Unique Veteran Users Report
FY 2012

Prepared by the National Center for Veterans Analysis and Statistics
July 2014
The Department of Veterans Affairs (VA) delivers a wide array of benefits and services to eligible Veterans, dependents, and survivors to help to ease the transition from the military to civilian life and to improve quality of life. These programs are overseen by three administrations:

- Veterans Health Administration (VHA) provides Health Care and Pharmacy services
- Veterans Benefits Administration (VBA) provides Compensation and Pension disability benefits, Education Assistance, Life Insurance, Vocational Rehabilitation/employment services, and Home Loan Guaranty assistance
- National Cemetery Administration (NCA) provides memorial benefits including graves, markers, flags, medallions, and burial allowances

The National Center for Veterans Analysis and Statistics (NCVAS) conducted a study of Veterans who have used at least one of 22 benefits or services provided by the VA during Fiscal Years 2005 through 2012. Veterans who used at least one benefit or service are termed ‘users’ and Veterans who did not are termed ‘non-users’. Additionally, NCVAS highlighted some utilization characteristics of these Veterans. All year designations refer to Fiscal Years (FY).

Key questions addressed in this study are:

- How many Veterans used VA benefits? How many did not?
- Which programs do Veterans use most?
- What are the demographic and socio-economic characteristics of VA users and how do they differ from non-users?
  - Gender
  - Age
  - Military cohort
  - Race
  - Household income
- Compensation & Health Care
  - How many Veterans receive disability Compensation and/or use VA Health Care?
  - How many disabled Veterans do not use VA Health Care?
  - Is the number of disabled Veterans not using VA Health Care going up or down?
Key Findings

- 40% (8.8 out of 22.3 million) of all Veterans used at least one VA benefit or service in FY 2012, which is up from 36% (8.9 out of 24.8 million) in FY 2005. Of these 8.8 million, 39% used multiple benefits which is up from 30% in 2005.

- Female Veteran use of VA benefits increased by 27% between FY 2005 and FY 2012.

- Health Care and Disability Compensation accounted for 77% of all VA use in FY 2012, up from 68% in FY 2005.
  - 48% of all users only used VA Health care in FY 2012.
  - 67% of Veterans receiving Disability Compensation used VA Health Care in FY 2012, up from 59% in FY 2005.

- Median age of male Veteran user is 64; median age of male non-user is 53.

- Median age of female Veteran user and non-user alike is 45.

- Veteran users tend to have lower household incomes than non-users.
Approximately 8.8 million Veterans used at least one VA benefit or service in FY 2012. 39% of all VA users received benefits or services from multiple programs*

VA Benefits Utilization by Program - Veterans only: FY 2012

Health Care 5.6
Compensation or Pension 3.8
Loan Guaranty 1.4
Life Insurance 1.3
Education 0.7
Vocational Rehab. 0.2
Memorial Benefits 0.2

* The numbers from the chart do not sum to the total number of VA users. Veterans who used multiple programs are counted in each individual program, but only once in the overall total.

About 6.0 million Veterans used at least one benefit provided by the Veterans Benefits Administration (VBA)

Prepared by the National Center for Veterans Analysis and Statistics
The numbers from the chart do not sum to the total number of VA users each year. Veterans who used multiple programs are counted in each individual program, but only once in the overall total.

- Health Care and Disability Compensation, the largest programs, increased by 17% and 25% respectively
- Life Insurance utilization is declining
- Home Loan Guaranty showed modest decline through 2008 and sharp decrease in 2009 consistent with the housing market, but afterward has been recovering steadily
- Education benefit use was stable through 2010, but trends upward markedly after 2011
- Memorial Benefit and Vocational Rehabilitation use have remained fairly steady

Prepared by the National Center for Veterans Analysis and Statistics
The number of Veterans using VA benefits remained stable despite 11% decline in Veteran population

Surge in female Veteran use doubled growth rate of female Veteran population

- Number of female Veterans grew at annual rate of 1.4% between FY 2005 and 2012, while the number who used benefits has grown at rate of 3.6%
- Use of benefits among female Veterans increased from 29.8% in 2005 to 34.5% in 2012
- Number of female users increased by 27.4% since 2005 while number of female non-users increased by only 2.8%
- Female Veterans made up 7.7% of all users in 2012, up from 6.1% in 2005

Prepared by the National Center for Veterans Analysis and Statistics
Comparison of VA Users and Non-Users FY 2012

Used VA Benefits: 8,847,951
Did not use VA Benefits: 13,480,328
Male Veterans who used VA benefits tend to be older than non-users. The median age for male users is 64 years, compared to a median age of 53 years for non-users.
Age distribution among female users and non-users is similar, with a median age of 45 for both groups.
The majority of male Veterans who used VA served during the Vietnam era. The majority of non-users served during Peacetime or the Vietnam era.

