Introduction

Overview

The Problem List application is used to document and track a patient's problems. It provides clinicians with a current and historical view of a patient's health care problems across clinical specialties. It will allow each identified problem to be traced through the VistA health care system in terms of treatment, test results, and outcome.

The Problem List application is designed to be used by primary caregivers such as physicians, nurses, social workers, and others, in both inpatient and outpatient settings, as well as by ward clerks and coding clerks.

Various data entry methods are possible with this application.

Features in Problem List

- Allows one problem list for a given patient.
- Tied to coding systems: SNOMED CT and ICD-10-CM.
- Requires minimal data entry.
- Linked to other sections of the medical record, such as CPRS and Health Summary.
- Supports import of problem information from other clinical settings outside the immediate VAMC.
- Uses a common language of terminology, the Lexicon Utility. Each term is well-defined and understandable. A user, site, or application may substitute a preferred synonym. Allows reformulation of a problem.
- Problem List now accommodates the use of the Systematic Nomenclature of Medicine – Clinical Terms (SNOMED CT) for selection of Patient Problems. Problem List is working with Standard Terminology Service (STS) to implement SNOMED CT on both the Enterprise Terminology Server and the Clinical Lexicon, using the New Term Rapid Turnaround (NTRT) strategy for vetting and deployment of novel clinical expressions.

Release Notes - Recent patches

Changes Made by GMPL*2.0*49 – Problem Selection List Enhancements

This patch introduces enhancements to the Problem Selection List feature that may be used as an alternative method to quickly document common and/or frequently used problems by selecting problems from the curated specialty categories containing the top SNOMED CT diagnoses pre-mapped to ICD-10-CM called the VA-National Problem Selection List. This patch includes updates to the Problem Selection List menu items and menu actions to assist in the creation and maintenance of selection lists related to editing and assigning of problem selection lists to users and locations.

If a problem selection list is defined for the System, Division, Location, or User, this area contains the problem categories defined in the list assigned by the CAC.

When the user selects a category, the problems in that category display in this area. This example shows the VA-National Problem Selection List, the category is Cardiology, and the problem is CAD – Coronary Artery Disease.

The screenshot shows the VistA CPRS interface for a patient named 'CPRSPATIENT, DEMO (OUTPATIENT)'. The 'Problem categories' list on the left includes 'Primary Care (VA)', 'Cardiology (VA)', 'Dental (VA)', 'Dermatology (VA)', 'Diabetes (VA)', 'ENT (VA)', 'Emergency Dept (VA)', 'Endo Metab Except Diabetes (VA)', and 'Gastroenterology (VA)'. The 'Cardiology (VA)' category is selected. The 'Problems' list on the right shows 'CAD - Coronary Artery Disease' selected. The 'Active Problems' table on the right lists various medical conditions with their status, descriptions, onset dates, last update dates, and locations.

Stat...	Description	Onset Date	Last Upda...	Location
A	Rash (SCT 271807003) TESTING		Sep 07 2017	4n-Observation
A	Blind left eye (IR) (SCT 274571007)	Sep 07 2017	Sep 07 2017	Prime Care-Eye
A	Congestive heart failure (SCT 42343007)	Sep 07 2017	Sep 07 2017	23 Hour Observ
A	Hypertension (SCT 38341003)		Jan 30 2015	23 Hour Observ
A	Anxiety (SCT 48694002)		May 14 2014	23 Hour Observ
A	neoplasm of lin (ICD-9-CM 799.9) ICD-10-CM I25.101 Unknown And Unspecified Cause Of Morbidity Or Mortality		May 06 2014	4n-Observation
A *	Dry Itchy Skin (ICD-9-CM 799.9) ICD-9-CM Text: Other Unknown And Unspecified Cause Of Morbidity Or Mortality IS Enc: Testing assignment of 799.9 to a free text entry.		Apr 08 2014	4n-Observation
A	SKIN SENSATION DISTURB (ICD-9-CM 782.0) ICD-9-CM Text: Disturbance Of Skin Sensation		Apr 08 2002	Inpatient Visit (I)
A	PAIN IN LIMB (ICD-9-CM 729.5) ICD-9-CM Text: Pain In Limb		Apr 08 2002	Inpatient Visit (I)

When a problem list is assigned, it will display on the left of the Problems tab. The VA-National Problem Selection List is shown above.

To support these enhancements, the file structure for #125 and #125.11 were redesigned and the data is migrated with new reports to identify duplicate selection lists and categories and selection list names in mixed/lower case. A new class field was added to both #125 and #125.11 files to identify, control, and manage the editing capabilities of national, VISN, or local level lists and categories. In CPRS, the VA-National Problem Selection List will display by default unless users have previously defined their own selection lists. The national selection list will be nationally distributed and maintained but require Clinical Application Coordinators (CAC) to import the updates using new GMPL Selection List Import feature.

This patch works with the OR*3.0*429 patch that migrates existing problem selection lists that currently exist into a new file structure. The patch migrates the lists that will be available after the patch is installed. Because mixed case list names are no longer allowed, this patch converts any lists with mixed case to all upper case.

Changes Made by GMPL*2.0*40 - Erroneous Problem File Cleanup

To correct an issue where SNOMED codes get stored in the DIAGNOSIS field #.01 instead of ICD codes, three new options have been added to the Problem List Mgt Menu [GMPL MGT MENU]:

1. SNOMED in Diagnosis Field Error Report [GMPL DIAG ERROR REPORT]
2. SNOMED in Diagnosis Field Cleanup Report [GMPL DIAG CLEANUP REPORT]
3. Generate SNOMED in Diagnosis Field Err/Cleanup Rpt [GMPL GENERATE DIAG RPTS]

The first two reports identify fields that have the error and where they are cleaned up. The third option enables users with access to this menu to rerun the filescan and cleanup tasks for any potential new errors.

Changes Made by GMPL*2.0*45 – Changes to Comment Length and a Provider Can Now View, Edit, or Delete Comments Entered by Another Provider

The length of the comment field has been changed from less than 60 characters (which includes spaces and punctuation) to less than 200.

Also, providers can now view, edit, and delete another provider's comments on a problem.

Changes Made by GMPL*2.0*42 - PROBLEM LIST SUPPORT FOR ICD-10-CM

This is the Problem List patch to support the requirements of ICD-10-CM implementation. The Problem Search function will continue to originate with the Problem List Subset of SNOMED CT and follow the algorithm introduced by the Problem List Data Standardization effort and CPRS v29. Prior to the ICD-10-CM implementation date (1 October 2015), the selected SNOMED CT code will continue to be resolved to the corresponding ICD-9-CM code(s), and all of the Problem List display and print options will continue to render the diagnostic codes as ICD-9-CM.

Beginning on the ICD-10-CM implementation date, the selected SNOMED CT code will be resolved to the corresponding ICD-10-CM code(s), and all of the Problem List display and print options will render the diagnostic codes as either ICD-9-CM or ICD-10-CM, depending upon the date when the code for the problem was last edited.

Diagnosis Code Search

- The Problem List application will provide the ability to search for SNOMED CT diagnoses which will be linked to a generic ICD-10 diagnosis code of R69.

Users may use the following search methods:

- SNOMED CT concept codes
- Text strings (i.e. SNOMED CT description)

Add/Edit/Store Diagnosis Code

- If the 'Current System Date' is on or after the ICD-10 activation date, the CPRS Problem List package will provide the ability to perform the following actions for ICD-10-CM diagnosis codes (problems) through the Action List items on the patient's problem list.
 - New Problem: Add an active SNOMED CT diagnosis linked to an ICD-10-CM diagnosis code of R69.
 - Change: Change an active SNOMED CT diagnosis linked to an ICD-10-CM diagnosis code of R69.
 - Inactivate: Inactivate a SNOMED CT diagnosis linked to an ICD-10-CM diagnosis code of R69.
 - Verify: Verify an active SNOMED CT diagnosis linked to an ICD-10-CM diagnosis code of R69.
 - Annotate: Annotate and update an active SNOMED CT diagnosis linked to an ICD-10-CM diagnosis code of R69.
 - Remove: Remove an active SNOMED CT diagnosis linked to an ICD-10-CM diagnosis code of R69.
 - Restore: Restore an active SNOMED CT diagnosis linked to an ICD-10-CM diagnosis code of R69.
 - View Details: View details of an active SNOMED CT diagnosis linked to an ICD-10-CM diagnosis code of R69.

Display Diagnosis

- The Problem List allows for the display of problems for the Active View, Inactive View, and Removed View options within the initial Problem List.
 - The Problem List application will display the patient's list of problems. Problems entered prior to July of 2013 will display in ICD-9-CM and those entered after will be represented in SNOMED CT. Problems added through Reminder Dialogs or Group notes will display problems in an ICD-10 diagnosis short description within the initial Problem List screen and will label whether an ICD diagnosis code is either ICD-9 or ICD-10.
- When user selects the 'View Details' action, the CPRS Problem List application will:
 - Display the details of an SNOMED CT diagnosis mapped to an ICD-10-CM diagnosis code of R69 and its full descriptions/definitions, or
 - If the problem was updated via the encounter form, it would display the newly mapped ICD10 code and not the R69.
 - Print the SNOMED CT to ICD-10-CM diagnosis code audit history
- When using the 'View Details' action, the CPRS Problem List application will display the ICD-10 label, ICD-10-CM diagnosis code, and short description within the audit history.

View options Active Inactive Both active and inactive Removed New problem	Active Problems (1 of 1)				
	Stat...	Description	Onset Date	Last Upda...	Location
	A	Cluster headache (SCT 193031009)		May 29 2013	23 Hour Observati

Print Diagnosis

- When the user selects the “View Details” action:
 - If the date the diagnosis code was entered is on or after the ICD-10 activation date, the CPRS Problem List application will provide the ability to print the problem represented in SNOMED CT linked to ICD-10-CM diagnosis codes and descriptions/definitions.
 - The CPRS Problem List application will designate whether diagnosis codes are SNOMED CT linked to ICD 10-CM and ICD-9-CM.

GMPL*2.0*44 - PROBLEM LIST ICD-10 CHANGES FOR CLINICAL REMINDERS

This build updates the Clinical Reminders Index cross-references in the Problem file (#9000011) to accommodate ICD-10 CM diagnosis codes. It restructures the Problem

List portion of the Clinical Reminders Index to a generic format that can support ICD and SNOMED CT coding systems. This format is:

```
^PXRMINDX (9000011, CODING SYSTEM,"ISPP", CODE, STATUS, PRIORITY,  
DFN, DLM, DAS)
```

```
^PXRMINDX (9000011, CODING SYSTEM,"PSPI", DFN, STATUS, PRIORITY,  
CODE, DLM, DAS)
```

Where CODING SYSTEM is a three-character abbreviation as defined in the Coding Systems file (#757.03) and CODE is the code, not the pointer. For details, see the Clinical Reminders Index Technical Manual (PXRMINDEX_TM).

The post-install routine will start a background job to rebuild the file #9000011 index in the new format.

GMPL*2*36 - EXTENSIONS TO ACCOMMODATE SNOMED-CT

The purpose of this patch is to accommodate the use of the Systematic Nomenclature of Medicine -- Clinical Terms (SNOMED CT) for selection of Patient Problems, and to dovetail with the efforts of Standard Data Service (SDS) to implement SNOMED CT on both the Enterprise Terminology Server and the Clinical Lexicon, using the New Term Rapid Turnaround (NTRT) strategy for vetting and deployment of novel clinical expressions.

This patch introduces changes required by CPRS v29 for selection of Patient Problems using SNOMED CT.

A new bulletin, GMPL PROBLEM NTRT BULLETIN, is added by the patch. This bulletin is sent to members of the FORUM mail group g.PROBLEM LIST NTRT when a SNOMED CT Concept is selected by the user for which no ICD-9-CM codes are mapped. The mail group is populated with members of OI&T's Standards and Terminology Service. When approved by the Domain Steward for Problem List, new standardized mappings will be deployed using the New Term Rapid Turnaround capability.

Two new options are included:

Problem List NTRT Follow-up Report

This report allows sites to evaluate problems with valid SNOMED CT Concept codes, which were unmapped to ICD at the time of entry.

The report may be filtered by Medical Center Division, Provider(s), and Time Interval.

Problem List Freetext Follow-up Report

This report allows sites to evaluate uncoded free text problems that have been entered by one or more providers over a specified time interval.

GMPL*2*41 - CORRECT WINDOWS REPORT FOOTER

This patch corrects the printing of inaccurate CBOC division information in the footer section of the Patient Problem List report which is printed from the Problems Tab in the CPRS GUI.

GMPL*2*39 - FIX FOR GENERAL ERRORS IN PROBLEM LIST

This patch addresses the following issues:

1. A diagnosis entered on the Diagnosis Tab of the Encounter Form on the Notes Tab of CPRS GUI is not added to the problem list for inpatients whose hospital location type is "Clinic".
2. A CPRS GUI user at a non-VA site entering a new problem list item while entering an encounter for a patient will generate an undefined variable error when saving the form. This will cause all of the just entered data for the encounter to not be saved.

