultural students, including many bureau trainees in the county agricultural schools. Project training has its beginning with the act of Congress known as the Smith-Hughes Act, which provides for at least six months each year of "supervised practical instruction in agriculture" for boys of high-school age.

The Veterans' Bureau, recognizing that the force of Emerson's statement, "the better part of courage is the courage of having done the thing before," applies to every trainee, adopted the project plans of the Smith-Hughes Act and modified them to suit the requirements of its agricultural trainees. One important modification necessary was that "projects shall extend through the natural and vital phase of production and business." Animal husbandry and horticultural projects; and many of those in general agriculture, require seven, eight, or more months for completion.

Smith-Hughes schools provide at the institution short "trial" projects for young boys by means of which the principle is taught. Projects for trainees should unquestionably be of greater magnitude than those installed for the farm boy in his teens at the county school. Projects in major and minor related branches were organized large enough to employ efficient production methods, secure desirable cash returns, entail careful managerial organization and financial considerations, and give experience that will enable the trainee to carry on after his training allowance ceases; otherwise a man would not realize the importance of his projects nor take the interest that would carry him upon the completion of his objective into a gainful occupation. Thus the bureau has developed projects of real man size for the adult veteran trainees who are buying farms and who are actually operating their farms under individual project programs and instruction following the specifications of their objectives.

The major and minor projects provide an intense practical application to a diversity of profitable lines which will insure the trainee, when following his occupation, against a total loss that would result from failure under a one-crop system. He is given the proper in-

struction to enable him to devote the necessary attention to each branch, intensifying upon all, though one is his specialty.

The past year's experiences indicate that there is a considerable advantage in carrying the necessary instruction to the men in project training on their farms. Trainees usually have had one year of institutional training, have established their projects and are tied by personal interests and financial obligations, making it impractical for them to abandon their project training and return to institutional training. The bureau has therefore established a system of developing knowledge and skill hand in hand by conveying instruction to the men who are performing the practical project work so that they are rehabilitated and established without the necessity of returning to institutional training.

Probably the greatest difficulty from the first and continuing to some extent to date has been the handling in a satisfactory manner of the many prospective agricultural trainees who have little educational preparation for vocational training. The sympathetic cooperation on the part of institutions is enabling the bureau to secure for these men elementary training concurrently with vocational training.

Notwithstanding the failure to provide lands for trainees by legislation, many men have been placed on the land through the cooperation of individuals with the districts who have offered suitable lands at a reasonable price and on satisfactory terms. One State, California, through its land settlement act, has provided opportunities for 10 or 15 trainees at the Delhi development where these men are receiving instruction and proper supervision with projects and individual training programs. In that State about 50 men are training into farm ownership on small farms averaging about 20 acres, with projects in the Imperial Valley under instruction from the Brawley Union High School, which by a staff of competent specialists carries instruction to the men on their lands.

One of the leading districts in project training, No. 10, has two farm community developments: One of small farms for gardening, fruit, poultry, etc., known as the McGrath land settlement, and the other of larger farms for general agriculture, stock raising, and dairying. These projects were established by the trainees with the assistance of the district and the Minnesota Agricultural School.

Hundreds of trainees have bought small suburban places and are developing farms and economizing in the support of their families. This idea has been encouraged by the bureau officers and the agricultural institutions until the introduction of project training on the places acquired by the trainees has popularized the idea of farm-home development. In the vicinity of almost every institution there can now be found a number of trainees living on their own places, upon which they are paying monthly installments not greater in most cases than they were expending for city rent.

The earliest establishment of trainees upon farms in the vicinity of institutions was noted at the Massachusetts Agricultural College, Amherst, Mass.; the Chaffee Junior Agricultural College, Ontario, Calif.; the New York Institute of Applied Agriculture, Long Island, N. Y.; the University of Maryland; and within the past year at one or more locations in almost every State in the Union.

While the rehabilitation act does not provide in any manner for assisting men in the purchase of land, advisory committees have been selected consisting of bureau agricultural training officers in cooperation with an officer selected by the institution, who advise trainees in the proper selection of lands and secure reasonable prices and terms which they can reasonably hope to meet. While a man purchases land where project training can be conducted and instruction given him, the bureau has authorized $300 for equipment, which, on approval of the advisory committees, may be used for instructional purposes in conducting his project training.

Probably one of the greatest deterrents to agricultural training was the inability to visualize a satisfactory future for the trainee who could not place himself on his own farm or that of some relative, nor train into farm ownership for want of credit for land or equipment. Training officers who were not agricultural experts held in prospect for the trainee only the position of farm laborer, a little better than the ordinary at possibly a small advance in wages, and that was viewed as questionable since with his handicap he must compete in the open market with all farm laborers. Discussion in agricultural conferences indicates the belief that had it been possible to finance trainees in the development of small farm homes there would easily have been twice the number training in agriculture.

The prospects of legislation looking to veterans securing land and credits have from time to time encouraged many trainees to select agriculture. There continues with many an abiding faith that the opportunity will yet be provided, at least for purchase with long time amortization credit and small initial payments. The Veterans' Bureau has given much attention to land-settlement questions, conferring with such governmental agencies as the Department of Agriculture, Land Economics Division, and Federal Farm Loan Board. As a result of the study and investigation made, the bureau prepared recommendations known as "The veterans' land purchase system—an American plan for establishing disabled ex-service men on land."

In evolving this land-settlement system for giving the agricultural trainees opportunity with land and equipment, several conferences were held in September, 1921, with representatives of Government agencies who were supplied with valuable information. As a result of these conferences exceptional personal interest was manifested and considerable publicity resulted. Numerous bills are pending in Congress dealing in part with land settlement and provisions for establishing farm homes for disabled veterans who indicate an interest in practical agricultural training.

TRAINING POLICIES.

It is necessary that the districts act on a uniform policy in training for vocational rehabilitation.

Training is provided for the purpose of developing the trainee until he is competent to perform satisfactorily the required duties of the occupation which has been agreed upon as his employment objective.

GENERAL TRAINING POLICY.

In order to accomplish most effectively this purpose, central office presents the following approved training policy which is submitted for the information and guidance of all concerned.

The policy provides that each trainee shall have a specified employment objective, that for each employment objective there shall be set up a complete program of instruction outlining the essential elements of training, and for each trainee there shall be made out an individual training program.

It is not the intention that this policy shall be interpreted to impose rigid training or course content. Each district office will be responsible for preparing specifications of the employment objectives of the trainees and securing the necessary cooperation of educational institutions in preparing outlines of complete programs of instruction. Central office will send representatives into the field to assist the districts in making this policy effective.

Specifications of employment objectives.—A specification will be prepared for each of the types of employment agreed to as employment objectives. These specifications will define the skill, knowledge, and personal qualifications required to succeed in the employment.

Complete program of instruction.—The procedure in developing a complete program of instruction is as follows:

(*a*) The specifications for the type of employment as described above are analyzed into simple operations, processes, and information which must be mastered in order to acquire the skill and knowledge required and to develop the proper attitude to succeed in the employment.

(*b*) The operations, processes, and informational content under *a* are grouped into units.

The program contains at least—

(*a*) The groups and contents described in *b* above.

(*b*) Statement of approximate time necessary for the completion of the program outlined.

The attached forms illustrate the several factors in a "Complete program of instruction."

NOTE.—The degree of proficiency required in each of the items of the complete program of instruction will be defined, and standards of proficiency will be determined through objective and performance tests whenever possible.

Individual training program.—An individual training program will be constructed for each trainee, which will include:

(*a*) The employment objective agreed upon.

(*b*) The units or portions of units the trainee must take to achieve the employment objective.

(*c*) The approximate date for completing training.

In making individual training programs, due consideration is given to the trainee's previous vocational experience, education, and the nature of his vocational handicap.

Records.—Form 1313, Individual Training Program, is filled out for each trainee at the time of induction into training, and also for each trainee already in training. Training programs prepared for trainees already in training must include a detailed and definite statement of the training already completed. The programs are filed in the trainee's individual case folder.

A supervision report, Form 1307, is used in recording all supervision of trainees.

Individual progress records of each trainee are kept by each institution. On this form are recorded the particular operations and processes performed and the units covered by the individual trainee, and a statement of his progress in each.

The types of training approved are as follows:

(*a*) Institutional.

(*b*) Training on the job in business, professional, or industrial establishments.

(*c*) Part-time training, in which the time is divided between institutional training and work on training in a business, professional, or industrial establishment.

(*d*) Project training in agriculture.

(*e*) Approved correspondence courses.

District offices operating through subdistrict offices secure from each institution giving institutional training a complete program of instruction, as defined, for each type of employment in which training is given by the institution. These programs of instruction are submitted to the district office for inspection, to insure that each program is sufficient in scope and content to meet that portion of the specifications of the employment objective for which it is designed.

TRADE AND INDUSTRIAL EMPLOYMENT OBJECTIVES.

The foregoing is a general training policy. The following policy refers particularly to training leading to employment in trade and industrial occupations:

(*a*) *Institutional training.*—Trade and industrial training in educational institutions should be provided under the following conditions:

(1) The selection of an employment objective must precede training or instruction.

(2) Trainees will be placed in those institutions which provide adequate facilities and definite courses leading to rehabilitation.

(3) The acquisition of knowledge and skill being essentially individual, the method of training is flexible, to encourage the rapid progress of each individual rather than to limit such individual by the progress of a group.

(4) Training must be organized into definite instructional steps or units which permit and necessitate progressive training.

(5) Work on practical jobs leading to rehabilitation, using the problem, project, and job method, must be the basis of training. All training must meet the requirements of the occupation for which training is provided.

(6) Academic instruction, where necessary to the advancement of the trainee, must be based on and given concurrently with technical and manipulative training. All instruction must be definitely directed toward the employment objective designated for the particular individual. The amount of related work is to be determined in conference with the trade instructor.

(7) All unit courses offered by an institution should be definitely outlined and such outlines must indicate the required (1) technical and information subject matter; (2) production operations, processes, and methods; (3) degree of skill; and (4) types of jobs, projects, and problems.

(8) The normal working hours of the school week should in general coincide with the normal working hours of the week

in the trade for which training is provided. In no instance should the variation from this schedule be more than six hours per week. The intent of this provision is to develop the trainee without waste of time to the point where he can do his full day's work. When the proper medical officer certifies that the physical or mental condition of a trainee is such as to make advisable shorter training periods, such change may be made for the particular trainee. If the trainee is not able to remain in training for reasonable periods, he should be referred to the medical department for such hospitalization or adjustment as may be advisable.

(9) Individual progress records of each trainee must be kept by each institution.

(*b*) *Training in productive establishments.*—The following policy governs training in productive establishments:

(1) The subdistrict rehabilitation assistants, under the direction of the subdistrict manager, enter into training arrangements with productive establishments and other places for the training of certain individuals. These arrangements are a matter of record in the trainee's folder. Such arrangements include the following:

(*a*) An employment objective which is defined in terms of occupational requirements and necessary degree of proficiency.

(*b*) Organization of training into specific instructional steps.

(*c*) Provision for training which will develop earning capacities during the period of training which can be measured in terms of productive value.

(2) Training arrangements are made with productive establishments which—

(*a*) Present opportunities for training in definite employment objectives, such as will offer suitable and continuous employment to trainees satisfactorily completing the training outlined and such as will prepare trainees to perform operations more extensive than those required in specialized piecework production.

(*b*) Have sufficient equipment and production material to provide reasonably continuous training for all trainees placed with them.

(*c*) Will advance the trainee from time to time as the development of ability to perform certain duties becomes evident, as agreed to in the training arrangements, and which will not during the period of training continue trainees in certain productive operations beyond the point of efficient training.

(*d*) Will require the trainee to maintain a complete and accurate record of all work performed which will be available to the rehabilitation assistant responsible for the training of the particular individual.

c. *Part-time training arrangements.*—Part-time and cooperative training arrangements meet the conditions set forth for training in both institutions and productive establishments, and in addition the following must be complied with:

(1) All training given in the institution is correlated and coordinated with the training provided in the productive establishment. The program is flexible, to permit individual assignments both in the productive establishment and in the institution.

(2) The periods of assignment to institutions and productive establishments for training alternate in such a manner as to provide coordinated instruction at all times and permit completion of unit assignments in the productive establishments.

(3) The requirements of the productive establishments are considered in all arrangements, and the trainees are at all times held responsible for compliance with the regulations of the productive establishments.

d. Approved correspondence courses in trade and industrial subjects are provided only as supplementary to training or employment which provides practical experience.

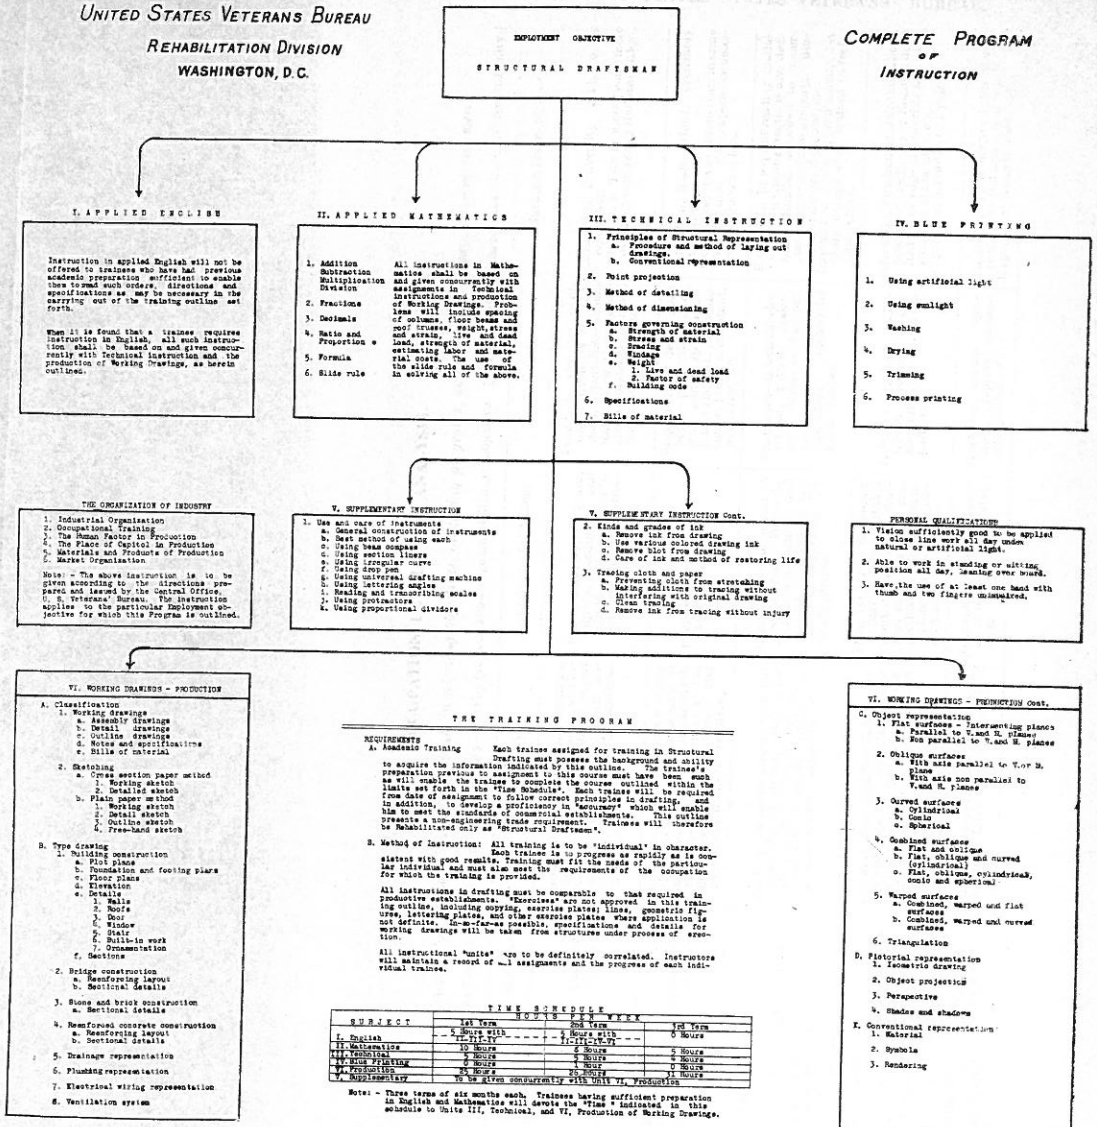
Each district reports at the end of every month the progress made in putting these policies into effect and any resulting problems confronting the districts. Central office renders assistance in the field in putting these policies into effect.

OCCUPATION LEVELS AND ANALYSIS.

Chart designed to aid rehabilitation assistants in selecting objectives, outlining programs, and placing handicapped ex-service men.

[Note.—(1) The length of training is commensurate with capacity—tried by previous knowledge and skill in new objective. (2) The wage should be commensurate with responsibility.]

Level.	Intelligence.	Responsibility.	Initiative and judgment.	Examples.	Education and experience.
Large scope of ability. Executives and specialists.	Superior capacity.	Responsible for general management, organization of departments, and execution of policies. Makes expert analysis of materials, methods, machinery, management, markets, money, and men.	Plans, analyzes, organizes, adjusts, coordinates, and selects. All departments. Initiates all major action.	President, vice president, superintendents of divisions, specialists—chemical engineer, electrical engineer, designer (senior), senior accountant, etc.	Education: University graduate or equivalent. Experience: Two or more years; more experience necessary if education less.
Highly skilled. Minor executives and minor specialists.	Above average capacity.	Carries out plans and policies of executives. Analyzes and organizes as above except for one department. Supervises work and men in the department. Makes reports and recommendations to executives.	Plans, etc., as above for one department.	Shop foremen; department heads—production, sales, etc.; minor specialists—junior chemist, junior designer, junior accountant, secretaries, etc.	Education: High school; preferably two years college. Experience: Two or more years in same or allied line. More experience necessay if education less.
Skilled. Tradesmen, clerks, etc.	Average capacity.	Performs complete process with full knowledge of process. High manual dexterity. Directs and supervises work of helpers. Makes complicated machine adjustments.	Lays out work according to specifications. Makes decisions as to quantity and quality of materials and methods—pertaining to single process.	Tradesmen—machinist electrician, pattern maker, etc.; clerks—bookkeeper, stenographer; salesmen; draftsmen; commercial artist; chemist.	Education: Blue-print reading; mathematics, including fractions and decimals; English sufficient to understand orders and make reports. Business training, if clerical, etc. Experience: Usual apprenticeship, 2–4 years, except when trained in technical school.
Semiskilled. Helpers.	Below average capacity.	Performs tasks definitely laid out by skilled superior. Operations more or less routine. The task is part of larger process in level above. Makes small adjustments.	Plans very little pertaining to part of process. Makes limited amount of decision as to materials and method—some decision in making minor adjustments.	Helpers—machinist, electrician, chemist, assembler, office, etc., in all departments.	Education: Fundamental mathematical processes; mechanics of English; limited knowledge of materials and construction of machine, etc. Experience: 6 months to 1 year.
Unskilled. Routine laborers.	Very low capacity.	Performs manual tasks. Operations routine. Little manual dexterity.	No planning. Decision only as to order of performing tasks.	Truckmen, machine operators, wrappers, messengers, janitors, etc.	Education: To understand directions, read labels and scales, and count. Experience: None to a few days.



18174—22. (Face page 329.)

JOB ANALYSIS.

A job analysis has been defined as "A scientific study and statement of all the facts regarding a job that throw light on its content and especially on its relation to the worker." It may also be defined as "An inventory of all the knowledge and skill necessarily possessed by a master workman in a given employment." Other definitions of a job analysis have been made which differ somewhat in the choice of words, depending upon the author's conception of the primary purpose of a job analysis. In a broad sense it is a method of industrial research.

A job analysis may serve one or more of several purposes, depending upon the aim of the person who utilizes the facts contained in the analysis.

The most common uses of a job analysis may be classified as follows:

1. *Efficiency engineering.*—Simplification of processes resulting in lower production costs. Job specifications for employing.

2. *Safety and health engineering.*—Protection of life and limb and promotion of healthful working conditions resulting in increased efficiency of the worker.

3. *Vocational advisement.*—Reliable information as a guide to choice of employment objective.

4. *Training.*—Scientific basis for content of training program.

The last three uses of a job analysis mentioned in the above list play a most important part in the work of vocational rehabilitation.

Vocational advice and counsel necessarily precede a wise choice of an employment objective. Most people know very little about an occupation in which they have not worked. The applicant for training has all too often only the haziest notions of what he desires to prepare himself for or what is necessary in terms of knowledge, skill, and strength to carry on successfully in a given vocation.

The rehabilitation agent, from first-hand information regarding vocations, may counsel in a very limited field of human activity. To enlarge his usefulness he must resort to job analysis for facts.

In order that a medical officer may declare training for a given vocation feasible for a man with a certain disability, it is necessary, in addition to his professional knowledge, that he be possessed of such knowledge as is found in a job analysis and commonly used by safety and health engineers.

Lastly, a job analysis furnishes a scientific basis for the content of the training program; this is true of institutional training programs as well as programs for job training. This is excellently brought out in "A study of engineering education," by Charles Riborg Mann, published in Bulletin No. 11 of the Carnegie Foundation for the Advancement of Teaching.

When a job analysis is made primarily for the purpose of determining the content of a training program, the best source of information is the master workers in the vocation being analyzed. The men with a wide experience in their vocations can authoritatively give first-hand information regarding at least the most important items of knowledge and skill required for effective workmanship. Most workers, upon being questioned regarding their vocations, will readily volunteer some information, but this is usually quite fragmentary and incomplete. The rehabilitation agent must resort to skillful

questioning in order to lead the workman on to consider all the phases of his work.

By interviewing several workers in the same vocation and recording all the facts thus obtained, a fairly complete inventory of the vocation showing the items of knowledge and skill may be obtained. The investigator, of course, must evaluate statements made to him and discriminate between facts, opinions, and notions or prejudices. To do this work well, it should be done methodically and with as much painstaking, scientific exactness as time will permit.

Many good suggestions and much valuable information relative to vocations may be found in the following publications:

Trade Specifications and Index of Professions and Trades in the Army, known as War Department Document No. 774.

Descriptions of Occupations, a series of publications prepared for the United States Employment Service by the United States Department of Labor.

List of Most Important Occupations and Employments in Food-Producing Industries under the Supervision of the United States Food Administration.

Shipyard Occupations, by the United States Shipping Board Emergency Fleet Corporation.

Vocational rehabilitation series on vocations, prepared by the Federal Board for Vocational Educational and issued in cooperation with the office of the Surgeon General, War Department, and Bureau of Medicine and Surgery, Navy Department.

Trade and industrial series, employment management series, and other bulletins, issued by the Federal Board for Vocational Education.

Uses of Job Analysis, Bureau of Industrial Research, New York, 1919.

Outline of Job Analysis, Valentine and Gregg.

The Instructor, the Man, and the Job, by Charles R. Allen.

Programs of training prescribed for trainees under the supervision of the United States Veterans' Bureau are of five kinds:

1. Standardized courses of study regularly offered by existing training facilities.
2. Courses built up by selecting subjects of study offered in the regular curriculums.
3. Training pursued in commercial or industrial establishments.
4. Agricultural project training.
5. Training for men with special disabilities.

Courses that lead to vocations usually governed by State licenses have already been standardized more or less in accord with the demands of the vocation and the standards set up by the examining boards. An analysis of such vocations is therefore not necessary for the purpose of establishing course content but may supply valuable information relative to the substitution of experience for prerequisites and regular subjects. It certainly is essential for determining employment objectives and declaring feasibility of training.

Courses can not effectively be built up by selecting subjects of study offered in the regular curriculums without a knowledge of the demands of the vocation such as are given by a job analysis.

The more definite and specific an employment objective is made, the more evident it becomes that courses of training, as ordinarily offered,

are very general. In fact, they are usually specific only with respect to a field of employment, as for instance, commercial training, engineering, or agriculture. Then, too, regular school scoures cover only a portion of the activities whereby a living may be gained. Under these conditions the prescribing of a course of training frequently consists of selecting subjects of instruction from those already organized and of supplementing these, when necessary, with special instruction or with training "on the job."

The process of learning "on the job" is not different from learning in school. Progress in training is predicated on the methods used in parceling out the items to be learned. It takes months and years to learn, assimilate, and master a vocation. Since time is an element in training and since the vocation consists of many items, it is absolutely necessary—to insure regular and rapid progress—that the learner acquire and master some specified item or items each day during the period of his training, the sum total of which constitute the vocation he is to master.

Training "on the job" necessitates a job analysis, not because the worker who is to train the man does not know all the parts of his vocation, but because the average worker, without teaching experience, has little or no analytical concept of his vocation and is therefore incapable of parceling out from day to day the various items of his trade that the learner is to acquire.

Among the facts recorded in a job analysis will be found the information that is necessary to determine the content of a program of training that will, when faithfully pursued, advance the trainee to the point of employability in a particular vocation.

The content of the job analysis must be carefully reviewed and evaluated in order to extract therefrom all the items that should go into the training program. When the teaching material has thus been selected, it must then be organized into an instructional order so that effective teaching may make the progress of the trainee rapid.

Training programs for organization purposes should be divided into units or broken up into "blocks." Only general directions for doing this can be given, since there are few things that very many vocations have in common. Most vocations will be found to have certain peculiar characteristics that may be used as a basis for organizing "blocks" in the training program: for instance, dental mechanics will be found to divide naturally into types of work done or different materials used.

A particular individual may begin his training with some of the knowledge and skill required, or he may begin it in an institution, establishment, or project where all knowledge and skill can not be acquired. Therefore the training program in his case will not make provision for training in one place.

A training program should be made for each trainee in conference with the individual who is to give the training in order to effect a clear understanding as to the content and sequence of the instruction, as well as to stimulate the instructor's interest.

A copy of the training program should be furnished the trainee that he may know what course of training he is to pursue, the various parts into which it is divided, the sequence preferably to be followed, and the estimated length of time for completion of each unit or "block," together with the estimated time required for completion of training.

All auxiliary knowledge, such as mathematics, trade science, technical terminology, knowledge of materials used, "safety-first," drawing, etc., *should be planned in a written training program* so as to be taught, as far as possible, by "hanging them on the job"—that is, *at the time when the actual work requires the use of such knowledge.*

The training program should provide such breadth and excellency of training and such a knowledge of the requirements of closely related jobs as will make employment reasonably certain under varying business conditions.

Training programs should provide for such training situations as will duplicate the methods employed, materials used, length of working-days, routine, job discipline, etc., as prevail in the best establishments in the locality.

In brief, all of the phases and conditions of the individual training program are defined by the job analysis of the particular occupation concerned.

INTELLIGENCE TESTS.

The job of retraining the handicapped and returning them to em ployment in which their capacities and abilities may find fullest expression can not be done well by any hit-or-miss method. The shaping of the destinies of men is too important to be trifled with. Rehabilitation, then, if it would accomplish what is best for trainees at the least cost, must be businesslike and scientific. To this end, intelligence tests are being used as an aid in the selection of employment objectives and the mapping of training programs.

The selection of the employment objective best suited to the trainee's capacity and abilities is the first and most important step in his rehabilitation, challenging on the part of both the trainee and the bureau the most careful consideration of his training experience in school and occupation, his ambitions, disability, and abilities. The steps involved in the selection are these:

(*a*) The man's field of interest.

(*b*) The level of occupations within his intelligence capacity.

(*c*) The occupation in that field of interest and at that occupation level for which his abilities and traits best fit him.

This report covers step (*b*) only, stressing the use of intelligence tests as an aid in determining the capacity of the trainee and consequently his level of occupation from which he may select his employment objective. It is not to be inferred that education, occupational experience, and moral equipment are not given proper weight. These must all be considered. The tests serve as an aid, and results from their use in district No. 12 during the past year and a half show them to be reliable as a measure of ability. They furnish, as one authority says, "a reliable index of a person's ability to learn, to think quickly and accurately, to analyze a situation, to maintain a state of mental alertness, and to comprehend instructions." It is obvious that different degrees of this ability are necessary in various lines, as, dental mechanics and operative dentistry, or machine operator and machinist; hence, the value of the test as an aid in the selection of the objective.

District No. 12 began giving tests to problem cases in October, 1920, revealing that approximately 20 per cent of trainees were aiming at objectives beyond their capacity to reach. One man, for instance, who entered in April, 1919, as a machinist, with a fifth-grade education, and experience as a teamster and office porter, shifted about, making no progress. Finally, the test was given and it was found that he had a mental age of 9 years. He was aiming too high and over $2,000 had been spent without results. This is an extreme case, but is representative of the problems which tests aid in solving.

The application of intelligence tests has been extended until now every man entering training in district 12 is examined. Each subdistrict either has staff members give the tests or they are given through the cooperation of examiners in the city school systems or universities.

The Terman group test of intelligence is used. In those cases receiving a low score because of language handicap or a low mentality, the Meyer mental measure is also given. This is a picture test and easily taken by foreigners unfamiliar with the English language. The results of the tests are placed in the hands of the rehabilitation assistants responsible for determining the employment objectives and outlining the training.

The scores on the Terman group test fall into the following classifications:

(*a*) Superior	155–220
(*b*) Above average	120–154
(*c*) Average	90–119
(*d*) Below average	60– 89
(*e*) Very low	0– 59

Occupations are similarly grouped according to the degree of thinking necessary, the responsibility required, and the size and complexity of the problems to be solved.

Broad scope of ability	Executives and specialists.
Highly skilled	Minor executives and specialists.
Skilled	Tradesmen, first-class clerks, etc.
Semiskilled	Helpers.
Unskilled	Laborers and process workers.

Thus the occupation level of each trainee is adjusted to his intelligence level. A study of 876 trainees in educational institutions in April, 1921, showed the following classifications:

Score.	Classification.	Number of trainees.	Per cent.
0–59	Very low	151	17.2
60–89	Below average	133	15.2
90–119	Average	126	14.5
120–154	Above average	207	23.6
155–220	Superior	259	29.5

The high percentage in the highest level is significant. This is doubtless larger than would result if all trainees in placement training were considered. The occupations of these trainees prior to entering the service were not above the average level, but frequently they were lower. The intelligence scores indicated that the money being spent for their training is well invested.

It does not follow that trainees with university-intelligence capacity are sent to universities. Prerequisites, age, and previous

occupation are also considered. Some of the very best records obtained by university trainees are by those who entered with insufficient entrance credits but with a superior intelligence test rating. The special students at Stanford University during the summer quarter, 1921, for instance, constituting approximately 25 per cent of the trainees enrolled, received a score rating of scholarship of 1.69 as compared with the average of 1.27 for men students. The wide margin in favor of the special students is evidence that superior intelligence scores are a safe indication of ability to master university work. Experience shows that a score of at least 135 in the Terman group test should be received as a basis for university entrance.

Trainees who desire semiprofessional courses, such as practical engineering and accountancy should have superior intelligence. The average score for the 150 students in the Southwestern University, an accountancy school, on March 20, was 156, 21 points above the score necessary for entrance to the university, yet 27 per cent had not gone beyond the eighth grade, and only 31 per cent had completed high school. *It would not have been fair to deny those with superior intelligence the right to this training, especially since they will return to the country a greater service because of it.*

The tests also reveal those with inferior capacity. These have been and always will be the bureau's greatest problem. The responsibility, however, of training them into employment is none the less definite. They must be content to be good machine operators, kodak printers, and helpers in the various trades. Tests given to the trainees in the vocational school in Los Angeles in the spring of 1921 show the presence of the problem there as follows:

Score.	Classification.	Previous education—grade.			Total.
		1 to 6.	7 to 9.	10 or higher.	
0–59	Very low	79	15	2	96
60–89	Below average	25	36	6	67
90–119	Average	14	27	13	54
120–154	Above average	8	22	15	45
155–220	Superior	2	18	21	41
Total		128	118	57	303

This analysis was of great aid to the bureau and educational directors in finding the kind of training to give, and the method of giving it. Thirteen of the group in the vocational school had one year of schooling; 12, two years; 15, three; 26, four; 28, five, etc. Experience shows that those less endowed mentally should have first of all prevocational education within their capacity and socialization to enable them to have the right attitude toward institutions and their work.

As revealed by the test, approximately 600 of those with low intelligence scores have been given special attention by the district and subdistrict offices, resulting in definite training programs worked out with clear understanding of their limitations. Very often trainees with insufficient background do not realize their limitations, and insist on long periods of training for objectives that are beyond

them. One, for instance, requested training as a metallurgist, another as an accountant, another as a designer, another as a lawyer, etc. Many shifted from one objective to another, getting nowhere. The tests revealed that they should be given special attention. In a great many cases the time saved by special consideration of this group amounted to six months or more. If three months only were saved in the 600 cases, at $125 per month, there would result a saving of $75,000.

That the tests give results is confirmed by the fact that the schools, trainees, and the 130 rehabilitation assistants in district 12 have accepted them and used them constantly.

18174—22——23

[1] "Registration," "entered," and "deceased" are cumulative figures. All others are status figures as of the first of each month.
[2] "Discontinued" was made a separate status on this date.
[3] Prior to this date "registration" included all notices sent to prospective claimants. Only applications for vocational training were counted after November, 1920.
[4] Figures not available prior to this date.
[5] First report of this status. "in process," "declined" and "deferred" constitute those persons "assigned" that have not entered training. (After July 1, 1922, "deceased before induction" should be included.)
[6] "Deceased" and "training interrupted" were separated from "discontinued" on this date.
[7] "Deceased before assigned" was separated from "eligible unassigned" on this date.
[8] "Lapsed eligibility" was counted in "declined" and "deferred" prior to July 1, 1922.
[9] "Deceased before induction" was separated from "deceased" and "entered training" on July 1. (Prior to July 1, 1922, "deceased before induction" was counted in "entered training.")

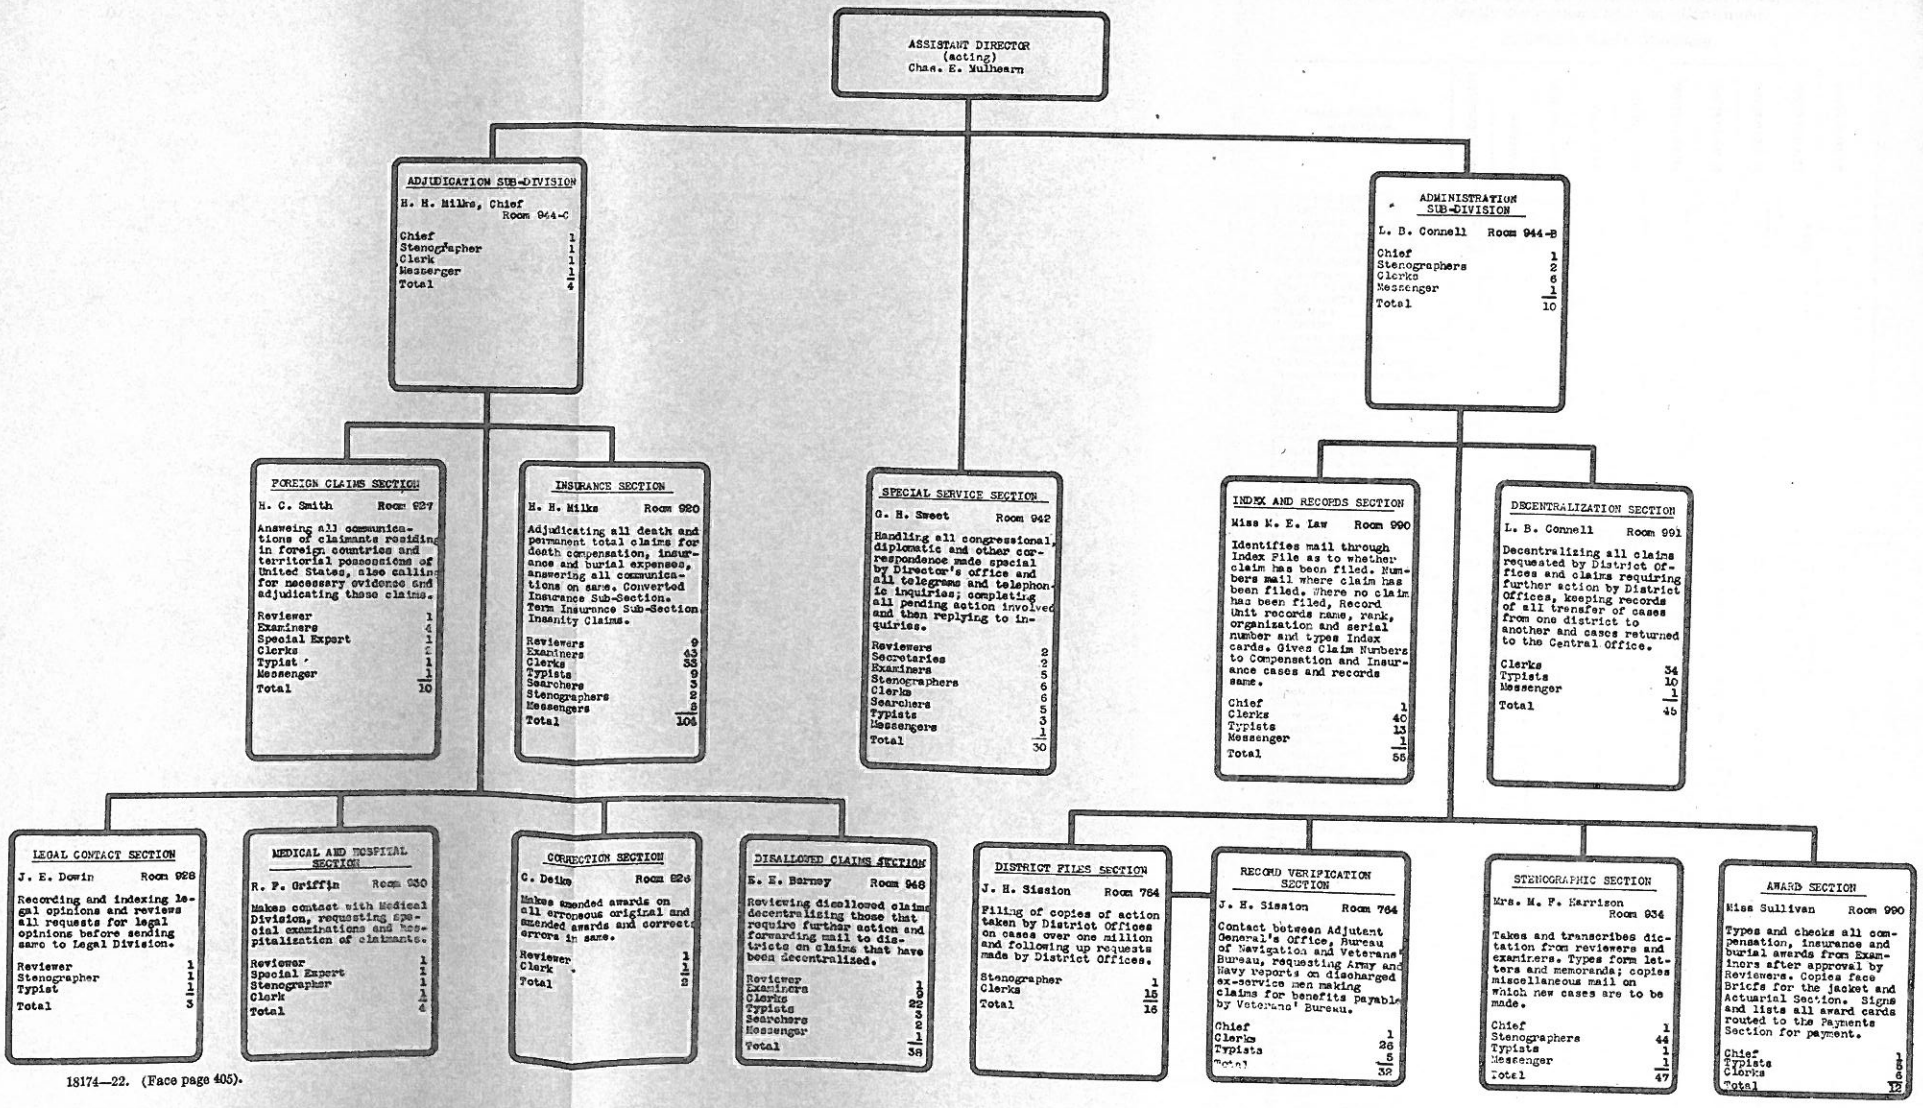
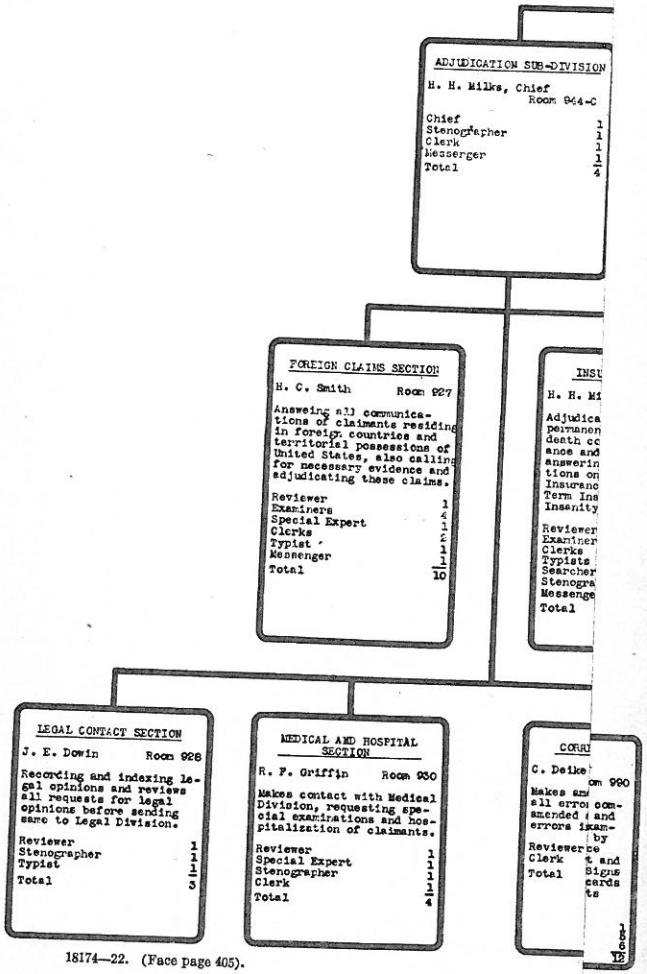
CLAIMS DIVISION





18174—22. (Face page 405).

CLAIMS DIVISION.

By the provisions of Public No. 90 (65th Cong.) an act to amend an act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September 2, 1914, there was created on October 6, 1917, in that bureau a division of military and naval insurance.

Article 3 of this act provides that "for the death or disability resulting from personal injury suffered or disease contracted in the line of duty by any commissioned officer or enlisted man or by any member of the Army Nurse Corps (female) or of the Naval Nurse Corps (female) when employed in the active service under the War Department or Navy Department the United States shall pay compensation as hereinafter provided, but no compensation shall be paid if the injury or disease has been caused by his own willful misconduct."

Article 3, later amended by Public No. 178 (65th Cong.) and the act of July, 1919 (41 Stat., 158), provided vocational training for every person "having a disability incurred, increased, or aggravated" in service "and who * * * is in need of vocational rehabilitation to overcome the handicap" (sec. 2) and to "any person disabled under circumstances entitling him * * * to compensation" (sec. 3).

Article 4 of this act provides for the issuing of insurance in a sum of "not less than $1,000 or more than $10,000 upon the payment of the premiums as hereinafter provided," benefits for which are paid upon the permanent total disability or death of the insured.

As a result of these acts there has been built up in this bureau the Claims Division, which adjudicates all claims for compensation and insurance and determines eligibility for vocational training. This division, which was started on October 15, 1917, with only a handful of personnel and a few cases to be handled, has grown into a great organization handling 850,487 compensation claims, 179,176 insurance claims, and 631,698 vocational rehabilitation claims against our Government.

On account of the shortage of floor space in Washington in the pioneer days of the War Risk Insurance Bureau, the Claims Division was housed in a separate building from the remainder of the bureau. During this period the division was forced to duplicate a great amount of work, which consequently required unnecessary personnel. On March 17, 1919, however, the Arlington Building being completed, the entire bureau moved into its present home and the Claims Division was located on the ninth floor, where it was better able to concentrate its efforts on the adjudication of compensation and insurance claims.

At this juncture the Army and Navy began to discharge the ex-service men by the thousands daily. Two hundred and thirty-seven thousand eight hundred compensation and insurance claims had been filed when the division moved into its new home, and when the Veteran's Bureau was established the number had reached 838,281.

These claims not only demanded additional skilled personnel to handle them but also adequate floor space, so that gradually the Claims Division expanded until it occupied the larger part of the ninth floor and finally also parts of the sixth seventh, and tenth floors.

