Introduction

The VA San Diego Healthcare System (VASDHS)/University of California, San Diego (UCSD) Clinical Psychology Postdoctoral Residency Program is based on the scientist-practitioner model, focused on creating a foundation in the delivery and dissemination of evidence-based clinical practices. The goal of the program is to provide training to clinical psychology postdoctoral residents. Residents will learn to deliver high quality, evidence-based clinical services, to be critical contributors to and consumers of the scientific literature, and to let each of these areas inform the other. The program emphasizes training in the professional practice of clinical psychology and does not offer training in any substantive specialty practice areas.

Residents spend most of their time in provision of psychological services (at least 65%), with additional time spent in educational activities (15%), and research/dissemination efforts (up to 20%). All residents will develop an individualized training plan specifying the amount of time spent on patient care, training, and research/dissemination activities (up to eight hours per week) with the goal of becoming an independent practitioner by the conclusion of residency.

Graduates are prepared for careers that integrate clinical, training, research, and leadership activities, such as VA or university medical center careers.

The VASDHS/UCSD Clinical Psychology Postdoctoral Residency Program has been accredited by the American Psychological Association since 2010.

Questions related to the program's accredited status should be directed to the Commission on Accreditation:

Office of Program Consultation and Accreditation

Facilities

Postdoctoral residents will provide clinical services within the VASDHS Mental Health Care Line. The VASDHS Mental Health Care Line spans multiple service locations throughout San Diego County. The VASDHS medical center is a modern, 400 bed general medical and surgical center situated adjacent to the UCSD campus and is closely affiliated with the Department of Psychiatry within the UCSD School of Medicine. The close university affiliation facilitates the program's scientist-practitioner training model as residents may choose to become involved in research or training activities occurring either at the VA or on the university campus.

The VASDHS has approved medical residency training programs including medicine, surgery, anesthesia, neurology, pathology, psychiatry, radiology, and audiology. The medical staff is augmented by outstanding physicians, dentists, nurses, consultants, research investigators, and other attending practitioners in various specialties. There are over 2,000 full- and part-time professional and administrative staff members.

The VASDHS Mental Health Care Line has extensive inpatient and outpatient mental health facilities. The second floor of the Medical Center is almost exclusively inhabited by mental health (psychology, psychiatry, social work, nursing, and pharmacy) services. There are also 28 acute care psychiatry beds, including 14 psychiatric intensive care beds and 10 beds assigned to the Neurobehavioral Assessment Unit. In addition, there is a Substance Abuse Residential Rehabilitation Treatment Program (SARRTP) and comprehensive aftercare program for Veterans with substance use disorders and their families.

Across the county, there are extensive medical and mental health services in the Community Based Outpatient Clinics (CBOCs). Mental health programs located at the Kearny Mesa CBOC include a PTSD Clinical Team (PCT), a Behavioral Health Interdisciplinary Program (BHIP; a general mental health clinic), Family Mental Health Program (FMHP) and a Primary Care Mental Health Integration (PCMHI) Team. The Rio Clinic houses the Center of Recovery Education (CORE) and the Wellness and Vocational Enhancement (WAVE) programs. In addition, the VASDHS has CBOCs in Chula Vista, Oceanside, and Escondido. The

ASPIRE Center is a residential rehabilitation program (Domiciliary) for Veterans with PTSD who are at risk for homelessness.

Veterans with a wide range of mental illnesses and behavioral problems are offered care in the VASDHS Mental Health Care Line, including those with serious mental illness, such as schizophrenia and bipolar disorder, other mood and anxiety disorders, psychiatric problems stemming from medical illnesses, posttraumatic stress disorder (PTSD), substance use disorders, sexual trauma, interpersonal trauma, somatoform disorders, personality disorders, and a wide range of family and interpersonal concerns. Across locations, patient care activities include psychiatric admissions, crisis intervention services, medication clinics, and individual, couple, family, and group therapies.

The VASDHS Psychology Service, which is part of the Mental Health Care Line, is focused on providing evidence-based assessments and treatments to improve the emotional and cognitive well-being of Veterans. It is an academically oriented service that shares the VA mission of excellence in clinical care, training, and clinically-focused research. Currently accessible to the postdoctoral residents are numerous part-time and full-time doctoral-level clinical psychologists, as well as psychiatrists, social workers, nursing staff, psychology technicians, vocational rehabilitation specialists, occupational therapists, peer support specialists, and administrative support staff. Many of the major sub-specialties of clinical psychology are also represented on the staff, including neuropsychology, geropsychology, couple therapy, substance use disorder treatment, behavioral medicine, posttraumatic stress disorder, and related psychology research. There are resources for computer assisted psychological testing and videotaping of therapy sessions. All medical records charting and scheduling is done electronically and care is provided both in person and via telehealth.

Other key resources within the VASDHS include the VISN 22 Mental Illness Research, Education and Clinical Center (MIRECC) and the VA Center of Excellence in Stress and Mental Health (CESAMH). MIRECCs were established by Congress in 1997 with the goal of bringing best practices in mental health care into the clinical settings of the VA. MIRECCs conduct research, produce clinical educational programs and products, and enhance clinical treatment to Veterans. The mission of our VISN-22 MIRECC at VASDHS (in partnership with the West Los Angeles VA and Long Beach VA) is to improve the long-term functional outcome of patients with chronic psychotic disorders, including schizophrenia, schizoaffective disorder and psychotic mood disorders. CESAMH was established at the VASDHS in 2007 as one of three Centers of Excellence to meet the increasing need for research and education into psychological health effects of deployment, combat injury, and other stressors that have important mental health consequences for the growing Veteran population. These Centers of Excellence are interdisciplinary in nature and are largely modeled after the MIRECCs. CESAMH's mission is to understand, prevent, and heal the effects of stress, including stress-related disorders i.e., PTSD and Traumatic Brain Injury. CESAMH is multi-disciplinary and its scope of research ranges from basic science, psychophysiology, and genetics through pharmacological and psychosocial interventions and their implementation. With strength in translational research, the VASDHS MIRECC and CESAMH each provide ideal settings in which to provide residents opportunities to engage in clinical research and dissemination activities.

The UCSD Department of Psychiatry is strongly integrated with the VASDHS, and together they offer a rich clinical and research environment. Since its inception in 1969, the Department of Psychiatry has developed into one of the most innovative and vigorous academic departments of psychiatry in the country. The department has a strong commitment to the basic neurosciences and to biological psychiatry, however this is balanced by an equally strong commitment to the understanding of an individual's present emotions, thoughts, and behaviors and the interpersonal relationships among family members and significant others.

Many successful joint programs are currently in operation under the umbrella of an inter-agency sharing agreement. Noteworthy among these programs is a four-year Residency in General Psychiatry, a two-year Fellowship in Child Psychiatry, psychiatric fellowships in Geropsychiatry, an APA-approved Joint Doctoral Program in Clinical Psychology, and an APA-approved Predoctoral Internship in Clinical Psychology. The missions of both the UCSD School of Medicine and the VASDHS include clinical care, professional training, and research; and both are nationally renowned for robust clinical, teaching, and research programs.

Postdoctoral Residency Admissions, Support, and Initial Placement Data
Postdoctoral Program Admissions

Date Program Tables are updated: 10/2/2023

<p>Briefly describe in narrative form important information to assist potential applicants in assessing their likely fit with your program. This description must be consistent with the program’s policies on intern selection and practicum and academic preparation requirements:</p>
<p>Requirements for consideration are as follows; 1) completion of an APA-accredited doctorate in clinical or counseling psychology, which includes completion of one's dissertation (proof of completion of all requirements for the doctorate is required before beginning the program (a signed attestation form stating that all doctoral requirements are complete is required from your institution’s Director of Training) and an APA-accredited internship in professional psychology, 2) US citizenship (as required by VA), and 3) males born after December 31, 1959 must have registered for the draft by age 26 years (as required by VA). Desirable qualifications include experience using evidence-based interventions, and career goals involving clinical, research, leadership, and dissemination activities involving evidence-based practices in university-affiliated, VA, or other medical center settings. Recruitment of individuals from diverse social and economic backgrounds and diverse cultural and demographic groups is a high priority. All residents are funded through postdoctoral stipends from the Office of Academic Affiliations (OAA) Department of Veterans Affairs. Stipends are currently \$58,571 with benefits plus co-pay. Funds from VASDHS Psychology and Education Service budgets are used to cover program needs such as office and testing supplies, computers, copying educational materials, publication of program brochures, etc.</p>
<p>Describe any other required minimum criteria used to screen applicants:</p>
<p>None</p>

Figure 3 Initial Post Residency Positions

Training Program Structure

Training focuses primarily on clinical assessment and evidence-based treatment of a wide range of psychiatric disorders within a multidisciplinary setting. Additionally, the program allows opportunities for program evaluation and/or research, as well as teaching and dissemination through activities such as direct, mentored supervision of psychology interns and practicum students, and formal presentations to academic, medical, and/or community audiences. The program is designed to offer a broad range of experiences to develop a number of core professional competencies (described below), achieved through intensive training that builds on the interests of the resident and the particular strengths of our faculty and department. Residents have a shared responsibility in designing and planning their residency experience in collaboration with their primary supervisor. The program requires a 365-day commitment, from August 26, 2024 to August 22, 2025.