GMPL*2*38 - Fix for Problem List Priority Value

This patch fixes a problem with the problem list priority field always being set to a value of "Unknown". This can happen when the user is adding a new problem list entry to the patient chart, or when editing an existing problem list entry. If the user picks a priority of "Acute" or "Chronic" when adding or editing a problem list entry, the entry is saved to the PROBLEM file with a priority of "Unknown". This will only happen to Problem tab entries that were added or edited after GMPL*2.0*37 was installed on the system.

A site can use FileMan to find a list of entries that were added or modified after GMPL*2.0*37 was installed on the system.

GMPL*2*37 - PROBLEM LIST REPAIR DUE TO SHAD

When entering a new problem in CPRS 27 with an Immediacy of "<unknown>" a zero was entered in the PRIORITY field of the PROBLEM File, file #9000011. The Priority field should be null for an unknown problem. Having a zero value in the PRIORITY field created a bad entry in the Clinical Reminder Index that caused Clinical Reminders to incorrectly evaluate ICD9 data that is stored in the PROBLEM File.

This patch contains two fixes to address this problem: a change to GMPLSAVE to evaluate the data that is being passed to this routine. If CPRS passes a zero value for the Priority field GMPLSAVE will set the Priority field to null.

A post-install routine will evaluate the PROBLEM file, for entries that contain a zero in the Priority field. If any entries in the PROBLEM file, contains a zero the Priority field will be set to Null and the entry will be corrected in the Clinical Reminder Index. A mailman message will be sent to the person installing this patch. The message will list out the number of entries that contain a zero value in the priority field. The number of entries that were corrected and a final check to make sure that all the bad entries were corrected.

GMPL*2*35 - ADD SHAD AND CV TREATMENT FACTORS TO LEGACY VISTA

This patch is being released in conjunction with CPRS GUI v27. CPRS GUI version 27 consists of two host files: OR_PSO_27.KID and CPRS_BUNDLE_GUI_27_REQ_REL.KID. These two host files contain software patches that support CPRS GUI v27 functionality. The

host files were created to simplify installation at Veterans Health Administration (VHA) facilities.

GMPL*2*33 - USERS UNABLE TO VIEW INACTIVE ICD9 CODES

This patch addresses the problem where users were unable to modify current Problem Category Lists to make it assignable. The users cannot tell if the code is Inactive.

GMPL*2*32 - GMPL*2*31 INFORMATIONAL FOLLOW UP

Included in patch GMPL*2*31 was a clean-up routine GMPL31P. This routine searched out bad ICD9 (file 81) pointers in the PROBLEM LIST file and PROBLEM LIST AUDIT entries. For pointers that included the "~", the "~" was removed and the remaining value was left. If a "-1" was found the pointer to the default ICD9 code 799.99 was put in the place of the "-1".

GMPL*2*31 - CORRECT DIAGNOSIS PTR UPDATE IN PROBLEM LIST

This patch corrects the problem of invalid characters (~) appearing in the DIAGNOSIS (pointer to the ICD DIAGNOSIS file #80) in the PROBLEM FILE (9000011). This modification will also add a check for the ICD code not being found. (-1 being returned instead of pointer from ICD #80 file search) The problem occurs when adding a problem or changing a problem via the CPRS GUI.

This patch also adds code that will record an audit trail when a Problem comment is modified.

GMPL*2.0*28 - CSV – Problem List Compliance

The following functionality has been added to Problem List in support of the Code Set Versioning project:

- Evaluation of problems on the active problem list to identify those entries with codes that are inactive for the current date.
- Display of problems with inactive codes.
- Prompts to edit problem list entries with codes that are inactive for the current date.
- Modifications of Lexicon Search Utility to display diagnoses that have active ICD9 codes for the current date. Only items that have active ICD9 codes for the current date will be selectable.

See page 14 for more detailed information of this CSV Compliance functionality.

GMPL*2.0*26 and GMTS*2.7*52 - CPRS/Problem List Enhancements

These patches added the following enhancements to Problem List and Health Summary:

1. The CPRS List Manager displays Head and Neck Cancer in the **Problem List** for veterans diagnosed with cancer of the head and/or neck related to nose and throat radium treatment.
2. The CPRS **Health Summary** displays Head and Neck Cancer for veterans diagnosed with cancer of the head and/or neck related to nose and throat radium treatment.
3. The CPRS GUI displays Head and Neck Cancer in the **Problem List** for veterans diagnosed with cancer of the head and/or neck related to nose and throat radium treatment.

4. (Available in CPRS v20) The CPRS GUI enables a user to indicate on the **problem list** that a veteran has cancer of the head and/or neck that is related to nose and throat radium treatments.
5. (Available in CPRS v20) Upon indicating Head and Neck Cancer on the **Problem List**, the CPRS GUI associates related services categories to this diagnosis.
6. (Available in CPRS v20) The CPRS GUI **Problem List** Clinic Report (remote data view) displays associated related service categories for a diagnosis of head and neck cancer that is indicated on the **problem list**.

See examples later in this manual for entering MST and Head and/or Neck Cancer conditions.

GMPL*2.0*27 - Clinical Reminders Index

This patch supports the Clinical Reminders Index (PXR*1.5*12), whose goal is to create a new global in the Clinical Reminders namespace, ^PXRMINDEX, that is an index of clinical data. Each of the packages whose data Clinical Reminders uses as a finding type is participating in this project.

GMPL*2.0*26 - Head-Neck Cancer/Military Sexual Trauma

This patch is in response to the Veterans Millennium Health Care and Benefits Act, Copayment Exemptions Software Requirements Specification, dated February 4, 2002. Special Conditions have been added to the Problem List for:

Head and/or Neck Cancer
Military Sexual Trauma

Orientation

How to Use this Manual

1. Make sure you know how to log on, navigate among menus and options, and respond to prompts for data entry. If necessary, ask your Application Coordinator or an IRM staff member to help you. The *DHCP User's Guide to Computing* provides basic information about general computing and your computer system.
2. Review the Preface, the Table of Contents, and the Introduction in this manual, to understand the organization of Problem List and this manual.
3. If you are the application coordinator, review the Operation section, and, if desired, copy and distribute the appropriate sections to individual users, according to the menus assigned by IRM/ADPAC personnel.
4. Review the following pages in which we describe special keys and commands used in VistA and the Problem List, as well as style conventions used in this manual.

VistA, Problem List, List Manager, and CPRS/Windows Conventions

Problem List uses the same conventions (in its List Manager and terminal-based version) as Lab, Pharmacy, and other VistA packages. Only a few of the special keys and commands are described here. See the User's Guide to Computing, for more complete lists of conventions. Problem List in CPRS follows standard Windows and VistA GUI standards and conventions.

Keep in mind that these keys and commands vary somewhat according to the kind of terminal you are using. Also note that your hospital IRM staff or the clinical coordinator can change menus (and even some of the prompts) to fit your hospital needs.

- <Enter>** The symbol used in computer dialogue examples for the return key. On some keyboards this is the ENTER key or the key with the symbol ↵. Enter <Enter> (press the return key) after every response you enter or when you wish to bypass a prompt, accept a default (/), or return to a previous action.
- ?** If you enter a question mark after a prompt, the computer will display instructions or a list of choices for responding to that prompt.
- ??** Two question marks will usually cause more detailed instructions to appear, or a list of choices.
- //** Double slashes mean a default response has been provided. This will either be the most likely choice, a previously entered response, or the least harmful choice. (Ex.: Are you sure you want to remove this problem? NO//) If you wish to select the default response (NO), just press the return key (indicated in this manual by <Enter>). Otherwise enter a different choice.
- +** The plus sign moves the screen to the next screen.
- The minus sign moves you back to the previous screen.
- ^** A single up-arrow, if allowed, terminates a series of questions and returns you to a previous level. You may need to enter ^ several times to exit the program or return to the level you wish. If you want to return to a previous prompt or option, enter ^ and the name of the desired prompt or option.
- ^(#)** will take you back to an earlier problem when the problem you are adding has more than five matches (see the Helpful Hints section in this manual for an example).
- \$** A dollar sign next to a problem on the problem list indicates that a clinician needs to verify a transcribed problem.
- *** An asterisk next to a problem indicates that it has been designated an acute problem.
- ()** Parentheses around an action mean that you can't select that action in that context. For example, if a patient has no active problems, you cannot choose the action Edit a problem.

Conventions used in this manual

- **Option examples:** Menus and examples of computer dialogue that you see on the CRT screen are depicted here in boxes:

```
Select Problem List Menu Option: p1 Patient Problem List
Select PATIENT NAME: PLPATIENT,ONE 03-04-14 666123432 NSC VETERAN

Searching for the patient's problem list...
```

- **CPRS GUI Examples:**

Examples of Problem List in CPRS are graphic captures such as the following:

Cover Sheet Problems Meds Orders Notes Consults Surgery D/C Summ Labs Reports

- **Reports or Printouts:** Reports are depicted here in double-lined boxes:

PLPATIENT,TWO (P3333)		PROBLEM LIST			
Prob No.	Date Recorded	Active Problems	Date of Onset	Date Resolved	
1.	2/9/04	Peripheral Vascular Disease Leg/Foot Due to diabetic neuropathy and old football injury	1991		PLPROVIDER,TWO
2.	2/9/04	Cholecystitis	1991	1972	PLPROVIDER,TWO
3.	2/9/04	Intermittent Claudication R profunda femoris occlusion - 90%	7/92		PLPROVIDER,TWO

- **User responses:** In computer dialogues, the user response is in boldface.

Select NEW PERSON NAME: **PLPROVIDER,ONE**

NOTE: You can respond to many prompts by typing the first few letters of a name, option, or action.

- **Option Selection:** Some option names have “mnemonics,” an abbreviation that you can enter rather than the entire option name. Since sites frequently assign their own numbers or letter abbreviations to options, we use the first letter or letters for selecting options in the examples in this manual.
- **Explanations:** Special notes are in a box, preceded by a pointing finger:

Note: 	A list must be defined before you can use this option.
---	--

+ NOTE:

- **Problem Selection:** When you are prompted to select a problem from a range of problems (e.g., Select Problem(s) (1-5)), you may select one item or more by using commas or a range of items separated by a dash.

List Manager Conventions

- **List Manager Screen Display:** The List Manager utility allows Problem List (and other applications) to maintain the header and action portion of a list, while the center display (for example, the problems or the detailed display) scrolls. So if a patient has too many problems to fit within the scrolling portion of the screen, pressing the return key causes that portion of the screen to scroll up while the top and bottom stay unchanged.

Select PATIENT NAME: PLPATIENT,THREE 03-04-14 6666432432 NSC VETERAN					
Searching for the patient's problem list...					
PROBLEM LIST		Apr 09, 2002@15:22:08		Page: 1 of 1	
PLPATIENT,THREE (P2432)		1 active problems			
ACTIVE PROBLEMS					
	Problem		Updated Clinic		
1	Asthma Bronchial, Onset 1997		4/9/02	LAB-MENTAL HEALTH	
+ Next Screen - Prev Screen ?? More actions

RM	Remove Problems	CM	Comment on a Problem	SP	Select New Patient
ED	Edit a Problem	DT	Detailed Display	PP	Print Problem List
				Q	Quit
Select Action: Quit// ED Edit a Problem					

The highlighted bar in the middle contains instructions about actions you can take.

For example:

You can type + to move forward or - to move back. To see a list of navigation actions, type two question marks (??) at the Select Action prompt.

Windows Conventions

See the CPRS online help or the SACC GUI Conventions (available at:

<http://vista.med.va.gov/sacc/docref.html>

Package Management

Implementation of Problem List

After installing Problem List, other implementation steps are mostly optional. These include:

1. Assigning menus and options (required)
2. Assigning the security key (optional)
3. Editing site parameters (optional)
4. Setting User Preferences (optional)
5. Creating selection lists (optional)
6. Creating Encounter Forms (optional)

All functions except #6 are described in the following pages of the Package Management section. See the Encounter Form Utilities Module User Manual (part of the Integrated Billing V. 2.0 documentation set) for instructions about creating Encounter Forms to use with Problem List. Also see CPRS documentation for further information about using Problem List through CPRS (either the List Manager or the GUI version).

Package Management

Links to other packages

Problem List is closely linked to other applications: Lexicon Utility, Computerized Patient Record System (CPRS), Data Standardization/Near Term Rapid Turnaround Time (NTRT, Encounter Form (part of Integrated Billing), Health Summary, and Patient Care Encounter (PCE). This linkage should remain transparent to users, but the IRM office and Clinical Coordinators will need to work closely to coordinate all the components. See the User and Technical Manuals of these packages for further instructions, such as how to build an encounter form for your hospital.

Lexicon

The Lexicon Utility can be modified to meet local site needs (for example, to allow nurses to see only nursing terms). See the Appendix in this manual and the Lexicon Utility documentation for information on customizing this package for use with the Problem List application.

Encounter Forms

Encounter Forms (scannable or otherwise) can be used by clinicians and clerks for data entry of problems into the Problem List. See the Appendix in this manual and the Encounter Form Utilities User Manual (part of the Integrated Billing 2.0 documentation set) for further information.

CPRS

Since the release of CPRS in 1999, many sites now use Problem List through the List Manager or GUI version of CPRS, which allows a more integrated view of the patient record. The cover sheet of CPRS displays a patient's current problems (site or user-configurable) and allows the clinician to click on any of these for immediate information. The Problem tab allows entry, edit, and display of problems.