On August 9, 1921, Congress passed Public Act No. 47 (67th Cong.), which provided that there should be created the United States Veterans' Bureau to handle all questions pertaining to the claims of ex-service men. This bureau took over the work of the former Bureau of War Risk Insurance and those activities of the Public Health Service and the Federal Board for Vocational Education that pertained to the care of disabled ex-service men. The act also provided for the establishment of not more than 14 regional offices throughout the continental United States.

Following this act, the Compensation and Insurance Claims Division of the Bureau of War Risk Insurance was transferred to the Claims Division of the United States Veterans' Bureau, and that part of the Federal Board for Vocational Education that determined the eligibility of a claimant for vocational training was also transferred to the Claims Division of this bureau.

DECENTRALIZATION.

In July, 1921, a committee was appointed in the Bureau of War Risk Insurance to outline procedure for the decentralization of compensation claims. It was decided that decentralization should be accomplished gradually in order that there might be no interruption in the adjudication of claims. On August 10, 1921, the director issued General Order No. 5, establishing procedure to be followed in district offices for the adjudication of compensation claims filed after that date. The adjudication of claims filed prior to August 10 was continued in central office in Washington, D. C., until district offices had made progress in handling new claims which were being submitted in large numbers at that time. On November 15, 1921, the director issued an order that the decentralization of all pending partial disability compensation claims which were on file in central office should be begun at once and completed not later than May 15, 1922. Within 12 hours of the issuance of the order to decentralize the work was started. The personnel was asked to work overtime, and this was willingly done. This work went on steadily day and night until 4 o'clock on the evening of April 19, 1922. On that date, nearly one month before the time set by the director, decentralization was completed and all cases had been properly forwarded to the field as requested by the director.

CLEAN-UP CAMPAIGN.

Soon after the establishment of the United States Veterans' Bureau, a clean-up campaign was launched in the 14 districts. For this campaign the Claims Division furnished such personnel as was required to assist clean-up squads that were organized in each district. The majority of the large towns were visited by these squads, notice being given in advance that they would be at specific places on certain days for the purpose of giving any information or assistance necessary to advise disabled ex-service men of their rights under the war risk insurance act and the vocational rehabilitation act.

The squads interviewed ex-service men as a means of determining whether they had just claims against the Government and assisted the claimants in the preparation of claims. Claims were forwarded to the district offices where, if new, they were adjudicated; if old claims, they were forwarded to central office for adjudication. Claimants who had previously filed claims but were not satisfied with the results were privileged to go before the clean-up squads and submit their legitimate complaints against the bureau. The squads secured legal evidence and made additional medical examinations when necessary. A disallowance unit and a clean-up squad unit were created in the Claims Division, and these units continued to function until all clean-up claims had been properly handled in central office or forwarded to district offices. As a result of the clean-up campaign the bureau received 48,598 new compensation claims and 27,617 new claims for vocational training. As soon as these new claims were received action was taken upon them, and at the end of this campaign the claims divisions in the districts had adjudicated nearly all of them.

HOSPITAL CANVASS.

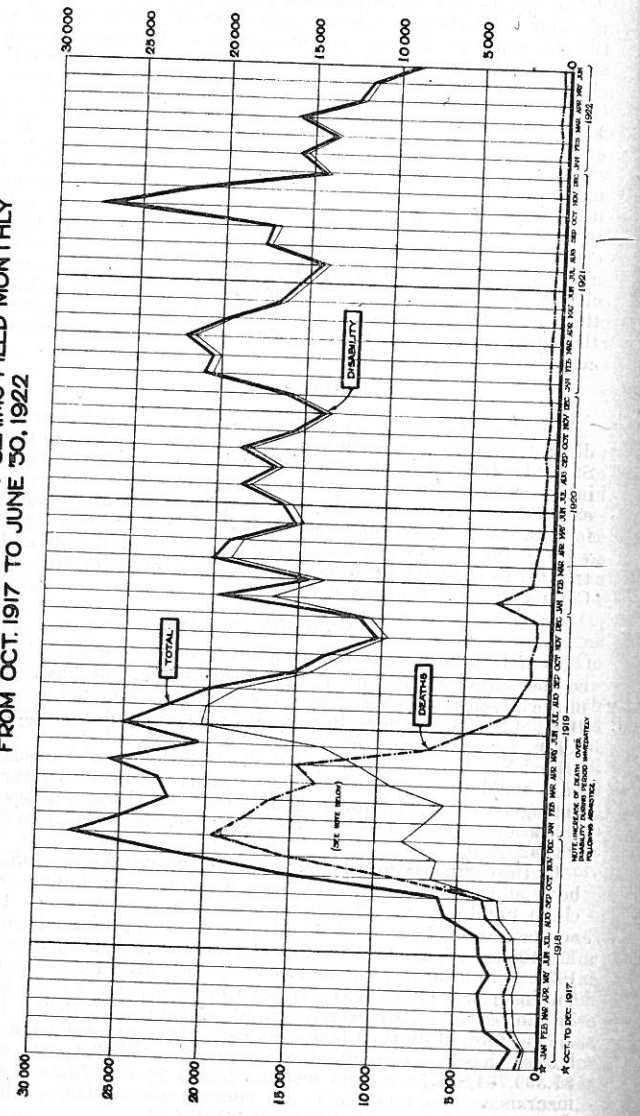
The clean-up squads having practically completed their work, the director ordered that a canvass be made of all hospitals in the United States that were taking care of ex-service men and that all patients be interviewed whether they were claimants or not. The names of the ex-service men were to be forwarded to central office, and if it was found that these men had filed claims for compensation, their claims were to be immediately called for by the hospital unit and decentralized to the field for adjudication. As a result of this drive, the Claims Division disposed of 10,646 cases.

CONDITION OF WORK.

As of June 30, 1922, central office records showed a total of 850,487 compensation claims and 179,176 insurance claims filed. By order of the director, there have been retained in central office as of June 30, 1922, 424,228 compensation cases, consisting of permanent total, death, foreign, bureau employees' claims, United States Vocational School No. 1 trainees' cases, and all disallowed disability claims that have not been requested for decentralization by either the district managers or the claimants themselves. The total number of compensation claims on file in the district offices as of June 30, 1922, was 426,259.

Of the compensation claims remaining in central office 148,521 have been allowed, 273,165 have been disallowed (including reassigned claim numbers), and 2,542 were pending as of June 30, 1922. Of compensation claims in the district offices 262,294 have been allowed, 119,106 have been disallowed, and 44,859 were pending as of June 30, 1922. All insurance claims have been retained in central office. Of the insurance claims 154,255 have been allowed, 23,754 have been disallowed, and 1,167 were pending as of June 30, 1922. Insurance claims allowed by the Claims Division since the establishment of the bureau have a commuted value of $1,348,093,110.95, of which $1,339,764,835.70 is term insurance, and $8,328,275.25 is converted insurance. Disbursements on compensation claims allowed to June 30, 1922, amounted to $359,421,018.72.

CHART NO. 16.
U.S. VETERANS' BUREAU
COMPENSATION DEATH AND DISABILITY CLAIMS FILED MONTHLY FROM OCT. 1917 TO JUNE 30, 1922



ORGANIZATION AND PROCEDURE.

During the experimental stages, this division tried many of the methods of office procedure followed in the modern business world. As a result there has been perfected an organization that is an adaptation of business methods particularly suited to the handling of claims.

At the beginning of the fiscal year 1922, the Compensation and Insurance Claims Division of the Bureau of War Risk Insurance was divided into 26 units, each unit being a complete claims adjudicating office within itself. In charge of each unit was to be found a claims reviewer, who was responsible to the assistant director in charge of the Claims Division through the chief reviewer. Under the reviewer in charge of the unit were placed from 5 to 20 examiners, according to the number of active claims being handled. These examiners were responsible directly to the reviewer, and the reviewer was responsible for the proper adjudication of all claims submitted. In each unit the files were arranged by claim numbers. In charge of these files was a supervising clerk with a corps of filing clerks and miscellaneous clerks, the supervising clerk being responsible directly to the reviewer in charge of the unit. In the units were also stenographers, typists, and medical account clerks. Attached to the unit was a complete corps of abstract clerks detailed to the Claims Division by the director's staff assistant for the purpose of keeping a complete actuarial record of all action taken by the Claims Division on all claims filed before this bureau.

This organization continued in central office until the decentralization of pending claims was begun in November, 1921. As decentralization progressed, the 26 units in central office were consolidated into smaller units until gradually the number of units dwindled to 3. The extra filing cabinets that were emptied by decentralization and consolidation were forwarded to the districts.

It was necessary to send experienced technical personnel to the districts to adjudicate the decentralized claims. Reviewers and examiners in central office were sent to the district offices after being given opportunity to select the districts they preferred.

District managers began to call on central office for technically trained employees faster than they were willing to be transferred, and it became necessary to resort to the draft system to get technical workers out into the field. When district managers called for more personnel than could be spared, it was necessary to call upon the Civil Service Commission to furnish the employees needed to handle claims work, in order that they might be trained in central office in advance and sent to the field when requested. As a result the bureau has been able to furnish all of the skilled assistance called for by the district managers.

DISTRICT OFFICE CLAIMS DIVISIONS.

In each district office there is a Claims Division under a reviewer sent out by the Claims Division of central office. This reviewer is known as chief of claims and is responsible directly to the district manager. However, the assistant director in charge of the Claims Division in central office maintains jurisdiction over the chief of claims and the claims division of the district offices, in the instruc-

tions and procedure for the adjudication of the claims, and in the confirmation of reviewers and examiners to be appointed by the district manager. Chiefs of claims in district offices are members of the district manager's staff. They deliberate with the chiefs of the other divisions in periodical conferences, and are directly responsible for the work of all personnel assigned to their divisions.

In the claims divisions of the district offices there are not only the compensation claims to be adjudicated but also the vocational claims which were transferred to the United States Veterans' Bureau by the Federal Board for Vocational Education. In the district offices the claims examiners pass upon eligibility for vocational training while they are passing upon a compensation claim. Before adjudicating these claims, it is necessary that the claims jacket be forwarded to the Medical Division in order that a medical rating may be given upon the disability of the claimant showing whether it is service connected and the per cent of disability. The Medical Division also expresses an opinion as to medical feasibility for vocational training, and returns the case to the Claims Division for adjudication.

Should the Claims Division find that the claimant has a compensable disability, a compensation award is promptly made. Should the Medical Division rate the claimant as having a vocational handicap and also as being feasible for training, the Claims Division will pass upon the eligibility of the claimant for vocational training. In passing upon this vocational question, the Claims Division is held responsible for the accuracy and sufficiency of the historical and legal data submitted by the claimant to establish the claim, and furnishes a decision based upon the medical rating as to whether the claimant is eligible for vocational rehabilitation. This decision is based upon all the evidence assembled as outlined in General Order 106. Should the decision be in favor of the claimant, a statement is made that the claimant is eligible for vocational training and forwarded to the Rehabilitation Division where induction into training is handled.

BOARD OF APPEALS.

In central office and in each district office there is a board of appeals. One man is assigned to the Central board of appeals by the Claims Division for the purpose of passing on claims pertaining to compensation and vocational training.

In central office the board of appeals is authorized by the director to review and render final decision on all appeals from the district offices. Should a claimant be dissatisfied with the decision rendered by his district office, he may appeal to the district board of appeals for a review of his claim. If the decision of this board does not satisfy him, he may appeal in writing through the district office to the central office board of appeals for a final review.

RECORDS OF DECENTRALIZED CASES.

When the director ordered decentralization of the active claims, it became necessary to create a unit in central office to handle this procedure. The decentralization unit was created for the purpose of keeping a complete record of all cases sent to the field and it had entire jurisdiction over packing and transporting the claims jackets after they were assembled from the general units of the Claims Division of central office. The work of this unit can not be too highly praised on account of the wonderful showing which it made in the drive to distribute over 300,000 cases to their respective districts in a short space of time.

During the process of this decentralization many problems were met. Many of the active cases were out of the files and in the different sections and divisions of the bureau for action. There were the problems of shipment and of keeping accurate records to show in detail the distribution of cases to the districts. As a means of solving these problems, all divisions in central office were requested to forward promptly to the Claims Division all claims in their possession. Here they were carefully reviewed by claims examiners. If found within the category of cases to be decentralized, no further action was taken, but the cases were immediately forwarded to the decentralization unit and thence to the district offices where claims examiners reviewed them and took proper action. This procedure was so successful that all cases were decentralized nearly a month in advance of the date set by the director for the completion of the work.

Individual records of the claims shipped to the districts were kept in central office in the form of dummy folders. On the jacket of these folders were inscribed the claimant's name, rank, organization, and claim number, just as these marks of identification appeared on the original folder. The outside of the jacket also shows the district to which the original claim was sent. These dummies were made up before the cases were decentralized and then filed in the main units of the Claims Division. When cases are transferred from one district to another, the districts concerned notify central office, and a correction is made on the dummy jacket, so that it can be readily determined in which district the claimant is located and which district manager is responsible for his claim. This was very necessary, as some claimants, being ignorant of the fact that decentralization had taken place, continued to write central office as to their claims. Such correspondence is referred to the proper district manager, and the claimant is notified which district office has jurisdiction over his case, and requested to communicate with that district. This plan has been most helpful in handling the great quantity of mail received daily by the Claims Division and consequently in expediting the adjudication of claims.

The Claims Division has also built up in the decentralization unit a complete system whereby it is possible to determine at any time the exact date a jacket has left central office and the district office to which it has been sent or transferred. Also there can be found in this unit a receipt for the jacket signed by the district manager. As a result of this complete and careful procedure, only one case was lost during the entire process of decentralization, and this case

was later located after a careful search by the Post Office Department and by this division.

NUMBER OF CASES DECENTRALIZED.

The total number of cases decentralized to each district by central office up to the close of the fiscal year 1922 is as follows:

District No. 1	21,191
District No. 2	33,365
District No. 3	24,287
District No. 4	22,875
District No. 5	25,589
District No. 6	15,645
District No. 7	34,756
District No. 8	36,205
District No. 9	25,325
District No. 10	13,085
District No. 11	10,147
District No. 12	13,524
District No. 13	8,465
District No. 14	16,013
Total	300,472

There are still in central office a number of disallowed disability claims. These, under the director's orders, will be retained until they have been reopened by the submission of additional evidence from the claimant, at which time they will be decentralized to the proper district. Should the district manager or the claimant himself request that his case be forwarded to the district, the case will be decentralized. This phase of decentralization will continue for some time. The division is at this time decentralizing to the fourteen districts about four hundred such claims daily.

DEATH AND PERMANENT TOTAL DISABILITY CLAIMS.

There are assigned permanently to the Claims Division, central office, all death and permanent total disability claims. These claims are located on the ninth floor in unit No. 1, known as the insurance unit. On June 30, 1922, there were 179,176 insurance claims filed, 178,009 insurance claims had been adjudicated, and 1,167 insurance claims were pending in central office on that date. There were 11,062 active permanent total disability cases in central office as of June 30, 1922.

In organizing this unit, the division was impressed with the necessity for a complete record to be kept in one central place showing the distribution of central office jackets. As a result, there has been placed in the general files of central office a permanent charge showing the "C" number, whether it is a permanent total or a death claim, and whether the central office folder has been forwarded to the insurance unit (unit No. 1). This record has been of great assistance in rerouting mail and locating the jackets, with the result that confusion in this class of cases has been reduced to a minimum.

OTHER CASES IN CENTRAL OFFICE.

Of the partial disability and temporary total disability cases to be left permanently in central office, approximately 1,500 are cases of claimants living in foreign countries, 1,300 of whom are receiving

benefits under the war risk insurance act. The remaining 200 claims are awaiting further evidence to be furnished the bureau by the claimant, as the bureau has done all in its power and secured all available evidence.

There are also in the neighborhood of five hundred trainees in United States Vocational School No. 1 at Chillicothe, Ohio, who are receiving vocational training and whose cases are on file in central office. The cases of all employees of the United States Veterans' Bureau who are claimants under the war risk insurance and vocational rehabilitation acts are forwarded to central office where they are adjudicated. These three classes of cases have been assigned to the miscellaneous unit, which is a complete organization in itself, responsible to the assistant director in charge of claims, through the chief reviewer.

In the adjudication of these claims, the division passes upon compensation and eligibility for vocational training. The record kept in this unit is the same as that for decentralized cases—a permanent charge in the general file showing the class of miscellaneous case, the "C" number, and the fact that the original central office folder is located in the miscellaneous unit. This method has proved beneficial in the attaching of mail and in locating cases.

DISALLOWANCES.

Other cases retained in central office are those of claimants who have been denied the right to compensation, prior to decentralization, on account of being less than 10 per cent disabled or not connected with service, etc. These will be retained by central office until the claimant himself or the district manager requests that they be forwarded to the district office. These claims are being forwarded to the districts on request at the rate of approximately four hundred a day. In central office they are kept in the general files.

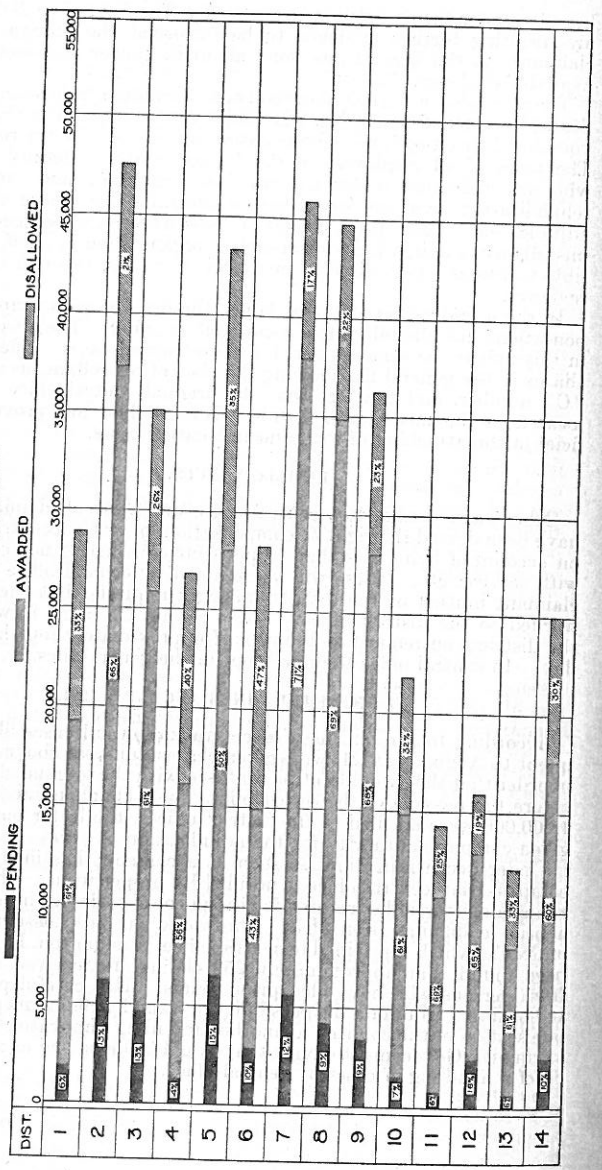
CLAIMS FILED SINCE AUGUST 9, 1921.

According to the outline of decentralization, all cases filed subsequent to August 9, 1921, were given claims numbers above 1,000,000 in order that they would not be confused with the original claims filed before the passage of the Sweet bill. These claims numbered above 1,000,000 were all filed in the district offices, the latter having been given complete authority for the adjudication of same.

Under decentralization, as soon as a claimant has filed claim for compensation central office is notified by proper form. This form is run against the index records for the purpose of determining whether a prior claim has been filed. This work has been assigned to the index file, which is retained in central office, Washington, D. C. It has been found that approximately 250 claims are received each week from persons who have filed prior claims. This careful process has reduced to a minimum the possibility of fraud by claimants going from one section of the country to another and filing duplicate claims, thus saving the Government money that would be disbursed except for the careful handling of cases by central office.

CHART NO. 17.

TOTAL NUMBER OF COMPENSATION CLAIMS RECEIVED AND ACTED UPON
DISTRICT OFFICES
AS OF JUNE 30, 1922



RECORD VERIFICATION.

As soon as it is determined by the index file unit that a prior claim has not been filed, a "C" number above 1,000,000 is assigned and the district manager is notified to that effect. The records are then forwarded to the record verification section, which has been transferred to the Claims Division. This section is in close contact with the authorities of the War and Navy Departments. Forms are executed calling for the military or naval medical history of the claimant. On receipt of this information from the War or Navy Department one copy is forwarded to the district manager, who, meanwhile, has secured a medical examination and other evidence necessary to the adjudication of the claim, and one copy is retained in the files of central office.

TYPING OF AWARDS.

On cases retained in central office, payments must be made by the Finance Division of central office. Therefore there has been built up a complete organization whereby the awards of compensation, insurance, or burial claims are forwarded by the awarding units to the award typist section, especially maintained for typing these awards and forwarding them to the proper office of the Finance Division where payments are made.

In the district offices the first payments on cases adjudicated are made by the disbursing office of the district. All subsequent payments are made by the Finance Division of central office. Special procedure has been outlined for typing awards in the district offices so that records of payments may be kept in the district offices and in the central office.

PERSONNEL.

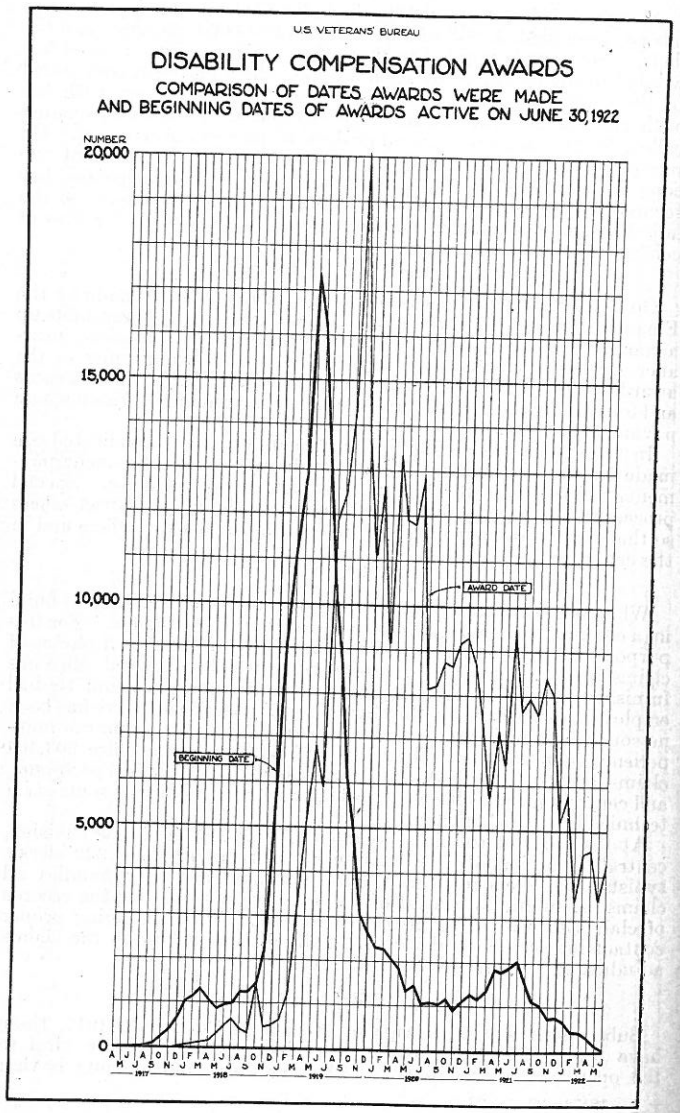
When decentralization was started, it was found necessary to build up a complete claims organization in each of the 14 districts. For this purpose competent and experienced men able to handle all phases of claims work in district offices were indispensable. Central office has furnished to the 14 districts more than 700 technical and clerical employees experienced in the claims work. As a result there has been no congestion in claims divisions of district offices on account of inexperience of personnel. There are still left in central office 603,404 claims, the handling of which requires a high-class technical personnel, and central office has been compelled to hold in the bureau some of its technically trained employees.

At the close of the fiscal year employees in the Claims Division, central office, included 58 examiners, 17 reviewers, and 320 clerks, typists, and stenographers. This personnel not only handles all claims remaining in central office, but is responsible for the records of claims forwarded to district offices, and for maintaining proper contact between central office and the district offices on the claims adjudicated by the district managers.

LEGISLATION.

Subsequent to the passage of the act of October 6, 1917, there have been numerous amendments which have been very vital to the operation of the division. Among these amendments is that

CHART NO. 18.



of May 20, 1918, which limited to $3 the fee of any attorney for the preparation of all papers necessary for the adjudication of a claim, and also provided that no agent or attorney should be recognized in the preparation or adjudication of a claim under articles 2, 3, or 4 except in the event of disagreement, etc.

In the amendment of December 24, 1919, to section 22 of the act the term "child" was defined in order that compensation and insurance benefits might be paid to a child legally adopted, and the terms "father," and "mother" were broadened for the purposes of paying compensation benefits to include a "foster father," and "foster mother" and insurance benefits to a "foster father," "foster mother" and a child of a foster parent.

Under the amendments of December 24, 1919, and of August 9, 1921, to section 23 of the act, the director is charged with the responsiblity for handling the benefits to which a claimant is entitled because of mental incompetency, all disbursements are made under his direct supervision, and these disbursements are made for furnishing comforts to and satisfying desires of the claimant while confined in a public institution. The dependents of the incompetent claimant receive a pro rata share of these benefits, and any surplus remaining is transferred to the special trust fund in the Treasury of the United States to be held to the claimant's credit and paid to him upon his complete recovery, or to a legally appointed guardian, committee, etc.; or, in the event of death, to the man's personal representative. There are approximately 5,000 of these cases receiving benefits under section 23.

Amendments of December 24, 1919, and of August 9, 1921, creating and amending section 31 of the act, provide compensation for men who applied for enlistment, or were inducted by draft boards, but were injured or died prior to being accepted and enrolled for active service. Insurance is also valid if it was applied for during that period.

The amendment of December 24, 1919, to section 301 of the act, which provides that section 301 shall be deemed to be effective as of April 6, 1917, the day war was declared, makes it possible for compensation to be paid to the deserving defenders of our land from the date of the commencement of war until the passage of the war risk act on October 6, 1917, which provided compensation and insurance.

The amendment of December 24, 1919, which amended section 302 of article 3 of the act of October 6, 1917, has been of great benefit to disabled men who were awarded compensation. By this amendment compensation was increased for temporary total disability from $30 for a single man to $80 per month, with additional compensation for a wife and child and dependent parents, and for permanent total disability to $100 per month. Additional allowances for dependents are not paid to veterans rated totally and permanently disabled or partially and permanently disabled. For partial disability a percentage of total disability is paid equal to the degree of reduction in earning capacity. A man who is temporarily and totally disabled, with no wife, but with four or more children living, receives more than $100 per month. If he has a wife and two or more children living he receives $100 per month. For each dependent parent a man temporarily disabled receives $10 in addition to the above

amounts. A man who is permanently and totally disabled is limited to $100 per month compensation, except that if a man, either temporarily or permanently disabled, is constantly in need of a nurse, he may be allowed not exceeding $20 per month additional.

The amendment of August 9, 1921, to section 300 of the act, provided that an ex-service man who is shown to have an active pulmonary tuberculosis or a neuropsychiatric disease of more than 10 per cent disability develop within two years after separation from the active military or naval service of the United States, shall be considered to have acquired his disability in the service or to have suffered an aggravation of a preexisting pulmonary tuberculosis or neuropsychiatric disease in the service. This amendment automatically connects these two diseases with the service if occurring within the time specified, and relieves many claimants of the necessity of submitting affidavits connecting such disabilities with the service. Affidavits connecting these diseases with service were frequently obtained with great difficulty, and this amendment has enabled the bureau to compensate veterans having active pulmonary tuberculosis and neuropsychiatric diseases that beyond all question were caused by the service, but for which it was difficult to establish a medical history that would satisfy previous legal requirements.

The August 9 amendment to section 306 of the act extended the time for obtaining from the director a certificate of disability to the effect that an injured person at the time of his discharge or resignation from the service was suffering from an injury likely to result in death or disability. Compensation is payable for death or disability, whenever occurring, if resulting from an injury for which a certificate has been obtained and if claim is made within five years after the occurrence of the disability. If no certificate has been obtained, the claimant must establish the fact that death or disability occurred within one year after discharge or resignation from the service.

The August 9 amendment to section 315 of the act provided that no person admitted to the military or naval forces of the United States after six months from the passage of this amendatory act shall be entitled to the compensation or other benefits or privileges under the provisions of article 3 of the war risk insurance act. Persons enlisting in the armed forces of the United States after February 9, 1922, are not eligible for compensation from the United States Veterans' Bureau.

INSURANCE DIVISION.

Yearly renewable term (war time) insurance was issued to men in the active military and naval service at a time when they were facing the new and unusual perils of the World War. Term insurance was issued at a very low premium rate. Premiums were collected by deduction from the Army or Navy pay rolls, the application for insurance itself including an authorization for this deduction. For the purposes of writing this war-time insurance, the officers of the Army and Navy were agents of the Bureau of War Risk Insurance, and there can be little doubt that in many cases an application for insurance from men enlisting in the service was more nearly a requirement than a privilege. For these reasons, despite the fact that the average age of those in the service during the war was under 24 years, at which time in life men usually feel relatively little need for insurance, approximately 4,500,000 persons applied for war-risk term insurance before the armistice. While the average commercial life insurance contract is less than $2,500, 80 per cent of the applications for term insurance submitted by men in the active military and naval service were for $10,000 of insurance and the average amount of term insurance applied for was $8,756. While these men were in service it was impossible for them to discontinue their insurance by neglecting to remit premiums. The only way in which insurance could be discontinued was by execution of a definite request for cancellation and the acceptance of such a request by the Bureau of War Risk Insurance. During the war these requests for cancellation were so few as to be practically negligible.

Generally men who applied for term insurance were young, vigorous, and free from family responsibilities. The sudden termination of the war and the rapid demobilization of the Army eliminated from the minds of most of them all need for insurance. As a result, and because of the financial handicaps that were invariably encountered in the period of transition between their discharge and their ultimate reassimilation into normal commercial and industrial activities of civil life, practically the entire amount of term insurance which was in force during the war was allowed to lapse. While the records of insurance in force for the period immediately following the war are extremely indefinite and incomplete, it is very doubtful whether there has ever been a time since the armistice when more than 500,000 of the four and a half million term policies which were carried during the war have been active by direct remittances from the insured. Over 75 per cent of the men who carried term insurance while in service never paid a premium after their discharge.

In previous years, in order to cope with this condition and to keep clearly before ex-service men the right to reinstate and the advantages of continuing their Government life insurance, the Liaison Division of the Bureau of War Risk Insurance devoted a major portion of its energies to circularizing lapsed policyholders and to procuring educational publicity explaining the benefits and advantages of insurance. There can be no doubt that the reviving interest in Government life insurance, particularly the various forms of converted poli-

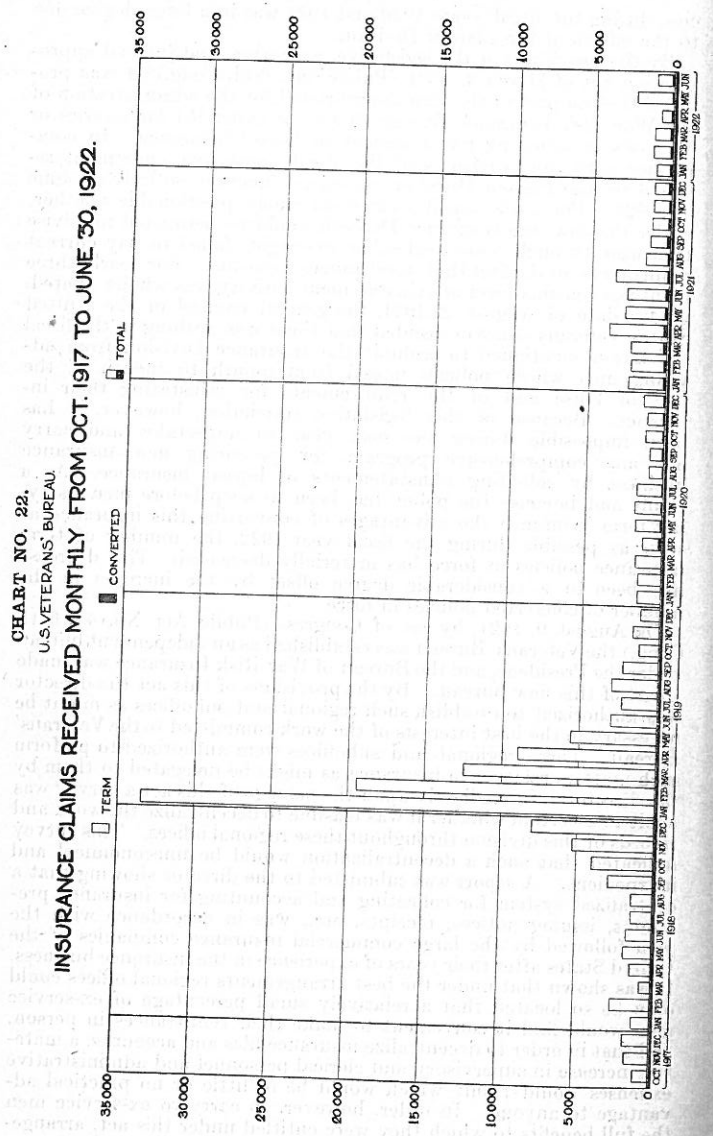
cies, during the fiscal years 1920 and 1921 was in a large degree due to the efforts of the Liaison Division.

By the provisions of the legislative, executive, and judicial appropriation act of March 3, 1921 (Public 364, 66th Cong.), it was provided that no part of the sum appropriated for the administration of the War Risk Insurance Bureau should be expended for salaries or expenses in soliciting reinstatement of lapsed insurance. In compliance with the provisions of the fiscal legislative enactment referred to, the Liaison Division ceased to function entirely on June 30, 1921. For some time it seemed extremely questionable whether, under this law, the Insurance Division would be permitted to advise men who, through some neglect or oversight, failed to pay current remittances, of the fact that remittances were due. For nearly three months, even this form of reinstatement activity was wholly abated. Under date of August 22,1921, the general counsel of the United States Veterans' Bureau decided that there was nothing in the fiscal legislation mentioned to prohibit the Insurance Division from advising men whose policies lapsed from month to month of the fact of lapse and of the requirements for reinstating their insurance. Because of this legislative restriction, however, it has been impossible during the past year to undertake and carry out any comprehensive program for procuring new insurance business by soliciting reinstatements of lapsed insurance. As a result and because the policy has been to keep before men carrying term insurance the advantages of converting this insurance as soon as possible during the fiscal year 1922, the number of term insurance policies in force has materially decreased. This decrease has been to a considerable degree offset by the increase in the number of converted policies in force.

On August 9, 1921, by act of Congress (Public Act No. 47, 67th Cong.) the Veterans' Bureau was established as an independent bureau under the President, and the Bureau of War Risk Insurance was made a part of this new bureau. By the provisions of this act the director was authorized to establish such regional and suboffices as might be necessary in the best interests of the work committed to the Veterans' Bureau. These regional and suboffices were authorized to perform such matters relative to insurance as might be delegated to them by the director. Immediately upon the passage of this act a survey was made to ascertain whether it was feasible to decentralize the work and records of this division throughout these regional offices. This survey indicated that such a decentralization would be uneconomical and inexpedient. A report was submitted to the director showing that a centralized system for collecting and accounting for insurance premiums, issuing notices, receipts, etc., was in accordance with the plan followed by the large commercial insurance companies of the United States after their years of experience in the insurance business. It was shown that under the best arrangements regional offices could only be so located that a relatively small percentage of ex-service men would find it convenient to make their remittances in person, and that in order to decentralize insurance files and accounts, a material increase in supervisory and clerical personnel and administrative expenses would result which would be of little or no practical advantage to anyone. In order, however, to carry to ex-service men the full benefits to which they were entitled under this act, arrange-



ments were promptly made whereby insurance premiums could be paid at all the regional offices of the Veterans' Bureau. Since this arrangement was made, 2 per cent of the insurance premiums remitted have been paid at these offices, while 98 per cent of the policyholders have continued to mail their remittances direct to Washington by bank draft or personal check. The regional and suboffices of the Veterans' Bureau are of great advantage to men who desire to obtain information direct relative to the provisions for reinstating and converting lapsed insurance.

On May 17, 1921, at which time the present assistant director assumed charge of the Insurance Division, there were 1,790 employees on the rolls of the division. The division was organized into 6 major subdivisions and 49 sections, with an administrative organization consisting of an assistant director and seven executive and administrative officers. Between May 17 and June 30, the personnel of the Insurance Division was reduced to 1,347 employees, a reduction of 443 employees, or 24 per cent. The organization of the division was realigned and consolidated to consist of 4 administrative assistants, 5 primary subdivisions, and 28 sections. The annual salary saving to the Government for the year 1922, as a result of these reductions, was approximately $585,000. During the fiscal year 1922 there has been a further reduction in personnel from 1,347 employees to 1,134, or 16 per cent, and the organization of the division has been further realigned and consolidated until it now consists of 3 major subdivisions and 15 sections. The principal activities of the Insurance Division during the fiscal year have been devoted to effecting economies in administration and improvements in the character and quality of service rendered in the various departments by carrying out a series of analytical studies of the operating problems involved in its various lines of endeavor, and by reallocating sections and revising methods of operation to eliminate duplicate and unnecessary operations.

During the year none of the functions of the Insurance Division has been decentralized or transferred to other divisions. The marine and seamen's section of the Legal Division was transferred to this division on January 11, 1922. A considerable amount of the statistical work of the personnel subdivision, the Claims Division, and whatever insurance work remained from the Liaison Division has been accomplished by the personnel of this division. The progress of the Insurance Division along the various lines indicated is more particularly outlined under the following appropriate headings:

1. Organization and procedure.
2. Condition of work.
3. Legislative enactments affecting insurance.
4. Personnel.
5. Supplies, space, and equipment.

ORGANIZATION AND PROCEDURE.

At the beginning of the fiscal year 1922, the term and converted insurance functions were being conducted more or less as two separate and independent activities with substantially different systems of accounting for insurance premiums and procedure for handling reinstatements, contract changes, addressograph changes, refunds,

lapses, and other similar forms of work. The activities of the division were being administered in fact by two separate insurance policies—one for term insurance, which looked primarily to the conservation of term insurance and failed to present clearly and accurately the advantages of converting term insurance into one of the permanent forms, and one for converted insurance, which was perhaps overzealous in its endeavor to have all men convert their term insurance immediately. These policies were often in conflict with each other, resulting in a loosely coordinated division and materially militating against smooth and harmonious operations.

To-day the Insurance Division is being administered as one United States Government life insurance company, with a single, clearly defined policy. All men carrying term insurance have had their attention invited to the benefits and advantages of converting such insurance at as young an age as possible, but the efforts of the division are also directed toward presenting clearly the true value of term policies to men in certain conditions and circumstances of life. The distinction between the term and converted insurance activities, from an organization standpoint, has been entirely abandoned. Uniform systems and procedures have been adopted for handling both classes of insurance, and sections performing similar operations have been consolidated, resulting in a more logical and effective working organization and material reductions in administrative expenses. The 5 subdivisions which existed at the beginning of the year have been reduced to 3 in number and the 28 sections have been reduced to 15. As none of the functions of this division has been discontinued or transferred to the various regional offices, the reductions in personnel and the establishment of this compact organization as it exists to-day was effected almost entirely by the introduction of simpler methods of operations, by consolidating similar and related functions, and by regrouping sections along lines of more logical and effective association of related activities. The principal changes referred to under this caption are as follows:

1. Consolidation of term and Government life insurance subdivisions to form one subdivision known as the operations subdivision.

2. Abolition of the cashier's subdivision and transfer of the cashier's section, the accounts section, and the insurance medical section to the administrative subdivision.

3. Separation of inactive term insurance files and records from the active term insurance files and records, and formation of an inactive files section.

4. Consolidation and reduction in the number of active term insurance units to form five and later three insurance units and reduction of the converted insurance units from six to five units.

5. Consolidation of the separate addressograph sections, refund sections, and claims sections of term and converted insurance to form one single addressograph section, refund section, and claims section, respectively.

These various consolidations effected considerable saving in space and overhead expense by eliminating section chiefs and supervisors of the higher salaried grades. As a definite illustration of the results of these changes, the records show that on June 30, 1921, the term and converted insurance addressograph sections operating separately

engaged a personnel of 58 employees, including 2 chiefs and 3 assistant chiefs. By combining these sections, it has been possible to reduce this personnel to 40 employees, with 1 chief and 1 assistant chief, a reduction in the number of employees of 31 per cent, and yet maintain practically the same volume of work in an efficient and satisfactory manner. Consolidations of this nature inevitably resulted in savings of equipment and valuable floor space.

During the year, in order to reduce to a minimum the administrative expenses to the Government in carrying out this insurance business and in order to expeditiously handle large volumes of work which fluctuated in quantity at various periods of the month, a series of thorough analytical studies were made of every standard operation of the division. Graphic illustrations, covering in detail all operations involved, were also made and wherever possible simpler systems instituted. Definite instructions in writing, covering all these standard operations, have been developed and issued to all concerned.

New and varied problems have been presented for solution throughout the year. The enactment of new legislation, the increasing volume of work in the loan and cash surrender sections, the pressing necessity for developing a better system for keeping premium records of insurance carried by men in service, the need for a revised and standard procedure for handling dividend payments, lapses, unpaid checks, and the like, and for a more satisfactory record of term insurance premium payments and more complete records of term insurance in the actuarial subdivision, have all presented problems demanding consideration and solution. It is confidently believed that while the personnel of the division has been steadily reduced, and while the division has been almost constantly busy moving and consolidating its various sections to make room for new bureaus and offices that are now housed in the Arlington Building, there has been continuous improvement in the character and quality of service rendered by the division. Particular reference is made to the following:

TERM INSURANCE PREMIUM ACCOUNTS.

During the fiscal year an entirely new system for handling term insurance accounts, which involved the careful training of all specialized clerks engaged in handling the 250,000 active term insurance accounts, has been installed. This system provides for carefully checking all premium notices before they are mailed and for completely recording in ink upon individual premium cards all premium payments at the time of their receipt. The system which had been in use, while simple in its operations, was inadequate in that no complete premium record was maintained for each account, resulting in considerable inaccuracies in the premium records with consequent dissatisfaction. This new system, built upon sound accounting methods, is proving very satisfactory and represents a distinct improvement in the service.

METHODS OF HANDLING CASH SURRENDERS.

It was observed in any time of financial difficulty that there was a tendency on the part of men who had carried converted insurance for a year or more to suddenly conclude to surrender these policies

for their cash value. Because persons who so surrendered their contracts had no right to again revive this insurance, and because by surrendering at a time of financial distress insurance protection was sacrificed when it was most needed, the plan was adopted of urging all applicants for surrender to retain their insurance and obtain money by taking out a loan as provided under the insurance contract. A definite procedure carrying out this policy has been set up, and the results are highly gratifying and strongly indicate that such a procedure is in the best interests of men insured under converted contracts.

PROCEDURE FOR HANDLING LAPSES.

In order to render the best possible service to policyholders in inducing them to continue their insurance, a definite procedure has been worked out and placed in effect for handling current lapses on insurance. Under this procedure a second premium notice and at least two letters are mailed to every man who fails to remit his premiums regularly. Particular consideration was given to the character of the letters written in such cases and encouraging results have been obtained.

PIERCE ACCOUNTING MACHINERY.

A comprehensive study and thorough experiment has been conducted with the Pierce accounting machinery. This experiment and investigation covered three months' operations—July, August, and September—on 20,000 converted insurance policies, and had in view the practical installation of this machinery for handling all insurance accounts. Appropriate forms have been designed as a result of this experiment, covering master premium cards, notices, receipts, and statistical cards. A special detailed report with suggestions and recommendations covering new methods for the handling of statistical, premium receipt, and premium accounting functions was submitted to the director under date of January 10, 1922.

PREMIUM RECORDS FOR MEN IN SERVICE.

One of the most difficult problems experienced by this division has been in connection with the insurance carried by men in the service, more particularly by men in the Army. The radical reduction in civilian personnel of the War Department compelled that department on June 30, 1921, to abandon the allotment system of paying premiums on converted insurance and to again revert to the deduction system, making it necessary for the Insurance Division to substantially alter its service accounting system consisting of 35,000 individual accounts to conform to this new procedure. Representatives of the Insurance Division were in numerous conferences with the officers of the War Department planning and developing this new system in order to avoid the unsatisfactory conditions experienced in the original operation of the deduction system. The labors of the War Department and of this division in this difficult task are now bearing satisfactory results, and for the first time since the Insurance Division was organized there is an adequate system for handling individual premium records of all insurance, both term and converted, carried by men in the military service. When it is further considered that the establishment of this accounting system required the preparation by this division of a complete Army serial index, and the typing, checking, and classifying of some 35,000 premium cards, it will be appreciated that no little progress has been made in rounding out the service phase of the accounting system.

