Report Overview

This Comprehensive Healthcare Inspection Program (CHIP) review provides a focused evaluation of the quality of care delivered in the inpatient and outpatient settings of the Oklahoma City VA Health Care System (Facility). The review covers key clinical and administrative processes that are associated with promoting quality care.

CHIP reviews are one element of the overall efforts of the Office of Inspector General (OIG) to ensure that our nation’s veterans receive high-quality and timely VA healthcare services. The reviews are performed approximately every three years for each facility. The OIG selects and evaluates specific areas of focus on a rotating basis each year.

The OIG’s current areas of focus are

1. Leadership and Organizational Risks;
2. Quality, Safety, and Value;
3. Credentialing and Privileging;
4. Environment of Care;
5. Medication Management;
6. Mental Health Care;
7. Long-term Care;
8. Women’s Health; and

This review was conducted during an unannounced visit made during the week of June 11, 2018. The OIG conducted interviews and reviewed clinical and administrative processes related to areas of focus that affect patient care outcomes. Although the OIG reviewed a spectrum of clinical and administrative processes, the sheer complexity of VA medical centers limits the ability to assess all areas of clinical risk. The findings presented in this report are a snapshot of Facility performance within the identified focus areas at the time of the OIG visit. Although it is difficult to quantify the risk of patient harm, the findings in this report may help facilities identify areas of vulnerability or conditions that, if properly addressed, could improve patient safety and healthcare quality.
Results and Review Impact

Leadership and Organizational Risks

At the Facility, the leadership team consists of the Director, Chief of Staff, Associate Director for Patient Care Services (ADPCS), Associate Director, and Assistant Director. Organizational communication and accountability are carried out through a committee reporting structure with the Quality, Safety and Value (QSV) Committee having oversight for groups such as the Clinical Executive, Nurse Executive, Strategic Improvement, and the Administrative Executive Boards. The leaders are also engaged in monitoring patient safety and care through formal mechanisms and are members of the Facility’s QSV Committee which tracks, trends, and monitors quality of care and patient outcomes.

The Director, assigned in June 2016, was the most tenured member of the leadership team. The Chief of Staff and ADPCS were assigned to their positions in February and March 2017, respectively. The Associate Director, permanently assigned in December 2017, had previously served as the Facility’s Assistant Director for 15 months. Apart from the Assistant Director appointed in May 2018, the executive leaders have been working together as a team since December 2017.

In the review of selected employee satisfaction survey results regarding Facility leaders, the OIG noted Facility leaders appeared actively engaged with employees and were working to improve employee satisfaction. The OIG noted that the Facility’s results reflected lower care ratings than the VHA average in the selected patient experience survey results regarding the Facility leaders. Multiple opportunities appear to exist to improve satisfaction with both inpatient and outpatient care. Facility leaders had begun to implement processes and plans to improve patient experiences.

The OIG recognizes that the Strategic Analytics for Improvement and Learning (SAIL) model has limitations for identifying all areas of clinical risk but is “a way to understand the similarities and differences between the top and bottom performers” within VHA.1 Although the leadership team was knowledgeable about selected SAIL metrics, the leaders should continue to take actions to improve performance of the Quality of Care and Efficiency metrics likely contributing to the current “3-Star” rating.

---

1 VHA’s Office of Operational Analytics and Reporting developed a model for understanding a facility’s performance in relation to nine quality domains and one efficiency domain. The domains within SAIL are made up of multiple composite measures, and the resulting scores permit comparison of facilities within a Veterans Integrated Service Network or across VHA. The SAIL model uses a “star” rating system to designate a facility’s performance in individual measures, domains, and overall quality. http://vaww.vssc.med.va.gov/VSSCEnhancedProductManagement/DisplayDocument.aspx?DocumentID=2146. (Website accessed on April 16, 2017.)
Additionally, the OIG reviewed accreditation agency findings, sentinel events, 2 disclosures of adverse patient events, and Patient Safety Indicator data and did not identify any substantial organizational risk factors. The OIG noted findings in two of the eight areas of clinical operations reviewed and issued two recommendations attributable to the Director. These are briefly described below.

**Quality, Safety, and Value**

The OIG found general compliance with requirements for protected peer reviews and patient safety. However, the OIG identified a deficiency with review of utilization management data. 3

**Long-term Care**

The OIG noted general compliance with provision of geriatric evaluations and implementation of interventions when indicated. However, the OIG identified a deficiency with program oversight and evaluation.

**Summary**

In the review of key care processes, the OIG issued two recommendations that are attributable to the Director. The number of recommendations should not be used as a gauge for the overall quality provided at this Facility. The intent is for Facility leaders to use these recommendations as a road map to help improve operations and clinical care. The recommendations address systems issues as well as other less-critical findings that, if left unattended, may eventually interfere with the delivery of quality health care.

---

2 A sentinel event is an incident or condition that results in patient death, permanent harm, severe temporary harm, or intervention required to sustain life.

Comments

The Veterans Integrated Service Network Director and Facility Director agreed with the CHIP review findings and recommendations and provided acceptable improvement plans. (See Appendixes E and F, pages 55–56, and the responses within the body of the report for the full text of the Directors’ comments.) The OIG will follow up on the planned actions until they are completed.

Purpose and Scope

Purpose

This Comprehensive Healthcare Inspection Program (CHIP) review was conducted to provide a focused evaluation of the quality of care delivered in the inpatient and outpatient settings of the Oklahoma City VA Health Care System (Facility) through a broad overview of key clinical and administrative processes that are associated with quality care and positive patient outcomes. The purpose of the review was to provide oversight of healthcare services to veterans and to share findings with Facility leaders so that informed decisions can be made to improve care.

Scope

Good leadership makes a difference in managing organizational risks by establishing goals, strategies, and priorities to improve care; setting the quality agenda; and promoting a quality improvement culture to sustain positive change. Investment in a culture of safety and quality improvement with robust communication and leadership is more likely to result in positive patient outcomes in healthcare organizations. Figure 2 shows the direct relationship leadership and organizational risks have with the processes used to deliver health care to veterans.

To examine risks to patients and the organization when these processes are not performed well, the OIG focused on the following nine areas of clinical care and administrative operations that support quality care—Leadership and Organizational Risks; Quality, Safety, and Value (QSV); Credentialing and Privileging; Environment of Care (EOC); Medication Management: Controlled Substances (CS) Inspection Program; Mental Health: Posttraumatic Stress Disorder (PTSD) Care; Long-term Care: Geriatric Evaluations; Women’s Health: Mammography Results and Follow-up; and High-Risk Processes: Central Line-Associated Bloodstream Infections (CLABSI) (see Figure 2).