Residents work a 40-hour week thereby completing 2,080 of supervised training per year, which is well above the minimum of 1,500 postdoctoral Supervised Professional Experience (SPE) hours required for licensure in California. The VASDHS is a Business and Professions Code (BPC) Section 2910 exempt setting whereby all hours related to clinical care including clinical research can be counted as SPE for licensure in California. General office hours are 8:00 am - 4:30 pm Monday through Friday. All residents will have this tour of duty. **Requests for alternate schedules are will be granted on very limited bases only when clinically indicated and must be approved by the primary supervisor and Director of Training.** If approved, the timekeeper must be notified so that the resident's tour can be changed in VATAS.

Residents are expected to work 40 hours/week. Each resident and their primary supervisor will discuss the resident's exact schedule. There are 11 federal holidays, 13 sick leave days (accrued over the course of the year), and 13 annual leave days (accrued over the course of the year). There are no part-time residents.

All residents are funded through postdoctoral stipends from the Office of Academic Affiliations (OAA) Department of Veterans Affairs. Stipends are currently \$58,571 with health benefits, which is at least comparable to stipends both locally and nationally. Of note, Residents are not eligible to contribute to either the VA Thrift Savings Plan (TSP) and or the VA retirement funds due to the nature of their type of appointment within the system. Funds from VASDHS Psychology and Education Service budgets, as well as funds from the UCSD Psychiatry Education Training Council, are used to cover program needs (e.g., office and testing supplies, computers, copying educational materials, publication of program brochures, etc.) and select program activities (e.g., food during program orientation and welcome events).

The 12-month training year begins with an *orientation week* in which residents are oriented to the VASDHS, residency program policy and procedures, as well as training program competency objectives and evaluation procedures. Trainees must also complete a 90-minute online training that is intended to take the place of all the hospital annual mandatory training modules. The training can be accessed at: <http://vaww.va.gov/oaa/mandatory.asp>.

During the orientation period, the supervisors and residents evaluate each trainee's

strengths and weaknesses and develop an individualized training plan for the residency year. This plan outlines the resident's responsibilities, including the proportion of time devoted to each training activity. Every resident must have a training plan approved by the training director by the **end of the first month of training.**

Training includes: 1) **supervised clinical experiences** with Veterans and families on multidisciplinary treatment teams at specific inpatient, outpatient and/or community clinics; 2) **didactics**; and 3) **research/dissemination activities**. Residents are selected for one of the positions described below, and train in this track for the entire year. All training, including supervised assessment and psychotherapy, didactics, and research/dissemination, occur within the track.

All residents are expected to:

- Collaborate with and directly provide services to people with mental illness
- Conduct evidence-based assessments and deliver evidence-based practices such as cognitive behavioral therapy, social skills training, and motivational interviewing
- Participate on interprofessional treatment teams
- Conduct research/program evaluation and disseminate evidence-based services

A developmental training approach is used for the **clinical training** in which learning objectives are accomplished primarily through experiential clinical learning under supervision and mentoring by the resident's supervisors. A resident's clinical training follows a progression from observation of supervisor modeling (in vivo service delivery and role plays in supervision), to delivering services with direct observation of resident-delivered services by the supervisor and/or with supervisor and resident as co-therapists, to increasingly autonomous, albeit monitored and supervised, service delivery. In the beginning of the training year, caseloads are lower, with increasing intensity as the year progresses. Time providing direct clinical care comprises approximately 40-50% of the resident's schedule.

Training in **research/dissemination** is increasingly complex, with initial support being offered through meetings with one's primary supervisor, brainstorming ideas and potentially presenting to the residency group, leading to execution of projects under guidance, and ultimately more autonomous presentations at public/community agencies and/or professional meetings. The research/dissemination project will be developed by the resident and overseen by the research / dissemination mentor. Residents spend **up to 20% of their time (1-8 hours per week) on the research/dissemination project.** The resident and their primary supervisor, along with input from research/dissemination mentors will determine the amount of time designated for research based on project scope, intensity, and time required to execute the project as part of the resident's training plan. **Should a project take less time than was originally anticipated a change in the training plan should occur.** Some residents elect to spend additional hours on research outside the 40-hour week. The project is intended to be limited in scope so that it may be achieved within the training period and supports the focus area. Some examples include involvement in an ongoing clinical research program, writing a research article using preexisting data, writing a review paper or case study, developing a treatment manual, development of a training to be delivered to other professionals, implementing a new intervention and conducting

program evaluation of outcomes, and writing a grant. Residents can also develop a project from existing data in one of our many federally-funded labs. One example might be evaluating client satisfaction and other key outcomes before and after implementation of an intervention designed or modified by the resident (e.g., using Cognitive Behavioral Therapy [CBT] approaches in a novel way to promote behavior change). Training in dissemination occurs with one's research/dissemination mentor. The nature of this project will be determined in collaboration with the supervision team and documented in the training plan. Residents will be asked to present their projects at the UCSD Judd Symposia (typically during April of each year) and may pursue the opportunity to present their projects at national conferences as well.

Each resident will receive training regarding issues of *cultural and individual diversity*. Issues related to cultural and individual diversity are covered in Diversity Seminar specifically; but are also discussed across seminars. Issues related to cultural diversity are included in the evaluation forms filled out by the residents concerning their supervisors, and supervisors are encouraged to make discussion of such issues an integral part of case conceptualization and treatment strategy development. Each resident also completes a measure of multicultural competency at the beginning and the end of the training year to assess the change in their level of cultural competence.

Finally, residents will ideally have an opportunity for *training in providing supervision* by supervising the clinical work of a psychiatry resident, clinical psychology intern, clinical psychology practicum student or other trainee. We offer training in "Supervision in Clinical Psychology" to our residents, through our six month supervision seminar.

Residency Positions

A. Behavioral Health Interdisciplinary Care and Primary Care Mental Health Integration with an Emphasis in Lesbian, Gay, Bisexual, Transgender (LGBT) Mental Health

The resident in this position works in the Chula Vista CBOC with a half-time placement in the General Mental Health (Behavioral Health Interdisciplinary Program; BHIP) team and a half-time rotation in Primary Care Mental Health Integration (PCMHI)/Behavioral Medicine (BMED) Clinic at the Medical Center in La Jolla.

Training will focus on the delivery of evidence-based psychotherapies (Prolonged Exposure [PE], Cognitive Processing Therapy [CPT], Acceptance and Commitment Therapy [ACT], Interpersonal Therapy [IPT], and Cognitive Behavioral Therapy [CBT], Dialectical Behavior Therapy [DBT] skills) for a wide range of mental health concerns. Special efforts will be made to build a case load that primarily includes Veterans who are either LGBT-identified or are experiencing concerns related to gender identity, gender expression, sexual orientation, or sexuality. Ways to ensure that evidence-based practices are delivered using an LGBT affirmative model of psychotherapy will be emphasized. The Chula Vista clinic receives referrals related to the following LGBT relevant clinical themes: military and non-military bullying and harassment related to gender identity and sexual orientation, parental rejection tied to LGBT identity, sexual trauma as a complicating factor in the coming out process, and gender identity disorder. The resident will also have the opportunity to work with a wide range of diagnoses in an

interdisciplinary team, which is a highlight of this position. The opportunity to treat Veterans in individual and group therapy is also provided, as the resident will co-facilitate the LGBT Health Disparities group, an intervention that is used in 22 VAs nationwide that is building an evidence base for relieving suicidality, isolation and depression. The resident will also have the opportunity to serve as Co-Facilitator (along with Dr. Ortiz) for the LGBT Clinical Care Committee, which meets monthly. This group is involved in outreach and staff education, LGBT specific clinical program development, and outcomes-based research. The primary supervisor for this resident position is Amanda Ortiz, Ph.D.

For the minor 2-day/week rotation in PCMHI/BMED, the resident will provide co-located MH services in primary care Patient Aligned Care Teams (PACT) including brief, focused assessment and treatment using evidence-based interventions and consultation with PACT teams for patients presenting with mild to moderate symptoms (e.g., depression, anxiety), psychosocial stress, and health risk behaviors. The resident will work with PCMHI team (psychology, MH nursing and psychiatry), primary medical (nursing, physician) and ancillary services (pharmacy, social work, nutrition) within PACT. In Behavioral Medicine (BMED) the fellow will provide empirically-supported assessments and therapies for primary and tertiary care patients for whom psychological issues are impacting their health status and vice versa, thus serving Veteran's with a variety of physical and mental health conditions. The clinic aim is to improve veteran's health by promoting healthy life styles, changing health compromising behaviors, encouraging treatment compliance when coping with chronic illness, and assisting with management of chronic conditions (e.g. chronic pain, diabetes). Special efforts will be made to build a case load that includes Veterans who are LGBT identified. The fellow will be a part of the Transgender Endocrinology clinical team which involves conducting psychological assessments for initiating hormone therapy as well as providing clinical consultation to the team. Fellow will also assist with providing outreach and education to VA medical providers regarding culturally sensitive LGBT Veteran care. Finally, opportunities to develop and run wellness groups specifically for LGBT Veterans will be available. The supervisor for this rotation is Autumn Backhaus, Ph.D.