PROCEDURE FOR PAYING DIVIDENDS.

At the beginning of the fiscal year the procedure for handling insurance dividends was slow and unsatisfactory. Under the system then in use the initial operations necessary in order to pay dividends were not commenced until approximately 30 days after the dividend was due, and dividend checks, as a regular procedure, were not mailed until some two months after the due date. An analysis was made of the dividend problem both in this division and in the Finance Division and a new procedure has been developed and installed whereby in all cases where premiums are paid within fifteen days after the due date, dividend checks are prepared and ready for mailing promptly upon the date they are due.

SWEET BILL—H. R. 6611.

All provisions of the Sweet bill, H. R. 6611 (Public Act No. 47, 67th Cong.), relating to the work of this division, except that providing for the payment of premiums through the post offices, which was carefully considered and deferred at the request of the Post Office Department, have been made effective. Complete procedures covering this work have been developed and are in operation, and the additional work made necessary in carrying out each specific provision has been disposed of and every new activity devolving upon this division as a result of this bill is now on a current basis and functioning smoothly. In particular, this legislation involved setting up procedure for determining whether death and permanent total disability was due to the hazard of military and naval service, the handling of reinstatements where a disqualifying disability existed which was the result of military or naval service in the World War, for waiving payment of premiums in cases of men confined in hospitals for compensable disabilities, or rated temporarily totally disabled, and to provide a satisfactory financial record of the premiums so waived, and for procuring and verifying proof of the right to waiver of premiums under this section.

ORGANIZATION.

In the reorganization of the Insurance Division there has been a decided departure from the original plans which established an organization upon a functional basis, in which each section would be engaged in some specialized activity. There was then an accounting section, a files section, certificate issue section, change section, and the like, each of which handled the specialized activities indicated by its designation. In actual operation this plan of organization was found to be unwieldy and expensive. Functions of the various

units and sections frequently overlapped and because many if not a majority of the cases received required attention in a number of sections, and further because definite lines delineating the work of the various sections were difficult to draw, and more difficult still to observe, it was found that this plan created delay and confusion. If the work of any one section was temporarily delayed, work throughout the division was often suspended or thrown into confusion.

THE UNIT PLAN OF ORGANIZATION.

The present plan of organization of this division is along what is termed the "unit" plan. Under this plan, all insurance policies in force are divided as nearly as possible into equal numerical units, the size of these units depending in a considerable degree upon the ability and training of supervisory personnel. To each of these units there are assigned the application files, the premium and other basic records, and an adequate number of specialized personnel, such as account clerks, dictators, stenographers, file clerks, typists, etc., to carry on all routine activities incident to continuing this insurance in force. The files and premium records and clerks using them are placed in adjacent positions. By this arrangement each employee is conveniently located with reference both to the employees and to the records with which he works. Supervisors are charged not only with a certain amount of work to do, but they are given all the records and necessary personnel to complete this assignment. This plan of organization has proved highly satisfactory and economical. These units now comprise from 75,000 to 100,000 insurance accounts and handle correspondence, premium accounting, changes, filing, billing, issuing receipts, reinstatements, and all similar routine activities. The tendency has been to constantly increase the work handled in these units and to decrease the number and size of sections doing specialized work, maintaining such sections only where they are necessary for control and checking purposes in order to procure uniformity in the various units. The rapidity with which this plan has been established has been governed, in a large measure, by the time necessary for training employees to assume new and greater responsibilities.

COST OF ADMINISTRATION.

From time to time considerable public interest has been manifested in the question of costs to the Government of administering Government life insurance. Because some insurance operations are not handled in this division and because personnel charged on its rolls is frequently loaned to assist in other bureau activities, it is impossible to present an absolute actual cost record in this matter. The principal insurance operations not handled in the Insurance Division are the adjudication and payment of insurance claims, which work is performed in conjunction with the handling of compensation claims, the initial handling of term insurance remittances, and the segregation of insurance mail in the bureau mails section. In addition, costs of administration of insurance are properly chargeable with a certain proportion of the expenses of the director's administrative and legal staff, which items can only be approximated. It is believed, however, that if the expenses of administration of this division were increased by 5 per cent and all personnel and equipment charged to it devoted exclusively to insurance work, this figure would represent with a fair degree of accuracy the total costs of administration of Government life insurance (term and converted). The annual cost in the Insurance Division for administration, assuming that all personnel and equipment charged to it are devoted exclusively to insurance work, is $1,744,038.56, or a little less than 50 cents per thousand dollars of insurance in force. The total annual cost to the Government for handling its current insurance business, including all claims adjudicated during the year but excluding the large volume of claims adjudicated in previous years which were the immediate result of the war, is estimated at $1,831,000.00, or a trifle less than 52½ cents per thousand dollars of insurance in force. The following is an itemized statement of actual costs of administration of the Insurance Division for the fiscal year ended June 30, 1922:

Administrative expenses of Insurance Division for fiscal year ending June 30, 1922.

Salaries, administrative and clerical	[1] $1,510,220.70	
Printing, binding, stationery, and minor office supplies	60,377.98	
Photostating and duplicating	16,015.64	
Telephone, telegraph, and telautograph	2,479.25	
Labor	861.21	
Rental of rented equipment	10,020.00	
Repairs to equipment and machinery	2,592.96	
Auditing	521.91	
Traveling expenses	148.91	
		$1,603,238.56
Pro rata share of rent, building maintenance, janitor, watch and char service, heat, light, and power, 85,000 feet, at $1.28	108,800.00	
Depreciation on $400,000 office furniture and equipment on basis of 8 per cent	32,000.00	
		140,800.00
Total amount incurred and ascertainable		1,744,038.56
Average amount of insurance in force		3,489,994,069.00
Cost per $1,000 for fiscal year		0.4997

CONDITION OF WORK.

Despite the material reductions in personnel effective prior to the first of and during this fiscal year, at no time during the year has the balance of work on hand in any department reached an alarming proportion. In issuing converted policies, collecting premiums, answering correspondence, preparing and maintaining necessary records, and performing the other varied activities incident to the administration of Government life insurance aggregating $3,234,974,940, 48,617 applications for conversion aggregating $204,946,309 and 49,331 applications for reinstatement of insurance aggregating $312,335,405 were received and approved; 733,756 letters from ex-service men were received and appropriately handled; 528,847 letters to ex-service men were originated; 4,549,737 notices of premiums due were mailed; 4,525,199 premiums were received, credited, and receipts covering them issued; remittances aggregating $47,024,030.95 were

[1] Includes two doctors detailed from Medical Division.

received, read, and deposited in the United States Treasury; and 345,318 dividends for $1,651,572.02 were calculated and paid, in addition to other operations, all of which are more particularly indicated in the following reports. As a regular procedure, this volume of correspondence has been handled within 48 hours after its receipt, remittances have been posted and receipts for premium payments have been issued within 36 hours after the remittances were received within the division, and applications for loans, cash surrenders, conversion, and other specialized types of work have been handled at all times without undue delay.

INSURANCE IN FORCE.

Due to the restrictions in the fiscal legislation discussed in the preceding pages of this report, the decreasing number of men in the active military and naval service, and to the fact that men carrying term insurance are converting this insurance into one of the permament forms, the number of term insurance policies in force during the past year continued to decrease, as has been the condition ever since the termination of the war. The number of converted insurance policies in force increased about 10 per cent during the year. When an insurance policy is converted from the low term premium rate to the higher converted rate, there is a decided tendency on the part of men converting to reduce the amount of insurance carried, as will be seen by noting that the average converted policy is $3,680, while the average term policy in force is $7,459. On June 30, 1922, there were 295,080 term policies in an amount of $2,201,238,054 and 280,852 converted policies aggregating $1,033,736,886, making a total of 575,932 policies in an amount of $3,234,974,940 of all forms of United States Government life insurance in force. The amount of insurance in force from month to month since June 30, 1921, is indicated in the following table:

Monthly record of insurance in force during fiscal year 1922, by number and amount of policies.

Date.	Term insurance.		Converted insurance.	
	Number.	Amount.	Number.	Amount.
1921.				
June 30	397,890	$2,980,660,235	253,164	$868,715,500

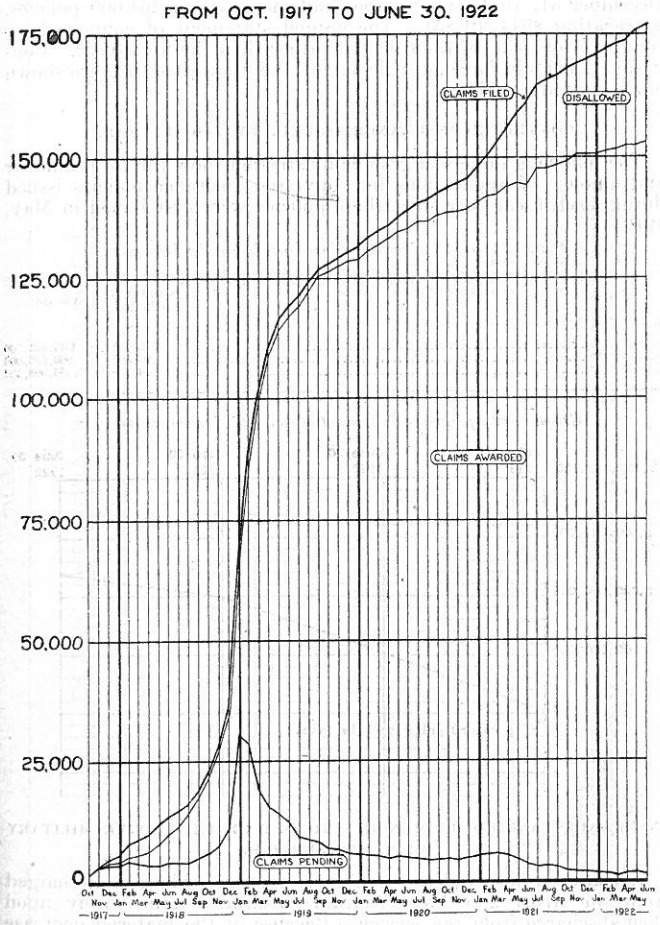
Increase			27,688	165,021,386

CHART NO. 23.



INSURANCE IN FORCE, BY FISCAL YEARS.

Prior to this fiscal year no adequate record has been maintained of term insurance in force from year to year. Converted policies were first issued in May, 1919. On December 31, 1920, on which date the first record of converted insurance in force was made, there were 212,152 converted policies, aggregating $712,454,000, in force. By December 31, 1921, this number had increased to 264,669 policies, aggregating $944,901,851. The annual statement of converted insurance is made as of the calendar rather than the fiscal year. Converted policies in force as of the end of the fiscal year 1922 are shown in the preceding table.

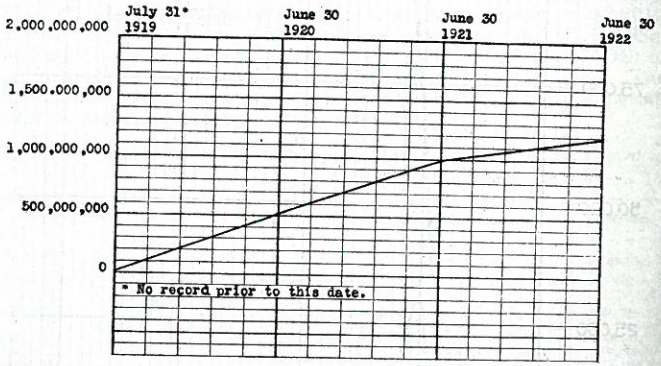
CONVERTED INSURANCE ISSUED, BY FISCAL YEAR.

The following table and graphic illustration show the total number and amount of applications for converted insurance policies issued during each fiscal year since these policies were first issued in May, 1919:

Cumulative record of converted insurance issued, by fiscal years.

Date.	Number of policies.	Amount.
June 30, 1920	152,979	$511,821,500
June 30, 1921	295,593	990,052,000
June 30, 1922	344,210	1,194,998,309

Graph showing increase in amount of converted insurance issued.



INSURANCE CARRIED BY MEN IN AND OUT OF THE ACTIVE MILITARY OR NAVAL SERVICE.

It has been observed that relatively few men who are discharged from the Army and Navy continue insurance immediately upon their discharge from the service. Because of the material decrease in the enlisted personnel of the Army and Navy, insurance carried by men in service has shown a very decided decrease during the fiscal year, as shown by the following table:

CHART NO. 24.

FORMS OF CONVERTED POLICIES.

Converted insurance is issued in six forms: Ordinary life, 20-payment life, 30-payment life, 20-year endowment, 30-year endowment, and endowment at age 62. Premium rates on the various forms of contracts vary. For the average man the 20-year endowment is the most expensive form and the ordinary life the least expensive. Because this bureau has no trained sales agents to personally interview men desiring to convert their insurance, and because it has no means of knowing the financial conditions and circumstances surrounding each applicant, the kind of policy which an insured will select is left largely to his own determination. The following table shows the kinds of converted policies approved, by number and amount:

Converted policies approved to June 30, 1922, by kind, number, and amount of policies.

	Number.	Amount.	Per cent of total.	
			Number.	Amount.
Ordinary life	50,819	$223,453,785	14.76	18.70
20-payment life	105,361	428,576,046	30.61	35.86
30-payment life	11,450	55,983,352	3.33	4.68
20-year endowment	141,887	336,620,435	41.22	28.17
30-year endowment	19,085	77,751,191	5.55	6.51
Endowment at age 62	15,608	72,613,500	4.53	6.08
Total	344,210	1,194,998,309	100.00	100.00

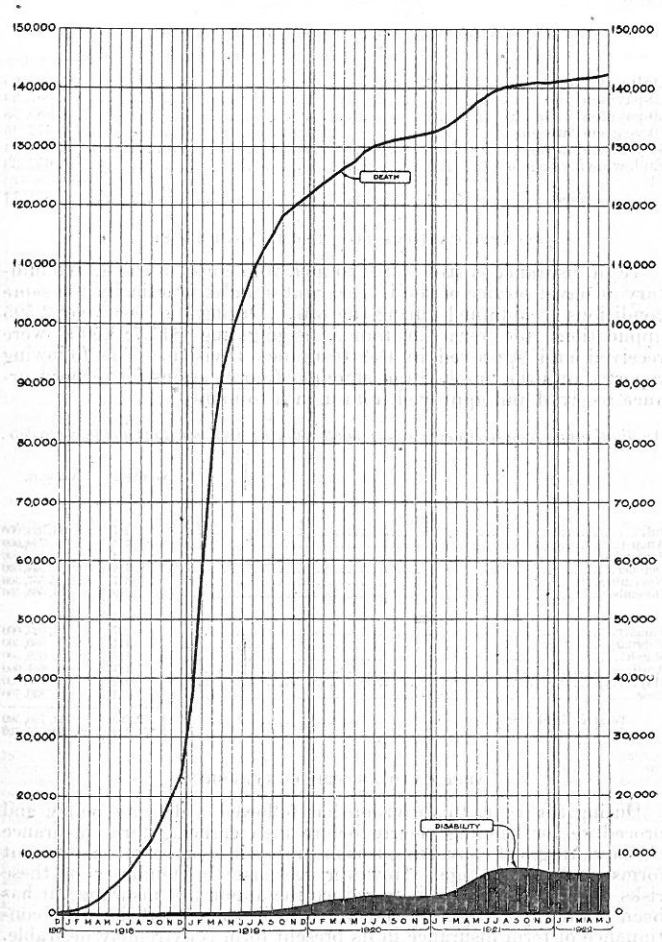
From the foregoing table it will be noted that the 20-year endowment is the most popular form of converted insurance contract,

CHART NO. 25.

U.S. VETERANS' BUREAU

NUMBER OF ACTIVE DEATH AND DISABILITY INSURANCE AWARDS

MONTHLY FROM DEC., 1917 TO JUNE 30, 1922.



although 30.6 per cent of the applicants for converted insurance selected the 20-payment life form. Since for the average man premium rates on the 20-year endowment policy are higher than on the other forms, men carrying this policy do not carry as much insurance as do those who select a cheaper form. The average amounts of the various forms of converted policies approved are shown in the following table:

Converted insurance approved, by average policies, as of June 30, 1922.

	Average policy.
Ordinary life	$4,397.05
20-payment life	4,067.69
30-payment life	4,889.38
20-year endowment	2,372.45
30-year endowment	4,073.94
Endowment at age 62	4,652.33
Average	3,471.71

APPLICATIONS FOR TERM INSURANCE.

Term insurance is still issued to men who enlist in the active military or naval service of the United States under practically the same conditions as obtained during the war. During the past year 2,595 applications for term insurance, aggregating $11,786,500, were received and approved in the Insurance Division. The following report shows the number and amount of applications for term insurance received and approved from month to month:

Applications for term insurance received monthly during fiscal year 1922 and totals to date.

	Number.	Amount.
1921.		
July	297	$1,324,000
August	141	739,000
September	34	193,000
October	110	594,000
November	617	2,557,500
December	389	1,666,500
1922.		
January	237	1,023,000
February	141	860,500
March	125	626,500
April	161	651,000
May	142	721,000
June	201	830,500
Total for fiscal year	2,595	11,786,500
Total to date	4,674,459	40,494,546,000

APPLICATIONS FOR CONVERSION.

During the year, this division has followed a definite policy and procedure for keeping clearly before men carrying term insurance the advantages of converting this insurance into one of the permanent forms at an early age. However, because the tendency of these risks when they convert is to reduce the amount of insurance, it has been uniformly recognized that for men in some conditions the continuance of term insurance in its present form is extremely desirable. During the year 48,839 applications for conversion, aggregating $205,530,807, were received; 48,617 applications, aggregating $204,946,309, were approved; and 1,665 applications, aggregating $5,863,512, were disapproved. The following table shows in detail the number of applications received and acted upon from month to month:

Applications for conversion by number and amount of policies during fiscal year 1922 and to date.

Date.	Applications recorded.		Applications approved (gross).		Applications disapproved.	
	Number.	Amount.	Number.	Amount.	Number.	Amount.
1921.						
To June 30	302,009	$1,005,190,000	295,593	$990,052,000	4,804	$16,507,750
July	6,030	23,956,500	5,157	20,352,500	453	1,423,000
August	3,534	14,716,000	4,548	18,742,000	294	951,000

[1] 390 disapproved applications revived for $1,374,500.

REINSTATEMENTS OF INSURANCE.

During the year 45,885 applications for reinstatement of term insurance, aggregating $301,560,713, and 3,446 applications for reinstatement of converted insurance, aggregating $10,774,692, were received and approved. The number and amount of reinstatements from month to month are shown in the following table:

Insurance reinstated by months during the fiscal year 1922 and to date.

UNPAID CHECKS.

A large proportion of United States Government life insurance premiums are remitted by personal checks or bank drafts. During the fiscal year 1922, 1,320,289 remittances paying insurance premiums were received in the form of checks, drafts, or express money orders. Of this number 13,873 checks were returned to the bureau unpaid when presented for collection. Thirteen thousand and fifty-seven unpaid checks have been collected during the year. The number of unpaid checks received during the fiscal year, the number collected, and the balance on hand are shown in the following table:

Unpaid checks received and collected during fiscal year 1922 and to date.

Date.	Received.		Collected.		Balance.

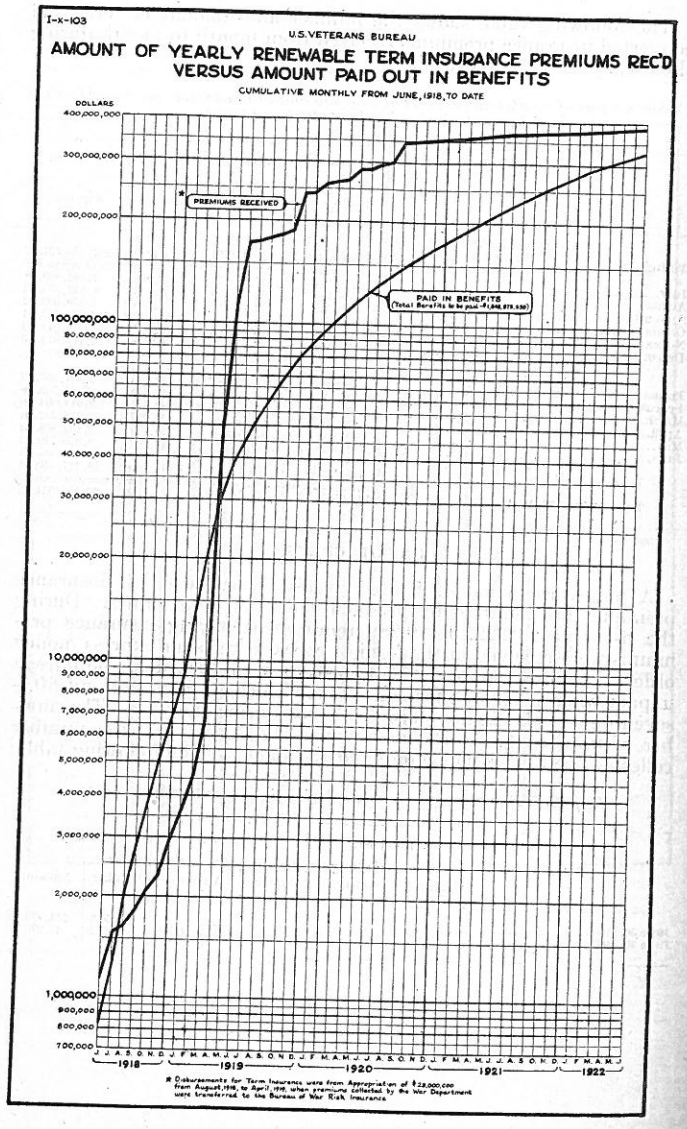
CHART NO. 27.



DIVIDENDS ON CONVERTED INSURANCE.

On April 18, 1921, the first dividend of $1,030,016.69 on converted insurance was declared payable on the anniversary dates of the policies. Under date of December 16, 1921, this amount was increased to $1,180,016.69. On April 6, 1922, the second dividend, aggregating $1,750,000, payable on the anniversary date of the policies, was declared, making a total of $2,930,016.69 declared and set aside to date for payment of dividends on converted insurance. The following table shows the number and amount of dividends paid from month to month during the fiscal year 1922. This report includes dividends apportioned for both the calendar year 1921 and the calendar year 1922.

Total to June 30, 1922	369,857	1,764,645.03

LOANS.

All converted insurance policies contain liberal provisions for loans to the insured after his policy has been in force one year. During the early policy years, loan values are relatively small but as policies become older loan values increase until they reach a very substantial sum. This year has witnessed a steadily increasing activity in the loan section of this division. The number and amount of loans made on converted insurance policies during the fiscal year 1922 are shown by the following table:

Report showing loans made upon converted insurance policies during fiscal year 1922 and to date.

SURRENDERS FOR CASH AND FOR PAID-UP INSURANCE.

During the fiscal year 1922, 10,618 policies, with a face value of $23,564,981.52, were surrendered for their cash value which aggregated $882,451.35. Policies surrendered for cash from month to month and the total to date are shown in the following report. Thirteen thousand two hundred and seventy-three policies with a face value of $30,585,981.52 have been surrendered for paid-up insurance in an amount of $1,081,957.11.

POLICIES IN FORCE UNDER EXTENDED INSURANCE.

Converted insurance policies provide extended insurance values after the first year. These values are automatic unless one of the other forms of optional settlements—that is, cash value or paid-up insurance—is selected. The number of policies in force under this extended insurance option from month to month during the fiscal year 1922 is shown in the following report:

Policies in force under extended insurance option from month to month during fiscal year 1922.

Date.	Number.	Amount.

May	626	1,377,000
June	547	1,276,500

UNITED STATES GOVERNMENT LIFE (CONVERTED) INSURANCE FUND.

Premiums paid on account of term and converted insurance policies are credited to the military and naval insurance appropriation and to the United States Government life (converted) insurance fund, respectively. The military and naval insurance appropriation has been set aside by Congress for payment of liabilities under term insurance contracts. A large percentage of losses under this form of insurance was the result of deaths or total permanent disabilities because of or during the World War. The United States Government life (converted) insurance fund is a separate fund composed exclusively of receipts from policy holders on account of converted insurance in force and from which are paid all liabilities arising under converted insurance contracts. The United States Government is trustee for this fund. Disbursements from it are made in accordance with awards made by the Director of the United States Veterans' bureau, and the reserve in the fund is invested and reinvested under the supervision of the Secretary of the Treasury.

ANNUAL STATEMENT OF THE UNITED STATES GOVERNMENT CONVERTED LIFE INSURANCE FUND FOR 1921.

The annual statement of the United States Government life (converted) insurance fund is made as of the end of the calendar rather than the fiscal year. The annual statement, showing assets and liabilities of the fund as of December 31, 1921, is shown in the following report. Copies of this statement are being mailed to all holders of converted insurance policies:

Annual statement United States Government life insurance fund December 31, 1921.

ASSETS.

United States bonds, book value (market value, $45,765,611.16)	$42,182,264.87
Loans to policy holders on policies	751,788.11
Cash on hand	992,822.52
Accrued interest on bonds	340,705.85
Due from United States Treasury under war risk act	703,070.50
All other assets	544,710.27
	45,515,362.12

LIABILITIES.

Reserve on all policies in force December 31, 1921 (American Experience Table of Mortality, 3½ per cent)	$29,387,889.00
Total permanent disability reserve	1,133,695.00
Reserve on policies lapsed during first year	850,097.11
Contingent reserve	2,020,954.73
Commuted value of installments, death and total permanent disability claims	2,133,487.00
Death and total permanent disability claims in process of settlement	1,822,689.00
Premiums paid in advance (discounted value)	3,949,351.90
Dividends on deposit	1,905.16
Apportioned for payment of dividends during 1922	1,750,000.00
All other liabilities	775,793.82
Unassigned funds	1,689,499.40
	45,515,362.12

FINANCIAL STATEMENT OF UNITED STATES GOVERNMENT LIFE INSURANCE FUND FROM ORIGIN OF FUND TO JUNE 30, 1922.

The following statement shows the sources of all moneys received on account of the United States Government life (converted) insurance and how these receipts are distributed. The bond investments are composed entirely of first, second, and fourth issues of Liberty bonds, 4¼ per cent converted. This statement covers transactions from the origin of the fund, May 1, 1919.

RECEIPTS.

Remittances received for premiums, premium interest, and reserve	$58,814,912.24
Deductions from claim, cash surrender, and loan vouchers to pay premiums, premium interest, reserve and policy loan interest	1,270,992.31
Dividend deposits	3,618.29
Sale of investments	1,545,398.75
Policy loans repaid	64,814.43
Interest collected on bonds	3,344,837.23
Interest collected on policy loans	7,530.27
Received from military and naval insurance appropriation under sec. 406 of the war risk act	4,272,884.05
Total	69,324,987.57

DISBURSEMENTS.

Cost of bonds purchased	56,231,570.10
Accrued interest paid on bonds at time of purchase	667,287.96
Loans to policyholders	2,107,081.48
Paid on account of death and total and permanent disability claims	5,495,491.13
Refund of unearned premiums	80,653.28
Paid on account of surrender of policies	1,794,745.77
Dividends paid to policyholders	1,867,700.74
Refunds on applications not approved	278,548.92

WORK REPORT OF REMITTANCES FOR POSTING.

Insurance remittances on term and converted insurance amounting to 3,927,523, were received for posting during the fiscal year 1922. For each remittance so received, a formal receipt was issued and mailed to the insured. The following table shows the number of remittances received and posted from month to month, with balances on hand at end of each month during the fiscal year 1922. This report does not include 608,136 premiums paid by deduction or checkage on the Army or Navy pay rolls.

WORK REPORT OF REMITTANCES FOR DEPOSIT.

Remittances on account of insurance premiums (term and converted) must be carefully listed, numbered, assorted, and deposited in the United States Treasury in such manner that any item can be identified and properly adjusted in case of a refund or other discrepancy in the records, or of failure to make collection. This work is performed in the cashier's section. During the fiscal year 1922 the insurance cashier received for deposit 4,362,929 insurance remittances aggregating $47,088,315.39. The following report shows the progress of this work from month to month:

MARINE AND SEAMEN'S INSURANCE.

At the beginning of the World War in 1914, it was evident that unless some provisions were made by the Government for insuring American vessels, trans-Atlantic shipping would have to be abandoned because private companies could not undertake the enormous risks involved. On September 2, 1914, Congress passed the war risk insurance act (S. 6357) providing for the insuring of American vessels, their freight, passage, moneys, and cargoes against loss or damage by risks of war. On June 12, 1917, provision was made by Congress, under S. 2133, for insuring the lives of the masters, officers, and crews, and their personal effects, and for reinsuring vessels of foreign friendly flags and their cargoes by the United States. A later amendment extended the provisions of the act to cover vessels of foreign friendly flags when such vessels were chartered or operated by the United States Shipping Board or by any citizen of the United States.

Out of an estimated loss of $29,764,882.12 sustained under the marine and seamen's policies issued since the creation of the bureau there remained unpaid at the end of the fiscal year 1922, $324,586.60, a large percentage of which was due foreign claimants residing in practically all parts of the world.

The amendment to the original war risk insurance act, approved July 11, 1918 (H. R. 11048), required the termination of insurance

activities of this character whenever the President should so direct, but in any event within six months after the end of the war. Under the joint resolution of Congress (Public Resolution 64), effective March 3, 1921, all marine and seamen's insurance activities were to cease September 3, 1921; but by the authority conferred by the amendment of July 11, 1918, the President extended this time to June 30, 1923, for the purpose of adjusting outstanding claims.

In making payment for losses the claimant's rights against the agencies responsible for loss of private property were subrogated by the bureau. Claims paid on account of the loss of life constitute a direct claim against Germany out of whatever funds are available for indemnification. It will be necessary to obtain and prepare for certification copies of thousands of documents to substantiate and present these claims. The marine and seamen's work during the past year has consisted, to a large extent, in compiling this information.

Complete statement of the volume of business transacted to date is given below:

Report of marine and seamen's insurance during fiscal year 1922.

Appropriation for payment of losses		$50,000,000.00
Marine premiums and salvage added to this amount		46,807,124.88
Seamen's premiums added to this amount		843,576.19
Total		97,650,701.07
Marine losses paid	$29,220,166.35	
Seamen's losses paid	266,780.31	
Installments due under adjusted seamen's claims	187.50	
Marine losses outstanding	177,359.10	
Seamen's losses pending	47,040.00	
Total losses	29,711,533.26	
Marine expenses	$200,766.64	
Seamen's expenses	73,287.35	
Total expenses	274,053.99	
		29,985,587.25
Net surplus out of appropriation and income		67,665,113.82

OPERATING PROFITS.

Net income (premiums and salvage)	47,650,701.07
Net disbursements (losses and expenses paid and pending)	29,985,587.25
Net operating profit	17,665,113.82

CIVIL RELIEF SECTION.

The act of Congress approved March 8, 1918 (Art. IV), provided that soldiers and sailors could apply to the Government for guarantee of premiums on their insurance with commercial companies while in the active service and during the period of the World War. The civil relief section was organized to handle this work.

In accordance with the joint resolution of March 3, 1921, the provisions of Article IV of the act terminated March 3, 1922. Policies then receiving the benefits of the act passed from under the jurisdiction of the bureau on that date.

The work accomplished by the civil relief section in administering this part of the act is succinctly stated in and may be clearly understood from a consideration of the following statistics: (*a*) 7,745 applications for protection of insurance premiums approved; (*b*) representing insurance in the amount of $12,526,956.29; (*c*) for yearly premiums in the amount of $362,399.50; (*d*) 102 policies matured as death claims during period of Government protection; (*e*) involving insurance in amount of $184,006.

An audit has been made of the accounts under the policies that lapsed because of the failure of the insured to reimburse the companies in the amount of premiums, together with interest, protected by the Government. A bill is now pending in Congress for an appropriation of $25,000, to be made to the bureau for the purpose of settling the claims arising under Article IV of the act. As soon as the appropriation is available the bureau will be in a position to close the accounts with the companies, and at that time the soldiers' and sailors' civil relief bonds held by the companies as security will be returned for cancellation.

LEGISLATION.

The act of August 9, 1921 (Public Act No. 47, 67th, Cong.), cured certain defects that had become apparent in the insurance provisions of the war risk insurance act and greatly liberalized the requirements for reinstatement of men suffering from disabilities of service origin. The following is a brief statement of the several sections which affect the Insurance Division:

Section 406.—In all cases where the insured's death or permanent total disability is the result of disease or injury traceable to the extra hazard of the military or naval service, the liability is borne by the United States. Thus the United States Government life insurance fund is relieved of the burden caused by the extra hazard of war. In accordance with the provisions of this section, there has been transferred from the military and naval insurance appropriation to the United States Government life insurance fund $4,645,674.26 as of June 30, 1922, to cover the Government's liability under converted insurance policies that have already matured.

Section 407 provides that if no person within the permitted class of beneficiaries survives the insured, then the insurance shall be paid to the estate of the insured, unless such estate would escheat under the laws of the place of his residence, then and in that event the insurance will not be paid to the estate of the insured, but shall be credited to the United States Government life insurance fund or the military and naval insurance appropriation, whichever is proper.

Section 408 provides that any former insured who is now physically disabled may reinstate his insurance by the payment of all premiums in arrears with interest at the rate of 5 per cent per annum, provided he furnishes proof that he is not permanently and totally disabled and that his disqualifying disability is the result of an injury or disease, or an aggravation thereof, suffered or contracted in the active military or naval service during the World War. Section 408 also provides that any former service man who allowed his insurance to lapse while suffering from injury or disease of service origin, and was at the time of such lapse entitled to compensation in a sum equal to, or in excess of, the amount due from

him in insurance premiums and who died without collecting or making claim for compensation or being allowed to reinstate his policy then such insurance will not be considered to have lapsed. During the year 6,549 reinstatements have been approved under the first provisions of this section.

Section 409 provides that payment of premiums on the due date thereof by former service men carrying term and converted insurance may be waived while the insured is confined in a hospital of the Veterans' Bureau for a compensable disability or while rated temporarily totally disabled by reason of an injury or disease entitling him to compensation. Up to the present date 196 requests for waiver of payment of insurance premiums, in accordance with the provisions of this section, have been received and acted upon.

Section 410 authorized the Director of the Veterans' Bureau to enter into an agreement with the Postmaster General in order to provide for the payment of insurance premiums and the acceptance of applications for reinstatement and conversion by the United States post offices.

Section 411 provides that policies of insurance or the reinstatement of insurance shall be incontestable, except for fraud or nonpayment of premiums, after six months from the date the policy is issued or the date of reinstatement.

PERSONNEL.

On June 30, 1921, there were 1,347 employees on the rolls of this division. During the year this number has been gradually reduced until at the present time this division is handling $3,234,974,940 worth of Government insurance with a personnel of 1,135 employees, having reduced the clerical force during the year by 212 employees, or 15 per cent, in addition to a reduction of 443 employees, or 24 per cent, between May 17 and June 30, 1921, or immediately prior to the beginning of the fiscal year. The number of employees on the rolls of this division on the last of each month and the monthly expenditure for salaries are indicated in the following table:

Number of employees on the rolls of the Insurance Division by months and salary expenditure during fiscal year 1922.

Date.	Number of employees.	Salary expenditure.
1921.		
June 30	1,347	
July	1,245	$134,944.69
August	1,227	132,240.80

May	1,138	121,764.82
June	1,135	121,652.30
Total salary expenditure for fiscal year		1,502,470.70

ADMINISTRATIVE AND SUPERVISORY EMPLOYEES.

During the year special attention has been given the matter of reducing the number of administrative and supervisory employees in the higher salaried grades, Savings of this character have been effected by increasing the responsibilities of employees retained and by consolidating and realigning similar sections to eliminate higher salaried supervisory and administrative positions. There are now in the Insurance Division 40 employees drawing salaries in excess of $1,800. The number of employees of this class with salary grades is shown in the following table:

The number of employees in the Insurance Division drawing salaries in excess of $1,800, with salary grades as of June 30, 1922.

Salary grade.	Number in grade.	Total salary.	Salary grade.	Number in grade.	Total salary.
$1,860	1	$1,860	$2,500	4	$10,000
$1,920	6	11,520	$2,750	1	2,750
$1,960	1	1,960	$2,850	1	2,850

$2,300	1	2,300			
$2,400	1	2,400	Total	40	97,390

SUPPLIES, SPACE, AND EQUIPMENT.

On June 30, 1921, the Insurance Division occupied a total of approximately 130,000 square feet of floor space. During the year, the division has been continuously moving and consolidating its working force into smaller and more compact working areas, thereby making available additional space facilities required by the bureaus and offices consolidated in the Arlington Building as a result of the act Public 47, 67th Cong. As a result of these moves and consolidations, approximately 50,000 square feet of floor space were released by this division during the year. To effect this substantial saving in space, every section and office in the division was compelled to move at least once. Practically every move was made in the evening, in accordance with definite plans which had previously been prepared, and was accomplished in a smooth and systematic manner so that at no time was any large group of clerks obliged to remain idle nor was there any appreciable interference with the operating functions of this division. Despite these moves, it is thought that the Insurance Division is located as nearly as possible on a "straight-line principle" with those sections adjacent which have the most contact. The reduction in personnel and the consolidating and regrouping of sections doing related activities resulted in the release of considerable quantities of supplies, office machinery, and furniture, and materially reduced the expenditures required during the fiscal year for these purposes.

DISTRICT OFFICE DIVISION.

During the fiscal year ending June 30, 1921, certain activities of the United States Public Health Service concerned with field supervision and medical care and treatment of ex-service men had been combined with field activities of the Bureau of War Risk Insurance under a Treasury Department order dated April 19, 1921, and in anticipation of the Sweet bill a survey of the field had been made under an informal agreement with the Federal Board for Vocational Education preparatory to the consolidation of these agencies in the event of the passage of bill H. R. 6611 (67th Cong., 1st sess.).

Prior to the merging of that part of the United States Public Health Service referred to with the Bureau of War Risk Insurance the duties of Bureau of War Risk Insurance representatives in the field were confined to making contact with disabled ex-service men for the purpose of compiling their claims for compensation and insurance and referring claimants to the United States Public Health Service for medical examination or care and treatment. The placing of all medical activities connected with compensation and insurance claims under the administration of the Bureau of War Risk Insurance eliminated much confusion and duplication of effort.

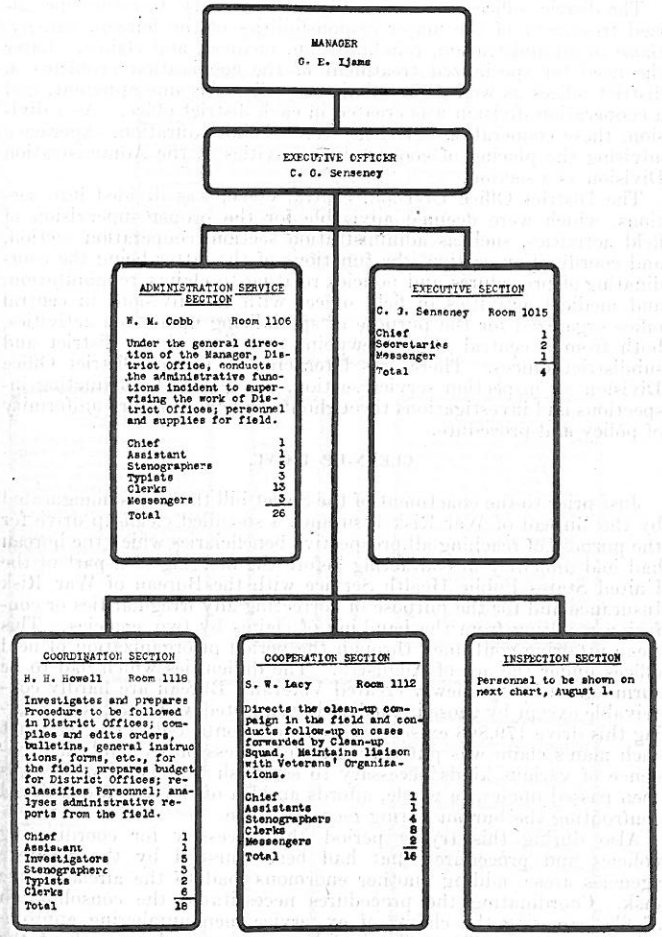
These important steps toward consolidation had been taken when the act of August 9, 1921 (Public 47, 67th Cong.), created the Veterans' Bureau. The actual merging of three large agencies into one organization that would do the work of all proved a stupendous task, involving as it did in some instances the physical movement of the offices of one or all of the agencies concerned and the obtaining of quarters suitable for the housing of the combined offices. The organization of 14 district offices and 126 subdistrict offices that would correlate the various activities hitherto administered separately was a difficult undertaking. The necessity for standardization became at once apparent. As a first step charts of organization for district offices and suboffices were outlined and put into effect, and the building up of the various branch offices according to these standardized plans was begun.

FIELD ORGANIZATION.

To supervise the organization and to conduct the administrative affairs of field offices a District Office Division was created in the central office at Washington, D. C., subdistrict managers were appointed for each subdistrict, district managers for each district, and a manager of district offices was designated in the central office.

The subdistrict offices were placed under the supervision of the district manager in whose district they were located. Each subdistrict office was originally organized in four sections to insure special-

DISTRICT OFFICE DIVISION



ized handling of the four general functions of suboffices, viz., administration, rehabilitation, medical, and service in connection with compensation claims. It was later deemed advisable to extend the scope of the service section to include all activities connected with the filing and adjudication of claims in so far as subdistrict offices were concerned, and the cooperation section was organized to assume the duties of the former service section.

The district offices were originally organized also to insure specialized treatment of the major responsibilities of the bureau, namely, those of administration, rehabilitation, medical, and claims. Later the need for specialized treatment of the cooperation problems in district offices as well as in subdistrict offices became apparent, and a cooperation division was created in each district office. As a division, these cooperation activities were of short duration, experience advising the placing of cooperative activities in the Administration Division as a section.

The District Office Division, central office, was divided into sections, which were deemed advisable for the proper supervision of field activities, such as administration section, cooperation section, and coordination section, the functions of the latter being the coordinating of procedures and policies relating to claims, rehabilitation, and medical activities of field offices with the divisions in central office organized for the purpose of specializing upon such activities, both from a central office viewpoint and that of the district and subdistrict offices. There was later created in the District Office Division an inspection service section, charged with conducting inspections and investigations throughout the field to insure uniformity of policy and procedure.

CLEAN-UP DRIVE.

Just prior to the enactment of the Sweet bill there was inaugurated by the Bureau of War Risk Insurance a so-called clean-up drive for the purpose of reaching all prospective beneficiaries which the bureau had had difficulty in contacting before the merging of a part of the United States Public Health Service with the Bureau of War Risk Insurance and for the purpose of correcting any irregularities or confusion resulting from the handling of claims by two agencies. This clean-up drive continued through the period of organization of field offices under the act of August 9. The difficulties which had to be surmounted by the newly created Veterans' Bureau are hardly conceivable except by those immediately connected with the task. During this drive 179,868 ex-service men were contacted. The fact that each man's claim was put through the process of accumulating evidence of various kinds necessary to establish the claim, which was then passed upon as a whole, affords an idea of the amount of detail confronting the bureau during reorganization.

Also during this trying period the necessity for coordinating policies and procedures that had been pursued by the separate agencies arose, adding another enormous load to the already huge task. Coordinating the procedures necessitated the consolidation of files covering the claims of ex-service men numbering approximately 700,000. These files had been maintained by each of the separate bureaus, in most instances upon the same individuals, but under vastly different systems.