Menu Access

Assign menus and options as follows:

Common Name	Technical Name	Who
Assign ICD Diagnoses to Problem List Note: This has been marked OUT OF ORDER with GMPL*2.0*49	GMPL CODE LIST	PIMS Clerks, Clinical Coordinators (CACs)
Patient Problem List	GMPL CLINICAL USER	Clinicians, Nurses, Clinical Coordinators (CACs)
Problem List Data Entry	GMPL DATA ENTRY	PIMS Clerks, Clinical Coordinators (CACs)
Problem List Mgt Menu	GMPL MGT MENU	IRMS, Clinical Coordinators (CACs)
Problem List User Preferences Menu	GMPL USER PREFS MENU	Clinicians, Nurses, IRMS, Clinical Coordinators (CACs)

Security Keys

- **GMPL IMPRT UTIL:** The GMPL IMPRT UTIL key is used to access the new option Import Problem Selection List [GMPL SELECTION LIST IMPORT]. Users with this access will be responsible for performing the National Problem Selection List updates and for creating/maintaining VISN or Local Problem Selection lists/categories if requested.
- **GMPL ICD CODE:** The GMPL ICD CODE security key is used by the Problem List package to determine if the current user is trained and authorized to code provider text relating to the ICD Diagnosis codes. Recommended allocation: PIMS Coding Clerks.

Electronic Signature

Problem List doesn't use electronic signature.

Legal Requirements

There are no specific legal requirements for Problem List.

Code Set Versioning (CSV) Requirements

Functionality has been added to Problem List in support of the Code Set Versioning project.

Problem List is available in two places:

- CPRS GUI Problem List tab
- List Manager Problem List

Both of these provide functionality to enter and manage problems associated with the patient, and all will evaluate problems on the active problem list to identify those entries with codes that are inactive for the current date.

ICD-10 Project

NOTE: With the ICD-10 project, many changes have been made to Problem List and the Lexicon utility, some of which may override Code Set Versioning requirements described here.

The following functionality was added to Problem List in support of the Code Set Versioning project:

Problem List in List Manager

- Evaluates problems on the active problem list to identify those entries with codes that are inactive for the current date.
- Provides a method to display to the user the identified problems with inactive codes.
- Prompts the user to edit problem list entries with codes that are inactive for the current date.
- Uses the Lexicon Search Utility and displays diagnoses that have active SNOMED CT codes for the current date. Only items that have active SNOMED CT codes for the current date will be selectable.

Adding a Problem

- When adding a new problem, Problem List uses the Lexicon Search Utility and displays diagnoses that have an active SNOMED CT code for the current date. Only items that have active SNOMED CT codes for the current date will be selectable.
- If the user or clinic has a Problem Selection List assigned, Problem List displays only items that have active SNOMED CT codes for the current date.

Changing a Problem

- When changing a problem, Problem List uses the Lexicon Search Utility and display diagnoses that have active SNOMED CT codes for the current date. Only items that have active SNOMED CT codes for the current date will be selectable.

Saving a Problem

- When the problem is saved, Problem List evaluates the problem code to ensure that it has an active SNOMED CT code for the current date. If the code is not active, an error message will be displayed to the user.

Verifying a Problem

- When verifying a problem on the Problem List, Problem List evaluates the code associated with the problem. If the code is inactive for the current date, OE/RR will display a message to the user stating that the code is not active for the current date and ask the user to edit the problem.

Problem List Selection Lists and Categories

- Problem Selection List functionality was modified to ensure that all selectable problems have an active SNOMED CT code for the current date.
- Problem Selection Lists can be assigned to a user or to a clinic. If a Problem Selection List is defined for a user or a clinic, CPRS GUI uses the list on the CPRS GUI Problems Tab. In addition, OERR List Manager displays the list on the OERR List Manager Problems Tab, and Problem List also uses it. In each interface, the list is displayed as a default common Problem List when a new problem is added.
- Problem List evaluates entries on the Problem Selection List and identify problems with inactive SNOMED CT, ICD-10-CM, and ICD-9-CM codes.
- When adding a problem to a Problem Category, Problem List allows selection of problems that have an active SNOMED CT code for the current date.
- When editing a problem included in a Problem Category, Problem List allows selection of problems that have active SNOMED CT codes for the current date.
- When adding a Problem Category to the Problem Selection List, Problem List evaluates the problems in the Problem Category. If a problem has an inactive code, the Problem Category will not be added to the Problem Selection List, an error message advising the user to edit the entries with inactive codes will be presented to the user, and the user will be returned to the BUILD PROBLEM SELECTION LIST screen.
- When saving the Problem Selection List, Problem List evaluates the problems for active SNOMED CT code for the current date. If an entry has an inactive code, the list will not be saved, an error message advising the user to edit the entries with inactive codes will be presented to the user, and the user will be returned to the BUILD PROBLEM SELECTION LIST screen.
- When assigning new SNOMED CT codes to a problem, Problem List allows selection of codes that are active for the current date.
- Problem List identifies any selection list problem with an SNOMED CT code that has been inactivated.
- Problem List generates a report that identifies the Problem Categories and Problem Selection Lists that include problems with inactivated codes.
- Problem List menu option Check Problem Selection List Problem Codes [GMPL SELECTION LIST CSV CHECK] creates a report that identifies the Problem Categories and Problem Selection Lists that include problems with inactivated codes. CACs should update the problems with inactivated codes.

An example of information that is included in the message sent to CACs is included below:

```

Subj: Problem Selection List Code Set Version review  [#156209] 09/28/17@08:46
5 lines
From: CODE SET VERSION INSTALL  In 'IN' basket.    Page 1
-----
The following Problem Selection Lists contain one or more problems that have
inactive SNOMED and/or ICD codes attached to them. Any current users or clinics using
these Selection Lists, will not be able to add the problems with inactive codes, until
the list and the inactive codes are updated. The list may not be assigned to any
additional users or clinics until updated.

TEST LIST1:
  CARDIO:
    Acute Myocardial Infarction (ICD-9-CM 410.9)  <INACTIVE ICD CODE>
    Coronary Artery Disease (ICD-9-CM 414.9)    <INACTIVE ICD CODE>
    Angina Pectoris, Unstable (ICD-9-CM 411.1)  <INACTIVE ICD CODE>
    Chest Pain (ICD-9-CM 786.50)                <INACTIVE ICD CODE>
    Angina Pectoris (ICD-9-CM 413.9)            <INACTIVE ICD CODE>
    Dyspnea (ICD-9-CM 786.09)                  <INACTIVE ICD CODE>
  GENERAL:
    Headache (ICD-9-CM 784.0)                  <INACTIVE ICD CODE>
    Fever (ICD-9-CM 780.6)                    <INACTIVE ICD CODE>

TEST LIST2:
  UROLOGY:
    Bladder Carcinoma (ICD-9-CM 188.9)         <INACTIVE ICD CODE>
    Impotence (ICD-9-CM 302.72)                <INACTIVE ICD CODE>
    Prostatic Carcinoma (ICD-9-CM 185.)        <INACTIVE ICD CODE>
    Prostatic Hypertrophy, Benign (ICD-9-CM 600.) <INACTIVE ICD CODE>
    Renal Calculi (ICD-9-CM 592.0)             <INACTIVE ICD CODE>
    Urinary Incontinence (ICD-9-CM 788.30)     <INACTIVE ICD CODE>

```

- Problem List developed a new option for CACs and IRM staff to manually initiate evaluation of the PROBLEM SELECTION CATEGORY file (#125.11) for inactivated SNOMED and/or ICD codes. This option performs similar actions as the Problem Selection List CSV Event Protocol. It is manually initiated rather than electronically triggered.
- Problem List evaluates the entries in PROBLEM SELECTION CATEGORY file (#125.11) and identifies any selection list problem with a code that has been inactivated.
- Problem List will generate a report that identifies the Problem Categories and Problem Selection Lists that include problems with inactivated codes.

Example of information that is included in the report:

```

The following Problem Selection Lists contain one or more problems that have
inactive SNOMED and/or ICD codes attached to them. Any current users or
clinics using these Selection Lists, will not be able to add the problems
with inactive codes, until the list and the inactive codes are updated. The
list may not be assigned to any additional users or clinics until updated.

TEST LIST1:
  CARDIO:
    Acute Myocardial Infarction (ICD-9-CM 410.9)  <INACTIVE ICD CODE>

```

Coronary Artery Disease (ICD-9-CM 414.9)	<INACTIVE ICD CODE>
Angina Pectoris, Unstable (ICD-9-CM 411.1)	<INACTIVE ICD CODE>
Chest Pain (ICD-9-CM 786.50)	<INACTIVE ICD CODE>
Angina Pectoris (ICD-9-CM 413.9)	<INACTIVE ICD CODE>
Dyspnea (ICD-9-CM 786.09)	<INACTIVE ICD CODE>
GENERAL:	
Headache (ICD-9-CM 784.0)	<INACTIVE ICD CODE>
Fever (ICD-9-CM 780.6)	<INACTIVE ICD CODE>
TEST LIST2:	
UROLOGY:	
Bladder Carcinoma (ICD-9-CM 188.9)	<INACTIVE ICD CODE>
Impotence (ICD-9-CM 302.72)	<INACTIVE ICD CODE>
Prostatic Carcinoma (ICD-9-CM 185.)	<INACTIVE ICD CODE>
Prostatic Hypertrophy, Benign (ICD-9-CM 600.)	<INACTIVE ICD CODE>
Renal Calculi (ICD-9-CM 592.0)	<INACTIVE ICD CODE>
Urinary Incontinence (ICD-9-CM 788.30)	<INACTIVE ICD CODE>

CPRS GUI Problem List Tab

- Entry of a new problem only allows selection of SNOMED codes that are active as of the current date. This applies both to the lexicon lookup and to the predefined list of selectable problems and categories.
- Any action taken on an active problem having an inactive ICD code first requires correction/update of that code via the "Change" action.

Add Problem

- When adding a new problem, CPRS GUI uses the Problem List Lexicon Search Utility and display diagnoses that have active SNOMED codes for the current date. Only items that have active SNOMED codes for the current date are selectable.
- If the user or clinic has a Problem Selection List assigned, CPRS GUI displays only items that have an active SNOMED and ICD code for the current date.

Verify Problem

- When verifying a problem, CPRS GUI evaluates the code associated with the Problem. If the code is inactive for the current date, CPRS GUI displays an error message to the user stating that the SNOMED CT or ICD-10-CM code is not active for the current date and advise the user that the problem can be edited using the change action.

Restore Problem

- When replacing a removed problem, CPRS GUI evaluates the code associated with the problem. If the code is inactive for the current date, CPRS GUI displays an error message to the user stating that the SNOMED CT or ICD-10-CM code is not active for the current date and then present the user with the change problem screen.

Change Problem

- When changing a problem, CPRS GUI uses the Problem List Lexicon Search Utility and displays diagnoses that have active SNOMED codes for the current date. Only items that have active SNOMED codes for the current date are selectable.

CPRS Problem List Management

When Problem List is used through CPRS, several CPRS parameters can be set that affect the use of Problem List.

Initial Tab and Cover Sheet Parameters

The tab that displays first when a user starts CPRS may be set by the parameter ORCH INITIAL TAB. This parameter may be set for the site and then overridden at the division and user levels, as needed. If no value is set, the chart will open, by default, to the Cover Sheet. ORCH INITIAL TAB may be set to the following values:

- 1 Cover
- 2 Problems
- 3 Meds
- 4 Orders
- 6 Notes
- 7 Consults
- 8 DC Summ
- 9 Labs
- 10 Reports

Note:	The number 5 is not one of the possible values. It is reserved. Additionally, CPRS may be configured to remain on the same tab when the user changes to another patient record. Setting ORCH USE LAST TAB to "yes" will accomplish this. If ORCH USE LAST TAB is set to "no" or not set, the chart will
--------------	---

	always open to the tab identified by ORCH INITIAL TAB when changing patients.
---	---

The criteria for determining what gets loaded into each section of the cover sheet are determined by parameter settings. To set Cover Sheet parameters, use the “CPRS Configuration (Clin Coordinator)” menu option then “GUI Parameters” and then “GUI Cover Sheet Display Parameters” on the CPRS Configuration menu to set Cover Sheet parameters. These parameters may be set for the system, a division, a service, a location, or an individual user. For Problem List, Currently active problems are shown in the list.

Problem List Default Views

The user’s default view on the Problems tab is determined by two different settings. Both the GUI and the List Manager versions of CPRS use the ORCH CONTEXT PROBLEMS parameter. Its value can be set at the SYSTEM and USER levels. The parameter takes the form of a semicolon-delimited string, with the different pieces’ meaning as follows:

- a;b;c;d;e (example: T-180;T;A;1;1329)
- a Begin date
- b End date
- c Status (A = active, I = inactive, B = both, R = removed)
- d If “1”, show all comments as default
- e Provider internal entry number

The user-level value for this parameter can be set using the **View | Filter** menu and saving the selected settings as the default. There should be no need to edit the parameter directly at the user level.