B. Family Mental Health Community of Practice (FMHCP) & Behavioral Health Interdisciplinary Care (BHIP)

Each of the two residents selected for this track will have the opportunity to provide individual, couple, and group psychotherapy. Residents will be part of the FMHCP, working out of the Rio Clinic four days per week, and either the Kearny Mesa BHIP (one resident) or La Jolla Medical Center BHIP (one resident) one day per week.

The majority of the resident's time will be spent conducting family services-based treatment or couple therapy within the FMHCP. The FMHCP specializes in providing conjoint therapy for relationship distress. Common couple therapy targets include communication/problem-solving, infidelity and trust, sexuality and intimacy, marriage preparation, and adjusting to major life events (e.g., post-deployment and re-integration issues) amongst those often experiencing comorbid physical (e.g., cancer, cardiac disease, diabetes, HIV infection) and/or mental health conditions (e.g., major depression, PTSD).

Integrative Behavioral Couple Therapy (IBCT) and Traditional Behavioral Couple Therapy (TBCT) are the primary intervention modalities, although opportunities to learn emotionally focused couple therapy (EFT), sex therapy, and Cognitive Behavioral Conjoint Therapy for PTSD (CBCT for PTSD), may also be available. Residents independently deliver services to Veteran couples but may also have the opportunity to deliver co-therapy (with your clinical supervisor or another trainee), services through telemental health, and will ideally engage in vertical supervision (with the FMHCP predoctoral psychology intern and/or possibly a predoctoral psychology practicum student). Multiple opportunities for involvement in program development or evaluation and/or clinical research exist. Previous residents have conducted evaluations of clinic outcomes and/or publication of research (e.g., working with Leslie Morland, PsyD. to analyze data from the CBCT for PTSD RCT). Additionally, the residents in this rotation will attend the weekly FMHCP Seminar with presentations and trainings from top couple therapists and researchers from across the country. Fellows will also attend a monthly the National VA Couples and Family Psychology (CFP) Didactic Series with other FMH postdoctoral residents, staff psychologists. The CFP series covers diverse topics presented by VA experts in topics such as IBCT, EFT, sex therapy, masculinity in couple therapy, and cultural and diversity factors in couple therapy. Residents will also have additional support via a weekly huddle, expected to be led by Tonya Pan-Weisz, Ph.D., FMHCP Coordinator. The primary supervisor for the FMHCP portion of these resident positions is expected to be Shelley Kind, Ph.D.

The La Jolla Medical Center BHIP is an interdisciplinary team that includes two psychologists, two LCSWs, two nurse practitioners, an RN, two psychology postdoctoral fellows, and one psychology intern. The program uses a transdiagnostic approach to provide services to Veterans with a wide variety of mental health concerns, including: PTSD/trauma, anxiety (GAD, OCD, panic disorder, social anxiety), depression, sleep disturbances, emotion dysregulation, and interpersonal difficulties. The resident receives individual supervision and training in diagnostic assessment, group and individual CBT interventions, and third wave approaches such as DBT and ACT. Additionally, the resident receives training in evidence-based interventions for PTSD, such as cognitive processing therapy (CPT) and Prolonged Exposure (PE). The primary supervisor for this portion of the residency position is Natalie Castriotta, Ph.D.

The Kearny Mesa BHIP is a large interdisciplinary team that includes over 35 mental health practitioners, including psychologists, psychiatrists, LCSWs, nurse practitioners, RNs, and peer support specialists. Similar to the LJ BHIP program, trainees will use a transdiagnostic approach to provide services to Veterans with a wide variety of mental health concerns, including: depression, sleep disturbances, trauma, anxiety, emotion dysregulation, health problems like chronic pain, and interpersonal difficulties. The resident can receive individual supervision and training in diagnostic assessment, CBT interventions, Cognitive Processing Therapy (CPT), Interpersonal Therapy for Depression (IPT), as well as third-wave approaches such as DBT and ACT (ACT is offered in both group and individual forms), mind-body interventions like Compassion Meditation, Mindfulness-Based Stress Reduction, Self-Compassion, and Mantram Repetition. We also tend to have two practicum students and may have psychiatry fellows, so there is a possibility for supervision experience. The primary supervisor for this portion of the residency position is Julie Kangas, Ph.D.

C. Home-Based Primary Care

By serving as a mental health provider on the Home-Based Primary Care (HBPC) team, the resident will receive excellent training in the three aspects of care evaluated for ABPP certification in Geropsychology: intervention, assessment, and consultation.

HBPC provides comprehensive, interdisciplinary primary care services in the homes of older veterans with chronic and disabling disease, particularly those at high risk of recurrent hospitalization or nursing home placement. Because most of these veterans are unable to access outpatient services, HBPC residents and psychologists provide a wide array of services: individual psychotherapy using CBT, PST, ACT, and other empirically based therapies to treat the full range of mental health issues, including depression, anxiety, PTSD, adjustment to illness and disability, and end-of-life concerns; behavioral medicine interventions for sleep, pain, obesity, and adherence to treatment regimens; brief neuropsychological assessment and dementia evaluations with an emphasis on using test results to inform interventions; evaluations of capacity to live independently and to make treatment decisions; and couples and family therapy with patients and their caregivers.

This position also offers residents a unique opportunity for multidisciplinary collaboration. In addition to weekly multidisciplinary team meetings, home visits are made both individually and in conjunction with team members from medicine, nursing, pharmacy, social work, physical therapy, and nutrition. The team looks to psychology for consultation and guidance in dealing with mental health issues affecting medical care for HBPC's complex patients.

Didactic education specific to the position includes the weekly National VA Geropsychology Seminar. Some fellows also attend selected presentations on geriatric issues available through UCSD's Division of Geriatric Psychiatry, the Stein Institute for Research on Aging, and Geriatric Medicine. The primary supervisor for this resident position is Julie Wetherell, Ph.D., ABPP.

D. Mood, Trauma, Anxiety, and General Mental Health (Behavioral Health Interdisciplinary Program (BHIP))

The resident in this position trains half time in the Behavioral Health Interdisciplinary Program (BHIP), which is the VA's general mental health program and consists of an interdisciplinary team that includes two psychologists, two LCSWs, two nurse practitioners, an RN, two psychology postdoctoral fellows, and one psychology intern. The program uses a transdiagnostic approach to provide services to Veterans with a wide variety of mental health concerns, including: PTSD/trauma, anxiety and obsessive compulsive spectrum disorders (GAD, OCD, panic disorder, social anxiety), depression, sleep disturbances, personality disorders, emotion dysregulation, and interpersonal difficulties. The goal of BHIP is to provide comprehensive, interdisciplinary mental health care to Veterans that is grounded in research and theory. The resident receives individual supervision and training in diagnostic assessment, individual and group CBT interventions, including the latest approaches to exposure therapy, individual and group DBT,

and ACT. Additionally, the resident receives training in evidence-based interventions for PTSD, such as cognitive processing therapy (CPT) and prolonged exposure (PE), with the opportunity to potentially become VA certified in CPT. The primary supervisor for this portion of the residency position is Natalie Castriotta, Ph.D.

The resident also trains half time in the Mood Disorders Psychotherapy Program (MDPP), a specialty outpatient clinic providing assessment and treatment services for mood disorders. The multidisciplinary treatment team includes psychologists, psychiatrists, a peer support specialist, a nurse, a social worker, and a pharmacist. Trainees receive individual supervision and training in diagnostic assessment, as well as group and individual third-wave and cognitive behavioral therapies for major depression or bipolar disorder. Residents can also elect to train in and deliver cognitive behavioral therapy for insomnia. The primary supervisors for this portion of the residency position are Benjamin McKenna, Ph.D and Colin Depp, Ph.D. Trainees will meet with both Drs. McKenna and Depp during group supervision and Dr. McKenna during weekly individual supervision.

Trainees will have a variety of opportunities for research and program development projects in both MDPP and BHIP, skills development in interdisciplinary team-based care, training in the delivery of telemental health, and participation in formal training workshops in VA sanctioned evidence-based treatments. There are also substantial opportunities for the resident to supervise psychiatry residents and junior psychology trainees.

E. Outpatient Posttraumatic Stress Disorder (PTSD) Treatment Rotations

The following residency positions include a significant focus on the assessment and treatment of PTSD in an outpatient context, although the specifics of each rotation vary.

1) South County PTSD Clinical Team (South County PCT)

The VA IU6 South County PTSD Clinic (SC PCT) is one of the highest volume PTSD clinics (in terms of number of Veterans receiving care) across the entire VA system nationwide. It serves Veterans of all service eras (e.g., Vietnam, Korea, Persian Gulf, Iraq, Afghanistan, Global War on Terror) with PTSD due to all trauma types, e.g., combat/military trauma, military sexual trauma, interpersonal trauma, civilian trauma, childhood trauma. For the 2024-2025 training year, this position will be based out of our Rio Community Based Outpatient Clinic (CBOC). The Rio CBOC is located in the central San Diego neighborhood of Mission Valley, approximately 20 minutes southeast of the La Jolla VA Medical Center and is within a short driving distance of the Central San Diego neighborhoods of North Park, Normal Heights, Hillcrest, University Heights, and City Heights. Parking is readily available on site. The resident in this position will also have a reserved therapy room for the entire training year (shared with other trainees during the times when the resident is not seeing patients).