---

7 CHIP reviews address these processes during fiscal year (FY) 2018 (October 1, 2017, through September 30, 2018).
Figure 2. FY 2018 Comprehensive Healthcare Inspection Program
Review of Healthcare Operations and Services

Source: VA OIG
Methodology

To determine compliance with the Veterans Health Administration (VHA) requirements related to patient care quality, clinical functions, and the EOC, the OIG physically inspected selected areas; reviewed clinical records, administrative and performance measure data, and accreditation survey reports; and discussed processes and validated findings with managers and employees. The OIG interviewed applicable managers and members of the executive leadership team.

The review covered operations for September 16, 2015, through June 11, 2018, the date when an unannounced week-long site visit commenced.

This report’s recommendations for improvement target problems that can impact the quality of patient care significantly enough to warrant OIG follow-up until the Facility completes corrective actions. The Director’s comments submitted in response to the recommendations in this report appear within each topic area.

While on site, the OIG did not receive any complaints beyond the scope of the CHIP review. The OIG conducted the inspection in accordance with OIG standard operating procedures for CHIP reviews and Quality Standards for Inspection and Evaluation published by the Council of the Inspectors General on Integrity and Efficiency.

---

8 The OIG did not review VHA’s internal survey results but focused on OIG inspections and external surveys that affect Facility accreditation status.

9 This is the date of the last Combined Assessment Program and/or Community Based Outpatient Clinic and Other Outpatient Clinic reviews.
Results and Recommendations

Leadership and Organizational Risks

Stable and effective leadership is critical to improving care and sustaining meaningful change. Leadership and organizational risks can impact the Facility’s ability to provide care in all the selected clinical areas of focus. To assess the Facility’s risks, the OIG considered the following organizational elements:

1. Executive leadership stability and engagement,
2. Employee satisfaction and patient experience,
3. Accreditation/for-cause surveys and oversight inspections,
4. Indicators for possible lapses in care, and
5. VHA performance data.

Executive Leadership Stability and Engagement

Because each VA facility organizes its leadership to address the needs and expectations of the local veteran population that it serves, organizational charts may differ among facilities. Figure 3 illustrates the Facility’s reported organizational structure. The Facility has a leadership team consisting of the Director, Chief of Staff, Associate Director for Patient Care Services (ADPCS), Associate Director, and Assistant Director. The Chief of Staff and ADPCS are responsible for overseeing patient care and service directors, as well as program and practice chiefs.

The Director, assigned in June 2016, was the most tenured leadership team member. The Chief of Staff, ADPCS, and Associate Director were assigned to their positions in February, March, and December 2017, respectively. The Associate Director previously served as the Facility’s Assistant Director for 15 months. It is important to note that apart from the Assistant Director assigned in May 2018, the executive leaders have worked together as a team since December 2017.

---

To help assess engagement of Facility executive leadership, the OIG interviewed the Director, Chief of Staff, ADPCS, and Associate Director regarding their knowledge of various performance metrics and their involvement and support of actions to improve or sustain performance.

In individual interviews, these executive leadership team members spoke knowledgeably, within the scope of their responsibilities, about actions taken during the previous 12 months to maintain or improve performance, employee and patient survey results, and selected Strategic Analytics for Improvement and Learning (SAIL) metrics. These are discussed more fully below.

The leaders are also engaged in monitoring patient safety and care through formal mechanisms. They are members of the Facility’s Quality, Safety and Value (QSV) Committee which tracks, trends, and monitors quality of care and patient outcomes. The Director serves as the chairperson with the authority and responsibility to establish policy, maintain quality care standards, and
perform organizational management and strategic planning. The QSV Committee also oversees various working groups, such as the Clinical Executive, Nurse Executive, Strategic Improvement, and Administrative Executive Boards. See Figure 4.

Employee Satisfaction and Patient Experience

The All Employee Survey is an annual, voluntary, census survey of VA workforce experiences. The data are anonymous and confidential. Since 2001, the instrument has been refined at several points in response to VA leadership inquiries on VA culture and organizational health. Although the OIG recognizes that employee satisfaction survey data are subjective, they can be a starting point for discussions, indicate areas for further inquiry, and be considered along with other information on Facility leadership.

To assess employee and patient attitudes toward Facility leaders, the OIG reviewed employee and patient satisfaction survey results that relate to the period of October 1, 2016, through September 30, 2017. Tables 1–3 provide relevant survey results for VHA, the Facility, and selected Facility executive leaders.11

Table 1 summarizes employee attitudes toward selected Facility leaders as expressed in VHA’s All Employee Survey.12 The Facility average for both selected survey questions were above the VHA average.13 The Director, Chief of Staff, and Assistant Director survey results for the Servant Leader Index Composite14 exceeded the Facility and VHA averages, while the ADPCS and Associate Director results were lower than the Facility and VHA averages. However, each leader’s results regarding satisfaction with executive leadership were higher than the VHA average and similar to or higher than the Facility average. In all, employees appear generally satisfied with Facility leaders.

---

11 Rating is based on responses by employees who report to or aligned under the Director, Chief of Staff, ADPCS, Associate Director, and Assistant Director.
12 The All Employee Survey is an annual, voluntary, census survey of VA workforce experiences. The data are anonymous and confidential. The instrument has been refined at several points since 2001 in response to operational inquiries by VA leadership on organizational health relationships and VA culture.
13 The OIG makes no comment on the adequacy of the VHA average for each selected survey element. The VHA average is used for comparison purposes only.
14 Servant Leader Index Composite is a summary measure of the work environment being a place where organizational goals are achieved by empowering others. This includes focusing on collective goals, encouraging contribution from others, and then positively reinforcing others’ contributions.
Table 2 summarizes employee attitudes toward the workplace as expressed in VHA’s All Employee Survey. The Facility averages for the selected survey questions were similar to or higher than the VHA average. Apart from the Director and Chief of Staff, opportunities may exist to improve employee satisfaction and to provide a safe workplace environment where employees feel comfortable in verbalizing their concerns. Facility leaders attributed the lower scores to internal investigations that resulted in unstable leadership in early fiscal year 2017, prior punitive leadership style and organizational culture, and the lack of accountability, which made staff cautious in verbalizing their concerns. Facility leaders expressed ongoing efforts to improve the culture of the organization.

VHA’s Patient Experiences Survey Reports provide results from the Survey of Healthcare Experience of Patients (SHEP) program. VHA utilizes industry standard surveys from the Consumer Assessment of Healthcare Providers and Systems program to evaluate patients’ experiences of their health care and to support the goal of benchmarking its performance against the private sector.

