

Retirement of VistA Police and Security Data Entry/Edit Options

October 2009

VistA Patch ES*1*46

Department of Veterans Affairs
Office of Information and Technology (OI&T)

Revision History

Date	Description	Technical Writer
10/14/09	The VistA Police & Security V. 1.0 package (ES namespace) is no longer being used. Patch ES*1*46 shuts this software down at VA Facilities nationwide. In its place, Veterans Affairs Medical Centers (VAMCs) are up and operational with the new windows based software named VA Police and Security (VAPS).	OI&T Legacy Infrastructure Team, DVA, Washington, DC

Retirement of VistA Police and Security Data Entry/Edit Options

Police Service personnel at all Veterans Affairs facilities nationwide are now using the national VA Police and Security (VAPS) system for their record keeping. VAPS allows a national database to be accessed by any VA Police Officer. It makes information available for a person that may have been a problem at another VA facility 2000 miles away. The VistA Police & Security V. 1.0 software (ES namespace) is no longer being used and thus Patch ES*1*46 effectively disables this software from further data manipulation. The national Police Service requested the disablement of all VistA ES options that can modify or delete any legacy Police & Security data. (See the list of options placed out of order, shown below.) They also requested to continue to be able to view this data in VistA. Hence, read-only options have been left active and intact in the VistA Police & Security software for historical data retrieval.

For more information about the VA Police and Security (VAPS) software, please contact the National VAPS Program Manager.

72 out of the 128 VistA Police & Security software options have been placed out of order. They are listed alphabetically as follows by option name:

- ESP ACTIVITY ADD/EDIT
- ESP ACTIVITY CODE EDIT
- ESP ADD JOURNAL ENTRY

- ESP VIOLATION MATCH
- ESP WANTS & WARRANTS INPUT

Patch ES*1*46 performs an environment check to verify that the Police package is installed in your system, and the post-install also removes Write, Delete, and LAYGO access from all users for files in the 910-916 number range.

See the description for Patch ES*1*46 of FORUM for site installation instructions.