Both the GUI and List Manager versions of CPRS use the PROBLEM LIST PRIMARY VIEW field (#125) of the NEW PERSON (#200) file. The contents of the field determine whether the outpatient (clinics) or inpatient (services) view of the problem list will be used, and can also be used to specify clinics or services to include in the list. The field will contain a “C” or “S,” followed by a list of internal entry numbers of clinics and services, separated by a forward slash (/) and ending with a trailing forward slash. Here is an example, excerpted from a VA FileMan INQUIRE into the NEW PERSON file for a user:

PROBLEM LIST PRIMARY VIEW: C/4/5/

“C” indicates outpatient (Clinics) view should be used. “S” indicates that the inpatient (Services) view should be used. “4” and “5” are pointers to default clinics or services (depending on “C” or “S”) to include in the view. Others will be hidden. If none are specified, all will be shown.

For users of the GUI, it is best to use the **View | Filter** menu to set this field. Save as Default will update it with the selected view and clinics or services to include. Since it is stored in the NEW PERSON file, it is applicable only to the individual user.

User Access and Privileges

If the user holds any of the ORES/ORELSE/PROVIDER keys, that user is viewed as a clinical user, and has full access privileges to all problem list options. If a user holds the OREMAS key, that user is viewed as a clerical user. In that case, the Verify, Remove, Restore, and View Removed options will not be available. If the site parameter requiring verification is set to

TRUE, then problems entered will be left in an UNVERIFIED state until a clinical user verifies them. Problems in the UNVERIFIED state are denoted by a dollar sign (\$) inserted at the beginning of the line.

These access levels are also enforced when problems are entered via the encounter form. Problems entered on the encounter form by clerical personnel will be left as UNVERIFIED.

CPRS List Manager and the Problem List package do not operate exactly the same as described above. The Problem List package evaluates the presence/absence of menu options in the user's menu tree, and determines access accordingly. Since CPRS LM sometimes drops into PL package code, it uses a hybrid method of keys and menu options to determine access.

Management Menu Options

Problem List Mgt Menu [GMPL MGT MENU]

- 1 Patient Problem List
- 2 Edit PL Site Parameters
- 3 Create Problem Selection Lists ...
 - 1 Build Problem Selection List(s) [GMPL BUILD SELECTION LIST]
 - 2 Copy Selection List from IB Encounter Form [GMPL BUILD ENC FORM LIST]
 - **> Out of order: This option has been disabled due to the Problem List SNOMED CT implementation.
 - 3 Assign/Remove Problem Selection List [GMPL ASSIGN LIST]
 - 4 Delete Problem Selection List [GMPL DELETE LIST]
 - 5 Check Problem Selection List Problem Codes [GMPL SELECTION LIST CSV CHECK]
 - 6 Import Problem Selection List [GMPL SELECTION LIST IMPORT]
 - **> Locked with GMPL IMPRT UTIL
- 4 List Patients with Problem List data
- 5 Search for Patients having selected Problem
- 6 Replace Removed Problem(s) on Patient's List
- 7 Problem List NTRT Follow-up Report
- 8 Problem List Freetext Follow-up Report
- 9 SNOMED in Diagnosis Field Error Report
- 10 SNOMED in Diagnosis Field Cleanup Report
- 11 Generate SNOMED in Diagnosis Field Err/Cleanup Rpt

Patient Problem List is described in the Package Operation section of this manual.

Note:

Problem List NTRT Follow-up Report and Problem List Freetext Follow-up Report are new with GMPL*2*36.

Edit PL Site Parameters[GMPL PARAMETER EDIT]

These site parameters are stored in the Problem List Site Parameters file #125.99.

This option lets you set five site parameters:

1. Place a flag on problems entered by clerks so that a clinician must review the problems and verify them. The flag will appear as a dollar sign (\$).
2. Prompt users to have a chart copy printed.
3. Search the Lexicon Utility when adding to or editing a problem list. The Lexicon Utility provides standardized text and codes – ICD-10-CM, CPT, SNOMED, and other codes, if they're available. If you choose not to use the Lexicon Utility, the Problem List will capture *only* the free text that is entered (the Provider Narrative) [NOTE: **Not Recommended**].
4. Choose whether to display the patient problem list in chronological or reverse chronological order (most recent at top).
5. Screen duplicate orders. If YES is entered in this field, duplicate problems (those having the same SNOMED and/or ICD code) will NOT be added to the problem list. The primary purpose of this field is to screen entries added via the scannable encounter form.

```
Select Problem List Mgt Menu Option: Edit PL Site Parameters
VERIFY TRANSCRIBED PROBLEMS: NO// YES
PROMPT FOR CHART COPY: YES, ASK// <Enter>
USE LEXICON UTILITY: YES// <Enter>
DISPLAY ORDER: CHRONOLOGICAL// REVERSE
SCREEN DUPLICATE ENTRIES: YES// <Enter>

You have PENDING ALERTS
      Enter "VA    VIEW ALERTS      to review alerts

Select Problem List Mgt Menu Option: <Enter>
```

Follow these steps to set the Problem List parameters:

1. Go into the Problem List Mgt Menu.
2. Select Edit PL Site Parameters.
3. Type NO if you don't wish to have transcribed entries flagged for clinician verification.
4. Type NO if you don't wish to have the users prompted about whether they want to have chart copies printed.
5. Type NO if you don't wish to use the Lexicon Utility to match the problem against a standardized term with corresponding codes (SNOMED, ICD10, etc.).
6. Type Reverse if you want your problems displayed in reverse chronological order (most recent at top).
7. Enter the @ sign if you don't want to screen duplicate entries. Otherwise, press the enter key.

Create Problem Selection Lists [GMPL BUILD LIST MENU]

This menu contains options for creating and maintaining lists of commonly selected problems (sometimes called a “Pick List”). These lists can help speed up the process of using the Problem List.

After you have a selection list assigned to you, this list will appear on your screen whenever you want to add new problems for a selected patient. Lists may also be assigned to a clinic. If you don’t have an individual problem selection list assigned to you, but a list has been built for a clinic, this list will appear when adding problems for a patient associated with that particular clinic.

Problem Selection Lists Options:

Create Problem Selection Lists

- 1 Build Problem Selection List(s) [GMPL BUILD SELECTION LIST]
- 2 Copy Selection List from IB Encounter Form [GMPL BUILD ENC FORM LIST]
 **> Out of order: This option has been disabled due to the Problem List SNOMED CT implementation.
- 3 Assign/Remove Problem Selection List [GMPL ASSIGN LIST]
- 4 Delete Problem Selection List [GMPL DELETE LIST]
- 5 Check Problem Selection List Problem Codes [GMPL SELECTION LIST CSV CHECK]
- 6 Import Problem Selection List [GMPL SELECTION LIST IMPORT]
 **> Locked with GMPL IMPRT UTIL

Option 1 allows you to:

- Create a pick list
- Add categories to it
- Add problems to the categories
- Assign the list to a user or clinic

The Clinical Coordinator can also use option 3 to assign selection lists to users.

Option 2 : This option has been disabled due to the Problem List SNOMED CT implementation.

Create Problem Selection Lists [GMPL BUILD LIST MENU]

Category: A grouping with or without a header of related problems, such as Cardiology, Musculoskeletal, Vascular, Neurology, etc.

- A list is made up of one or more Categories, each of which contains several related problems.
- Categories can be re-used in other lists.

Problem Selection List Class: The type of class that is associated with this list. Answer with a VISN or Local class type. National class types are reserved for the National Development team and cannot be added by the local sites.

These are the steps to create a problem selection list from scratch. See the next pages for examples and step-by-step instructions on creating problem selection lists.

1. Create a new list by typing in a name at the Select LIST NAME prompt.
2. Create a new problem category using the action EC (Enter/Edit Category).
3. Add problems to the category using the action AD (Add Problems).
4. Continue to create more categories if you wish to have more on your list. Add problems to each category.

REMEMBER: You can respond to many prompts by typing the first few letters of a name, option, or action. Some option names have “mnemonics” — an abbreviation that you can enter rather than the entire option name.

Build Problem Selection List(s)

This option lets you create selection lists by creating one or more problem categories and adding the problems you want in each category.

New categories may be added to this list, or an existing category can be removed. Enter/Edit Category allows you to change the contents (problems) of a category, or create a new one that may be added to this list.

You may also change how each category appears in this list, view each category's sequence number to facilitate resequencing, assign this list to a clinic or user(s), or edit a different list.

Steps to use option:

1. Go into the Problem List Mgt Menu.
2. Select the Create Problem Selection Lists option.
If numbers are used for menu options, you can type in that number or the first letter(s) of the option.
3. Select Build Problem Selection List(s).
4. At the “Select LIST NAME” prompt, type the name of a new selection list by entering a new name.
5. Enter the Problem Selection Class.

```
Select Create Problem Selection Lists Option: 1  Build Problem Selection
List(s)
Select LIST NAME: Dr. Provider's List
Are you adding 'Dr. Provider's List' as
a new PROBLEM SELECTION LIST (the 9TH)? No// y  (Yes)
PROBLEM SELECTION LIST CLASS: ?
Enter the Class for this selection list.
National lists are reserved for National Development and cannot be edited
by sites.

Build Problem Selection List(s) cont'd

This option also lets you add problem categories to an existing list.

New categories may be added to this list, or an existing one removed; Enter/Edit Category allows you to change the contents (problems) of a category, or create a new one that may be added to this list.

Other actions allow you to change how each category appears in this list, view each category's sequence number to facilitate resequencing, assign this list to a clinic or user(s), or edit a different list.

Example: Editing a Problem Selection List

1. Go into the Problem List Mgt Menu.
2. Select Create Problem Selection Lists.
3. Select Build Problem Selection List(s).
4. At the “Select LIST NAME” prompt, type the name of a selection list that you wish to add categories to.

```

Note: This option was removed as a result of the project to begin using ICD-10 codes.

Assign/Remove Problem Selection List [GMPL ASSIGN LIST]

This option lets you assign or remove selection lists to users, clinics, divisions, or the system.

Steps to use option:

1. Go into the Problem List Mgt Menu.
2. Select the Create Problem Selection Lists option.
3. Select Assign/Remove Problem Selection List.

4. At the “Default Problem Selection List Display may be set for the following” prompt, type the entity (User, Location, Division, or System) that you wish to assign a selection list to.
5. At the “Select <ENTITY>” prompt, type the value of the entity you are assigning a list to.

```
Select Create Problem Selection Lists Option: A Assign/Remove Problem Selection
List

Default Problem Selection List Display may be set for the following:

    1   User           USR      [choose from NEW PERSON]
    2   Location        LOC      [choose from HOSPITAL LOCATION]
    3   Division        DIV      [choose from INSTITUTION]
    4   System          SYS      [XXXX.MED.VA.GOV]

Enter selection: User      NEW PERSON
Select NEW PERSON NAME: PROVIDER, ONE

--- Setting Default Problem Selection List Display   for User: PROVIDER, ONE---
Selection List: //   LIST 1      Local
```

To remove a selection list from one of the entities, follow the steps below.

Steps to use option:

1. Go into the Problem List Mgt Menu.
2. Select Create Problem Selection Lists.
3. Select Assign/Remove Problem Selection List.
4. At the “Default Problem Selection List Display may be set for the following” prompt, type the entity (User, Location, Division, or System) that you wish to remove a selection list from.
5. At the “Select <ENTITY>” prompt, type the value of the entity you are removing a list from.
6. At the “Selection List: <LIST NAME>//” prompt, type an “@” symbol and hit enter to remove the selection list from the corresponding entity.

```
Select Create Problem Selection Lists Option: A Assign/Remove Problem Selection
List

Default Problem Selection List Display may be set for the following:

    1   User           USR      [choose from NEW PERSON]
    2   Location        LOC      [choose from HOSPITAL LOCATION]
    3   Division        DIV      [choose from INSTITUTION]
    4   System          SYS      [XXXX.MED.VA.GOV]
```

Package Management

```
Enter selection: User    NEW PERSON
Select NEW PERSON NAME: PROVIDER, ONE

--- Setting Default Problem Selection List Display  for User: PROVIDER, ONE---
Selection List: LIST 1//  @  ...deleted

Default Problem Selection List Display may be set for the following:

    1   User          USR      [choose from NEW PERSON]
    2   Location      LOC      [choose from HOSPITAL LOCATION]

```

Delete Problem Selection List [GMPL DELETE LIST]

This option will let you delete a problem selection list that is no longer in use. After you select a list name, the system checks to see if this list is assigned to any User, Clinic, Division, or System, and if so, doesn't allow you to delete the list.

Steps to use option:

1. Go into the Problem List Mgt Menu.
2. Select Create Problem Selection Lists.
3. Select Delete Problem Selection List.
4. At the "Select LIST NAME" prompt, type the name of a selection list that you wish to delete.

```
Select Create Problem Selection Lists Option: 4  Delete Problem Selection List
Select LIST NAME: LIST 1          Local

Checking the Default Problem Selection List parameter for use of this list ...
No other parameter settings found.

Are you sure you want to delete this list? NO// YES

Deleting LIST 1 selection list ...
DONE.
```

If the list being deleted is also assigned to any users in the NEW PERSON file, those assignments will be deleted as well.

```
Checking the NEW PERSON file for any pointers to this list and removing them...
No pointers found.
```

If the list is currently assigned to any users, clinics, division, or system, you will be notified and the list will not be deleted:

```
Select Create Problem Selection Lists Option: D  Delete Problem Selection List
Select LIST NAME: LIST 2

Checking the Default Problem Selection List parameter for use of this list .....

CANNOT DELETE
This list is currently assigned to the following entities:

    User: PROVIDER, ONE
    Clinic: PRIMARY CARE
```

Check Problem Selection List Problem Codes [GMPL SELECTION LIST CSV CHECK]

This option will scan all the current selection lists in the system for any problems that have inactive SNOMED CT and/or ICD codes. A report is displayed containing the selection list name(s), categorie(s), and problems with the inactive codes.