VHA collects SHEP survey data from Patient-Centered Medical Home, Specialty Care, and Inpatient Surveys. From these, the OIG selected four survey items that reflect patient attitudes towards facility leaders (see Table 3). For this Facility, all four patient survey results reflected lower care ratings than the VHA average.

Multiple opportunities appear to exist to improve both inpatient and outpatient satisfaction with care provided. Facility leaders cited the old physical environment (hospital buildings), long Emergency Department wait times, negative media coverage, shortage of providers, and cultural challenges (patients’ perceptions of foreign-born providers) as contributing factors. The leaders reported being in the process of implementing corrective actions to improve patient satisfaction.

Accreditation/For-Cause Surveys\textsuperscript{15} and Oversight Inspections

To further assess Leadership and Organizational Risks, the OIG reviewed recommendations from previous inspections by oversight and accrediting agencies to gauge how well leaders respond to identified problems. Table 4 summarizes the relevant Facility inspections most recently performed by the OIG and The Joint Commission (TJC).\textsuperscript{16} Indicative of effective leadership, the Facility has closed all recommendations for improvement except for those issued as part of a recently performed TJC inspection in April 2018 and open OIG recommendations as listed in Table 4.\textsuperscript{17} The Facility leaders reported that insufficient time had elapsed to close the TJC recommendations, but the Facility was in the process of addressing all open OIG recommendations.

The OIG also noted the Facility’s current accreditation status with the Commission on Accreditation of Rehabilitation Facilities\textsuperscript{18} and College of American Pathologists,\textsuperscript{19} which demonstrates the Facility leaders’ commitment to quality care and services. Additionally, the Long Term Care Institute conducted an inspection of the Facility’s Community Living Center.\textsuperscript{20}

\textsuperscript{15} The Joint Commission (TJC) conducts for-cause unannounced surveys in response to serious incidents relating to the health and/or safety of patients or staff or reported complaints. The outcomes of these types of activities may affect the current accreditation status of an organization.

\textsuperscript{16} TJC is an internationally accepted external validation that an organization has systems and processes in place to provide safe and quality oriented health care. TJC has been accrediting VA medical facilities for over 35 years. Compliance with TJC standards facilitates risk reduction and performance improvement.

\textsuperscript{17} A closed status indicates that the Facility has implemented corrective actions and improvements to address findings and recommendations, not by self-certification, but as determined by the accreditation organization or inspecting agency.

\textsuperscript{18} The Commission on Accreditation of Rehabilitation Facilities provides an international, independent, peer review system of accreditation that is widely recognized by Federal agencies. VHA’s commitment is supported through a system-wide, long-term collaboration with the Commission on Accreditation of Rehabilitation Facilities to achieve and maintain national accreditation for all appropriate VHA rehabilitation programs.

\textsuperscript{19} For 70 years, the College of American Pathologists has fostered excellence in laboratories and advanced the practice of pathology and laboratory science. In accordance with VHA Handbook 1106.01, VHA laboratories must meet the requirements of the College of American Pathologists.

\textsuperscript{20} Since 1999, the Long Term Care Institute has been to over 3,500 healthcare facilities conducting quality reviews and external regulatory surveys. The Long Term Care Institute is a leading organization focused on long-term care quality and performance improvement; compliance program development; and review in long-term care, hospice, and other residential care settings.

Indicators for Possible Lapses in Care

Within the healthcare field, the primary organizational risk is the potential for patient harm. Many factors impact the risk for patient harm within a system, including unsafe environmental conditions, sterile processing deficiencies, and infection control practices. Leaders must be able to understand and implement plans to minimize patient risk through consistent and reliable data and reporting mechanisms. Table 5 summarizes key indicators of risk since the OIG’s previous September 2015 Combined Assessment Program and Community Based Outpatient Clinic (CBOC) and Other Outpatient Clinics review inspections through the week of June 11, 2018.\(^21\)

The OIG noted concerns with the high number of sentinel events. Facility managers reported reviewing each sentinel and institutional disclosure event and developing actions for improvement when indicated. Facility managers reported that the most significant trend identified eight patients who had delayed cancer diagnoses. Facility leaders took corrective actions, including the removal of the responsible provider, and conducted institutional disclosures. Facility managers also identified patients who fell and sustained fractures, but no trend was identified from these falls as each incident occurred under a different condition.

Source: Oklahoma City VA Health Care System’s Patient Safety Manager and Risk Manager (received June 13, 2018)

\(^21\) It is difficult to quantify an acceptable number of occurrences because one occurrence is one too many. Efforts should focus on prevention. Sentinel events and those that lead to disclosure can occur in either inpatient or outpatient settings and should be viewed within the context of the complexity of the Facility. (Note that the Oklahoma City VA Health Care System is a mid-high complexity (1b) affiliated Facility as described in Appendix B.)

\(^22\) A sentinel event is an incident or condition that results in patient death, permanent harm, severe temporary harm, or intervention required to sustain life.

\(^23\) Institutional disclosure of adverse events (sometimes referred to as “administrative disclosure”) is a formal process by which facility leaders together with clinicians and others, as appropriate, inform the patient or his or her personal representative that an adverse event has occurred during care that resulted in, or is reasonably expected to result in, death or serious injury, and provide specific information about the patient’s rights and recourse.

\(^24\) Large-scale disclosure of adverse events (sometimes referred to as “notification”) is a formal process by which VHA officials assist with coordinating the notification to multiple patients (or their personal representatives) that they may have been affected by an adverse event resulting from a systems issue.
The OIG also reviewed Patient Safety Indicators developed by the Agency for Healthcare Research and Quality within the U.S. Department of Health and Human Services. These provide information on potential in-hospital complications and adverse events following surgeries and procedures. The rates presented are specifically applicable for this Facility, and lower rates indicate lower risks. Table 6 summarizes Patient Safety Indicator data from October 1, 2015, through December 31, 2017.

*Source: VHA Support Service Center*

*Note: The OIG did not assess VA’s data for accuracy or completeness.*

Four of the 12 Patient Safety Indicator measures (iatrogenic pneumothorax, postoperative acute kidney injury requiring dialysis, perioperative pulmonary embolism or deep vein thrombosis, and unrecognized abdominopelvic accidental puncture/laceration) show a higher observed rate than Veterans Integrated Service Network (VISN) 19 or VHA.

Two patients developed iatrogenic pneumothorax, which were known procedure complications.

Two patients had acute kidney injury after surgery and required dialysis. Facility managers did not identify trends, and no specific actions were required.

