Clinical Information Support System

Patient-Centered Management Module (PCMM)

PCMM Web-VistA Installation Guide

November 2015
Documentation Version 1.4

Office of Information and Technology
Enterprise Systems Engineering
Project Management Office

.

Revision History

Date	Version	Description	Author
November 2015	1.4	Minor edits. Updated determine disk space for extracts and file backups.	<mark>REDACTED</mark>
October 2015	1.3	Added VistA Patch Rollback instructions.	<mark>REDACTED</mark>
June 2015	1.2	Updated Patch descriptions	<mark>REDACTED</mark>
March 2015	1.1	Technical edit.	<mark>REDACTED</mark>
October 2014	1.0	Initial document.	<mark>REDACTED</mark>

Table of Contents

1. Background

This is the Patient-Centered Management Module Web Installation Guide. This guide contains step-by-step instructions for installing the VistA patches required to support the PCMM Web application.

The following patches are available with this release:

PCMM Web Informational Patch:
- WEBP*1*1 - Patient-Centered Management Module (PCMM) Web

VistA Patches:
- SD*5.3*620 – PCMM DATA EXTRACTS (Release April 2015)
- SD*5.3*603 – PCMM WEB LEGACY CHANGES
  - The VistA software for this patch is released as a KIDS host file. It may be downloaded from a secured FTP site as directed by the PCMM Web Implementation Team.
- OR*3.0*387 – PCMM WEB TEAM DISPLAY ENHANCEMENTS TO CPRS
  - The VistA software for this patch is released as a KIDS host file. It may be downloaded from a secured FTP site as directed by the PCMM Web Implementation Team.

NOTE: These patches are to be staggered when implementing into production and not to be installed all at once. This installation includes a Data Migration and that must be executed separately on the PCMM Web server in between the installation of SD*5.3*620 and SD*5.3*603. A CPRS Header Update job must be executed on the PCMM Web server between the installation of SD*5.3.603 and OR*3.0.*387. The installation of all patches must be coordinated between VistA and PCMM Web.

1.1. Purpose

The purpose of this Installation Guide specifies how the Patient-Centered Management Module web application will be evaluated and subsequently deployed within the Office of Enterprise Development (OED).

1.2. Scope

The scope of this plan encompasses the PCMM Web application, and related responsibilities. The plan specifies:

a. Pre-requisites for installing PCMM Web and PCMM Data Extracts.
b. Acceptance – a decision to manage the risk as falling within an acceptable risk tolerance range.

1.3. Pre-Requisite Considerations

The following are pre-requisite considerations for the PCMM Web application installation:

- Verify the user installing the PCMM Web has access to the National Patch Module and Forum to retrieve patches.
- The user knows how to install VistA Patches.
- The user knows how to retrieve files from the Host File System (HFS).

- The user has knowledge of Linux or VMS systems.
- The user must have the XUMGR and XUPROGMODE security keys.
- The user will execute the extract options on the "back-end" database server, where applicable.
- Executing the extract routines requires access to the Caché (M) command line. (programmer prompt).
- Executing patch SD*5.3*603 requires access to the Caché (M) command line (programmer prompt).

2. Patch SD*5.3*620 – PCMM Web Data Extracts

On April 9, 2015 (compliance date), Patch SD*5.3*620 was released. Therefore, all sites should have installed Patch SD*5.3*620 into production. This patch introduced menu options that will be used to extract PCMM data from the site's local Vista system. During deployment, each site is expected to FTP the extract files to the PCMM Web project team. These files will be used to perform data validation during PCMM Web Deployment.

> **IMPORTANT: DO NOT run the Post Installation instructions in this patch on the Production System until the site is scheduled to begin the PCMM Data Mitigation process. Each site will be scheduled for deployment and will receive notification from the Implementation Manager indicating the planned deployment date. In addition, the extraction menu options in the SD*5.3*620 patch should not be executed before the Data Validation process begins.**

- Each site will be contacted by the PCMM Implementation Manager to schedule PCMM Data Mitigation.
- This patch may be installed with users on the system. This patch should take less than 5 minutes to install.
- The file extract processing may be system resource intensive. It is recommended to schedule the post installation steps for non-peak hours.

2.1. Data Extract Instructions

These steps are executed once the site is scheduled for PCMM Web deployment. The steps below are preparation for data migration efforts. All sites are required to participate in the data migration prior to going live with the PCMM Web application. The Implementation Manager will schedule your site for deployment and schedule the Data Extract date. Legacy PCMM users must be off the system and complete with data entry during the data migration.

> **NOTE: DO NOT run the extract options detailed on your Production system until your site has been scheduled to begin the PCMM Data Mitigation process and deployment. An Implementation Manager will contact your site to schedule the PCMM Data Migration.**

- You may test the extract functionality in your site's Test Account, but do not perform the FTP steps in section 2.5. On the test systems, extracts can run at any time to verify functionality.

- Execute the extracts on the "back-end" database server (i.e., ecp node), where applicable, by staff with Caché (M) command line (programmer prompt) access and privileges (i.e., programmer mode access).

- The extract processing may be system resource intensive because Patient Team Assignment Extract and Patient Team Position extracts will be extracting all patients assigned to a PCMM Team. This process may take a substantial amount of time to complete due to the large file sizes. Ensure that the site's system has enough space to support storage of these files.

  Estimated Extract File sizes. The timing will vary site to site.

```
SIZE           STN    FILE_NAME                                 TIMING
------------------------------------------------------------------------------
50MB – 85MB    <SITE#>_PCMMPATIENTTEAMASSIGNMENT.TXT            4 – 12 HOURS
45MB – 80MB    <SITE#>_PCMMPATIENTTEAMPOSITIONASSIGNMENT.TXT    4 – 12 HOURS
685KB – 1.5MB  <SITE#>_PCMMPOSITIONASSIGNMENTHISTORY.TXT        2 – 10 MINUTES
145KB – 290KB  <SITE#>_PCMMPRECEPTORASSIGNMENTHISTORY.TXT       2 – 10 MINUTES
30KB – 40KB    <SITE#>_PCMMTEAMHISTORY.TXT                      2 – 10 MINUTES
300KB – 400KB  <SITE#>_PCMMTEAMPOSITIONHISTORY.TXT              2 – 10 MINUTES
495KB – 610KB  <SITE#>_PCMMTEAMPOSITION.TXT                     2 – 10 MINUTES
35KB – 40KB    <SITE#>_PCMMTEAM.TXT                             2 – 10 MINUTES
```

- It is recommended to perform this extract during non-peak hours.

- The extract should run after all PCMM Legacy users are logged off the system.

- Run on the last business day before your scheduled installation/deployment date and schedule the extract for non-peak hours. Users should cease data entry in PCMM Web prior to the extract. If data entry is still in progress, some data may not be captured in the extract and may not be included in data migration.

NOTE: <u>DO NOT RUN the extract options until the site has been scheduled to begin data migration</u>. The implementation coordinator will contact the site with the scheduled date for data migration and additional assistance.

The Patient Team Assignment Extract makes a copy of all patients assigned to a PCMM Team. This process will take a while due to the size of the extract. Additionally, this applies for the Patient Team Position Assignment Extract.

Complete the following three steps to perform the data extracts for PCMM data

1. Assign the PCMM DATA EXTRACTS Security Key to yourself or the user who will be performing the extract.

2. Determine extract file space requirement.

3. Execute the data extract options.

4. FTP the extract files.

2.2. Assign PCMM DATA EXTRACTS Security Key

The user that runs the extracts will need the PCMM DATA EXTRACTS Security Key. The security key must be assigned before the extract files can be created.

```
Use the Menu Management option:

            Application Utilities ...
            Capacity Planning ...
            FileMan Access for the OIG ...

Select Systems Manager Menu <TEST ACCOUNT> Option: Menu Management

            Edit options
            Key Management ...
            Secure Menu Delegation ...
            Restrict Availability of Options
            Option Access By User
            List Options by Parents and Use
            Fix Option File Pointers
            Help Processor ...
   OPED     Screen-based Option Editor
            Display Menus and Options ...
            Menu Rebuild Menu ...
            Out-Of-Order Set Management ...
            See if a User Has Access to a Particular Option
            Show Users with a Selected primary Menu

Select Menu Management <TEST ACCOUNT> Option: Key Management

            Allocation of Security Keys
            De-allocation of Security Keys
            Enter/Edit of Security Keys
            All the Keys a User Needs
            Change user's allocated keys to delegated keys
            Delegate keys
            Keys For a Given Menu Tree
            List users holding a certain key
            Remove delegated keys
            Show the keys of a particular user

Select Key Management <TEST ACCOUNT> Option: Allocation of Security Keys

Allocate key: PCMM DATA EXTRACTS        enter the security key name

Another key:
```

```
Holder of key: <User Name>                    enter the user's name

Another holder:

You've selected the following keys:

PCMM DATA EXTRACTS

You've selected the following holders:

<User Name>

You are allocating keys.  Do you wish to proceed? YES//

PCMM DATA EXTRACTS  being assigned to:
     <User Name>
```

If the user was logged on before the key was assigned, log off, and then log on again. A user's security keys are determined at logon time.

