Introduction

The Decision Support System (DSS) Extracts FY 2004 Extracts V. 3.0 software provides a means of exporting data from selected **VISTA** software modules and transmitting it to a Decision Support System (DSS) database residing at the Austin Automation Center (AAC). This transfer is accomplished through a set of extract routines, intermediate files, and transmission routines. Data from **VISTA** packages is stored by the extract routines in the intermediate files, where it is temporarily available for local use and auditing. The data is then transmitted to the AAC, where it is formatted and uploaded into commercial software. After the data has been successfully uploaded into the commercial software, it is purged from the intermediate files.

This document is designed to:

- Provide DSS Teams with technical information regarding each extract.
- Detail the source from which the data element in each extract is obtained.
- Provide DSS Teams with the tools to perform additional data validation.

Medical Records Data Definitions

#727.802 -- ADMISSION EXTRACT (ADM) File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the MAS Admission extract from existing VISTA files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains one nationally determined cross-reference, the "AC" cross-reference on the EXTRACT NUMBER field (#2). This cross-reference is used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

#727.827 -- CLINIC EXTRACT (CLI) File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the Clinic Visit extract from existing *VISTA* files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains one nationally determined cross-reference, the "AC" cross-reference on the EXTRACT NUMBER field (#2). This cross-reference is used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

#727.806 -- DENTAL EXTRACT (DEN) File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the Dental extract from existing *VISTA* files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains one nationally determined cross-reference: the "AC" cross-reference on the EXTRACT NUMBER field (#2). This cross-reference is used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

#727.815 -- EVENT CAPTURE LOCAL EXTRACT (ECS) File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the Event Capture extract from the existing Event Capture **VISTA** files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. Only the extract load should make entries routine.

Since the local site will determine validation techniques, it is intended that the site add whatever cross-references deemed necessary. However, this file contains one nationally determined cross-reference: the "AC" cross-reference on the EXTRACT NUMBER field (#2). This cross-reference is used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

#727.819 -- PHARMACY IV DETAIL EXTRACT (IVP) File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the Pharmacy IV extract from existing *VISTA* files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains one nationally determined cross-reference: the "AC" cross-reference on the EXTRACT NUMBER field (#2). This cross-reference is used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

#727.813 -- LABORATORY EXTRACT (LAB) File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the Laboratory extract from existing *VISTA* files. Entries into this file are made by extracting data by two different methods depending upon whether or not LMIP codes are used. Using LMIP codes, the data are extracted in large part from the WKLD LOG file (#64.03) which is populated by a routine provided by the Laboratory development team. Not using LMIP codes, the data are derived from several Lab files as well as from several other *VISTA* files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains one nationally determined cross-reference: the "AC" cross-reference on the EXTRACT NUMBER field (#2). This cross-reference is used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

#727.824 -- LAB RESULTS EXTRACT (LAR) File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the Laboratory Results extract from existing **VISTA** files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains one nationally determined cross-reference: the "AC" cross-reference on the EXTRACT NUMBER field (#2). This cross-reference is used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

#727.805 -- NURSING EXTRACT (NUR) File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the Nursing extract from existing *VISTA* files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains one nationally determined cross-reference: the "AC" cross-reference on the EXTRACT NUMBER field (#2). This cross-reference is used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

#727.823 -- PAI EXTRACT (PAI) File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the Patient Assessment Instrument (PAI) extract from existing VISTA files. Entries into this file are made by extracting data from the PAF file (#45.9). Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains one nationally determined cross-reference: the "AC" cross-reference on the EXTRACT NUMBER field (#2). This cross-reference is used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

#727.826 -- PROSTHETICS EXTRACT (PRO) File Data Definition

This file contains the data elements as specified by the Decision Support System (DSS) Program Office for the Prosthetics Extract from existing VISTA files. Entries into this file are made by extracting data that originates in the Prosthetics RECORD OF PROS APPLIANCE/REPAIR file (#660). Information respective to the patient for which Prosthetic information is extracted is pulled from the PATIENT file (#2). Once the extracts (making up the records in this file) are approved by the extract manager, entries in this file are loaded into mail messages and transmitted to the commercial vendor. Entries in this file should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross references are deemed necessary to support validation. However, this file contains one nationally determined cross-reference: the "AC" cross-reference on the EXTRACT NUMBER field (#2). This cross-reference is used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *not* be modified directly using VA FileMan.