Eight patients experienced perioperative pulmonary embolism or deep vein thrombosis. These involved patients who had chronic pulmonary embolism/deep vein thrombosis, patients on anticoagulants who experienced deep vein thrombosis, and a patient who refused anticoagulant. Facility managers reported reviewing these cases and taking actions to improve patient outcomes, including identifying or accurately coding patients with chronic embolism/deep vein thrombosis on admission, initiating anticoagulant therapy as soon as possible, and incorporating an anticoagulation prophylaxis field in orthopedic note templates.

Two patients developed unrecognized abdominopelvic accidental puncture/laceration. One patient had a perforated coronary artery which was reportedly immediately identified and repaired. The second patient had a spinal fusion with abdominal distention three days after the procedure, but no puncture was visualized.

**Veterans Health Administration Performance Data**

The VA Office of Operational Analytics and Reporting adapted the SAIL Value Model to help define performance expectations within VA. This model includes measures on healthcare quality, employee satisfaction, access to care, and efficiency but has noted limitations for identifying all areas of clinical risk. The data are presented as one “way to understand the similarities and differences between the top and bottom performers” within VHA.26

VA also uses a star-rating system where facilities with a “5-Star” rating are performing within the top 10 percent of facilities and “1-Star” facilities are performing within the bottom 10 percent of facilities. Figure 5 describes the distribution of facilities by star rating.27 As of June 30, 2017, the Facility was rated at “3-Star” for overall quality.

---

27 Based on normal distribution ranking quality domain of 128 VA Medical Centers.
Figure 5. Strategic Analytics for Improvement and Learning Star Rating Distribution (as of June 30, 2017)

Source: VA Office of Informatics and Analytics Office of Operational Analytics and Reporting (accessed May 16, 2018)

Figure 6 illustrates the Facility’s Quality of Care and Efficiency metric rankings and performance compared with other VA facilities as of June 30, 2017. Of note, Figure 6 uses blue and green data points to indicate high performance (for example, Ambulatory Care Sensitive Conditions (ACSC) Hospitalization, Complications, and Efficiency). Metrics that need improvement are denoted in orange and red (for example, Adjusted Length of Stay (LOS), Mental Health (MH) Continuity (of) Care, Registered Nurse (RN) Turnover, Call Responsiveness, and Rating (of) Primary Care (PC) Provider).

---

28 For data definitions of acronyms in the SAIL metrics, please see Appendix D.
Figure 6. Facility Quality of Care and Efficiency Metric Rankings (as of December 31, 2017)

Source: VHA Support Service Center

Note: The OIG did not assess VA’s data for accuracy or completeness. Also see Appendix C for sample outpatient performance measures that feed into these data points (such as wait times, discharge contacts, and where patient care is received). For data definitions, see Appendix D.

Conclusion

The Facility has generally stable executive leadership. Apart from the Assistant Director, the executive leaders have worked together since December 2017. Although the OIG’s review of survey data suggested generally satisfied employees, opportunities appear to exist to improve patient experiences. The OIG noted that Facility leaders were actively engaged with employees and patients and were working to improve overall satisfaction. Organizational leaders support efforts related to patient safety, quality care, and other positive outcomes (such as initiating processes and plans to maintain positive perceptions of the Facility through active stakeholder engagement).
The OIG was concerned with the number of sentinel events and disclosures, but Facility leaders reported reviewing each event, taking corrective actions, and developing preventive measures to improve performance. The OIG reviewed accreditation agency findings, Patient Safety Indicator data, and SAIL results and did not identify any substantial organizational risk factors. The leadership team was knowledgeable about selected SAIL metrics but should continue to take actions to improve care and performance of selected Quality of Care and Efficiency metrics that are likely contributing to the “3-Star” rating.
Quality, Safety, and Value

VHA’s goal is to serve as the nation’s leader in delivering high-quality, safe, reliable, and veteran-centered care using a coordinated care continuum. To meet this goal, VHA must foster a culture of integrity and accountability that is vigilant and mindful, proactively risk aware, and predictable, while seeking continuous improvement. VHA also strives to provide healthcare services that compare favorably to the best of the private sector in measured outcomes, value, and efficiency.

VHA requires that its facilities operate a Quality, Safety, and Value (QSV) program to monitor the quality of patient care and performance improvement activities. The purpose of the OIG review was to determine whether the Facility implemented and incorporated selected key functions of VHA’s Enterprise Framework for QSV into local activities. To assess this area of focus, the OIG evaluated the following: protected peer reviews of clinical care, utilization management (UM) reviews, and patient safety incident reporting with related root cause analyses (RCAs).

VHA has implemented approaches to improving patient safety, including the reporting of patient safety incidents to its National Center of Patient Safety. Incident reporting helps VHA learn about system vulnerabilities and how to address them. Required RCAs help to more accurately identify and rapidly communicate potential and actual causes of harm to patients throughout the organization.

30 Department of Veterans Affairs, Veterans Health Administration Blueprint for Excellence, September 2014.
31 According to VHA Directive 2010-025 (June 3, 2010), this is a peer evaluation of the care provided by individual providers within a selected episode of care. This also involves a determination of the necessity of specific actions, and confidential communication is given to the providers who were peer reviewed regarding the results and any recommended actions to improve performance. The process may also result in identification of systems and process issues that require special consideration, investigation, and possibly administrative action by facility staff. (Due for recertification June 30, 2015, but has not been updated.)
32 According to VHA Directive 1117, UM reviews evaluate the appropriateness, medical need, and efficiency of healthcare services according to evidence-based criteria.
33 According to VHA Handbook 1050.01, VHA National Patient Safety Improvement Handbook, March 4, 2011, VHA has implemented approaches to improve patient safety, including the reporting of patient safety incidents to the VHA National Center for Patient Safety, in order for VHA to learn about system vulnerabilities and how to address them as well as the requirement to implement RCA (a widely-used methodology for dealing with safety-related issues) to allow for more accurate and rapid communication throughout an organization of potential and actual causes of harm to patients.
34 VHA Handbook 1050.01.
The OIG interviewed senior managers and key QSV employees and evaluated meeting minutes, protected peer reviews, RCAs, the annual patient safety report, and other relevant documents. Specifically, OIG inspectors evaluated the following performance indicators:\(^{35}\)

- Protected peer reviews
  - Examination of important aspects of care (for example, appropriate and timely ordering of diagnostic tests, prompt treatment, and appropriate documentation)
  - Implementation of improvement actions recommended by the Peer Review Committee

- UM
  - Completion of at least 75 percent of all required inpatient reviews
  - Documentation of at least 75 percent of Physician UM Advisors’ decisions in National UM Integration database
  - Interdisciplinary review of UM data

- Patient safety
  - Entry of all reported patient incidents into VHA’s patient safety reporting system\(^{36}\)
  - Annual completion of a minimum of eight RCAs\(^{37}\)
  - Provision of feedback about RCA actions to reporting employees
  - Submission of annual patient safety report

**Conclusion**

The OIG found general compliance with requirements for protected peer reviews and patient safety. However, the OIG identified a deficiency with UM data review that warranted a recommendation for improvement.