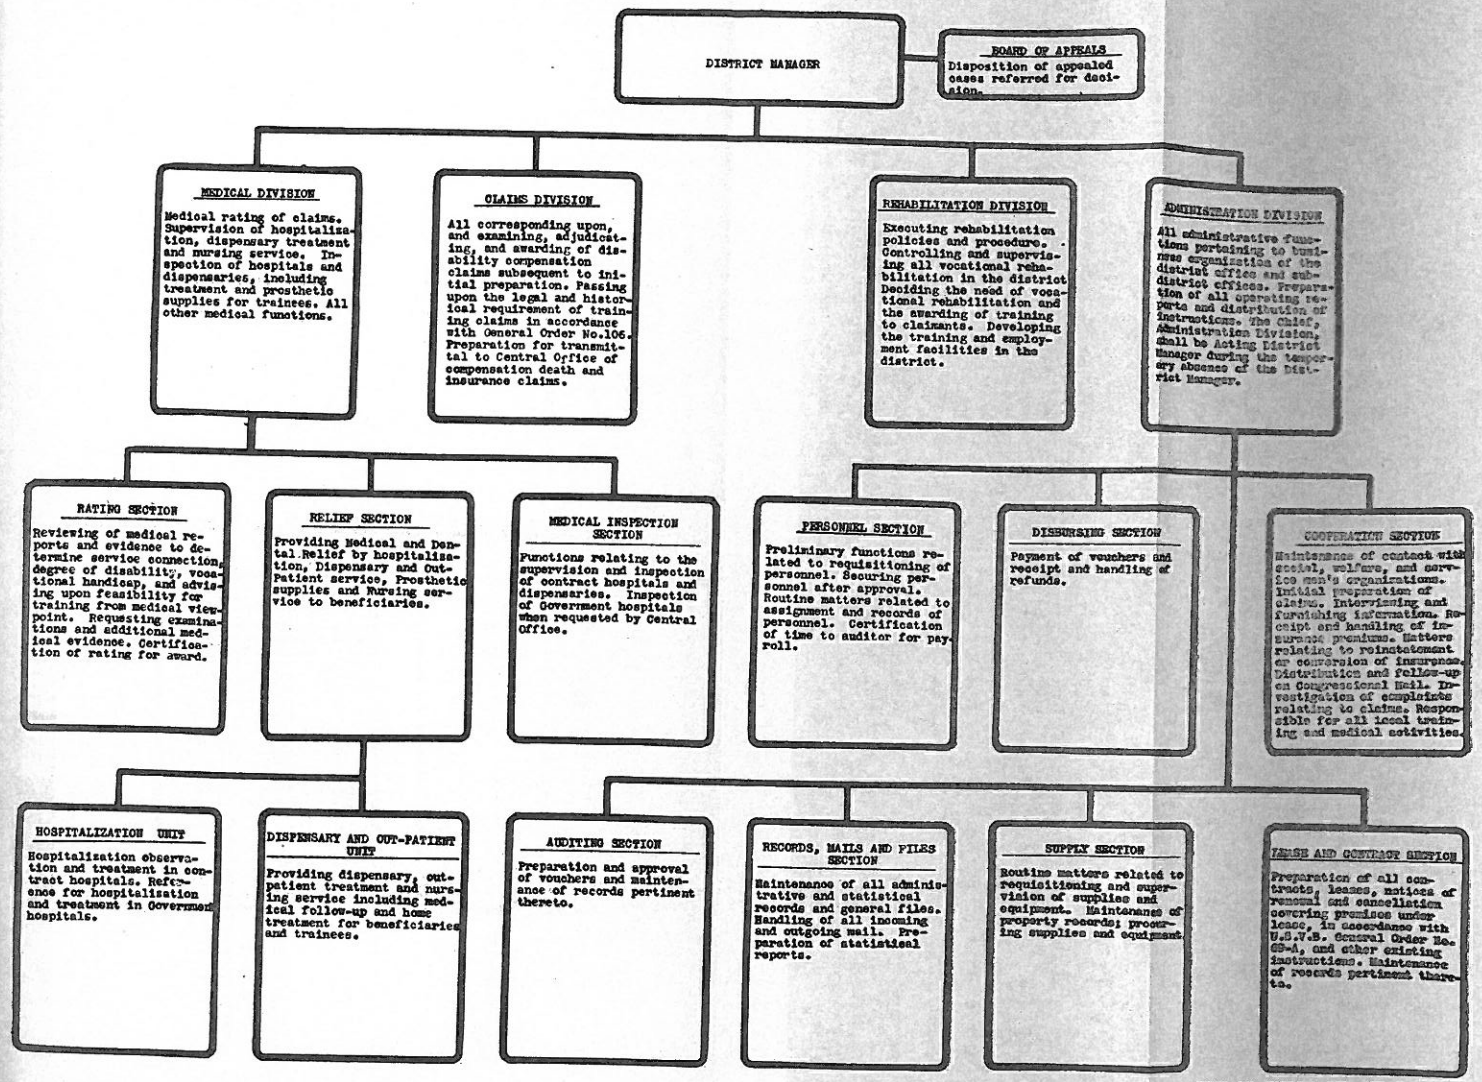
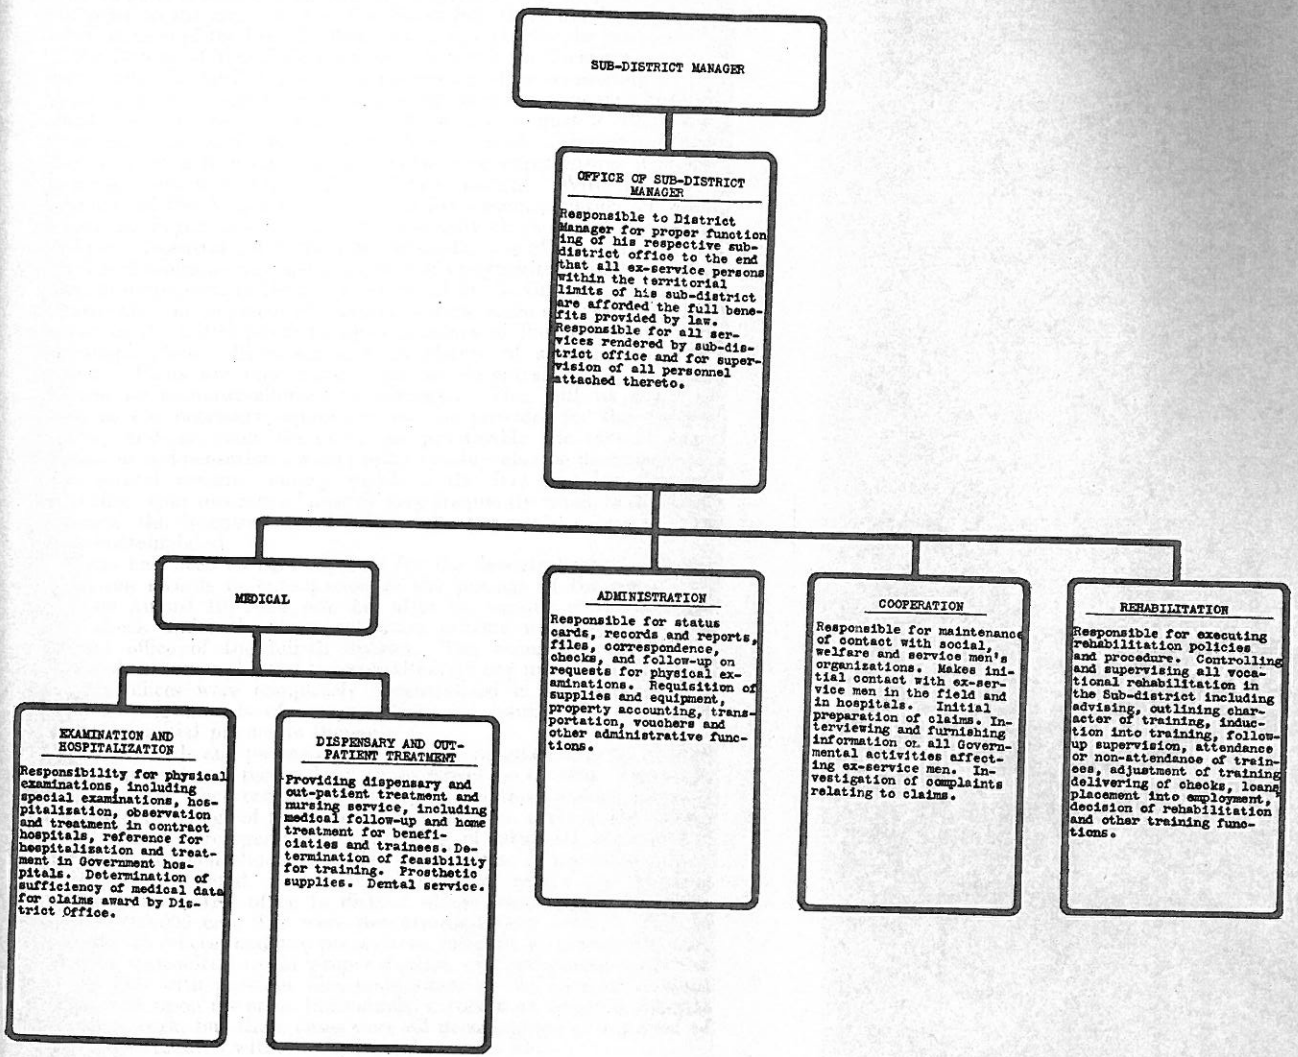
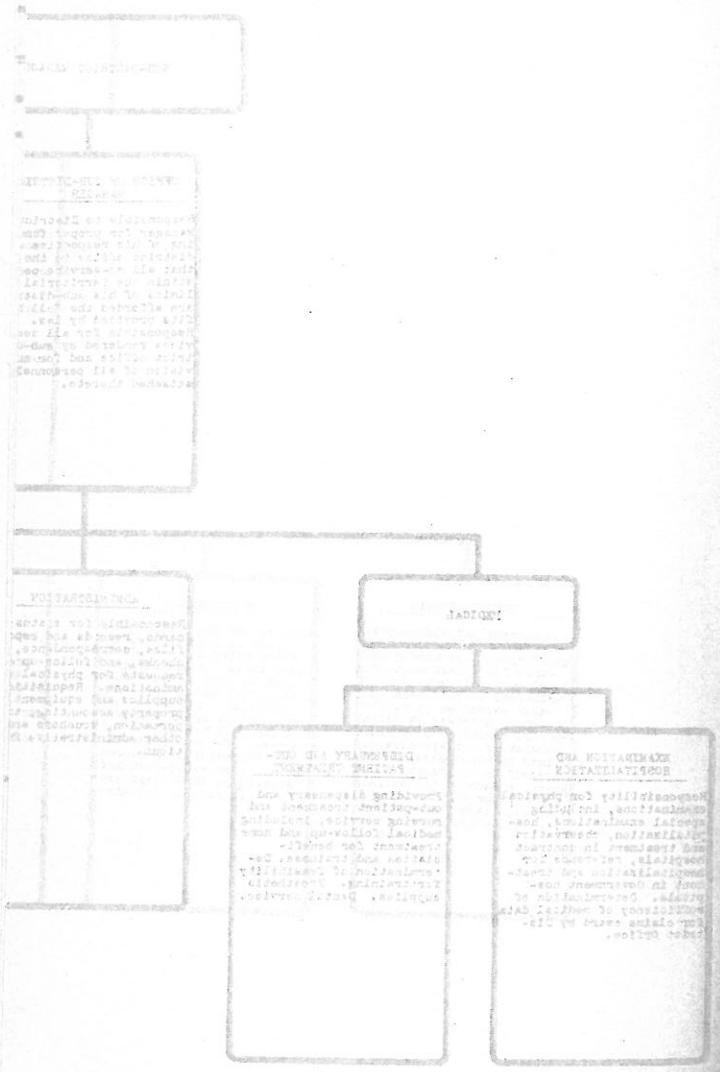
PLAN OF DISTRICT ORGANIZATION



18174—22. (Face p. 491.) No. 1

PLAN OF SUB-DISTRICT ORGANIZATION





DISTRICT DISBURSING OFFICES.

Subsequent to the merging of certain activities of the United States Public Health Service with the Bureau of War Risk Insurance, but prior to the enactment of the Sweet bill, there had been established in each of the branch offices which came under the jurisdiction of the Bureau of War Risk Insurance, through the Treasury Department order of April 19, 1921, a disbursing office, consisting of an auditing force, a deputy disbursing clerk, and the necessary clerical assistants. Before the passage of the act of August 9, 1921, the payments that could be made by these branch disbursing offices were restricted to certain already authorized expenditures incident to hospitalization and medical care and treatment. With the establishment of the Veterans' Bureau further decentralization of payments was begun, and by June 30 practically all classes of payments had been decentralized to these branch disbursing offices, with the exception of insurance payments and monthly payments of compensation awards subsequent to the initial payment at the time of making the award; also the payment of trainees' maintenance allowances subsequent to the initial payment upon entrance of the beneficiary into training. These offices are now in charge of special disbursing agents. Plans are now under way to decentralize the current trainee maintenance-allowance payments. This will be done as soon as the necessary equipment can be provided for the district offices, and as soon thereafter as practicable the current payments on compensation awards will probably also be decentralized. For several reasons, among which is the fact that beneficiaries receiving "split insurance" awards very frequently reside in different districts, the decentralization of insurance payments is not at this time contemplated.

Plans had been so carefully laid for the decentralization of compensation awards in anticipation of the passage of the Sweet bill that on August 10, 1921, one day after the signing of the act, the first check under the decentralization scheme was issued by the district office of the fourth district. The other districts closely followed this example, and in approximately one month all 14 of the district offices were completely decentralized in this respect and were making awards of compensation and issuing the checks to cover the initial payments thereon.

These awards and payments were for a time made only by district offices upon claims received by these offices on or after August 9, 1921; central office continuing to adjudicate those claims received prior to the passage of the Sweet bill. However, early in December, 1921, after the reorganization, obtaining of adequate quarters for branch offices, consolidation of files, coordination of procedures, etc., had been completed, the decentralization of active and pending claims from central office to district offices was begun. Approximately 300,000 case files were decentralized from central office to the district offices, and the precautions incident to preventing loss, insuring transmittal to the proper district, and preventing confusion of the files with previous files maintained by the separate bureaus in the field upon the same individuals, involved an immense amount of detail work, but these cases were all decentralized in a period of about four months without the loss of a single file.

The employment of a large amount of temporary help had been necessary to the consolidation of folders when the offices maintained by the separate bureaus were merged, and the employment of temporary help was also necessary during this period of decentralization of case files from central office. However, these temporary employees were released upon the completion of the work.

At the time of the creation of the United States Veterans' Bureau accounting for equipment and supplies was a serious problem. It seemed impossible to obtain accurate records of the equipment and supplies distributed throughout the field activities. All property records were immediately combined, and prior to the end of 1921 a complete inventory was made showing the classes and value of all property in each district. From that time on the responsibility for all property under the jurisdiction of each district was vested in one individual known as district property custodian, who was responsible to the district manager. According to plans carefully laid, a perfect control is maintained over all property.

CONTACT SERVICE.

Early after the creation of the Veterans' Bureau the necessity for making a specialty of contacting ex-service men and women on their claims became apparent, and in conjunction with the United States Civil Service Commission the position of contact representative was created. Contact representatives were assigned to all district and subdistrict offices, and were trained thoroughly in the manner of presenting claims and in explaining all rights of ex-service men and women under the laws administered by this bureau.

This position was created for the purpose of eliminating the confusion which frequently arose through lack on the part of employees of knowledge of the law and failure on the part of disabled ex-service men and women to follow procedure. These conditions being reflected in the manner of submitting claims and supporting evidence in connection therewith resulted in unnecessary correspondence and consequent delay in adjudication. Since contacting became a specialty prompt relief has been given to many ex-service men and women who would otherwise have failed to submit and substantiate their claims.

It is believed that the policy of the bureau of appointing ex-service men, wherever possible and practicable, as contact representatives has in a large measure worked toward a better understanding between claimants and beneficiaries and the bureau, and resulted in a clearer conception by the bureau of the difficulties under which ex-service men and women labor in presenting their claims.

Contact representatives are a part of the cooperation section of district offices and subdistrict offices. These sections are charged with the duty of following through the claims of ex-service men and women after having submitted them to the proper divisions of the offices for adjudication.

It was, of course, impossible to locate contact representatives in every village, town, or rural district in which disabled ex-service men resided. For the purpose of forming a close connection between the bureau and all disabled ex-service men and women, the services of

ex-service men's and welfare organizations have been accepted and used wherever available.

Contact representatives have been used in handling the claims of hospitalized ex-service men. Early in 1922 an intensive hospital clean-up campaign was instituted. The hospitals of each district were visited by contact representatives and medical officers for the purpose of expeditiously disposing of all unsettled questions upon the claims of these men. During the progress of this hospital clean-up campaign 29,777 men were contacted.

The hospital campaign brought out several facts. Among them was the necessity for stationing permanently in the larger Government hospitals a contact representative to handle the affairs of new entrants into the hospitals daily and men being discharged daily. Many of these men changed from a training to a compensation status, or vice versa, upon their entrance to or discharge from the institution. Plans are being carefully laid to accomplish this, and a procedure which will insure the rapid disposal of the questions connected therewith is in process of promulgation.

BOARDS OF APPEAL.

Upon the passage of the Sweet bill the need for district office appeal boards also became apparent, in order to insure justice to claimants and beneficiaries in so far as possible in the district offices. Accordingly, members of each district office considered most thoroughly versed in the various questions relating to claims were appointed in each of the 14 districts as members of such district appeal boards. These members, three in number, represented the major problems relating to the adjudication of claims, i. e., legal, medical, and training, and the boards were empowered to pass upon all questions relating to claims in so far as the district was concerned, with the exception of total permanent disability awards and insurance and death claims, upon which final decision was restricted to central office. The establishment of these district appeal boards has had the effect of preventing those injustices which invariably occur through the normal percentage of oversight and inconsistencies that can not be eliminated because of the human element making up any organization, and has resulted in having the borderline cases passed upon by experts on claims matters.

Should applicants still be dissatisfied with the decision of the district office after their claims have been passed upon by the district board of appeals, appeal from the decision of the district board to the central office board of appeals is permitted, thus further insuring complete justice to all claimants.

SUMMARY.

In summary, the activities of the district and subdistrict offices may be stated in general as follows:

The district offices are charged with the administration of the activities of all subdistrict offices within the territory making up the respective district and with all matters throughout the district relating to the service with which this bureau is charged, with the exception of awarding total permanent disability, insurance, and

death claims, the operation of Government-owned hospitals, subsequent payments of awards (which will probably be decentralized in the near future), and matters which the law requires maintained in the central office at Washington, D. C., such as the signing of leases by the director, etc. The responsibilities of the district office, among other things, include the following: Adjudication of disability compensation claims up to and including total temporary awards, adjudication of training claims, hospitalization and treatment of disabled men, payment of bills and vouchers and other payments except the monthly payments of compensation and training allowance and insurance payments, the carrying out of the policies of central office, and the supervision of subdistrict offices.

The subdistrict offices are charged with the responsibility of contacting claimants and beneficiaries, the dissemination of information relating to the rights of ex-service men and women, under the laws which this bureau operates, the hospitalization and treatment of ex-service men and women within the subdistrict, examination of claimants in connection with compiling claims, the building up of claims for presentation to the district office for adjudication, and the carrying out of central office policies under the supervision of the district office.

Some idea of the volume of transactions conducted by field offices may be obtained by the following general statistics:

Number of district offices	14
Number of subdistrict offices	126
Number of pieces of mail received monthly (approximate)	1,006,500
Number of pieces of mail issued monthly (approximate)	1,151,750
Number of vouchers handled monthly (approximate)	35,000
Number of checks issued monthly covering initial payments on compensation or training awards and on adjustments thereof (approximate)—this does not include the regular monthly payments subsequent to initial check	99,500
Transportation, meal, and lodging requests issued to beneficiaries monthly (approximate)	21,500
Number of men in training as of June 30, 1922	102,108
Number of men in hospitals as of June 30, 1922	26,869
Number of case files being maintained as of June 30, 1922	1,065,931

These statistics show that the organization of the district offices and subdistrict offices was a tremendous undertaking. The preparation which was made in anticipation of the passage of the Sweet bill and the steady and determined progress which has been made by those concerned with the reorganization have resulted in the well-balanced and efficient institution now in operation.

Total	5,338,475	

FINANCE DIVISION.

The Finance Division consists of three subdivisions, namely: Allotment and allowance, accounting, and disbursing. Financial activities of the bureau are reported according to these subdivisions.

ALLOTMENTS AND ALLOWANCES.

An amendment to the war-risk insurance act approved December 24, 1919, provides that all allotments and family allowances payable by the Bureau of War Risk Insurance shall be discontinued at the end of the fourth calendar month after the termination of the war emergency. On the basis of this amendment the Comptroller General ruled on March 19, 1921, that "All allotments and allowances will terminate not later than July 31, 1921." Since August 1, 1921, therefore, the work of the allotment and allowance subdivision has pertained to awards payable for some period between November 1, 1917, and July 31, 1921, which have not been fully paid or otherwise finally disposed of.

Many causes have operated to delay payments either in full or in part, such as original application failed to reach the bureau; allottee in foreign country not accessible to mail service, or removed leaving no post-office address; checks not received by the allottee or received and cashed by some other person; allowance erroneously eliminated; allowance not paid for the full period covered by the allotment; payment not made to all allottees who had title in a particular case, etc. When these cases are called up, the further evidence required is assembled and the case finally disposed of. In many cases called up, no further payments are due but extensive correspondence usually follows before a claimant accepts the bureau decision as final.

Many complaints are received from allottees alleging that certain checks mailed by this bureau were never received. These cases require extended search and investigation to determine whether check has been cashed, and if so, by whom, and are disposed of by the reclamation of forged check or the issuance of duplicate check upon the filing of bond of indemnity if original check has not been paid by the Treasury Department. The various procedures connected with this phase require a great deal of work in this and other subdivisions of the Finance Division. An important work of the allotment and allowance subdivision is the preparation of clearance reports for the General Accounting Office and the Chief of Finance, War Department, showing allotment payments made by this bureau in specific cases for use in the settlement of pay accounts of enlisted men.

The following tabulations show the volume of business in the concrete and the gradual decrease of both output and personnel for the fiscal year 1922:

Checks mailed on original or amended awards.

Date.	Number of checks.	Allotment.	Allowance.	Total value.
1921.

June	190	3,298.67	4,143.76	7,442.43
Total	1,984	39,862.37	48,271.68	88,134.05

The amount due the deceased allottee is payable either to a legal representative of the estate or to the person who bore the expenses of the allottee's last illness and burial, upon the filing of a voucher and receipted bills covering said expenses.

Checks canceled.

Date.	Number of checks.	Allotment.	Allowance.	Total value.
1921.				
July	2,200	$40,203.73	$45,571.71	$85,775.44
August	2,331	39,320.70	45,305.40	84,626.10
September	935	18,327.97	21,963.44	40,291.41
October	3,451	60,484.92	78,975.37	139,460.29
November	2,408	44,639.94	54,726.67	99,366.61
December	2,030	39,682.58	49,200.29	88,882.87
1922.				
January	1,029	18,106.86	22,397.79	40,504.65

April	540	10,415.38	12,390.76	22,806.14
May	2,145	37,362.73	47,255.64	84,618.37
June	1,577	27,865.11	33,414.75	61,279.86
Total	20,115	363,646.27	446,484.73	810,131.00

Usually these canceled checks are old and are returned from many different sources. Each check returned requires a careful review of the entire file to determine what disposition should be made of the check. If the allottee or other person is found entitled to the proceeds of the check, payment is made; otherwise, restoration is made to the fund upon which the check was drawn.

Allotment and allowance overpayments recovered.

1921:	
July	$104,531.36
August	176,249.71
September	25,981.09
October	88,044.67

March	79,583.62
April	39,758.66
May	53,282.49
June	39,713.31
Total	799,440.96

The amendment to section 210 of the war-risk insurance act, approved August 9, 1921, provides that overpayments of allotment made to the person designated by the enlisted man shall not be recovered for any reason whatsoever, and allowance payments when so made shall be recoverable only in cases of manifest fraud and where the relationship of the allottee to the enlisted man, as required by the war-risk insurance act, does not exist. Since the approval of said amendment recoveries are made only in the excepted cases as indicated above, and also in cases where a check carrying an overpayment has not been cashed or negotiated by the allottee and is returned to the possession of the United States.

Practically every piece of incoming correspondence calls up a particular case for examination, to determine whether errors have been made either in adjustment or in payment. This necessitates a careful review of all evidence in the file and quite often additional evidence must be assembled before the case can be finally disposed of. In reports to the General Accounting Office a full and precise report of allotment payments made by this bureau must be furnished for use in the final settlement of the pay account of the enlisted man. As files expand, cases become more complicated and difficult and require much more time and study to dispose of finally.

ACCOUNTING.

The work of this subdivision is closely connected with every division of the bureau by the fact that all expenses incurred are audited and recorded here.

Analysis of all expenditures, which was heretofore made by sorting vouchers into their classes and adding the amounts in each class on an adding machine, is now made by punching a card for every expenditure and sorting and tabulating these cards by machines with a saving of considerable work and time. This new system enables the making of reports showing a complete analysis of all expenditures by districts, by appropriations, and by classes a few days after the receipt of the information from the district offices.

With the establishment of the United States Veterans' Bureau on August 9, 1921, the Accounting Division of the War Risk Insurance Bureau and the Federal Board for Vocational Education were

consolidated with the result of practically doubling the work of the accounting subdivision and increasing the personnel from 396 to 714. After consolidation was completed it was possible to release 40 clerks from the accounting subdivision with an approximate saving of $65,000 in salaries. The methods of recording vouchers and of keeping the accounts were revised in order to establish a uniform system in the consolidated subdivision.

The following comparative statement of the vouchers examined and approved by this division for the fiscal years 1921 and 1922 shows the increase in the work accomplished:

Appropriation.	Fiscal year 1921.	Fiscal year 1922.
Miscellaneous vouchers	195,785	277,136
Meal requests	414,018	305,184
Transportation requests	273,702	926,402
New and adjusted payments	305,406	207,890
Regular monthly payments	5,250,772	4,956,321

The following tabulation shows the increase and decrease in the different classes of vouchers paid in central office by months during the past fiscal year:

Date.	Miscellaneous vouchers.	Meal requests.	Transportation requests.	New and adjusted payments.	Regular monthly payments.
1921.					
July	11,622	60,475	36,820	29,540	391,194
August	12,392	64,257	52,929	20,990	400,216
September	22,507	49,197	36,558	22,355	403,270
October	25,455	33,911	114,790	25,273	408,095
November	22,184	24,960	84,801	24,410	414,035
December	26,133	15,637	69,944	18,921	420,111
1922.					
January	26,331	11,988	82,092	13,990	421,179
February	22,799	8,780	82,713	10,798	410,320
March	23,363	11,761	101,426	14,463	446,667
April	28,241	9,763	89,070	9,807	409,721
May	30,908	8,354	100,711	9,184	405,888
June	25,201	6,101	74,548	8,159	422,625

These figures do not include payments made on account of beneficiaries taking vocational training. There were on an average 91,000 ex-service men taking section 2 training who were paid twice each month. This requires that two entries be made for each trainee, or a total of 2,184,000 entries for checks issued to these trainees. There have also been on an average 10,000 adjustments on training pay each month.

The large decrease in the number of meal and lodging requests is due to the decentralization of these requests, payments now being made in the district offices. While the number of miscellaneous vouchers was more than doubled after the consolidation with the Accounting Division of the Federal board, the total number of miscellaneous vouchers approved in this division does not bear out this result for the full fiscal year. This is due to payment of certain classes of vouchers in the field which were formerly paid in central office. It will be noted that the number of transportation requests audited has increased 275 per cent. The decrease in new and amended awards is due to the fact that a large percentage of the new and amended awards are now paid in the field.

While decentralization of payments gradually reduced the number of vouchers approved for payment in this division, the work of the

division is not materially increased thereby. The law requires that the accounts of field disbursing agents must receive an administrative disbursed in central office located in the city of Washington.

The following is a comparative statement showing the amounts disbursed from appropriations and trust funds administered by the United States Veterans' Bureau during the fiscal years 1921 and 1922:

Disbursements for fiscal years 1921 and 1922.

	Fiscal year 1921.	Fiscal year 1922.
Appropriations:		
Losses on war-risk insurance on American vessels, their cargoes, etc.	$36,911.56	$249,075.78
Military and naval family allowance	13,449,062.74	2,902,194.22
Military and naval insurance	94,901,353.38	102,988,870.13
Military and naval compensation	121,305,053.43	123,350,542.45
Vocational rehabilitation, Veterans' Bureau	99,064,993.11	166,051,141.22
Medical and hospital services, Veterans' Bureau	45,277,864.62	68,970,568.42
Hospital facilities and services	166,052,141.22	916,500.00
Salaries and expenses, Veterans' Bureau	9,404,199.70	6,067,448.86
National security and defense	1,275.16	[1] 53,722.49
Trust funds:		
Army allotments	3,343,085.36	732,675.23
Navy allotments	6,101,678.17	1,181,933.49
Marine Corps allotments	507,147.84	105,203.96
Coast Guard allotments	373,057.95	60,106.32
United States Government life insurance fund	2,086,695.47	6,084,931.08
Vocational rehabilitation gift fund		135.58

[1] Credit.

It will be noted from the foregoing figures that while the number of vouchers approved in this subdivision for payment has gradually decreased on account of the decentralization of certain payments, the total disbursements of the bureau have increased. The following figures show the disbursements by months for the fiscal year:

1921:	
July	$49,451,385.86
August	39,065,582.75
September	34,586,570.57
October	40,432,606.64
November	37,243,576.29
December	39,198,691.45
1922:	
January	40,905,222.14
February	45,747,777.27
March	38,049,893.53
April	38,849,190.79
May	39,206,464.71
June	36,870,642.25

The above figures include the allotment of $33,360,663.90 to the United States Public Health Service, National Home for Disabled Volunteer Soldiers, War and Navy Departments, etc.

Loans made to trainees from the vocational rehabilitation revolving fund during the fiscal year amount to $1,115,857.34.

DISBURSING.

The additional work devolving upon the disbursing clerk as a result of the consolidation of the financial operations of the former Bureau of War Risk Insurance and the former Rehabilitation Division of the Federal Board for Vocational Education, and incidental to payment of the expenses for medical services transferred from the Public Health Service to this bureau, was performed without any apparent slackening of service. Payments of all kinds were made promptly and regular schedules of deliveries of checks to beneficiaries and vocational trainees were maintained.

Personnel of the disbursing office of the former Bureau of War Risk Insurance was 319, and there were employed in the Rehabilitation Division disbursing office 97 persons, a total of 416. When the special disbursing agents were appointed for the field offices the personnel of the central disbursing office was 370, showing a saving of 46 positions made without delay to necessary payments of insurance, compensation, and training allowances. This personnel was further reduced to 347 on June 30, 1922.

The operation of the field disbursing offices under the system of having a deputy to the central disbursing clerk bonded for making certain payments in the field was satisfactory and of material advantage. Further decentralization of finance matters, however, indicated the advisability of terminating such a system because of the volume of business conducted in the field offices. On January 31 all field deputy designations and authorizations were withdrawn and terminated and on February 1, 1922, the special disbursing agent in each office was ready to function. This change to special disbursing agents was made effective without any interruption or delay in payments.

The change, while involving increased expenses in field offices for this branch of the business, has been the means of effecting a reduction in the central disbursing office. Prior to the change all advances from the Treasury were made to and disbursed and accounted for by one central disbursing clerk, whereas now there are 15 additional bonded officers, among whom is distributed a large part of the responsibility formerly resting upon the central office disbursing clerk. The great number of checks issued by the central disbursing clerk has previously made it necessary for the accounting division of the Treasurer's Office to maintain a force reconciling the paid and outstanding checks against the central disbursing clerk's accounts. This work of reconciliation will be materially reduced, thus effecting a saving in the General Accounting Office. The account of each special disbursing agent will be of moderate volume, covering which the Treasurer of the United States will render monthly statements to each special disbursing agent which can be used for verifying all checks issued and outstanding.

The following is a statement of checks issued by central disbursing office during the past fiscal year:

		Number of checks.	Value.
Allotment and allowance		168,107	$6,236,156.48
Allotment	$2,753,949.78		
Allowance	3,482,206.70		
Term insurance		2,194,216	98,986,218.03
Compensation		2,811,722	113,551,576.70
Vocational rehabilitation		1,539,866	108,678,554.29
Salary		130,990	8,122,741.91
Converted insurance		377,224	7,539,317.13
Miscellaneous		293,623	56,096,839.02
Total		7,815,748	402,211,403.56

The activities of the auditing and disbursing sections in district offices for the fiscal year 1922 are shown by the following figures:

Total number of vouchers paid July 1, 1921, to June 30, 1922, all districts	326,450
Total number of checks issued	890,748
Total value	$55,202,129.40

[1] Fiscal year appropriation.
[2] Allotment to the Bureau War Risk Insurance from appropriations for the national security and defense (President's fund).
[3] Allotments to the Bureau War Risk Insurance, Public Health Service, and United States Veterans' Bureau from appropriations made to the Treasury Department for increased compensation of employees.
[4] Continuing appropriation available immediately and until expended.
[5] Act amending the act of Sept. 2, 1914, substituting this amount for the original amount appropriated.
[6] Appropriation direct to United States Veterans' Bureau for increased compensation of employees.
[7] Available to War Risk Insurance beneficiaries and Public Health Service beneficiaries.
[8] Includes $210,000 for hospital furniture and equipment.
[9] Transferred from appropriation "Pay of the Navy, 1920," to the Public Health Service for increased pay of personnel.
[10] $500,000 of this appropriation for revolving loan fund.
[11] The appropriation marine and seamen's insurance was not administered for the relief of World War veterans but has been included since it is an appropriation administered by the U. S. Veterans' Bureau. Deduct $50,000,000 from the total appropriated to secure the amount appropriated for the relief of the World War veterans.

[1] This is a trust fund administered by the United States Veterans' Bureau and derived from premiums paid by insured veterans. To arrive at the total income credited to the fund during the period under observation, the following items should be added to the grand total given above:

Increase by adjustment in book value of bonds, due to amortization	$165,058.43
Interest accrued on investment bonds on June 30, 1922, not due	432,411.03
Interest accrued on policy loan investments on June 30, 1922, not due	84,032.99
	681,502.45

[2] The donors and the amounts of their gifts are as follows:

American Red Cross	$52,000.00
National Catholic War Council	25,000.00
MacDowell Music Club	25.00
Philadelphia street party	36.05
Little Mermaid fund	1,075.95
	78,137.00

[3] Income from marine and seamen's insurance was not disbursed for the relief of World War veterans, but has been included since it is administered by the United States Veterans' Bureau. Deduct $53,140,513.74 to secure the income other than appropriations available for veteran relief.

TABLE No. 138.—*Statement of receipts and expenditures as of June 30, 1922.*

Item.	Bureau to which appropriated.	Receipts.			Disbursements to date.	Balance.

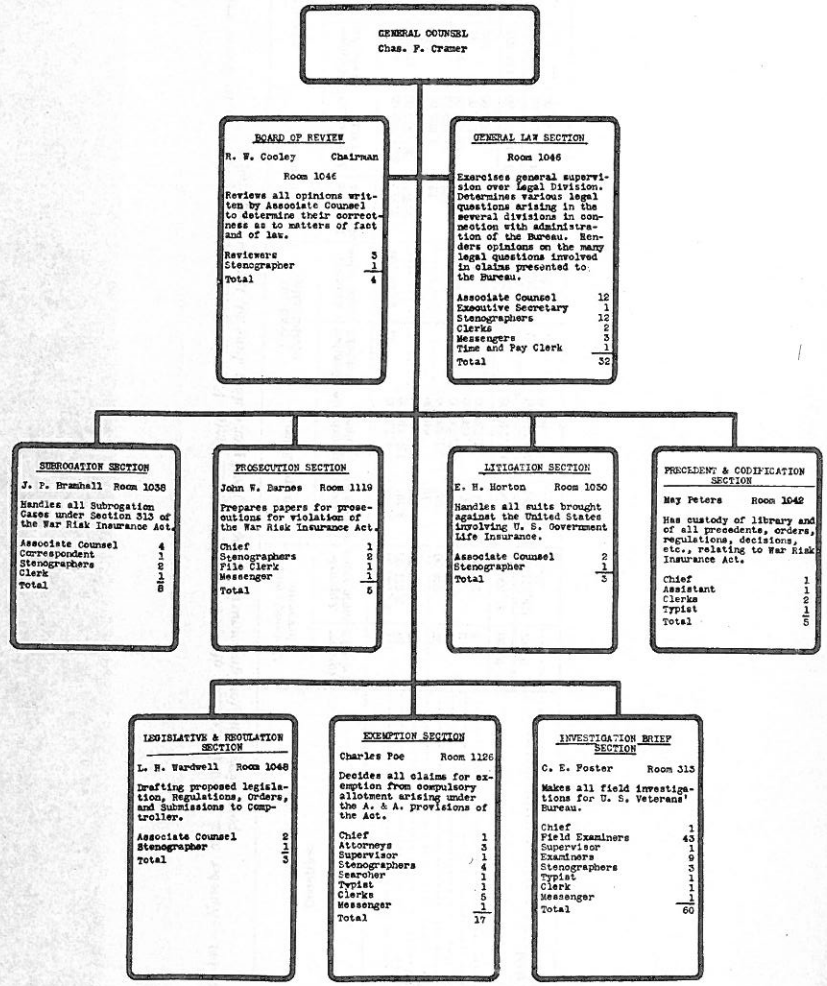
LEGAL DIVISION



18174—22. (Face page 549.)

LEGAL DIVISION.

By the act of August 9, 1921, the rehabilitation division of the Federal Board for Vocational Education, certain activities of the United States Public Health Service, and the Bureau of War Risk Insurance were brought under one head. By that act, also, authority was given to decentralize the functions of the new bureau by the creation of district offices not to exceed 14, and subdistrict offices not to exceed 140 in number. The act further authorized the acquisition and construction of additional facilities for the hospitalization of disabled veterans of the World War and modified the war-risk insurance act in many important particulars. These changes in the law have all operated to increase in volume and diversity the work of the legal division.

Prior to August 9, 1921, the work of this division was almost entirely confined to construing, interpreting, and passing upon questions involving the various sections of the war risk insurance act, namely, matters dealing with allotment and allowance, compensation, and insurance. While by far the larger part of the work still is, and will always continue to be, devoted to matters along these lines, questions concerning the interpretation and application of the vocational rehabilitation act, the handling of all legal matters in connection with the acquisition of hospitals and training centers, and the numerous questions of administrative law which are continually arising in connection with the operation of the regional offices, hospitals, and training centers now occupy a considerable part of the division's attention.

The attitude of the legal division in dealing with the claims for allotment and allowance, compensation, insurance, and vocational training is unlike that of the legal advisers of private organizations, in that while the legal department of a private commercial organization approaches the problems submitted to it from the standpoint of the advocate intent on sustaining the claims of the organization, the counsel employed in the legal division of the bureau sit rather as judges seeking to protect the rights of the claimants as well as the rights of the Government. Consequently, the legal division in dealing with a claim endeavors to bring the case within the letter or spirit of the law and to secure the evidence necessary to justify the allowance of the claim. This procedure is predicated on the theory that the statutes administered by the bureau are of a beneficial nature, and every effort should be made to assist the ex-service man in bringing his claim within the provisions of the law. While numerous suits have been instituted against the bureau under the provisions of section 13 of the war risk insurance act as amended May 20, 1918, virtually all of them are suits in which the bureau, though the defendant, is such in name only, the controversy being between contending claimants.

The matters referred to the Legal Division from the various divisions of the bureau cover a wide and varied field. Among the many important legal subjects which are constantly being considered are: Preparation and prosecution (in conjunction with the Department of Justice) of tort actions in those cases where the claimant has been injured by a third party and has assigned his right of action to the United States; preparation and defense (in conjunction with the Department of Justice) of those cases in which suit is brought against the United States under the provisions of section 13 of the war risk act; preparation and prosecution (in conjunction with the Department of Justice) of those cases where persons have been guilty of violating the provisions of the act; passing upon the various legal questions arising in connection with the leasing and acquiring of property for hospitals and training centers; deciding questions involving all phases of administrative law; construing wills where insurance has been bequeathed and applying the intestacy laws of the various States and countries where payments, under the terms of the act, are in order, and the person on whose account payment is to be made has died intestate; deciding domestic relations questions, such as the validity of marriages, divorces, adoptions, guardianship appointments, etc., and questions covering the entire field of life insurance law.

In addition to the requests for opinions from the various divisions and sections of the bureau on general questions as to compensation, insurance, and vocational training claims, which are arising constantly, many general inquiries with reference to the various sections of the law are presented from outside the bureau—for instance, such sources as ex-service men's organizations, soldier welfare organizations, Congressmen, Senators, and others interested in the act and its application, etc., who are continually requesting opinions as to the effect of the law on different classes of cases. Opinions are always rendered pursuant to such requests. One might naturally assume, since the bureau has been deciding compensation and insurance questions since the passage of the war risk insurance act in October, 1917, that the precedents on these subjects were long since well established. Such is not a fact, however. Amendments passed on June 25, 1918, December 24, 1919, and August 9, 1921, all of which tended to liberalize and broaden the provisions of the act, have operated to upset the constructions placed on the law as enacted prior thereto and necessitated the revision of precedents, thereby allowing thousands of claims which previously did not fall within the law.

OFFICE OF THE GENERAL COUNSEL.

The office of the general counsel exercises supervision over the work of the various sections of the Legal Division and handles all general legal questions dealing with allotment and allowance, compensation and insurance, and vocational training. The personnel of this office consists of the general counsel and twenty-five attorneys, designated as associate counsel, three of whom constitute a board of review which passes upon the opinions rendered by the associate counsel detailed to write opinions.

The following statement is a general summary of the work accomplished in the Legal Division during the fiscal year ended June 30, 1922.

General submissions:	
Pending July 1, 1921	14
Received during the fiscal year	2,770
Disposed of during the fiscal year	2,626
On hand June 30, 1922	144
Claims cases:	
Pending July 1, 1921	216
Received during the fiscal year	4,149
Disposed of during the fiscal year	3,974
On hand June 30, 1922	175
Correspondence:	
On hand July 1, 1921	242
Received during the fiscal year	30,540
Dispatched during the fiscal year	43,205
On hand June 30, 1922	184

LITIGATION.

It is the policy of the bureau to discourage litigation in all cases, and to make adjudication of claims in such manner that the claimants will see the fairness of the decisions of the bureau and hence will not object to them. It is provided by the war-risk insurance act, however, that in the event of a disagreement between the bureau and any beneficiary or beneficiaries thereunder, as to a claim under the contract of insurance, an action may be brought against the United States in the district court wherein the claimants or any one of them resides.

The usual question which arises in cases where litigation results is not as to the validity of insurance, but as to the proper person entitled to payment thereof under the provisions of the war-risk insurance act. Most of the suits have been instituted by a contending claimant, where the bureau has already recognized some other person as beneficiary and made an award in his or her favor. While the defense of these actions is committed to the Department of Justice, the bureau has invariably been requested to render assistance in the defense of such cases and an attorney from the litigation section appears in court and assists the United States attorney in the defense.

The following statement is a general summary of the work accomplished by the litigation section during the fiscal year ended June 30, 1922:

Cases received during the fiscal year	131
Cases disposed of during the fiscal year	41
Cases on hand June 30, 1922	90

EXEMPTION.

The primary function of the exemption section of the Legal Division is to decide questions arising out of claims for exemption from compulsory allotment made by enlisted men in the military and naval service, but its decisions are by no means limited to such claims. They embrace also the claims interposed by wives or children or persons on their behalf for compulsory allotment of pay by the enlisted man when he has either intentionally or unintentionally failed to name them as entitled to share in it and the Government allowance for which the war-risk insurance act provides. There

is hardly a question of the law of domestic relations that has not been determined by this section, as all cases referred to the section involve questions as to the validity of marriages, divorce decrees, agreements in writing for separation, the relation of parent to child, and guardian to ward, adoption, legitimacy of children, etc.

The law relating to the compulsory allotment of the enlisted man's pay, and also relating to the Government allowance for both classes of dependents became inoperative on the 31st day of July, 1921, so that the cases remaining to be determined by this section are those which have not been fully adjusted. The work of the exemption section is therefore now limited to the consideration, investigation, and decisions of questions pending in the bureau, and no new business is now considered.

The section which at one time consisted of about 380 employees has been reduced to 19 employees. The following tabulated statement shows the number of cases determined by this section during the past year, as well as those on hand for decision. It is not possible to state precisely how many more cases are in the files of the allotment and allowance subdivision to be forwarded to the exemption section for action, though it is supposed that the number is still quite large.

Though no new claims are presented to this section for action, the decision on those which do come before it is rendered more difficult than heretofore because of change of address, death of witnesses, lapse of time, and various other circumstances.

The average of cases determined by the exemption section, working with approximately its present force, has been about 116 per week.

Exemption cases:	
Pending July 1, 1921	917
Received during the fiscal year	4,775
Disposed of during the fiscal year	4,656
On hand June 30, 1922	1,036
Rehearing cases:	
Pending July 1, 1921	287
Received during the fiscal year	1,244
Disposed of during the fiscal year	1,394
On hand June 30, 1922	137
Exemption cases returned to allotment and allowance subdivision	7,017
Correspondence:	
Letters on hand July 1, 1921	81
Letters received during the fiscal year	11,792
Letters written during the fiscal year	14,455
Letters on hand June 30, 1922	0

PROSECUTIONS.

