VistA Imaging Approved DICOM Modality Interfaces
November 2026

VistA Imaging has successfully tested many modalities and interfaced them to VistA using DICOM. The following list of approved DICOM modalities was generated based on the most current information and will change as more information becomes available.

A DICOM modality is considered "Supported" if it passes the VA's internet validation test suite listed in the Joint VA/DoD DICOM Modality Conformance Requirements (Rev 3.3) document. Some modalities have superscript numbers which refer to the notes at the end of the document.

If the software used on a modality is revised by the manufacturer, the modality will need to be re-validated.

The VA retains the right to change modality testing requirements at any time as needed for VA medical care. These changes could require re-testing of the modalities.

VA facilities are required to complete a quality review for the images produced by the device before it may be placed into clinical use. The results of the quality review must be filed with the National VistA Imaging Project Office.

This list of approved DICOM modalities does not in any way constitute product endorsement by the VA. It only states whether or not the listed product has passed VA's internet-based validation testing. Upgrades to the vendor devices can affect interoperability and may require re-validation. The validation process does not indicate how well the actual product will work operationally, either within the VA or elsewhere.

Modality/Device Types

Approved modalities and devices are grouped into the categories listed below. A list of approved devices for each category can be found on the page listed below.

Modality/Device Types…….. 1
Bone Density 2
Cardiology 2
CD/DVD Burners 2
Computed Radiography 3
Computed Tomography 5
Dental Extra-Oral Radiography 9
Dental Intra-Oral Radiography 10
Dental VL – Endoscopy.....11
Dental Workstations 11
Digital Subtraction.....11
Direct X-Ray.....11
Evidence Creator (Encapsulated PDF) 15
Film Digitizer 16
Film Digitizer Software 16
Frame Grabber.....16
General Microscopy.....16
Magnetic Resonance.....17
Mammography.....20
Middleware – Interface Engine.....21
Nuclear Medicine.....21
Nuclear Medicine - SPECT 22
Ophthalmic Photography 23
Ophthalmic Ultrasound.....27
Ophthalmic Workstation.....27
Optical Coherence Tomography (Ophthalmology use only).....28
Other.....28
PET.....28
PET/CT.....29
PET/MR.....29
Q/R – 3D Reconstruction Workstation.....29
Q/R – Planning Workstation.....29
Q/R – Routers 30
Q/R – Workstations 30
Radio Fluoroscopy and X-Ray Angiography ...32
Secondary Capture.....35
Secondary Capture (Injection Dosage Capture)36
Surgical Workstation 36
Ultrasound 36
Visual Field Analyzer (Encapsulated PDF).....43
VL – Endoscopy 43
VL – Endoscopy/Microscopy 44
VL – Pathology.....44
XA – X-Ray Angiographic.....44
XC – External-camera Photography (Encapsulated PDF) 45
Notes.....46

Bone Density

Supported Bone Density Devices

GE DPX Bravo
GE DPX Duo
GE DPX-MD+
GE DPX-NT
GE Lunar iDXA
GE Prodigy Advance
GE Prodigy Primo
GE Prodigy Pro
GE/Lunar Prodigy
Hologic Discovery
Hologic Horizon
Hologic Explorer
Hologic Oasis (QDR) Workstation
Norland Excell (IlluminatusDXA)
Norland XR-46 (IlluminatusDXA)
Norland XR-600 (IlluminatusDXA)
Norland XR-800 (IlluminatusDXA)

Cardiology

Supported Cardiology Devices

GE Innova IGS 520
GE Innova IGS 530
GE Innova IGS 540
GE Innova IGS 620
GE Innova IGS 630
GE Discovery IGS 730
GE Discovery IGS 740
Philips IntelliSpace Cardiovascular version 2.3
Philips Medical Systems AlluraXper
GE Healthcare MUSE 9 (DICOM Storage)

CD/DVD Burners

Supported CD/DVD Burners

All Pro Solutions, DCMburner, v6.14
Pacsgear Media Writer D100/D200[1]
Perennity CD Burner Software V4.5
RadInfo Systems CDPowerPACS[2]
Sencor DICOM Part 10 Burner
Sorna FilmX
Sorna eXpedo
Sorna Vertex
Sorna, Product: Vertex[43], Version: 3.10.4.10407
SST Group, DMC-EZ

Notes

1 Uses DICOM software that was approved for Pacsgear and Pacscan
2 2 Device now supported by Sorna

Computed Radiography

Supported Computed Radiography Devices

Agfa ADC-51xx
Agfa ADC 70[4]
Agfa ADC Compact[4]
Agfa ADC Solo[4]
Agfa ADC-QS
Agfa ADC-VIPS[1]
Agfa NX Workstation for all CR Plate Readers
Agfa PRID[8]

Notes

1 No DICOM Modality Worklist capability.
4 Data is transferred via an intermediary device. Confirm intermediary device was purchased as well.
5 Tested as DICOM Object. Test images were not converted to Targa format.
8 Only supplies Modality Worklist.
9 Storage commitment not tested.

Computed Tomography

Supported Computed Tomography Devices

Canon Medical Systems, Aquilion Precision (V8.80)
Canon Medical Systems, Aquilion One (V10.00)

Notes

The notes below are included for reference purposes; see specific listing for details.