---

\(^{35}\) For CHIP reviews, the OIG selects performance indicators based on VHA or regulatory requirements or accreditation standards and evaluates these for compliance.

\(^{36}\) WebSPOT has been the software application used for reporting and documenting adverse events in the VHA (National Center for Patient Safety) Patient Safety Information System database. However, it is expected that by April 1, 2018, all facilities will have implemented the new Joint Patient Safety Reporting System (JPSR); and it is anticipated that all previous patient safety event reporting systems will be discontinued by July 1, 2018.

\(^{37}\) According to VHA Handbook 1050.01, March 4, 2011, the requirement for a total of eight RCAs and aggregated reviews is a minimum number, as the total number of RCAs is driven by the events that occur and the Safety Assessment Code (SAC) score assigned to them. At least four analyses per fiscal year must be individual RCAs, with the balance being aggregated reviews or additional individual RCAs.
Utilization Management: Data Review

VHA requires that an interdisciplinary facility group review UM data. This group should include, but not be limited to, representatives from UM, medicine, nursing, social work, case management, MH, and Chief Business Office revenue utilization review. This ensures that a comprehensive approach is taken when reviewing UM data for performance improvement. From May 1, 2017, through April 30, 2018, the interdisciplinary group did not include representation from medicine, case management, or Chief Business Office revenue utilization review. This resulted in a lack of expertise in the review and analysis of UM data. Facility managers were not aware of the membership requirements.

Recommendation 1

1. The Facility Director ensures all required members consistently participate in the interdisciplinary group that reviews utilization management data and monitors compliance.

Facility concurred.

Target date for completion: December 2018

Facility Response: The interdisciplinary group that reviews utilization management data and monitors compliance was evaluated to ensure the best representatives from the requisite service lines are selected. The meeting time was assessed and the facility has implemented a schedule so members can participate as required. Will monitor until 90% compliance is achieved for two consecutive quarters.

---

38 VHA Directive 1117.
Credentialing and Privileging

VHA has defined procedures for the credentialing and privileging of all healthcare professionals who are permitted by law and the facility to practice independently—without supervision or direction, within the scope of the individual’s license, and in accordance with individually granted clinical privileges. These healthcare professionals are also referred to as licensed independent practitioners (LIP).39

Credentialing refers to the systematic process of screening and evaluating qualifications. Credentialing involves ensuring an applicant has the required education, training, experience, and mental and physical health. This systematic process also ensures that the applicant has the skill to fulfill the requirements of the position and to support the requested clinical privileges.40

Clinical privileging is the process by which an LIP is permitted by law and the facility to provide medical care services within the scope of the individual’s license. Clinical privileges need to be specific, based on the individual’s clinical competence, recommended by service chiefs and the Medical Staff Executive Committee, and approved by the Director. Clinical privileges are granted for a period not to exceed two years, and LIPs must undergo re-privileging prior to the expiration of the held privileges.41

The purpose of the OIG review was to determine whether the Facility complied with selected requirements for credentialing and privileging of selected members of the medical staff. The OIG team interviewed key managers and reviewed the credentialing and privileging folders of 10 LIPs who were hired within 18 months prior to the on-site visit,42 and 20 LIPs who were re-privileged within 12 months prior to the visit.43 The OIG evaluated the following performance indicators:

- Credentialing
  - Current licensure
  - Primary source verification
- Privileging
  - Verification of clinical privileges
  - Requested privileges38

39 VHA Handbook 1100.19, Credentialing and Privileging, October 15, 2012. (Due for recertification October 31, 2017, but has not been updated.)
40 VHA Handbook 1100.19.
41 VHA Handbook 1100.19.
42 The 18-month period was from December 11, 2016, through June 11, 2018.
43 The 12-month review period was from June 11, 2017, through June 11, 2018.
- Facility-specific
- Service-specific
- Provider-specific
  - Service chief recommendation of approval for requested privileges
  - Medical Staff Executive Committee decision to recommend requested privileges
  - Approval of privileges for a period of less than, or equal to, two years
- Focused Professional Practice Evaluation (FPPE)
  - Evaluation initiated
    - Timeframe clearly documented
    - Criteria developed
    - Evaluation by another provider with similar training and privileges
    - Medical Staff Executive Committee decision to recommend continuing initially granted privileges
- Ongoing Professional Practice Evaluation (OPPE)
  - Determination to continue privileges
    - Criteria specific to the service or section
    - Evaluation by another provider with similar training and privileges
    - Medical Staff Executive Committee decision to recommend continuing privileges

**Conclusion**

Generally, the Facility met requirements with the above performance indicators. The OIG made no recommendations.
Environment of Care

Any medical center, regardless of its size or location, faces vulnerabilities in the healthcare environment. VHA requires managers to conduct EOC inspection rounds and resolve issues in a timely manner. The goal of the EOC program is to reduce and control environmental hazards and risks; prevent accidents and injuries; and maintain safe conditions for patients, visitors, and staff. The physical environment of a healthcare organization must not only be functional but should also promote healing. 44

The purpose of the OIG review was to determine whether the Facility maintained a clean and safe healthcare environment in accordance with applicable requirements. The OIG also determined whether the Facility met requirements in selected areas that are often associated with higher risks of harm to patients in the locked MH Unit and with Emergency Management processes. 45

VHA requires managers to ensure capacity for MH services for veterans with acute and severe emotional and/or behavioral symptoms causing a safety risk to self or others, and/or resulting in severely compromised functional status. This level of care is typically provided in an inpatient setting to ensure safety and to provide the type and intensity of clinical intervention necessary to treat the patient. Such care needs to be well integrated with the full continuum of care to support safety and effective management during periods of such severe difficulty. Inpatient MH settings must also provide a healing, recovery-oriented environment. 46

VHA requires managers to establish a comprehensive Emergency Management program to ensure continuity of patient care and hospital operations in the event of a disaster or emergency, which includes conducting a Hazard Vulnerability Analysis (HVA) and developing an Emergency Operations Plan (EOP). 47 These requirements allow the identification and minimization of impacts from potential hazards, threats, incidents, and events on health care and other essential services provided by facilities. VHA also requires managers to develop Utility Management Plans to ensure reliability and reduce failures of electrical power distribution systems in accordance with TJC, 48 Occupational Safety and Health Administration, 49 and

44 VHA Directive 1608, Comprehensive Environment of Care, February 1, 2016.
45 Applicable requirements include various VHA Directives, Joint Commission hospital accreditation standards, Occupational Safety and Health Administration, American National Standards Institute (ANSI)/Association for the Advancement of Medical Instrumentation (AAMI), and National Fire Protection Association (NFPA).
46 VHA Handbook 1160.06, Inpatient Mental Health Services, September 16, 2013.
48 TJC. EOC standard EC.02.05.07.
49 Occupational Safety and Health (OSHA) is part of the US Department of Labor. OSHA assures safe and healthful working conditions for working men and women by setting and enforcing standards and by providing training, outreach, education, and assistance.
National Fire Protection Association standards. The provision of sustained electrical power during disasters or emergencies is critical to continued operations of a healthcare facility.

