Report Overview

This Office of Inspector General (OIG) Comprehensive Healthcare Inspection Program (CHIP) report provides a focused evaluation of the quality of care delivered in the inpatient and outpatient settings of the Beckley VA Medical Center and two outpatient clinics in West Virginia. The inspection covers key clinical and administrative processes that are associated with promoting quality care.

Comprehensive healthcare inspections are one element of the OIG’s overall efforts to ensure that the nation’s veterans receive high quality and timely VA healthcare services. The inspections are performed approximately every three years for each facility. The OIG selects and evaluates specific areas of focus each year.

The OIG team looks at leadership and organizational risks, and at the time of the inspection, focused on the following additional seven areas:

1. COVID-19 pandemic readiness and response
2. Quality, safety, and value
3. Registered nurse credentialing
4. Medication management (targeting remdesivir use)
5. Mental health (focusing on emergency department and urgent care center suicide risk screening and evaluation)
6. Care coordination (spotlighting inter-facility transfers)
7. High-risk processes (examining the management of disruptive and violent behavior)

The OIG conducted an unannounced virtual inspection of the Beckley VA Medical Center during the week of August 9, 2021. The OIG held interviews and reviewed clinical and administrative processes related to specific areas of focus that affect patient outcomes. Although the OIG reviewed a broad spectrum of processes, the sheer complexity of VA medical facilities limits inspectors’ ability to assess all areas of clinical risk. The findings presented in this report are a snapshot of the medical center’s performance within the identified focus areas at the time of the OIG inspection. Although it is difficult to quantify the risk of patient harm, the findings may help this medical center and other Veterans Health Administration (VHA) facilities identify

---

vulnerable areas or conditions that, if properly addressed, could improve patient safety and healthcare quality.

**Inspection Results**

The OIG noted opportunities for improvement in several areas reviewed and issued four recommendations to the Medical Center Director (Director), Chief of Staff, and Associate Director/Patient Care Services. These opportunities for improvement are briefly described below.

**Leadership and Organizational Risks**

At the time of the OIG’s virtual inspection, the medical center’s leadership team consisted of the Director, Chief of Staff, Associate Director/Patient Care Services, and Associate Director. The medical center’s leaders had worked together for over one year. The Associate Director, who was permanently assigned in November 2017, was the most tenured leader. The Director and Chief of Staff, who were assigned in April 2020, were the newest members of the leadership team. The Associate Director/Patient Care Services had served in the position since March 2020.

Organizational communications and accountability were managed through a committee reporting structure, with Executive Leadership Board oversight of several working groups. The Director served as the chairperson of the Executive Leadership Board, which had the authority and responsibility to establish policy, maintain quality care standards, and perform organizational management and strategic planning. Leaders monitored patient safety and care through the Quality, Safety & Value Council, which was responsible for tracking and trending quality of care and patient outcomes.

The fiscal year 2020 annual medical care budget increased approximately 31 percent compared to the previous year’s budget, and the Director reported using the funds for pandemic response efforts. Executive leaders were also able to discuss interim strategies to address clinical occupational shortages and explained that the medical center’s rural location was a factor in recruitment and retention challenges.

Employee survey data revealed general satisfaction with leaders; however, opportunities appeared to exist for the Chief of Staff to improve employees’ perceptions of leadership and the workplace, and for leaders to reduce staff feelings of moral distress at work. Scores for most executive leaders were notably higher than the medical center and VHA averages. Overall patient experience survey scores reflected similar or higher care ratings compared to VHA

---

2 VHA Support Service Center.

patients’ scores nationally. However, gender-specific survey results highlighted opportunities for leaders to improve female patients’ experiences with specialty care providers.

The VA Office of Operational Analytics and Reporting developed the Strategic Analytics for Improvement and Learning (SAIL) Value Model to help define performance expectations within VA with “measures on healthcare quality, employee satisfaction, access to care, and efficiency.”

The executive leaders were generally knowledgeable within their scope of responsibilities about selected VHA data used by the SAIL and Community Living Center SAIL measures and should continue to take actions to improve performance.

The inspection team also reviewed accreditation agency findings, sentinel events, and disclosures of adverse patient events and did not identify any substantial organizational risk factors. In individual interviews, the executive leadership team members were able to speak in depth about actions taken during the previous 12 months to maintain or improve organizational performance, employee satisfaction, or patient experiences.

**COVID-19 Pandemic Readiness and Response**

The OIG reported the results of the COVID-19 pandemic readiness and response evaluation for this medical center and other facilities in a separate publication to provide stakeholders with a more comprehensive picture of regional VHA challenges and ongoing efforts.

**Quality, Safety, and Value**

The medical center complied with requirements for a committee responsible for quality, safety, and value oversight functions; the Systems Redesign and Improvement Program; and protected peer reviews. However, the OIG identified a weakness with surgical work group meetings.

---

4 “Strategic Analytics for Improvement and Learning (SAIL) Value Model,” VHA Support Service Center, accessed March 6, 2020, [https://vssc.med.va.gov](https://vssc.med.va.gov). (This is an internal website not publicly accessible.)

5 VHA Directive 1149, *Criteria for Authorized Absence, Passes, and Campus Privileges for Residents in VA Community Living Centers*, June 1, 2017. Community living centers, previously known as nursing home care units, provide a skilled nursing environment and a variety of interdisciplinary programs for persons needing short- and long-stay services.

6 VHA Directive 1190, *Peer Review for Quality Management*, November 21, 2018. A sentinel event is an incident or condition that results in patient “death, permanent harm, or severe temporary harm and intervention required to sustain life.”

8 VHA Directive 1190. A peer review is a “critical review of care, performed by a peer,” to evaluate care provided by a clinician for a specific episode of care, identify learning opportunities for improvement, provide confidential communication of the results back to the clinician, and identify potential system or process improvements.
Medication Management
The medical center addressed many of the indicators of expected performance, including staff availability to receive remdesivir shipments, proper naming for medication orders, and adverse event reporting. However, the OIG found deficiencies with patient and caregiver education.

Mental Health
The medical center complied with requirements related to suicide prevention screening within the emergency department or urgent care center. However, the OIG found that staff responsible for suicide safety plan development had not completed the required training.

Care Coordination
Generally, the medical center met expectations for the existence of an inter-facility transfer policy, as well as monitoring and evaluation of inter-facility transfers. However, the OIG identified deficiencies with staff sending active medication lists and advance directives with patients to receiving facilities.

High-Risk Processes
The medical center met many of the requirements for the management of disruptive and violent behavior. However, the OIG identified deficiencies with staff training.

Conclusion
The OIG conducted a detailed inspection across eight key areas (two administrative and six clinical) and subsequently issued four recommendations for improvement to the Medical Center Director, Chief of Staff, and Associate Director/Patient Care Services. The number of recommendations should not be used as a gauge for the overall quality of care provided at this medical center. The intent is for medical center leaders to use the recommendations to help guide improvements in operations and clinical care. The recommendations address issues that may eventually interfere with the delivery of quality health care.
VA Comments

The Veterans Integrated Service Network Director and Medical Center Director agreed with the comprehensive healthcare inspection findings and recommendations and provided acceptable improvement plans (see appendixes G and H, pages 55–56, and the responses within the body of the report for the full text of the directors’ comments). The OIG considers recommendations 1–3 closed. The OIG will follow up on the planned action for the open recommendation until completed.