The section of prosecutions is charged with the duty of handling all cases of fraud arising within the bureau, the evidence in such cases being properly assembled, briefs prepared and submitted to the Department of Justice for transmission to the United States attorney having jurisdiction.

While the majority of cases coming to the attention of the section involve violation of the penal provisions of the act, when the act does not cover the particular offense the case is prepared under the proper provision of the Federal Criminal Code. An approximate classification of the different violations of the act and the Federal Criminal Code coming to the attention of this section may be enumerated as

follows: Perjury in connection with claims for allotment and allowance, compensation, or insurance; fraudulent receipt of checks or moneys in connection with allotment and allowance, compensation, or insurance; fraud in receipt of checks or moneys after the happening of any of the contingencies which terminate the right thereto; excessive fees charged in violation of section 13 of the act by claim agents or attorneys at law for services rendered in connection with the preparation and execution of the necessary papers in a claim filed in this bureau; fraudulent use of Government transportation, meal and lodging requests; fraudulent claims in connection with dental or medical treatment; misappropriation of funds by camp officers or theft of Government property by vocational trainees, and conspiracy to defraud the United States in connection with claims arising under the war risk insurance act.

Since the organization of this section the Department of Justice has at all times been ready and willing to cooperate to the fullest extent. The records and reports show that, as compared with the number of convictions obtained in criminal cases forwarded to the Department of Justice by other branches of the Government, the usual average number of convictions have been obtained by the Legal Division in cases involving violation of the act.

The work accomplished in this section during the fiscal year is summarized as follows:

Cases pending in the Department of Justice July 1, 1921	710
Cases forwarded to the Department of Justice during the fiscal year	206
Total	916
Disposition of cases reported by the Department of Justice, prosecution not advisable	117
Defendant dead or can not be located	28
Whole or partial refund	52
Convictions	51
Acquittals	3
Indictments ignored by grand jury	14
Convicted of other offenses (bureau prosecution dropped)	9
Nolle prosequi	19
Grand jury failed to indict	21
Indicted by grand jury, defendant not apprehended	17
Cases in which witnesses not located	3
Proceedings barred by limitations	153
Indictments returned, trial pending	187
Cases pending with Department of Justice in course of further development	242
Total	916

INVESTIGATION.

This section investigates and procures reports and information relative to any matters requiring investigation. It is composed of a chief, located in the central office, and 44 salaried field examiners stationed throughout the United States, these examiners being augmented by several hundred local examiners who work on a fee basis. Though under the Legal Division, only a part of the work of the section is devoted to matters arising in the division, as it investigates cases for all divisions of the bureau. The principal functions of the section are to secure proof in those cases where the claimant is unable to obtain it himself, and to investigate frauds and cases where evidence is submitted for the purpose of showing that beneficiaries

have terminated their rights under the act, as, for instance, widows who have been guilty of open and notorious illicit cohabitation, or, having remarried, have attempted to conceal the fact from the bureau in order that compensation payments to them may not be suspended.

The report of the section for the fiscal year is as follows:

Cases pending July 1, 1921	1,987
Cases received during the fiscal year	18,726
Cases disposed of during the fiscal year	17,502
Cases on hand June 30, 1922	3,211

LEGISLATION AND REGULATIONS.

This section was organized at the beginning of the fiscal year for the purpose of exercising a general supervision over all matters of legislative reference in which the United States Veterans' Bureau might be interested; drafting legislation to be submitted to Congress with recommendations in connections therewith; drafting and preparing for issue regulations, general orders, and other orders of the bureau authorized by the statutes under which this bureau operates, including the reconciliation of differences of opinion among the members of the administrative offices of the bureau with respect to the advisability of any particular regulation or other issue; maintaining a complete history file and index of such regulations and orders; and preparing any and all submissions to the Comptroller General of the United States for the purpose of obtaining his decision on the questions so presented.

There were transferred to this section functions and duties theretofore exercised by three other offices in the bureau, namely, the checking and reconciling of opinions relative to proposed regulations and general orders which was formerly under the supervision of the executive officer; the preparation of legislation to be suggested and recommendations with respect to legislation suggested or theretofore introduced, which was formerly a part of the duties of the general law section of the Legal Division; and the maintenance of the complete history files, indexing, editing, and checking of regulations and general orders, which was formerly under the supervision of the regulations section of the chief clerk's subdivision of the Administration Division.

SUBROGATION.

If a claimant for compensation received his injuries while in the service as the result of negligent or wrongful acts of any agency other than that of the United States, for which he claims and receives compensation, he is required to prosecute his cause of action, should the case show liability, under the provisions of section 313 of the act, against the third party responsible for his injuries for the purpose of recovering damages for such injuries.

Where the injury resulted in death and the soldier or sailor left dependent parents, children, or a widow who were entitled to receive compensation, suit was brought by them in their own names or through an administrator.

These cases are investigated by the subrogation section and are tried under the supervision of that section. The trials have been very successful, and substantial recoveries have been made.

Out of any damages recovered, after deducting the costs of the case, the claimant returns to the bureau all compensation paid him up to date of his recovery and retains the balance. His compensation payments are then suspended until the suspended payments equal the balance of the recovery retained by him.

In a few cases the United States took a complete assignment of the suit, and when recovery was made the money was paid to the bureau and credited to the military and naval compensation fund, in accordance with the provisions of section 313 of the act. When this was done there was no suspension of compensation payments by the bureau.

Following is a report of cases pending at the end of the fiscal year 1921 and of those received and disposed of during the fiscal year 1922:

Number of subrogation cases pending June 30, 1921	293
Cases received during fiscal year ending June 30, 1922	260
Cases disposed of during fiscal year ending June 30, 1922	293
Number of subrogation cases pending June 30, 1922	260

Classification of cases, to June 30, 1922.

Causes of action arising in France and other foreign countries [1]	30
Cases arising against railroads during period of Federal control	152
Cases wherein compensation is not claimed	31
Cases wherein compensation has been awarded	78
Cases wherein compensation has been disallowed	16
Cases wherein suit for damages is pending in Federal and State courts	117
Cash recoveries for fiscal year ending June 30, 1922	$114,336.00
Discoveries and settlements for fiscal year ending June 30, 1922 [2]	$152,941.49
Total amount of recoveries, discoveries, and settlements for fiscal year ending June 30, 1922	$267,277.49

[1] Since July 1, 1922, 355 cases arising from a steamer collision at sea in 1918, resulting from the negligence of a steamship company, have developed under section 313 of the war-risk insurance act, and new jackets have been made up for all of these cases. These cases can be classed as English cases, as the accident happened off the coast of Scotland.

A recent decision of the highest court in France has opened up the possibility of recoveries being made in a number of cases involving injuries to American soldiers through railroad accidents while in France. It is estimated that there will be approximately 150 of these French cases.

[2] This sum represents moneys received by persons who have not applied for but who are or may be entitled to compensation and who have either recovered or compromised causes of action upon which such compensable disability is based. If and when compensation is awarded, payment thereof is suspended, and the amount of the net recovery is credited thereon as in other cases.

ADMINISTRATION DIVISION.

CHIEF CLERK'S SUBDIVISION.

The chief clerk's subdivision is a service organization furnishing supplies, equipment, and services to central office and the field organization of the Veterans' Bureau.

PRINTING AND SUPPLIES.

This section furnishes supplies and equipment to central office and to the field organization of the Veterans' Bureau.

On July 1, 1921, this section consisted of the former Bureau of War Risk Insurance printing and supply section, which had taken over by that date the work of supplying the 14 district offices of the Public Health Service transferred to the Bureau of War Risk Insurance by order of the Secretary of the Treasury. The act of August 9, 1921, added to the printing and supply section of the Bureau of War Risk Insurance the supply service of the Rehabilitation Division of the Federal Board for Vocational Education. These two supply organizations were consolidated and reorganized without affecting the flow of supplies to the field.

Stationery and minor office supplies, valued at approximately $70,000, were secured from the Public Health Service and large quantities of furniture, equipment, technical and crafts supplies, etc., were acquired from the Rehabilitation Division of the Federal Board for Vocational Education. These supplies were stocked in the Arlington Building basement and disbursed to the field.

On the transfer of the Public Health Service purveying service to the Veterans' Bureau, by Executive order of April 29, 1922, a complete reorganization was effected, the personnel was somewhat reduced, and it is believed that the handling of requisitions and the delivery of supplies and equipment to the field has been greatly expedited.

During the past year the printing and supply section has cooperated with the Bureau of the Budget and maintained liaison with the War Department and other Government agencies, in order to secure supplies and equipment by transfer, wherever practicable. Equipment was secured from the War Department without the transfer of funds, thereby effecting a considerable saving to the bureau. In the latter part of the year it was found possible to secure from the Navy Department stocks that were surplus in that department without transfer of funds when such materials were for Veterans' Bureau hospitals. Large quantities of equipment were transferred to the United States Veterans' Bureau from the Army stores at Camps Grant, Sherman, Jackson, Devens, Dix, and Meade, and also from the War Department general intermediate depot at Atlanta, Ga.

The printing and supply section during the fiscal year furnished equipment and supplies to the field and central office, including stationery, minor office supplies, books, medicines, drugs, surgical and dental instruments and supplies, tools, trainee materials, crafts

supplies and blank forms, valued at approximately $2,700,000. This estimate does not include supplies furnished since May 29, 1922, to hospitals taken over from the Public Health Service.

PROPERTY ACCOUNTING.

This unit maintains an account of all property of the Veterans' Bureau, in central office and in the field. The property account system of the Federal board was taken over at the time of consolidation, but it subsequently proved not feasible in many particulars and a revised system was decided upon that combined features of the old Federal board system with features of the Public Health Service system.

DUPLICATING.

This section duplicates all bureau issues, including general orders, regulations, instructions, and other bureau issues, and also furnishes emergency supplies of duplicated blank forms where such blank forms are required for immediate use and where delivery can not be awaited from the Government Printing Office.

LEASES AND CONTRACTS.

This section handles the leases of all property leased by the Veterans' Bureau and also contracts with educational institutions, commercial firms, etc., covering services furnished by such organizations to the Veterans' Bureau. During the fiscal year it handled 5,625 educational contracts, 3,700 service contracts, and 1,300 proposals for contract hospitals.

Prior to April 29, 1921, the Bureau of War Risk Insurance maintained offices in eight cities, namely: Boston, New York, Philadelphia, St. Louis, Minneapolis, San Francisco, and Dallas. Seven leases had been consummated, covering 10,475 square feet of floor space, at a rental of $27,988 per year, or at the rate of $2.67 per square foot. The office in Philadelphia occupied space without payment of rental by the Bureau, as the premises were leased by another Government agency.

Pursuant to directions contained in the letter from the Secretary of the Treasury dated April 19, 1921, transferring certain activities of the United States Public Health Service to the Bureau of War Risk Insurance, there were transferred 95 leases, covering 388,399 square feet of floor space, at a rental of $851,982.65 per annum, or at the rate of $2.19 per square foot.

To carry into effect the plans outlined for the care and treatment of the beneficiaries of the Bureau of War Risk Insurance and to provide adequate and satisfactory quarters for the ever-increasing number of patients and beneficiaries, it was found necessary to obtain more space and to open offices in additional cities to take care of the decentralization of the activities of the Bureau of War Risk Insurance which was initiated at that time. The agreements covering office space transferred to the Bureau of War Risk Insurance were effected by obtaining a proposal from the lessor and the issuance of a "letter of acceptance."

The preparation of agreements in "letter of acceptance" form was tedious and increased the likelihood of clerical error. It did not tend toward the expeditious handling of such matters. Therefore a "lease form" (Chief Clerk 127) was prepared and printed and is now used by the bureau.

The records did not indicate that a very thorough canvass had been made of available office space in the various localities with a view to obtaining suitable space at the lowest rate of rental. Instructions were accordingly issued to obtain opinions from disinterested parties acquainted with local realty conditions as to the reasonableness of the rate of rental of office space to be acquired by the bureau.

Between May 1, 1921, and August 8, 1921, 34 leases were effected, covering approximately 34,414 square feet of floor space at a rental of $50,062.68 per annum, or at the rate of $1.45 per square foot.

The enactment of legislation by Congress (Public, No. 47, 67th Cong.) established the Veterans' Bureau on August 9, 1921, and provided for the merging therein of all of the functions, powers, and duties heretofore conferred by law upon the Bureau of War Risk Insurance and the Federal Board for Vocational Education, and in addition thereto—

all personnel, facilities, property, and equipment, including leases, contracts, and other obligations and instrumentalities in the District of Columbia and elsewhere of the Bureau of War Risk Insurance, of the United States Public Health Service, as described and provided in a written order of the Treasury Department issued and signed by Secretary of the Treasury on April 19, 1921.

There were received from the Federal Board for Vocational Education 85 leases, covering approximately 193,151 square feet of office space, at an annual rental of $340,395, or at the rate of $1.76 per square foot, and also 68 leases covering premises used for training center purposes at a rental of $507,602.32 per year, or a total rental obligation of $847,997.32 per annum.

Very careful consideration was given immediately to the necessity for the use of the privately owned property held under lease on August 9, 1921, to the concentration of the activities of the former Bureau of War Risk Insurance and the Federal Board for Vocational Education, and to the practicability of dispensing with the use of space wherever it was found feasible to do so without impairing the service. A canvass was made of available space suitable for the needs of the bureau, and a very earnest endeavor has been made to secure adequate and satisfactory quarters at the lowest possible rental. During the first quarter of the fiscal year 1922, 55 leases, covering 72,158 square feet, at a rental of $111,432 per year, were canceled.

The establishment of the Federal Board of Real Estate, Bureau of the Budget, made it necessary that the acquirement of office space be submitted to the board for consideration in connection with the availability of Government-owned buildings. The relinquishment of premises and the acquisition of privately owned property by lease have been accordingly cleared through the board.

The decentralization of the activities of the bureau has in many instances necessitated the leasing of additional space. The establishment of dispensaries in connection with the field offices increased the amount of rental paid. However, the saving effected in the

elimination of fees paid to physicians for examinations and treatments considerably overbalanced the additional expenditure for rental. There are indicated in the following table some of the results of strenuous efforts to effect savings in the rate of rental paid for office space.

City.	Per square foot.		Reduction yearly rental.
	From—	To—	
New York	$2.75	$1.42	$46,430
Philadelphia	2.75	.97	65,840
Atlanta	2.00	.58	52,000
Cincinnati	1.40	.95	26,121
New Orleans	2.50	2.00	
Chicago		3.00	
Minneapolis	2.50	1.00	101,410
Seattle	1.26	1.06	10,000
Dallas	2.00	.95	22,991
	1.75	1.20	11,550
Total			336,342

The savings are in reality very much greater. The decentralized activities of the bureau made it imperative that more office space be occupied than heretofore and the actual economical result effected is the *difference* between the rate of rental per square foot per annum paid under leases consummated by other agencies of the Government and transferred to the Veterans' Bureau and the rate of rental per square foot per annum obligated under leases made by the Veterans' Bureau multiplied by the area in square feet now occupied.

Instead of continuing the occupancy of space covered by leases transferred to the Veterans' Bureau, negotiations were opened with the lessors in an endeavor to obtain a reduction in the rental. In a number of instances premises have been vacated and satisfactory space has been secured at a lower rate of rental. By consistently and vigorously pursuing this policy, there resulted a conservation of $767,195.26 in rental. This has been accomplished at a time when there is a great demand for office space throughout the country.

The total office space occupied by 13 district offices and 118 subdistrict offices, under lease July 1, 1922, amounted to 1,176,857 square feet at a rental of $1,509,909.54 per annum, or at the rate of $1.32 per square foot, one of the district offices and 8 of the subdistrict offices being located in Federal buildings. A very material reduction in the rate of rental per square foot has been accomplished.

Changes have been made in the location of vocational schools and more desirable property has been acquired in order that proper facilities and quarters could be provided to carry on the work of instruction. Thirty leases with a rental obligation of $53,262 per year have been canceled. On July 1, 1922, there were 57 leases covering premises used for vocational school purposes at a rental of $748,350 per year.

INSULAR OFFICES.

The subdistrict office at Manila, P. I., for which a rental of $7,800 per year was paid, was vacated June 30, 1922, and satisfactory space

secured in the old customs house. The subdistrict office at Honolulu is also located in a Federal building.

COORDINATING OFFICES.

Temporary offices are maintained for coordinating and medical examination purposes at Saranac Lake (N. Y.), Lincoln (Nebr.), Brawley (Calif.), and Cebu (P. I.), at a rental cost of $2,700 per year. The office at Lincoln, Nebr., is located in a Federal building.

HOSPITALS.

Pursuant to Executive order dated April 29, 1922, and effective May 1, 1922, the United States Public Health Service transferred to the Veterans' Bureau 76 leases covering (*a*) 36 hospitals, (*b*) 21 nurses' quarters, (*c*) 1 out-patient office, (*d*) 18 miscellaneous easements, garages, etc. The rental obligated thereunder amounts to $1,020,423.64 per annum.

SUMMARY.

	Annual rental.
(*a*) Rental office space, 1,176,857 square feet	$1,509,909.54
(*b*) Vocational schools	748,350.00
(*c*) Hospitals	1,020,423.64
	2,278,683.18

MAIL.

This section handles all correspondence, including telegrams coming into or going out of central office. With the transfer of the Rehabilitation Division of the Federal Board for Vocational Education, the 14 district offices, and the hospitals of the Public Health Service to this bureau, the quantity of mail and telegrams thus handled materially increased.

The incoming mail for the fiscal year totaled 13,546,193 pieces, including 104,709 registered letters, 26,602 special-delivery letters, 238,614 unclaimed letters (postal addresses in error), and 34,920 personal letters. The outgoing mail for the fiscal year totaled 14,299,516 pieces, 8,505,224 of these being insurance premium notices and receipts. The total incoming telegrams for the fiscal year numbered 73,138 and the outgoing telegrams numbered 46,257.

The mails section, as part of its miscellaneous functions, handled the translation (in its translation unit) of all foreign mail received, and verified the addresses of all outgoing mail to foreign countries. This section also distributed all bureau issues such as general orders, etc., to central office, district offices, hospitals, etc., handling approximately 6,850,660 sheets of paper, not including 400,000 pieces of literature which were folded and inclosed with insurance notices.

Although the work of the section materially increased during the fiscal year and became more complex, the personnel was decreased by 23 employees and the work kept current in spite of the decrease.

BUILDING AND EQUIPMENT.

During the fiscal year this section maintained the motor-vehicle service of the bureau, the furniture repair shop, and a telephone unit. It handled outgoing freight amounting to 1,510 tons, incoming freight amounting to 790 tons, express amounting to 312 tons, and 11,932 sacks of outgoing mail. The furniture repair shop completed during the year 2,408 requisitions for the repair of furniture and equipment, handled 1,310 requisitions for crating furniture and supplies for shipment to the field, and constructed 4,557 boxes for shipping supplies to the field.

The building and equipment section, with its labor force, accomplished during the fiscal year the following general moves:

July 1 and 5, 1921.—Moved offices of district No. 4 from "F" building, Seventh and B Streets SW., to building "C," Seventh and B Streets SW.

August 10 to 14, 1921.—Moved offices of Rehabilitation Division from Nineteenth and D Streets SW. to Arlington Building.

August 16 to 31, 1921.—Moved warehouse stocks—furniture, crafts supplies, etc.—of Rehabilitation Division from Nineteenth and D Streets SW. to Arlington Building.

September 2 to 3, 1921.—Moved offices of district No. 4 from Seventh and B Streets SW. to Arlington Building.

April 13 and 14, 1922.—Moved offices of personnel subdivision from first floor to tenth floor, Arlington Building, in order to provide space for offices of the Alien Property Custodian.

May 6 and 7, 1922.—Moved offices of hospital section from Seventh and B Streets SW. to Arlington Building.

May 13, 1922.—Moved offices of the purveying service, Seventh and B Streets SW. to Arlington Building.

This section also handled 942 miscellaneous minor moves within the Arlington Building and the transfer, installation, and disconnection of 1,045 telephones, preparing orders on the Chesapeake & Potomac Telephone Co. for the work. Through the discontinuance of certain switchboard equipment, a saving of $1,500 per year was effected.

INFORMATION.

This section maintains a contact with the general public and handles all cases presented by claimants personally. In performing this work during the past fiscal year it handled approximately 120,250 telephone calls, interviewed approximately 30,000 claimants, not including 40,375 cases relative to allotment and allowance refunds, rehabilitation, etc., and converted 8,170 insurance policies, valued at $5,741,500, and handled 2,253 insurances policies involving reinstatements.

This section also handled during the year insurance loans amounting to $105,240, assisted the District Office Division in the clean-up campaign, and supervised the preparation of the field letter. The field letter furnishes information to the field on all matters pertaining to the conduct of the bureau and is circulated weekly.

PERSONNEL SUBDIVISION.

During the fiscal year 1922 the activities of the personnel subdivision were vastly enlarged and changed. Prior to August 9, 1921, all appointments were made on the recommendation of the Director of the Bureau of War Risk Insurance, subject to the approval of the Secretary of the Treasury. Under the provisions of the act of August 9, which created the United States Veterans' Bureau, the appointing power is vested in the Director of the Veterans' Bureau.

Appointees are selected from eligibles certified to the bureau by the United States Civil Service Commission. Appointments in central office are made from departmental registers maintained in Washington, D. C. Field appointments are made from district civil service registers. Selections and recommendations for field appointments are made by the district managers in their respective districts, or by the medical officer in charge, if for United States Veterans' hospitals. Such recommendations are subject to the approval of the director.

Effective July 1, 1921, under an order signed by the Secretary of the Treasury, dated April 19, 1921, 4,001 employees were transferred from the United States Public Health Service to the Bureau of War Risk Insurance, making a total personnel on that date of 9,096. On August 9, 1921, under the provisions of the act of August 9, there were transferred to the United States Veterans' Bureau 9,087 employees from the Bureau of War Risk Insurance and 6,716 employees from the Federal Board for Vocational Education. By Executive order, dated April 29, 1922, 57 United States Public Health hospitals were transferred to the bureau and a personnel of 11,929 was added to the rolls. There were on the bureau's rolls at the close of the fiscal year 29,746 employees. Of that number 4,758 were assigned to central office, 14,247 to the district offices and vocational schools, 10,416 to United States veterans' hospitals, and 325 to United States vocational school, Chillicothe, Ohio. The field personnel, as of June 30, 1922, was distributed as follows:

	Hospitals.	District offices and vocational schools.	Total.
District No.—			
1	560	1,154	1,714
2	672	1,640	2,312
3	196	1,217	1,413
4	922	1,195	2,117

In order to function properly in an independent establishment, it was necessary that the personnel subdivision undergo a complete reorganization. This work was completed during the early part of the fiscal year. Under the existing organization it has been possible to handle an increased personnel of approximately 100 per cent with practically no increase since August 9, 1921, in the number of employees assigned to the personnel subdivision.

At first an effort was made by central office to select all scientific, professional, and technical personnel for the field service, but later it was decided that inasmuch as the official in charge of each field office

is directly responsible for the work under his supervision appointees should be selected by him.

For the purpose of obtaining statistical data and other information pertaining to personnel, the Hollerith punch card system was installed.

During the fiscal year 8,250 employees were separated from the service by resignation, discontinuance, or dismissal. Of the men employed by the bureau 64.52 per cent are ex-service men.

APPENDIX.

LAWS FOR THE RELIEF OF VETERANS OF THE WORLD WAR.

[PUBLIC—No. 193—63D CONGRESS.]

[S. 6357.]

An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department.

Whereas the foreign commerce of the United States is now greatly impeded and endangered through the absence of adequate facilities for the insurance of American vessels and their cargoes against the risks of war; and

Whereas it is deemed necessary and expedient that the United States shall temporarily provide for the export shipping trade of the United States adequate facilities for the insurance of its commerce against the risks of war: Therefore

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That there is established in the Treasury Department a bureau to be known as the Bureau of War Risk Insurance, the director of which shall be entitled to a salary at the rate of $5,000 per annum.

SEC. 2. That the said Bureau of War Risk Insurance, subject to the general direction of the Secretary of the Treasury, shall, as soon as practicable, make provisions for the insurance by the United States of American vessels, their freight and passage moneys, and cargoes shipped or to be shipped therein, against loss or damage by the risks of war, whenever it shall appear to the Secretary that American vessels, shippers, or importers in American vessels are unable in any trade to secure adequate war-risk insurance on reasonable terms.

SEC. 3. That the Bureau of War Risk Insurance, with the approval of the Secretary of the Treasury, is hereby authorized to adopt and publish a form of war-risk policy, and to fix reasonable rates of premiums for the insurance of American vessels, their freight and passage moneys and cargoes against war risks, which rates shall be subject to such change, to each port and for each class, as the Secretary shall find may be required by the circumstances. The proceeds of the aforesaid premiums when received shall be covered into the Treasury of the United States.

SEC. 4. That the Bureau of War Risk Insurance, with the approval of the Secretary of the Treasury, shall have power to make any and all rules and regulations necessary for carrying out the purposes of this act.

SEC. 5. That the Secretary of the Treasury is authorized to establish an advisory board, to consist of three members skilled in the practices of war-risk insurance, for the purpose of assisting the Bureau of War Risk Insurance in fixing rates of premium and in adjustment of claims for losses, and generally in carrying out the purposes of this act; the compensation of the members of said borad to be determined by the Secretary of the Treasury, but not to exceed $25 a day each, while actually employed. In the event of disagreement as to the claim for losses, or amount thereof, between the said bureau and the parties to such contract of insurance, an action on the claim may be brought against the United States in the district court of the United States, sitting in admiralty, in the district in which the claimant or his agent may reside.

SEC. 6. That the Director of the Bureau of War Risk Insurance, upon the adjustment of any claims for losses in respect of which no action shall have begun, shall, on approval of the Secretary of the Treasury, promptly pay such claim for losses to the party in interest; and the Secretary of the Treasury is directed to make provision for the speedy adjustment of claims for losses and also for the prompt notification of parties in interest of the decisions of the bureau on their claims.

SEC. 7. That for the purpose of paying losses accruing under the provisions of this act there is hereby appropriated, out of any money in the Treasury of the United States not otherwise appropriated, the sum of $5,000,000.

SEC. 8. That there is hereby appropriated, for the purpose of defraying the expenses of the establishment and maintenance of the Bureau of War Risk Insurance, including the payment of salaries herein authorized and other personal services in the District of Columbia, out of any money in the Treasury of the United States not otherwise appropriated, the sum of $100,000.

SEC. 9. That the President is authorized whenever, in his judgment, the necessity of further war insurance by the United States shall have ceased to exist, to suspend the operations of this act in so far as it authorizes insurance by the United States against loss or damage by risks of war, which suspension shall be made, at any event, within two years after the passage of this act, but shall not affect any insurance outstanding at the time or any claims pending adjustment. For the purpose of the final adjustment of any such outstanding insurance or claims, the Bureau of War Risk Insurance may, in the discretion of the President, be continued in existence a further period not exceeding one year.

SEC. 10. That a detailed statement of all expenditures under this act and of all receipts hereunder shall be submitted to Congress at the beginning of each regular session.

SEC. 11. That this act shall take effect from and after its passage.

Approved, September 2, 1914.

[PUBLIC—No. 209—64TH CONGRESS.]

[H. R. 13224.]

An act to amend an act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September second, nineteen hundred and fourteen.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section nine of an act establishing a Bureau of War Risk Insurance, approved September second, nineteen hundred and fourteen, be, and it is hereby, amended so as to require the suspension of the operations of the act within three years from the date said act was approved.

SEC. 2. That all moneys received from premiums and from salvage shall be covered into the Treasury to the credit of the appropriation made for the payment of losses and be available for the purposes thereof.

Approved, August 11, 1916.

[PUBLIC—No. 387—64TH CONGRESS.]

[H. R. 20082.]

An act to amend an act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September second, nineteen hundred and fourteen.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section nine of an act establishing a Bureau of War Risk Insurance, approved September second, nineteen hundred and fourteen, as amended by the act of August eleventh, nineteen hundred and sixteen, be, and is hereby, amended so as to require the suspension of the operations of the act within four years from the date said act of September second, nineteen hundred and fourteen, was approved.

SEC. 2. That section seven of the act of September second, nineteen hundred and fourteen, be, and is hereby, amended to read as follows:

"That for the purpose of paying losses accruing under the provisions of this act there is hereby appropriated, out of any money in the Treasury of the United States not otherwise appropriated, the sum of $15,000,000."

SEC. 3. That all moneys received from premiums and from salvage shall be covered into the Treasury to the credit of the appropriation made for the payment of losses and be available for the purposes thereof.

Approved, March 3, 1917.

[PUBLIC—No. 20—65TH CONGRESS.]

[S. 2133.]

An act to amend an act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September second, nineteen hundred and fourteen, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the first section of the act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September second, nineteen hundred and fourteen, is hereby amended to read as follows:

"That there is established in the Treasury Department a bureau to be known as the Bureau of War Risk Insurance, the director of which shall be entitled to a salary at the rate of $5,000 per annum."

SEC. 2. That section two of such act is hereby amended to read as follows:

"SEC. 2. That the said Bureau of War Risk Insurance, subject to the general direction of the Secretary of the Treasury, shall, as soon as practicable, make provisions for the insurance by the United States of American vessels, their freight and passage moneys, cargoes shipped or to be shipped therein, and personal effects of the masters, officers, and crews thereof against loss or damage by the risks of war, whenever it shall appear to the Secretary that American vessels, shippers or importers in American vessels, or the masters, officers, or crews of such vessels, are unable in any trade to secure adequate war-risk insurance on reasonable terms.

"The Bureau of War Risk Insurance, subject to the general direction of the Secretary of the Treasury, shall, as soon as practicable, make provisions for the insurance by the United States, as further provided in section three a, of masters, officers, and crews of American merchant vessels against loss of life or personal injury by the risks of war, and for compensation during detention following capture by enemies of the United States whenever it shall appear to the Secretary that in any trade the need for such insurance exists."

SEC. 3. That there is hereby added to such act a new section, to be known as section two a, to read as follows:

"SEC. 2a. That the Bureau of War Risk Insurance, with the approval of the Secretary of the Treasury, is hereby authorized to make provisions for the reinsurance by the United States of vessels of foreign friendly flags or their cargoes, or both, when such vessels or their cargoes are insured by the Government of any country which is at war with an enemy of the United States; and, further, to reinsure with the Governments of any countries which are at war with an enemy of the United States American vessels and their cargoes."

SEC. 4. That section three of such act is hereby amended to read as follows:

"SEC. 3. That the Bureau of War Risk Insurance, with the approval of the Secretary of the Treasury, is hereby authorized to adopt and publish forms of war-risk policies and to fix reasonable rates of premium for the policies which it is authorized to issue under this act, which rates shall be subject to such change to each port and for each class as the Secretary shall find may be required by the circumstances. All proceeds of the aforesaid premium and from salvage which have been or are hereafter received shall be covered into the Treasury of the United States to the credit of the Bureau of War Risk Insurance, and in addition to all other appropriations made under this act are hereby permanently appropriated for the purpose of paying losses and return premiums accruing under this act."

SEC. 5. That there is hereby added to such act a new section, to be known as section three a, to read as follows:

"SEC. 3a. That whenever it shall appear to the Secretary of the Treasury that the effecting of such insurance is desirable in the national interest in the case of vessels engaged in any trade, the owner of every American merchant vessel engaged in such trade shall insure the master, officers, and crew of such vessel against loss of life or personal injury from war risks as well as for compensation during detention by an enemy of the United States following capture.

"Such insurance shall be effected either with the Bureau of War Risk Insurance or in insurance companies, and on terms satisfactory to the Secretary of the Treasury.

"Such insurance shall provide, and the Bureau of War Risk Insurance is authorized to write, policies so providing—

"(a) In case of death, permanent disability which prevents the person injured from performing any and every kind of duty pertaining to his occupation, or the loss of both hands, both arms, both feet, both legs, or both eyes, or any two thereof, for the payment of an amount equivalent to one year's earnings, or to twelve times the monthly earnings of the insured, as fixed in the articles for the voyage (hereinafter referred to as the principal sum), but in no case shall such amount be more than $5,000 or less than $1,500;

"(b) In case of any of the following losses, for the payment of the percentage of the principal sum indicated in the following tables:

"One hand, fifty per centum;
"One arm, sixty-five per centum;
"One foot, fifty per centum;
"One leg, sixty-five per centum;
"One eye, forty-five per centum;
"Total destruction of hearing, fifty per centum;

"That the Bureau of War Risk Insurance may include in its policy undertakings to pay specified percentages of the principal sum for other losses or disabilities; and

"(c) In case of detention by an enemy of the United States, following capture, for the payment during the continuance of such detention of compensation at the same rate as the earnings of the insured immediately preceding such detention, to be determined in substantially the same manner as provided in subdivision (a) of this section.

"The aggregate payments under this section in respect to any one person shall not exceed the amount of the principal sum.

"Payments provided for in this section shall be made only to the master, officer, or member of the crew concerned, except that a payment for loss of life shall be made to the estate of the insured for distribution to his family free from liability of debt, and payment on account of detention by an enemy following capture shall be made to dependents of the person detained, if designated by him.

"No claim under this section shall be valid unless made by the master, officer, or member of the crew concerned, or his estate, or a person designated under this section, within two years after the date on which the President suspends the operations of this act in so far as it authorizes insurance by the United States."

SEC. 6. That there is hereby added to such act a new section to be known as section three b, to read as follows:

"SEC. 3b. That in the event of failure of the owner of any vessel to effect insurance of the master, officers, and crew of such vessel prior to sailing, in accordance with section three a of this act, the Secretary of the Treasury is hereby authorized to effect such insurance with the Bureau of War Risk Insurance at the expense of the owner of such vessel, and the latter shall be liable for such expense and, in addition, to a penalty of not exceeding $1,000. The amount of such premium, with interest and of the penalty and of all costs, shall be a lien on the vessel."

SEC. 7. That section five of such act is hereby amended to read as follows:

"SEC. 5. That the Secretary of the Treasury is authorized to establish an advisory board, to consist of three members skilled in the practices of war-risk insurance, for the purpose of assisting the Bureau of War Risk Insurance in fixing rates of premium and in adjustment of claims for losses, and generally in carrying out the purposes of this act; the compensation of the members of said board to be determined by the Secretary of the Treasury, but not to exceed $20 a day each, while actually employed. He is likewise authorized to appoint two persons skilled in the practices of accident insurance for the purpose of assisting the Bureau of War Risk Insurance in the adjustment of claims for death, personal injury, or detention; the compensation of the persons so appointed to be determined by the Secretary of the Treasury, but not to exceed $20 a day each, while actually employed. In the event of disagreement as to the claim for losses, or amount thereof, between the said bureau and the parties to such contract of insurance, an action on the claim may be brought against the United States in the district court of the United States, sitting in admiralty, in the district in which the claimant or his agent may reside."

SEC. 8. That there is hereby added to such act a new section to be known as section five a, to read as follows:

"SEC. 5a. No claim agent or attorney shall be entitled to receive any compensation whatever for services in the collection of claims against the Bureau of War Risk Insurance for death, personal injury, or detention, except when proceedings are taken in accordance with section five in a district court of the United States, in which case the judge shall, as a part of his determination and order, settle and determine the amount of compensation not to exceed ten per centum of amount recovered, to be paid by the claimant on behalf of whom such proceedings are instituted to his legal adviser or advisers, and it shall be unlawful for any lawyer or other person acting in that behalf to ask for, contract for, or receive any larger sum than the amount so fixed."

SEC. 9. That section seven of such act is hereby amended to read as follows:

"SEC. 7. That for the purpose of paying losses and return premiums accruing under the provisions of this act there is hereby appropriated, out of any money in the Treasury of the United States not otherwise appropriated, the sum of $50,000,000."

SEC. 10. That section eight of such act is hereby amended to read as follows:

"SEC. 8. That there is hereby appropriated for the purpose of defraying the expenses of the establishment and maintenance of the Bureau of War Risk Insurance, including the payment of salaries herein authorized and other personal services, and for the purchase of necessary books of reference, periodicals, etc., that may be paid for in advance out of any money in the Treasury of the United States not otherwise appropriated, the sum of $250,000."

SEC. 11. That section nine of such act is hereby amended to read as follows:

"SEC. 9. That the President is authorized, whenever in his judgment the necessity of further war insurance by the United States shall have ceased to exist, to suspend the operation of the act in so far as it authorizes insurance by the United States against loss or damage by risks of war, which suspension shall be made, in any event, within four years after the passage of this act, but shall not affect any insurance outstanding at the time or any claims pending adjustment. For the purpose of the final adjustment of any such outstanding insurance or claims, the Bureau of War Risk Insurance may, in the discretion of the President, be continued in existence a further period not exceeding three years."

SEC. 12. That the act entitled "An act to amend an act entitled 'An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department,' approved September second, nineteen hundred and fourteen," approved August eleventh, nineteen hundred and sixteen, and the act entitled "An act to amend an act entitled 'An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department,' approved September second, nineteen hundred and fourteen," approved March third, nineteen hundred and seventeen, are hereby repealed.

Approved June 12, 1917.

[PUBLIC—NO. 90—65TH CONGRESS.]

[H. R. 5723.]

An act to amend an act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September second, nineteen hundred and fourteen, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the first section of the act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September second, nineteen hundred and fourteen, as amended, is hereby amended to read as follows:

"ARTICLE I.

"SECTION 1. That there is established in the Treasury Department a bureau to be known as the Bureau of War Risk Insurance, the director of which shall receive a salary at the rate of $5,000 per annum.

"That there be in such bureau a Division of Marine and Seamen's Insurance and a Division of Military and Naval Insurance in charge of a commissioner of Marine and Seamen's Insurance and a commissioner of Military and Naval Insurance, respectively, each of whom shall receive a salary of $4,000 per annum."

SEC. 2. That such act of September second, nineteen hundred and fourteen, as amended, is hereby amended by adding new sections, as follows:

"SEC. 12. That sections two to seven, inclusive, and section nine, shall be construed to refer only to the Division of Marine and Seamen's Insurance.

"SEC. 13. That the director, subject to the general direction of the Secretary of the Treasury, shall administer, execute, and enforce the provisions of this act, and for that purpose have full power and authority to make rules and regulations, not inconsistent with the provisions of this act, necessary or appropriate to carry out its purposes, and shall decide all questions arising under the act, except as otherwise provided in sections five and four hundred and five. Wherever under any provision or provisions of the act regulations are directed or authorized to be made, such regulations, unless the context otherwise requires, shall or may be made by the director, subject to the general direction of the Secretary of the Treasury. The director shall adopt reasonable and proper rules to govern the procedure of the divisions, to regulate the matter of the compensation, if any, but in no case to exceed ten per centum, to be paid to claim agents and attorneys for services in connection with any of the matters provided for in articles two, three, and four, and to regulate and provide for the nature and extent of the proofs and evidence and the method of taking and furnishing the same in order to establish the right to benefits of allowance, allotment, compensation, or insurance provided for in this act, the forms of application of those claiming to be entitled to such benefits, the method of making investigations and medical examinations, and the manner and form of adjudications and awards.

"SEC. 14. That the bureau and its divisions shall have such deputies, assistants, actuaries, clerks, and other employees as may be from time to time provided by Congress. The bureau shall, by arrangement with the Secretary of War and the Secretary of the Navy, respectively, make use of the services of surgeons in the Army and Navy. The Secretary of the Treasury is authorized to establish an advisory board consisting of three members skilled in the practice of insurance against death or disability for the purpose of assisting the Division of Military and Naval Insurance in fixing premium rates and in the adjustment of claims for losses under the contracts of insurance provided for in article four and in adjusting claims for compensation

under article three; compensation for the persons so appointed to be determined by the Secretary of the Treasury, but not to exceed $20 a day each while actually employed.

"SEC. 15. That for the purposes of this act, the director, commissioners, and deputy commissioners shall have power to issue subpœnas for and compel the attendance of witnesses within a radius of one hundred miles, to require the production of books, papers, documents, and other evidence, to administer oaths and to examine witnesses upon any matter within the jurisdiction of the bureau. The director may obtain such information and such reports from officials and employees of the departments of the Government of the United States and of the States as may be agreed upon by the heads of the respective departments. In case of disobedience to a subpœna, the bureau may invoke the aid of any district court of the United States in requiring the attendance and testimony of witnesses and the production of documentary evidence, and such court, within the jurisdiction of which the inquiry is carried on, may, in case of contumacy or refusal to obey a subpœna issued to any officer, agent, or employee of any corporation or other person, issue an order requiring such corporation or other person to appear before the bureau, or to give evidence touching the matter in question; and any failure to obey such order of the court may be punished by such court as a contempt thereof. Any person so required to attend as a witness shall be allowed and paid the same fees and mileage as are paid witnesses in the district courts of the United States.

"SEC. 16. That the director shall submit annually to the Secretary of the Treasury estimates of the appropriations necessary for the work of the bureau.

"SEC. 17. That for the purpose of carrying out the provisions of this act there is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, the sum of $100,000, for the payment of all expenses incident to the work authorized under this act, including salaries of the director and commissioners and of such deputies, assistants, accountants, experts, clerks, and other employees in the District of Columbia or elsewhere, as the Secretary of the Treasury may deem necessary, traveling expenses, rent and equipment of offices, typewriters and exchange of same, purchase of law books and books of reference, printing and binding to be done at the Government Printing Office, and all other necessary expenses. With the exception of the director, the commissioners, and such special experts as the Secretary of the Treasury may from time to time find necessary for the conduct of the work of the bureau, all employees of the bureau shall be appointed from lists of eligibles to be supplied by the Civil Service Commission and in accordance with the civil-service law. Such fees, allowances, and salaries shall be the same as are paid for similar services in other departments of the Government.

"SEC. 18. That there is hereby appropriated, from any money in the Treasury not otherwise appropriated, the sum of $141,000,000, to be known as the military and naval family allowance appropriation, for the payment of the family allowances provided by Article II. Payments out of this appropriation shall be made upon and in accordance with awards by the Commissioner of the Division of Military and Naval Insurance.

"SEC. 19. That there is hereby appropriated, from any money in the Treasury not otherwise appropriated, the sum of $12,150,000, to be known as the military and naval compensation appropriation, for the payment of the compensation, funeral expenses, services, and supplies provided by Article III. Payments out of this appropriation shall be made upon and in accordance with awards by the director.

"SEC. 20. That there is hereby appropriated, from any money in the Treasury not otherwise appropriated, the sum of $23,000,000, to be known as the military and naval insurance appropriation. All premiums that may be collected for the insurance provided by the provisions of Article IV shall be deposited and covered into the Treasury to the credit of this appropriation.

"Such sum, including all premium payments, is hereby made available for the payment of the liabilities of the United States incurred under contracts of insurance made under the provisions of Article IV. Payments from this appropriation shall be made upon and in accordance with awards by the director.

"SEC. 21. That there shall be set aside as a separate fund in the Treasury, to be known as the military and naval pay deposit fund, all sums held out of pay as provided by section two hundred and three of this act. Such fund, including all additions, is hereby made available for the payment of the sums so held and deposited, with interest, as provided in section two hundred and three, and the amount necessary to pay interest is hereby appropriated.

"SEC. 22. That for the purpose of this amendatory act the marriage of the claimant to the person on account of whom the claim is made shall be shown—

"(1) By a duly verified copy of a public or church record; or

"(2) By the affidavit of the clergyman or magistrate who officiated; or

"(3) By the testimony of two or more eyewitnesses to the ceremony; or

"(4) By a duly verified copy of the church record of baptism of the children; or

"(5) By the testimony of two or more witnesses who know that the parties lived together as husband and wife, and were recognized as such, and who shall state how long, within their knowledge, such relation continued: *Provided*, That marriages, except such as are mentioned in section forty-seven hundred and five of the Revised Statutes, shall be proven in compensation or insurance cases to be legal marriages according to the law of the place where the parties resided at the time of marriage or at the time when the right to compensation or insurance accrued; and the open and notorious illicit cohabitation of a widow who is a claimant shall operate to terminate her right to compensation or insurance from the commencement of such cohabitation: *Provided further*, That for the purpose of the administration of Article II of this act marriage shall be conclusively presumed, in the absence of proof, that there is a legal spouse living, if the man and woman have lived together in the openly acknowledged relation of husband and wife during the two years immediately preceding the date of the declaration of war, or the date of enlistment or of entrance into or employment in active service in the military or naval forces of the United States if subsequent to such declaration."

In Articles II, III, and IV of this act unless the context otherwise requires—

"(1) The term 'child' includes—

"(a) A legitimate child.

"(b) A child legally adopted more than six months before the enactment of this amendatory act or before enlistment or entrance into or employment in active service in the military or naval forces of the United States, whichever of these dates is the later.