In all, the OIG team inspected nine patient care areas—surgical intensive care, medical/surgical 7E and 5N, locked mental health, and Community Living Center 4S units; primary care Module C; podiatry clinic; pre-operative and recovery; and the Emergency Department. The team also inspected the Blackwell CBOC. The OIG reviewed relevant documents and interviewed key employees and managers. The OIG evaluated the following location-specific performance indicators:

- Parent Facility
  - EOC rounds
  - EOC deficiency tracking
  - Infection prevention
  - General safety
  - Environmental cleanliness
  - General privacy
  - Women veterans’ exam room privacy
  - Availability of medical equipment and supplies

- Community Based Outpatient Clinic
  - General safety
  - Medication safety and security
  - Infection prevention
  - Environmental cleanliness
  - General privacy
  - Exam room privacy
  - Availability of medical equipment and supplies

- Locked MH Unit
  - Bi-annual MH EOC Rounds
  - Nursing station security

---

50 National Fire Protection Association (NFPA) is a global nonprofit organization devoted to eliminating death, injury, and property and economic loss due to fire, electrical, and related hazards.
- Public area and general unit safety
- Patient room safety
- Infection prevention
- Availability of medical equipment and supplies

**Emergency Management**
- Hazard Vulnerability Analysis (HVA)
- Emergency Operations Plan (EOP)
- Emergency power testing and availability

**Conclusion**
Generally, the Facility met requirements with the above performance indicators. The OIG made no recommendations.
Medication Management: Controlled Substances Inspection Program

The Controlled Substances (CS) Act divides controlled drugs into five categories based on whether they have a currently accepted medical treatment use in the United States, their relative abuse potential, and likelihood of causing dependence when abused.\(^{51}\) Diversion by healthcare workers—the transfer of a legally-prescribed CS from the prescribed individual to another person for illicit use—remains a serious problem that can increase serious patient safety issues, causes harm to the diverter, and elevates the liability risk to healthcare organizations.\(^{52}\)

VHA requires that facility managers implement and maintain a CS inspection program to minimize the risk for loss and diversion and to enhance patient safety.\(^{53}\) Requirements include the appointment of CS Coordinator(s) (CSC) and CS inspectors (CSI), procedures for inventory control, and the inspection of the pharmacy and clinical areas with CS.

The OIG review of these issues was conducted to determine whether the Facility complied with requirements related to CS security and inspections and to follow up on recommendations from the 2014 report.\(^{54}\) The OIG team interviewed key managers and reviewed CS inspection reports for the prior two completed quarters;\(^{55}\) monthly summaries of findings, including discrepancies, provided to the Director for the prior 12 months;\(^{56}\) CS inspection quarterly trend reports for the prior four quarters;\(^{57}\) and other relevant documents. The OIG evaluated the following performance indicators:

- **CSC reports**
  - Monthly summary of findings to the Director
  - Quarterly trend report to the Director
  - Actions taken to resolve identified problems

- **Pharmacy operations**
  - Annual physical security survey of the pharmacy/pharmacies by VA Police

---

\(^{51}\) Drug Enforcement Agency Controlled Substance Schedules. https://www.deadiversion.usdoj.gov/schedules/. (Website accessed on August 21, 2017.)

\(^{53}\) VHA Directive 1108.02(1), Inspection of Controlled Substances, November 28, 2016. (amended March 6, 2017).

\(^{55}\) The review period was October 1, 2017, through March 31, 2018.

\(^{56}\) The review period was May 1, 2017, through April 30, 2018.

\(^{57}\) The four quarters were from April 1, 2017, through March 31, 2018.
• CS ordering processes
• Inventory completion during Chief of Pharmacy transition
• Staff restrictions for monthly review of balance adjustments

• Requirements for CSCs
  • Free from conflicts of interest
  • CSC duties included in position description or functional statement
  • Completion of required CSC orientation training course

• Requirements for CSIs
  • Free from conflicts of interest
  • Appointed in writing by the Director for a term not to exceed three years
  • Hiatus of one year between any reappointment
  • Completion of required CSI certification course
  • Completion of required annual updates and/or refresher training

• CS area inspections
  • Monthly inspections
  • Rotations of CSIs
  • Patterns of inspections
  • Completion of inspections on day initiated
  • Reconciliation of dispensing between pharmacy and each dispensing area
  • Verification of CS order
  • CS inspections performed by CSCs

• Pharmacy inspections
  • Monthly physical counts of the CS in the pharmacy by CSIs
  • Completion of inspections on day initiated
  • Security and documentation of drugs held for destruction

58 The “Destructions File Holding Report” lists all drugs awaiting local destruction or turn-over to a reverse distributor. CSIs must verify there is a corresponding sealed evidence bag containing drug(s) for each destruction holding number on the report.
o Verification of hard copy outpatient pharmacy CS prescriptions
o Verification of 72-hour inventories of the main vault
o Quarterly inspections of emergency drugs
o Monthly CSI checks of locks and verification of lock numbers

**Conclusion**

Generally, the Facility met requirements with the above performance indicators. Pharmacy managers and staff reported that the national shortage of injectable opioid pain medications did not impact needed treatment and care of their patients based on services typically provided at the Facility. The OIG made no recommendations.
Mental Health Care: Posttraumatic Stress Disorder Care

Posttraumatic Stress Disorder (PTSD) may occur “following exposure to an extreme traumatic stressor involving direct personal experience of an event that involves actual or threatened death or serious injury; other threat to one’s physical integrity; witnessing an event that involves death, injury, or threat to the physical integrity of another person; learning about unexpected or violent death, serious harm, threat of death or injury experienced by a family member or other close associate.” For veterans, the most common traumatic stressor contributing to a PTSD diagnosis is war-zone related stress. Non-war zone military experiences, such as the crash of a military aircraft, may also contribute to the development of PTSD. The PTSD screen is performed through a required national clinical reminder and is triggered for completion when the patient has his or her first visit at a VHA medical facility. The reminder typically remains active until it is completed. VHA requires that