Problems with inactive SNOMED concept codes will be identified with <INACTIVE SCT CODE>, inactive ICD codes will be identified with <INACTIVE ICD CODE>, and if both SNOMED & ICD codes are inactive: <INACTIVE SCT/ICD CODE>.

Steps to use option:

1. Go into the Problem List Mgt Menu.
2. Select Create Problem Selection Lists.
3. Select Check Problem Selection List Problem Codes.
4. At the “DEVICE: HOME//” prompt, choose a device to print the report to.

```
Code Set Version Review of Problem Selection Lists                                Page: 1

Replace Removed Problems on Patient's List [GMPL REPLACE PROBLEMS]

This option allows you to list all the problems that have been removed from a selected patient's problem list and place any of them back on the problem list.

Some sites might want to limit the Remove Problem action, as well as this option, to those with access to the Management Menu.

Steps to use option:

1. Type the name of the patient.
2. A list of problems that have been removed for this patient is displayed.
3. If you wish to replace any of these problems on the patient's list, type the number of the problem(s).
4. The name of the problem you selected is displayed, followed by a prompt asking you if you're sure. If you're sure you wish to replace this problem, type Yes.

```
Select Problem List Mgt Menu Option: R Replace Removed Problems on Patient's List
Select PATIENT NAME: PLPATIENT,FIVE      10-15-35      666034567      SC VETERAN
                        A: Known allergies

SNOMED in Diagnosis Field Error Report

This report goes back to the last Problem file cleanup runtime and identifies any occurrences where SNOMED codes have been saved in the Diagnosis field where an ICD code should be.

Steps to use option:

1. Select Problem List Management Menu Option:
2. Select (9) SNOMED in Diagnosis Field Error Report.

Sample Error Report:

Erroneous Problem File Record Entries Report			
<p>**NOTE**: This report is retroactive as of the last Problem file scan runtime: Jul 09, 2015@13:00:32. This report will expire and be purged from the system in 30 days. If the Generate SNOMED in Diagnosis Field Err/Cleanup Rpt [GMPL GENERATE DIAG RPTS] menu option is run prior to the 30 days, then this report will expire on the date/time the option is run. Whichever comes first.</p> <p>A scan of your system's Problem file #9000011 has been performed for possible errors. The following 9 record entries contain a SNOMED CT concept code in the Diagnosis field #.01. This report contains 4 columns. Please scroll to the right to see a full display of the Problem text.</p> <p>These record entries will be corrected and upon completion, a separate MailMan message will be sent to the installer containing instructions on how to access the cleanup report.</p>

SNOMED in Diagnosis Field Cleanup Report

This report goes back to the last Problem file cleanup runtime and identifies any corrections where SNOMED codes in the Diagnosis field were corrected to ICD codes.

Steps to use option:

1. Select Problem List Management Menu Option:
2. Select (10) SNOMED in Diagnosis Field Cleanup Report.

Sample Cleanup Report:

Problem File Cleanup Report				
<p>**NOTE**: This report is retroactive as of the last Problem file cleanup runtime:Jul 09, 2015@13:00:32. This report will expire and be purged from the system in 30 days. If the Generate SNOMED in Diagnosis Field Err/Cleanup Rpt [GMPL GENERATE DIAG RPTS] menu option is run prior to the 30 days, then this report will expire on the date/time the option is run. Whichever comes first.</p> <p>A cleanup of the Problem file has been performed and the following 9 record entries have been corrected. This report contains 7 columns. Please scroll to the right for more information.</p> <p>These entries no longer contain a SNOMED CT concept code in the Diagnosis field #.01. The correct primary ICD diagnosis and secondary diagnosis code(s) is now stored in the appropriate fields. The corresponding SNOMED CT concept and designation codes have also been correctly filed in their respective fields. The provider narrative and problem fields were also updated accordingly as well.</p>

Problem List Preferred View [GMPL USER VIEW]

This option on the User Preferences Menu lets you limit your Problem List display to one or more specific hospital services or clinics. It also displays the clinics or services you have already selected. If you type +, you will see more clinics or services to choose from.

Steps to use option:

1. Go into the Problem List User Preferences Menu.
2. Select Problem List Preferred View.
3. Type Yes if you wish to change your preferred view.
4. At the "Select VIEW" prompt, type Inpatient or Outpatient.
5. Type A or S for All problems or Selected clinics.

```
Select Problem List User Preferences Menu Option: 1 Problem List Preferred View
CURRENT VIEW: Inpatient, all services included
Do you want to change your preferred view? NO// y YES
Select VIEW: INPATIENT// OUTPATIENT
Include (A)ll problems or only those from (S)electd clinics? ALL// SSELECTED
Retrieving list of clinics.....
```

PROBLEM LIST PREFERRED VIEW	Apr 29, 2002 07:46:26	Page:1 of 2
PLPROVIDER, ONE		0 Clinics

CLINICS		Included in View
Clinic

+ + More Clinics ?? More actions		
AD	Add Items to View	DV Delete Preferred View * Exit
RM	Remove Items from View	SV Save Preferred View & Exit
VE	Select New View of Problems	Q Quit w/o Saving Changes
Select Action: Next Screen// ad		
Select Item(s): 2 Audiology		

- After the screen containing clinics for your preferred view is displayed, type AD or Add Item(s) to View if you wish to add more clinics or services.
- Type the number(s) of the clinics or services you wish to add to your preferred view.

Problem Look-up Defaults [GMPL USER LOOK-UP DEFAULTS]

This option lets you define your own default screens for use when looking up a problem in the Lexicon Utility. The purpose of this option is to speed up the look-up and selection process by only looking for and displaying terms relevant to your practice.

Specific kinds of terms may be included or excluded from the search, if defined here.

Steps to use option:

- Go into the Problem List User Preferences Menu.
- Type 2 for Problem Look-up Defaults.
- Type the number of the kind of look-up default you wish.

```

SELECT PROBLEM LIST USER PREFERENCES MENU OPTION: 2  PROBLEM LOOK-UP DEFAULTS

1      FILTER
      **> OUT OF ORDER: THIS OPTION HAS BEEN DISABLED DUE TO THE
PROBLEM LIST SNOMED CT IMPLEMENTATION.
2      DISPLAY
      **> OUT OF ORDER: THIS OPTION HAS BEEN DISABLED DUE TO THE
PROBLEM LIST SNOMED CT IMPLEMENTATION.
3      VOCABULARY
      **> OUT OF ORDER: THIS OPTION HAS BEEN DISABLED DUE TO THE
PROBLEM LIST SNOMED CT IMPLEMENTATION.
4      SHORTCUTS
5      LIST CURRENT DEFAULTS

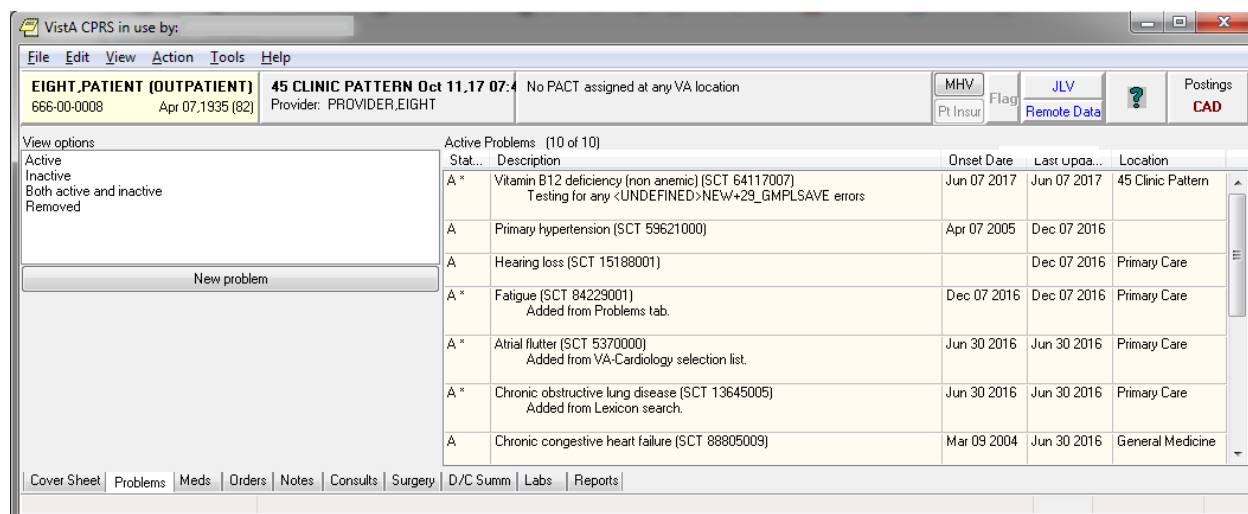

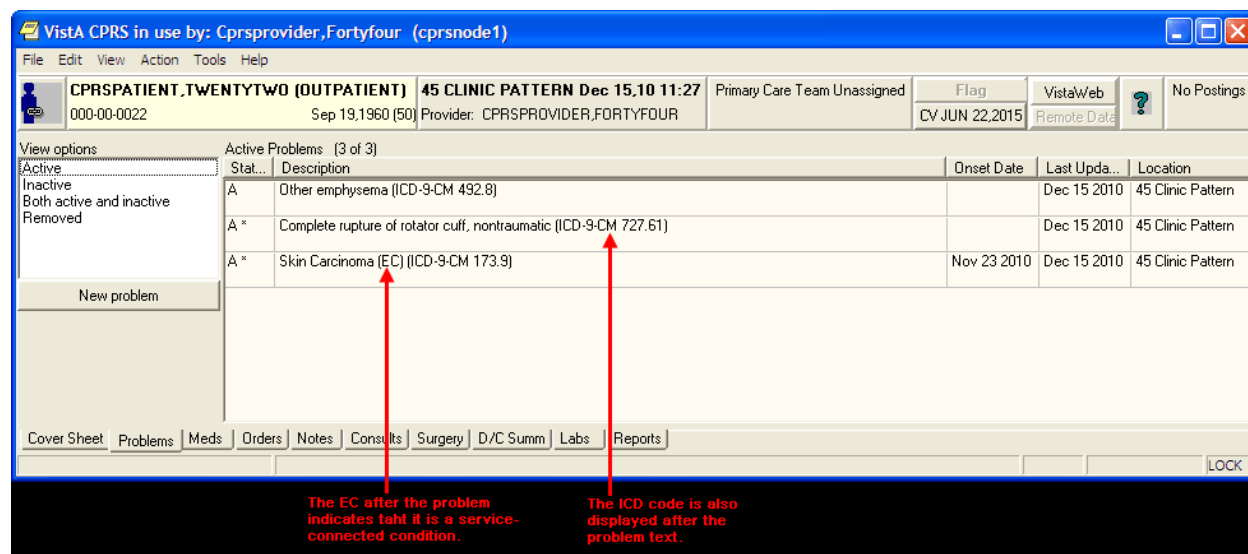

```

- Type the name(s) or number(s) of the filter option you wish to limit your Problem List to.
- ### Preferred Problem Selection [GMPL USER LIST]

Note: This option is no longer used with patch GMPL*2.0*49. List are designated using a CPRS parameter (ORQQPL SELECTION LIST) and set using another Problem List option.

Viewing the Problems Tab

When you click on the Problems Tab, a screen similar to the following opens up:

View Options

You have a choice of how to display a patient's problems: active problems only, inactive problems only, both active and inactive problems, and problems for a selected service or provider by customizing your view of the problem list.

You can change the view, add, deactivate, remove, verify, or annotate problems.

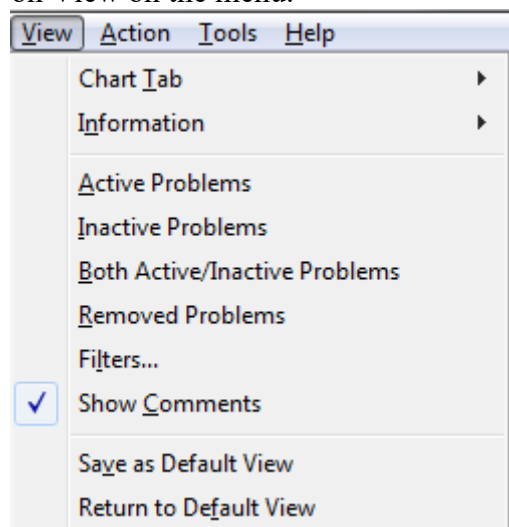

Changing Views on the Problem List

Changing the view of the Problem List allows you to focus the list of problems on one of several criteria. Focusing the list will speed up the selection process.