"(c) A stepchild, if a member of the man's household.

"(d) An illegitimate child, but, as to the father, only, if acknowledged by instrument in writing signed by him, or if he has been judicially ordered or decreed to contribute to such child's support, and if such child, if born after December thirty-first, nineteen hundred and seventeen, shall have been born in the United States, or in its insular possessions.

"(2) The term 'grandchild' means a child as above defined of a child as above defined.

"(3) Except as used in section four hundred and one and in section four hundred and two the terms 'child' and 'grandchild' are limited to unmarried persons either (a) under eighteen years of age, or (b) of any age, if insane, idiotic, or otherwise permanently helpless.

"(4) The term 'parent' includes a father, mother, grandfather, grandmother, stepfather, and stepmother, either of the person in the service or of the spouse.

"(5) The terms 'brother' and 'sister' include brothers and sisters of the half blood as well as those of the whole blood, stepbrothers and stepsisters, and brothers and sisters through adoption.

"(6) The term 'commissioned officer' includes a warrant officer, but includes only an officer in active service in the military or naval forces of the United States.

"(7) The terms 'man' and 'enlisted man' mean a person, whether male or female, and whether enlisted, enrolled, or drafted into active service in the military or naval forces of the United States, and include noncommissioned and petty officers, and members of training camps authorized by law.

"(8) The term 'enlistment' includes voluntary enlistment, draft, and enrollment in active service in the military or naval forces of the United States.

"(9) The term 'commissioner' means the Commissioner of Military and Naval Insurance.

"(10) The term 'injury' includes disease.

"(11) The term 'pay' means the pay for service in the United States according to grade and length of service, excluding all allowances.

"(12) The term 'military or naval forces' means the Army, the Navy, the Marine Corps, the Coast Guard, the Naval Reserves, the National Naval Volunteers, and any other branch of the United States service while serving pursuant to law with the Army or the Navy.

"SEC. 23. That when, by the terms of this amendatory act, any payment is to be made to a minor, other than a person in the military or naval forces of the United States, or to a person mentally incompetent, such payment shall be made to the person who is constituted guardian or curator by the laws of the State or residence of claimant, or is otherwise legally vested with responsibility or care of the claimant.

"SEC. 24. That the Bureau of War Risk Insurance, so far as practicable, shall upon request furnish information to and act for persons in the military or naval service, with respect to any contracts of insurance whether with the Government or otherwise, as may be prescribed by regulations. Said bureau may upon request procure from and keep a record of the amount and kind of insurance held by every

commissioned and appointive officer and of every enlisted man in the military or naval service of the United States, including the name and principal place of business of the company, society, or organization in which such insurance is held, the date of the policy, amount of premium, name and relationship of the beneficiary, and such other data as may be deemed of service in protecting the interests of the insured and beneficiaries.

"SEC. 25. That whoever in any claim for family allowance, compensation, or insurance, or in any document required by this act or by regulation made under this act, makes any statement of a material fact knowing it to be false, shall be guilty of perjury and shall be punished by a fine of not more than $5,000, or by imprisonment for not more than two years, or both.

"SEC. 26. That if any person entitled to payment of family allowance or compensation under this act, whose right to such payment under this act ceases upon the happening of any contingency, thereafter fraudulently accepts any such payment, he shall be punished by a fine of not more than $2,000, or by imprisonment for not more than one year, or both."

ARTICLE II.

ALLOTMENTS AND FAMILY ALLOWANCES.

SEC. 200. That the provisions of this article shall apply to all enlisted men in the military or naval forces of the United States.

SEC. 201. That allotment of pay shall, subject to the conditions, limitations, and exceptions hereinafter specified, be compulsory as to wife, a former wife divorced who has not remarried and to whom alimony has been decreed, and a child, and voluntary as to any other person; but on the written consent of the wife or former wife divorced, supported by evidence satisfactory to the bureau of her ability to support herself and the children in her custody, the allotment for her and for such children may be waived; and on the enlisted man's application or otherwise for good cause shown, exemption from the allotment may be granted upon such conditions as may be prescribed by regulations.

The monthly compulsory allotment shall be in an amount equal to the family allowance hereinafter specified except that it shall not be more than one-half the pay, or less than $15; but for a wife living separate and apart under court order or written agreement or for a former wife divorced, it shall not exceed the amount specified in the court order, decree, or written agreement to be paid to her. For an illegitimate child, to whose support the father has been judicially ordered or decreed to contribute, it shall not exceed the amount fixed in the order or decree.

If there be an allotment for a wife or child, a former wife divorced and who has not remarried shall be entitled to a compulsory allotment only out of the difference, if any, between the allotment for the wife or child or both and one-half of the pay.

SEC. 202. That the enlisted man may allot any proportion or proportions or any fixed amount or amounts of his monthly pay or of the proportion thereof remaining after the compulsory allotment, for such purposes and for the benefit of such person or persons as he may direct, subject, however, to such conditions and limitations as may be prescribed under regulations to be made by the Secretary of War and the Secretary of the Navy, respectively.

SEC. 203. That in case one-half of an enlisted man's monthly pay is not allotted, regulations to be made by the Secretary of War and the Secretary of the Navy, respectively, may require, under such circumstances and conditions as may be prescribed in such regulations, that any proportion of such one-half pay as is not allotted shall be deposited to his credit, to be held during such period of his service as may be prescribed. Such deposits shall bear interest at the rate of four per centum per annum, with semiannual rests, and, when payable, shall be paid principal and interest to the enlisted man, if living, otherwise to any beneficiary or beneficiaries he may have designated, or if there be no such beneficiary, then to the person or persons who would under the laws of the State of his residence be entitled to his personal property in case of intestacy.

SEC. 204. That a family allowance of not exceeding $50 per month shall be granted and paid by the United States upon written application to the bureau by such enlisted man or by or on behalf of any prospective beneficiary, in accordance with and subject to the conditions, limitations, and exceptions hereinafter specified.

The family allowance shall be paid from the time of enlistment to death in or one month after discharge from the service, but not for more than one month after the termination of the present war emergency. No family allowance shall be made for any period preceding November first, nineteen hundred and seventeen. The payment shall be subject to such regulations as may be prescribed relative to cases of desertion and imprisonment and of missing men.

Subject to the conditions, limitations, and exceptions hereinabove and hereinafter specified, the family allowance payable per month shall be as follows:

Class A. In the case of a man, to his wife (including a former wife divorced) and to his child or children:

(a) If there be a wife but no child, $15.
(b) If there be a wife and one child, $25.
(c) If there be a wife and two children, $32.50, with $5 per month additional for each additional child.
(d) If there be no wife, but one child, $5.
(e) If there be no wife, but two children, $12.50.
(f) If there be no wife, but three children, $20.
(g) If there be no wife, but four children, $30, with $5 per month additional for each additional child.

Class B. In the case of a man or woman, to a grandchild, a parent, brother, or sister:

(a) If there be one parent, $10.
(b) If there be two parents, $20.
(c) For each grandchild, brother, sister, and additional parent, $5.

In the case of a woman, to a child or children:

(d) If there be one child, $5.
(e) If there be two children, $12.50.
(f) If there be three children, $20.
(g) If there be four children, $30, with $5 per month additional for each additional child.

SEC. 205. That family allowances for members of class A shall be paid only if and while a compulsory allotment is made to a member or members of such class. The monthly family allowance to a former wife divorced shall be payable only out of the difference, if any, between the monthly family allowance to the other members of class A and the sum of $50, and only then if alimony shall have been decreed to her. For a wife living separate and apart under court order or written agreement or to a former wife divorced the monthly allowance, together with the allotment, if any, shall not exceed the amount specified in the court order, decree, or written agreement to be paid to her. For an illegitimate child, to whose support the father has been judicially ordered or decreed to contribute, it shall not exceed the amount fixed in the order or decree.

SEC. 206. That family allowances to members of class B shall be granted only if and while the member is dependent in whole or in part on the enlisted man, and then only if and while the enlisted man makes a monthly allotment of his pay for such member or members equal to the amount of the monthly family allowance as hereinabove specified, except that—

(a) The maximum monthly allotment so required to be made to members of class B shall be one-half of his pay.
(b) If he is making no allotment to a member of class A, the minimum monthly allotment so designated to be made to members of class B shall be $15 per month.
(c) If he is making the compulsory allotment to a member of class A, the minimum monthly allotment so designated to be made to members of class B shall be one-seventh of his pay, but not less than $5 per month.

On the enlisted man's application, or otherwise for good cause shown, exemption from this additional allotment under class B as a condition to the allowance may be granted upon such conditions as may be prescribed by regulations.

SEC. 207. That the amount of the family allowance to members of class B shall be subject to each of the following limitations:

(a) If an allowance is paid to one or more beneficiaries of class A the total allowance to be paid to the beneficiaries of class B shall not exceed the difference between the allowance paid to the beneficiaries of class A and the sum of $50.
(b) The total monthly allowance to beneficiaries of class B, added to the enlisted man's monthly allotment to them, shall not exceed the average sum habitually contributed by him to their support monthly during the period of dependency but not exceeding a year immediately preceding his enlistment or the enactment of this amendatory act.

SEC. 208. That as between the members of class A and as between the members of class B the amount of the allotment and family allowance shall be apportioned as may be prescribed by regulations.

SEC. 209. The War and Navy Departments, respectively, shall pay over to the Treasury Department monthly the entire amount of such allotments for distribution to the beneficiaries, and the allotments and family allowances shall be paid by the bureau to or for the beneficiaries.

SEC. 210. That upon receipt of any application for family allowance the commissioner shall make all proper investigations and shall make an award, on the basis of which award the amount of the allotments to be made by the man shall be certified to the War Department or Navy Department, as may be proper. Whenever the commissioner shall have reason to believe that an allowance has been improperly made or that the conditions have changed, he shall investigate or reinvestigate and may modify the award. The amount of each monthly allotment and allowance shall be determined according to the conditions then existing.

ARTICLE III.

COMPENSATION FOR DEATH OR DISABILITY.

SEC. 300. That for death or disability resulting from personal injury suffered or disease contracted in the line of duty by any commissioned officer or enlisted man or by any member of the Army Nurse Corps (female) or of the Navy Nurse Corps (female) when employed in the active service under the War Department or Navy Department, the United States shall pay compensation as hereinafter provided; but no compensation shall be paid if the injury or disease has been caused by his own willful misconduct.

SEC. 301. That if death results from injury—

If the deceased leaves a widow or child, or if he leaves a widowed mother dependent upon him for support, the monthly compensation shall be the following amounts:

(a) For a widow alone, $25.

(b) For a widow and one child, $35.

(c) For a widow and two children, $47.50, with $5 for each additional child up to two.

(d) If there be no widow, then for one child, $20.

(e) For two children, $30.

(f) For three children, $40, with $5 for each additional child up to two.

(g) For a widowed mother, $20. The amount payable under this subdivision shall not be greater than a sum which, when added to the total amount payable to the widow and children, does not exceed $75. This compensation shall be payable for the death of but one child, and no compensation for the death of a child shall be payable if such widowed mother is in receipt of compensation under the provisions of this article for the death of her husband. Such compensation shall be payable whether her widowhood arises before or after the death of the person and whenever her condition is such that if the person were living the widowed mother would have been dependent upon him for support.

If the death occur before discharge or resignation from service, the United States shall pay for burial expenses and the return of body to his home a sum not to exceed $100, as may be fixed by regulations.

The payment of compensation to a widow or widowed mother shall continue until her death or remarriage.

The payment of compensation to or for a child shall continue until such child reaches the age of eighteen years or marries, or if such child be incapable, because of insanity, idiocy, or being otherwise permanently helpless, then during such incapacity.

Whenever the compensation payable to or for the benefit of any person under the provisions of this section is terminated by the happening of the contingency upon which it is limited, the compensation thereafter for the remaining beneficiary or beneficiaries, if any, shall be the amount which would have been payable to them if they had been the sole original beneficiaries.

As between the widow and the children not in her custody, and as between children, the amount of the compensation shall be apportioned as may be prescribed by regulations. The word "widow" as used in this section shall not include one who shall have married the deceased later than ten years after the time of injury.

SEC. 302. That if disability results from the injury—

(1) If and while the disability is total, the monthly compensation shall be the following amounts:

(a) If he has neither wife nor child living, $30.

(b) If he has a wife but no child living, $45.

(c) If he has a wife and one child living, $55.

(d) If he has a wife and two children living, $65.

(e) If he has a wife and three or more children living, $75.

(f) If he has no wife but one child living, $40, with $10 for each additional child up to two.

(g) If he has a widowed mother dependent on him for support, then, in addition to the above amounts, $10.

To an injured person who is totally disabled and in addition so helpless as to be in constant need of a nurse or attendant, such additional sum shall be paid, but not exceeding $20 per month, as the director may deem reasonable: *Provided, however,* That for the loss of both feet or both hands or both eyes, or for becoming totally blind or helplessly and permanently bedridden from causes occurring in the line of duty in the service of the Unites States, the rate of compensation shall be $100 per month: *Provided further,* That no allowance shall be made for nurse or attendant.

(2) If and while the disability is partial, the monthly compensation shall be a percentage of the compensation that would be payable for his total disability, equal to the degree of the reduction in earning capacity resulting from the disability, but no compensation shall be payable for a reduction in earning capacity rated at less then ten per centum.

A schedule of ratings of reductions in earning capacity from specific injuries or combinations of injuries of a permanent nature shall be adopted and applied by the bureau. Ratings may be as high as one hundred per centum. The ratings shall be based, as far as practicable, upon the average impairments of earning capacity resulting from such injuries in civil occupations and not upon the impairment in earning capacity in each individual case, so that there shall be no reduction in the rate of compensation for individual success in overcoming the handicap of a permanent injury. The bureau shall from time to time readjust this schedule of ratings in accordance with actual experience.

(3) In addition to the compensation above provided, the injured person shall be furnished by the United States such reasonable governmental medical, surgical, and hospital services and with such supplies, including artificial limbs, trusses, and similar appliances, as the director may determine to be useful and reasonably necessary: *Provided,* That nothing in this act shall be construed to affect the necessary military control over any member of the military or naval establishments before he shall have been discharged from the military or naval service.

(4) The amount of each monthly payment shall be determined according to the family conditions then existing.

SEC. 303. That every person applying for or in receipt of compensation for disability under the provisions of this article shall, as frequently and at such times and places as may be reasonably required, submit himself to examination by a medical officer of the United States or by a duly qualified physician designated or approved by the director. He may have a duly qualified physician designated and paid by him present to participate in such examination. For all examinations he shall, in the discretion of the director, be paid his reasonable traveling and other expenses and also loss of wages incurred in order to submit to such examination. If he refuses to submit himself for, or in any way obstructs, any examination, his right to claim compensation under this article shall be suspended until such refusal or obstruction ceases. No compensation shall be payable while such refusal or obstruction continues, and no compensation shall be payable for the intervening period.

Every person in receipt of compensation for disability shall submit to any reasonable medical or surgical treatment furnished by the bureau whenever requested by the bureau; and the consequences of unreasonable refusal to submit to any such treatment shall not be deemed to result from the injury compensated for.

SEC. 304. That in cases of dismemberment, of injuries to sight or hearing, and of other injuries commonly causing permanent disability, the injured person shall follow such course or courses of rehabilitation, reeducation, and vocational training as the United States may provide or procure to be provided. Should such course prevent the injured person from following a substantially gainful occupation while taking same, a form of enlistment may be required which shall bring the injured person into the military or naval service. Such enlistment shall entitle the person to full pay as during the last month of his active service, and his family to family allowances and allotment as hereinbefore provided, in lieu of all other compensation for the time being.

In case of his willful failure properly to follow such course or so to enlist, payment of compensation shall be suspended until such willful failure ceases and no compensation shall be payable for the intervening period.

SEC. 305. That upon its own motion or upon application the bureau may at any time review an award, and, in accordance with the facts found upon such review, may end, diminish, or increase the compensation previously awarded, or, if compensation has been refused or discontinued, may award compensation.

18174—22——38

SEC. 306. That no compensation shall be payable for death or disability which does not occur prior to or within one year after discharge or resignation from the service, except that where, after a medical examination made pursuant to regulations, at the time of discharge or resignation from the service, or within such reasonable time thereafter, not exceeding one year, as may be allowed by regulations, a certificate has been obtained from the director to the effect that the injured person at the time of his discharge or resignation was suffering from injury likely to result in death or disability, compensation shall be payable for death or disability, whenever occurring, proximately resulting from such injury.

SEC. 307. That compensation shall not be payable for death in the course of the service until the death be officially recorded in the department under which he may be serving. No compensation shall be payable for a period during which the man has been reported "missing" and a family allowance has been paid for him under the provisions of Article II.

SEC. 308. That no compensation shall be payable for death inflicted as a lawful punishment for a crime or military offense except when inflicted by the enemy. A dismissal or dishonorable or bad conduct discharge from the service shall bar and terminate all right to any compensation under the provisions of this article.

SEC. 309. That no compensation shall be payable unless a claim therefor be filed, in case of disability, within five years after discharge or resignation from the service, or, in case of death during the service, within five years after such death is officially recorded in the department under which he may be serving: *Provided, however*, That where compensation is payable for death or disability occurring after discharge or resignation from the service, claim must be made within five years after such death or the beginning of such disability.

The time herein provided may be extended by the director not to exceed one year for good cause shown. If at the time that any right accrues to any person under the provisions of this article, such person is a minor, or is of unsound mind or physically unable to make a claim, the time herein provided shall not begin to run until such disability ceases.

SEC. 310. That no compensation shall be payable for any period more than two years prior to the date of claim therefor, nor shall increased compensation be awarded to revert back more than one year prior to the date of claim therefor.

SEC. 311. That compensation under this article shall not be assignable, and shall be exempt from attachment and execution and from all taxation.

SEC. 312. That compensation under this article shall not be paid while the person is in receipt of service or retirement pay. The laws providing for gratuities or payments in the event of death in the service and existing pension laws shall not be applicable after the enactment of this amendment to persons now in or hereafter entering the military or naval service, or to their widows, children, or their dependents, except in so far as rights under any such law shall have heretofore accrued.

Compensation because of disability or death of members of the Army Nurse Corps (female) or of the Navy Nurse Corps (female) shall be in lieu of any compensation for such disability or death under the act entitled "An act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes," approved September seventh, nineteen hundred and sixteen.

SEC. 313. That if an injury or death for which compensation is payable under this amendatory act is caused under circumstances creating a legal liability upon some person other than the United States or the enemy to pay damages therefor, the director, as a condition to payment of compensation by the United States, shall require the beneficiary to assign to the United States any right of action he may have to enforce such liability of such other person or any right which he may have to share in any money or other property received in satisfaction of such liability of such other person. The cause of action so assigned to the United States may be prosecuted or compromised by the director and any money realized thereon shall be placed to the credit of the compensation fund.

SEC. 314. That from and after the passage of this act the rate of pension for a widow of an officer or enlisted man of the Army, Navy, or Marine Corps of the United States who served in the Civil War, the war with Spain, or the Philippine Insurrection, now on the pension roll or hereafter to be placed on the pension roll, and entitled to receive a less rate than hereinafter provided, shall be $25 per month; and nothing herein shall be construed to affect the additional allowance provided by existing pension laws on account of a helpless child or child under sixteen years of age: *Provided, however*, That this act shall not be so construed as to reduce any pension under any act, public or private: *And provided further*, That the provisions of this section shall be administered, executed, and enforced by the Commissioner of Pensions.

ARTICLE IV.

INSURANCE.

SEC. 400. That in order to give to every commissioned officer and enlisted man and to every member of the Army Nurse Corps (female) and of the Navy Nurse Corps (female) when employed in active service under the War Department or Navy Department greater protection for themselves and their dependents than is provided in Article III, the United States, upon application to the bureau and without medical examination, shall grant insurance against the death or total permanent disability of any such person in any multiple of $500, and not less than $1,000 or more than $10,000, upon the payment of the premiums as hereinafter provided.

SEC. 401. That such insurance must be applied for within one hundred and twenty days after enlistment or after entrance into or employment in the active service and before discharge or resignation, except that those persons who are in the active war service at the time of the publication of the terms and conditions of such contract of insurance may apply at any time within one hundred and twenty days thereafter and while in such service. Any person in the active service on or after the sixth day of April, nineteen hundred and seventeen, who, while in such service and before the expiration of one hundred and twenty days from and after such publication, becomes or has become totally and permanently disabled or dies, or has died, without having applied for insurance, shall be deemed to have applied for and to have been granted insurance, payable to such person during his life in monthly installments of $25 each. If he shall die either before he shall have received any of such monthly installments or before he shall have received two hundred and forty of such monthly installments, then $25 per month shall be paid to his wife from the time of his death and during her widowhood, or to his child, or widowed mother if and while they survive him: *Provided, however*, That not more than two hundred and forty of such monthly installments, including those received by such person during his total and permanent disability, shall be so paid; and in that event the amount of the monthly installments shall be apportioned between them as may be provided by regulations.

SEC. 402. That the director, subject to the general direction of the Secretary of the Treasury, shall promptly determine upon and publish the full and exact terms and conditions of such contract of insurance. The insurance shall not be assignable, and shall not be subject to the claims of creditors of the insured or of the beneficiary. It shall be payable only to a spouse, child, grandchild, parent, brother or sister, and also during total and permanent disability to the injured person, or to any or all of them. The insurance shall be payable in two hundred and forty equal monthly installments. Provisions for maturity at certain ages, for continuous installments during the life of the insured or beneficiaries, or both, for cash, loan, paid-up and extended values, dividends from gains and savings, and such other provisions for the protection and advantage of and for alternative benefits to the insured and the beneficiaries as may be found to be reasonable and practicable, may be provided for in the contract of insurance, or from time to time by regulations. All calculations shall be based upon the American Experience Table of Mortality and interest at three and one-half per centum per annum, except that no deduction shall be made for continuous installments during the life of the insured in case his total and permanent disability continues more than two hundred and forty months. Subject to regulations, the insured shall at all times have the right to change the beneficiary or beneficiaries of such insurance without the consent of such beneficiary or beneficiaries, but only within the classes herein provided. If no beneficiary within the permitted class be designated by the insured, either in his lifetime or by his last will and testament, or if the designated beneficiary does not survive the insured, the insurance shall be payable to such person or persons, within the permitted class of beneficiaries as would under the laws of the State of the residence of the insured, be entitled to his personal property in case of intestacy. If no such person survive the insured, then there shall be paid to the estate of the insured an amount equal to the reserve value, if any, of the insurance at the time of his death, calculated on the basis of the American Experience Table of Mortality and three and one-half per centum interest in full of all obligations under the contract of insurance.

SEC. 403. That the United States shall bear the expenses of administration and the excess mortality and disability cost resulting from the hazards of war. The premium rates shall be the net rates based upon the American Experience Table of Mortality and interest at three and one-half per centum per annum.

SEC. 404. That during the period of war and thereafter until converted the insurance shall be term insurance for successive terms of one year each. Not later than five years after the date of the termination of the war as declared by proclamation of the President of the United States, the term insurance shall be converted, without medical

examination, into such form or forms of insurance as may be prescribed by regulations and as the insured may request. Regulations shall provide for the right to convert into ordinary life, twenty payment life, endowment maturing at age sixty-two and into other usual forms of insurance and shall prescribe the time and method of payment of the premiums thereon, but payments of premiums in advance shall not be required for periods of more than one month each and may be deducted from the pay or deposit of the insured or be otherwise made at his election.

SEC. 405. That in the event of disagreement as to a claim under the contract of insurance between the bureau and any beneficiary or beneficiaries thereunder, an action on the claim may be brought against the United States in the district court of the United States in and for the district in which such beneficiaries or any one of them resides. The court, as part of its judgment, shall determine and allow such reasonable attorney's fees, not to exceed ten per centum of the amount recovered, to be paid by the claimant on behalf of whom such proceedings are instituted to his attorney; and it shall be unlawful for the attorney or for any other person acting as claim agent or otherwise to ask for, contract for, or receive any other compensation because of such action. No other compensation or fee shall be charged or received by any person except such as may be authorized by the commissioner in regulations to be promulgated by him. Any person violating the provisions of this section shall be deemed guilty of a misdemeanor, and upon conviction thereof shall, for each and every such offense, be fined not exceeding $500, or be imprisoned at hard labor not exceeding two years, or both, in the discretion of the court.

SEC. 3. That section eight of the act entitled "An act to authorize the President to increase temporarily the Military Establishment of the United States," approved May eighteenth, nineteen hundred and seventeen, shall be held and construed to authorize the President, in accordance with the provisions of said act and for the period of the existing emergency only, to appoint as generals the Chief of Staff and the commander of the United States forces in France; and as lieutenant general each commander of an army or army corps organized as authorized by existing law: *Provided*, That the pay of the grades of general and lieutenant general shall be $10,000 and $9,000 a year, respectively, with allowances appropriate to said grades as determined by the Secretary of War: *And provided*, That brigadier generals of the Army shall hereafter rank relatively with rear admirals of the lower half of the grade. And, hereafter, the chief of any existing staff corps, department, or bureau, except as is otherwise provided for the Chief of Staff, shall have the rank, pay, and allowances of major general.

Approved, October 6, 1917.

[PUBLIC—No. 151—65TH CONGRESS.]

[H. R. 11245.]

An act to amend an act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September second, nineteen hundred and fourteen, and an act in amendment thereto, approved October sixth, nineteen hundred and seventeen.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section thirteen, article one, of the act approved October sixth, nineteen hundred and seventeen, entitled "An Act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," be, and is hereby, amended by striking out the following words in the last sentence: "to regulate the matter of compensation, if any, but in no case to exceed ten per centum, to be paid to claim agents and attorneys for services in connection with any of the matters provided for in articles two, three, and four," and insert at the end of the sentence the following words: "*Provided, however*, That payment to any attorney or agent for such assistance as may be required in the preparation and execution of the necessary papers shall not exceed $3 in any one case: *And provided further*, That no claim agent or attorney shall be recognized in the presentation or adjudication of claims under articles two, three, and four, except that in the event of disagreement as to a claim under the contract of insurance between the bureau and any beneficiary or beneficiaries thereunder, an action on the claim may be brought against the United States in the district court of the United States in and for the district in which such beneficiaries or any one of them resides, and that whenever judgment shall be rendered in an action brought pursuant to this provision, the court, as part of its judgment, shall determine and allow such reasonable attorney's fees, not to exceed five per centum of the amount recovered, to be paid by the claimant in behalf of whom such proceedings were instituted, to his attorney.

"Any person who shall directly or indirectly solicit, contract for, charge, or receive, or who shall attempt to solicit, contract for, charge, or receive, any fee or compensation, except as herein provided, shall be guilty of a misdemeanor, and for each and every offense shall be punishable by a fine of not more than $500 or by imprisonment at hard labor for not more than two years, or by both such fine and imprisonment," so that the section as amended shall read as follows:

"SEC. 13. That the director, subject to the general direction of the Secretary of the Treasury, shall administer, execute, and enforce the provisions of this act, and for that purpose have full power and authority to make rules and regulations not inconsistent with the provisions of this act, necessary or appropriate to carry out its purposes, and shall decide all questions arising under the act, except as otherwise provided in section five. Wherever under any provision or provisions of the act regulations are directed or authorized to be made, such regulations, unless the context otherwise requires, shall or may be made by the director, subject to the general direction of the Secretary of the Treasury. The director shall adopt reasonable and proper rules to govern the procedure of the divisions and to regulate and provide for the nature and extent of the proofs and evidence and the method of taking and furnishing the same in order to establish the right to benefits of allowance, allotment, compensation, or insurance provided for in this act, the forms of application of those claiming to be entitled to such benefits, the methods of making investigations and medical examinations, and the manner and form of adjudications and awards: *Provided, however*, That payment to any attorney or agent for such assistance as may be required in the preparation and execution of the necessary papers shall not exceed $3 in any one case: *And provided further*, That no claim agent or attorney shall be recognized in the presentation or adjudication of claims under articles two, three, and four, except that in the event of disagreement as to a claim under the contract of insurance between the bureau and any beneficiary or beneficiaries thereunder an action on the claim may be brought against the United States in the district court of the United States in and for the district in which such beneficiaries or any one of them resides, and that whenever judgment shall be rendered in an action brought pursuant to this provision the court, as part of its judgment, shall determine and allow such reasonable attorney's fees, not to exceed five per centum of the amount recovered, to be paid by the claimant in behalf of whom such proceedings were instituted to his attorney, said fee to be paid out of the payments to be made to the beneficiary under the judgment rendered at a rate not exceeding one-tenth of each of such payments until paid.

"Any person who shall directly or indirectly, solicit, contract for, charge , or receive, or who shall attempt to solicit, contract for, charge, or receive any fee or compensation, except as herein provided, shall be guilty of a misdemeanor, and for each and every offense shall be punishable by a fine of not more than $500 or by imprisonment at hard labor for not more than two years, or by both such fine and imprisonment."

SEC. 2. That Article IV of said Act, approved October sixth, nineteen hundred and seventeen, entitled, "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," is hereby amended by striking out section four hundred and five thereof.

Approved, May 20, 1918.

[PUBLIC—No. 175—65TH CONGRESS.]

[S. 4482.]

An act to amend an act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September second, nineteen hundred and fourteen, as amended.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the second subdivision (4) of section twenty-two of the act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September second, nineteen hundred and fourteen, as amended, relating to the definition of the term "parent," is hereby amended to read as follows:

"(4) The term 'parent' includes a father, mother, grandfather, grandmother, father through adoption, mother through adoption, stepfather, and stepmother, either of the person in the service or of the spouse."

SEC. 2. That four new sections are hereby added to Article I of said act, to be known as sections twenty-seven, twenty-eight, twenty-nine, and thirty, respectively, and to read as follows:

"SEC. 27. That whoever shall obtain or receive any money, check, allotment, family allowance, compensation, or insurance under Articles II, III, or IV of this act, with-

out being entitled thereto, with intent to defraud the United States or any person in the military or naval forces of the United States, shall be punished by a fine of not more than $2,000, or by imprisonment for not more than one year, or both.

"SEC. 28. That the allotments and family allowances, compensation, and insurance payable under Articles II, III, and IV, respectively, shall not be assignable; shall not be subject to the claims of creditors of any person to whom an award is made under Articles II, III, or IV, and shall be exempt from all taxation: *Provided*, That such allotments and family allowances, compensation, and insurance shall be subject to any claims which the United States may have, under Articles II, III, and IV, against the person on whose account the allotments and family allowances, compensation, or insurance is payable.

"SEC. 29. That the discharge or dismissal of any person from the military or naval forces on the ground that he is an enemy alien, conscientious objector, or a deserter, or as guilty of mutiny, treason, spying, or any offense involving moral turpitude, or willful and persistent misconduct shall terminate any insurance granted on the life of such person under the provisions of Article IV, and shall bar all rights to any compensation under Article III or any insurance under Article IV.

"SEC. 30. That this act may be cited as the war-risk insurance act."

SEC. 3. That section two hundred of said act is hereby amended to read as follows:

"SEC. 200. That the provisions of this article shall apply to all enlisted men in the military or naval forces of the United States, except the Philippine Scouts, the insular force of the Navy, and the Samoan native guard and band of the Navy."

SEC. 4. That the second and third paragraphs of section two hundred and one of said act are hereby amended to read as follows:

"The monthly compulsory allotment shall be $15. For a wife living separate and apart from her husband under court order or written agreement, or for a former wife divorced, the monthly compulsory allotment shall not exceed the amount specified in the court order, decree, or written agreement to be paid to her, and for an illegitimate child, to whose support the father has been judicially ordered or decreed to contribute, it shall not exceed the amount fixed in the order or decree.

"If there is a compulsory allotment for a wife or child, then a former wife divorced who has not remarried and to whom alimony has been decreed, shall not be entitled to a compulsory allotment, but shall be entitled to a family allowance as hereinafter provided."

SEC. 5. That section two hundred and three of said act is hereby amended to read as follows:

"SEC. 203. That in case one-half of an enlisted man's monthly pay is not allotted, regulations to be made by the Secretary of War and the Secretary of the Navy, respectively, may require, under circumstances and conditions as may be prescribed in such regulations, that any proportion of such one-half pay as is not allotted shall be deposited to his credit, to be held during such period of his service as may be prescribed. Such deposit shall bear interest at the same rate as United States bonds bear for the same period, and, when payable, shall be paid principal and interest to the enlisted man, if living, otherwise to any beneficiary or beneficiaries he may have designated, or if there be no such beneficiary, then to the person or persons who, under the laws of the State of his residence, would be entitled to his personal property in case of intestacy."

SEC. 6. That the third and fourth paragraphs of section two hundred and four of said act are hereby amended to read as follows:

"Class A. In the case of a man to his wife (including a former wife divorced) and to his child or children—

"(a) If there is a wife but no child, $15;

"(b) If there is a wife and one child, $25;

"(c) If there is a wife and two children, $32.50, with $5 per month additional for each additional child;

"(d) If there is no wife, but one child, $5;

"(e) If there is no wife, but two children, $12.50;

"(f) If there is no wife, but three children, $20;

"(g) If there is no wife, but four children, $30, with $5 per month additional for each additional child;

"(h) If there is a former wife divorced who has not remarried and to whom alimony has been decreed, $15.

"Class B. In the case of a man or woman to a grandchild, a parent, brother, or sister—

"(a) If there is one parent, $10;

"(b) If there are two parents, $20;

"(c) If there is a grandchild, brother, sister, or additional parent, $5 for each.

"In the case of a woman, the family allowances for a husband and children shall be in the same amounts, respectively, as are payable, in the case of a man, to a wife and children, provided she makes a voluntary allotment of $15 as a basis therefor, and provided, further, that dependency exists as required in section two hundred and six."

SEC. 7. That section two hundred and six of said act is hereby amended to read as follows:

"SEC. 206. That family allowances to members of class B shall be paid only if and while the members are dependent in whole or in part on the enlisted man, and then only if and while the enlisted man makes a monthly allotment of his pay for such members in the following amounts:

"(a) If an enlisted man is not making a compulsory allotment for class A the allotment for class B required as a condition to the family allowance shall be $15;

"(b) If an enlisted man is making a compulsory allotment for class A the additional allotment for class B required as a condition to the family allowance shall be $5, or if a woman is making an allotment of $15 for a dependent husband or child the additional allotment for the other members of class B required as a condition to the family allowance shall be $5."

SEC. 8. That section two hundred and ten of said act is hereby amended to read as follows:

"SEC. 210. That upon receipt of any application for family allowance, the commissioner shall make all proper investigations and shall make an award, on the basis of which award the amount of the allotments to be made by the man shall be certified to the War Department or Navy Department, as may be proper. Whenever the commissioner shall have reason to believe that an allowance has been improperly made or that the conditions have changed, he shall investigate or reinvestigate and may modify the award. The amount of each monthly allotment and allowance shall be determined according to the family conditions existing on the first day of the month."

SEC. 9. That sections four, six, seven, and eight of this act shall take effect on the first day of July, nineteen hundred and eighteen.

SEC. 10. That section three hundred of said act is hereby amended to read as follows:

"SEC. 300. That for death or disability resulting from personal injury suffered or disease contracted in the line of duty, by any commissioned officer or enlisted man or by any member of the Army Nurse Corps (female) or of the Navy Nurse Corps (female) when employed in the active service under the War Department or Navy Department, the United States shall pay compensation as hereinafter provided; but no compensation shall be paid if the injury or disease has been caused by his own willful misconduct: *Provided*, That for the purposes of this section said officer, enlisted man, or other member shall be held and taken to have been in sound condition when examined, accepted, and enrolled for service: *Provided further*, That this section, as amended, shall be deemed to become effective as of October sixth, nineteen hundred and seventeen."

SEC. 11. That section three hundred and one of said act is hereby amended to read as follows:

"SEC. 301. That if death results from injury—

"If the deceased leaves a widow or child, or if he leaves a mother or father either or both dependent upon him for support, the monthly compensation shall be the following amounts:

"(a) If there is a widow but no child, $25;

"(b) If there is a widow and one child, $35;

"(c) If there is a widow and two children, $42.50, with $5 for each additional child up to two;

"(d) If there is no widow, but one child, $20;

"(e) If there is no widow, but two children, $30;

"(f) If there is no widow, but three children, $40, with $5 for each additional child up to two;

"(g) If there is a dependent mother (or dependent father), $20, or both, $30. The amount payable under this subdivision shall not exceed the difference between the total amount payable to the widow and children and the sum of $75. This compensation shall be payable for the death of but one child, and no compensation for the death of a child shall be payable if the dependent mother is in receipt of compensation under the provisions of this article for the death of her husband. Such compensation shall be payable whether the dependency of the father or mother or both arises before or after the death of the person, but no compensation shall be payable if the dependency arises more than five years after the death of the person.

"If the death occurs before discharge or resignation from service, the United States shall pay for burial expenses and the return of the body to his home a sum not to exceed $100, as may be fixed by regulations.

"The payment of compensation to a widow shall continue until her death or remarriage.

"The payment of compensation to or for a child shall continue until such child reaches the age of eighteen years or marries, or if such child be incapable, because of insanity, idiocy, or being otherwise permanently helpless, then during such incapacity.

"Whenever the compensation payable to or for the benefit of any person under the provisions of this section is terminated by the happening of the contingency upon which it is limited, the compensation thereafter for the remaining beneficiary or beneficiaries, if any, shall be the amount which would have been payable to them if they had been the sole original beneficiaries.

"As between the widow and the children not in her custody, and as between children, the amount of the compensation shall be apportioned as may be prescribed by regulation.

"The term 'widow' as used in this section shall not include one who shall have married the deceased later than ten years after the time of injury, and shall include a widower, whenever his condition is such that, if the deceased person were living, he would have been dependent upon her for support."

SEC. 12. That subdivision (1) of section three hundred and two of said act is hereby amended to read as follows:

"(1) If and while the disability is total, the monthly compensation shall be the following amounts:

"(a) If the disabled person has neither wife nor child living, $30;

"(b) If he has a wife but no child living, $45;

"(c) If he has a wife and one child living, $55;

"(d) If he has a wife and two children living, $65;

"(e) If he has a wife and three or more children living, $75;

"(f) If he has no wife but one child living, $40, with $10 for each additional child up to two;

"(g) If he has a mother or father, either or both dependent on him for support, then in addition to the above amounts, $10 for each;

"(h) If he is totally disabled and in addition so helpless as to be in constant need of a nurse or attendant, such additional sum shall be paid, but not exceeding $20 per month, as the director may deem reasonable: *Provided, however*, That for the loss of both feet or both hands or both eyes, or for becoming totally blind or becoming helpless and permanently bedridden from causes occurring in the line of duty in the service of the United States, the rate of compensation shall be $100 per month: *Provided further*, That where the rate of compensation is $100 per month, no allowance shall be made for a nurse or attendant."

SEC. 13. That subdivision (4) of section three hundred and two of said act is hereby amended to read as follows:

"(4) The amount of each monthly payment shall be determined according to the family conditions existing on the first day of the month."

SEC. 14. That two new subdivisions are hereby added to section three hundred and two of said act, to be known as subdivisions (5) and (6), respectively, and to read as follows:

"(5) Where the disabled person and his wife are not living together, or where the children are not in the custody of the disabled person, the amount of the compensation shall be apportioned as may be prescribed by regulations.

"(6) The term 'wife' as used in this section shall include 'husband' if the husband is dependent upon the wife for support."

SEC. 15. That where section three hundred and one of said act is amended by striking out the provisions that a mother is entitled to compensation only when she is widowed and substitute provisions are included to the effect that compensation is payable to a dependent mother or dependent father, such substitute provisions shall be deemed to be in effect as of October sixth, nineteen hundred and seventeen.

SEC. 16. That section three hundred and eleven of said act is hereby repealed.

SEC. 17. That section three hundred and twelve of said act is hereby amended to read as follows:

"SEC. 312. That compensation under this artlcle shall not be paid while the person is in receipt of service or retirement pay. The laws providing for gratuities or payments in the event of death in the service and existing pension laws shall not be applicable after the enactment of this amendment to any person in the active military or naval service on the sixth day of October, nineteen hundred and seventeen, or who thereafter entered the active military or naval service, or to their widows, children, or their dependents, except in so far as rights under any such law have heretofore accrued.

"Compensation because of disability or death of members of the Army Nurse Corps (female) or of the Navy Nurse Corps (female) shall be in lieu of any compensation for such disability or death under the act entitled 'An act to provide compensation for employees of the United States suffering injuries while in the performance of their duties, and for other purposes,' approved September seventh, nineteen hundred and sixteen."

SEC. 18. That section three hundred and thirteen of said act is hereby amended to read as follows:

"SEC. 313. (1) That if an injury or death for which compensation is payable under this article is caused under circumstances creating a legal liability upon some person other than the United States or the enemy to pay damages therefor, the director, as a condition to payment of compensation by the United States, may require the beneficiary to assign to the United States any right of action he may have to enforce such liability of such other person, or if it appears to be for the best interests of the beneficiary the director may require him to prosecute the said action in his own name, subject to regulations. The director may require such assignment or prosecution at any time after the injury or death, and the failure on the part of the beneficiary to so assign or to prosecute said cause of action in his own name within a reasonable time, to be fixed by the director, shall bar any right to compensation on account of the same injury or death. The cause of action so assigned to the United States may be prosecuted or compromised by the director, and any money realized or collected thereon, less the reasonable expenses of such realization or collection, shall be placed to the credit of the military and naval compensation appropriation. If the amount placed to the credit of such appropriation in such case is in excess of the amount of the award of compensation, if any, such excess shall be paid to the beneficiary after any compensation award for the same injury or death is made.

"If a beneficiary or conditional beneficiary shall have recovered, as a result of a suit brought by him or on his behalf, or as a result of a settlement made by him or on his behalf, any money or other property in satisfaction of the liability of such other person, such money or other property so recovered shall be credited upon any compensation payable, or which may become payable, to such beneficiary, or conditional beneficiary by the United States on account of the same injury or death.

"(2) If an injury or death for which compensation may be payable under this article is caused under circumstances creating a legal liability upon some person, other than the United States or the enemy, to pay damages therefor, then, in order to preserve the right of action, the director may require the conditional beneficiary at any time after the injury or death, to assign such right of action to the United States, or, if it appears to be for the best interests of such conditional beneficiary, to prosecute the said cause of action in his own name, subject to regulations. The failure on the part of the beneficiary to so assign or to prosecute the said cause of action in his own name within a reasonable time, to be fixed by the director, shall bar any right to compensation on account of the same injury or death. The cause of action so assigned may be prosecuted or compromised by the director, and any money realized or collected thereon, less the reasonable expenses of such realization or collection, shall be paid to such beneficiary and be credited upon any future compensation which may become payable to such beneficiary by the United States on account of the same injury or death.

"(3) The bureau shall make all necessary regulations for carrying out the purposes of this section. For the purposes of computation only under this section the total amount of compensation due any beneficiary shall be deemed to be equivalent to a lump sum equal to the present value of all future payments of compensation computed as of the date of the award of compensation at four per centum, true discount, compounded annually. The probability of the beneficiary's death before the expiration of the period during which he is entitled to compensation shall be determined according to the American Experience Table of Mortality.

"A conditional beneficiary is any person who may become entitled to compensation under this article on or after the death of the injured person.

"Nothing in this section shall be construed to impose any administrative duties upon the War or Navy Departments."

SEC. 19. That section four hundred and one of said act is hereby amended to read as follows:

"SEC. 401. That such insurance must be applied for within one hundred and twenty days after enlistment or after entrance into or employment in the active service and before discharge or resignation, except that those persons who are in the

active war service at the time of the publication of the terms and conditions of such contract of insurance may apply at any time within one hundred and twenty days thereafter and while in such service. Any person in the active service on or after the sixth day of April, nineteen hundred and seventeen, who, while in such service and before the expiration of one hundred and twenty days from and after such publication, becomes or has become totally and permanently disabled, or dies, or has died, without having applied for insurance, shall be deemed to have applied for and to have been granted insurance, payable to such person during his life in monthly installments of $25 each. If he shall die either before he shall have received any of such monthly installments or before he shall have received two hundred and forty of such monthly installments, then $25 per month shall be paid to his widow from the time of his death and during her widowhood, or if there is no widow surviving him, then to his child or children, or if there is no child surviving him, then to his mother, or if there is no mother surviving him, then to his father, if and while they survive him: *Provided, however,* That not more than two hundred and forty of such monthly installments, including those received by such person during his total and permanent disability, shall be so paid. The amount of the monthly installments shall be apportioned between children as may be provided by regulations."