Purpose and Scope

The purpose of the Office of Inspector General (OIG) Comprehensive Healthcare Inspection Program (CHIP) is to conduct routine oversight of VA medical facilities that provide healthcare services to veterans. This report’s evaluation of the quality of care delivered in the inpatient and outpatient settings of the Beckley VA Medical Center and related community-based outpatient clinics examines a broad range of key clinical and administrative processes associated with positive patient outcomes. The OIG reports its findings to Veterans Integrated Service Network (VISN) and medical center leaders so that informed decisions can be made to improve care.¹

Effective leaders manage organizational risks by establishing goals, strategies, and priorities to improve care; setting expectations for quality care delivery; and promoting a culture to sustain positive change.² Effective leadership has been cited as “among the most critical components that lead an organization to effective and successful outcomes.”³ Figure 2 illustrates the direct relationships between leadership and organizational risks and the processes used to deliver healthcare to veterans.

Because of the COVID-19 pandemic, the OIG converted this site visit to a virtual inspection, paused physical inspection steps (especially those involved in the environment of care-focused review topic), and initiated a COVID-19 pandemic readiness and response evaluation.

As such, to examine risks to patients and the organization, the OIG focused on core processes in the following eight areas of administrative and clinical operations (see figure 2):⁴

1. Leadership and organizational risks
2. COVID-19 pandemic readiness and response⁵
3. Quality, safety, and value
4. Registered nurse credentialing

---

¹ VA administers healthcare services through a network of 18 regional offices nationwide referred to as the Veterans Integrated Service Network.
⁴ Virtual CHIP site visits address these processes during fiscal year 2021 (October 1, 2020, through September 30, 2021); they may differ from prior years’ focus areas.
5. Medication management (targeting remdesivir use)
6. Mental health (focusing on emergency department and urgent care center suicide risk screening and evaluation)
7. Care coordination (spotlighting inter-facility transfers)
8. High-risk processes (examining the management of disruptive and violent behavior)

**Figure 2.** Fiscal year (FY) 2021 comprehensive healthcare inspection of operations and services. 
*Source: VA OIG.*
Methodology

The Beckley VA Medical Center also provides care through two outpatient clinics in West Virginia. Additional details about the types of care provided by the medical center can be found in appendixes B and C.

To determine compliance with the Veterans Health Administration (VHA) requirements related to patient care quality and clinical functions, the inspection team reviewed OIG-selected clinical records, administrative and performance measure data, and accreditation survey reports. The team also interviewed executive leaders and discussed processes, validated findings, and explored reasons for noncompliance with staff.

The inspection examined operations from December 8, 2017, through August 13, 2021, the last day of the unannounced multiday evaluation. During the virtual site visit, the OIG did not receive any complaints beyond the scope of the inspection.

The OIG reported the results of the COVID-19 pandemic readiness and response evaluation for this medical center and other facilities in a separate publication to provide stakeholders with a more comprehensive picture of regional VHA challenges and ongoing efforts.

Oversight authority to review the programs and operations of VA medical facilities is authorized by the Inspector General Act of 1978. The OIG reviews available evidence within a specified scope and methodology and makes recommendations to VA leaders, if warranted. Findings and recommendations do not define a standard of care or establish legal liability.

This report’s recommendations for improvement address problems that can influence the quality of patient care significantly enough to warrant OIG follow-up until medical center leaders complete corrective actions. The Medical Center Director’s responses to the report recommendations appear within each topic area. The OIG accepted the action plans that medical center leaders developed based on the reasons for noncompliance.

The OIG conducted the inspection in accordance with OIG procedures and Quality Standards for Inspection and Evaluation published by the Council of the Inspectors General on Integrity and Efficiency.

---

6 The OIG did not review VHA’s internal survey results and instead focused on OIG inspections and external surveys that affect facility accreditation status.

7 The range represents the time period from the prior CHIP site visit to the completion of the unannounced, multiday virtual CHIP visit in August 2021.

Results and Recommendations

Leadership and Organizational Risks

Stable and effective leadership is critical to improving care and sustaining meaningful change within a VA medical center. Leadership and organizational risks can affect a medical center’s ability to provide care in the clinical focus areas. To assess this medical center’s risks, the OIG considered several indicators:

1. Executive leadership position stability and engagement
2. Budget and operations
3. Staffing
4. Employee satisfaction
5. Patient experience
6. Accreditation surveys and oversight inspections
7. Identified factors related to possible lapses in care and the medical center response
8. VHA performance data (medical center)
9. VHA performance data (community living center (CLC))

Executive Leadership Position Stability and Engagement

Because each VA facility organizes its leadership structure to address the needs and expectations of the local veteran population it serves, organizational charts may differ across facilities. Figure 3 illustrates this medical center’s reported organizational structure. The medical center had a leadership team consisting of the Medical Center Director (Director), Chief of Staff, Associate Director/Patient Care Services (ADPCS), and Associate Director. The Chief of Staff and ADPCS oversaw patient care, which required managing service directors and chiefs of programs.

---

11 VHA Directive 1149, Criteria for Authorized Absence, Passes, and Campus Privileges for Residents in VA Community Living Centers, June 1, 2017. CLCs, previously known as nursing home care units, provide a skilled nursing environment and a variety of interdisciplinary programs for persons needing short- and long-stay services.
At the time of the OIG inspection, the executive team had worked together for over one year, although the Associate Director had served in the role since 2017 (see table 1).

*Source: Beckley VA Medical Center Supervisory Human Resources Specialist (received August 9, 2021).*

The Director served as the chairperson of the Executive Leadership Board, which had the authority and responsibility to establish policy, maintain quality care standards, and perform organizational management and strategic planning. The Executive Leadership Board oversaw various working groups such as the Healthcare Operations, Organizational Health, and Healthcare Delivery Councils. These leaders monitored patient safety and care through the Quality, Safety & Value Council, which was responsible for tracking and trending quality of care and patient outcomes (see figure 4).
To help assess the medical center executive leaders’ engagement, the OIG interviewed the Director, Chief of Staff, ADPC, and Associate Director regarding their knowledge of various performance metrics and involvement and support of actions to improve or sustain performance. In individual interviews, the executive leaders were able to speak in depth about actions taken during the previous 12 months to maintain or improve organizational performance, employee satisfaction, or patient experiences. These are discussed in greater detail below.
Budget and Operations

The medical center’s FY 2020 annual medical care budget of $168,935,849 increased approximately 31 percent compared to the previous year’s budget of $129,365,372. When asked about the effect of this change on the medical center’s operations, the Director reported that the increased funds were used to support pandemic response efforts.

Staffing

The Veterans Access, Choice, and Accountability Act of 2014 required the OIG to determine, on an annual basis, the VHA occupations with the largest staffing shortages. Under the authority of the VA Choice and Quality Employment Act of 2017, the OIG conducts annual determinations of clinical and nonclinical VHA occupations with the largest staffing shortages within each medical facility. In addition, the OIG has demonstrated a linkage between staffing shortages and negative effects on patient care delivery.

Table 2 provides the top facility-reported clinical and nonclinical occupational shortages as noted in the OIG Determination of Veterans Health Administration’s Occupational Staffing Shortages, Fiscal Year 2020. The executive leaders confirmed that occupations listed in table 2 remained the top clinical and nonclinical shortages at the time of the OIG inspection. The Chief of Staff, ADPCS, and Associate Director explained that the medical center’s rural location was a factor in challenges with staff recruitment and retention. The ADPCS shared recent collaborative efforts between the Veterans Affairs Nursing Academic Partnership and a local nursing program in hopes of recruiting additional nursing staff. The Chief of Staff stated that they are actively recruiting specialty and mental health providers. The Chief of Staff also reported implementing interim strategies to address clinical occupational shortages such as hiring part-time staff to perform colonoscopies; using telemedicine to deliver care; initiating sharing agreements with other medical centers for needed services; and employing hospitalists and advanced practice

Employee Satisfaction

The All Employee Survey “is an annual, voluntary, census survey of VA workforce experiences. The data are anonymous and confidential.” Since 2001, the instrument has been refined several times in response to VA leaders’ inquiries on VA culture and organizational health. Although the OIG recognizes that employee satisfaction survey data are subjective, they can be a starting point for discussions, indicate areas for further inquiry, and be considered along with other information on medical center leaders.