Problems List views:

- Active
- Inactive
- Active and Inactive
- Removed

To change the view, click on any of the options listed in the View options field or click on View on the menu.

Filters

Select the Filters option on the menu to further focus the list of problems you wish to have displayed. From the Filters dialog, you may choose to display problems by any combination of Status, Source Clinic (which is listed when you select Outpatient), Source Service (which is listed when you select Inpatient), and Provider.

Package Operation

How to Use Problem List

Operation of Problem List will vary from site to site, depending on the data entry method your hospital has chosen. Typical scenarios that might be used are described on the next two pages.

The actions for both clinician entry and clerk entry are essentially identical. In the descriptions on the following pages, differences between the two are noted.

The basic operation of the Problem List program is very simple:

1. Pick a patient.
2. Enter the Provider Name, if you're a clerk.
3. The patient's problem list is displayed.
4. Perform one of several possible actions, such as add a new problem, edit a problem, print a problem list, as described on the following pages.

Potential Scenarios for Problem List Entry

Outpatient Scenarios

- A. *Direct data entry into the Problem List:* A clinician (nurse, Physician Assistant, physician) compiles a list of patient problems relevant to the visit by direct data entry into either the CPRS GUI, the CPRS List Manager, or the Problem List package.
- B. *Manual entry into encounter form:* A patient checks in, is seen by a clinician, and an encounter form (usually an electronically generated form from the Integrated Billing software) is filled out by the provider. Problems addressed in the visit are captured. A purpose of visit may be recorded. The encounter form may be generic or it may be patient-specific, with ID, demographics, and Service Connection (SC) information. It may be customized to the clinic as well, with clinic, provider, and clinic-specific procedures and diagnoses. Data entry is done by a provider, who may check items or fill in free text. The provider must note which services delivered were for a service-connected condition. The provider may, in some cases, use the same form to create a progress note.

A clerk transcribes the problem and procedure data from the form into VistA. Free-text problem entries will be transferred to the computer to the best of the clerk's ability. Unclear entries will be returned to the provider for clarification. A new encounter form is

electronically generated from this data, to be used by the provider the next time he/she enters data for the patient.

- C. Same as above, except that after the encounter form is completed by the provider, it is scanned (through a scanning device), and entered electronically into DHCP.

Inpatient Scenarios

- A. A *clinician* (nurse, Physician Assistant, physician) compiles the list of patient problems relevant to the hospitalization. Presently, this is mainly done by direct data entry. The potential applications of Problem List data during inpatient stays include Treatment Plans, creation of headers for Progress Notes, preparation of a prompt sheet for a discharge document, and worksheets for rounds. Problem data may benefit the Utilization Review specialist who must submit data for certification of ongoing inpatient treatment.

Another scenario would be using the application to create a problem list (VAF 10-1415) when one is required, as for a new patient with a new chart.

- B. A *clerk* transcribes patient information entered by a provider on an encounter form designed to capture problem data for an inpatient. The clerk enters data from checkbox entries and free-text entries. The clerk then prints a turnaround form to allow the provider to correct errors. Clerks will record corrections and set a verification flag. (Providers may verify data online, as well.)

Problem List in CPRS GUI

Problem List is available as a tab on the CPRS GUI Cover Sheet. The Cover Sheet is the first screen you see after opening a patient record unless your site defines another tab as the initial tab. It presents a quick overview of a patient's condition and history. It shows active problems, allergies and postings, active medications, clinical reminders, lab results, vitals, and a list of appointments or visits.

See [Appendix A](#) for information about using the new Lexicon Search capability.

Cover Sheet Problems Meds Orders Notes Consults Surgery D/C Summ Labs Reports

You can quickly review the active problems (asterisks identify acute problems, and dollar signs identify unverified problems).

Scroll bars beside a box mean that more information is available if you scroll up or down.

Single-click on one of the five menus: File, Edit, View, Tools, or Help, to see choices of things you can do or other options available to you.

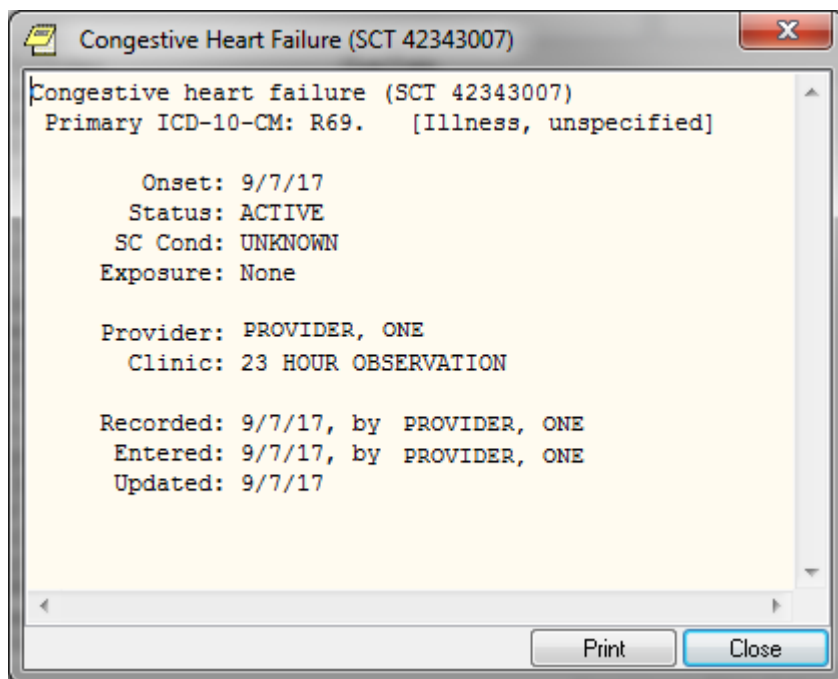

File Menu

The File menu contains three commands that you will use often:

- **Select New Patient** brings up the Patient Selection dialog.
- **Update/Provider/Location** brings up a dialog that enables you to change the clinician or location of an encounter.
- **Review/Sign Changes** enables you to view the orders you have placed that require an electronic signature, select the orders you want to sign at this time, and enter your electronic signature (if you are authorized to sign them).

Click on any Problem List item on the cover sheet to get more detailed information.

Example

Adding a Problem Using a Problem Selection List

If a Problem Selection List is assigned to a user, selected clinic, division, or system under which the user is signed into, those corresponding problem selection list categories and problems will be displayed for user selection.

Steps to add a new problem to a patient's problem list:

1. Select the Problems tab.
2. Select the New Problem button. The Problem Selection List categories and problems appear.

Note:

If you have not defined the provider or location, you will be prompted for this encounter information.

Problem categories

- Primary Care (VA)
- Cardiology (VA)
- Dental (VA)

Other Problem

Cancel

3. Select a problem associated with a particular Problem category/specialty.
4. Enter information about the problem, such as whether it is acute or chronic, treatment factors (Service Connected, Radiation, Agent Orange, or Environmental Contaminants), the Date of Onset, the provider, and the clinic.
5. Add a comment if you wish by clicking **Add Comment** and entering the comment in the dialog that appears. Then click **OK**.
6. Click **OK** again.

Adding a Problem Using the Lexicon Search

You add a new problem from the Problems tab. From this tab, you can add, remove, change, verify, and annotate a problem.

See [Appendix A](#) for information about using the new Lexicon Search capability.

Steps to add a new problem to a patient's problem list:

1. Select the Problems tab.
2. Select New Problem. The Problem List Lexicon Search box appears (only if there are no Problem Selection Lists currently assigned).

Note:

If you have not defined the provider or location, you will be prompted for this encounter information.

Problem List Lexicon Search

Enter Term to Search:

Headache

Select from one of the following items:

Problem

- ▷ Benign coital headache
- ▷ Benign exertional headache
- ▷ Cervicogenic headache
- ▷ Chronic cluster headache
- ▷ Chronic cluster headache evolved from episodic cluster headache
- ▷ Chronic headache disorder
- ▷ Chronic mixed headache syndrome
- ▷ Chronic post-concussion headache
- ▷ Chronic post-traumatic headache
- ▷ Chronic tension-type headache
- ▷ Cluster headache
- ▷ Daily headache
- ▷ Drug withdrawal headache
- ▷ Episodic cluster headache
- ▷ Episodic tension-type headache
- ▷ Frontal headache

Description: Headache
SNOMED CT: 25064002

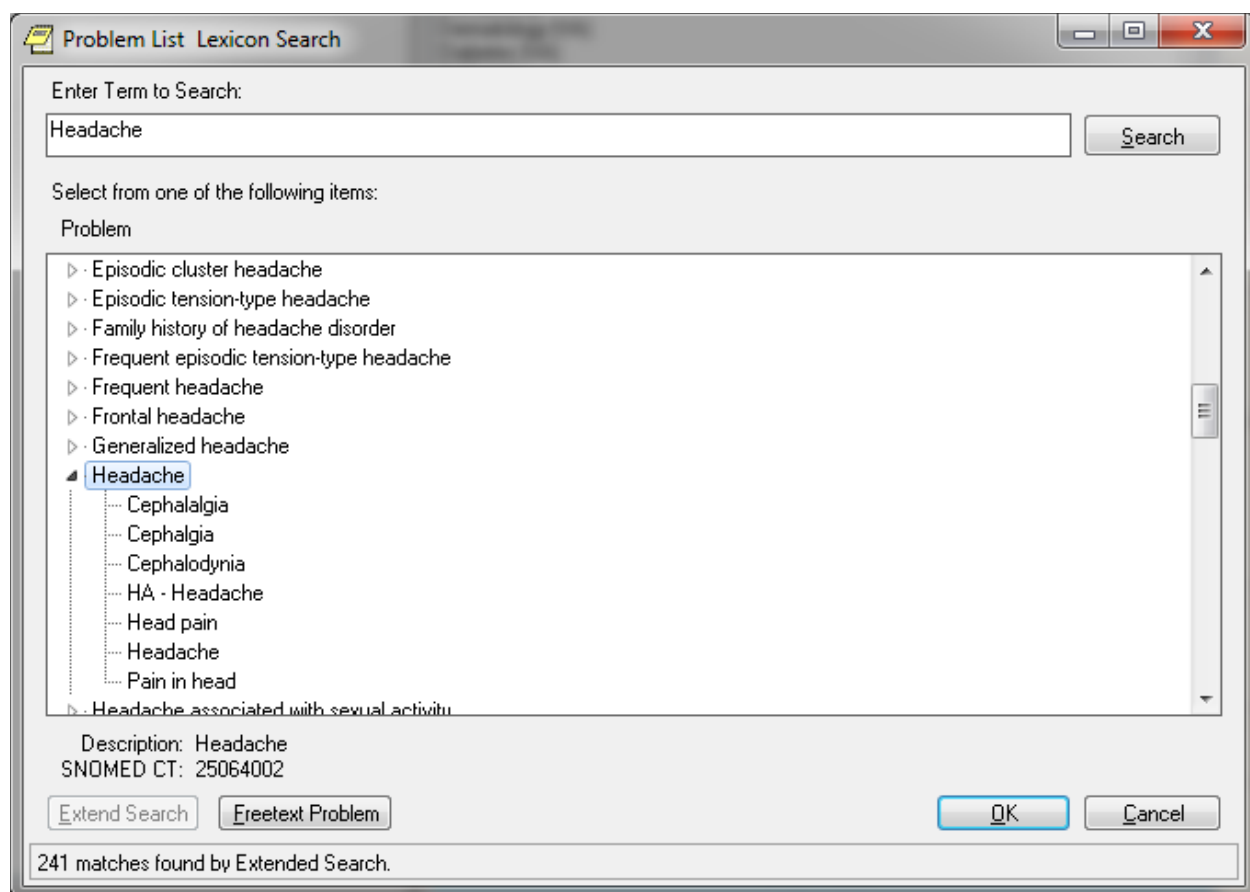

Extend Search

OK Cancel

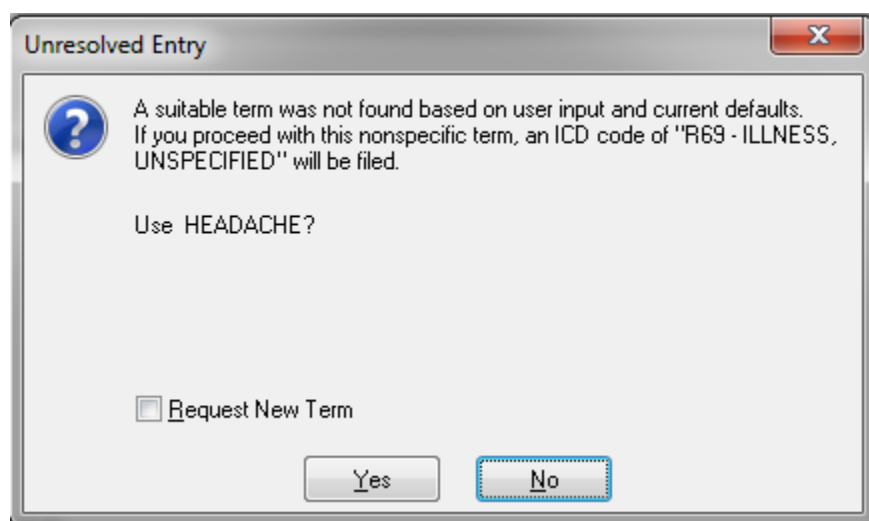

112 matches found.