1. PTSD screening is performed for every new patient and then is repeated every year for the first five years post-separation and every five years thereafter, unless there is a clinical need to re-screen earlier;

2. If the patient’s PTSD screen is positive, an acceptable provider must evaluate treatment needs and assess for suicide risk; and

3. If the provider determines a need for treatment, there is evidence of referral and coordination of care.

To assess whether the Facility complied with the requirements related to PTSD screening, diagnostic evaluation, and referral to specialty care, the OIG team reviewed relevant documents and interviewed key employees and managers. Additionally, the OIG reviewed the electronic health records (EHR) of 49 randomly selected outpatients who had a positive PTSD screen from July 1, 2016, through June 30, 2017. The OIG evaluated the following performance indicators:

- Completion of suicide risk assessment by acceptable provider within required timeframe
- Offer to patient of further diagnostic evaluation

---

59 VHA Handbook 1160.03, Programs for Veterans with Post-Traumatic Stress Disorder (PTSD), March 12, 2010 (rescinded November 16, 2017).
60 VHA Handbook 1160.03.
61 A PTSD screen is not required if the patient received a PTSD diagnosis in outpatient setting in the past year; has a life expectancy of 6 months or less; has severe cognitive impairment, including dementia; is enrolled in a VHA or community-based hospice program; or has a diagnosis of cancer of the liver, pancreas, or esophagus.
- Referral for diagnostic evaluation
- Completion of diagnostic evaluation within required timeframe

**Conclusion**

Generally, the OIG found general compliance with the above performance indicators. The OIG made no recommendations.
Long-term Care: Geriatric Evaluations

More than nine million veterans of all ages are enrolled with VA, and 46 percent of these veterans are age 65 and over. As a group, veterans experience more chronic disease and disability than their non-veteran peers. VA must plan for the growing health demands by aging veterans and to have mechanisms in place for delivering those services in an appropriate and cost-effective manner. Participants in geriatric evaluation (GE) programs have been shown to be significantly less likely to lose functional ability, experience health-related restrictions in their daily activities, or use home healthcare services.

In 1999, the Veterans Millennium Benefits and Healthcare Act mandated that the veterans’ standard benefits package include access to GE. This includes a comprehensive, multidimensional assessment and the development of an interdisciplinary plan of care. The healthcare team would then manage the patient with treatment, rehabilitation, health promotion, and social service interventions necessary for fulfillment of the plan of care by key personnel. Facility leaders must also evaluate the GE program through a review of program objectives, procedures for monitoring care processes and outcomes, and analyses of findings.

In determining whether the Facility provided an effective geriatric evaluation, OIG staff reviewed relevant documents and interviewed key employees and managers. Additionally, the team reviewed the EHRs of 47 randomly selected patients who received a GE from July 1, 2016, through June 30, 2017. The OIG evaluated the following performance indicators:

- Provision of or access to GE
- Program oversight and evaluation
  - Evidence of GE program evaluation
  - Evidence of performance improvement activities through leadership board
- Provision of clinical care
  - Medical evaluation by GE provider
  - Assessment by GE nurse

---

64 VHA Directive 1140.04.
66 Public Law 106-117.
68 VHA Directive 1140.04.
- Comprehensive psychosocial assessment by GE social worker
- Patient or family education
- Plan of care based on GE

- Geriatric management
  - Implementation of interventions noted in plan of care

**Conclusion**

Generally, the OIG noted compliance with provision of GE, provider and nursing evaluations, patient education, development of plans of care, and implementation of interventions when indicated. However, the OIG identified a deficiency with program oversight and evaluation that warranted a recommendation.

**Program Oversight and Evaluation**

VHA requires that GE performance improvement activities must be coordinated with quality management and reviewed by the leadership board responsible for oversight of all performance improvement activities at the Facility. This ensures that the leadership team reviews GE data and provides the opportunity to identify practice improvements, ensures appropriate actions were taken, and measures the effectiveness of actions on a regular basis.

The OIG noted that the GE program’s PI activities were reported to the Facility’s Home Based Primary Care, Community Living Center, Health Care Delivery and Clinical Executive Board Committees. However, the OIG did not find evidence that GE PI activities were reported and reviewed by the Facility’s QSV Committee which is responsible for monitoring quality of care and patient outcomes. Absence of reporting PI activities to the leadership board may cause delay in addressing GE issues and implementing appropriate action plans. Program managers believed they met the requirement by reporting GE PI activities to the Health Care Delivery Committee which was replaced by the Clinical Executive Board Committee, effective December 21, 2017.

**Recommendation 2**

2. The Facility Director ensures that the Quality, Safety, and Value Committee maintains oversight of all geriatric evaluation program quality improvement activities and monitors compliance.

69 VHA Directive 1140.04.
Facility concurred.

Target date for completion: December 2018

Facility response: The Facility Director will ensure that geriatric evaluation program quality improvement activities are added to the Quality, Safety, and Value Committee agenda and will monitor compliance of the quality improvement activities. Will monitor until 90% compliance is achieved for two consecutive quarters.
Women’s Health: Mammography Results and Follow-Up

In 2017, an estimated 252,710 new cases of invasive breast cancer and 40,610 breast cancer deaths were expected to occur among US women.⁷⁰ Timely screening, diagnosis, notification, and treatment are essential to early detection and optimal patient outcomes.

The Veteran’s Health Care Amendments of 1983 mandated VA provide veterans with preventive care, including breast cancer screening.⁷¹ The Veterans Health Care Act of 1992 also authorized VA to provide gender-specific services including mammography services to eligible women veterans.⁷²

VHA has established timeframes for clinicians to notify ordering providers and patients of mammography results. “Incomplete” and “probably benign” results must be communicated to the ordering provider within 30 days of the procedure and to the patient within 14 calendar days from the date the results are available to the ordering provider. “Suspicious” and “highly suggestive of malignancy” results must be communicated to the ordering provider within three business days of the procedure, and the recommended course of action should be communicated to the patient as soon as possible, with seven calendar days representing the outer acceptable limit. Communication with patients must be documented.⁷³

The OIG team examined whether the Facility complied with selected VHA requirements for the reporting of mammography results by reviewing relevant documents and interviewing selected employees and managers. The team also reviewed the EHRs of 49 randomly selected women veteran patients who received a mammogram from July 1, 2016, through June 30, 2017. The OIG evaluated the following performance indicators:

- Electronic linking of mammogram results to radiology order
- Scanning of hard copy mammography reports, if outsourced
- Inclusion of required components in mammography reports
- Communication of results and any recommended course of action to ordering provider
- Communication of results and any recommended course of action to patient

---

- Performance of follow-up mammogram if indicated
- Performance of follow-up study

**Conclusion**

Generally, the Facility met requirements with the above performance indicators. The OIG made no recommendations.
High-Risk Processes: Central Line-Associated Bloodstream Infections

TJC requires facilities to establish systematic infection prevention and control programs to reduce the risk of acquiring and transmitting infections. Central lines “refer to a broad category of intravascular (within blood vessels) devices used to administer fluids, medications, blood and blood products, and parenteral nutrition. Unlike the short, temporary catheters inserted into the peripheral vasculature,” central lines are threaded through a vein in the arm, chest, neck, or groin and advanced so that the furthest tip terminates at or close to the heart or in one of the great vessels.