To assess employee attitudes toward medical center leaders, the OIG reviewed employee satisfaction survey results from VHA’s All Employee Survey from October 1, 2019, through September 30, 2020. The same trend was noted for the Director, ADPCS, and Associate Director; however, scores related to the Chief of Staff were consistently lower than those for VHA and the medical center. The Chief of Staff explained that there had been several staff acting in the role prior to the selection of a permanent chief of staff, and a negative work environment created by a prior service chief contributed to the low scores.

---

19 “AES Survey History.”

20 Ratings are based on responses by employees who report to or are aligned under the Director, Chief of Staff, ADPCS, and Associate Director.

21 The OIG makes no comment on the adequacy of the VHA average for each selected survey element. The VHA average is used for comparison purposes only.

*The Servant Leader Index is a summary measure based on respondents’ assessments of their supervisors’ listening, respect, trust, favoritism, and response to concerns.

Table 4 summarizes employee attitudes toward the workplace as expressed in VHA’s All Employee Survey. The medical center averages for the selected survey questions were similar to the VHA averages. Selected scores related to the Director, ADPCS, and Associate Director were generally better than those for VHA and the medical center. However, opportunities appeared to exist for the Chief of Staff to improve employee perceptions of being able to do what is right without fear of reprisal. The OIG also noted opportunities for the Chief of Staff, ADPCS, and Associate Director to reduce employee feelings of moral distress at work (uncertainty about the right thing to do or inability to carry out what you believed to be the right thing).

VHA leaders have articulated that the agency “is committed to a harassment-free health care environment.” To this end, leaders initiated the “End Harassment” and “Stand Up to Stop Harassment Now!” campaigns to help create a culture of safety where staff and patients feel

22 “Stand Up to Stop Harassment Now!” Department of Veterans Affairs, accessed December 8, 2020, https://vaww.insider.va.gov/stand-up-to-stop-harassment-now/. Patient Experience

To assess patient experiences with the medical center, which directly reflect on its leaders, the OIG team reviewed survey results from October 1, 2019, through September 30, 2020. VHA’s Patient Experiences Survey Reports provide results from the Survey of Healthcare Experiences of Patients program. VHA uses industry standard surveys from the Consumer Assessment of Healthcare Providers and Systems program to evaluate patients’ experiences with their health care and support benchmarking its performance against the private sector.

23 “Stand Up to Stop Harassment Now!”
VHA also collects Survey of Healthcare Experiences of Patients data from Inpatient, Patient-Centered Medical Home (primary care), and Specialty Care surveys. The OIG reviewed responses to three relevant survey questions that reflect patients’ attitudes toward their healthcare experiences. Table 6 provides relevant survey results for VHA and the Beckley VA Medical Center. For this medical center, the overall patient satisfaction survey results reflected similar or higher care ratings than VHA averages. Patients appeared generally satisfied with the care provided.

In 2019, women were estimated to represent 10.1 percent of the total veteran population in the United States, and it is projected that women will represent 17.8 percent of living veterans by 2048. For these reasons, it is important for VHA to provide accessible and inclusive care for women veterans.

The OIG reviewed selected responses to several additional relevant questions that reflect patients’ experiences by gender, including those for Inpatient, Patient-Centered Medical Home

24 Ratings are based on responses by patients who received care at this medical center.

(primary care), and Specialty Care surveys (see tables 7–9). The results for male respondents were similar to or more favorable than the corresponding VHA averages. Scores for outpatient female respondents were more positive than those for female VHA respondents nationally, except for the score related to perceptions of specialty care providers. The Director and Chief of Staff acknowledged challenges in specialty care clinics and reported efforts to improve services by recruiting specialists, chartering committees to identify services that could be improved, engaging women veterans to share their ideas and speak up on what is important to them, and integrating “Whole Health” into primary care and mental health clinics.26

Accreditation Surveys and Oversight Inspections

To further assess leadership and organizational risks, the OIG reviewed recommendations from previous inspections and surveys—including those conducted for cause—by oversight and accrediting agencies to gauge how well leaders responded to identified problems. Table 10 summarizes the relevant medical center inspections most recently performed by the OIG and The

---

27 “Profile Definitions and Methodology: Joint Commission Accreditation,” American Hospital Directory, accessed December 12, 2020, [https://www.ahd.com/definitions/prof_accred.html](https://www.ahd.com/definitions/prof_accred.html). “The Joint Commission conducts for-cause unannounced surveys in response to serious incidents relating to the health and/or safety of patients or staff, or reported complaints. The outcomes of these types of activities may affect the accreditation status of an organization.”
Joint Commission (TJC).\textsuperscript{28} At the time of the OIG inspection, medical center leaders had completed action plans for all recommendations for improvement issued since the previous CHIP site visit conducted in December 2017. However, the two recommendations issued from a prior focused OIG report published on February 11, 2021, remained open.\textsuperscript{29}

The OIG team also noted the medical center’s current accreditation by the Commission on Accreditation of Rehabilitation Facilities and the College of American Pathologists.\textsuperscript{30} Additional results included the Long Term Care Institute’s inspection of the medical center’s CLC.\textsuperscript{31}

\textsuperscript{28} VHA Directive 1100.16, Accreditation of Medical Facility and Ambulatory Programs, May 9, 2017. TJC provides an “internationally accepted external validation that an organization has systems and processes in place to provide safe and quality-oriented health care.” TJC “has been accrediting VA medical facilities for over 35 years.” Compliance with TJC standards “facilitates risk reduction and performance improvement.”

\textsuperscript{29} VA OIG, Communication of Test Results and Oncology Scheduling Concerns at the Beckley VA Medical Center in West Virginia, Report No. 20-00339-69, February 11, 2021. As of October 2021, both recommendations had been closed.

\textsuperscript{30} VHA Directive 1170.01, Accreditation of Veterans Health Administration Rehabilitation Programs, May 9, 2017. The Commission on Accreditation of Rehabilitation Facilities “provides an international, independent, peer review system of accreditation that is widely recognized by Federal agencies.” VHA’s commitment “is supported through a system-wide, long-term joint collaboration with CARF [Commission on Accreditation of Rehabilitation Facilities] to achieve and maintain national accreditation for all appropriate VHA rehabilitation programs.” “About the College of American Pathologists,” College of American Pathologists, accessed February 20, 2019, https://www.cap.org/about-the-cap. According to the College of American Pathologists, for 75 years it has “fostered excellence in laboratories and advanced the practice of pathology and laboratory science.” Additionally, as stated in VHA Handbook 1106.01, Pathology and Laboratory Medicine Service (P&LMS) Procedures, January 29, 2016, VHA laboratories must meet the requirements of the College of American Pathologists.

\textsuperscript{31} “About Us,” Long Term Care Institute, accessed December 8, 2020, http://www.ltciorg.org/about-us/. The Long Term Care Institute is “focused on long term care quality and performance improvement, compliance program development, and review in long term care, hospice, and other residential care settings.”

**Identified Factors Related to Possible Lapses in Care and Medical Center Responses**

Within the healthcare field, the primary organizational risk is the potential for patient harm. Many factors affect the risk for patient harm within a medical center, including hazardous environmental conditions; poor infection control practices; and patient, staff, and public safety. Leaders must be able to understand and implement plans to minimize patient risk through consistent and reliable data and reporting mechanisms.
Table 11 lists the reported patient safety events from December 8, 2017 (the prior OIG CHIP site visit), through August 8, 2021.32

Source: Beckley VA Medical Center’s Patient Safety Manager and Risk Manager (received August 9 and 11, 2021).

