Community Care Network (CCN)

Overview
The Department of Veterans Affairs (VA) is committed to providing eligible Veterans with the care they need when and where they need it. Many programs exist today for Veterans to receive such care however, the multiple programs and eligibility requirements are confusing for Veterans, community providers and VA staff.

In an effort to streamline VA’s community care programs, the president signed the VA MISSION Act into legislation on Wednesday, June 6, 2018, providing more choices and robust care coordination for Veterans using one consolidated program instead of multiple programs. A significant component of having one method for Veterans to receive care from community providers, although not dependent on the legislation, are the Community Care Network (CCN) contracts to be awarded to as many as four contractors throughout calendar year 2018 covering an established set of regional boundaries to ensure health care services and resources are available to our diverse Veteran population.

To establish the new CCN, VA released a Request for Proposal (RFP) for Third Party Administrators (TPAs) to develop and administer regional networks of high-performing licensed health care providers who will work together with VA providers and practitioners to provide medical, dental and pharmacy services to eligible Veterans who are unable to receive care at local VA medical centers. The CCN contracts were developed with a focus on transparency, accountability, quality and increased communications between VA and Veterans.

CCN Regional Structure
This set of contracts, awarded to as many as four contractors covering an established set of regional boundaries aligned to state boundaries, will provide local flexibility and increased access to care.

Each regional network will serve as the contract vehicle for VA to purchase care in the community. The existing Patient Centered Community Care (PC3) and the Veterans Choice Program (VCP) community care networks will transition out over a designated period of time to allow for the CCN implementation to occur region-by-region in a phased approach. This will ensure the Veterans experience and coordination of care is consistent and without interruption.

The four regions were established based on the volume of Veterans enrolled in VA’s health care systems and the number of community care referrals by state. Due to special nuances with health care systems and provider networks in Alaska, American Samoa, Guam and the Northern Mariana Islands, those locations will be managed under separate contracts outside of the CCN.

Key Features
The CCN has several features that will improve care coordination and make it easier for community providers, VA staff, and TPAs to deliver care to Veterans.
• **Expanded Health Care Services:** The CCN will administer regional networks of high-performing licensed health care providers who will work together with VA physicians and practitioners to provide medical, surgical, Complementary and Integrative Health Services (CIHS), Durable Medical Equipment (DME), pharmacy, and dental services to eligible Veterans who are unable to receive care at local VA medical centers.

• **Improved Customer Service:** The CCN will allow VA staff to directly manage Veteran touchpoints for customer service while the TPAs will support VA staff and community provider inquiries.

• **Improved Accountability:** Performance will be measured at the local VAMC level to help ensure TPAs build provider networks that meet the needs of Veterans and VAMCs. The CCN will also enable the designation of high performing preferred providers by identifying providers that meet specific quality and performance metrics.

• **Improved Health Information Exchange:** The CCN will have direct health information sharing capability between VA and community providers to ensure proper care coordination.

• **Improved Referrals and Scheduling:** Under the new CCN, VA staff will refer Veterans directly to community providers and will directly schedule community care appointments for Veterans through the local VAMC. Veterans can also choose to schedule their own appointment with support from local VA staff.

• **Improved Provider Payments:** The TPAs will pay claims submitted by community providers within the network they administer and the TPAs will send invoices directly to VA for reimbursement.

**Timeline**
The timeline for VA to transition to the new CCN is based on when contracts are awarded to the TPAs to administer the work. Once the new contracts are awarded in each of the four designated regions throughout calendar year 2018, TPAs will initiate care at two sites within the awarded region within 180 days and at all sites within the awarded region within 12 months of contract award.