2.2.1. Determine Extract File Space Requirement

Use the following information to determine how much disk space will be required to store the PCMM extract files. The extract files are written to the directory defined as the primary HFS (Host File System) for the site's VistA instance. The name of this directory may be found by executing the following command from the M command line:

```
W $$DEFDIR^%ZISH()
```

Ensure there is sufficient available free disk space on the disk where this directory is located based on the calculation detailed below.

Extract File Name	Source Global Name	Extract Record Size
site_PCMMPATIENTTEAMASSIGNMENT.TXT	^SCPT(404.42,	135
site_PCMMPATIENTTEAMPOSITIONASSIGNMENT.TXT	^SCPT(404.43,	109
site_PCMMTEAM.TXT	^SCTM(404.51,	117
site_PCMMPOSITIONASSIGNMENTHISTORY.TXT	^SCTM(404.52,	114
site_PCMMPRECEPTORASSIGNMENTHISTORY.TXT	^SCTM(404.53,	141
site_PCMMTEAMPOSITION.TXT	^SCTM(404.57,	200
site_PCMMTEAMHISTORY.TXT	^SCTM(404.58,	65
site_PCMMTEAMPOSITIONHISTORY.TXT	^SCTM(404.59,	73

Run the following commands to determine the record count for each file at the site. The number in red is the record count in each file.

```
CHEYL12>D ^%G

Device:
Right margin: 80 =>
Screen size for paging (0=nopaging)? 24 =>
```

```
For help on global specifications DO HELP^%G
Global ^SCPT(404.42,0 -- NOTE: translation in effect
^SCPT(404.42,0)="PATIENT TEAM ASSIGNMENT^404.42PIA^77123^76507"

Global ^SCPT(404.43,0 -- NOTE: translation in effect
^SCPT(404.43,0)="PATIENT TEAM POSITION ASSIGNMENT^404.43PI^84688^83574"

Global ^SCTM(404.51,0 -- NOTE: translation in effect
^SCTM(404.51,0)="TEAM^404.51^1061^1059"

Global ^SCTM(404.52,0 -- NOTE: translation in effect
^SCTM(404.52,0)="POSITION ASSIGNMENT HISTORY^404.52PIA^2316^1972"

Global ^SCTM(404.53,0 -- NOTE: translation in effect
^SCTM(404.53,0)="PRECEPTOR ASSIGNMENT HISTORY^404.53PIA^156^146"

Global ^SCTM(404.57,0 -- NOTE: translation in effect
^SCTM(404.57,0)="TEAM POSITION^404.57IA^5544^5479"

Global ^SCTM(404.58,0 -- NOTE: translation in effect
^SCTM(404.58,0)="TEAM HISTORY^404.58PIAO^1079^1076"

Global ^SCTM(404.59,0 -- NOTE: translation in effect
^SCTM(404.59,0)="TEAM POSITION HISTORY^404.59PIA^5364^5301"
```

To determine the size requirements, multiply the record count by the record size for each file. Add these totals together and then add 25%. The result should be the approximate disk space (in bytes) required for the local storage of the extract files. (For example, divide by 1024 for KB; 1,048,576 for MB.)

This same calculation may be used in Section 3.2.2 Determine Backup File Space Requirement below to calculate disk space needed to backup the PCMM globals.

2.3. Execute Data Extract Routines

1. The extract processing may be system resource intensive. It is recommended to schedule this for non-peak hours.

2. The data extract files are stored in the host file default directory on the site's system. This path will display on the screen as the extracts are run. Disk space may be verified before running the extract file using this command:

```
W $ZF(-1,$S($system.Version.GetCompBuildOS()["UNIX":"df -h",
$system.Version.GetCompBuildOS()["VMS": "show device D /unit=byte")),!
```

3. The SCMC PCMM EXTRACT ROUTINES option may be assigned to a user's Secondary Menu Options, and executed from any menu. Or, executed using **D ^XUP** at the Caché command prompt, then enter **SCMC PCMM EXTRACT ROUTINES** at the option prompt.

4. The list of eight extracts will display. Execute each data extract by following the steps below:

    a. The Patient Team Assignment Extract and Patient Team Position Assignment Extract may take several hours to run. DO NOT run the extracts at the same time. It is recommended patient extracts run during non-peak/off hours.

    b. Run the smaller extracts before the Patient Team Assignment Extract and Patient Team Position Assignment Extract.

5. Extract files should run one at a time to avoid interruption of service or slower response times.

```
Step 2
VISTA>D ^XUP

Setting up programmer environment
This is a TEST account.

Terminal Type set to: C-VT320

Select OPTION NAME: SCMC PCMM EXTRACT ROUTINES        SCMC PCMM Extract
Routines

            Team File Extract
            Team History File Extract
            Team Position File Extract
            Team Position History Extract
            Patient Team Assignment Extract *
            Patient Team Position Assignment Extract*
            Position Assignment History Extract
            Preceptor Assignment History Extract
```

*Note: Patient Team Assignment Extract and Patient Team Position Assignment Extract will take the longest. Expect that these two extracts will take several hours.

```
Select SCMC PCMM Extract Routines <TEST ACCOUNT> Option:
```

Example:

```
Select SCMC PCMM Extract Routines <TEST ACCOUNT> Option: Team File Extract

<directory name> will display here
```

6. Repeat these steps for each of the menu options. Eight extract files will be created. Each file name is prefixed with the local site number. FTP the following the extracts to the PCMM Web Data Migration Staging Server.

```
<site#>_PCMMPATIENTTEAMASSIGNMENT.TXT
<site#>_PCMMPATIENTTEAMPOSITIONASSIGNMENT.TXT
<site#>_PCMMPOSITIONASSIGNMENTHISTORY.TXT
<site#>_PCMMPRECEPTORASSIGNMENTHISTORY.TXT
<site#>_PCMMTEAM.TXT
<site#>_PCMMTEAMHISTORY.TXT
<site#>_PCMMTEAMPOSITION.TXT
<site#>_PCMMTEAMPOSITIONHISTORY.TXT
```

2.4. FTP Extract Files

> **NOTE: The extract files should be transmitted immediately after completion. Before the FTP process, contact the PCMM Web Systems Administrator via email at** REDACTED **and request your Username and Password before sending the files. The Systems Administrator will confirm the files have arrived.**

- Secure FTP is required to copy the extract files to the PCMM Web Data Migration Staging Server. The FTP extract file location is:

REDACTED

Caché (M) command line:

> **NOTE: 442 is a sample station number and used as an example.**

2.5. Validate Extract Files After FTP

Once the FTP process is complete, run the following programmer prompt to validate checksum:

    !md5sum /srv/vista/iro/user/hfs/###_PCMM*

3. SD*5.3*603 – PCMM Web Legacy Changes

> **NOTE: The SD*5.3*603 patch will be installed after the Data Migration team completes the data validation.**

The purpose of the SD*5.3*603 patch is to install the VistA changes needed to support PCMM Web and to remove all user access for the Legacy PCMM GUI. Additionally, The PCMM NIGHTLY TASK job in TaskMan is no longer needed.

3.1. Pre-Requisites Considerations

The following are pre-requisite considerations for the SD*5.3*603 patch installation:

1. The installer must logon to the "back-end" database server, where applicable, to install the SD*5.3*603 patch.

2. The installer must have access to the Caché (M) command line (programmer prompt).

3. The installer must have the XUMGR security key to create the application proxy user record properly. Also XUPROGMODE and XUAUDITING security keys.

4. The installer should turn on terminal logging to assist in possible trouble-shooting.

5. SD*5.3*603 patch may be installed with users on the system and may take 15-20 minutes to install. However, one background process could take several hours to install. A MailMan Message will be sent after the installation is complete.