Training in Prolonged Exposure (PE) therapy, Cognitive Processing Therapy (CPT), and other evidence-based trauma approaches are emphasized. Supervision in ancillary evidence-based psychotherapies for non-trauma specific issues can also be provided based on resident interest (e.g., Acceptance and Commitment Therapy, Cognitive

Behavioral Therapy for Insomnia). Provision of services via telehealth is an integral component of this position. Delivery of care in person is dependent on current public health guidelines although during the 2024-2025 training year. “Vertical supervision” (also known as “supervision of supervision” or “umbrella supervision”) is also emphasized in this training position and may include formal as well as ad hoc supervision of a predoctoral interns, practicum students, and psychiatry residents.

The resident acts as part of a multi-disciplinary team comprised of staff in psychology, psychiatry, pharmacy, nursing, peer support, and chaplaincy. Staff interface with primary care and other mental health providers to provide integrated care for the myriad physical and mental health concerns of this group. Our high patient volume allows the resident in this position to readily specialize in working with various subpopulations as our team works with Veterans from diverse backgrounds across numerous identity markers. Our Rio Clinic team is the central hub of our “South County” (southern San Diego County) PCT Team and we also work with our colleagues in our Chula Vista and Kearny Mesa CBOC clinics. We meet Mondays-Thursdays in a 30 minute team huddle (our resident has an opportunity to lead one huddle if desired) as well as during a one hour multidisciplinary team meeting. Finally, our South County PCT therapists meet weekly for a one hour complex trauma consultation meeting.

Formal integrated didactic experiences include a year-long weekly seminar on PTSD, a weekly consultation group on the delivery of PE, a weekly consultation group on working with Veterans with complex trauma as described above, and the possibility of formal VA provider status certification in CPT. Additionally, VASDHS has an active Diversity Action Committee (DAC) that leads our collective efforts to address systemic racism and inequalities while we seek to maximize diversity, equity and inclusion. The resident in this position will be supported and provided with time to participate in DAC if this aligns with the resident’s training goals. The clinic continues to grow and evolve; thus, the resident will also have the opportunity to take part in program development and evaluation. The primary supervisor for this resident position is Lisa Campbell, Ph.D The secondary supervisor is to be determined and will be a psychologist within the South County PCT team.

2) PTSD in Alternative Settings

Given the volume of Veterans requesting treatment for PTSD and the rapid rise of telemental healthcare, many Veterans receive trauma therapy outside of a PTSD Clinical Team (PCT). Many Veterans receive the same types of therapy offered in PCT but within alternative settings, such as our Telemental Health (TMH) Clinic and our Behavioral Health Interdisciplinary Program (BHIP). Residents in this position will spend 50% time training within the TMH clinic, located at the Aspire Center, and 50% time training within the South County BHIP clinic, located in Kearny Mesa. Both TMH and South County BHIP serve Veterans of all service eras (e.g., Vietnam, Korea, Persian Gulf, Iraq, Afghanistan, Global War on Terror) with PTSD due to all trauma types, e.g., combat/military trauma, military sexual trauma, interpersonal trauma, civilian trauma, childhood trauma.

Training in Prolonged Exposure (PE) therapy, Cognitive Processing Therapy (CPT), and other evidence-based trauma approaches are emphasized. Supervision in ancillary evidence-based psychotherapies for non-trauma specific issues can also be provided based on resident interest (e.g., Acceptance and Commitment Therapy, Cognitive Behavioral Therapy for Insomnia). Provision of services via telehealth is an integral component of this position. Delivery of care in person is dependent on current public health guidelines although during the 2024-2025 training year. “Vertical supervision” (also known as “supervision of supervision” or “umbrella supervision”) is also emphasized in this training position.

The resident acts as part of a multi-disciplinary team comprised of staff in psychology, psychiatry, social work, pharmacy, and nursing. Staff interface with primary care and other mental health providers to provide integrated care for the myriad physical and mental health concerns of this group. Our high patient volume allows the resident in this position to readily specialize in working with various subpopulations as our team works with Veterans from diverse backgrounds across numerous identity markers. Clinical teams meet daily for 30 minute team huddles (our resident has an opportunity to lead one huddle if desired) as well as during a one hour multidisciplinary team meeting. Finally, our South County PCT therapists meet weekly for a one hour complex trauma consultation meeting.

Formal integrated didactic experiences include a year-long weekly seminar on PTSD, a weekly consultation group on the delivery of PE, a weekly consultation group on working with Veterans with complex trauma as described above, and the possibility of formal VA provider status certification in CPT. The clinic continues to grow and evolve; thus, the resident will also have the opportunity to take part in program development and evaluation. The primary supervisor for this resident position is Jeffrey Poizner, Ph.D., who is a member of the TMH team.

Residents will also complete a specialized rotation on the Suicide Prevention (SP) Team. The SP team manages and coordinates treatment for Veterans who are flagged as high risk for suicide. This is a highly unique opportunity in that it is the only suicide-focused mental health rotation in the care line. Residents will be based on site at the Kearny Mesa clinic. Clinical experience involves a focus on implementation of evidence-based treatments for suicidality. Residents will have the opportunity to receive training in Advanced Safety Planning Intervention (ASPI), Dialectical Behavior Therapy (DBT), and Collaborative Assessment and Management of Suicidality (CAMS). In addition to therapies mentioned above, training can be provided in CBT (emphasis on transdiagnostic exposure treatment with anxiety disorders), Cognitive Processing Therapy (CPT), Prolonged Exposure (PE) Therapy, Exposure and Response Prevention (ERP). The main treatment modality would be individual therapy (either virtual or in person, depending on resident preference); however, there is an option for group therapy if interested. Residents will also participate in a once weekly interdisciplinary meeting where there is 1) complex case consultation and 2) flag review (i.e., determining whether Veteran remains in a period of heightened acuity). In addition to working with providers across mental health (e.g., psychiatrists, social workers, nurses), the SP team works with

clinics across the entire hospital (e.g., primary care, pain). The primary objective of this advanced rotation is to empower residents to implement gold standard evidence-based protocols within the context of a highly complex patient population. The supervisor for this rotation will be Scarlett Baird, Ph.D.

E. Psychosocial Rehabilitation (PSR)

Residents in one of the two available psychosocial rehabilitation positions are situated within both this training program AND the [Interprofessional Fellowship in Psychosocial Rehabilitation & Recovery Oriented Services](#) (“PSR Fellowship”) program. In 2018, the PSR Fellowship earned the American Psychological Association Division 18 President’s Excellence in Training Award “in recognition as an outstanding psychology training program, preparing learners to provide recovery-oriented, evidence-based services to adults diagnosed with serious mental illness.” The goal of the PSR Fellowship program is to train residents in multiple disciplines (psychology, social work, vocational rehabilitation, chaplaincy, nursing, psychiatry) to function in leadership positions on interprofessional teams working with Veterans with serious mental illness (SMI). Residents are trained to deliver evidence-based psychosocial rehabilitation (PSR) and psychotherapeutic practices aimed at improving functioning and quality of life primarily in Veterans with psychotic disorders, disseminate these approaches, and critically develop and evaluate new approaches. Residents operate within a recovery-oriented model that encourages Veterans to develop personalized living, learning, working, and socializing goals to empower them to participate actively in their recovery by choosing from a holistic menu of therapeutic services. Clinical training occurs primarily at the Center of Recovery Education (CORE), the VASDHS’s award-winning, CARF-accredited Psychosocial Rehabilitation and Recovery Center. Residents also complete a rotation on the inpatient psychiatry unit. All PSR residents assist Veterans in developing and following recovery plans; provide individual and group-based PSR services; and counseling modalities appropriate to their discipline, including assessments, individual, and group psychotherapies. PSR training emphasizes on cognitive behavioral therapy for psychosis, psychoeducational and wellness groups (e.g., Illness Management and Recovery), skills-training groups (e.g., Social Skills Training, Cognitive Behavioral Social Skills Training), community integration groups and outings, supported employment, and spiritual counseling. This clinical training model provides experiences with all key integrated PSR services across inpatient and outpatient settings, while being flexible enough to accommodate individual interests and training needs. Residents also assist in clinic administration tasks (e.g., accreditation maintenance), to provide valuable leadership experience for PSR settings. Finally, they design, implement, and disseminate an Education Dissemination Project (EDP) that is designed to enhance psychosocial rehabilitation beyond the training site. Possible EDP examples include developing and evaluating a new or adapted culturally-informed intervention, delivering a new SMI/PSR training to other professionals, participating in an ongoing SMI clinical research program, writing a research article using preexisting data, writing a review paper or case study, and writing a grant. PSR residents receive training through supervised clinical

practice, specialized didactics, and oversight of their EDP. The PSR Fellowship supervision team consists of psychologists, social workers, a psychiatrist, a vocational rehabilitation specialist, and a chaplain. The supervision team for the PSR rotations currently includes Viara Quiñones, Ph.D., Jessica McGivern, Ph.D., Nani Jenson, Psy.D., Vanessa Girard, LCSW, Patrick Sullivan, LCSW, Nathan Nguyen, MS CRC, and Shelia Crabb, M.Div.

