Weekly update on Virtual Lifetime Electronic Record (VLER)

On October 17, 2012, VLER provided Electronic Case File Transfer (eCFT) online training for identified Integrated Disability Evaluation System (IDES) clinicians. This training provided fundamental hands-on exercises for clinicians, including creating a Service member record, modifying a document after being uploaded, registering within the user roles, and other administrative actions within the system. eCFT is an electronic method of transferring Service members' records through the IDES process. Previously, hard-copy case files—including service treatment records (STRs), commanders' letters, narrative summaries, and compensation and pension examination reports—were sent via FedEx or other delivery methods. By utilizing a shared, paperless, and searchable system, the Services and the Department of Veterans Affairs will increase the accountability, efficiency, and transparency of an IDES community that consists of 30,000 Wounded, Ill, and Injured Service members.
