Weekly update on Virtual Lifetime Electronic Record (VLER)

On January 10, 2012, Department of Veterans Affairs (VA) Virtual Lifetime Electronic Record (VLER) confirmed requirements to add Service member separation data (date of separation, separation pay, etc.) to the Veterans Tracking Application (VTA) data extract. The schedule for completing requirements is expected by the week of January 14, 2013, and delivery of this new capability to Integrated Disability Evaluation System (IDES) program offices is expected within 30 days. VTA is a legacy application which currently helps IDES program offices track Service members and Veterans separating through the IDES.