6. There are several manual post-installation steps to complete. Ensure to follow the steps below.

7. Only the following sites need to perform the Standard Position Cleanup step detailed in the Post-Installation Instructions.

   501 – NEW MEXICO HCS
   512 – BALTIMORE MD VAMC
   528 – UPSTATE NEW YORK HCS
   548 – WEST PALM BEACH VAMC
   558 – DURHAM VAMC
   590 – HAMPTON (VAMC)
   598 – CENTRAL ARKANSAS HCS
   614 – MEMPHIS VAMC
   644 – PHOENIX VAMC
   679 – TUSCALOOSA

3.2. Pre-Installation Instructions

1. Logon to the "back-end" database (i.e., ecp) server to install the SD*5.3*603 patch.

2. Turn on terminal logging to assist in possible trouble-shooting.

3. Assign the XUMGR, XUAUDITING, and XUPROGMODE security keys if not assigned.

4. Determine space requirements for backup of PCMM globals.

5. Backup the globals containing PCMM files. Backup globals during non-peak hours. See Section 2.2.1 Determine Extract File Space Requirement, above, to determine disk space requirement.

6. If auditing is ON for the Outpatient Encounter (409.68) file, complete the following:
   a. Note which fields are being audited.
   b. Turn auditing OFF.

3.2.1. Assign XUMGR Security Key

Assign XUMGR security key to the user (New Person File) that installs the SD*5.3*603 patch, following site procedures for Security Key installations. This key is required to create the application proxy user record.

```

Holder of key: <User Name>       enter the user's name

Another holder:

You've selected the following keys:

XUMGR

You've selected the following holders:

<User Name>

You are allocating keys.  Do you wish to proceed? YES//

XUMGR being assigned to:
     <User Name>
```

3.2.2. Determine PCMM Global Backup Space Requirement

Refer to See Section 2.2.1 Determine Extract File Space Requirement, above, to determine disk space
required to store the PCMM data global backup files.

3.2.3. Backup PCMM Files

```
Caché (M) command line:

VISTA>DO ^%GO

Global output
Device: <directory name>pcmmBKUPS.gbl
```

```
Parameters? "WNS" =>
Description (^ for self-loading): PCMM VistA Files

All Globals? No => No
Global ^SCPT
Global ^SCTM
Global ^
2 globals selected from 456 available globals.
SCPT      SCTM
2 globals written
VISTA>
```

3.2.4. Check Audited Fields

Before installing the SD*5.3*603 patch, verify if any fields are audited in the Outpatient Encounter File and then turn off auditing. If auditing occurs, the Outpatient Encounter File consumes a large amount of disk space when creating a new ACOD index on the file.

```

3.3. Installation Overview

- Download SD_53_603.KID file from secure FTP site. The PCMM Implementation Team will provide the site URL and credentials.
- The pre-installation routine will delete the current Standard Position reference file. A new gold version will be created by this installation. The pre-installation routine will be automatically deleted when the install is completed.
- The main installation will update routines, data dictionaries, options, and remote procedure definitions as detailed in the patch description.
- The post-installation routine will:
    - Add or update HWSC server and web service file entries.
    - Add the application proxy user.
    - Convert Patient Team Position Assignment: Status (404.43/.12) from NA to IU. The installation process may pause while this is performed.
    - Un-schedule the legacy PCMM Nightly Task from TaskMan.
    - Place PCMM Legacy Menus out-of-order.
    - Change SCMC PCMM GUI WORKSTATION to SCMC PCMMR WEB USER MENU. The installation process may pause while this is performed.
    - Build the new C cross reference for Patient Team Position Assignment file.
    - Build the new ACOD index for the Outpatient Encounters file. This will be submitted to TaskMan. A MailMan message is sent after the completion of this process.
    - Delete the trigger (FTEXR) on Position Assignment History File (404.52): FTE Equivalent (.09).
    - Create missing ACOD index records in the Outpatient Encounters file
    - Add two records to the Team Purpose file – PRIMARY CARE - NVCC and PRIMARY CARE – HBPC.

NOTE: Depending on the file size and system, building the ACOD index may take an extended time to complete.

Build Outpatient Encounter ACOD Index		
Site	Record Count	Time (h:m:s)
Memphis	22,874,707	~ 1:30:00
Iron Mountain	6,685,573	0:06:08
Portland	24,849,833	11:37:19
Greater L.A.	44,078,860	5:40:02

3.4. Installation Instructions

This patch is a part of a phased, coordinated process for deploying PCMM Web. The site will be contacted by the PCMM Web Implementation Team and given credentials to the secure FTP site. The file can then be downloaded to the site.

File Name	Contents	Retrieval Format
SD_53_603.KID	KIDS Build	ascii

1. Download the SD_53_603.KID file.

2. From the **Kernel Installation and Distribution System Menu**, select the **Installation Menu**, then the **Load a Distribution** option. At this prompt: `Enter a Host File:` enter the directory name and file name of the KIDS file;

   Example: `user$:[temp]SD_53_603.KID`

   Respond **YES** when prompted to continue

3. From this **Kernel Installation and Distribution System Menu**, you may also select to use the following options.

   a. **Verify Checksums in Transport Global** – This option will allow you to ensure the integrity of the routines that are in the transport global.
   b. **Compare Transport Global to Current System** – This option will allow you to view all changes that will be made when this patch is installed. It compares all components of this patch (i.e., routines, DDs, templates, etc.).
   c. **Backup a Transport Global** – This option will create a backup message of any routines exported with this patch. It will not backup any other changes such as DDs or templates.

4. From the **Kernel Installation and Distribution System Menu**, select the **Install Package(s)** option and choose the patch to install. **Enter SD*5.3*603**.

5. When prompted 'Want KIDS to Rebuild Menu Trees Upon Completion of Install? NO//' respond **NO**.

6. When prompted 'Want KIDS to INHIBIT LOGONs during the install? NO//' respond **NO**.

7. When prompted 'Want to DISABLE Scheduled Options, Menu Options, and Protocols? NO//' respond **NO**.

8. If prompted 'Delay Install (Minutes): (0 – 60): 0//' respond **0**.

3.5. Post-Installation Instructions

1. Validate Application Proxy User.
2. Standard Position Cleanup, if applicable.
3. If auditing was turned OFF for the Outpatient Encounter (409.68) file during Pre-Installation and the MailMan message is received for the ACOD index build, turn auditing ON for the fields that were being audited.
4. The CPRS PC Details web service requires a username and password. Update the Web Service Configuration.
5. Email the PCMM Web development team once the Patch SD*5.3*603 installation is complete. Please note the site information in the body of your e-mail. The PCMMR team e-mail address is:

REDACTED

3.5.1. Validate Application Proxy User

Verify the application proxy user was created correctly using FileMan. Verify one Secondary Menu Options – SCMC PCMMR APP PROXY MENU, and User Class – APPLICATION PROXY (shown below) are included.

```
VISTA>DO P^DI

Select OPTION: INQUIRE TO FILE ENTRIES

OUTPUT FROM WHAT FILE: NEW PERSON//
Select NEW PERSON NAME: SCMC,APPLICATION PROXY
ANOTHER ONE:
STANDARD CAPTIONED OUTPUT? Yes//   (Yes)
Include COMPUTED fields:  (N/Y/R/B): NO// BOTH Computed Fields and Record
Number (IEN)
DISPLAY AUDIT TRAIL? No//   NO

NAME: SCMC,APPLICATION PROXY
  DATE ENTERED: FEB 27, 2014         CREATOR: INNIS,JOHN
SECONDARY MENU OPTIONS: SCMC PCMMR APP PROXY MENU
  TIMESTAMP: 63278,58937
User Class: APPLICATION PROXY        ISPRIMARY: Yes
  PSIM UPDATE USER: INNIS,JOHN      PSIM UPDATE DT: FEB 27, 2014@15:49:11
  PROVIDER KEY ©: 0
```

3.5.2. Standard Position Cleanup

ONLY the following sites listed below need to complete the standard position cleanup steps:

> 501 – NEW MEXICO HCS
> 512 – BALTIMORE MD VAMC
> 528 – UPSTATE NEW YORK HCS
> 548 – WEST PALM BEACH VAMC
> 558 – DURHAM VAMC
> 590 – HAMPTON (VAMC)
> 598 – CENTRAL ARKANSAS HCS
> 614 – MEMPHIS VAMC
> 644 – PHOENIX VAMC
> 679 – TUSCALOOSA

NOTE: Only run this routine once, per site listed above. If the routine needs to run again, first restore the backup of the original global. This process will log records changed in the ^XTMP("SCMCFPOS") global and retained for 1 year.

If a site other than listed above runs the routine, no changes will occur.

Steps:
1. Backup the global:

```
VISTA>DO ^%GOGEN
Device: <directory name>teampositionbkup.gbl
Parameter"? ""NS" =>
```

```
Warning:  Use"a""V" format to avoid problems with control characters.
Global ^SCTM(404.57
Global ^
VISTA>
```

2. Run the cleanup routine.

> **NOTE: It is very important to notify the Implementation Manager if this step fails for any reason.**

```
VISTA>DO EN^SCMCFPOS
VISTA>
```

3. Delete this routine (SCMCFPOS) upon successful installation of this patch.

3.5.3. Turn Auditing On (If Applicable)

If auditing was turned off before this patch was installed, follow steps below to turn it back on. If auditing was not turned on, skip the step below and continue to the 8.5.5 PCMM Web Application Installation section.

After receiving the MailMan message that the ACOD Index build has completed, auditing may be turned back on for the fields that were turned off above.

