

DID YOU KNOW THE OKC VA OFFERS VOICE THERAPY FOR TRANSGENDER VETERANS?

While not every person modifies their voice as part of transition, voice therapy is available to help you find balance between your mind, body, and voice.

Therapy may focus on any/all of the following:

- Pitch (higher v. lower)
- Resonance (shaping of voice signal)
- Prosody (rate, rhythm)
- Articulation (production of speech sounds)
- Intonation and stress patterns (rise and fall of pitch in conversation)

If interested, please contact your physician or one of the LGBTQ+ Veteran Care Coordinators.

For any questions regarding voice therapy, please contact:

Caitlyn Cloud, M.S., CCC-SLP
Speech Pathologist
