

DO YOU HAVE DIABETIC KIDNEY DISEASE?

**Diabetic Kidney Disease is the most
common cause of kidney failure
and
WE NEED YOUR HELP!**

The VA is **currently enrolling Veterans into a clinical study** to see if **pentoxifylline** (*an FDA-approved drug used to improve blood flow in patients with blood vessel disease in their legs*) **can help to prevent kidney failure.**

Consider if this is something that you could do for yourself and for other Veterans with Diabetic Kidney Disease.

For more information on this study, please contact David Leverty at: (612) 467-5560
