

This print information (Figure 9) helps you differentiate:

- **Who**—For whom was the message printed (i.e., BLUE,THOMAS E. COMPUTER SPECIALIST).
- **Where**—At what location was the message printed (i.e., Printed at ISC-SF.VA.GOV).
- **When**—When was the message printed (i.e., 02 Aug 99 14:41 as opposed to when the message was actually sent).

If you use the Print new messages by basket option to print all of your new mail, MailMan first prints any new priority mail in your mailbox before printing other new mail in your mailbox.