The Director spoke knowledgeably about serious adverse event reporting processes, including discussing adverse events during daily morning meetings and receiving information about institutional disclosures from the Chief of Staff, Chief of Quality Management, Patient Safety Manager, and Risk Manager. The Director also described having a strong quality management department, and a dedicated Risk Manager and Patient Safety Manager. The Director further stated that leaders promoted patient safety goals and fostered a culture of safety throughout the medical center.33

32 It is difficult to quantify an acceptable number of adverse events affecting patients because even one is too many. Efforts should focus on prevention. Events resulting in death or harm and those that lead to disclosure can occur in either inpatient or outpatient settings and should be viewed within the context of the complexity of the facility. (The Beckley VA Medical Center is a medium complexity (2) affiliated medical center as described in appendix B.) According to VHA Directive 1190, Peer Review for Quality Management, November 21, 2018, a sentinel event is an incident or condition that results in patient “death, permanent harm, or severe temporary harm and intervention required to sustain life.” Additionally, as stated in VHA Directive 1004.08, Disclosure of Adverse Events to Patients, October 31, 2018, VHA defines an institutional disclosure of adverse events (sometimes referred to as an “administrative disclosure”) as “a formal process by which VA medical facility leaders together with clinicians and others, as appropriate, inform the patient or personal representative that an adverse event has occurred during the patient’s care that resulted in, or is reasonably expected to result in, death or serious injury, and provide specific information about the patient’s rights and recourse.” Lastly, in VHA Directive 1004.08, VHA defines large-scale disclosures of adverse events (sometimes referred to as “notifications”) as “a formal process by which VHA officials assist with coordinating the notification to multiple patients (or their personal representatives) that they may have been affected by an adverse event resulting from a systems issue.”

Veterans Health Administration Performance Data for the Medical Center

The VA Office of Operational Analytics and Reporting developed the Strategic Analytics for Improvement and Learning (SAIL) Value Model to help define performance expectations within VA with “measures on healthcare quality, employee satisfaction, access to care, and efficiency.”

Despite noted limitations for identifying all areas of clinical risk, the data are presented as one way to understand the similarities and differences between the top and bottom performers within VHA.

Figure 5 illustrates the medical center’s quality of care and efficiency metric rankings and performance compared with other VA facilities as of December 31, 2020. Figure 5 shows the medical center’s performance in the first through fifth quintiles. Those in the first and second quintiles (blue and green data points, respectively) are better-performing measures (for example, patient-center medical home (PCMH) survey access, Centers for Medicare & Medicaid Services (CMS) mortality (MORT), and adjusted length of stay (LOS)). Metrics in the fourth and fifth quintiles are those that need improvement and are denoted in orange and red, respectively (for example, patient safety indicator composite (PSI90), healthcare (HC) associated (assoc) infections, and behavioral health (BH90)).

The executive leaders were generally knowledgeable within their scope of responsibilities about VHA data and factors contributing to poor performance on specific SAIL measures. Leaders were able to speak in depth about actions taken during the previous 12 months to improve organizational performance. Leaders cited examples such as training clinicians to explore alternatives to in-dwelling catheters to reduce infections and requesting assistance from VA headquarters and other organizations to assist with restructuring behavioral health services.

Veterans Health Administration Performance Data for the Community Living Center

The CLC SAIL Value Model is a tool to “summarize and compare performance of CLCs in the VA.”[37] The model “leverages much of the same data” used in CMS’s Nursing Home Compare and provides a single resource “to review quality measures and health inspection results.”[38]

Figure 6 illustrates the medical center’s CLC quality rankings and performance compared with other VA CLCs as of December 31, 2020. Figure 6 displays the CLC metrics with high performance (blue and green data points) in the first and second quintiles (physical restraints—

---

[37] Center for Innovation and Analytics, Strategic Analytics for Improvement and Learning (SAIL) for Community Living Centers (CLC): A tool to examine Quality Using Internal VA Benchmarks, July 16, 2021.

[38] Center for Innovation and Analytics, Strategic Analytics for Improvement and Learning (SAIL) for Community Living Centers (CLC): A tool to examine Quality Using Internal VA Benchmarks. “In December 2008, The Centers for Medicare & Medicaid Services (CMS) enhanced its Nursing Home Compare public reporting site to include a set of quality ratings for each nursing home that participates in Medicare or Medicaid. The ratings take the form of several “star” ratings for each nursing home. The primary goal of this rating system is to provide residents and their families with an easy way to understand assessment of nursing home quality; making meaningful distinctions between high and low performing nursing homes.”
long-stay (LS), new or worse pressure ulcer (PU)–short-stay (SS), and high risk PU (LS)). Metrics in the fourth and fifth quintiles need improvement and are denoted in orange and red (for example, catheter in bladder (LS), falls with major injury (LS), and urinary tract infection (UTI) (LS)).

Executive leaders were also knowledgeable about poorly performing CLC SAIL measures. In individual interviews, leaders described actions taken to improve performance, which included staff increasing environmental checks to help reduce resident falls and leaders improving the CLC’s infrastructure to make it more of a home-like setting.

![Figure 6. Beckley CLC quality measure rankings (as of December 31, 2020).](image)

*Note: The OIG did not assess VA’s data for accuracy or completeness.*

### Leadership and Organizational Risks Findings and Recommendations

When the OIG conducted this virtual inspection, the executive leadership team consisted of the Director, Chief of Staff, ADPCS, and Associate Director, who had worked together for over one year. The Director served as the chairperson of the Executive Leadership Board, which had the

---

39 For data definitions of acronyms in the SAIL CLC measures, please see appendix F.
authority and responsibility to establish policy, maintain quality care standards, and perform organizational management and strategic planning.

The medical center’s FY 2020 annual medical care budget increased approximately 31 percent compared to the previous year’s budget. The executive leaders were able to discuss interim strategies to address clinical occupational shortages and added that the medical center’s rural location was a factor in recruitment and retention challenges.

Selected employee satisfaction survey responses demonstrated satisfaction with most of the leadership team and maintenance of an environment where staff felt respected, and discrimination was not tolerated. However, responses also highlighted opportunities for the Chief of Staff to improve employee perceptions toward leaders and workplace, and for leaders to reduce feelings of moral distress at work. Patient experience survey data generally implied satisfaction with the care provided but also revealed opportunities to improve female patients’ perceptions of specialty care providers.

The OIG’s review of the medical center’s accreditation findings, sentinel events, and disclosures did not identify any substantial organizational risk factors. Leaders were generally knowledgeable within their scope of responsibility about VHA data and factors contributing to poor performance on specific SAIL and CLC SAIL measures. In individual interviews, they were able to speak in depth about actions taken during the previous 12 months to maintain or improve organizational performance, employee satisfaction, or patient experiences.

The OIG made no recommendations.
COVID-19 Pandemic Readiness and Response

On March 11, 2020, due to the “alarming levels of spread and severity” of COVID-19, the World Health Organization declared a pandemic. VHA subsequently issued its COVID-19 Response Plan on March 23, 2020, which presents strategic guidance on prevention of viral transmission among veterans and staff and appropriate care for sick patients.

During this time, VA continued providing care to veterans and engaged its fourth mission, the “provision of hospital care and medical services during certain disasters and emergencies” to persons “who otherwise do not have VA eligibility for such care and services.” In effect, VHA facilities provide a safety net for the nation’s hospitals should they become overwhelmed—for veterans (whether previously eligible or not) and non-veterans.

Due to VHA’s mission-critical work in supporting both veteran and civilian populations during the pandemic, the OIG conducted an evaluation of the pandemic’s effect on the medical center and its leaders’ subsequent responses. The OIG analyzed performance in the following domains:

- Emergency preparedness
- Supplies, equipment, and infrastructure
- Staffing
- Access to care
- CLC patient care and operations
- Vaccine administration

The OIG also surveyed medical center staff to solicit their feedback and potentially identify any problematic trends and/or issues that may require follow-up.