SEC. 20. That section nineteen of this act amending section four hundred and one of the act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September second, nineteen hundred and fourteen, as amended, shall be deemed to be in effect as of October sixth, nineteen hundred and seventeen: *Provided,* That nothing herein shall be construed to interfere with the payment of monthly installments, authorized to be made under the provisions of said section four hundred and one as originally enacted, for the months up to and including June, nineteen hundred and eighteen: *Provided further,* That all awards of automatic insurance under the provisions of said section four hundred and one as originally enacted shall be revised as of the first day of July, nineteen hundred and eighteen, in accordance with the provisions of said section four hundred and one as amended by section nineteen of this act.

SEC. 21. That section four hundred and two of said act is hereby amended to read as follows:

"SEC. 402. That the director, subject to the general direction of the Secretary of the Treasury, shall promptly determine upon and publish the full and exact terms and conditions of such contract of insurance. The insurance shall be payable only to a spouse, child, grandchild, parent, brother, or sister, and also during total and permanent disability to the injured person, or to any or all of them. The insurance shall be payable in two hundred and forty equal monthly installments. Provisions for maturity at certain ages, for continuous installments during the life of the insured or beneficiaries, or both, for cash, loan, paid up and extended values, dividends from gains and savings, and such other provisions for the protection and advantage of and for alternative benefits to the insured and the beneficiaries as may be found to be reasonable and practicable, may be provided for in the contract of insurance, or from time to time by regulations. All calculations shall be based upon the American Experience Table of Mortality and interest at three and one-half per centum per annum, except that no deduction shall be made for continuous installments during the life of the insured in case his total and permanent disability continues more than two hundred and forty months. Subject to regulations, the insured shall at all times have the right to change the beneficiary or beneficiaries of such insurance without the consent of such beneficiary or beneficiaries, but only within the classes herein provided. If no beneficiary within the permitted class be designated by the insured either in his lifetime or by his last will and testament, or if the designated beneficiary does not survive the insured, the insurance shall be payable to such person or persons within the permitted class of beneficiaries as would under the laws of the State of the residence of the insured be entitled to his personal property in case of intestacy. If no such person survive the insured, then there shall be paid to the estate of the insured an amount equal to the reserve value, if any, of the insurance at the time of his death, calculated on the basis of the American Experience Table of Mortality and three and one-half per centum interest in full of all obligations under the contract of insurance."

Approved, June 25, 1918.

[PUBLIC—No. 195—65TH CONGRESS.]

[H. R. 11048.]

An act to amend the war-risk insurance act.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the war-risk insurance act is hereby amended by adding to such act a new section, to be known as section two b, to read as follows:

"SEC. 2b. That when it appears to the Secretary of the Treasury that vessels of foreign friendly flags, or their masters, officers, or crews, or shippers or importers in such vessels, are unable in any trade to secure adequate war-risk insurance on reasonable terms, the Bureau of War Risk Insurance, with the approval of the Secretary, is hereby authorized to make provisions for the insurance by the United States of (1) such vessels of foreign friendly flags, their freight and passage moneys, and personal effects of the masters, officers, and crews thereof against the risks of war when such vessels are chartered or operated by the United States Shipping Board or its agent, or chartered by any person a citizen of the United States, and (2) the cargoes to be shipped in such vessels of foreign friendly flags, whether or not they are so chartered. Such insurance on the vessel, however, is authorized only when the United States Shipping Board or its agent operates the vessel or the charterers are, by the terms of the charter party or contract with the vessel owners, required to assume the war risk or provide insurance protecting the vessel owners against war risk during the term of the charter or hire of the vessel.

"The Bureau of War Risk Insurance, with the approval of the Secretary of the Treasury, is also hereby authorized to insure the masters, officers, and crews of vessels operated or chartered as aforesaid against the loss of life or personal injury by the risk of war and for compensation during the detention following capture by enemies of the United States, whenever it appears to the Secretary that the owners, operators, or charterers of such vessels are unable, in any trade, to secure such insurance on reasonable terms."

SEC. 2. That section five of the war-risk insurance act is hereby amended to read as follows:

"SEC. 5. That the Secretary of the Treasury is authorized to establish an advisory board, to consist of three members skilled in the practices of war-risk insurance, for the purpose of assisting the Bureau of War Risk Insurance in fixing rates of premium and in adjustment of claims for losses, and generally in carrying out the purposes of this act; the compensation of the members of said board to be determined by the Secretary of the Treasury, but not to exceed $20 a day each while actually employed. He is likewise authorized to appoint two persons skilled in the practice of accident insurance for the purpose of assisting the Bureau of War Risk Insurance in the adjustment of claims for death, personal injury, or detention; the compensation of persons so appointed to be determined by the Secretary of the Treasury, but not to exceed $20 a day each while actually employed. In the event of disagreement as to the claim for losses, or amount thereof, between the said bureau and the parties to such contract of insurance, an action on the claim may be brought against the United States in the district court of the United States, sitting in admiralty, in the district in which the claimant or his agents may reside. The Secretary of the Treasury is, in his judgment, authorized to compromise the claim either before or after the institution of an action therein."

SEC. 3. That section nine of the war-risk insurance act is hereby amended to read as follows:

"SEC. 9. That the President is authorized whenever in his judgment the necessity of further war insurance by the United States shall have ceased to exist to suspend the operation of this act, in so far as the Division of Marine and Seamen's Insurance is concerned, which suspension shall be made in any event within six months after the end of the war, but shall not affect any insurance outstanding at the time or any claims pending adjustment. For the purpose of the final adjustment of any such outstanding insurance or claims, the Division of Marine and Seamen's Insurance may, in the discretion of the President, be continued in existence for a period not exceeding three years after such suspension.

"The words 'end of the war' as used herein shall be deemed to mean the date of proclamation of exchange of ratification of the treaty of peace, unless the President shall, by proclamation, declare a prior date, in which case the date so proclaimed shall be deemed to be the 'end of the war' within the meaning of this act."

Approved, July 11, 1918.

[PUBLIC—No. 272—65TH CONGRESS.]

[H. R. 13273.]

An act to amend an act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September second, nineteen hundred and fourteen, and an act in amendment thereto approved October sixth, nineteen hundred and seventeen.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department" be, and is hereby, amended by adding the following new paragraph to section two hundred and ten of Article II of the said act:

"*Provided, however*, That whenever the commissioner shall by further investigation or reinvestigation modify the existing award, no reimbursement from the person receiving an allowance shall be required for allotments and allowances already paid nor shall any deductions be made from allotments and allowances to be paid in the future for any change in award made in previous allotments and allowances, except where it is conclusively shown that the person receiving the allowance does not bear the relationship to the enlisted man which is required by the act and except in cases of manifest fraud."

Approved, February 25, 1919.

[PUBLIC—No. 312—65TH CONGRESS.]

[H. R. 13306.]

An act to authorize the payment of allotments out of the pay of enlisted men in certain cases in which these payments have been discontinued.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That in all of those cases in which an authority of allotment by an enlisted man directing the payment of an indicated amount to a designated beneficiary is on file in the Bureau of War Risk Insurance, and payments pursuant to this authority had been made by said bureau prior to July first, nineteen hundred and eighteen, but which payments were discontinued as of that date, the War and Navy Departments are directed to resume the payments of allotments in these cases, pursuant to the authority on file as aforesaid, pending the receipt of a new authority, or of a written rescission of the old authority from the enlisted men. In those cases in which pending the receipt of the new authority, the military authorities, beginning with July first, nineteen hundred and eighteen, have reserved from month to month out of the soldier's monthly accruing pay, the amount directed to be paid by the original authority of allotment, the War and Navy Departments, upon resuming the payment of allotments in such cases, under the authority of this act, shall pay all arrearages out of these respective reservations.

Approved, February 28, 1919.

[PUBLIC RESOLUTION—No. 22—65TH CONGRESS.]

[S. J. Res. 128.]

Joint resolution granting to certain persons in the active war service an extension of time within which application for insurance may be made under section four hundred and one of the act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September second, nineteen hundred and fourteen, as amended by the act approved October sixth, nineteen hundred and seventeen.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the time within which application for insurance may be made as set forth in section four hundred and one of the act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September second, nineteen hundred and fourteen, as amended by the act approved October sixth, nineteen hundred and seventeen, is hereby extended, with respect to every person in the active war service as to whom the time for making application would expire before the twelfth day of April, nineteen hundred and eighteen, so that every such person may make application for insurance up to and including the said twelfth day of April, nineteen hundred and eighteen: *Provided*, That nothing herein shall be construed to effect an extension of the automatic insurance provided for in the said section four hundred and one beyond the twelfth day of February, nineteen hundred and eighteen.

Approved, February 12, 1918.

[PUBLIC RESOLUTION—No. 27—65TH CONGRESS.]

[S. J. Res. 133.]

Joint resolution authorizing the granting of insurance under the act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September second, nineteen hundred and fourteen, as amended by the act approved October sixth, nineteen hundred and seventeen, on application by a person other than the person to be insured.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That insurance under the act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September second, nineteen hundred and fourteen, as amended by the act approved October sixth, nineteen hundred and seventeen, shall be granted by the Bureau of War Risk Insurance on application made by the person to be insured or, subject to such regulations as the bureau may prescribe, by any person within the permitted class as specified in section four hundred and two of said act: *Provided*, That the person to be insured has been taken a prisoner of war before April twelfth, nineteen hundred and eighteen: *And provided further*, That no one but the insured may designate a beneficiary, and nothing in this resolution shall be deemed to change or affect the permitted class of beneficiaries or impose any obligation on the insured against his will.

Approved, April 2, 1918.

[PUBLIC RESOLUTION—No. 52—65TH CONGRESS.]

[S. J. Res. 214.]

Joint resolution authorizing and directing the accounting officers of the Treasury to allow credit to the disbursing clerk of the Bureau of War Risk Insurance in certain cases.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That for such reasonable time as may be fixed by the Secretary of the Treasury, but not extending beyond the fiscal year ending June thirtieth, nineteen hundred and twenty, the accounting officers of the Treasury are hereby authorized and directed to allow credit in the accounts of the disbursing clerk of the Bureau of War Risk Insurance for all payments of insurance installments heretofore or hereafter made under the provisions of Article IV of the war risk insurance act in advance of the verification of the deduction on the pay rolls, or of the payment otherwise, of all premiums.

Approved, February 26, 1919.

[PUBLIC RESOLUTION—No. 44—66TH CONGRESS.]

[S. J. Res. 189.]

Joint resolution authorizing and directing the accounting officers of the Treasury to allow credit to the disbursing clerk of the Bureau of War Risk Insurance in certain cases.

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That for such reasonable time as may be fixed by the Secretary of the Treasury, but not extending beyond the fiscal year ending June 30, 1921, the accounting officers of the Treasury are hereby authorized and directed to allow credit in the accounts of the disbursing clerk of the Bureau of War Risk Insurance for all payments of insurance installments heretofore or hereafter made under the provisions of Article IV of the war risk insurance act in advance of the verification of the deduction on the pay rolls, or of the payment otherwise, of all premiums.

Approved, May 26, 1920.

[PUBLIC—No. 11—66TH CONGRESS.]

[S. 1213.]

An act to amend an act entitled "An act to provide for vocational rehabilitation and return to civil employment of disabled persons discharged from the military or naval forces of the United States, and for other purposes," approved June 27, 1918.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 2 of the act entitled "An act to provide for vocational rehabilitation and return to civil employment of disabled persons discharged

from the military or naval forces of the United States, and for other purposes," approved June 27, 1918, be hereby amended to read as follows:

"SEC. 2. That every person enlisted, enrolled, drafted, inducted, or appointed in the military or naval forces of the United States, including members of training camps authorized by law, who, since April 7, 1917, has resigned or has been discharged or furloughed therefrom under honorable conditions, having a disability incurred, increased, or aggravated while a member of such forces, or later developing a disability traceable in the opinion of the board to service with such forces, and who, in the opinion of the Federal Board for Vocational Education, is in need of vocational rehabilitation to overcome the handicap of such disability, shall be furnished by the said board, where vocational rehabilitation is feasible, such course of vocational rehabilitation as the board shall prescribe and provide.

"The board shall have the power, and it shall be its duty, to furnish the persons included in this section suitable courses of vocational rehabilitation, to be prescribed and provided by the board; and every person electing to follow such a course of vocational rehabilitation shall, while following the same, be paid monthly by the said board from the appropriation hereinafter provided such sum as in the judgment of the said board is necessary for his maintenance and support and for the maintenance and support of persons depending upon him, if any: *Provided, however*, That in no event shall the sum so paid such person while pursuing such course be more than $80 per month for a single man without dependents, or for a man with dependents $100 per month plus the several sums prescribed as family allowances under section 204 of Article II of the War Risk Insurance Act.

"No compensation under Article III of the act entitled 'An act to amend an act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department,"' approved October 6, 1917, shall be paid for the period during which any such person is being furnished by said board a course of vocational rehabilitation and support as herein authorized: *Provided, however*, That in the event any person pursuing a course of vocational rehabilitation is entitled under said Article III to compensation in an amount in excess of the payments made to him by the said board for his support and the support of his dependents, if any, the Bureau of War Risk Insurance shall pay monthly to such person such additional amount as may be necessary to equal the total compensation due under said Article III of said act.

"There is hereby appropriated, out of any money in the Treasury of the United States not otherwise appropriated, available immediately and until expended, the sum of $6,000,000, or so much thereof as may be necessary, to be used by the Federal Board for Vocational Education for the purpose of making the payments prescribed by this section and for defraying the administrative expenses incident thereto."

Approved, July 11, 1919.

[PUBLIC—No. 99—66TH CONGRESS.]

[S. 2497.]

An act to provide for the payment of six months' pay to the widow, children, or other designated dependent relative of any officer or enlisted man of the Regular Army whose death results from wounds or disease not the result of his own misconduct.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That hereafter, immediately upon the official notification of the death from wounds or disease, not the result of his own misconduct, of any officer or enlisted man on the active list of the Regular Army or on the retired list when on active duty, the Quartermaster General of the Army shall cause to be paid to the widow, and if there be no widow to the child or children, and if there be no widow or child to any other dependent relative of such officer or enlisted man previously designated by him, an amount equal to six months' pay at the rate received by such officer or enlisted man at the date of his death. The Secretary of War shall establish regulations requiring each officer and enlisted man having no wife or child to designate the proper dependent relative to whom this amount shall be paid in case of his death. Said amount shall be paid from funds appropriated for the pay of the Army.

SEC. 2. That nothing in this act shall be construed as making the provisions of this act applicable to officers or enlisted men of any forces or troops of the Army of the United States other than those of the Regular Army, and nothing in this act shall be construed to apply in commissioned grades to any officers except those holding permanent or provisional appointments in the Regular Army.

Approved, December 17, 1919.

[PUBLIC—No. 26—66TH CONGRESS.]

[H. R. 6450.]

An act to amend an act entitled "An act to amend an act entitled 'An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department, approved September 2, 1914, as amended."

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 12 of an act entitled "An act to amend an act entitled 'An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department, approved September 2, 1914,' as amended," be, and is hereby, amended as follows:

At the end of subdivision H, section 12, insert: "Except in case of loss of both hands and both eyes, or in case of loss of both feet and both eyes, or in case of loss of both hands and both feet, in which cases there shall be an allowance of $100 per month for a nurse or attendant, the same in addition to the $100 per month allowed in this act for the loss of both feet, or both hands, or both eyes."

Approved, August 6, 1919.

[PUBLIC—No. 104—66TH CONGRESS.]

[H. R. 8778.]

An act to amend and modify the war risk insurance act.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the office of the Commissioner of Military and Naval Insurance and the office of the Commissioner of Marine and Seamen's Insurance created by the war risk insurance act are hereby abolished and the powers and duties pertaining to such offices are hereby transferred to the Director of the Bureau of War Risk Insurance, who shall hereafter receive a salary at the rate of $7,500 per annum. Until such time as the Secretary of the Treasury may direct otherwise, and subject to the provisions of section 9 of the war risk insurance act, there shall be in the Bureau of War Risk Insurance a Division of Marine and Seamen's Insurance and a Division of Military and Naval Insurance. All laws inconsistent with this section are hereby so modified as to conform to the provisions hereof.

SEC. 2. That paragraph (b) of the second subdivision (1) of section 22 of the war risk insurance act is hereby amended to read as follows:

"(b) A child legally adopted."

SEC. 3. That paragraph (d) of the second subdivision (1) of section 22 of the war risk insurance act is hereby amended to read as follows:

"(d) An illegitimate child, but, as to the father only, if acknowledged in writing signed by him, or if he has been judicially ordered or decreed to contribute to such child's support, or has been judicially decreed to be the putative father of such child."

SEC. 4. That section 22 of the war risk insurance act is hereby amended by inserting therein immediately following subdivisions (4) and (5), respectively, two new subdivisions to be known as subdivision (4a) and subdivision (5a) and to read as follows:

"(4a) The terms 'father' and 'mother' include stepfathers and stepmothers, fathers and mothers through adoption, and persons who have stood in loco parentis to a member of the military or naval forces at any time prior to his enlistment or induction for a period of not less than one year: *Provided*, That this subdivision shall be deemed to be in effect as of October 6, 1917."

"(5a) The terms 'brother' and 'sister' include the children of a person who, for a period of not less than one year, stood in loco parentis to a member of the military or naval forces of the United States at any time prior to his enlistment or induction, or another member of the same household as to whom such person during such period likewise stood in loco parentis: *Provided*, That this subdivision shall be deemed to be in effect as of October 6, 1917."

SEC. 5. That section 23 of the war risk insurance act is hereby amended by the addition thereto of a new paragraph to read as follows:

"If any person entitled to receive payments under this act shall be an inmate of any asylum or hospital for the insane maintained by the United States, or by any of the several States or Territories of the United States, or any political subdivision thereof, and no guardian or curator of the property of such person shall have been appointed by competent legal authority, the director, if satisfied after due investigation that any such person is mentally incompetent, may order that all moneys payable to him or her under this act shall be held in the Treasury of the United States to the credit of such person. All funds so held shall be disbursed under the order

of the director and subject to his discretion, either to the chief executive officer of the asylum or hospital in which such person is an inmate, to be used by such officer for the maintenance and comfort of such inmate, subject to the duty to account to the Bureau of War Risk Insurance and to repay any surplus at any time remaining in his hands in accordance with regulations to be prescribed by the director; or to the wife (or dependent husband if the inmate is a woman), minor children, and dependent parents of such inmate, in such amounts as the director shall find necessary for their support and maintenance, in the order named; or, if at any time such inmate shall be found to be mentally competent, or shall die, or a guardian or curator of his or her estate be appointed, any balance remaining to the credit of such inmate shall be paid to such inmate, if mentally competent, and otherwise to his or her guardian, curator or personal representatives."

SEC. 6. That the provisions of section 28 of the war risk insurance act shall not be construed to prohibit the assignment by any person to whom converted insurance shall be payable under Article IV of such act of his interest in such insurance to any other member of the permitted class of beneficiaries.

SEC. 7. That a new section is hereby added to the war risk insurance act, to be known as section 31, and to read as follows:

"SEC. 31. That if after induction by the local draft board, but before being accepted and enrolled for active service, the person died or became disabled as a result of disease contracted or injury suffered in the line of duty and not due to his own willful misconduct involving moral turpitude, or as a result of the aggravation, in the line of duty and not because of his own willful misconduct involving moral turpitude, of an existing disease or injury, he or those entitled thereto shall receive the benefits of compensation payable under Article III: *Provided*, That any insurance application made by a person after induction by the local draft board but before being accepted and enrolled for active service shall be deemed valid."

SEC. 8. That the second paragraph of section 204 of the war risk insurance act is hereby amended to read as follows:

"The family allowance shall be paid from the time of enlistment to death in or one month after discharge from the service, but not for more than four months after the termination of the present war emergency. No family allowance shall be made for any period preceding November 1, 1917. The payment shall be subject to such regulations as may be prescribed relative to cases of desertion and imprisonment and of missing men."

SEC. 9. That a new section is hereby added to Article II of the war risk insurance act, to be known as section 211, and to read as follows:

"SEC. 211. That all family allowances and allotments payable by the Bureau of War Risk Insurance under the authority of this article shall be discontinued at the end of the fourth calendar month after the termination of the present war emergency, as declared by proclamation of the President of the United States, and thereafter all allotments of pay shall be voluntary and shall be made under such regulations as may be prescribed by the Secretary of War and the Secretary of the Navy, respectively."

SEC. 10. That the second paragraph of subdivision (g) of section 301 of the war risk insurance act is hereby amended to read as follows:

"If death occur or shall have occurred subsequent to April 6, 1917, and before discharge or resignation from service, the United States shall pay for burial expenses and the return of body to his home a sum not to exceed $100, as may be fixed by regulations."

That section 301 of the war risk insurance act, as amended, shall be deemed to be in effect as of April 6, 1917: *Provided, however*, That before compensation thereunder shall be paid there shall first be deducted from said sum so to be paid the amount of any payments such person may have received by way of gratuities or payments under pension laws in force and existence between April 6, 1917, and October 6, 1917.

SEC. 10a. That section 300 of the war risk insurance act is hereby amended to read as follows:

"SEC. 300. That for death or disability resulting from personal injury suffered or disease contracted in the line of duty, by any commissioned officer or enlisted man, or by any member of the Army Nurse Corps (female) or of the Navy Nurse Corps (female) when employed in the active service under the War Department or Navy Department, the United States shall pay compensation as hereinafter provided; but no compensation shall be paid if the injury or disease has been caused by his own willful misconduct: *Provided*, That for the purposes of this section said officer, enlisted man, or other member shall be held and taken to have been in sound condition when examined, accepted, and enrolled for service: *Provided further*, That this section, as amended, shall be deemed to become effective as of April 6, 1917."

SEC. 11. That section 302 of the war risk insurance act is hereby amended to read as follows:

"SEC. 302. That if disability results from the injury—

"(1) If and while the disability is rated as total and temporary, the monthly compensation shall be the following amounts:

"(a) If the disabled person has neither wife nor child living, $80.

"(b) If he has a wife but no child living, $90.

"(c) If he has a wife and one child living, $95.

"(d) If he has a wife and two or more children living, $100.

"(e) If he has no wife but one child living, $90, with $5 for each additional child.

"(f) If he has a mother or father, either or both dependent on him for support, then, in addition to the above amounts, $10 for each parent so dependent.

"(2) If and while the disability is rated as partial and temporary, the monthly compensation shall be a percentage of the compensation that would be payable for his total and temporary disability, equal to the degree of the reduction in earning capacity resulting from the disability, but no compensation shall be payable for a reduction in earning capacity rated at less than 10 per centum.

"(3) If and while the disability is rated as total and permanent, the rate of compensation shall be $100 per month: *Provided, however*, That the loss of both feet, or both hands, or the sight of both eyes, or the loss of one foot and one hand, or one foot and the sight of one eye, or one hand and the sight of one eye, or becoming helpless and permanently bedridden, shall be deemed to be total, permanent disability: *Provided further*, That for double, total, permanent disability the rate of compensation shall be $200 per month.

"(4) If and while the disability is rated as partial and permanent, the monthly compensation shall be a percentage of the compensation that would be payable for his total and permanent disability equal to the degree of the reduction in earning capacity resulting from the disability, but no compensation shall be payable for a reduction in earning capacity rated at less than 10 per centum.

"A schedule of ratings of reductions in earning capacity from specific injuries or combinations of injuries of a permanent nature shall be adopted and applied by the bureau. Ratings may be as high as 100 per centum. The ratings shall be based, as far as practicable, upon the average impairments of earning capacity resulting from such injuries in civil occupations and not upon the impairment in earning capacity in each individual case, so that there shall be no reduction in the rate of compensation for individual success in overcoming the handicap of a permanent injury. The bureau in adopting the schedule of ratings of reduction in earning capacity shall consider the impairment in ability to secure employment which results from such injuries. The bureau shall from time to time readjust this schedule of ratings in accordance with actual experience.

"(5) If the disabled person is so helpless as to be in constant need of a nurse or attendant, such additional sum shall be paid, but not exceeding $20 per month, as the director may deem reasonable.

"(6) In addition to the compensation above provided, the injured person shall be furnished by the United States such reasonable governmental medical, surgical, and hospital services and with such supplies, including wheeled chairs, artificial limbs, trusses, and similar appliances, as the director may determine to be useful and reasonably necessary, which wheeled chairs, artificial limbs, trusses, and similar appliances may be procured by the Bureau of War Risk Insurance in such manner, either by purchase or manufacture, as the director may determine to be advantageous and reasonably necessary: *Provided*, That nothing in this act shall be construed to affect the necessary military control over any member of the military or naval establishments before he shall have been discharged from the military or naval service.

"(7) Where the disabled person and his wife are not living together, or where the children are not in the custody of the disabled person the amount of the compensation shall be apportioned as may be prescribed by regulations.

"(8) The term 'wife' as used in this section shall include 'husband' if the husband is dependent upon the wife for support.

"(9) That the Bureau of War Risk Insurance is hereby authorized to furnish transportation, also the medical, surgical, and hospital services and the supplies and appliances provided by subdivision (6) hereof, to discharged members of the military or naval forces of those Governments which have been associated in war with the United States since April 6, 1917, and come within the provisions of laws of such Governments similar to the war risk insurance act, at such rates and under such regulations as the Director of the Bureau of War Risk Insurance may prescribe; and the Bureau of War Risk Insurance is hereby authorized to utilize the similar services, supplies,

and appliances provided for the discharged members of the military and naval forces of those Governments which have been associated in war with the United States since April 6, 1917, by the laws of such Governments similar to the war risk insurance act, in furnishing the discharged members of the military and naval forces of the United States who live within the territorial limits of such Governments and come within the provisions of subdivision (6) hereof, with the services, supplies, and appliances provided for in such subdivision; and any appropriations that have been or may hereafter be made for the purpose of furnishing the services, supplies, and appliances provided for by subdivision (6) hereof are hereby made available for the payment to such Governments or their agencies for the services, supplies, and appliances so furnished at such rates and under such regulations as the Director of the Bureau of War Risk Insurance may prescribe.

"(10) That section 302 of the war risk insurance act as amended shall be deemed to be in effect as of April 6, 1917: *Provided*, That any person who is now receiving a gratuity or pension under existing law shall not receive compensation under this act unless he shall first surrender all claim to such gratuity or pension."

SEC. 12. That section 401 of the war risk insurance act is hereby amended to read as follows:

"SEC. 401. That such insurance must be applied for within one hundred and twenty days after enlistment or after entrance into or employment in the active service and before discharge or resignation, except that those persons who are in the active war service at the time of the publication of the terms and conditions of such contract of insurance may apply at any time within one hundred and twenty days thereafter and while in such service: *Provided*, That any person in the active service on or after the 6th day of April, 1917, and before the 11th day of November, 1918, who while in such active service made application for insurance after the expiration of more than one hundred and twenty days after October 15, 1917, or more than one hundred and twenty days after entrance into or employment in the active service, and whose application was accepted and a policy issued thereon, and from whom premiums were collected, and who becomes or had become totally and permanently disabled, or dies or has died, shall be deemed to have made legal application for such insurance and the policy issued on such application shall be valid. Any person in the active service on or after the 6th day of April, 1917, and before the 11th day of November, 1918, who, while in such service, and before the expiration of one hundred and twenty days after October 15, 1917, or one hundred and twenty days after entrance into or employment in the active service, becomes or has become totally and permanently disabled, or dies or has died, without having applied for insurance, shall be deemed to have applied for and to have been granted insurance, payable to such person during his life in monthly installments of $25 each; and any person inducted into the service by a local draft board after the 6th day of April, 1917, and before the 11th day of November, 1918, who, while in such service, and before being accepted and enrolled for active military or naval service, becomes or has become totally and permanently disabled, or dies or has died, without having applied for insurance, shall be deemed to have applied for and to have been granted insurance, payable to such person during his life in monthly installments of $25 each. If he shall die either before he shall have received any of such monthly installments or before he shall have received two hundred and forty of such monthly installments, then $25 per month shall be paid to his widow from the time of his death and during her widowhood; or if there is no widow surviving him, then to his child or children; or if there is no child surviving him, then to his mother; or if there be no mother surviving him, then to his father, if and while they survive him: *Provided, however*, That no more than two hundred and forty of such monthly installments, including those received by such person during his total and permanent disability, shall be so paid. The amount of the monthly installments shall be apportioned between children as may be provided by regulations: *Provided further*, That each officer and enlisted man attached to the United States ship Cyclops on the 4th day of March, 1918, and every officer and enlisted man who on said date was a passenger on said vessel shall be deemed to have been granted insurance in the sum of $5,000 permitted under the war risk insurance act."

SEC. 13. That the permitted class of beneficiaries for insurance as specified in section 402 of the war risk insurance act is hereby enlarged so as to include, in addition to the persons therein enumerated, uncles, aunts, nephews, nieces, brothers-in-law and sisters-in-law of the insured. This section shall be deemed to be in effect as of October 6, 1917: *Provided*, That nothing herein shall be construed to interfere with the payment of the monthly installments authorized to be made under the provisions of said war risk insurance act, as originally enacted and subsequently amended, up to and including the second calendar month after the passage of this Act: *Provided further*, That all awards of insurance under the provisions of the said war risk insurance act, as originally enacted and subsequently amended, shall be revised as of the first day of the third calendar month after the passage of this act, in accordance with the provisions of the said war risk insurance act as modified by this amendatory act.

SEC. 14. That if no person within the permitted class of beneficiaries survive the insured, then there shall be paid to the estate of the insured the monthly installments payable and applicable under the provisions of Article IV of the war risk insurance act.

SEC. 15. That if any person to whom such yearly renewable term insurance has been awarded dies, or his rights are otherwise terminated after the death of the insured, but before all of the two hundred and forty monthly installments have been paid, then the monthly installments payable and applicable shall be payable to such person or persons within the permitted class of beneficiaries as would, under the laws of the State of residence of the insured, be entitled to his personal property in case of intestacy; and if the permitted class of beneficiaries be exhausted before all of the two hundred and forty monthly installments have been paid, then there shall be paid to the estate of the last surviving person within the permitted class the remaining unpaid monthly installments.

SEC. 16. That if no beneficiary within the permitted class be designated by the insured as beneficiary for converted insurance, granted under the provisions of Article IV of the war risk insurance act, either in his lifetime or by his last will and testament, or if the designated beneficiary does not survive the insured, then there shall be paid to the estate of the insured the remaining unpaid monthly installments; or if the designated beneficiary survives the insured and dies before receiving all of the installments of converted insurance payable and applicable, then there shall be paid to the estate of such beneficiary the remaining unpaid monthly installments.

SEC. 17. That the Bureau of War Risk Insurance may make provision in the contract for converted insurance for optional settlements, to be selected by the insured, whereby such insurance may be made payable either in one sum or in installments for thirty-six months or more. The bureau may also include in said contract a provision authorizing the beneficiary to elect to receive payment of the insurance in installments for thirty-six months or more, but only if the insured has not exercised the right of election as hereinbefore provided; and even though the insured may have exercised his right of election, the said contract may authorize the beneficiary to elect to receive such insurance in installments spread over a greater period of time than that selected by the insured.

SEC. 18. That all premiums paid on account of insurance converted under the provisions of Article IV of the war risk insurance act shall be deposited and covered into the Treasury to the credit of the United States Government life insurance fund and shall be available for the payment of losses, dividends, refunds, and other benefits provided for under such insurance. Payments from this fund shall be made upon and in accordance with awards by the director.

The Bureau of War Risk Insurance is hereby authorized to set aside out of the fund so collected such reserve funds as may be required, under accepted actuarial principles to meet all liabilities under such insurance; and the Secretary of the Treasury is hereby authorized to invest and reinvest the said United States Government life insurance fund, or any part thereof, in interest-bearing obligations of the United States and to sell the obligations for the purposes of the said fund.

SEC. 19. That the amount of the monthly installments of allotment and family allowance, compensation, or yearly renewable term insurance which has become payable under the provisions of the war risk insurance act but which has not been paid prior to the death of the person entitled to receive the same may be payable to the personal representatives of the deceased person.

Approved, December 24, 1919.

EXTRACT FROM PUBLIC LAW NO. 105, 66TH CONGRESS.

PUBLIC HEALTH SERVICE.

For medical, surgical, and hospital services and supplies for war-risk insurance patients and other beneficiaries of the Public Health Service, including necessary personnel, regular and reserved commissioned officers of the Public Health Service, clerical help in the District of Columbia and elsewhere, maintenance, equipment, leases, fuel, lights, water, printing, freight transportation and travel, maintenance and operation of passenger motor vehicles, and reasonable burial expenses (not exceeding $100 for any patient dying in hospital), $2,000,000.

BUREAU OF WAR RISK INSURANCE.

Military and naval compensation: For the payment of military and naval compensation, funeral expenses, services and supplies, as authorized by law, $30,000,000.

Approved, December 24, 1919.

PROCLAMATIONS.

MARINE AND WAR-RISK INSURANCE BY GERMAN COMPANIES PROHIBITED.

No. 1386.

By the President of the United States of America.

A PROCLAMATION.

Whereas certain insurance companies, incorporated under the laws of the German Empire, have been admitted to transact the business of marine and war-risk insurance in various States of the United States, by means of separate United States branches established pursuant to the laws of such States, and are now engaged in such business under the supervision of the insurance departments thereof, with assets in the United States deposited with insurance departments or in the hands of resident trustees, citizens of the United States, for the protection of all policyholders in the United States;

And whereas the nature of marine and war-risk insurance is such that those conducting it must of necessity be in touch with the movements of ships and cargoes, and it has been considered by the Government of great importance that this information should not be obtained by alien enemies;

Now, therefore, I, Woodrow Wilson, President of the United States of America, by virtue of the powers vested in me as such, hereby declare and proclaim that such branch establishments of German insurance companies now engaged in the transaction of business in the United States pursuant to the laws of the several States are hereby prohibited from continuing the transaction of the business of marine and war-risk insurance either as direct insurers or reinsurers; and all individuals, firms, and insurance companies incorporated under the laws of any of the States or Territories of the United States, or of any foreign country, and established pursuant to the laws of such States and now engaged in the United States in the business of marine and war-risk insurance either as direct insurers or reinsurers are hereby prohibited from reinsuring with companies incorporated under the laws of the German Empire, no matter where located; and all persons in the United States are prohibited from insuring against marine or war risks with insurance companies incorporated under the laws of the German Empire or with individuals, firms, and insurance companies incorporated under the laws of any of the States or Territories of the United States or of any foreign country and now engaged in the business of marine or war-risk insurance in the United States, which reinsure business originating in the United States with companies incorporated under the laws of the German Empire, no matter where located.

The foregoing prohibitions shall extend and operate as to all existing contracts for insurance and reinsurance which are hereby suspended for the period of the war, except that they shall not operate to vitiate or prevent the insurance or reinsurance of, and the payment or receipt of, premiums on insurance or reinsurance under existing contracts on vessels or interest at risk on the date of this proclamation, and such insurance or reinsurance, if for a voyage, shall continue in force until arrival at destination, and if for time, until thirty days from the date of this proclamation, but if on a voyage at that time, until the arrival at destination.

Nothing herein shall be construed to operate to prevent the payment or receipt of any premium, return premium, or claim now due or which may become due on or in respect to insurances or reinsurances not prohibited by this proclamation.

That all funds of such German companies now in the possession of their managers or agents, or which shall hereafter come into their possession, shall be subject to such rules and regulations concerning the payment and disposition thereof as shall be prescribed by the insurance supervising officials of the State in which the principal office of such establishment in the United States is located, but in no event shall any funds belonging to or held for the benefit of such companies be transmitted outside of the United States, nor be used as the basis for the establishment, directly or indirectly, of any credit within or outside of the United States to or for the benefit or use of the enemy or any of his allies without the permission of this Government.

In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the District of Columbia this thirteenth day of July in the year of our Lord one thousand nine hundred and seventeen and of the Independence of the United States the one hundred and forty-second.

[SEAL.] WOODROW WILSON.

By the PRESIDENT:
FRANK L. POLK,
Acting Secretary of State.

AGENCIES IN THE UNITED STATES OF GERMAN INSURANCE COMPANIES.

No. 1366.

By the President of the United States of America.

A PROCLAMATION.

Whereas certain insurance companies, incorporated under the laws of the German Empire, have been admitted to transact the business of insurance in various States of the United States, by means of separate United States branches established pursuant to the laws of such States, and are now engaged in business under the supervision of the insurance departments thereof, with assets in the United States, deposited with insurance departments or in the hands of resident trustees, citizens of the United States, for the protection of all policyholders in the United States;

And whereas the interests of the citizens of the United States in the protection afforded by such insurance are of great magnitude, so that it is deemed to be important that the agencies of such companies in the United States be permitted to continue in business;

Now, therefore, I, Woodrow Wilson, President of the United States of America, by virtue of the powers vested in me as such, hereby declare and proclaim that such branch establishments of German insurance companies now engaged in the transaction of business in the United States pursuant to the laws of the several States, are hereby authorized and permitted to continue the transaction of their business in accordance with the laws of such States in the same manner and to the same extent as though a state of war did not now exist; provided, however, that all funds of such establishments now in the possession of their managers or agents, or which shall hereafter come into their possession, shall be subject to such rules and regulations concerning the payment and disposition thereof as shall be prescribed by the insurance supervising officials of the State in which the principal office of such establishment in the United States is located, but in no event shall any funds belonging to or held for the benefit of such companies be transmitted outside of the United States nor be used as the basis for the establishment directly or indirectly of any credit within or outside of the United States to or for the benefit or use of the enemy or any of his allies without the permission of this Government.

In witness whereof, I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the City of Washington this sixth day of April in the year of our Lord one thousand nine hundred and seventeen, and of the Independence of the United States the one hundred and forty-first.

[SEAL.] WOODROW WILSON.

By the President:
ROBERT LANSING,
Secretary of State.

VOCATIONAL REHABILITATION.

[Approved June 27, 1918, 40 Stat. 617.]

[PUBLIC—No. 178—65TH CONGRESS.]

[S. 4557.]

An act to provide for vocational rehabilitation and return to civil employment of disabled persons discharged from the military or naval forces of the United States, and for other purposes.

Designation of act.

Definitions.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this act shall be known as the vocational rehabilitation act. That the word "board," as hereinafter used in this act, shall mean the "Federal Board for Vocational Education." That the word "bureau," as hereinafter used in this act, shall mean the "Bureau of War Risk Insurance."

Conditions establishing eligibility for training.

Persons eligible.

Date of separation from service and nature of discharge.

Relation of disability to service.

Need and feasibility of vocational rehabilitation.

[1] SEC. 2 (as amended by the act of July 11, 1919, 41 Stat. 158). That every person enlisted, enrolled, drafted, inducted, or appointed in the military or naval forces of the United States, including members of training camps authorized by law, who, since April 7, 1917, has resigned or has been discharged or furloughed therefrom under honorable conditions, having a disability incurred, increased, or aggravated while a member of such forces, or later developing a disability traceable in the opinion of the board to service with such forces, and who, in the opinion of the Federal Board for Vocational Education, is in need of vocational rehabilitation to overcome the handicap of such disability shall be furnished by the said board, where vocational rehabilitation is feasible, such course of vocational rehabilitation as the board shall prescribe and provide.

Courses of vocational rehabilitation to be prescribed and furnished by board.

The board shall have the power, and it shall be its duty, to furnish the persons included in this section suitable courses of vocational rehabilitation, to be prescribed and provided by the board; and every person electing to follow such a course of vocational rehabilitation shall, while following the same, be paid monthly by the said board from the appropriation hereinafter provided such sum as in the judgment of the said board is necessary for his maintenance and support and for the maintenance and support of persons depending upon him, if any: *Provided, however*, That in no event shall the sum so paid such person while pursuing such course be more than $80 per month for a single man without dependents, or for a man with dependents $100 per month plus the several sums prescribed as family allowances under section 204 of Article II of the war risk insurance act.[2]

Maintenance pay payable to persons following courses.

(Amendment of June 5, 1920, 41 Stat. 1020.) That the board may, after June 30, 1920, pay, subject to the conditions and limitations prescribed by section 2 of the vocational rehabilitation act as amended, to all trainees undergoing training under said section residing where maintenance and support is above the average and comparatively high, in lieu of the monthly payments for maintenance and support prescribed by section 2, as amended, such sum as in the judgment of the said board is necessary for his maintenance and support and for the maintenance and support of persons dependent upon him, if any: *Provided, however*, That in no event shall the sum so paid such person while pursuing such course be more than $100 per month for a single man without dependents or for a man with dependents $120 per month, plus the several sums prescribed as family allowances under section 204 of Article II of the war risk insurance act.[2]

Increase permitted.

Compensation under war risk insurance act during training.

No compensation under Article III of the act entitled "An act to amend an act entitled 'An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department.'" approved October 6, 1917, shall be paid for the period during which any such person is being furnished by said board a course of vocational rehabilitation and support as herein authorized: *Provided, however*, That in the event any person pursuing a course of vocational rehabilitation is entitled under said Article III to compensation in an amount in excess of the payments made to him by the said board for his support and the support of his dependents, if any, the Bureau of War Risk Insurance shall pay monthly to such person such additional amount as may be necessary to equal the total compensation due under said Article III of said act.

Appropriation for maintenance pay.

There is hereby appropriated out of any money in the Treasury of the United States not otherwise appropriated, available immediately and until expended, the sum of $6,000,000, or so much thereof as may be necessary, to be used by the Federal Board for Vocational Education for the purpose of making the payments prescribed by this section and for defraying the administrative expenses incident thereto.

Courses available to persons not embraced by sec. 2 if entitled to compensation.

SEC. 3. That the courses of vocational rehabilitation provided for under this act shall, as far as practicable and under such conditions as the board may prescribe, be made available without cost for instruction for the benefit of any person who is disabled under circumstances entitling him, after discharge from the military or naval forces of the United States, to compensation under Article III of said act and who is not included in section two hereof.

---

[1] This section as originally enacted in the vocational rehabilitation act, provided as follows:

SEC. 2. That every person who is disabled under circumstances entitling him, after discharge from the military or naval forces of the United States, to compensation under Article III of the act entitled "An act to amend an act entitled 'An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department,'" approved October sixth, nineteen hundred and seventeen, hereinafter referred to as "said act," and who, after his discharge, in the opinion of the board, is unable to carry on a gainful occupation, to resume his former occupation, or to enter upon some other occupation, or having resumed or entered upon such occupation is unable to continue the same successfully, shall be furnished by the said board, where vocational rehabilitation is feasible, such course of vocational rehabilitation as the board shall prescribe and provide.

The board shall have power, and it shall be its duty, to furnish the persons included in this section suitable courses of vocational rehabilitation to be prescribed and provided by the board, and every person elected to follow such a course of vocational rehabilitation shall, while following the same, receive monthly compensation equal to the amount of his monthly pay for the last month of his active service, or equal to the amount to which he would be entitled under Article III of said act, whichever amount is the greater. If such person was an enlisted man at the time of his discharge, for the period during which he is so afforded a course of rehabilitation, his family shall receive compulsory allotment and family allowance according to the terms of Article II of said act in the same manner as if he were an enlisted man, and for the purpose of computing and paying compulsory allotment and family allowance his compensation shall be treated as his monthly pay: *Provided*, That if such person willfully fails or refuses to follow the prescribed course of vocational rehabilitation which he has elected to follow, in a manner satisfactory to the board, the said board in its discretion may certify to that effect to the bureau and the said bureau shall, during such period of failure or refusal, withhold any part or all of the monthly compensation due such person and not subject to compulsory allotment which the said board may have determined should be withheld: *Provided, however*, That no vocational teaching shall be carried on in any hospital until the medical authorities certify that the condition of the patient is such as to justify such teaching.

The military and naval family allowance appropriation provided for in section eighteen of said act shall be available for the payment of the family allowances provided by this section; and the military and naval compensation appropriation provided for in section nineteen of said act shall be available for the payment of the monthly compensation herein provided. No compensation under Article III of said act shall be paid for the period during which any such person is furnished by said board a course of vocational rehabilitation except as is hereinbefore provided.

[2] Section 204 of Article II of the War Risk Insurance Act provides as follows:

That a family allowance of not exceeding $50 per month shall be granted and paid by the United States upon written application to the bureau by such enlisted man or by or on behalf of any prospective beneficiary, in accordance with and subject to the conditions, limitations, and exceptions hereinafter specified.

* * * * *

Class A. In the case of a man to his wife (including a former wife divorced) and to his child or children—

(*a*) If there is a wife but no child, $15;

(*b*) If there is a wife and one child, $25;

(*c*) If there is a wife and two children, $32.50, with $5 per month additional for each additional child;

(*d*) If there is no wife, but one child, $5;

(*e*) If there is no wife, but two children, $12.50;

(*f*) If there is no wife, but three children, $20;

(*g*) If there is no wife, but four children, $30, with $5 per month additional for each additional child;

(*h*) If there is a former wife divorced who has not remarried and to whom alimony has been decreed, $15.

Class B. In the case of a man or woman to a grandchild, a parent, brother, or sister—

(*a*) If there is one parent, $10;

(*b*) If there are two parents, $20;

(*c*) If there is a grandchild, brother, sister, or additional parent, $5 for each.