**Period of Military Service: FY 2012**
(in percent)

**Male VA Users**

- World War II: 6.6%
- Korean Conflict: 6.7%
- Vietnam Era: 36.9%
- Pre-9/11 Gulf War: 15.1%
- Post-9/11 Gulf War: 21.5%
- Peacetime only: 13.2%

**Male Non-Users**

- World War II: 1.0%
- Korean Conflict: 0.9%
- Vietnam Era: 30.0%
- Pre-9/11 Gulf War: 20.5%
- Post-9/11 Gulf War: 16.6%
- Peacetime only: 31.0%

Note: Veterans who served during multiple periods are categorized into their latest wartime period of military service.

Prepared by the National Center for Veterans Analysis and Statistics
Almost half of female Veterans who used VA served during the Post-9/11 Gulf War compared to only a quarter of female Veterans who did not use VA.

**Period of Military Service: FY 2012**
(in percent)

### Female VA Users
- World War II: 2.2%
- Korean Conflict: 1.1%
- Vietnam Era: 8.9%
- Pre-9/11 Gulf War: 25.7%
- Post-9/11 Gulf War: 46.5%
- Peacetime only: 15.6%

### Female Non-Users
- World War II: 0.4%
- Korean Conflict: 0.2%
- Vietnam Era: 9.9%
- Pre-9/11 Gulf War: 28.9%
- Post-9/11 Gulf War: 26.6%
- Peacetime only: 34.1%

Prepared by the National Center for Veterans Analysis and Statistics

Note: Veterans who served in multiple periods are categorized into their latest wartime period of military service.
For male users and non-users there is very little difference in race and ethnicity distribution.

Male Users FY 2012:
- White: 80.8%
- African-American: 10.6%
- Hispanic: 6.3%
- Asian: 0.9%
- Other: 0.4%

Prepared by the National Center for Veterans Analysis and Statistics
Data Sources

A Veteran user is defined as any Veteran who received or used at least one VA benefit or service during the fiscal year. Veteran spouses, Veteran dependents, and active military service members who used VA benefits and services were not included in the analysis. Each Veteran is only counted once in the overall total even if he/she used multiple programs.

- **Health Care**: All Veterans who received either VA inpatient care, VA outpatient care, purchased (fee basis) care, VA long-term services and support, or VA pharmacy care were included. VA Health Care enrollees who did not seek care from VA during the current year were not included. Veterans who only sought care from a VHA Vet Center were not included.

- **Memorial Affairs**: All Veterans who were interred in a National, State, Interior, or Military cemeteries, or Veterans who were interred in private cemeteries and requested headstones/markers from VA were included. Due to data unavailability, Veterans who only received Presidential Memorial Certificates or a flag were not included.

- **Compensation & Pension**: All Veterans who received VA disability compensation or pension payments were included. Veterans who received Special Adaptive Housing benefits were also included in the analysis. Veterans with pending or denied claims were not included.

- **Education**: All Veterans who received benefits for Chapter 30, 32, 33, 1606, and 1607 education programs were included.

- **Vocational Rehabilitation**: All Veterans who participated in various stages of the Vocational Rehabilitation and Employment program were included.

- **Loan Guaranty**: All Veterans who had an active, new or re-financed VA-guaranteed home loan were included.

- **Life Insurance**: All Veterans who had an active VA life insurance policy or were in receipt of a benefit from a policy that was administered or supervised by VA were included. VA insurance programs included in the analysis were National Service Life Insurance (NSLI), United States Government Life Insurance (USGLI), Veterans’ Special Life Insurance (VSLI), Veterans’ Reopened Insurance (VRI), Service-Disabled Veterans Insurance (S-DVI), Veterans’ Mortgage Life Insurance (VMLI), Traumatic Injury Protection (TSGLI), and Veterans’ Group Life Insurance (VGLI). The analysis does not include Service-members’ Group Life Insurance (SGLI) and Family Service-members’ Group Life Insurance (FSGLI).
Methodology and Assumptions

• Records from each utilization source were combined using the Veteran’s Social Security Number (SSN) as the primary identifier

• Veteran records from each input source were verified against official Social Security Administration data to validate SSN, name, date of birth, and gender

• Missing SSN or SSNs determined to be incorrect by SSA were omitted from the analysis

• Estimates for Veterans who did not use any VA benefits or services were derived using the United States Veterans Eligibility Trends & Statistics (USVETS) database and VetPop2011. Counts from USVETS were adjusted to be consistent with total population estimates from VetPop11
  – The adjustment was applied to aggregate counts of non-users, non-enrolled, and age 65 or older, who are Veterans whose records are most incomplete

• Some data elements were not available for all Veteran records. A minimum of 70% coverage was assumed to be an appropriate sample of all Veteran users to create frequency distributions.
  – 0.01 percent of user records had unknown gender. Of those, 99% were age 55 or older and assumed to be male
  – Race/ethnicity information is available only in aggregate estimates at the national level