---

42 38 U.S.C. § 1785(a); 38 C.F.R. § 17.86(b). VA’s missions include serving veterans through care, research, and training. 38 C.F.R. § 17.86 outlines VA’s fourth mission, the “[p]rovision of hospital care and medical services during certain disasters and emergencies…During and immediately following a disaster or emergency…VA under 38 U.S.C. § 1785 may furnish hospital care and medical services to individuals (including those who otherwise do not have VA eligibility for such care and services) responding to, involved in, or otherwise affected by that disaster or emergency.”
The OIG reported the results of the COVID-19 pandemic readiness and response evaluation for this medical center and other facilities in a separate publication to provide stakeholders with a more comprehensive picture of regional VHA challenges and ongoing efforts.\textsuperscript{44}

Quality, Safety, and Value

VHA’s goal is to serve as the nation’s leader in delivering high quality, safe, reliable, and veteran-centered care.\(^{45}\) To meet this goal, VHA requires that its facilities implement programs to monitor the quality of patient care and performance improvement activities and maintain Joint Commission accreditation.\(^{46}\) Many quality-related activities are informed and required by VHA directives, nationally recognized accreditation standards (such as TJC), and federal regulations. VHA strives to provide healthcare services that compare “favorably to the best of [the] private sector in measured outcomes, value, [and] efficiency.”\(^{47}\)

To determine whether VHA facilities have implemented and incorporated OIG-identified key processes for quality and safety into local activities, the inspection team evaluated the medical center’s committee responsible for quality, safety, and value oversight functions; its ability to review data, information, and risk intelligence; and its ability to ensure that key quality, safety, and value functions are discussed and integrated on a regular basis. Specifically, OIG inspectors examined the following requirements:

- Review of aggregated quality, safety, and value data
- Recommendation and implementation of improvement actions
- Monitoring of fully implemented improvement actions

The OIG reviewers also assessed the medical center’s processes for its Systems Redesign and Improvement Program, which supports “VHA’s transformation journey to become a High Reliability Organization.”\(^{48}\) Systems redesign and improvement processes drive organizational change toward the goal of “zero harm” and can create strong cultures of safety. VHA implemented systems redesign and improvement programs to “optimize Veterans’ experience by providing services to develop self-sustaining improvement capability.”\(^{49}\) The OIG team examined various requirements related to systems redesign and improvement:

- Designation of a systems redesign and improvement coordinator
- Tracking of facility-level performance improvement capability and projects
- Participation on the facility quality management committee and VISN Systems Redesign Review Advisory Group
- Staff education on performance improvement principles and techniques

\(^{45}\) Department of Veterans Affairs, *Veterans Health Administration Blueprint for Excellence*, September 21, 2014.
\(^{47}\) Department of Veterans Affairs, *Veterans Health Administration Blueprint for Excellence*.
\(^{49}\) VHA Directive 1026.01.
Next, the OIG assessed the medical center’s processes for conducting protected peer reviews of clinical care. Protected peer reviews, “when conducted systematically and credibly,” reveal areas for improvement (involving one or more providers’ practices) and can result in both immediate and “long-term improvements in patient care.” Peer reviews are “intended to promote confidential and non-punitive” processes that consistently contribute to quality management efforts at the individual provider level. The OIG team examined the completion of the following elements:

- Evaluation of aspects of care (for example, choice and timely ordering of diagnostic tests, prompt treatment, and appropriate documentation)
- Peer review of all applicable deaths within 24 hours of admission to the hospital
- Peer review of all completed suicides within seven days after discharge from an inpatient mental health unit
- Completion of final reviews within 120 calendar days
- Implementation of improvement actions recommended by the Peer Review Committee for Level 3 peer reviews
- Quarterly review of the Peer Review Committee’s summary analysis by the Executive Committee of the Medical Staff

Finally, the OIG assessed the medical center’s surgical program. The VHA National Surgery Office provides oversight for surgical programs and “promotes systems and practices that enhance high quality, safe, and timely surgical care.” The National Surgery Office’s principles, which guide the delivery of comprehensive surgical services at local, regional, and national levels, include “(1) Operational oversight of surgical services and quality improvement activities;

---

50 VHA Directive 1190, Peer Review for Quality Management, November 21, 2018. A peer review is a “critical review of care, performed by a peer,” to evaluate care provided by a clinician for a specific episode of care, identify learning opportunities for improvement, provide confidential communication of the results back to the clinician, and identify potential system or process improvements. In the context of protected peer reviews, “protected” refers to the designation of review as a confidential quality management activity under 38 U.S.C. § 5705 as “a Department systematic health-care review activity designated by the Secretary to be carried out by or for the Department for improving the quality of medical care or the utilization of health-care resources in VA facilities.”

51 VHA Directive 1190.

52 VHA Directive 1190.

53 VHA Directive 1190.

54 VHA Directive 1190. A peer review is assigned a Level 3 when “most experienced and competent clinicians would have managed the case differently.”

(2) Policy development; (3) Data stewardship; and (4) Fiduciary responsibility for select specialty programs.” The medical center’s performance was assessed on several dimensions:

- Assignment and duties of a chief of surgery
- Assignment and duties of a surgical quality nurse (registered nurse)
- Establishment of a surgical work group with required members who meet at least monthly
- Surgical work group tracking and review of quality and efficiency metrics
- Investigation of adverse events

The OIG reviewers interviewed senior managers and key quality, safety, and value employees and evaluated meeting minutes, systems redesign and improvement documents and reports, protected peer reviews, National Surgery Office reports, and other relevant information.

**Quality, Safety, and Value Findings and Recommendations**

The medical center complied with requirements for a committee responsible for quality, safety, and value oversight functions; the Systems Redesign and Improvement Program; and protected peer reviews. However, the OIG identified a weakness with surgical work group meetings.

VHA requires medical facility directors to ensure that facilities with surgery programs have a surgical work group that meets at least monthly. The OIG reviewed Surgical Workgroup Committee meeting minutes from August 27, 2020, through July 22, 2021, and found that the committee did not meet for 3 of 12 months (25 percent). The Surgical Workgroup Committee cancelled its meetings in September, November, and December 2020. These meeting cancellations may have resulted in the committee’s inability to monitor surgical performance improvement activities and recommend corrective actions to the Director. The Chief of Staff (who also served as the interim Chief of Surgery) explained that the previous Chief of Surgery changed the meeting frequency from monthly to quarterly and believed this met the requirement.

56 “NSO Reporting, Resources, & Tools.”
58 For CHIP visits, the OIG selects performance indicators based on VHA or regulatory requirements or accreditation standards and evaluates these for compliance.
59 VHA Directive 1102.01(2).
60 This committee was originally called the Operative, Anesthesia and other Invasive Procedure Review Committee; it is recorded in figure 4 as Operative & Invasive. The name was changed to the Surgical Workgroup Committee by the previous Chief of Surgery in February 2021.
Recommendation 1

1. The Medical Center Director evaluates and determines any additional reasons for noncompliance and makes certain that the Surgical Workgroup Committee meets at least monthly.61

Medical center concurred.

Target date for completion: Completed

Medical center response: The Chief of Staff determined the noncompliance was related to the previous Chief of Surgery’s misunderstanding of the requirements. Once the Chief of Staff took over the duties of Chief of Surgery, the noncompliance was identified, and the meetings were compliant going forward. The Chief of Staff continued to serve in the capacity of the Chief of Surgery until December 5, 2021, when a permanent replacement was named. The Surgical Workgroup Committee has convened with all required participants for seven consecutive months (September 2021–March 2022), remaining at 100% compliance. Compliance was monitored by the Quality, Safety & Value Council that is chaired by the Medical Center Director.