```
For the "Select FIELD:" prompt(s) enter the field(s) made note of above.
For the "AUDIT:" prompt(s) enter the value(s) made note of above.

Select AUDIT OPTION: 5   TURN DATA AUDIT ON/OFF
AUDIT FROM WHAT FILE: OUTPATIENT ENCOUNTER//
Select FIELD: .02   PATIENT     n
AUDIT: n// YES, ALWAYS

Select FIELD: .07   CHECK OUT PROCESS COMPLETION    n
AUDIT: n// EDITED OR DELETED

Select FIELD:

Select AUDIT OPTION:
```

3.5.4. Add Web Service Username and Password

Follow these steps to add a username and password to the web service configuration. The password will be supplied by the Implementation Manager.

```
VISTA>D ^XUP

Setting up programmer environment
This is a TEST account.
```

```

3.5.5. PCMM Web Application Installation

NOTE: Complete the steps below once the Data Migration is validated and completed and the PCMM Web application is ready to go live in site's environment.

Ensure you received notification from the Implementation Manager before proceeding with this step.

- You may install in the test environment per requirements at the site; however, test instances of CPRS may no longer display PCMM data correctly.
- Do not install into Production until the Implementation Manager has provided sign off.

3.5.6. Delete Post Installation Processing Routines

The following routines should be deleted after SD*5.3*603 has been successfully installed:

- SD53P603
- SCMCOPT
- SCMCFPOS

3.5.7. Install OR*3.0*387

Pre-Requisites:
- Once the Implementation Manager has approved the installation of Patch OR*3.0*387, ensure all other deployments have been executed.

3.5.8. Remove Legacy PCMM GUI from User Computers

The IRM office should coordinate the removal of the Legacy PCMM GUI from user workstations.

3.5.9. Recovery Steps

If there are problems encountered during the "go-live" process, some recovery steps have been automated.

Restore PCMM Files

> **NOTE: Restore PCMM Files only if errors occur with the installation of PCMM in a live environment.**

Caché (M) command line:

4. Patch OR*3.0*387 – PCMM Web Team Display Enhancements to CPRS

Patch OR*3.0*387 allows CPRS to retrieve the patient's team and provider assignments from PCMM Web.

NOTE: Wait to install this patch on the site's Production System until PCMM Web is ready to "go live." You will receive notification from the Implementation Manager when it is ok to proceed. PCMM Web features in CPRS (PCMM summary header and PCMM details popup window) will not function properly without a live PCMM Web system.

Patch OR*3.0*387 may be installed on test systems after SD*5.3*603 is installed.

4.1. Installation Overview

Patch OR*3.0*387 will install one routine and two RPC definitions. There are no unique instructions for either pre or post-installation. This patch may be installed with users on the system although it is recommended that the patch be installed during non-peak hours to minimize potential disruption to users. This patch should take less than 1 minute to install.

4.2. Pre-Installation Instructions

Ensure to install patch SD*5.3*603 first. Wait to install OR*3.0*387 until directed by the PCMM Web Implementation Team. CPRS PCMM functionality will not execute properly without a live PCMM Web system.

4.3. Installation Instructions

This patch will install one routine and two RPC definitions.

The VistA software for this patch is released as a KIDS host file. It may be downloaded from a secured FTP site as directed by the PCMM Web Implementation Team. The software distribution includes:

File Name	Contents	Retrieval Format
OR_30_387.KID	KIDS Build	ascii

1. Download the OR_30_387.KID file.

2. From the Kernel Installation and Distribution System Menu, select the Installation Menu, then the **Load a Distribution** option. When prompted for the Host File, enter **<directory>OR_30_387.KID**, then when prompted to "Continue with Load" (twice), respond **YES**.

3. From the Installation Menu, you may also select the following options. When prompted for the INSTALL NAME, enter the patch **OR*3.0*387**.

    a. Verify Checksums in Transport Global - This option will allow you to ensure the integrity of the routines that are in the transport global.

    b. Compare Transport Global to Current System - This option will allow you to view all changes that will be made when this patch is installed. It compares all components of this patch (routines, DDs, templates, etc.).

    c. Backup a Transport Global - This option will create a backup message of any routines exported with this patch. It will not backup any other changes such as DDs or templates.

1. From the Installation Menu, select the Install Package(s) option and choose the patch to install. Enter **OR*3.0*387**.

2. When prompted 'Want KIDS to Rebuild Menu Trees Upon Completion of Install? NO//' respond **NO**.

3. When prompted 'Want KIDS to INHIBIT LOGONs during the install? NO//' respond **NO**.

4. When prompted 'Want to DISABLE Scheduled Options, Menu Options, and Protocols? NO//' respond **NO**.

5. If prompted 'Delay Install (Minutes): (0 - 60): 0//' respond **0**.

4.4. Post-Installation Instructions

No post-installation instructions needed.

5. Patches WEB 1*1 and WEB 1*2 Installation

The WEB 1*1 and WEB 1*2 patches are informational only patches and have no associated VistA software. The software associated with WEBP*1*1 and WEBP*1*2 are for the PCMM Web application. The PCMM Web application is installed on one or more servers in a VA data center.

6. PCMM Web VistA Patch Rollback

1. To rollback a VistA patch, choose and execute the "Backup a Transport Global" on the Patch Installation Menu. This option will create a MailMan Message containing a backup of all current routines that will be replaced by the patch install.

An example of the message subject:

    BACKUP OF <PATCH NAME> INSTALL ON MMM DD, YYYY

6.1. Patch SD*5.3*603

For patch **SD*5.3*603,** PCMM Web will keep the data synchronized with VistA; there should not be a need to restore data on VistA.

2. The following routines would need to be restored from the Backup Transport Global MailMan message:

        SCAPMC23
        SCMCDD1
        SCMCMHTC
        SCMCTSK
        SCMCTSK2
        SCMCTSK5
        SCMCTSK6
        SDCOU

Note: The other routines in the patch were written specifically for PCMM Web. They may be deleted.

3. Refer to Section 3.5.9 Recovery Steps for detailed steps on reverting some of the changes made by the patch, specifically, Remove PCMM Legacy Menus Out of Order and Restore Legacy Broker Menu to Users.

4. Changes to Fileman Data Dictionaries can be restored from a system backup, or a subsequent patch. The files that are changed are documented in the patch description.

5. Changes to the Standard Position (#403.46) file may remain.

6. Any other changes made by this patch can be remediated by a subsequent patch.

6.2. Patch SD*5. 3*620

The routines and menu options released in this patch are for one-time data extracts used for data migration. No rollback is required. The released M routines and Menu Options may be deleted from the target system

6.3. Patch OR*3.0*387

Restore the one routine (ORWPT1) from the Backup Transport Global Mailman message. Changes to revert the two RPC definitions (ORWPT1 PRCARE and ORWPT1 PCDETAIL) would have to be done manually or in a subsequent new patch.

6.4. WEBP*1*1

 Informational patch, no VistA rollback required.

6.5. WEBP*1*2

Informational patch, no VistA rollback required.

6.6.Additional Information and Example

Backing Up Transport Globals

The Backup a Transport Global option [XPD BACKUP] creates a MailMan message that will back up all current routines on a system that would be replaced by a KIDS patch. This option is under the KIDS: Installation menu of the KIDS menu. This applies to a patch that has been loaded on a system, but not installed.