H. Psychosomatic/Behavioral Medicine Rotations

The three psychosomatic/behavioral medicine rotations exist within this training program and the VASDHS/UCSD Psychosomatic Fellowship program. The VASDHS/UCSD Psychosomatic Fellowship program provides top notch postgraduate training experiences that prepare fellows from a variety of health service disciplines (i.e., psychology, psychiatry, and clinical pharmacy) for the assessment and treatment of the behavioral, psychological, social, and biological factors that impact illness, health, and quality of life (i.e., biopsychosocial approach to health and illness). Residents are supervised by an experienced, enthusiastic, and engaged group of core psychology, psychiatry, and pharmacy faculty. The program spans both inpatient and outpatient medical settings. The fellow cohort collaborates in the provision of clinical services, attends a group supervision, and is also responsible for teaching a psychosomatic didactic seminar for interns and practicum students. Residents are offered an immersive specialty training experience as a mental health professional in interdisciplinary medicine, with a range of both mental health and medical providers (e.g. primary care, specialty care). VASDHS/UCSD has a robust psychosomatic/health psychology faculty and therefore many opportunities for research mentorship are available. Former fellows have completed a variety of research/dissemination projects examples include: program evaluations, analyses and presentation of existing datasets, and quality improvement projects.

The description for each of the three resident positions are below:

1) La Jolla Behavioral Medicine (BMED)/Primary Care Mental Health Integration (PCMHI) & Psycho-Oncology

BMED – Fellows will provide empirically-supported assessments and therapies for primary and tertiary care patients with a variety of physical and mental health conditions. The clinic aims to improve veterans’ physical health and mental wellbeing by promoting healthy lifestyles, assisting patients to change health compromising behaviors, encouraging effective communication w/ healthcare teams to improve treatment adherence, coping with chronic illness, and assisting with management of chronic conditions (e.g. chronic pain, diabetes). Fellows will work closely with professionals from a variety of specialty areas (e.g. primary care, neurology, pulmonary, nephrology).

PCMHI – Fellows will provide co-located MH services in primary care Patient Aligned Care Teams (PACT) including brief, focused assessment and treatment using evidence-based interventions and consultation with PACT teams for patients presenting with mild to moderate symptoms (e.g., depression, anxiety),

psychosocial stress, and health risk behaviors. Fellows will work with PCMHI team (psychology, MH nursing, clinical social work, and psychiatry), primary medical (nursing, physician) and ancillary services (pharmacy, social work, nutrition) within PACT. The goal of this placement is for fellows to become proficient in working collaboratively with a treatment team and to provide brief evidenced-based interventions in the primary care setting. The primary supervisor for the BMED/PCMHI portions of the residency position is Teresa Pan, Ph.D.

Psycho-Oncology – Fellows will provide co-located psycho-oncology services in outpatient Hematology/Oncology clinics as well as perform focused assessment and interventions for inpatients and those undergoing infusion treatments. Services include screening for cancer-related psychological distress, assessment of general mental health, interventions to promote adjustment to diagnosis and treatment, encouraging compliance with treatment recommendations, and referral to additional supportive services. Fellows will work interprofessionally with a number of treatment providers and will also attend weekly Tumor Board Case Conference. The primary supervisor for this portion of the residency position is Samantha Yeager, Ph.D.

2) Inpatient Consultation Liaison (CL) Service & Pain Clinic Service

Inpatient Consultation Liaison (CL) Service – The fellow will spend half of their week in the CL Service providing assessment and treatment recommendations for Veterans on the inpatient medical and surgical units. These units include the ICU and DOU, the Spinal Cord Injury Unit, the palliative-care unit and the Community Living Center. Typical referrals include delirium, dementia/cognitive disorders, capacity evaluations, risk assessment, and mental health symptoms. Interventions include pharmacotherapy as well as crisis intervention and brief psychotherapy. Nearly half of Veterans seen in CL are over 65 years old with typical requests for assessment and consultation on cognitive disorders and behavioral issues, providing a unique opportunity for fellows to gain the necessary training and experience to address the needs of this underserved population. Fellows will also participate in a weekly psychosomatic medicine didactic.

Pain Clinic Service – The fellow will also spend half of their week as part of a specialized pain clinic service that provides both medical and procedural interventions for pain conditions as well as pain psychology services for pain management. Patients with chronic pain commonly present with comorbid psychiatric conditions. The structure of the clinic is a team-based delivery model with pain physicians, advanced nurse practitioners, and psychologists. The fellow will be involved in both inpatient and outpatient services. The pain clinic providers support mental health attendance at office visits and will send patients to the fellow as “warm handoffs” during office visit times. Additionally, the fellow will carry a caseload of outpatient individual cases as well as complete comprehensive pain-focused psychological evaluations including pre-implantable device

evaluations (spinal cord stimulator, intrathecal pain pump) and opiate risk assessments. The fellow will also participate in several interprofessional rounds, team treatment meetings, and pain committees to broaden their interprofessional experiences and skills as a psychologist contributing to pain management services in a biomedical environment.

The primary supervisor for this resident position is Thomas Rutledge, Ph.D. Fellows will also be supervised by Kristin Beizai, M.D. and Alan Hsu, M.D., both CL attending psychiatrists, offering a unique supervision opportunity and additional interprofessional training.

3) Kearny Mesa Primary Care Mental Health Integration (PCMHI) and Behavioral Medicine

KM PCMHI & Behavioral Medicine – The postdoctoral resident will provide evidence-based assessments and treatments (e.g., CBT, ACT, Mindfulness) for primary and tertiary care patients for whom psychological issues are impacting their health status, thus, serving veterans with a variety of physical and mental health conditions. The clinic aims to improve veterans' physical health and mental wellbeing by promoting healthy life styles, assisting patients to change health compromising behaviors, encouraging treatment compliance when coping with chronic illness, and assisting with management of chronic conditions (e.g. chronic pain, diabetes). The resident will work closely with professionals from a variety of disciplines (e.g. primary care, anesthesia pain, pharmacy). The resident will also co-lead groups for Veterans coping with chronic pain and insomnia. For those interested in gaining more experience in women's behavioral mental health, we are coordinating care with Gynecology and the Maternity Care Coordinator to provide services to women veterans with low sexual desire and to those who are pregnant, in the postpartum, have had a recent pregnancy loss, or are struggling with infertility. There are opportunities to gain individual and group supervision experiences with psychology trainees throughout the year.

The postdoctoral resident in this rotation will also participate in the VA San Diego Tobacco Treatment Program. Cessation groups are offered within PACT PCMHI clinics and within the Substance Abuse Residential Rehabilitation Program (SARRTP). The treatment team consists of psychologists, pharmacists and a psychiatrist, thus providing opportunities for interprofessional co-facilitation of groups. Motivational interviewing skills and strategies are an important part of services provided by the program, a major component of which is a telephone-delivered treatment engagement intervention. The goal of this placement is for fellows to become proficient in evidence-based treatment for tobacco use, and to gain skills for motivating veterans to stop tobacco use and utilize evidence based treatment. The primary supervisors for this position are Andrea Hekler, Ph.D., Ben Felleman, Ph.D. and Rebecca Greco, Ph.D.

I. SARRTP (Residential SUD/PTSD treatment) & General Mental Health (Behavioral Health Interdisciplinary Program – BHIP)

The VA Substance Abuse Residential Rehabilitation Treatment Program (SARRTP)'s PTSD Track provides evidence-based PTSD and substance use disorder (SUD) treatment and assessment for Veterans currently undergoing residential SUD treatment. In addition to co-facilitating PTSD groups (i.e., in vivo exposure, trauma-focused CBT, PTSD skills), fellows will deliver individual PTSD/SUD treatment in an accelerated format (3x weekly), allowing most Veterans to complete PTSD treatment protocols prior to discharge from SARRTP. This format takes advantage of the safety and structure of the residential setting to promote treatment engagement and completion. The residential setting (i.e., minimizing no-shows) and accelerated treatment approach afford a unique opportunity to establish strong competency implementing evidence-based PTSD treatment with a complex and very diverse population. Prolonged Exposure (PE), Cognitive Processing Therapy (CPT), Written Exposure Therapy (WET), and Trauma-Informed Guilt Reduction Treatment (TriGR) are most heavily utilized. Fellows will also facilitate SUD-focused groups, such as relapse prevention skills, mindfulness-based relapse prevention, DBT skills for addictions, and anger management. Opportunities for Motivational Interviewing/Motivational Enhancement Therapy, including formal tape review and feedback, are also available. Fellows will work with Veterans with PTSD/SUD from all trauma types, including combat (all eras), military sexual trauma, and childhood trauma. This position primarily involves treatment within the residential SUD unit, but also includes some outpatient therapy if desired by the fellow. Fellows will also attend rounds with a multidisciplinary team of psychologists, psychiatrists, social workers, nurses, chaplains, addiction therapists, and peer support specialists. Fellows will experience what it is like to work on a residential unit and participate in crisis management, team interventions, and multidisciplinary teamwork. Fellows will have the opportunity to provide layered supervision to more junior trainees. Finally, fellows have the opportunity to be involved with state-of-the-art PTSD/SUD research through this rotation (or may choose to pursue a different area of research). The fellow has the opportunity to participate as a study therapist on the first federally funded prolonged exposure + CBD clinical trial where they will receive tape review and feedback on research fidelity. The primary supervisor for this residency position is Claire Stagnaro, Psy.D.