The use of central lines has greatly facilitated the care provided to patients; however, they are not without their risks. The Centers for Disease Control and Prevention defines a central line-associated bloodstream infection (CLABSI) as a “primary bloodstream infection that develops in a patient with a central line in place. This type of infection occurs within the 48 hours of insertion and is not related to infection at another site.”

Infections occurring on or after the third calendar day following admission to an inpatient location are considered “healthcare-associated.” The patient’s age, underlying conditions, and gender are basic risk factors, but external risk factors such as prolonged hospitalization, multilumen central lines, and central line duration far outnumber the basic ones. External factors are associated with a 2.27-fold increased risk for mortality and increased healthcare costs.

The OIG’s review of these issues examined whether the Facility established and maintained programs to reduce the incidence of healthcare-associated bloodstream infections in intensive care unit patients with indwelling central lines. In addition to conducting manager and staff interviews, the OIG team reviewed committee minutes, the Infection Prevention/Control Risk Assessment, and other relevant documents. The team also reviewed the training records of 25 clinical employees involved in inserting and/or managing central lines. The OIG evaluated the following performance indicators:

- Presence of Facility policy on the use and care of central lines

---

74 TJC. Infection Prevention and Control: IC.01.03.01.
75 Association for Professionals in Infection Control and Epidemiology, Guide to Preventing Central Line-Associated Bloodstream Infections, 2015.
76 These are vessels that enter and leave the heart—superior and inferior vena cava, pulmonary artery, pulmonary vein, aorta.
79 Association for Professionals in Infection Control and Epidemiology, 2015.
• Performance of annual infection prevention risk assessment
• Evidence of routine discussion of CLABSI data and prevention outcome measures in committee minutes
• Provision of infection incidence data on CLABSI
• Education on reducing the risk of CLABSI for staff involved in inserting and/or managing central lines
• Educational materials about CLABSI prevention for patients and families
• Use of a checklist for central line insertion and maintenance

**Conclusion**

Generally, the OIG found general compliance with the above performance indicators. The OIG made no recommendations.
### Appendix A: Summary Table of Comprehensive Healthcare Inspection Program Review Findings

VA Outpatient Clinic Profiles

The VA outpatient clinics in communities within the catchment area of the Facility provide PC integrated with women’s health, MH, and telehealth services. Some also provide specialty care, diagnostic, and ancillary services. Table 8 provides information relative to each of the clinics.

Table 8. VA Outpatient Clinic Workload/Encounters and Specialty Care, Diagnostic, and Ancillary Services Provided (October 1, 2016, through September 30, 2017)

86 Includes all outpatient clinics in the community that were in operation as of February 15, 2018.
87 An encounter is a professional contact between a patient and a practitioner vested with responsibility for diagnosing, evaluating, and treating the patient’s condition.
88 Specialty care services refer to non-PC and non-MH services provided by a physician.
89 Diagnostic services include EKG, EMG, laboratory, nuclear medicine, radiology, and vascular lab services.
90 Ancillary services include chiropractic, dental, nutrition, pharmacy, prosthetic, social work, and weight management services.

**Source:** VHA Support Service Center

**Data Definition:** The average number of calendar days between an established patient’s PC completed appointment (clinic stops 322, 323, and 350, excluding Compensation and Pension appointments) and the earliest of three possible preferred (desired) dates (Electronic Wait List (EWL), Cancelled by Clinic Appointment, Completed Appointment) from the completed appointment date. The absence of reported data is indicated by “n/a.”
Data Definition: The percent of assigned PC patients discharged from any VA facility who have been contacted by a PC team member within two business days during the reporting period. Patients are excluded if they are discharged from an observation specialty and/or readmitted within two business days to any VA facility. Team members must have been assigned to the patient’s team at the time of the patient’s discharge. Team member identification is based on the primary provider on the encounter. Performance measure mnemonic “PACT17.” The absence of reported data is indicated by “n/a.”
**Data Definition:** This is a measure of where the patient receives his PC and by whom. A low percentage is better. The formula is the total VHA ER/Urgent Care Encounters While on Team (WOT) with a LIP divided by the number of PC Team Encounters WOT with an LIP plus the total number of VHA ER/Urgent Care Encounters WOT with an LIP. The absence of reported data is indicated by “n/a.”

Appendix E: VISN Director Comments

Department of Veterans Affairs Memorandum

Date: August 29, 2018
From: Director, Rocky Mountain Network (10N19)
Subj: CHIP Review of the Oklahoma City VA Health Care System, OK
To: Director, Los Angeles Office of Healthcare Inspections (54LA)
       Director, Management Review Service (VHA 10E1D MRS Action)

1. I have reviewed the findings, recommendations, and action plan of the Oklahoma City VA Health Care System. I am in agreement with the above.

(Original signed by:)
Ralph T. Gigliotti
VISN 19 Network Director

For accessibility, the original format of this appendix has been modified to comply with Section 508 of the Rehabilitation Act of 1973, as amended.
Appendix F: Facility Director Comments

Department of Veterans Affairs Memorandum

Date: August 29, 2018
From: Director, Oklahoma City VA Health Care System (635/00)
Subj: CHIP Review of the Oklahoma City VA Health Care System, OK
To: Director, Rocky Mountain Network (10N19)

1. I have reviewed the findings within the report of the CHIP Review of the Oklahoma City VA Health Care System, Oklahoma City, Oklahoma. I agree with the findings of the inspection.

2. The plan for corrective actions has been established.

(Original signed by):
Wade Vlosich
Director, Oklahoma City VA Health Care System

For accessibility, the original format of this appendix has been modified to comply with Section 508 of the Rehabilitation Act of 1973, as amended.