Example of Backup Transport Global and Restoring Routines to Pre-Patch Version

```
SELECT OPTION NAME: XPD MAIN          KERNEL INSTALLATION & DISTRIBUTION SYSTEM

7. Appendix A – Patch Description WEB*1*1

==
Run Date: NOV 05, 2015   Designation: WEBP*1*1
Package : PATIENT CENTERED MANAGEMENT MODULEPriority   : MANDATORY
Version : 1   Status   : COMPLETE/NOT RELEASED
==

Subject: PATIENT-CENTERED MANAGEMENT MODULE (PCMM) WEB

Category: INFORMATIONAL

Description:
===========

This is the informational patch for the release of the new
Patient-Centered Management Module (PCMM) Web application.

RELEASE INFORMATION:
PCMM Web is a portlet that runs inside the Clinical Information Support
System (CISS) portal. The Clinical Information Support System (CISS) is
a web-based portal application that provides a central interface for
users to access information and applications necessary for their role.
The applications accessed through CISS are called partner systems. PCMM
Web is a partner system to CISS.

In order to fully support a team based, patient-centric approach to
healthcare delivery, enhancements to PCMM have been developed which allow
a team to be formed and aligned around a patient. These, include
providers residing in multiple VA sites and in non-VA settings to enable
care coordination and communication.   The software supports automated
data collection for management metrics and analysis related to access,
workload, and panel management. VHA's model of team-based care is known
as the Patient-Aligned Care Team (PACT). The goal is to evolve and
replace existing PCMM software with functionality that identifies all
team members and specialists (VA and non-VA) involved in the care of the
patient, as well as their contact information and provide modalities to
facilitate provider-provider communication. This new PACT Management
Module is known as PCMM Web. According to the PCMM Modification
Workgroup, the relationship between the patient and his/her Primary Care
Provider (PCP) will help to enhance patient care and the treatment
process. Patients who regularly visit the same PCP receive better
healthcare and utilize fewer healthcare resources because of the PCP's
ability to treat patients more efficiently and effectively.

There are three VistA patches associated with release of PCMM Web. These
patches are required and support PCMM Web interactions with VistA and
CPRS.

SD*5.3*620 - PCMM DATA EXTRACTS
SD*5.3*603 - PCMM WEB LEGACY CHANGES
OR*3.0*387 - PCMM Web TEAM DISPLAY ENHANCEMENTS TO CPRS

SOFTWARE CHANGES:
================
PCMM Web is a web-based application. Changes will be applied to the
production servers and will be immediately available to the users. No
changes at the local site are required for this release.

```
SYSTEM REQUIREMENTS:
====================

SOFTWARE RETRIEVAL:
==================
The PCMM Web application can be accessed directly from Internet Explorer
(IE).  All installations will occur on the single national enterprise web
server.

Test Sites:
----------
Memphis VAMC - Memphis, TN
Iron Mountain VAMC - Iron Mountain MI
VA West Los Angeles HCS  - Los Angeles, CA
Portland VAMC - Portland, OR

The files listed above will be obtainable via FTP.  The preferred method
will be to FTP the files from:
```

<mark>REDACTED</mark>

```
This transmits the files from the first available FTP server.  Sites may
elect to retrieve manuals directly from a specific server as follows:

   CIO FIELD OFFICE        FTP ADDRESS                 DIRECTORY
```

<mark>REDACTED</mark>

```
Documentation can also be found on the VA Software Documentation Library
at:
http://www4.va.gov/vdl/

Patch Installation:

There is no local VistA installation for PCMM Web. All installations will
be done on the national web server.

Supporting VistA patches are required.  See the PCMM Web-VistA
Installation Guide.

ADDITIONAL INFORMATION:
=======================
If you have any questions concerning the implementation of this
application, please contact the VA Service Desk at 1-888-596-4357 or
directly log a Remedy ticket via Remedy Requester application using the
```

category: Applications-HealtheVet-Vista, and type, PCMM Web.

Any changes or impacts to this package/installation will be reported on
this message.

Routine Information:

Package : PATIENT CENTERED MANAGEMENT MODULEPriority   : MANDATORY
Version : 1   Status   : UNDER DEVELOPMENT
==

Subject: PATIENT-CENTERED MANAGEMENT MODULE (PCMM) WEB APPLICATION, VERSION 1.1

Category: INFORMATIONAL

Description:
===========

The Patient-Centered Management Module (PCMM) Web application version
WEBP-1.2 provides several upgrades and enhancements for the national
release of PCMM Web.

Enhancements:
=============

NON-VA CARE

Functionality to capture non-va care has been added in WEBP*1*2.
Provide the ability to capture, view, and manage Non-VA Providers that are
providing Non-VA Care (formerly Fee Basis) to the patient through the VA.
Non-VA Care consists of three categories:
 -Veteran's Choice
 -Community Nursing Home
 -Veteran State Home

New Menus in PCMMWeb will allow a user to search for Non-VA Providers
and Non-VA practices. Users will be required to assign a Non-VA Practice
to a Non-VA Provider and then to the patient.

The user is given an option to assign the patient
to a special care type PACT team, "Non-VA Care", to
allow a Care Coordinator to manage the population of patients receiving
Non-VA Care paid for by the VA.

This new functionality also allows a
special tag to appear in the CPRS header "*Click for Non-VA PC*"
indicating that a patient is receiving primary care from a provider in one
of the Non-VA Care categories with a Specialty of "Primary Care." In the
CPRS window, a new tag will appear for these Non-VA Care primary care
assignments by using the tag of "Non-VA PC:" at the bottom of the CPRS
popup window. Only the "Primary Care" Specialty will be indicated in the
CPRS header by using the "*Click for Non-VA PC*" tag.

All other Non-VA provider assignments to patients with other Specialties,
except Primary Care, will only be displayed in the CPRS Window no changes
to current functionality. the current functionality of capturing and
displaying Private Sector and DOD Non-VA Providers is still available to
the user thru the new Non-VA Providers process.

HOME BASED PRIMARY CARE

Provide the ability to remove Home Based Primary Care (HBPC) as a FOCUS
of the care type "Primary Care" and created a new specialty care type of
"Primary Care - HBPC". This care type functions as a special Primary Care
PACT team that will not follow the same validation rules as a Primary
Care PACT team and will have no pending status. Assignment to this care
type will be "Active" automatically without using encounters. A patient
will only be assigned to either a PC PACT team or a PC-HBPC PACT team at
any given time within the same 3 digit station code. This new
functionality allows this special PACT team to display in the CPRS header
the same as for PC PACT teams by indicating the team name and the
assigned PCP and AP, if assigned. In the CPRS window, a new tag will
appear indicating this new care type of "Primary Care - HBPC" by using
the tag of "HBPC:" instead of "PACT:".

Implementation:
===============
The PCMM Web WEBP-1.2 is a centrally managed web-based application and
will be implemented as a one-time installation by the PCMM Technical Team
(HP). PCMM Web 1.1 was installed at four facilities that transitioned to
PCMM Web in its Initial Operating Capability (IOC) stage:
  585 Iron Mountain
  614 Memphis
  648 Portland
  691 West Los Angeles

Implementation Files:
=====================

Subject:  PCMM WEB DATA EXTRACTS

Category:  ROUTINE

Description:
===========

The purpose of this patch is to provide sites with a means to extract
Vista legacy Primary Care Management Module (PCMM) data for comparison to
Patient-Centered Management Module-Web (PCMM Web) for data migration prior
to the implementation of PCMM Web patch SD*5.3*603.

*********************************ATTENTION**********************************
DO NOT run the "SCMC PCMM EXTRACT ROUTINES" listed below until your
site has been scheduled to begin the PCMM data validation and migration
process.  Each site will be contacted by the Implementation Manager to
schedule PCMM data validation and migration.
***************************************************************************

Technical Summary
=================
1.  Routine SCRPTEAM is a new routine that extracts data from the TEAM
    file (404.51) for comparison to PCMMR data.
2.  Routine SCRPTHST is a new routine that extracts data from the TEAM
    HISTORY file (404.58) for comparison to PCMMR data.
3.  Routine SCRPTPOS is a new routine that extracts data from the TEAM
    POSITION file (404.57) for comparison to PCMMR data.
4.  Routine SCRPTPHS is a new routine that extracts data from the TEAM
    POSITION HISTORY file (404.59) for comparison to PCMMR data.
5.  Routine SCRPPTA is a new routine that extracts data from the PATIENT
    TEAM ASSIGNMENT file (404.42) for comparison to PCMMR data.
6.  Routine SCRPPTPA is a new routine that extracts data from the PATIENT
    TEAM POSITION ASSIGNMENT file (404.43) for comparison to PCMMR data.
```

7. Routine SCRPPRAH is a new routine that extracts data from the
    PRECEPTOR ASSIGNMENT HISTORY file (404.53) for comparison to PCMMR
    data.
8. Routine SCRPPAHS is a new routine that extracts data from the POSITION
    ASSIGNMENT HISTORY file (404.52) for comparison to PCMMR data.
9. A new security key PCMM DATA EXTRACTS is necessary to run the extract
    routine options.