We request closure of this recommendation based on the evidence provided above.

---

61 The OIG reviewed evidence sufficient to demonstrate that medical center leaders had completed improvement actions, and therefore, closed the recommendation before publication of the report.
Registered Nurse Credentialing

VHA has defined procedures for the credentialing of registered nurses that include verification of “professional education, training, licensure, certification, registration, previous experience, including documentation of any gaps (greater than 30 days) in training and employment, professional references, adverse actions, or criminal violations, as appropriate.” Licensure is defined by VHA as “the official or legal permission to practice in an occupation, as evidenced by documentation issued by a State in the form of a license and/or registration.”

VA requires all registered nurses to hold at least one active, unencumbered license. Registered nurses who hold a license in more than one state are not eligible for appointment if a state has terminated the license for cause or if the registered nurse voluntarily relinquished the license after written notification from the state of potential termination for cause. When an action has been “taken against [an] applicant’s sole license or against any of the applicant’s licenses, a review by the Chief, Human Resources Management Service, or the Regional Counsel, must be completed to determine whether the applicant satisfies VA’s licensure requirements,” and documented as required. Additionally, all current and previously held licenses must be verified from the primary or original source and documented in VetPro, VHA’s electronic credentialing system, prior to appointment to a VA medical facility.

The OIG assessed compliance with VA licensure requirements by conducting interviews with key managers and reviewing relevant documents for 35 registered nurses hired from July 1, 2020, through July 11, 2021. The OIG determined whether

- the registered nurses were free from potentially disqualifying licensure actions, or
- the Chief, Human Resources Management Service or Regional Counsel determined that the registered nurses met VA licensure requirements.

The OIG also reviewed the credentialing files for 30 of the 35 registered nurses to determine whether medical center staff completed primary source verification prior to the appointment.

---

62 VHA Directive 2012-030, Credentialing of Health Care Professionals, October 11, 2012. (This directive was replaced on September 15, 2021, by VHA Directive 1100.20, Credentialing of Health Care Providers. The two documents contain similar language regarding credentialing procedures.)

64 VHA Directive 2012-030, replaced by VHA Directive 1100.20. The two documents contain similar language regarding RN licenses. “Definition of Unencumbered license,” Law Insider, accessed December 3, 2020, https://www.lawinsider.com/dictionary/unencumbered-license. An unencumbered license is “a license that is not revoked, suspended, or made probationary or conditional by the licensing or registering authority in the respective jurisdiction as a result of disciplinary action.”

Registered Nurse Credentialing Findings and Recommendations

The medical center generally met the requirements listed above. The OIG made no recommendations.
Medication Management: Remdesivir Use in VHA

On May 1, 2020, the Food and Drug Administration (FDA) authorized the emergency use of remdesivir. At that time, remdesivir was an unapproved, investigational antiviral medication for the treatment of adults and children hospitalized with severe COVID-19. The FDA provided information on specific laboratory tests to be ordered prior to and during the administration of remdesivir. Additionally, the FDA required providers to report potentially related adverse events.

VA issued a memorandum on May 8, 2020, which outlined the use of remdesivir under the FDA’s Emergency Use Authorization criteria. Due to the limited supply and specific storage requirements of remdesivir, VA needed someone to be available 24 hours a day, 7 days a week to accept overnight, cold-chain shipments of the drug and report any unused medication to the Emergency Pharmacy Services group.

On August 28, 2020, the FDA amended the Emergency Use Authorization criteria for remdesivir to include “suspected or laboratory-confirmed COVID-19 in all hospitalized adult and pediatric patients.” The FDA subsequently approved remdesivir on October 22, 2020, for use in adult patients requiring hospitalization for the treatment of COVID-19.

To determine whether VHA facilities complied with requirements related to the administration of remdesivir, the OIG interviewed key employees and managers and reviewed electronic health records of eight patients who were administered remdesivir under Emergency Use Authorization from May 8 through October 21, 2020. The OIG assessed the following performance indicators:

- Staff availability to receive medication shipments
- Medication orders used proper name

69 Gilead Sciences, Fact Sheet for Health Care Providers: Emergency Use Authorization (EUA) of Veklury (remdesivir).

70 Assistant Under Secretary for Health for Operations Memorandum, Remdesivir Distribution for Department of Veterans Affairs (VA) Patients, May 8, 2020.

71 Centers for Disease Control and Prevention, Vaccine Storage and Handling Kit, May 2014. “The cold chain begins with the cold storage unit at the manufacturing plant, extends through transport of vaccine(s) to the distributor, then delivery and storage at the provider facility, and ends with administration of vaccine to the patient. Appropriate storage conditions must be maintained at every link in the cold chain.” Assistant Under Secretary for Health for Operations Memorandum, Remdesivir Distribution for Department of Veterans Affairs (VA) Patients.

• Staff determined patients met criteria for receiving medication prior to administration

• Required testing completed prior to medication administration for
  o Potential pregnancy
  o Kidney assessment (estimated glomerular filtration rate)\textsuperscript{74}
  o Liver assessment (alanine transferase or serum glutamic pyruvic transaminase)\textsuperscript{75}

• Patient/caregiver education provided

• Staff reported any adverse events to the FDA

**Medication Management Findings and Recommendations**

The OIG team observed general compliance with many elements of expected performance listed above. However, the OIG identified deficiencies with patient and caregiver education.

Under the Emergency Use Authorization, the VA Pharmacy Benefits Management Services required healthcare providers to provide the *Fact Sheet for Patients and Patients/Caregivers*; inform patients or caregivers that remdesivir was not an FDA-approved medication; provide the option to refuse the medication; and advise patients or caregivers of known risks, benefits, and alternatives to remdesivir prior to administration.\textsuperscript{76} For the eight patients who received remdesivir, the OIG determined that healthcare providers did not

• provide any of the patients or caregivers with the *Fact Sheet for Patients and Patients/Caregivers*,

• inform 50 percent of patients or caregivers that remdesivir was not an FDA-approved medication,

• inform any of the patients or caregivers of the option to refuse remdesivir, or

• advise any of the patients or caregivers of the known risks, benefits, and alternatives to remdesivir prior to administration.

\textsuperscript{74} “Estimated Glomerular Filtration Rate (eGFR),” National Kidney Foundation, accessed December 9, 2020, [https://www.kidney.org/atoz/content/gfr](https://www.kidney.org/atoz/content/gfr). “Estimated glomerular filtration rate [eGFR] is the best test to measure your level of kidney function and determine your stage of kidney disease.”

\textsuperscript{75} “Alanine transferase,” National Cancer Institute, accessed December 9, 2020, [https://www.cancer.gov/publications/dictionaries/cancer-terms/def/alanine-transferase](https://www.cancer.gov/publications/dictionaries/cancer-terms/def/alanine-transferase). Alanine transferase, also referred to as serum glutamate pyruvate transaminase, is “an enzyme found in the liver and other tissues,” of which a high level may be indicative of liver damage.

This could have resulted in patients or caregivers lacking the information needed to make a fully informed decision to receive the medication. The Associate Chief of Pharmacy stated that providers were aware of the requirements but did not document patient or caregiver discussions because the medical record lacked a standardized template.

Given the FDA’s approval of remdesivir for use in adult patients hospitalized with COVID-19, the OIG made no recommendations related to the Emergency Use Authorization requirements.\textsuperscript{77}

\textsuperscript{77} Food and Drug Administration, “FDA News Release: FDA Approves First Treatment for COVID-19.”
Mental Health: Emergency Department and Urgent Care Center
Suicide Risk Screening and Evaluation

Suicide prevention remains a top priority for VHA. Suicide is the 10th leading cause of death, with over 47,000 lives lost across the United States in 2019. The suicide rate for veterans was 1.5 times greater than for nonveteran adults and estimated to represent approximately 13.8 percent of all suicide deaths in the United States during 2018. However, suicide rates among veterans who recently used VHA services decreased by 2.4 percent between 2017 and 2018.