In the case of a woman, the family allowances for a husband and children shall be in the same amounts, respectively, as are payable in the case of a man to a wife and children * * *.

Power and duty of board, to provide proper training.
To prescribe courses.
To pay necessary expenses.
To insure vocational rehabilitation.
To place rehabilitated persons.
Rules and regulations.

SEC. 4. That the board shall have the power and it shall be its duty to provide such facilities, instructors, and courses as may be necessary to insure proper training for such persons as are required to follow such courses as herein provided; to prescribe the courses to be followed by such persons; to pay, when in the discretion of the board such payment is necessary, the expense of travel, lodging, subsistence, and other necessary expenses of such persons while following the prescribed courses; to do all things necessary to insure vocational rehabilitation; to provide for the placement of rehabilitated persons in suitable or gainful occupations. The board shall have the power to make such rules and regulations as may be necessary for the proper performance of its duties as prescribed by this act, and is hereby authorized and directed to utilize, with the approval of the Secretary of Labor, the facilities of the Department of Labor, in so far as may be practicable, in the placement of rehabilitated persons in suitable or gainful occupations.

Labor Department facilities to be utilized.
Studies, investigations, and reports.

SEC. 5. That it shall also be the duty of the board to make or cause to have made studies, investigations, and reports regarding the vocational rehabilitation of disabled persons and their placement in suitable or gainful occupations. When the board deems it advisable, such studies, investigations, and reports may be made in cooperation with or through other departments and bureaus of the Government, and the board in its discretion may cooperate with such public or private agencies as it may deem advisable in performing the duties imposed upon it by this act.

Cooperation with public and private agencies.
Occupational therapy of men prior to discharge under control of War and Navy Departments.

SEC. 6. That all medical and surgical work or other treatment necessary to give functional and mental restoration to disabled persons prior to their discharge from the military or naval forces from the United States shall be under the control of the War Department and the Navy Department, respectively. Whenever training is employed as a therapeutic measure by the War Department or the Navy Department a plan may be established between these agencies and the board acting in an advisory capacity to insure, in so far as medical requirements permit, a proper process of training and the proper preparation of instructors for such training. A plan may also be established between the War and Navy Departments and the board whereby these departments shall act in an advisory capacity with the board in the care of the health of the soldier and sailor after his discharge.

Plan to insure proper process of training and preparation of instructors.
Care of the health of soldier after discharge.
Cooperation to insure continuous process of vocational training.

The board shall, in establishing its plans and rules and regulations for vocational training, cooperate with the War Department and the Navy Department in so far as may be necessary to effect a continuous process of vocational training.

Gifts and donations.

[3] SEC. 7. That the board is hereby authorized and empowered to receive such gifts and donations from either public or private sources as may be offered unconditionally. All moneys received as gifts or donations shall be paid into the Treasury of the United States, and shall constitute a permanent fund, to be called the "Special fund for vocational rehabilitation," to be used under the direction of the said board, in connection with the appropriations hereby made or hereafter to be made, to defray the expenses of providing and maintaining courses of vocational rehabilitation; and a full report of all gifts and donations offered and accepted, and all disbursements therefrom, shall be submitted annually to Congress by said board.

Special fund for vocational rehabilitation.
Report to be submitted to Congress of gifts received.
Appropriation $2,000,000.

[3] SEC. 8. That there is hereby appropriated out of any money in the Treasury of the United States not otherwise appropriated, available immediately and until expended the sum of $2,000,000 or such much thereof as may be necessary to be used by the Federal Board for Vocational Education for the purposes of this act, to wit, for renting and remodeling buildings and quarters, repairing, maintaining, and equipping same, and for equipment and other facilities necessary for proper instruction of disabled persons, $250,000; for the preparation of instructors and salaries of instructors, supervisors, and other experts, including necessary traveling expenses, $545,000; for traveling expenses of disabled persons in connection with training and for lodging, subsistence, and other necessary expenses in special cases of persons following prescribed courses, $250,000; for tuition for disabled persons pursuing courses in existing institutions, public or private, $545,000; for the placement and supervision after placement of vocationally rehabilitated persons, $45,000; for studies, investigations, reports and preparation of special courses of instruction, $55,000; for miscellaneous contingencies, including special mechanical appliances necessary in special cases for disabled men, $110,000; and for the administrative expenses of said board incident to performing the duties imposed by this act, including salaries of such assistants, experts, clerks, and other employees in the District of Columbia or elsewhere as the board may deem necessary, actual traveling and other necessary expenses incurred by the members of the Board and by its employees under its orders, including attendance at meetings of educational associations and other organizations, rent and equipment of offices in the District of Columbia and elsewhere, purchase of books of reference, law books, and periodicals, stationery, typewriters and exchange thereof, miscellaneous supplies, postage on foreign mail, printing and binding to be done at the Government Printing Office, and all necessary expenses, $200,000.

Purposes for which appropriation may be used.

SEC. 9. That said board shall file with the Clerk of the House and the Secretary of the Senate on July first and every three months thereafter, for the information of the Congress, an itemized account of all expenditures made under this act, including names and salaries of employees. Said board shall also make an annual report to the Congress of its doing under this act on or before December first of each year.

Quarterly report of all expenditures to be submitted to Congress.

SEC. 10. That section three hundred and four of the act entitled "An act to authorize the establishment of a Bureau of War Risk Insurance in the Treasury Department," approved September second, nineteen hundred and fourteen, as amended, is hereby repealed.

Section 304, war risk insurance act repealed.

SEC. 11. No person of draft age physically fit for military service shall be exempted from such service on account of being employed under the terms of this act.

Employees under act not exempted from military service.

(Amendment of March 4, 1921, Pub. 389, 66th Cong.) That no person who has been declared eligible for training under the provisions of the vocational rehabilitation act, for whom training has been prescribed and who has been notified by the board to begin training shall be eligible to the benefits of said act in the event of his failure to commence training within a reasonable time after notice has been sent such person by the board: *Provided further*, That except when such failure is due, in the opinion of the board, to physical incapacity, such time shall not be longer than twelve months after the passage of this act for persons already declared eligible and notified to begin training, and twelve months after notice is given for persons hereafter declared eligible and notified to begin training.

Period within which training course shall be commenced.

(Deficiency Act, March 6, 1920, 41 Stat. 504.) The Secretary of War shall have authority to transfer to the Federal Board for Vocational Education, without compensation therefor, certain surplus machine tools and other equipment belonging to the War Department and now in possession of the Federal board and being used by that board as equipment in schools for vocational education controlled by the board. Property so transferred shall be dropped from the records of the War Department on the filing with the War Department of an itemized receipt for the articles thus transferred. An itemized statement of the articles transferred hereunder and the cost price thereof shall be reported to Congress by the Secretary of War.

Transfer of surplus of machines, etc., of War Department authorized.

[3] The use of the special fund authorized by section 7 together with the appropriation provided by section 8 was extended by the act of Feb. 26, 1919, entitled: "An act extending the use of the special fund for vocational education provided by section seven of the vocational rehabilitation act, approved June twenty-seventh, nineteen hundred and eighteen, and for other purposes," as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the special fund for vocational education, authorized by section seven of the vocational rehabilitation act, approved June twenty-seventh, nineteen hundred and eighteen, together with the items of appropriation made by said act, are hereby made available, in addition to the purposes therein prescribed, for such other expenses as in the discretion of the board is deemed necessary and proper for the payment of necessary travel, lodging, subsistence, and other expenses of disabled men while under investigation by the board to determine their eligibility for training under the act, and the purchase of supplies, equipment, and clothing for disabled men when ready to enter employment, and the traveling expenses of such men to place of employment and for supplementing any or all of the other items of appropriation made by said act.

"Approved, February 26, 1919."

Period of training to be counted as constructive residence under homestead laws.

(Act of September 29, 1919, 41 Stat. 288.) That every person who, after discharge from the military or naval service of the United States during the war against Germany and its allies, is furnished any course of vocational rehabilitation under the terms of the vocational rehabilitation act approved June 27, 1918, upon the ground that he comes within Article III of the act of October 6, 1917, fortieth volume, Statutes at Large, page 398, and who before entering upon such course shall have made entry upon or application for public lands of the United States under the homestead laws, or who has settled or shall hereafter settle upon public lands, shall be entitled to a leave of absence from his land for the purpose of undergoing training by the Federal Board of Vocational Education, and such absence, while actually engaged in such training shall be counted as constructive residence: *Provided*, That no patent shall issue to any homestead settler who has not resided upon, improved, and cultivated his homestead for a period of at least one year.

Appropriation sundry civil act, March 4, 1921, Public 389, 66th Cong.

Personal services.

Funeral expenses.

Medical service and treatment.

Printing and binding.

Purchase of books and periodicals.

Revolving fund.

Rent.

Salary limitations.

VOCATIONAL REHABILITATION: For an additional amount for carrying out the provisions of the act entitled "An act to provide for the vocational rehabilitation and return to civil employment of disabled persons discharged from the military or naval forces of the United States, and for other purposes," approved June 27, 1918, as amended, including personal services in the District of Columbia and elsewhere, funeral and other incidental expenses (including transportation of remains) of deceased trainees of the board, necessary medical service and treatment to trainees hereafter required in cases where such service or treatment is not provided by the Bureau of War Risk Insurance, and not more than $60,000 may be used for such service and treatment heretofore furnished; printing and binding to be done at the Government Printing Office; law books, books of reference, and periodicals, $65,000,000 of which sum not exceeding $500,000 may be used by the Federal Board for Vocational Education as a revolving fund for the purpose of making advancements to persons commencing or undergoing training under the vocational rehabilitation act, such advancements to bear no interest and to be reimbursed in such installments as may be determined by the Federal board by proper deductions from the monthly maintenance and support allowance allowed by said act as amended, together with the unexpended balances of the appropriations for this purpose for the fiscal years 1920 and 1921, of which sums not exceeding $5,000 may be expended for rent of quarters in the District of Columbia if space is not provided by the Public Buildings Commission: *Provided*, That the salary limitations placed upon the appropriation for vocational rehabilitation by the sundry civil appropriation act approved July 19, 1919, modified as provided by the sundry civil appropriation act approved June 5, 1920, shall apply to the appropriation herein made.

Sundry civil appropriation act, July 19, 1919, 41 Stat. 178.

That no person shall be paid by said board out of the appropriation contained in this act, or the act approved July 11, 1919, amending section 2 of the act approved June 27, 1918, at a rate of compensation exceeding $2,500 per annum and rates above that sum, except not to exceed the following: One at $6,000, two at $5,000 each, twenty-eight in excess of $3,500 and not in excess of $4,000 each, twenty-seven at $3,500 each, seventy at $3,000 each, sixty at $2,750 each, and one hundred at $2,500 each.

Sundry civil appropriation act, June 5, 1920, 41 Stat. 887.

That the salary limitations placed upon the appropriation for vocational rehabilitation by the sundry civil appropriation act approved July 19, 1919, shall apply to the appropriation herein made except that there may be employed during the fiscal year 1921, in addition to this limitation, employees at annual rates of compensation as follows: One at not to exceed $6,500, one at not to exceed $5,000, two at not to exceed $4,000 each, ten at not to exceed $3,500 each, ten at not to exceed $3,250 each, and ten at not to exceed $3,000 each.

ESTABLISHMENT OF VETERANS' BUREAU.

[PUBLIC—No. 47—67TH CONGRESS.]

[H. R. 6611.]

An act to establish a Veterans' Bureau and to improve the facilities and service of such bureau, and further to amend and modify the War Risk Insurance Act.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

TITLE I.—VETERANS' BUREAU.

SECTION 1. There is hereby established an independent bureau under the President to be known as the Veterans' Bureau, the director of which shall be appointed by the President, by and with the advice and consent of the Senate. The director of the Veterans' Bureau shall receive a salary of $10,000 per annum, payable monthly.

The word "director," as hereinafter used in this act, shall mean the Director of the Veterans' Bureau.

The powers and duties pertaining to the office of the Director of the Bureau of War Risk Insurance now in the Treasury Department are hereby transferred to the director, subject to the general direction of the President, and the said office of the Director of the Bureau of War Risk Insurance is hereby abolished.

There shall be included on the technical and administrative staff of the director such staff officers, experts, and assistants as the director shall prescribe, and there shall be in the Veterans' Bureau such sections and subdivisions thereof as the director shall prescribe.

SEC. 2. The director, subject to the general direction of the President, shall administer, execute, and enforce the provisions of this act, and for that purpose shall have full power and authority to make rules and regulations not inconsistent with the provisions of this act, which are necessary or appropriate to carry out its purposes and shall decide all questions arising under this act except as otherwise provided herein.

SEC. 3. The functions, powers, and duties conferred by existing law upon the Bureau of War Risk Insurance are hereby transferred to and made part of the Veterans' Bureau.

The functions, powers, and duties conferred upon the Federal Board for Vocational Education by the act entitled "An act to provide for vocational rehabilitation and return to civil employment of disabled persons discharged from the military or naval forces of the United States, and for other purposes," approved June 27, 1918, and amendments thereto, are hereby transferred to and made a part of the Veterans' Bureau.

SEC. 4. All personnel, facilities, property, and equipment, including leases, contracts, and other obligations and instrumentalities in the District of Columbia and elsewhere of the Bureau of War Risk Insurance, of the United States Public Health Service, as described and provided in a written order of the Treasury Department issued and signed by the Secretary of the Treasury on April 19, 1921, and designated "Order relative to the transfer of certain activities of the United States Public Health Service, relating to the Bureau of War Risk Insurance, including the trainees of the Rehabilitation Division of the Federal Board for Vocational Education," and of the Rehabilitation Division of the Federal Board for Vocational Education, as a result of the administration of the act approved June 27, 1918, and amendments thereto, are hereby transferred to and made a part of the Veterans' Bureau under the control, management, operation, and supervision of the director, and subject to such change in designation and organization as he may deem necessary in carrying out the provisions of this act: *Provided*, That all commissioned personnel detailed or hereafter detailed from the United States Public Health Service to the Veterans' Bureau, shall hold the same rank and grade, shall receive the same pay and allowances and shall be subject to the same rules for relative rank and promotion as now or hereafter may be provided by law for commissioned personnel of the same rank or grade or performing the same or similar duties in the United States Public Health Service.

SEC. 5. All records, files, documents, correspondence, and other papers relating to service rendered or to be rendered by the United States Public Health Service in the medical examination, assignment to hospitals, and treatment of persons who are now or have been patients and beneficiaries of the Bureau of War Risk Insurance or of the Rehabilitation Division of the Federal Board for Vocational Education, as a result of the administration of the act apppoved June 27, 1918, and amendments thereto, and as described and provided in a written order of the Treasury Department

issued and signed by the Secretary of the Treasury on April 19, 1921, and designated "Order relative to the transfer of certain activities of the United States Public Health Service relating to the Bureau of War Risk Insurance, including the trainees of the Rehabilitation Division of the Federal Board for Vocational Education," shall be transferred to the Veterans' Bureau.

All records, files, documents, correspondence, and other papers in the possession of the Bureau of War Risk Insurance, and those which as a result of the administration of the act approved June 27, 1918, and amendments thereto, are in the possession of the Rehabilitation Division of the Federal Board for Vocational Education shall be transferred to the Veterans' Bureau.

SEC. 6. The director shall establish a central office in the District of Columbia, and not more than fourteen regional offices and such suboffices, not exceeding one hundred and forty in number, within the territory of the United States and its outlying possessions as may be deemed necessary by him and in the best interests of the work committed to the Veterans' Bureau and to carry out the purposes of this act. Such regional offices may, pending final action by the director in case of an appeal, under such rules and regulations as may be prescribed by the director, exercise such powers for hearing complaints and for examining, rating, and awarding compensation claims, granting medical, surgical, dental, and hospital care, convalescent care, and necessary and reasonable after care, making insurance awards, granting vocational training, and all other matters delegated to them by the director as could be performed lawfully under this act by the central office. The suboffices shall have such powers as may be delegated to them by the director, except to make compensation and insurance awards and to grant vocational training.

The regional offices and suboffices, with all authority to establish such offices, shall terminate on June 30, 1926, but nothing herein shall prevent the director from terminating any regional offices or suboffices when in his judgment this may be done without detriment to the administration of this act, and upon such termination all records and supplies pertaining thereto shall be delivered to the central office.

SEC. 7. The beneficiaries of the Bureau of War Risk Insurance and the Rehabilitation Division of the Federal Board for Vocational Education shall hereafter be the beneficiaries of the Veterans' Bureau, and complete individual record of each beneficiary shall be kept by the Veterans' Bureau.

SEC. 8. All sums heretofore appropriated for carrying out the provisions of the war-risk insurance act and amendments thereto, and to carry out the provisions of the act entitled "An act to provide for vocational rehabilitation and return to civil employment of disabled persons discharged from the military or naval forces of the United States, and for other purposes," approved June 27, 1918, and amendments thereto, shall, where unexpended, be made available for the Veterans' Bureau, and may be expended in such manner as the director deems necessary in carrying out the purposes of this act, with the restrictions heretofore imposed as to number of persons that may be employed at stated salaries.

SEC. 9. The director, subject to the general directions of the President, shall be responsible for the proper examination, medical care, treatment, hospitalization, dispensary, and convalescent care, necessary and reasonable after care, welfare of, nursing, vocational training, and such other services as may be necessary in the carrying out of the provisions of this act, and for that purpose is hereby authorized to utilize the now existing or future facilities of the United States Public Health Service, the War Department, the Navy Department, the Interior Department, the National Homes for Disabled Volunteer Soldiers, and such other governmental facilities as may be made available for the purposes set forth in this act; and such governmental agencies are hereby authorized and directed to furnish such facilities, including personnel, equipment, medical, surgical, and hospital services and supplies, as the director may deem necessary and advisable in carrying out the provisions of this act, in addition to such governmental facilities as are hereby made available.

In order to standardize the character of examination, medical care, treatment, hospitalization, dispensary, and convalescent care, nursing, vocational training, and such other services as may be necessary for beneficiaries under this act, the director shall maintain an inspection service, with authority to examine all facilities and services utilized in carrying out the purpose of this act, and for this purpose, with the approval of the President, may utilize such other Government or private agencies as may be deemed practicable and necessary. The head of the inspection service shall report to the director in the manner the director may prescribe the result of each examination of facilities and services, and shall recommend to him methods of standardizing such facilities and services.

When, in the opinion of the director, the facilities and services utilized for the hospitalization, medical care, and treatment for beneficiaries under this act are unsatisfactory, the director shall make arrangements for the further hospitalization, care, and treatment of such beneficiaries by other means.

In the event that there is not sufficient Government hospital and other facilities for the proper medical care and treatment of beneficiaries under this act, and the director deems it necessary and advisable to secure additional Government facilities, he may, within the limits of appropriations made for carrying out the provisions of this paragraph, and with the approval of the President, improve or extend existing governmental facilities, or acquire additional facilities by purchase or otherwise. Such new property and structures as may be so improved, extended, or acquired shall become part of the permanent equipment of the Veterans' Bureau or of some one of the now existing agencies of the Government, including the War Department, Navy Department, Interior Department, Treasury Department, the National Homes for Disabled Volunteer Soldiers, in such a way as will best serve the present emergency, taking into consideration the future services to be rendered the veterans of the World War, including the beneficiaries under this act.

In the event Government hospital facilities and other facilities are not thus available or are not sufficient, the director may contract with State, municipal, or private hospitals for such medical, surgical, and hospital services and supplies as may be required, and such contracts may be made for a period of not exceeding five years and may be for the use of a ward or other hospital unit or on such other basis as may be in the best interest of the beneficiaries under this act.

The President is hereby authorized, should he deem it necessary and advisable for the proper medical care and treatment of beneficiaries under this act, to transfer to the director the operation, management, and control of specifically designated hospitals now under the jurisdiction of the Public Health Service. Such hospitals when transferred shall be used exclusively for beneficiaries under this act and shall be under the operative control of the director for such period of time as the President may prescribe.

SEC. 10. For the purpose of this act, the director is authorized to detail from time to time clerks or persons employed in the bureau, to make examinations into the merits of compensation and insurance claims, whether pending or adjudicated, as he may deem proper, and to aid in the preparation, presentation, or examination of such claims; and any such person so detailed shall have power to administer oaths, take affidavits, and certify to the correctness of the papers and documents pertaining to the administration of this act. Nothing in this section shall be construed to authorize a travel allowance to clerks or persons for transportation or subsistence outside of the district in which they are employed.

SEC. 11. The director is hereby authorized to make such rules and regulations as may be deemed necessary in order to promote good conduct on the part of persons who are receiving care or treatment in hospitals, homes, or institutions as patients or beneficiaries of said bureau during their stay in such hospitals, homes, institutions, or training centers. Penalties for the breach of such rules and regulations may, with the approval of the director, extend to a forfeiture by the offender of such portion of the compensation payable to him, not exceeding three-fourths of the monthly installment per month for three months, for a breach committed while receiving treatment in such hospital, home, institution, or training center as may be prescribed by such rules and regulations: *Provided*, That the offender shall have the right to appeal the decision involving the forfeiture of a part of his compensation to a board of three persons which shall be established and appointed by the director in September of each year for each regional district. Such board shall be known as the Board on Discipline and Morale. It shall serve without compensation, and at least one member of such board shall be an ex-service man and a member of some war veterans' organization. No person who is in the employ of the United States shall be a member of such board. The decision of such board, after hearing all the evidence presented by the offender and those charging a breach of the rules and regulations, shall be final.

SEC. 12. The director may set forth in regulations to be prescribed by him the conditions and limitations whereby all patients or beneficiaries of the Veterans' Bureau who are receiving treatment through the bureau as inmates of a hospital may allot any proportion or proportions or any fixed amount or amounts of their monthly compensation for such purposes and for the benefit of such person or persons as they may direct.

In case such inmate has not allotted three-fourths of his monthly compensation, regulations to be made by the director may provide that any unallotted portion of such three-fourths compensation may be deposited to his credit with the Treasurer of the United States to accumulate at such rate of interest as the Secretary of the Treasury may determine but at a rate never less than 3½ per centum per annum, payable for no period, however, of less than six months, and when payable shall be paid, principal and interest, to such patient if living; otherwise, to any beneficiary or beneficiaries he may have designated, or, if there be no such beneficiary, then to

the executor or administrator of the estate of such deceased person: *Provided*, That this paragraph shall not be so construed as to prevent payment by the bureau from the amounts due to the decedent's estate of his funeral expenses, expenses of last illness, board, rent, lodging, or other household expenses for which decedent is liable, provided a claim therefor is presented by the creditors or by the person or persons who actually paid the same before settlement by the Veterans' Bureau.

The Secretary of the Treasury is hereby authorized to invest and reinvest the said allotments deposited with him, or any part thereof, in interest-bearing obligations of the United States and to sell the obligations for the purposes of said funds.

SEC. 13. In addition to the care, treatment, and appliances now authorized by law, said bureau also shall provide without charge therefor hospital, dental, medical, surgical, and convalescent care and treatment and prosthetic appliances for any member of the military or naval forces of the United States separated therefrom under honorable conditions disabled by reason of any wound or injury received or disease contracted, or by reason of any aggravation of a preexisting injury or disease, specifically noted at examination for entrance into or employment in the active military or naval service, while in the active military or naval service of the United States on or after April 6, 1917: *Provided*, That the wound or injury received or disease contracted, or aggravation of a preexisting injury or disease, for which such hospital, dental, medical, surgical, and convalescent care and treatment and prosthetic appliances shall be furnished was incurred in line of duty and not caused by his own willful misconduct: *Provided further*, That application for such care and treatment and appliances provided for in this section shall be made within one year from date of separation from service or from the date this act goes into effect, whichever is the later.

SEC. 14. The director shall file with the Clerk of the House and the Secretary of the Senate on the first day of the next regular session after this act takes effect an itemized account of all expenditures, classified by regional offices and suboffices, made under this act, including names, classifications, and salaries of all staff officers, experts, assistants, and employees, and the nature and terms of all contracts made under the authority of this act, and the names and principal place of business of the parties thereto. Thereafter, on the first Monday in December of each year, the director shall make a report to Congress of his doings under this act for the preceding fiscal year.

Any person who shall knowingly make or cause to be made, or conspire, combine, aid or assist in, agree to, arrange for, or in anywise procure the making or presentation of a false or fraudulent affidavit, declaration, certificate, statement, voucher, or paper or writing purporting to be such, concerning any claim or the approval of any claim for compensation or the payment of any money, for himself or for any other person, under Article III of the war risk insurance act, or any acts amendatory of or supplemental to such Article III, shall forfeit all rights, claims, and benefits under such Article III, and in addition to any and all other penalties imposed by law shall be guilty of a misdemeanor and upon conviction thereof shall be punished by a fine of not more than $1,000 or imprisonment for not more than one year, or by both such fine and imprisonment, for each such offense.

TITLE II.—AMENDMENTS TO THE WAR RISK INSURANCE ACT.

SEC. 15. Section 29 of the war risk insurance act is hereby amended to read as follows:

"SEC. 29. The discharge or dismissal of any person from the military or naval forces on the ground that he is an enemy alien, conscientious objector, or a deserter, or is guilty of mutiny, treason, spying, or any offense involving moral turpitude, or willful and persistent misconduct, shall terminate any insurance granted on the life of such person under the provisions of Article IV, and shall bar all rights to any compensation under Article III or any insurance under Article IV: *Provided*, That, as to converted insurance, the cash surrender value thereof, if any, on the date of such discharge or dismissal shall be paid the insured, if living, and if dead to the designated beneficiary: *Provided further*, That an enemy alien who volunteered or who was drafted into the Army, Navy, or Marine Corps of the United States during the World War, and who was not discharged from the service on his own application or solicitation, by reason of his being an enemy alien, and whose service was honest and faithful, shall be entitled to the benefit of the war risk insurance act and all amendments thereto: *Provided further*, That in case any person has been dishonorably discharged from the military or naval forces as a result of a court-martial trial, and it is thereafter established to the satisfaction of the director that at the time of the commission of the offense resulting in such court-martial trial and discharge that such person was insane, such person shall be entitled to the compensation and insurance benefits of the war risk insurance act."

SEC. 16. Section 31 of the war risk insurance act is hereby amended by adding thereto a subsection to be known as subsection (a) and to read as follows:

"(a) Any person who between the 6th day of April, 1917, and the 11th day of November, 1918, applied for enlistment or enrollment in the military or naval forces, and who was accepted provisionally and directed or ordered to a camp, post, station, or other place for final acceptance into such service, shall be deemed to have the same status as an inducted man not yet accepted and enrolled for active service during the period while such person was complying with such order or direction, and during such compliance, and until his final acceptance or rejection for enlistment or enrollment into the military or naval forces, shall be entitled to the same benefits under Articles III and IV of the war risk insurance act as an inducted man not yet accepted and enrolled for active service."

SEC. 17. Section 210 of the war risk insurance act as amended is hereby amended to read as follows:

"SEC. 210. Upon receipt of any application for family allowance, the director shall make all proper investigations and shall make an award, on the basis of which award the amount of the allotments to be made by the man shall be certified to the War Department or Navy Department, as may be proper. Whenever the director shall have reason to believe that an allowance has been improperly made or that the conditions have changed, he shall investigate or reinvestigate and may modify the award. The amount of each monthly allotment and allowance shall be determined according to the family conditions existing on the first day of the month: *Provided*, That whenever an award of allotment or allowance, or both, covering any period has been paid to, or on behalf of, a person designated by the enlisted man as beneficiary of his allotment, no recovery of the allotments paid in such cases shall hereafter be made for any reason whatsoever; and no recovery of the allowances paid in such cases shall hereafter be made for any reason whatsoever except where it is shown that the person receiving the allowance does not bear the relationship to the enlisted man which is required by the war risk insurance act, and except, also, in cases of manifest fraud."

SEC. 18. Section 300 of the war risk insurance act is hereby amended to read as follows:

"SEC. 300. For death or disability resulting from personal injury suffered or disease contracted in the line of duty on or after April 6, 1917, or for an aggravation of a disability existing prior to examination, acceptance, and enrollment for service, when such aggravation was suffered and contracted in the line of duty on or after April 6, 1917, by any commissioned officer or enlisted man, or by any member of the Army Nurse Corps (female) or of the Navy Nurse Corps (female) when employed in the active service under the War Department or Navy Department, the United States shall pay to such commissioned officer or enlisted man, member of the Army Nurse Corps (female) or of the Navy Nurse Corps (female) or, in the discretion of the director, separately to his or her dependents, compensation as hereinafter provided: but no compensation shall be paid if the injury, disease, or aggravation has been caused by his own willful misconduct. That for the purposes of this section every such officer, enlisted man, or other member employed in the active service under the War Department or Navy Department who was discharged or who resigned prior to the date of approval of this amendatory act, and every such officer, enlisted man, or other member employed in the active service under the War Department or Navy Department on or before November 11, 1918, who hereafter is discharged or resigns, shall be held and taken to have been in sound condition when examined, accepted, and enrolled for service, except as to defects, disorders, or infirmities, made of record in any manner by proper authorities of the United States at the time of, or prior to, inception of active service, to the extent to which any such defect, disorder, or infirmity was so made of record: *Provided further*, That an ex-service man who is shown to have an active pulmonary tuberculosis or neuropsychiatric disease (of more than 10 per centum degree of disability in accordance with the provisions of subdivision (2) of section 302 of the war risk insurance act, as amended) developing within two years after separation from the active military or naval service of the United States shall be considered to have acquired his disability in such service, or to have suffered an aggravation of a preexisting pulmonary tuberculosis or neuropsychiatric disease in such service, but nothing in this proviso shall be construed to prevent a claimant from receiving the benefits of compensation and medical care and treatment for a disability due to these diseases of more than 10 per centum degree (in accordance with the provisions of subdivision (2) of section 302 of the war risk insurance act, as amended) at a date more than two years after separation from such service, if the facts of the case substantiate his claim. This section shall be deemed to be in effect as of April 6, 1917."

SEC. 19. Section 305 of the war risk insurance act is hereby amended to read as follows:

"Sec. 305. Upon its own motion or upon application the bureau may at any time review an award, and, in accordance with the facts found upon such review, may end, diminish, or increase the compensation previously awarded, or, if compensation is increased, or, if compensation has been refused, reduced or discontinued, may award compensation in proportion to the degree of disability sustained as of the date such degree of disability began, but not earlier than the date of discharge or resignation."

SEC. 20. Section 306 of the war risk insurance act is hereby amended to read as follows:

"SEC. 306. No compensation shall be payable for death or disability which does not occur prior to or within one year after discharge or resignation from the service, except that where, after a medical examination made pursuant to regulations, a certificate has been obtained from the director at the time of discharge or resignation from the service, or within one year thereafter, or within one year after the passage of this amendatory act, whichever is the later, to the effect that the injured person at the time of his discharge or resignation was suffering from injury likely to result in death or disability, compensation shall be payable for death or disability whenever occurring, proximately resulting from such injury."

SEC. 21. Section 313 of the war risk insurance act, as amended, is hereby amended by adding thereto, immediately following subsection (2) thereof, a new subsection to be known as subsection (2a) and to read as follows:

"(2a) The Veterans' Bureau is hereby authorized to pay the beneficiary or other person or persons in whose name an action may have been commenced or prosecuted, and to all witnesses in such action, fees and mileage, the same as is now paid and allowed to witnesses in the United States courts, in going to, remaining at, and returning from place of trial, and without any regard to whether the action, if any, is brought or prosecuted in a court of the United States or some other court.

"In all cases of assignment of causes of action under this section, whether the assignment be heretofore or hereafter made, where it shall appear to the director to be to the best interests of the beneficiary so to do, the director, acting for and in the name of the United States, may assign the cause of action back to the beneficiary or to his personal representatives."

SEC. 22. A new section is hereby added to Article III of the war risk insurance act to be known as section 315, and to read as follows:

"SEC. 315. That no person admitted into the military or naval forces of the United States after six months from the passage of this amendatory act shall be entitled to the compensation or any other benefits or privileges provided under the provisions of Article III of the war risk insurance act, as amended."

SEC. 23. Section 402 of the war risk insurance act is hereby amended by adding thereto a subsection to be known as subsection (a) and to read as follows:

"(a) Where a beneficiary at the time of designation by the insured is within the permitted class of beneficiaries and is the designated beneficiary at the time of the maturity of the insurance because of the death of the insured, such beneficiary shall be deemed to be within the permitted class even though the status of such beneficiary shall have been changed."

SEC. 24. Section 404 of the war risk insurance act is hereby amended to read as follows:

"SEC. 404. During the period of the war and thereafter until converted the insurance shall be term insurance for successive terms of one year each. Not later than five years after the date of the termination of the war as declared by proclamation of the President of the United States the term insurance shall be converted, without medical examination, into such form or forms of insurance as may be prescribed by regulations and as the insured may request. Regulations shall provide for the right to convert into ordinary life, twenty-payment life, endowment maturing at age sixty-two, and into other usual forms of insurance, and shall prescribe the time and method of payment of the premiums thereon, but payments of premiums in advance shall not be required for periods of more than one month each and may be deducted from the pay or deposit of the insured or be otherwise made at his election.

"In case where an insured whose yearly renewable term insurance has matured by reason of total permanent disability is found and declared to be no longer permanently and totally disabled, and where the insured is required under regulations to renew payment of premiums on said term insurance, and where this contingency is extended beyond the five-year period during which said yearly renewable term insurance otherwise must be converted, there shall be given such insured an additional period of two years from the date on which he is required to renew payment of premiums in which to convert said term insurance as hereinbefore provided."

SEC. 25. A new section is hereby added to Article IV of the war risk insurance act to be known as section 406, and to read as follows:

"SEC. 406. Whenever benefits under United States Government life insurance (converted insurance) become or have become payable because of total permanent disability of the insured or because of the death of the insured as a result of disease or injury traceable to the extra hazard of the military or naval service as such hazard may be determined by the director, the liability shall be borne by the United States, and the director is hereby authorized and directed to transfer from the military and naval insurance appropriation to the United States Government life insurance fund a sum which, together with the reserve of the policy at the time of maturity by total permanent disability or death, will equal the then value of such benefits. When a person receiving total permanent disability benefits under a United States Government life policy (converted policy) recovers from such disability and is then entitled to continue a reduced amount of insurance, the director is hereby authorized and directed to transfer to the military and naval insurance appropriation all of the loes reserve to the credit of such policy claim except a sum sufficient to set up the then required reserve on the reduced amount of insurance that may be continued, which sum shall be retained in the United States Government life insurance fund for the purpose of such reserve."

SEC. 26. A new section is hereby added to Article IV of the war risk insurance act (including therein section 14 of the act entitled "An act to amend and modify the war risk insurance act," approved December 24, 1919), to be known as section 407, and to read as follows:

"SEC. 407. If no person within the permitted class of beneficiaries survive the insured, then there shall be paid to the estate of the insured the monthly installments payable and applicable under the provisions of Article IV of the war risk insurance act: *Provided*, That in cases where the estate of the insured would escheat under the laws of the place of his residence the insurance shall not be paid to the estate of the insured, but shall escheat to the United States and shall be credited to the United States Government life insurance fund or the military and naval insurance appropriation, as may be proper. This section shall be deemed to be in effect as of October 6, 1917."

SEC. 27. A new section is hereby added to Article IV of the war risk insurance act to be known as section 408, and to read as follows:

"SEC. 408. In the event that all provisions of the rules and regulations other than the requirements as to the physical condition of the applicant for insurance have been complied with, an application for reinstatement of lapsed or canceled yearly renewable term insurance or application for United States Government life insurance (converted insurance) hereafter made may be approved: *Provided*, That the applicant's disability is the result of an injury or disease or of an aggravation thereof suffered or contracted in the active military or naval service during the World War: *Provided further*, That the applicant during his lifetime submits proof satisfactory to the director showing the service origin of the disability or aggravation thereof and that the applicant is not totally and permanently disabled. As a condition, however, to the acceptance of an application for the reinstatement of lapsed or canceled yearly renewable term insurance or United States Government life insurance (converted insurance) the applicant shall be required to pay all the back monthly premiums which would have become payable if such insurance had not lapsed, together with interest at the rate of 5 per centum per annum compounded annually on each premium from the date said premium is due by the terms of the policy: *Provided further*, That where any soldier has heretofore allowed his insurance to lapse, while suffering from wounds or disease suffered or contracted in line of service, and was at the time he allowed his said policy to lapse entitled to compensation on account thereof in a sum equal to or in excess of the amount due from him in premiums on his said insurance, and has since died from said wounds or disease without collecting or making claim for said compensation, or being allowed to reinstate his said policy on account of his physical condition, then and in that event said policy shall not be considered as lapsed, and the Veterans' Bureau is hereby authorized and directed to pay to the beneficiaries of said soldier under said policy the amount of said insurance less the premiums and interest thereon at 5 per centum per annum compounded annually in installments as provided by law."

SEC. 28. A new section is hereby added to Article IV of the war risk insurance act to be known as section 409, and to read as follows:

"SEC. 409. The Veterans' Bureau is authorized to make provision in accordance with regulations, whereby the payment of premiums on yearly renewable term insurance and United States Government life insurance (converted insurance) on

the due date thereof may be waived and the insurance may be deemed not to lapse in the cases of the following persons, to wit: (a) Those who are confined in a hospital under said bureau for a compensable disability during the period while they are so confined; (b) those who are rated as temporarily totally disabled by reason of an injury or disease entitling them to compensation during the period of such total disability and while they are so rated: *Provided*, That such relief from payment of premiums on renewable term insurance on the due date thereof shall be for full calendar months, beginning with the month in which said confinement to hospital, or temporary total disability rating begins, and ending with that month during the half or major fraction of which the person is confined in hospital, or is rated as temporarily totally disabled: *Provided further*, That all premiums, the payment of which when due is waived as above provided, shall bear interest at the rate of 5 per centum per annum compounded annually from the due date of each premium, and if not paid by the insured shall be deducted from the insurance when the same matures either because of permanent total disability or death."

SEC. 29. A new section is hereby added to Article IV of the war risk insurance act to be known as section 410, and to read as follows:

"SEC. 410. Under such rules and regulations as the Director of the Veterans' Bureau and the Postmaster General may prescribe, the Postmaster General is hereby authorized to receive the premiums on yearly renewable term insurance and United States Government life insurance (converted insurance) and to act for and turn over to the Treasurer of the United States the money so received, and if the money-order system is used as an agency for the transmission of such money, the Postmaster General may adopt a specially-designed money-order form for such purpose, and he also is authorized to receive and transmit to the Veterans' Bureau applications for reinstatement of lapsed insurance and applications for conversion of yearly renewable term insurance."

SEC. 30. A new section is hereby added to Article IV of the war risk insurance act to be known as section 411, and to read as follows:

"SEC. 411. Subject to the provisions of section 29 of the war risk insurance act and amendments thereto policies of insurance heretofore or hereafter issued in accordance with Article IV of the war risk insurance act shall be incontestable after six months from date of issuance, or reinstatement, except for fraud or nonpayment of premiums."

Approved, August 9, 1921.

EXECUTIVE ORDER.

Whereas section 9 of the act of Congress entitled "An act to establish a Veterans' Bureau and to improve the facilities and service of such bureau, and further to amend and modify the war risk insurance act," approved August 9, 1921, provides that—

"SEC. 9. The director, subject to the general directions of the President, shall be responsible for the proper examination, medical care, treatment, hospitalization, dispensary, and convalescent care, necessary and reasonable after care, welfare of, nursing, vocational training, and such other services as may be necessary in the carrying out of the provisions of this act, and for that purpose is hereby authorized to utilize the now existing or future facilities of the United States Public Health Service, the War Department, the Navy Department, the Interior Department, the National Homes for Disabled Volunteer Soldiers, and such other governmental facilities as may be made available for the purposes set forth in this act; and such governmental agencies are hereby authorized and directed to furnish such facilities, including personnel, equipment, medical, surgical, and hospital services and supplies as the director may deem necessary and advisable in carrying out the provisions of this act, in addition to such governmental facilities as are hereby made available. * * *"

And whereas said section 9 further provides that—

"In the event that there is not sufficient Government hospital and other facilities for the proper medical care and treatment of beneficiaries under this act, and the director deems it necessary and advisable to secure additional Government facilities, he may, within the limits of appropriations made for carrying out the provisions of this paragraph, and with the approval of the President, improve or extend existing governmental facilities or acquire additional facilities by purchase or otherwise. Such new property and structures as may be so improved, extended, or acquired shall become part of the permanent equipment of the Veterans' Bureau or of some one of the now existing agencies of the Government, including the War Department, Navy Department, Interior Department, Treasury Department, the National Homes for Disabled Volunteer Soldiers, in such a way as will best serve the present emergency, taking into consideration the future services to be rendered the veterans of the World War, including the beneficiaries under this act."

Now, therefore, by virtue of the authority vested in me by said law, I direct that the following specifically described hospitals now under the supervision of the United States Public Health Service and operated for hospital or sanatoria or other uses for sick and disabled former soldiers, sailors, and marines, are hereby transferred to the United States Veterans' Bureau and shall on and after the effective date hereof operate under the supervision, management, and control of the Director of the United States Veterans' Bureau:

No. 79, Dawsonsprings, Ky.
No. 80, Fort Lyon, Colo.; and
The purveying depot at Perryville, Md.

I hereby direct that the following hospitals now under construction by the Treasury Department or projected under existing law shall, when and as each is completed, be transferred to the United States Veterans' Bureau, and shall on and after the respec-

tive dates of such transfer be operated under the supervision, management, and control of the Director of the United States Veterans' Bureau:

Fort McKenzie, Sheridan, Wyo.
Fort Walla Walla, Walla Walla, Wash.
Excelsior Springs, Elcelsior Springs, Mo.
Catholic Orphan Asylum (Bronx), New York.
Central New England Sanitorium, Rutland, Mass.
Hospital at Tuskegee, Ala.
Hospital in western Pennsylvania.
Hospital on Jefferson Barracks Reservation, St. Louis, Mo.
Hospital in Metropolitan District, New York.

All facilities, property, and equipment now in the possession of the United States Public Health Service in the hospitals above mentioned and all supplies in said hospitals and in the purveying depots at Perryville and North Chicago purchased from funds allotted to said service by the Director of the United States Veterans' Bureau are hereby transferred to the United States Veterans' Bureau.

It is hereby directed that the Surgeon General of the United States Public Health Service, the Director of the United States Veterans' Bureau, and the Director of the Bureau of the Budget shall each designate a representative to form a board, which board shall allocate to the United States Veterans' Bureau and to the United States Public Health Service, with due regard to their respective present and future needs, all supplies transferred to the United States Public Health Service by the War Department, Navy Department, or other governmental agencies, in accordance with law, and said board shall also allocate to the United States Veterans' Bureau and to the United States Public Health Service the buildings and facilities at the purveying depot at North Chicago, Ill., according to their respective needs.

All leases, contracts, and other obligations and instrumentalities of the United States Public Health Service in the District of Columbia or elsewhere and all records, files, documents, correspondence, and other papers relating to the service rendered by the United States Public Health Service in the operation of the hospitals and purveying depots hereby transferred or relating to the medical examination, assignment to hospitals, and treatment of persons who are now or who have been patients and beneficiaries of the United States Veterans' Bureau are hereby transferred to the United States Veterans' Bureau as of the effective date of this order.

The Secretary of the Treasury, with due regard to the needs of the United States Public Health Service, shall authorize and direct the Surgeon General of the United States Public Health Service to detail to the United States Veterans' Bureau for duty until released by the director of the bureau, the commissioned personnel now on duty at the hospitals and purveying depots above mentioned and such other commissioned personnel as may be required for the operation of the Veterans' hospitals and purveying depots, provided that the regular commissioned officers of the United States Public Health Service shall be subject to recall in the discretion of the Surgeon General of that service. Such other personnel of the United States Public Health Service as are now paid from funds allotted by the Director of the United States Veterans' Bureau shall, subject to the approval of the director of the bureau, be transferred and given appointment in the United States Veterans' Bureau in the manner prescribed by civil service laws and regulations.

So that the transfer herein directed may be made with minimum inconvenience this order shall be construed to allow administrative adjustments hereunder to be made effective May 1, 1922.

This order shall not be construed as in any way limiting or curtailing the authority conferred by existing law whereby the Director of the United States Veterans' Bureau may utilize the now existing or future facilities of the United States Public Health Service, the War Department, the Navy Department, the Interior Department, the National Homes for Disabled Volunteer Soldiers, or such other governmental facilities as may be made available for the use of the United States Veterans' Bureau.

(Signed) WARREN G. HARDING.

THE WHITE HOUSE, *April 29, 1922.*

TRAINING DISABLED VETERANS.

Institutions used by the United States Veterans' Bureau for training disabled veterans of the World War during the fiscal year ending June 30, 1922.