Additional Information:

DO NOT run the extract options in this patch until your site has been
scheduled to begin the PCMM data validation and migration process.
Each site will be contacted by the Implementation Manager to schedule
PCMM data validation and migration

Release Notes   SD_53_620_RN.pdf   binary
```

```
Patch Installation:
====================

Please refer to the PCMM Web-VistA Data Extract Guide for complete
details.

Installation Overview
---------------------

1. DO NOT run the Post Installation instructions in this patch on the
   Production System until your site has been scheduled to begin the PCMM
   Data Mitigation process.
   Each site will be contacted by the PCMM Implementations Manager to
   schedule PCMM Data Mitigation.
2. This patch may be installed with users on the system.  This patch
   should take less than 2 minutes to install.
3. The file extract processing may be system resource intensive.
   It is recommended that the Post Installation portion of this patch be
   scheduled for non-peak hours.

Pre-Installation Instructions
-----------------------------

No special instructions.

Installation Instructions
-------------------------

This patch will install eight data extract routines, nine menu options,
and one security key.

1. Login to the "backend" database server (i.e. ecp node), if applicable
   to your site.
2. Choose the PackMan message containing this patch.
3. Choose the INSTALL/CHECK MESSAGE PackMan option.
4. From the Kernel Installation and Distribution System Menu, select the
   Installation Menu.  From this menu, you may elect to use the following
   options. When prompted for the INSTALL NAME enter SD*5.3*620
   a. Verify Checksums in Transport Global - This option will allow you to
      ensure the integrity of the routines that are in the transport
      global.
   b. Compare Transport Global to Current System - This option will allow
      you to view all changes that will be made when this patch is
      installed. It compares all components of this patch (routines, DDs,
      templates, etc.).
   c. Backup a Transport Global - This option will create a backup message
      of any routines exported with this patch. It will not backup any
      other changes such as DDs or templates.
5. From the Installation Menu, select the Install Package(s) option and
   choose the patch to install.  Enter SD*5.3*620
6. When prompted 'Want KIDS to Rebuild Menu Trees Upon Completion of
   Install? NO//' respond NO
7. When prompted 'Want KIDS to INHIBIT LOGONs during the install? NO//'
   respond NO
```

8. When prompted 'Want to DISABLE Scheduled Options, Menu Options, and
   Protocols? NO//' respond NO
9. If prompted 'Delay Install (Minutes): (0 - 60): 0//' respond 0.

Post-Installation Instructions (to be executed once site is scheduled for
PCMM Web Data Mitigation)

Please refer to the PCMM Web-VistA Data Extract Guide for complete
details.

NOTE: DO NOT run the extract options on the Production system until your
site has been scheduled to begin the PCMM Data Mitigation process.
Extract options may be run in test accounts to verify functionality,
however, the FTP step should not be run in the test account.

Each site will be contacted by the Implementation Manager to schedule
PCMM Data Mitigation.

           ENHANCEMENT
           OTHER
           SORT TEMPLATE

Description:
===========

This patch implements changes to VistA required to support the new
Patient-Centered Management Module (PCMM) Web. There is a companion CPRS
patch (OR*3.0*387) that implements changes to Remote Procedure Calls (RPC)
required to display content for the Primary Care Header and Detail Window.

This patch is a part of a phased, coordinated process for deploying PCMM
Web. The VistA software for this patch and the companion OR*3.0*387
patch is released as two KIDS host files. They may be downloaded from a
secured ftp site as directed by the PCMM Web Implementation Team.

*******************************************************************
DO NOT INSTALL THIS PATCH ON A PRODUCTION SYSTEM UNTIL NOTIFIED BY
THE PCMM WEB IMPLEMENTATION MANAGER.
*******************************************************************

In order to fully support a team based, patient-centric approach to
healthcare delivery, enhancements to PCMM have been developed to allow a
team to be formed and aligned around a patient, including providers across
multiple VA sites and in non-VA settings to enable care coordination and
communication. The software supports automated data collection for
management metrics and analysis related to access, workload, and panel
management. VHA's model of team-based care is known as the
Patient-Aligned Care Team (PACT). The goal is to evolve and replace
existing PCMM software with functionality that identifies all team members
and specialists (VA and non-VA) involved in the care of the patient, as
well as their contact information and provide modalities to facilitate
provider-provider communication. This new PACT Management Module is known
as PCMM Web. According to the PCMM Modification Workgroup, the
relationship between the patient and his/her Primary Care Provider (PCP)
will help to enhance patient care and the treatment process. Patients who
regularly visit the same PCP receive better healthcare and utilize fewer
healthcare resources because of the PCP's ability to treat patients more
efficiently and effectively.
```

Most of the changes to VistA are to background processing that will not be visible to users. An Application Proxy user was created to support batch processing for reading and updating VistA files.

TECHNICAL SUMMARY:
==================

Files

STANDARD POSITION (#403.46) file - Several position names were changed and new positions were added.
Name change
  TEAM PHARMACIST to PACT CLINICAL PHARMACIST
  DIETITIAN to REGISTERED DIETITIAN
  OIF OEF CLINICAL CASE MANAGER to TCM CLINICAL CASE MANAGER
  OIF OEF PROGRAM MANAGER to TCM PROGRAM MANAGER
  OIF OEF TRANSITION PATIENT ADVOCATE to TCM TRANSITION PATIENT ADVOCATE
New positions
  ADMINISTRATIVE ASSOCIATE
  ANTICOAG CLINICAL PHARMACIST
  ADVANCE PRACTICE ASSOCIATE PROVIDER
  ASSOCIATE PROVIDER
  CLINICAL ASSOCIATE
  FELLOW
  NURSE (LVN)
  NURSE PRACTITIONER ASSOCIATE PROVIDER
  PEER SUPPORT APPRENTICE
  PEER SUPPORT SPECIALIST
  PHYSICIAN ASSISTANT ASSOCIATE PROVIDER
  PRIMARY CARE PROVIDER
  SURROGATE CARE MANAGER
  SURROGATE PRIMARY CARE PROVIDER
  SURROGATE CLINICAL ASSOCIATE
  ADVANCE PRACTICE NURSE
  ADVANCE PRACTICE NURSE (MHTC)
  LEAD COORDINATOR
  PEER SUPPORT SPECIALIST (MHTC)

POSITION ASSIGNMENT HISTORY (#404.52) file
A new field was added:
  TEAMLET POSITION (#.12) field - indicates whether or not a position is a
  teamlet member.
The descriptions for the following field descriptions were modified to reflect that PCMM Web will maintain FTEE history data.
  FTEE HISTORY multiple (#1)
    FTEE HISTORY (#.01) field
    VALUE (#.02) field
    USER (#.03) field
The trigger (FTEXR) on the FTEE EQUIVALENT (#.09) field will be deleted by the post-install routine. (This trigger performed updates to FTEE HISTORY, now maintained by PCMM Web.)