The trainee will do a minor rotation with the Behavioral Health Interdisciplinary Program (BHIP) team at the La Jolla campus one day per week for the duration of the training year. This is a general clinic where the trainee will be supervised in the delivery of evidence-based psychotherapy services. Activities include providing evidence-based treatments to a diverse population of individuals and groups of Veterans with a variety of diagnoses including anxiety, depression, PTSD, and personality disorders along with participation on an interdisciplinary treatment team. Interdisciplinary teams are usually comprised of psychologists, psychiatrists, nurse practitioners, LVN's, social workers, pharmacists, nurses, and admin support staff. There are many different training opportunities available on the BHIP rotation. Supervisors in BHIP use a developmental model of supervision; as such, the amount of training and level of training is a dynamic process and will be based in part on the trainee's experience, level of training, their professional trajectory, and what experiences may round out their experience in combination with Veterans' needs and staff availability. Thus, not all training opportunities can be guaranteed. The evidence based-therapies in group format may include CBT-Depression, ACT Depression/Anxiety, CBT-Anxiety, CBT-Insomnia, DBT skills, and Anger Management. The exact group will be determined between the trainee and supervisor factoring in the trainee's training goals. Individual Evidence-Based Psychotherapy may include CBT-Depression, CBT-

Anxiety, CBT-Insomnia, CBT-Chronic Pain, CBT-Anger Management, Cognitive Processing Therapy (CPT), Prolonged Exposure (PE), Interpersonal Psychotherapy (IPT), STAIR, and DBT skills. The primary supervisor for this residency position is Tina Mayes, Ph.D.

Supervision

Residents receive at least four hours of supervision per week, and at least two of these hours are individual supervision with a qualified, licensed psychologist. At least one hour of weekly individual supervision comes from the primary supervisor. Additional individual supervision hour may come from a secondary supervisor, who would be selected for individual cases, to provide regular supervision throughout the year, or as a research supervisor. Both hours of one to one supervision must be conducted by a psychologist licensed in the state of California. All residents will receive supervision from at least two different psychologists during the training year. Individual supervision must involve direct observation of clinical care or review of services using video/audio recordings at least once per evaluation period. Additional supervision may come from group supervision. Supervision assignments are documented in the resident's training plan.

Residents who wish to pursue licensure in the State of California must complete the most current Supervision Agreement (e.g., from the California Board of Psychology, or BOP) with their primary supervisor at the beginning of the training year. This form will be retained by the primary supervisor until the end of the training year, at which point it will be submitted to the BOP with a completed copy of the most current Verification of Experience Form. These forms are available through the licensing board (e.g., California Board of Psychology Website at <http://www.psychology.ca.gov/applicants/index.shtml#psych>). Completion of licensure paperwork in California or other states is the responsibility of the resident.

Licensing boards in some states, including California, may require that supervised clinical hours be documented on a weekly basis throughout the year. Each resident is responsible for maintaining this documentation and ensuring that it will satisfy the licensing board requirements of the state(s) in which he/she is interested in becoming licensed. Residents who wish to pursue licensure in a state other than California are encouraged to determine that state's licensure requirements prior to beginning the residency and to comply with that state's regulations regarding postgraduate supervised professional experience. While the training director(s) will attempt to support residents' efforts, it is the resident's responsibility to ensure that the most current BOP forms are completed and most current licensing law requirements are met for licensure in the state where the resident plans to practice.

A developmental training approach will be used in which learning objectives are accomplished primarily through experiential clinical learning under supervision and mentoring by the resident's supervisors. Training considerations take precedence over service delivery. Generally, a resident's training will follow a progression from observing supervisor modeling to increasingly autonomous, albeit monitored and supervised, service delivery using direct live observation of resident service delivery and video recording/audio recording of sessions, rather than relying only on narrative reports.

Seminars

Safety and Assault Prevention Training: All psychology residents are required to attend the Safety and Assault Prevention Training, which typically occurs at the start of the training year and is focused on ways to maintain safety in clinical contexts.

Laws and Ethics Seminar: All residents are also required to attend a Laws and Ethics Seminar. The 2-hour ethics portion of the seminar covers content relevant to the practice of psychology and may include: 1) code of conduct, 2) avoiding ethical complaints, 3) patient-therapist relationship issues, 4) record keeping guidelines, 5) forensic issues, and 6) research ethics. The 2-hour legal portion of the seminar covers content such as: 1) informed consent, 2) HIPAA, 3) confidentiality, 4) reporting laws, and 5) an individual's access to their own medical record. This didactic is presented by Tina Mayes, Ph.D, and Katherine Lacefield, Ph.D.

Supervision in Clinical Psychology Seminar: Between January and June, fellows participate in a monthly seminar (4th Tuesday of each month) on developing skills as a clinical supervisor. The seminar provides didactic trainings related to supervision and provides an opportunity for Fellows to discuss experiences as supervisors. In addition to the seminar, residents are encouraged to supervise more junior trainees, while receiving supervision on that supervision, from the intern or practicum student's primary staff supervisor. It is led by Emily Wilhite, Ph.D., and Natalie Castriotta, Ph.D.

Substance Use Disorders Seminar: All residents are required to attend the Substance Use Disorders Seminar (unless they already have fulfilled this California licensure requirement). This seminar meets weekly for 60 minutes for a total of 15 meetings. The content of the seminar covers the required areas to meet the California Board of Psychology licensure requirement on the evaluation and treatment of alcohol and other substance use disorders. It is organized by John Correa, Ph.D.

Evidence-Based Practices Seminar: Those psychology residents in the Clinical Psychology Postdoctoral Residency Program will meet weekly (Tuesdays 2-3pm) from February 13 – May 28, 2024 for the Evidence-Based Practices Seminar. This seminar provides multi-hour training in evidence-based practices commonly utilized within the VA mental health system. It is organized by Natalie Castriotta, Ph.D. & Emily Wilhite, Ph.D.

Professional Development Seminar: All psychology postdoctoral residents are required to attend the Professional Development Seminar. This seminar meets once per month (1st Tuesday of the month) for 60 minutes for the entire training year and focuses on professional development issues. It is led by Natalie Castriotta, Ph.D. and Emily Wilhite, Ph.D.

Cultural Diversity Seminar: All residents are required to attend the Cultural Diversity Seminar. This seminar meets once per month (2nd Tuesday of each month) for 60 minutes each meeting (see Appendix B for seminar schedule). The objective for this seminar is for residents to learn to integrate a culturally competent perspective comprised of knowledge, skills, and awareness. It is led by Claire Wang, Ph.D.

Clinical Psychology Postdoctoral Residency Seminar: Those psychology residents in the Clinical Psychology Postdoctoral Residency Program will meet monthly (3rd Tuesday of each month) for 60 minutes each session. This seminar provides the opportunity for the residents in this training program to participate in professional development activities, including giving presentations (e.g., job talk, journal article, research), specific to their career objectives. It is led by Natalie Castriotta, Ph.D., and Emily Wilhite, Ph.D.

Rotation Specific Seminars: Many of the Resident positions have seminars that are specific to their rotation. Residents' primary supervisors will provide information on rotation-specific seminars that residents are expected to attend.

Other Educational Opportunities for Postdoctoral Fellows

Professional Consultation and Mentorship

Professional consultation and mentorship are available through multiple sources.

- Any member of the program staff will be happy to offer, or help connect residents with, consultation for the purpose of professional growth. Potential sources of consultation include VA mental health careline staff or by university-affiliated faculty members.

Diversity Resources

The UCSD Psychiatry Department Chair's Advisory Committee on Diversity Issues welcomes trainee members to join in promoting diversity, equity, and inclusion in the Department. The committee meets monthly on the first Monday and subcommittees meet in the interim. If you would like more information or to join, please contact the Committee Chair, Lisa Eyler (lteyler@ucsd.edu).

The UCSD Department of Psychiatry Chair's Advisory Committee on Diversity Issues created a new feature on the department website -- the "[Diversity Corner](#)". This part of the website will feature quarterly rotating content with the goal of providing a glimpse into diversity-related events in our department as well as stimulating general discussion of diversity-related topics. The Diversity Committee has also started a listserv to disseminate noteworthy manuscripts related to diversity. Residents are encouraged to contact Carol Franz (cfranz@ucsd.edu), to be added to the email list, as well as to suggest a topic or manuscript for consideration for "Diversity Reads."

The VA Psychology Training Council's Multicultural and Diversity Committee has multiple resources that may be of interest. One is a "diversity discussions" listserv. Once per month an article is sent out and discussion about the topic is invited. Every month or so there is also a consultation call advertised on the listserv.

Academic Resources

Residents needing academic resources will have access to the **UCSD library system** as well as the **VA's medical library**.