The field is set to "I" if an inpatient status is found based on these calls.
727.826,8 DATE OF SERVICE	DATE OF SERVICE is defined as the Delivery Date of the patient's prosthetic record and is used as the determining date range when generating the Prosthetics Extract. #727.814 -- RADIOLOGY EXTRACT (RAD) File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the Radiology extract from existing *VISTA* files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains a nationally determined cross-reference: the "AC" cross-reference on the EXTRACT NUMBER field (#2). This cross-reference is used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.

#727.811 -- SURGERY EXTRACT (SUR) File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the Surgery extract from existing **VISTA** files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains one nationally determined cross-reference: the "AC" cross-reference on the EXTRACT NUMBER field (#2). This cross-reference is used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

The field is set to "I" if an inpatient status is found based on these calls.
727.817,8 DAY	An 8-character numeric string that represents the date on which the Treating Specialty change took place.	PATIENT MOVEMENT file (#405); DATE/TIME field (#.01) This field is always exactly 8 numeric characters in length. The format is YYYYMMDD; for example, 19970923. If the date cannot be determined, a default is used. The default date value is the value of the YEAR MONTH field (#1) concatenated with "01" for the day (DD) portion. Year 2000 compliant per vendor.
727.817,9 PRODUCT	The product or feeder key for this extract.	For the Treating Specialty Change extract, the PRODUCT field is null.
727.817,10 ADMISSION DATE	An 8-character numeric string that represents the date of the Admission associated with this Treating Specialty change.	PATIENT MOVEMENT file (#405); ADMISSION/CHECK-IN MOVEMENT field (#.14) PATIENT MOVEMENT FILE (#405); DATE/TIME (#.01) This field is always exactly 8 numeric characters in length. The format is YYYYMMDD; for example, 19970923. If the date cannot be determined, a default is used. The default date value is the value of the YEAR MONTH field (#1) concatenated with "01" for the day (DD) portion. Year 2000 compliant per vendor.

The movement record is the current treating specialty movement.
727.817,15 LOSING TREATING SPECIALTY	The Specialty associated with the losing Facility Treating Specialty for this patient movement. If this movement is not an actual treating specialty change, then it is possible for this field to be the same as NEW TREATING SPECIALTY field (#14).	Using the "ATT3" or "ATT6" cross reference on the PATIENT MOVEMENT file (#405) and the patient pointer (DFN) stored in the PATIENT NO. - DFN field (4) in the TREATING SPECIALTY CHANGE EXTRACT file (#727.817), NEW TREATING SPECIALTY data is derived from the FACILITY TREATING SPECIALTY field (.09) in the PATIENT MOVEMENT file (#405). This facility treating specialty data is a pointer to the FACILITY TREATING SPECIALTY file (#45.7). Using the SPECIALTY field (1) in the FACILITY TREATING SPECIALTY file (#45.7), the pointer to the SPECIALTY file (#42.4) is obtained. This Specialty is then the LOSING Specialty for the Treating Specialty change occurring on the date in the TRT extract record.

#727.809 -- UNIT DOSE LOCAL EXTRACT (UDP) File Data Definition

This file contains data elements as specified by the Decision Support System (DSS) Program Office for the Pharmacy Unit Dose extract from existing *VISTA* files. Entries into this file are made by extracting data from several files. Once approved by the DSS site manager, entries in this file are loaded into an electronic mail message and sent to the commercial vendor. Entries should be made only by the extract load routine.

Since validation techniques will be determined by the local site, it is intended that the site add whatever cross-references deemed necessary. However, this file contains one nationally determined cross-reference: the "AC" cross-reference on the EXTRACT NUMBER field (#2). This cross-reference is used by the DSS Extracts software package as an essential feature for managing and purging data in this file and should not be modified.

This file should *NOT* be modified directly using VA FileMan.