PATIENT TEAM ASSIGNMENT (#404.42) file - New code values were added to two fields.

```
   ASSIGNMENT TYPE (#.08) field
     '98' for PENDING PRIMARY CARE
   STATUS (#.15) field
     'DU' for DOD UNASSIGN
     'IU' for INACTIVE UNASSIGN
     'DD' for REASSIGN-DOD REMOVED
     'PR' for PAT RELOCATION
     'RP' for REQ BY PAT
     'NN' for NOT NEEDED
     'PC' for PROV CHANGE
     'PI' for MVI MOVE/MERGE
     'FT' for INTRA FAC TRANS
     'MU' for MISSING/UNK
     'MD' for M-PACT DENIAL/WDRAW
     'DC' for DISCHARGE FROM CARE
     'ER' for ERROR

PATIENT TEAM POSITION ASSIGNMENT (#404.43) file - New code values were
added to one field.
   STATUS (#.12) field
     'DU' for DOD UNASSIGN
     'IU' for INACTIVE UNASSIGN
     'DD' for REASSIGN-DOD REMOVED
     'PR' for PAT RELOCATION
     'RP' for REQ BY PAT
     'NN' for NOT NEEDED
     'PC' for PROV CHANGE
     'PI' for MVI MOVE/MERGE
     'FT' for INTRA FAC TRANS
     'MU' for MISSING/UNK
     'MD' for M-PACT DENIAL/WDRAW
     'DC' for DISCHARGE FROM CARE
     'ER' for ERROR
A new cross reference ("C") was added to TEAM POSITION (#.02) field

OUTPATIENT PROFILE (#404.41) file - Two new fields were added:
   CPRS HEADER TEXT (#.06) field - This field is populated by PCMM Web with
     primary care information to be displayed in the CPRS PCMM Header.
   CPRS PC WINDOW CACHE (#.07) field - This field stores the last data set
     displayed in the CPRS Primary Care Details Window. This cached data
     will be displayed if there is no connection to PCMM Web.

OUTPATIENT ENCOUNTER (#409.68) file - A new Index, ACOD, was created to
sort records by the PATIENT (#.02) field and CHECK OUT PROCESS COMPLETION
(#.07) field.

PCMM PATIENT EVENTS (#404.54) file - This is a new file used to track
patient events of interest to PCMM Web.
   PATIENT (#.01) field
   EVENT DATE/TIME (#.02) field
   EVENT CODE (#.03) field
   EVENT DATA (#.04) field

TEAM PURPOSE (#403.47) File - Two records were added:
   PRIMARY CARE - NVCC
```

```
   PRIMARY CARE - HBPC

Routines
--------
The routine SCMCTSK was modified to update several files when a patient
date of death is entered or removed in the PATIENT (#2) file.
  - User enters or removes a date of death for a patient in VistA
  - A cross reference on the PATIENT (#2) file DATE OF DEATH (#.351) field
    executes
       FC^DGFCPROT
  - This routine submits the DG FIELD MONITOR protocol to TaskMan
  - The DG FIELD MONITOR protocol executes the protocols in its Items list
  - The SCMC PCMM INACTIVATE ON DATE OF DEATH protocol executes
       DEATH^SCMCTSK
  - This entry point updates the following File
       PCMM PATIENT EVENTS (#404.54) file - record is created or updated

The routine SCMCTSK2 was modified to ensure the PCMM NIGHTLY TASK [SCMC
PCMM NIGHTLY TASK] menu option job never runs on VistA. (A QUIT statement
was added immediately after the entry point - NIGHT.)

Three new routines; SCMCWS1, SCMCWS1A, SCMCWSUT; were developed to
implement a new Application Program Interface (API) that calls a PCMM Web
web service to retrieve PACT and other team information that is displayed
in the CPRS PC Details Window.
This API uses the HealtheVet Web Service Client (HWSC) to implement the
web service. The default set up is performed by the post-install routine.
This API is called by the CPRS RPC: ORWPT1 PCDETAIL. A new ICR, 6027 -
SCMC PCMM/R GET PRIMARY CARE DETAILS, was created and activated to
support this functionality.
These routines are also used by the new RPC, SCMC PCDETAIL. It is used to
batch load CPRS PC Window Cache during PCMMR deployment.

*************************************************************************
NOTE: Sites will encounter an XINDEX Error after the installation of this
patch. SCMCWS1 uses HWSC. It calls a Cache Class to parse the eXtensible
Markup Language (XML) document returned by the web service call.
A SAC Exemption (134) was approved on 02/04/2015.
*************************************************************************

A new routine, SCMCDDR, was developed to implement the RPC, SCMC LISTER.
It returns VistA data to PCMM Web using the VA FileMan DBS API: Lister
(LIST^DIC).

A new routine, SCMCDDR0, was developed to implement the RPC, SCMC FINDER.
It returns VistA data to PCMM Web using the VA FileMan DBS API: Find
(FIND^DIC).

A new routine, SCMCDDR2, was developed to implement the RPC, SCMC GETS
ENTRY DATA. It returns VistA data to PCMM Web using the VA FileMan DBS
API: Data Retriever (GETS^DIQ).

A new routine, SCMCDDR3, was developed to implement the RPC, SCMC FILER.
It updates VistA data from PCMM Web using a VA FileMan DBS APIs: Filer
```

(FILE^DIE) and Updater (UPDATE^DIE).

A new routine, SCMCENCT, was developed to implement the RPC, SCMC GET
PATIENT ENCOUNTERS. It returns patient encounter data to PCMM Web. The
data is used to determine if and when a patient had a completed encounter
with a teamlet member.

A new routine, SCMCNPER, was developed to implement the RPC, SCMC GET
NEW PERSON. It returns provider information to PCMM Web.

A new routine, SCMCPAT, was developed to implement two RPCs.
 SCMC PATIENT DIEDON returns a patient's date of death to PCMM Web.
 SCMC PATIENT INFO returns patient demographic information to PCMM Web.

A new routine, SCMCFTEE, was developed to implement five RPCs; SCMC
FTEE CREATE, SCMC FTEE READ, SCMC FTEE READALL, SCMC FTEE UPDATE, SCMC
FTEE DELETE. They allow PCMM Web to maintain FTEE HISTORY multiple (#1) in
the POSITION ASSIGNMENT HISTORY (#404.52) file.

The routine SCMCMHTC was modified to fix a date comparison issue.

The routine SCAPMC23 was modified to correct an endless loop when reading
unexpected data.

The routine SCMCDD1 was modified to create or update OUTPATIENT PROFILE
(#404.41) file records for all assignment types. The routine was also
modified to add "fail-safes" to quit processing if PATIENT TEAM ASSIGNMENT
(#404.42) file or PATIENT TEAM POSITION ASSIGNMENT (#404.43) file records
are not found when sending mail messages.

Two routines, SCMCTSK5 and SCMCTSK6, were modified to change
auto-inactivation related time periods and other text in report and mail
boiler plate text. All auto-inactivation processing will be performed by
PCMM Web.

The routine SDCOU was modified to create ACOD index records for Credit
Stop Code OUTPATIENT ENCOUNTER (#409.68) file records. The original code
did not properly handle new style indexes. The Set and Kill logic was
modified to do so.

The pre-install routine, SD53I603, was developed to perform the following
actions:
 - Delete the global for the STANDARD POSITION (#403.46) file and create
   the initial file header.

The post-install routine, SD53P603, was developed to perform the
following actions:
 - Add or update HWSC server and web service file entries
 - Add the application proxy user
 - Convert values in the PATIENT TEAM POSITION ASSIGNMENT (#404.43) file
   STATUS (#.12) field from NA to IU
 - Build the new ACOD index for the OUTPATIENT ENCOUNTER (#409.68) file
 - Build the new C cross reference for PATIENT TEAM POSITION ASSIGNMENT
   (#404.43) file
 - Un-schedule the legacy PCMM NIGHTLY TASK [SCMC PCMM NIGHTLY TASK]

```
      menu option from TaskMan
  - Place PCMM legacy menu options out-of-order
  - Change users' secondary menu option from SCMC PCMM GUI WORKSTATION to
    SCMC PCMMR WEB USER MENU
  - Create missing ACOD index records in the OUTPATIENT ENCOUNTER (#409.68)
    file
  - Delete the trigger cross reference (FTEXR) on the POSITION ASSIGNMENT
    HISTORY (404.52) file FTEE EQUIVALENT (#.09) field
  - Create two records in the TEAM PURPOSE (#403.47) file
    - PRIMARY CARE - NVCC
    - PRIMARY CARE - HBPC
```

A new routine, SCMCOPT, was developed to place a number of PCMM legacy
menu options and a protocol out-of-order. The items to be placed
out-of-order are listed below in the Options Associated and Protocols
Associated sections. This routine also contains an entry point to change
the value in the SECONDARY MENU OPTIONS (#.01) field in the SECONDARY MENU
OPTIONS (#203) multiple in the NEW PERSON (#200) file for users that
have the option SCMC PCMM GUI WORKSTATION to SCMC PCMMR WEB USER MENU.
Both entry points are called by the post-installation routine, SD53P603.