[1] No DICOM Modality Worklist capability.
[2] Poor DICOM Modality Worklist capability.
[3] Tested using the DeJarnette Netshare for interfacing.
[4] Data transferred via an intermediary device. Confirm intermediary device was purchased as well.
[5] Tested as DICOM Object. Test images were not converted to Targa format.
[6] *Obsolete; retained for numbering purposes.*
[7] *Obsolete; retained for numbering purposes.*
[8] Only supplies Modality Worklist.
[9] Automatic measurements may not be possible; manual calibration may be required.
[10] Older versions of vendor's software are not supported.
[11] *Obsolete; retained for numbering purposes.*
[12] *Obsolete; retained for numbering purposes.*
[13] *Obsolete; retained for numbering purposes.*
[14] *Obsolete; retained for numbering purposes.*
[15] Does not support OP SOP Classes.
[16] DICOM Query/Retrieve – Performs C-Find SCU and C-Move SCU roles only.
[17] DICOM Query/Retrieve – Study/Root Q/R fully supported.
[18] DICOM Encapsulated PDF only
[19] Reported connectivity issues, please contact support for assistance
[20] Version of DICOM Software approved on prior
[21] Requires using NNT/iRYS Workstation w/DICOM module
[22] At the time of validation VA HDIG was out of date with the DICOM Standard and doesn't have the ability to recognize the value, POSTMARKER, the third value of Image Type (0008,0008). Validation testing was done with the Application Entity Security Matrix (AESM) entry configured to: VALIDATE=NO and RELAX VALIDATION=YES.
[23] This device is not approved for Query Retrieve
[24] During testing it was noted that if the objects sent by the vendor have different accession numbers, then the ePDF objects stored in VistA do not display an accession numbers. But if the ePDF objects are made up of images that are from the same accession number, then the ePDF objects stored in VistA display the accession number.
[25] This device is not approved for the following SOP Classes: Multi-Frame Secondary Capture Storage, Video Endoscopic Image Store and Video Photographic Image Store. Only approved for Secondary Capture Image Storage and VL Endoscopic Image Storage.
[26] Device does not perform MWL, it is a Vista Storage only device
[27] Approved HL7 interface 5/2/2014. The latest version 3.5 is not validated for use within VA.
[28] Since the VistA Imaging Query/Retrieve Provider only supports Study Level at this time, the Validation team could not test the vendor device performing queries and retrieves at either the Series or Image Levels. The vendor device may be used to obtain prior DICOM images from a Query/Retrieve provider other than VistA Imaging.
[29] VistA Imaging does not support biometry related SOP classes such as: Keratometry Measurements Storage (1.2.840.10008.5.1.4.1.1.78.3), Ophthalmic Axial Measurements Storage (1.2.840.10008.5.1.4.1.1.78.7) and Intraocular Lens Calculations Storage (1.2.840.10008.5.1.4.1.1.78.8).
[30.] This device was validated for US SOP Classes only.
[31.] Comments: Broad Query matching key attributes is not supported. Can filter by Modality
[32] VistA Imaging does not support PET (Radiopharmaceutical) Dose SR storage.
[33] DCS VG80A_mCT.doc is an addendum to syngoCT-VB10.pdf. Everything valid for syngo CT VB10 is also valid for Biograph mCT. Specifics to mCT are described in VG80A_mCT.doc. The specific SOP Classes tested for the VG80A_mCT are 1.2.840.10008.5.1.4.1.1.2 CT Image Storage, 1.2.840.10008.5.1.4.1.1.128 Positron Emission Tomography Image Storage, 1.2.840.10008.5.1.4.1.1.7 Secondary Capture Image Storage, 1.2.840.10008.5.1.4.1.1.88.67; X-Ray Radiation Dose SR.
[34] This device has been granted conditional approved for use with VistA Imaging pending the updated Stryker DICOM conformance statement document – to reflect DICOM Transfer Syntax changes as required by the VA and the inclusion of the decision to use Study Instance UID generated by the DataMediator. The Stryker DICOM Conformance Statement will be released in Q4 2021 to include the DICOM Transfer Syntax changes, as required by the VA.
[35] Validated only Digital Intra-oral X-ray Image Storage - For Presentation SOP class since other SOP classes are out of scope for the purposes of sensor device validation.
[36] The device is not equipped to create new studies rather sending series to existing studies. So not able to validate MWL. Since work list not created in vender PAC, not able to validate device images through validation process. Performed Q/R and verified SOP class from storage server.
[37] This device is not approved for Secondary Capture Image Storage.
[38] Since the VistA Imaging Query/Retrieve Provider only supports Study Level at this time, the Validation team could not test the vendor workstation performing queries and retrieves at either the Series or Image Levels. The vendor workstation was able to be used as a DICOM image acquisition device, perform Modality Worklist, and acquire images for the test patient. The workstation was then able to post process the acquired image, create secondary

capture images, and store them to VistA.

[39] DICOM Query/Retrieve – Study/Root Q/R not supported.

[40] VISTA imaging doesn't support DOSE SR.

[41] For Secondary capture IOD SOP Instance UID Integrity is not applicable as the secondary capture is a screen capture which is generated on the fly and not stored in the system, so every secondary capture is a new image hence new UID is assigned to the object.

[42] This is a review software which have ability to forward the studies to another viewer such as VistA.

[43] Not an image acquisition device. It serves as store and transfer purpose only.

[44] The device supports Modality Worklist queries using Scheduled Procedure Step Start Date (0040,0002). The device's use case does not enable the user to enter Accession Number or Patient ID for filtering purposes of the DICOM Worklist. This device was only validated for Radiology use not consult.

[45] Validation approved on December 11, 2024 for Discovery XR656. As of June 2nd, 2020, GE Healthcare released a commercial configurations of 2 popular products with new names which simplifies portfolio and reflects the value of these product offers, i.e, Definium 656 HD (formerly the Discovery XR656 HD) , Definium 646 HD (formerly the Optima XR646 HD).

[46] Encore and Symbia are the same systems. Encore 2 is the Model name used in the Factory before the system was named Symbia.

[47] It is not a primary acquisition device instead post-processing software that receives primary study data from VA and can creates DICOM elements that are additional series to VA existing study data.