- The UCSD library system will be available electronically through a desktop

computer located in the residents' VA La Jolla (Building 1) bullpen.

- The VA medical library provides access to several research databases (e.g. psychINFO, PubMed, etc.) and also offer interlibrary loan services. The website for the VA library is available through the VA's intranet at:
<http://vaww.sandiego.portal.va.gov/sites/education/MedLibrary/default.aspx>

The UCSD Department of Psychiatry offers **Grand Rounds** once a month on Tuesdays from 8:00-9:30 am at the Center for Neural and Brain Circuits (CNBC) large auditorium. Residents are encouraged to attend, as interested. The schedule can be found here: <https://medschool.ucsd.edu/som/psychiatry/education/GrandRounds/Pages/default.aspx>. Grand Rounds presentations can be accessed virtually through the Department website above. For live streaming, log on a few minutes before a presentation. To view an archived presentation, click on the "archived" option up at the top of the page.

The **UCSD Psychiatry Education Training (PET) Council** offers a **Professional Development Lecture Series** accessible to all trainees and faculty. The 2024 – 2025 Professional Development Series is expected to be held on the 3rd Thursday of each month, 12:30 – 1:30 and available online. As this series is not a part of resident's standard schedules, please be sure to speak with your supervisor(s) if you are hoping to attend any of the following and be aware that changes to your schedule (which may require 60 days' notice) may be required. Lectures can be found here: <https://medschool.ucsd.edu/som/psychiatry/education/trainee-resources/Pages/Professional-Development.aspx>

Other educational and training resources offered by the UCSD Department of Psychiatry can be found here: <http://psychiatry.ucsd.edu/education/Pages/Trainee-Resources.aspx>. This website also has valuable information on academic software site licenses and other professional development resources.”

The UC San Diego School of Medicine offers an **Educational Development and Evaluation seminar series**, in which instruction in academic teaching methodologies is offered. Course listings and RSVPs are available at: https://meded.ucsd.edu/index.cfm/ugme/mededtecheval/educational_development/meds/schedule_and_rsvp/.

Diversity, Equity, & Inclusion (DEI)

The program is organized and administered in such a way that respect for and understanding of cultural and individual diversity of faculty, staff, residents and Veterans/consumers is fundamental to and a core part of training at the VASDHS. We employ Tervalon and Murry-Garcia's concept of cultural humility (1998)¹ as a practice that “incorporates a lifelong commitment to self-evaluation and self-critique, to redressing the power imbalances in the

¹ Tervalon, M., Murray-Garcia, J. (1998). Cultural humility versus cultural competence: A critical distinction in defining physician training outcomes in multicultural education. *Journal of Health Care for the Poor and Underserved*, 9, 117-125.

patient-physician dynamic, and to developing mutually beneficial and non-paternalistic clinical and advocacy partnerships with communities on behalf of individuals and defined populations.”

We provide a supportive and encouraging learning environment for all persons. Our commitment to diversity includes attempting to ensure an appropriate representation of individuals along many dimensions, including gender, sexual orientation, age, religious, ethnicity/race, and (dis)abilities in our trainees and faculty. Our program contains Tervalon and Murray-Garcia’s three elements of cultural humility: 1) We model the “ability to maintain an interpersonal stance that is other-oriented (or open to the other) in relation to aspects of cultural identity that are most important to the person (Hook, et al, 2013)²; 2) We invite the trainees to join any of the several VASDHS and UCSD committees which are actively addressing aspects of structural racism and other inequities; and 3) We provide opportunities for trainees to engage stakeholders and to participate in partnerships to advocate for diversity, equity, and inclusion.

Demographic Information for San Diego County and VASDHS

San Diego County is ethnically diverse

<https://www.census.gov/quickfacts/fact/table/sandiegocountycalifornia,CA#viewtop>. Less than half of the San Diego population self identifies as White non-Hispanic (46%). The largest group of people of color is Hispanic or Latino (33.5%), and 23.5% of Residents indicated they were foreign born. Women represent 49.7% of the population. VASDHS serves all adult age groups, Veteran cohorts, and ethnic/racial/cultural backgrounds, as well as both females and males. The Veteran population, itself, also represents a unique cultural group within our community. Thus, Residents receive training and experience working with this culture, as well as how the Veterans culture interacts with other aspects of diversity. There are 261,009 Veterans in San Diego and Imperial County, and in fiscal Year 2021, VASDHS served 84,572 Veterans. More than 25,000 of those Veterans were seen in mental health clinics for a total of about 200,000 mental health visits. Veterans served within VASDHS mental health clinics were 81% male. With respect to age, 2% were under age 25, and 21% were age 65 or older. 45% were White non-Hispanic, 19% Hispanic, 17% African American, 9% Asian, 2% Hawaiian/Pacific Islander, and 1% American Indian. With respect to Veteran culture, the Navy represents the most frequent branch of service, and Persian Gulf Era Veterans (which includes Iraq and Afghanistan Veterans) is the largest cohort at 74%.

Each resident will receive training regarding sensitivity to issues of cultural and individual diversity. Issues related to cultural and individual diversity are covered in a bi-weekly seminar and are discussed in other seminars. Issues related to cultural diversity are included in the evaluation forms filled out by the residents concerning their supervisors, and supervisors are encouraged to make discussion of such issues an integral part of case conceptualization and treatment strategy development. Each resident also completes an evaluation of multicultural competence at the beginning and the end of the training year to assess the change in their level of cultural competence.

DEI Training Program Activities: VASDHS Mental Health Care Line and UCSD Committees

² Hook, J.N. et al. (2013). *Cultural humility: Measuring openness to culturally diverse clients. Journal of Counseling Psychology, 60(3), 353-366.*

The VASDHS Mental Health Care Line recently reconstituted the Diversity Action Committee, a group that meets twice monthly to report on the progress of subcommittees and to present CME seminars. Currently active subcommittees consist of EConsults (CPRS request for consultation on diversity-related clinical issues), LC3 (LGBTQA+ Clinical Care Committee), Outreach, Quality Improvement, and Training and Didactics. Trainees are welcome to participate. Examples of the CME seminars include Dr. Faith Prelli presenting on “Antiracism in Clinical relationships Accountability Model” and Dr. Nia Billings discussing “Implicit attitudes toward people with disabilities”.

The UCSD Department of Psychiatry has a long-standing Chair’s Advisory Board on Diversity that meets monthly and includes about 20 subcommittees, which include workgroups for each Gender, LGBTQ, and DisAbility focus; a separate subcommittee each on Attracting, Retaining, and Elevating BIPOC staff, trainees, and faculty; a group focused on Mechanisms to facilitate community engagement and advocacy; a workgroup on educational programs/workshops on structural inequality, systemic racism, and police brutality; a subcommittee on Clinical Service Diversity & Serving people of color and low-income clients; and other DEI topics. The Diversity Committee also sponsors seminars on implicit Bias and allyship, hosts a yearly Cultural Celebration, awards a Diversity Champion faculty and trainee.

DEI Training Program Activities: Stakeholder Engagement and Advocacy

The VASDHS Mental Health Care Line host an annual Mental Health Summit on issues related to Veterans and caregivers that is open to the public and brings together multiple stakeholder groups. Trainees are encouraged to attend, and CME are available for faculty.

Professional advocacy is a topic in the Diversity Seminar and this year UCSD will present a panel discussion on Incorporating Advocacy into Professional Life that will be part of orientation.

Equal Opportunity Employer

The program has nondiscriminatory policies and operating conditions and avoids any actions that would restrict program access and participation. In recent years, California state law and University of California policy have prohibited the specific inclusion of race/ethnicity factors in the recruitment of staff and faculty. More recently, however, the University has initiated an Equal Opportunity/Affirmative Action Program to increase faculty and staff diversity with some success. There is no discrimination in faculty hiring and retention practices, Resident recruitment and selection processes, or patient eligibility criteria concerning access to the various evaluation and treatment programs.

Research/Dissemination Project Opportunities and Expectations

Residents are required to engage in some clinical research and/or dissemination activity across the training year. Such activities might include piloting a new clinical service or evaluating a current program offering. To complete such projects, residents will have support in

protecting time (e.g., reducing their clinical case load) to conduct these clinical research/dissemination activities. Up to 8 hours per week may be requested. The project, and the associated adjustment in training activities, must be reflected in the resident's training plan and approved by the primary supervisor and Director of Training. The project selected should be of a scope consistent with the amount of protected time being requested. If the project does not require the number of hours being requested, or if the project is completed prior to the conclusion of the training year, an adjustment to the resident's time will occur (e.g., their clinical case load will increase).

Core Competencies

Advanced competencies, as outlined in the APA *Standards of Accreditation (SoA)*, are those skill sets that are “fundamental to health service psychology” and include the integration of science and practice, an ability to attend to individual and cultural diversity, and an understanding of ethical and legal standards associated with one's practice. The program expects residents to develop competence in these areas, as well as several others, in order to graduate from the program. These include:

I. Psychological Assessment, Diagnosis, and Consultation: By the end of the residency, residents should be able to formulate a diagnosis by integrating data from a variety of sources, including clinical interview, family history, medical history, mental status examinations, and psychological measures. All residents must demonstrate expertise in psychological assessment. By the end of the residency, the resident should be able to develop an evaluation battery to answer a specific referral question, administer and score appropriate measures, interpret the data, integrate the data with history and other sources, write a report that clearly answers the referral question, and provide clear, relevant, treatment recommendations. All residents must be able to assist consumers and other providers in formulating treatment plans and setting attainable treatment goals, as well as linking consumers with needed resources to achieve them.