3. Select a problem from the list or search the lexicon for the problem by clicking **Extend Search** on the lower left side of the Problems tab. When the list appears, locate and click on the problem.
4. Enter information about the problem, such as whether it is acute or chronic, treatment factors (Service Connected, Radiation, Agent Orange, or Environmental Contaminants), the Date of Onset, the provider, and the clinic.

5. Add a comment if you wish by clicking **Add Comment** and entering the comment in the dialog that appears. Then click **OK**.
6. Click **OK** again.
7. If you select Extend Search, a screen such as the following appears. You can select one of the listed terms or click on the Freetext Problem button.

If you click on the Freetext Problem button, you have a choice of Requesting a New Term.

Note: 	See Appendix A for more details about requesting new terms.
---	---

Annotating a Problem

To annotate a problem, use these steps:

1. Click on the **problem** in the problem list.
2. Select **Action | Annotate...** or right-click the problem and select **Annotate...** from the pop-up menu.
3. Enter your annotation in the dialog that appears (up to 200 characters).
4. Click **OK**.

Changing a Problem

To change a problem on a patient's problem list, use these steps:

1. Click the **Problems** tab.
2. Click on the problem in the list box that you want to change.
3. Select **Action | Change...** or right-click the problem and select **Change...** from the pop-up menu.
4. Enter the desired changes.
5. Add or remove a comment if desired.

Note: A comment can be as many as 200 characters (including spaces) in length.

6. Click **OK**.

Note: 	When you view the details of a problem, you will see who changed the problem and when.

Cover Sheet Problems Meds Orders Notes Consults Surgery D/C Summ Labs Reports

Deactivating a Problem

To deactivate a problem on a patient's problem list, use the following steps:

1. Click on a problem in the list box.
2. Select **Action | Inactivate** or right-click the problem and select **Inactivate** from the pop-up menu.

Removing a Problem

A problem is not removed from the database because things "pointing" to it might be broken if it is removed. A field in the problem record can be "flagged" with an "H" and the problem will be HIDDEN. Any software that runs on the database must look at the field to see if it is hidden or not. The hidden record will not appear on any reports or lists and will appear to the user that it has been removed. Actually it is only removed from sight.

To remove a problem from a patient's problem list, use these steps:

1. Click on the problem.
2. Select **Action | Remove** or right-click the problem and click **Remove** on the pop up menu.

Verifying a Problem

To verify a problem on a patient's problem list, use these steps:

1. Click on the problem in the problem list.
2. Select **Action | Verify** or right-click the problem and click **Verify** on the pop up menu.

Customizing the Problem List

On the Problems tab, you can sort the problem list by problem status or use the view filtering to get a more specific list of problems. You can sort the list to see the following:

- Active Problems
- Inactive Problems
- Both Active/Inactive Problems
- Removed Problems

Problem List in CPRS List Manager

Using Problem List through the List Manager version of CPRS is very similar to using it directly in the Problem List application. The advantage of using it in CPRS is that you also have access to the complete patient chart, which includes Orders, Notes, Reports, Summaries, and Meds.

When you sign in to the List Manager version of CPRS, the first screen you see is the Patient Selection screen. If you have a default list defined, the names on the list will appear here for you to select from.

Steps to use Options:

1. Select patient name.

Patient Selection	Apr 12, 2002@11:37:30	Page:	1 of 1
Current patient: ** No patient selected **

Potential Scenarios for Problem List Entry

Outpatient Scenarios

- A. *Direct data entry into the Problem List:* A *clinician* (nurse, Physician Assistant, physician) compiles a list of patient problems relevant to the visit by direct data entry into either the CPRS GUI, the CPRS List Manager, or the Problem List package.
- B. *Manual entry into encounter form:* A patient checks in, is seen by a clinician, and an encounter form (usually an electronically generated form from the Integrated Billing software) is filled out by the provider. Problems addressed in the visit are captured. A purpose of visit may be recorded. The encounter form may be generic or it may be patient-specific, with ID, demographics, and Service Connection (SC) information. It may be customized to the clinic as well, with clinic, provider, and clinic-specific procedures and diagnoses. Data entry is done by a provider, who may check items or fill in free text. The provider must note which services delivered were for a service-connected condition. The provider may, in some cases, use the same form to create a progress note.

A clerk transcribes the problem and procedure data from the form into VistA. Free-text problem entries will be transferred to the computer to the best of the clerk's ability. Unclear entries will be returned to the provider for clarification. A new encounter form is electronically generated from this data, to be used by the provider the next time he/she enters data for the patient.

- C. Same as above, except that after the encounter form is completed by the provider, it is scanned (through a scanning device), and entered electronically into DHCP.

Inpatient Scenarios

- A. A *clinician* (nurse, Physician Assistant, physician) compiles the list of patient problems relevant to the hospitalization. Presently, this is mainly done by direct data entry. The potential applications of Problem List data during inpatient stays include Treatment Plans, creation of headers for Progress Notes, preparation of a prompt sheet for a discharge document, and worksheets for rounds. Problem data may benefit the Utilization Review specialist who must submit data for certification of ongoing inpatient treatment.

Another scenario would be using the application to create a problem list (VAF 10-1415) when one is required, as for a new patient with a new chart.

- B. A *clerk* transcribes patient information entered by a provider on an encounter form designed to capture problem data for an inpatient. The clerk enters data from checkbox entries and free-text entries. The clerk then prints a turnaround form to allow the provider to correct errors. Clerks will record corrections and set a verification flag. (Providers may verify data online, as well.)

Using Problem List through the Problem List Program in List Manager

Patient Problem List Option [GMPL CLINICAL USER]

This option lets clinicians use the Problem List program to review a patient's problems, add a new problem, edit an existing problem, inactivate a problem, and a number of other actions, as described in the following pages.

Note: 	Problems on the list will appear in chronological order unless you choose reverse chronological order in the Edit PL Site Parameters option (on the Problem List Mgt Menu).
---	---

```
Select Option: Patient Problem List
Select PATIENT NAME: PLPATIENT,ONE    03-04-14    666001111    SC VETERAN
Searching for the patient's problem list...
```

1. Select the Patient Problem List option from your clinical menu. (Each site will decide what menu to place this option on.)
2. Type the name of the patient whose problem you wish to enter.

The patient's problem list is then displayed, as shown in the example below:

PROBLEM LIST		Jun 29, 2017@09:11:27		Page: 1 of 2	
CPRSPATIENT,FIFTEEN (C0010)		6 active problems			
ACTIVE PROBLEMS

RM	Remove Problems	CM	Comment on a Problem	SP	Select New Patient
ED	Edit a Problem	DT	Detailed Display	PP	Print Problem List
				Q	Quit
Select Action: Next Screen//					

REMEMBER: You can respond to many prompts by typing the first few letters of a name, option, or action. Some option names have “mnemonics” — an abbreviation that you can enter rather than the entire option name.

Problem List Data Entry [GMPL DATA ENTRY]

This option lets **clerks** enter and maintain Problem Lists. Clerks can enter new problems, edit problems, remove, or print a problem. The clerks in outpatient clinics will probably be working with Encounter Forms (or similar data entry forms) to enter and edit problems that clinicians have entered onto the forms.

Note: 	When problems are entered into the problem list with no ICD code attached, the system automatically assigns the number R69 .
---	---

Select Option: **Problem List Data Entry**
 Select PATIENT NAME: **CPRSPATIENT,EIGHT** 06-18-62 666221008
 Searching for the patient's active problem list...

1. Select the Problem List Data Entry option from your clinical menu. (Each site will decide what menu to place this option on.)
2. Type the name of the patient whose problem you wish to enter.
3. Type the name of the Provider for this problem list.

How to Use Problem List User List Manager Actions

The Patient Problem List and Problem List Data Entry options in List Manager present screens that contain patient information and one or more problems for that patient (if they have been previously entered). At the bottom of this screen are a number of actions you can perform at this time. This section describes the following user actions:

- Add New Problems
- Comment on a Problem
- Detailed Display
- Edit a Problem
- Inactivate Problems
- Print Problem List
- Remove Problems
- Select New Patient
- Select View of List
- Show All Problems
- Verify Problems
- More Actions

Note:

Other actions are available on management screens, but they aren't described individually in this manual. See the Package Management section earlier in this manual for further information about management actions.

ACTIONS

Add New Problems

Follow the steps listed below the sample screen to create a problem list for a patient or add a new problem to an already existing problem list.

Note: 	New problems that you add will appear at the bottom of the list unless you change the display to reverse chronological order through the option Edit PL Site Parameters. They will then appear at the top of the list.
Note: 	If there is more than one match to the problem you enter, a list is displayed for you to select from.

These lists are displayed in groups of five. If there are more than five matches and you want to scroll back to a previous batch of five, type $\wedge(\#)$ – e.g., $\wedge 1$ – and the screen will re-display the first group.

Clinic: Podiatry

PROBLEM: Diabetes Mellitus

363 matches found

1	Diabetes mellitus (SNOMED CT 73211009)
2	FH: Diabetes mellitus (SNOMED CT 160303001)
3	H/O: diabetes mellitus (SNOMED CT 161445009)
4	Type 2 diabetes mellitus (SNOMED CT 44054006)

```

5   Type 1 diabetes mellitus (SNOMED CT 46635009)
Type "^" to STOP or Select 1-5: 1

```

1. Type the name of the patient to add a problem for.
2. Type AD at the “Select Action” prompt.
3. If the patient is an outpatient, you will be prompted for a clinic.
4. Enter the name of the problem you wish to add to the patient’s problem list. You will be re-prompted for “PROBLEM” until you press return.

The patient’s problem should be entered in clinical terms. You can use one full word or two to three partial words; for example, DIABETES, DIAB MELL, or DIAB MELL INSUL.

- You can enter as many comments to a problem (up to 200 characters each) as you wish.
- The date of onset should be the date the problem was first observed, as precisely as known.
- If you have no idea of the date, press return to bypass the prompt.

Example 1 (cont’d)

```

COMMENT (<200 char): Check foot sore
DATE OF ONSET: T-3 (MAY 19, 2004)
STATUS: ACTIVE// <Enter>
(A)cute or (C)hronic: Chronic

>>> Currently known service-connection data for CUMQUAT,EARNEST.:
      SC %: 50%
      Disabilities: NONE STATED

Remove Problems

You can remove a problem from the list if it was incorrectly entered.

Note:

If it is necessary to see problems that have been removed or you want to replace them on the list, someone with the Problem List Mgt Menu can access the option, Replace Removed Problems on Patient's List, to do this.

Verify Problems

If problems are entered from an Encounter Form (or other printed material) by clerks, the hospital can set a parameter to require that these transcribed problems must be verified by the clinician.

When the problem appears on the problem list, it will have a \$ beside it to indicate that the clinician must take action to verify that the problem is correct as entered.

How to Use Problem List User GUI Actions

After you select the Problems tab, the Action menu on the toolbar contains actions relevant to Problem List: New Problem, Change, Inactivate, Verify, Annotate, Remove, and Restore.

Annotating a Problem

To annotate a problem, use these steps:

1. Click on the **problem** in the problem list.
2. Select **Action | Annotate...** or right-click the problem and select **Annotate...** from the pop-up menu.
3. Enter your annotation in the dialog that appears (up to 200 characters).
4. Click **OK**.

Changing a Problem

To change a problem on a patient's problem list, use these steps:

1. Click the **Problems** tab.
2. Click on the problem in the list box that you want to change.
3. Select **Action | Change...** or right-click the problem and select **Change...** from the pop-up menu.
4. Enter the desired changes.
5. Add or remove a comment if desired.

Note: 	A comment can be as many as 200 characters (including spaces) in length.
---	--

6. Click **OK**.

Note: 	When you view the details of a problem, you will see who changed the problem and when.
---	--

Rash (SCT 271807003)

SNOMED-CT: Eruption

Primary ICD-10-CM: R21. [Rash and other nonspecific skin eruption]

Onset:

Status: ACTIVE

SC Cond: NO

Exposure: None

----- Audit History -----

5/14/14: DIAGNOSIS changed by Provider, One from (ICD-9-CM 782.1) to (ICD-10-CM R21.)

Print Close

Inactivating a Problem

To deactivate a problem on a patient's problem list, use the following steps:

1. Click on a problem in the list box.
2. Select **Action | Inactivate** or right-click the problem and select **Inactivate** from the pop-up menu.

Removing a Problem

A problem is not removed from the database because things "pointing" to it might be broken if it is removed. A field in the problem record can be "flagged" with an "H" and the problem will be HIDDEN. Any software that runs on the database must look at the field to see if it is hidden or not. The hidden record will not appear on any reports or lists and will appear to the user that it has been removed. Actually it is only removed from sight.

To remove a problem from a patient's problem list, use these steps:

1. Click on the problem.
2. Select **Action | Remove** or right-click the problem and click Remove.

Verifying a Problem

To verify a problem on a patient's problem list, use these steps:

1. Click on the problem in the problem list.
2. Select **Action | Verify** or right-click the problem and click **Verify** on the pop up menu.

Helpful Hints & Tips

Helpful Hints

Q: When I want to add a problem that has many different names (more than five) to choose from, is there any way I can scroll back to the top of the list?

A: If you type an up-arrow and the number of the problem (^#), you will go back to the group of five numbers that includes the number you entered.

Example:

```
Select Action: Next Screen// ad   Add New Problem(s)
```

```

```
Type "^" to STOP or Select 1-10:
```

Q: Can I add Problem List items to the Health Summary?