A new routine, SCMCFPOS, was developed to fix the TEAM POSITION (#404.57)
file at sites that have deviated from the gold STANDARD POSITION (#403.46)
file that is released with this patch.

Patch Components
================

Files & Fields Associated:

```
File Name (#)          Field Name (#)               New/Modified/Deleted
-------------          --------------------------   --------------------
PATIENT TEAM ASSIGNMENT file (#404.42)
 STATUS field           (#.15)                       Modified - new codes
 ASSIGNMENT TYPE field  (#.08)                       Modified - new code

PATIENT TEAM POSITION ASSIGNMENT file (#404.43)
 TEAM POSITION          (#.02)                       New C cross reference
 STATUS                 (#.12)                       Modified - new codes

POSITION ASSIGNMENT HISTORY file (#404.52)
 TEAMLET POSITION field  (#.12)                      New
 FTEE HISTORY multiple   (#1)                        Modified
   FTEE HISTORY field      (#.01)                     Modified
   VALUE field             (#.02)                     Modified
   USER field              (#.03)                     Modified

OUTPATIENT PROFILE file  (#404.41)
 CPRS HEADER TEXT field      (#.06)                  New
 CPRS PC WINDOW CACHE field (#.07)                   New

OUTPATIENT ENCOUNTERS file (#409.68)
 PATIENT field              (#.02)      Added ACOD index for .02 and .07
```

```
PCMM PATIENT EVENTS        (#404.54)                      New

Subject:  PCMM WEB TEAM DISPLAY ENHANCEMENTS TO CPRS

Category:  ROUTINE
           ENHANCEMENT

Description:
===========

This patch addresses changes to the code behind two CPRS RPCs required to
support the release and use of Patient-Centered Management Module (PCMM)
Web. It is released in conjunction with SD*5.3*603.

This patch is a part of a phased, coordinated process for deploying PCMM
Web. The VistA software for this patch and the companion SD*5.3*603
patch is released as two KIDS host files. They may be downloaded from a
secured ftp site as directed by the PCMM Web Implementation Team.

**********************************************************************
DO NOT INSTALL THIS PATCH ON A PRODUCTION SYSTEM UNTIL NOTIFIED BY
THE PCMM WEB IMPLEMENTATION MANAGER.
CPRS WILL NOT FUNCTION PROPERLY IF THIS PATCH IS INSTALLED PREMATURELY.
**********************************************************************

If the ORWPT1 PRCARE RPC is called by CPRS, the content of the first
line of the PCMM Header Button is determined and formatted by PCMM Web,
and stored in the Outpatient Profile File (404.41). The RPC code has
been modified to retrieve the data from there. If the RPC is not
called by CPRS, the data format remains as it was. The Mental Health line
in the header was modified to include the MH Team name.
Associated routine: ORWPT1
Associated ICRs
   6042 - SCMC PCMM/R GET PRIMARY CARE SUMMARY
   5972 - ORWPT1 PRCARE
```

If the ORWPT1 PCDETAIL RPC is called by CPRS, the contents of the Primary
Care Detail Window is retrieved from PCMM Web by a web service, formatted,
returned to CPRS, and displayed in the window. If the RPC is not called
by CPRS, the data format remains as it was.
Associated routine: ORWPT1
Associated ICRs
   6027 - SCMC PCMM/R GET PRIMARY CARE DETAILS
   5971 - ORWPT1 PCDETAIL

Documentation Retrieval Instructions:

Updated documentation describing the new functionality introduced by this
patch is available.

The preferred method is to FTP the files from
REDACTED
This transmits the files from the first available FTP server. Sites may
also elect to retrieve software directly from a specific server as
follows:

REDACTED

Documentation can also be found on the VA Software Documentation Library
at: http://www.va.gov/vdl/

File Description   File Name   FTP Mode

Installation Guide   SD_53_603_IG.PDF   binary
Release Notes   OR_30_387_RN.PDF   binary
(This patch is released with SD*5.3*603. Installation notes for both
patches are in the same document.)

NOTE: Updates to the Primary Care Header and Window Changes will be
documented in the CPRS User guide with the release of CPRS 30.b

```
(OR*3.0*350).
References in the CPRS Help files to PCMM will also be updated in that
version.

Software Retrieval Instructions:
================================
The VistA software for this patch is released as a KIDS host file. It may
be downloaded from a secured ftp site as directed by the PCMM Web
Implementation Team.
The software distribution includes:

File Name              Contents          Retrieval Format
---------              --------          ----------------
OR_30_387.KID          KIDS Build        ascii

Patch Installation:
===================

This patch is a part of a phased, coordinated process for deploying PCMM
Web.

*********************************************************************
DO NOT INSTALL THIS PATCH ON A PRODUCTION SYSTEM UNTIL NOTIFIED BY
THE PCMM WEB IMPLEMENTATION MANAGER.
*********************************************************************

Please refer to the PCMM Web-VistA Installation Guide for complete
details.

15. Appendix I – Check HealtheVet Web Service Client (HWSC) Configuration

NOTE: If needed, Appendix H includes additional information on the Health*e*Vet Web Services.
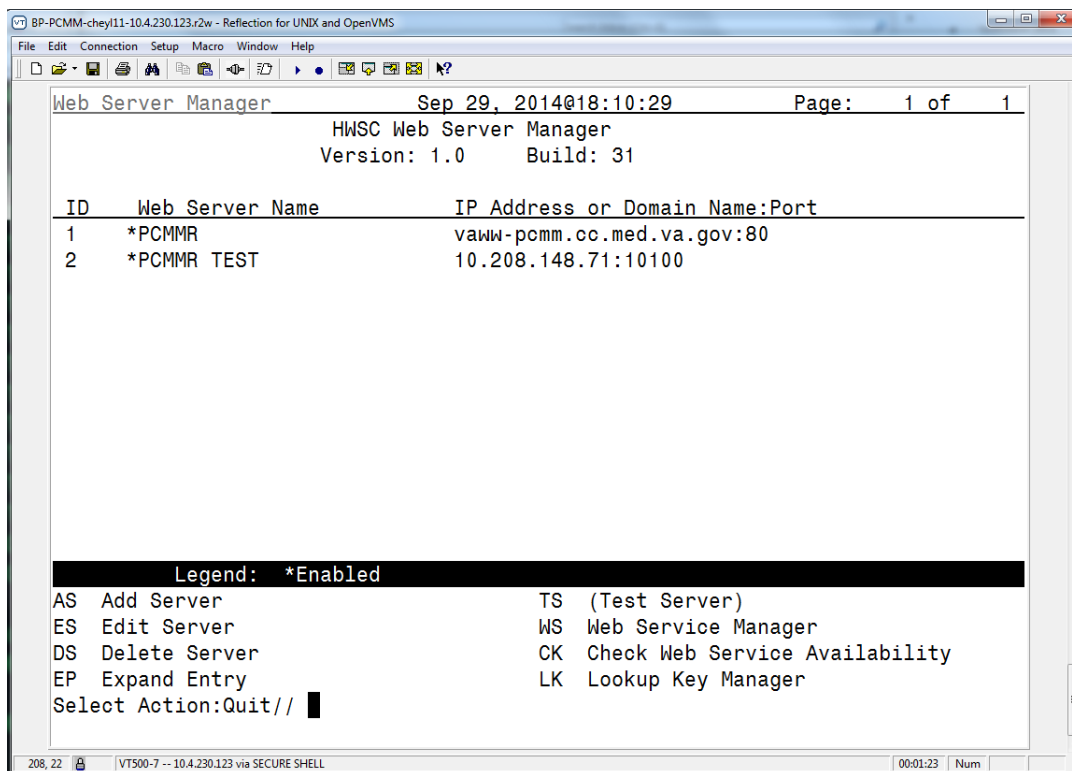

The post-install routine for patch SD*5.3*603 creates entries in the HWSC configuration files to support a web service call to PCMM Web. Two server definitions are created: one for production PCMM Web, and one for a development test system. In some circumstances, it may be necessary to change the server name and/or port number for the production connection. Follow the steps below to change the server name or port.

```
VISTA>D ^XUP

Setting up programmer environment
This is a TEST account.

Terminal Type set to: C-VT320

Select OPTION NAME: XOBW WEB SERVER MANAGER       Web Server Manager
Web Server Manager
```

```
Select Action:Quit// ES   Edit Server
Select Web Server:  (1-2): 1
NAME: PCMMR//