II. General Principles of Evidence-Based Interventions: All residents are expected to understand and demonstrate an advanced understanding and application of psychotherapeutic techniques common to all theoretical approaches including empathy, rapport, relationship building, and history-taking, and must become proficient in the procedures involved in specific individual and group evidence-based practices relevant to their track and rotations.

III. Rehabilitation and Recovery: The goal of psychiatric rehabilitation is to enable individuals to transcend limits imposed by mental illness, social barriers, internalized stigma and second-class personhood, so that the individual can achieve their goals and aspirations in living, learning, working and socializing roles. To this end, residents must instill hope in verbal communication, make encouraging statements regarding an individual's potential for recovery, and promote hopefulness for recovery, including identifying strengths. Residents must emphasize treatment choices and participation in the healthcare process, and integrate the use of community resources and entitlement programs into treatment planning and goal achievement. Residents must also communicate with family members, friends, neighborhood and other natural community supports when appropriate to support efforts to change and goal attainment.

IV. Laws and Ethics: Postdoctoral residents must demonstrate sound professional clinical judgment and behavior in the application of assessment and intervention procedures with individuals, familiarity with and understanding of professional and legal standards in professional psychology, and a thorough working understanding of APA ethical principles and standards.

V. Cultural Diversity: Residents are expected to demonstrate expertise in cultural diversity. Cultural and ethnic issues cut across all core competency areas. Residents develop expertise in cultural diversity through exposure to a multiethnic staff and patient population, through coursework, clinical supervision and consultation. By the end of the residency, residents are expected to 1) identify cultural/ethnic issues relevant to the case; 2) explain how these issues affect psychiatric presentation, psychological test data, response to staff and treatment interventions, and 3) modify assessment/treatment approach based on supervisory and consultant input. The VASDHS has a culturally diverse patient population, which ensures adequate contact to develop skills in this area.

VI. Supervision: Residents receive supervision and, if possible, are provided opportunities to supervise other providers (e.g., clinical psychology interns and practicum students), under the guidance of a shared licensed clinical supervisor. Residents come to supervision prepared to discuss cases, including but not limited to providing video- or audio-tape of sessions and using theoretical framework to describe a case, assessment or treatment plan. Residents seek supervision for complex cases, and communicate in a professional manner with supervisors and supervisees. Open discussion and acceptance of constructive feedback during supervision is essential to the learning process.

VII. Clinical Research/Dissemination Skills: Postdoctoral residents receive training in program evaluation and clinical research. These include the following skills: a) formulating testable hypotheses / identifying a service need; b) designing and carrying out a research/program evaluation project; c) presenting findings to other professionals.

VIII. Organization, Management and Administration: Residents must use time-management skills to maintain an efficient practice, comply with program and local facility policies and procedures that support training and patient care, and complete administrative tasks that support training and patient care, in order to function as effective practitioners.

IX. Interprofessional Practice: Residents receive training in interprofessional practice including clarity regarding roles, approaches, and resources. Residents develop expertise in interprofessional practice through team-work and communication. By the end of the residency, they are expected to collaborate effectively with other professionals in practice and in research.

Application and Selection Process

Each applicant is asked to submit the following materials via the APPA CAS portal (<http://www.appic.org/About-APPIC/Postdoctoral/APPA-Postdoc-Application-Information>):

1. A brief statement of interest (maximum 2 pages), with the following: The emphasis area(s) to which you are applying, including a rank ordering of your preferred rotations. Please describe why you are applying to each rotation as well as a brief summary of educational, clinical and research experiences relevant to the specific area(s) of interest, a summary of your training needs and goals for the residency, and a statement of your career goals.
2. A current curriculum vitae or resume.
3. Three letters of reference, preferably from clinical and research supervisors.
 - a. Materials should be submitted via the APPA CAS portal by 8:59 pm PST/11:59 EST pm on December 1, 2023.
 - b. Selection of residents is done by our Postdoctoral Selection Committee (consisting of the Training Director and supervisors for each emphasis area) with input from other psychologists in each emphasis area using the following criteria (not in order of priority):
 - Breadth and quality of previous general clinical training experience,
 - Breadth, depth, and quality of training experience in the specific area of emphasis,
 - Quality and scope of scholarship, as indicated partially by research, conference presentations, and publications,
 - Relationship between clinical and research interests/experience of the applicant,
 - Evidence of accomplishments,
 - Thoughtfulness of information provided in the cover letter,
 - Goodness of fit between the applicant's stated objectives and the training program and medical center's resources,
 - Strength of letters of recommendation from professionals who know the applicant well.
 - c. Top applicants in each emphasis area are invited to interview with the primary supervisor and other relevant faculty. Interview invitations are expected to be sent out by December 21, 2023. All interviews will be virtual in format. During the interviews, applicants are reassessed based on their interviews using similar criteria to those stated above, with the opportunity to obtain further and clarifying information as needed, as well as an assessment of interpersonal skills. Final admission and hiring of residents is dependent on VASDHS Human

Resources Service approval, which includes a federal background check, physical examination, and education/credential verification.

The program is an Equal Opportunity Employer. Our commitment to diversity includes attempting to ensure an appropriate representation of individuals along many dimensions, including (but not limited to) gender, sexual orientation, age, ethnic/racial minorities, and persons with disabilities. We provide a supportive and encouraging learning environment for students, regardless of ethnic background or physical needs, and applicants from diverse backgrounds are encouraged to apply.

The program has nondiscriminatory policies and operating conditions and avoids any actions that would restrict program access and participation. In recent years, California state law and University of California policy have prohibited the specific inclusion of race/ethnicity factors in the recruitment of staff and faculty. More recently, however, the University has initiated an Equal Opportunity/Affirmative Action Program to increase faculty and staff diversity with some success. There is no discrimination in faculty hiring and retention practices, resident recruitment and selection processes, or patient eligibility criteria concerning access to the various evaluation and treatment programs.

Evaluation Process

Supervisors and residents are expected to exchange feedback routinely as a part of the supervisory process. The evaluation procedures are meant to formalize this continuous information flow. It is the responsibility of the Training Director and supervisors to ensure that evaluation occurs in a timely and constructive fashion, and residents are encouraged and expected to take an active role. To that end, it is essential that residents understand the philosophy and logistics of evaluation as they begin training. The Training Director will review the overall evaluation process during initial orientation processes, and each individual supervisor should review exit competencies for the specific position at the beginning of the year.

In collaboration with their supervisors, residents will complete a self-assessment of their own skills and knowledge for each core competency at the beginning of the training year. Strengths and weaknesses that emerge from this self-assessment, as well as the resident's application materials, will be used to develop a training plan. Supervisors will complete competency-based evaluations of residents at mid-year and end-of-training. The mid-point evaluations are intended to be a progress report for residents to increase self-awareness and awareness of supervisor's perceptions, discrepancies between self-ratings and supervisor ratings, and to help the Resident focus on specific goals and areas of needed improvement as training progresses. Residents are rated as "having a problem," "progressing well," (consistent with where they would be expected to be given their training), or having developed competence in each rated area. In the event that a supervisor suspects that a resident is not fulfilling critical competencies, Due Process procedures are in place to work towards resolution. The Due Process procedure is reviewed in detail with residents at the beginning of the year.

Residents will also be asked to provide a written evaluation of each supervisor at the mid-year and end-of-year evaluation time points. Residents and supervisors are expected to discuss these evaluations to facilitate mutual understanding and growth.

As part of a continual quality improvement plan, the Training Director(s) will conduct a self-study with residents at mid-year and at the conclusion of each training year. The areas reviewed are caseload mix and volume, balance of activities (clinical, teaching, research), amount and quality of supervision, adequacy of facility resources, and professional relationships between the residents and other healthcare professionals. The findings and minutes are distributed to the entire faculty for review and action when appropriate.

Program Modifications due to COVID-19

Current facility information and guidance can be found at the VA San Diego Healthcare System (VASDHS) COVID-19 link:

<https://dvagov.sharepoint.com/sites/VHAVASDDirector/c19/SitePages/Home.aspx>.

Training policies and processes are made in conjunction with VASDHS and Mental Health Care Line guidance, as well as information from OAA, APA, APICC, CA Board of Psychology, and current best practices from national training programs.

Hospital staff and trainees have currently transitioned back to working onsite. Clinical care is provided through a combination of in person and virtual appointments, with virtual appointments remaining the most common mode of treatment in outpatient clinics. Virtual appointments are typically delivered at the VA through our virtual care system. Training seminars are currently being delivered in person. Clinical meetings occur in a mix of in person and online settings.

COVID-19 Vaccine Mandate: All VA staff, volunteers, contractors, and trainees are required to be fully vaccinated against COVID-19. Proof of vaccination is required prior to the start of the training year.

Current policies are subject to change in accordance with changes to federal, state, and local policies.