A: You can add Problem List components (Active, Inactive, and All) to your Health Summary when you build a Health Summary type. You can also jump between Health Summary and Problem List if you attach the two protocols listed above.

Q: How can I change the length of time before the system times out? Frequently, I have to leave my terminal to take care of a patient or other business; then when I come back, I have to log in and go through all the prompts and such to get back to where I was.

A: Each site sets its time-outs; talk to your ADPAC or IRMS to see what can be done. Security is the main issue in determining time-out times.

Glossary

\$	A symbol that can appear beside a problem, indicating that the problem was entered by a clerk and needs to be verified by a physician. For this functionality to exist, a site parameter must be set through the option Edit PL Site Parameters (on the Problem List Mgt Menu).
*	A symbol that can appear beside a problem, indicating that the problem has been designated as acute or critical.
Action	A functional process a user takes within the Problem List option that affects the end result or, what is actually accomplished by the option. <i>Examples:</i> Edit a problem, print a problem list, add a comment to a problem.
CPT	Current Procedural Terminology, a coding system of medical terms, used for billing purposes.
Clinical Term	Names used for problems, diagnoses, procedures, etc.
Clinician	A doctor or other health care provider in the medical center who is authorized to enter problems onto a patient's chart.
DSM-IV	Diagnostic and Statistical Manual of Mental Disorders, 4th Ed.,
Encounter Form	A paper form (which can be created by a form generator utility) for use with Problem List to print a patient's problems on, for the clinician to edit and/or add new problems, then used by clerks to enter new problems and/or edit existing problems.
Health Summary	A VistA clinical module that allows users to compile summaries of a patient's health care by combining various components of data drawn from other VistA modules such as Laboratory, Pharmacy, and Radiology.
ICD-9-CM	International Classification of Diseases, 9th Rev, Clinical Modification, 1991.
ICD-10-CM	International Classification of Diseases, 10th Rev, Clinical Modification, 2015.

Indian Health Service (IHS)	The Indian Health Service has a computerized system comparable to VistA, called Resource and Patient Management System (RPMS).
Lexicon	A terminology utility that uses UMLS terms, the Multiterm Lookup and other utilities to provide clinical terms and concepts, semantic types, special coding, etc.
NTRT	New Term Rapid Turnaround (NTRT) is the process to distribute standard reference files to VistA and to HealtheVet environments.
PCE	Patient Care Encounter, a VistA application.
PL	Occasionally this abbreviation for Problem List is used in option or menu names.
Problem	The term that the clinician gives to a patient's complaint or diagnosis.
Progress Note	A VistA module, as well as a non-computerized form, for maintaining text about a patient's condition.
SNOMED	Systematic Nomenclature of Medicine, another coding system, used mostly by the Anatomic Pathology module of Laboratory.
Specialty Subset	Because many discipline-specific terms are synonyms to other terms, they are not accessible unless you specify the appropriate subset of the Lexicon to choose from. When building problem selection lists, users must choose one of the following specialty subsets: Nursing, Dental, Social Work, Immunology, or General Problem.
VistA	Veterans Information System Technology Architecture, the VHA computer program used in VA facilities.

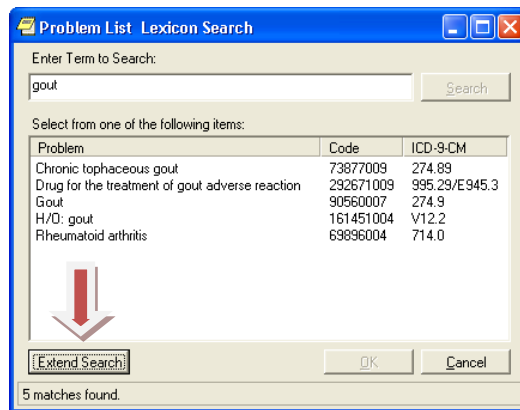

Appendix A: Lexicon/NTRT Tips for the Problems Tab

In 2013 the Problem List application adopted SNOMED CT to comply with the interoperability terminology standard in support of data exchange among the DoD, VA, and private sector healthcare providers worldwide. Therefore enhancements were implemented to support the standardization effort.

Lexicon searches are based on the SNOMED CT vocabulary, a clinical terminology rather than the administrative code set of ICD.

1. There are two searches—Initial and Extended: The initial search displays matches from a commonly used list of SNOMED CT terms used within the VA. If the desired term is not found on the initial list, use the Extend Search button to display a list of matches from a larger set of SNOMED CT and matches from the initial search.

Example from the initial search

2. The extended search displays a list of matches from a larger set of SNOMED CT as well as matches from the initial search. By default, matches from the extended search are mapped to ICD-10-CM code R69 the equivalent of ICD-9-CM code 799.9.

Example from the extended search

Problem List Lexicon Search

Enter Term to Search:

rash

Search

Select from one of the following items:

Problem

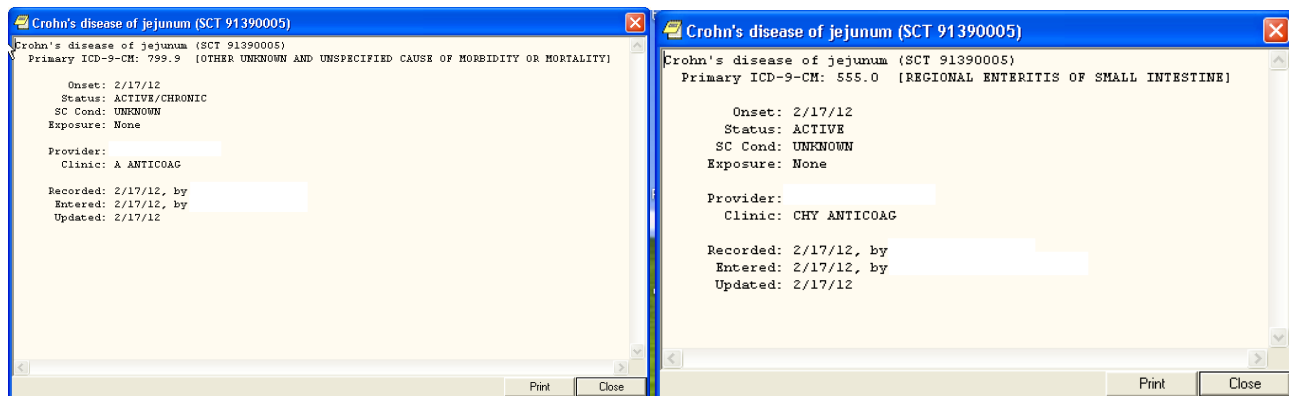

- ▲ Eruption
 - ... Breaking out - eruption
 - ... Eruption
 - Eruption of skin
 - ... Exanthem
 - ... Rash
 - ... Skin eruption
 - ... Skin rash
- > Eruption due to drug
- > Eruption of female perineum
- > Eruption of skin co-occurrent with human immunodeficiency virus infection
- > Erythema scarlatiniforme
- > Generalized rash
- > Generalized skin eruption caused by drug and medicament
- > Gravel rash
- > Halogen eruption
- > Herpetiform eruption
- > Leptospiral rash

Description: Rash
SNOMED CT: 271807003

Extend Search Freetext Problem OK Cancel

265 matches found by Extended Search.

Example of the 799.9 Updated in the Patient Record

3. If there are no matches from the initial search or extended search, the user may have the option to enter a free text problem entry by clicking on the free text problem button. A dialog box displays giving the user a choice to submit his/her term to the STS team for consideration to be added to the Core Problem List subset or to return to the search dialog to again search for a closely related term. By clicking on "Apply for New Term" a bulletin is automatically generated as shown below.

Example of Bulletin for a New Problem/Diagnosis Request

```
Subj: NEW PROBLEM/DIAGNOSIS TERM REQUEST [#196413] 02/14/12@15:54 33
lines
From: OR PROBLEM NTRT BULLETIN In 'IN' basket. Page 1 *New*

*** New Problem/Diagnosis Term Request ***

Requested term: acroangiodermatitis of mali
Date/Time of request: 2/14/12@15:54
Name of requester: Ten Cprsprodvider MD
Service: INFORMATION OFFICE
Location: SITE VAMC(442)

A New Term Rapid Turnaround (NTRT) mail message has been sent to you
because a user from your facility has failed to find a suitable term
after initiating the search options within the Problem List application
and has chosen to request a new term to be added to the Problem List
subset.

Please review the requested term and verify it is understandable,
clinically useful, and does not already exist within the Problem List
subset. If the term is found appropriate, then submit a NTRT request at
the NTRT website, http://vista.med.va.gov/ntrt/. Follow the link to
Access the NTRT Request Web Site.

The Problem List domain steward will review each request and respond to
you with the outcome of this request. If the term is approved by the
Problem List NTRT committee it will be added to the Problem List subset
and made available within future searches.
```

The progress of this request may be monitored by accessing the NTRT website at the NTRT website.

If you have questions, need more information, or are having accessibility problems with this website, please contact STS by Exchange E-Mail: [VHA OI HDI STS NTRT].

Thank-you.

4. Submitting New Term Rapid Turnaround Requests (NTRT)

All users must have logon access to submit new term requests. This is in addition to your VA authentication. If you do not have access, you can use the following link to [access a logon request form](#). Fill in the form and submit it to request access to the site. This request is sent to the VHAT OI HDI STS NTRT mail group that will check for existing access, and if none exists, will create a logon and password and send it to the requester.

Below is the Welcome page where you enter your “Username” and “Password” to logon. Logon names and passwords are case-sensitive.

5. Setting the new ORQQPL Parameter

This parameter determines whether the user will be shown SNOMED CT and ICD codes when searching for patient problems.

- a. Logon to Programmer Mode.
- b. Select OPTION NAME: XPAR MENU TOOLS General Parameter Tools
- c. Select General Parameter Tools Option: **EP** Edit Parameter Values
- d. Select PARAMETER DEFINITION NAME: **ORQQPL SUPPRESS CODES** Suppress Codes in Lexicon Problem Search
- e. ORQQPL SUPPRESS CODES may be set for the following:

5	User	USR	[choose from NEW PERSON]
10	Service	SRV	[choose from SERVICE/SECTION]
15	Division	DIV	[choose from INSTITUTION]
20	System	SYS	[xxx.VA.GOV]

- f. Enter selection: 5 User NEW PERSON
- g. Select NEW PERSON NAME: <USER>
- h. Setting ORQQPL SUPPRESS CODES for User: <USER> Suppress Codes?: NO// ?
This indicates whether code values should be hidden during Problem searches. Suppress Codes?: NO// **YES**

Setting the parameter value to YES will suppress the code display during lexicon look-ups. If you wish to set it for a given service, division, or system-wide, you can set the value at the corresponding level.

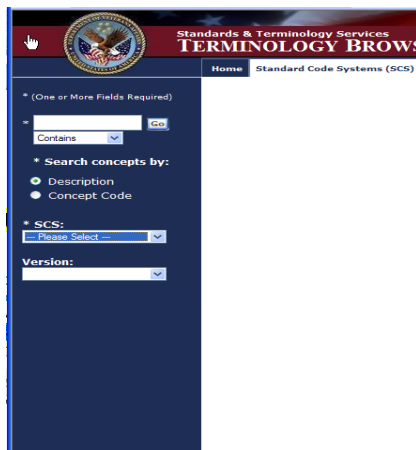

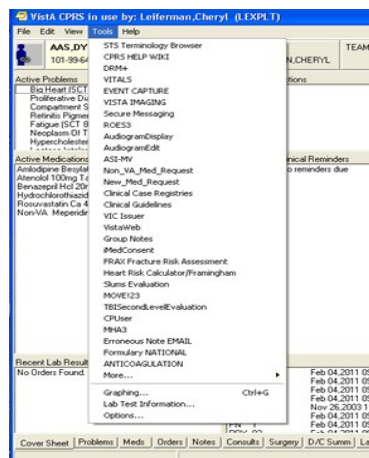

ORQQPL SUPPRESS CODES may be set for the following:

5	User	USR	[choose from NEW PERSON]
10	Service	SRV	[choose from SERVICE/SECTION]

15 Division DIV [choose from INSTITUTION]
 20 System SYS [xxxmVA.GOV]

6. Setting up CPRS Tools Menu (instructions for this are in the CPRS Technical Manual as well)
 - a. In VistA, go to CPRS Configuration Clinical Coordinator.
 - b. Select GUI Parameters
 - c. GUI Tool Menu Items
 - d. Setup for a User, Location, Service, System, or Division.
 - e. Add New Sequence
 - f. Name=Command: Terminology
 - g. Browser=http://vahrppwls14.aac.xxx:7204/sts.browser/index.action
 - h. Open CPRS, Click on Tools in the Menu Bar and View the Terminology Browser. The same steps can be used to add the CPRS Wiki to the Tools Bar.