VHA has implemented various evidence-based approaches to reduce veteran suicides. In addition to expanded mental health services and community outreach, VHA has adopted a three-phase process to screen and assess for suicide risk in most clinical settings. The phases include primary and secondary screens and a comprehensive assessment. However, screening for patients seen in emergency departments or urgent care centers begins with the secondary screen, the Columbia-Suicide Severity Rating Scale, and subsequent completion of the Comprehensive Suicide Risk Assessment when screening is positive. The OIG examined whether staff initiated the Columbia-Suicide Severity Rating Scale and completed all required elements.

Additionally, VHA requires intermediate, high-acute, or chronic risk-for-suicide patients to have a suicide safety plan completed or updated prior to discharge from the emergency department or urgent care center. The medical center was assessed for its adherence to the following requirements for suicide safety plans:

- Completion of suicide safety plans by required staff
- Completion of mandatory training by staff who develop suicide safety plans

To determine whether VHA facilities complied with selected requirements for suicide risk screening and evaluation within emergency departments and urgent care centers, the OIG inspection team interviewed key employees and reviewed relevant documents;

---

80 Office of Mental Health and Suicide Prevention, 2020 National Veteran Suicide Prevention Annual Report.

81 Deputy Under Secretary for Health for Operations and Management (DUSHOM) Memorandum, Suicide Risk Screening and Assessment Requirements, May 23, 2018; Department of Veterans Affairs, Department of Veterans Affairs (VA) Suicide Risk Identification Strategy: Minimum Requirements by Setting, December 18, 2019.

82 DUSHOM Memorandum, Eliminating Veteran Suicide: Implementation Update on Suicide Risk Screening and Evaluation (Risk ID Strategy) and the Safety Planning for Emergency Department (SPED) Initiatives, October 17, 2019.
• the electronic health records of 49 randomly selected patients who were seen in the emergency department or urgent care center from December 1, 2019, through August 31, 2020; and
• staff training records.

**Mental Health Findings and Recommendations**

The medical center complied with requirements related to suicide prevention screening within the emergency department or urgent care center. However, the OIG found that staff responsible for suicide safety plan development had not completed the required training.

VHA requires staff to complete mandatory suicide safety plan training prior to developing suicide safety plans with patients. The OIG reviewed the training records for 21 staff responsible for suicide safety plan development and found that four (19 percent) lacked evidence that staff completed the mandatory training. Lack of training could prevent staff from providing optimal treatment to veterans who are at risk for suicide. The Chief, Mental Health Integrated Clinical Community attributed the noncompliance to a lack of oversight by the interim rotating mental health leaders during the time when the chief, mental health integrated clinical community position was vacant.

**Recommendation 2**

2. The Chief of Staff evaluates and determines any additional reasons for noncompliance and ensures staff complete mandatory suicide safety plan training prior to developing suicide safety plans.  

---

83 Assistant Under Secretary for Health for Clinical Services/Chief Medical Officer Memorandum, *Update to Safety Planning in the Emergency Department (ED): Suicide Safety Planning and Follow-up Interventions*, October 1, 2021.

84 The OIG reviewed evidence sufficient to demonstrate that medical center leaders had completed improvement actions, and therefore, closed the recommendation before publication of the report.
Medical center concurred.

Target date for completion: Completed

Medical center response: The Chief of Staff evaluated and determined no additional reasons for noncompliance. Upon notification of the findings during the suicide safety plan session, the Chief of Mental Health contacted the four individuals that lacked the mandatory training and removed them from the emergency department rotation schedule until their training requirements were completed. Once the Chief of Mental Health confirmed the individuals had completed the required training, the individuals were placed back into the emergency department rotation schedule for suicide safety plan development. To track ongoing compliance with current and each new employee, the Chief of Mental Health maintains a spreadsheet to track suicide safety plan development training for staff. This spreadsheet demonstrates sustainment of this action for the two new employees since September 2021. 100% of staff responsible for suicide safety plan development were compliant by September 1, 2021.

We request closure of this recommendation based on the evidence provided above.
Care Coordination: Inter-facility Transfers

Inter-facility transfers are necessary to provide access to specific providers, services, or levels of care. While there are inherent risks in moving an acutely ill patient between facilities, there is also risk in not transferring the patient when his or her needs can be better managed at another facility.\textsuperscript{85}

VHA medical facility directors are “responsible for ensuring that a written policy is in effect that ensures the safe, appropriate, orderly, and timely transfer of patients.”\textsuperscript{86} Further, VHA staff are required to use the VA Inter-Facility Transfer Form or a facility-defined equivalent note in the electronic health record to monitor and evaluate all transfers.\textsuperscript{87}

The medical center was assessed for its adherence to various requirements:

- Existence of a facility policy for inter-facility transfers
- Monitoring and evaluation of inter-facility transfers
- Completion of all required elements of the Inter-Facility Transfer Form or facility-defined equivalent by the appropriate provider(s) prior to patient transfer
- Transmission of patient’s active medication list and advance directive to the receiving facility
- Communication between nurses at sending and receiving facilities

To determine whether the medical center complied with OIG-selected inter-facility transfer requirements, the inspection team reviewed relevant documents and interviewed key employees. The team also reviewed the electronic health records of 50 patients who were transferred from the medical center due to urgent needs to a VA or non-VA facility from July 1, 2019, through June 30, 2020.

Care Coordination Findings and Recommendations

The OIG observed general compliance with requirements regarding a facility policy for inter-facility transfers and the monitoring and evaluation of inter-facility transfers. However, the OIG found deficiencies with transmission of patients’ active medication lists and advance directives to receiving facilities.

\textsuperscript{86} VHA Directive 1094.
\textsuperscript{87} VHA Directive 1094. A completed VA Inter-Facility Transfer Form or an equivalent note communicates critical information to facilitate and ensure safe, appropriate, and timely transfer. Critical elements include documentation of patients’ informed consent, medical and/or behavioral stability, mode of transportation and appropriate level of care required, identification of transferring and receiving physicians, and proposed level of care after transfer.
VHA requires that “all pertinent medical records available, including an active patient medication list and any medications given to the patient prior to transfer [be sent] with the patient, including documentation of the patient’s advance directive made prior to transfer, if any.” The OIG estimated that 71 percent of electronic health records (95% CI: 57.4 and 83.3 percent) lacked evidence that staff sent an active medication list to the receiving facility, which is statistically significantly above the 10 percent deficiency benchmark. Additionally, of the 13 transferred patients who had a completed advance directive, the OIG did not find evidence that staff sent a copy to the receiving facility for 5 of them. This could have resulted in incorrect treatment decisions that compromise patient safety, or the inability of staff at the receiving facility to immediately determine patient preferences regarding their health care. The Chief, Acute Care Service Line and the Emergency Department Director attested that staff sent copies of the medication lists and advanced directives with every patient transfer, but the transfer form lacked a section to document it. The Chief, Acute Care Service Line also attributed noncompliance to staff’s lack of attention to detail. Due to the low number of patients identified for the advance directive review, the OIG made no recommendation for this requirement.

**Recommendation 3**

3. The Chief of Staff and Associate Director/Patient Care Services evaluate and determine any additional reasons for noncompliance and ensure staff send active medication lists to receiving facilities during inter-facility transfers.89

---

88 VHA Directive 1094.

89 The OIG reviewed evidence sufficient to demonstrate that medical center leaders had completed improvement actions, and therefore, closed the recommendation before publication of the report.
Medical center concurred.

