Areas Served: Veterans in the counties of Alameda, Marin, Napa, Sonoma, Lake, Mendocino, Humboldt, San Francisco, and San Mateo

Medical School Affiliation: University of California, San Francisco - Schools of Medicine, Nursing, Dentistry, and Pharmacy

There are 196 Residency and Fellow positions; 40 allied health professional trainees. More than 800 UCSF trainees from 36 clinical programs rotate through SFVAMC.

San Francisco VA Health Care System is a comprehensive network that provides health services to Veterans through San Francisco VA Medical Center (SFVAMC) and nine community-based outpatient clinics in Oakland, Santa Rosa, Eureka, Ukiah, Clearlake, San Bruno, and Downtown San Francisco. We have a long history of conducting cutting-edge research, establishing innovative medical programs, and providing compassionate care to Veterans. The Medical Center has 111 operating beds and a 120-bed Community Living Center. Outpatient clinics provide primary, mental health, and specialty care services.

SFVAMC has several National Centers of Excellence in the areas of Epilepsy Treatment; Cardiac Surgery; Post Traumatic Stress Disorder; HIV; and Renal Dialysis. It has many other nationally recognized programs including: the Parkinson's Disease Research, Education, and Clinical Center; the Hepatitis C Resource Center; the Mental Illness Research and Education Clinical Center; and the Western Pacemaker and AICD Surveillance Program. The Medical Center is designated as one of only seven VA Centers of Excellence in Primary Care Education. We also have a Community Resource and Referral Center that is designed to serve Veterans who are homeless and at-risk of homelessness with one-stop access to community based services. The Medical Center is the first VA to perform MRI-guided deep brain stimulation surgery and is one of only a few VA Medical Centers performing state-of-the-art transcatheter aortic valve replacement procedures.

SFVAMC is the largest competitively funded research program in VA with \$91.3 million in research expenditures in FY 2023. The Medical Center is one of the few in the world equipped for studies using both whole-body magnetic resonance imaging (MRI) and spectroscopy, and is the site of VA's National Center for the Imaging of Neurodegenerative Diseases. Additionally, San Francisco VA Medical Center established a unique partnership with the Department of Defense (DoD) to study the basic neuroscience and neuroimaging of combat-related brain and spinal cord injuries, PTSD, fracture/polytrauma, and other neurological combat-related injuries and predictors of injuries of war fighters. This program is considered a national resource by the DoD.

The Medical Center has been affiliated with the University of California, San Francisco (UCSF), School of Medicine for over 60 years. All physicians are jointly recruited by SFVAMC and UCSF School of Medicine.