Target date for completion: Completed

Medical center response: The Chief of Staff and Associate Director/Patient Care Services evaluated and determined no additional reasons for noncompliance. Upon notification of the noncompliance, the Chief, Acute Care Service Line educated 100% of Emergency Room providers & staff regarding active medication lists and sending the list to the receiving facility. To track compliance, the Chief, Acute Care Service and the Transfer Coordinator updated the transfer log to include notation of medication list sent and review of each patient completed. The Transfer Coordinator reviews this log daily to ensure compliance. The transfer logs were reported to the Quality, Safety & Value Council as well as the Executive Leadership Board for a total of six months with an overall compliance rate of 99%. A total of 279 transfers took place from October 1–February 28 with three fallouts noted in FY 22 that were all related to new providers in the Emergency Department. All three providers were reeducated by the Chief, Acute Care Service Line.

We request closure of this recommendation based on the evidence provided above.
High-Risk Processes: Management of Disruptive and Violent Behavior

VHA defines disruptive behavior as “behavior by any individual that is intimidating, threatening, dangerous, or that has, or could, jeopardize the health or safety of patients, Department of Veterans Affairs (VA) employees, or individuals at the facility.”

Balancing the rights and healthcare needs of violent and disruptive patients with the health and safety of other patients, visitors, and staff poses a significant challenge for VHA facilities. VHA has “committed to reducing and preventing disruptive behaviors and other defined acts that threaten public safety through the development of policy, programs, and initiatives aimed at patient, visitor, and employee safety.” The OIG examined various requirements for the management of disruptive and violent behavior:

- Development of a policy for reporting and tracking disruptive behavior
- Implementation of an employee threat assessment team
- Establishment of a disruptive behavior committee or board that holds consistently attended meetings
- Use of the Disruptive Behavior Reporting System to document the decision to implement an Order of Behavioral Restriction
- Patient notification of an Order of Behavioral Restriction
- Completion of the annual Workplace Behavioral Risk Assessment with involvement from required participants

---

91 VHA Directive 2012-026.
92 VHA Directive 2012-026. An employee threat assessment team is “a facility-level, interdisciplinary team whose primary charge is using evidence-based and data-driven practices for addressing the risk of violence posed by employee-generated behavior(s), that are disruptive or that undermine a culture of safety.”
93 VHA Directive 2012-026. VHA defines a disruptive behavior committee or board as “a facility-level, interdisciplinary committee whose primary charge is using evidence-based and data-driven practices for preventing, identifying, assessing, managing, reducing, and tracking patient-generated disruptive behavior.”
94 DUSHOM Memorandum, Actions Needed to Ensure Medical Facility Workplace Violence Prevention Programs (WVPP) Meet Agency Requirements, July 20, 2018. VA requires each medical facility’s disruptive behavior committee “to use the Disruptive Behavior Reporting System (DBRS) to document a decision to implement an Order of Behavioral Restriction (OBR) and to document notification of a patient when an OBR is issued.”
95 DUSHOM Memorandum, Workplace Behavioral Risk Assessment (WBRA), October 19, 2012. The Workplace Behavioral Risk Assessment is a “data-driven process that evaluates the unique constellation of factors that affect workplace safety. It enables facilities to make informed, supportable decisions regarding the level of PMDB [Prevention and Management of Disruptive Behavior] training needed to sustain a culture of safety in the workplace.”
VHA also requires that all staff complete part 1 of the prevention and management of disruptive behavior training within 90 days of hire. The Workplace Behavioral Risk Assessment results are used to assign additional levels of training. When the assessment results deem a facility location as low or moderate risk, staff working in the area are also required to complete part 2 of the training. When results indicate high risk, staff are required to complete parts 1, 2, and 3 of the training. VHA also requires that employee threat assessment team members complete the appropriate team-specific training. The OIG assessed staff compliance with the completion of required training.

To determine whether VHA facilities implemented and incorporated OIG-identified key processes for the management of disruptive and violent behavior, the inspection team examined relevant documents and training records and interviewed key managers and staff.

**High-Risk Processes Findings and Recommendations**

The OIG found the medical center met many of the requirements for the management of disruptive and violent behavior. However, the OIG identified opportunities for improvement with staff training.

VHA requires that staff complete prevention and management of disruptive behavior training based on the risk level assigned to their work area. The OIG found that none of the 30 selected staff completed the required training. This could result in staff’s lack of awareness, preparedness, and precautions when responding to disruptive behavior. The Deputy Chief of Police reported that staff did not complete the training because medical center leaders suspended face-to-face training to prevent exposure to COVID-19.

---

97 DUSHOM Memorandum, *Actions Needed to Ensure Medical Facility Workplace Violence Prevention Programs (WVPP) Meet Agency Requirements*.

98 DUSHOM Memorandum, *Update to Prevention and Management of Disruptive Behavior (PMDB) Training Assignments*.
Recommendation 4

4. The Medical Center Director evaluates and determines any additional reasons for noncompliance and ensures all staff complete the required prevention and management of disruptive behavior training based on the risk level assigned to their work area.99

Medical center concurred.

Target date for completion: September 1, 2022

Medical center response: The Medical Center Director evaluated and determined that due to current COVID pandemic restrictions, all portions of the Prevention and Management of Disruptive Behavior (PMDB) training except for Level 1 have been suspended due to face-to-face requirements. The medical center has now identified an option for instructor-led virtual training for Level 2–low risk. Level 2–mod/high risk still requires in-person skills check-off. The PMDB Chairperson met with the Education Coordinator to assess current PMDB training status. As of April 7, 2022, the percentage of staff requiring training annually are: Part I of PMDB Training - 100%, Part II Low - 36%, Part II Moderate - 12%. Beginning on April 25, 2022, the medical center will begin having virtual classes for Part II Low Risk two days per week and train 16–32 staff per week. Approximately 323 employees will need to be trained on this level. The estimated completion date to train staff on Part II Low Risk is July 30, 2022. Part II Moderate/High Risk training is dependent upon COVID restrictions and/or expanded trainer pool as face-to-face skill check-off is required. Additional support has been approved by the Medical Center Director to complete the training and ensure the medical center remains in compliance going forward. A team member from each service line will be asked to complete the PMDB trainer course. Once PMDB trainers are identified, vetted through executive leadership, and training is completed, the medical center will require a three-year commitment to PMDB training. With 1 face-to-face training per week for 105 staff; the medical center’s estimated completion date is September 1, 2022. Monthly updates will be reported to the Quality, Safety & Value Council until the medical center is at 100% compliance and a plan is in place for annual training.

99 The OIG recognizes that COVID-19 has affected facility operations and makes no comment on the timeline for safely accomplishing this important training.
Report Conclusion

The OIG acknowledges the inherent challenges of operating VA medical facilities, especially during times of unprecedented stress on the U.S. healthcare system. To assist leaders in evaluating the quality of care at their medical center, the OIG conducted a detailed review of eight clinical and administrative areas and provided four recommendations on issues that may adversely affect patients. The number of recommendations does not reflect the overall caliber of services delivered at this medical center. However, the OIG’s findings illuminate areas of concern, and the recommendations may help guide improvement efforts. A summary of recommendations is presented in appendix A.
Appendix A: Comprehensive Healthcare Inspection Program Recommendations

The table below outlines four OIG recommendations aimed at reducing vulnerabilities that may lead to patient and staff safety issues or adverse events. The recommendations are attributable to the Medical Center Director, Chief of Staff, and ADPCS. The intent is for these leaders to use the recommendations to guide improvements in operations and clinical care. The recommendations address findings that, if left unattended, may potentially interfere with the delivery of quality health care.
