1. Introduction

1.1. Purpose

The purpose of these Release Notes is to identify enhancements to the Admission Discharge Transfer (ADT) package related to the ICD-10 Follow On Class 1 Software Remediation Project contained in patch DG*5.3*850.

1.2. Background

On January 16, 2009, the Centers for Medicare & Medicaid Services (CMS) released a final rule for replacing the 30-year-old International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) code set with International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) and International Classification of Diseases, Tenth Revision, Procedure Coding System (ICD-10-PCS) with dates of service, or dates of discharge, for inpatients that occur on or after the ICD-10 activation date.

The classification system consists of more than 68,000 codes, compared to approximately 13,000 ICD-9-CM codes. There are nearly 87,000 ICD-10-PCS codes, while ICD-9-CM has nearly 3,800 procedure codes. Both systems also expand the number of characters allotted from five and four respectively to seven alpha-numeric characters. This value does not include the decimal point, which follows the third character for the ICD-10-CM code set. There is no decimal point in the ICD-10-PCS code set. These code sets have the potential to reveal more about quality of care, so that data can be used in a more meaningful way to better understand complications, better design clinically robust algorithms, and better track the outcomes of care. ICD-10-CM also incorporates greater specificity and clinical detail to provide information for clinical decision making and outcomes research.

ICD-9-CM and ICD-10-CM Comparison

<table>
<thead>
<tr>

<td>Characters can be either alpha or numeric. Letters O and I are not used to avoid confusion with the numbers 0 and 1.</td>
</tr>
<tr>
<td>All characters are numeric</td>
<td>Each character can be any of 34 possible values. The ten digits 0-9 and the 24 letters A-H, J-N and P-Z may be used in each character.</td>
</tr>
<tr>
<td>Decimal after first 2 characters</td>
<td>Does not contain decimals</td>
</tr>
</tbody>
</table>

1.3. Scope of Changes

NOTE: Existing ICD-9 functionality has not changed.

This patch updates the Admission Discharge Transfer (ADT) package for ICD-10 remediation. Patch DG*5.3*850 makes the following changes to the ADT application:

- The Patient Treatment File (PTF) has been updated to allow ICD-10 Diagnosis and Procedure codes to be assigned an episode of care after the ICD-10 activation date, for the computation of the Diagnosis Related Group (DRG) and for the transmission of ICD-10 codes to the Austin Information Technology Center (AITC).
- ICD-10 Diagnosis and Procedure codes are now used to specify a Catastrophic Disability (CD) for a patient if the Date of Decision is on or after the ICD-10 activation date.
- The PTF Expanded Code List has been updated so that users can choose to view either ICD-9 or ICD-10 code sets.
- The Third Party Insurance Report has been updated to display both ICD-9 and/or ICD-10-CM/ICD-10-PCS codes.
- The Comprehensive Report by Admission and the Comprehensive Census Report have been updated to include an ICD-9 or ICD-10 indicator.
- New file fields, print templates, and routines have been added to support ICD-10 implementation.

1.4. Documentation

The ADT manuals are posted on the VistA Documentation Library (VDL) page https://www.va.gov/vdl/

The following ADT user manuals are updated with changes for DG*5.3*850:
- PIMS V. 5.3 ADT Module User Manual
- PIMS V. 5.3 ADT Module User Manual: PTF Menu

The following manual does not exist for this package:
- Security Guide

NOTE: Security information is contained within the PIMS Technical Manual.
The following ADT documentation is present on the VDL, but does not require updates:

- ADT Outputs Menu User Manual
- Bed Control Menu User Manual
- Contract Nursing Home RUG Menu User Manual
- Copay Exemption Test Supervisor Menu User Manual
- High Risk Mental Health Patient: National Reminder and Flag Installation and Setup Guide
- Scheduling and Registration
- Means Test Supervisor Menu User Manual
- PIMS Installation Guide
- PIMS Release Notes
- PIMS Technical Manual
- PIMS User Manual – Menus, Intro & Orientation
- Registration Menu User Manual
- RUG-II Menu User Manual
- Security Officer Menu User Manual
- Supervisor ADT Menu User Manual
- Veteran ID Card Menu User Manual
2. PTF Expanded Code Listing (PTF File #45.89)

The PTF Expanded Code Listing option has been updated to prompt the user to select an ICD-9 or ICD-10 code set. The default ICD code set is based on the current system date.

**Example of Expanded Code Listing ICD Prompts**

3. **Catastrophic Disability (CD) Prompt (File #27.17)**

The CD prompt has been updated to accommodate ICD-10 CM and PCS codes and labels. The Date of Decision determines whether ICD-9 or ICD-10 codes are displayed.

**Example of Catastrophic Disability (CD) Prompt**

```
Testing
Select Action: Quit// AE Add/Edit Catastrophic Disability

According to the veteran's current enrollment record, the assignment of a Catastrophically Disabled Status will not improve his/her enrollment priority.

Do you still want to perform a review? No// Y (Yes)

DECIDED BY: AAN// Dr. FirstName LastName
DATE OF DECISION: MAY 09, 2014//
REVIEW DATE: MAY 09, 2014//
METHOD OF DETERMINATION: PHYSICAL EXAMINATION//

CD STATUS DIAGNOSES: ?

The status diagnosis must be a valid diagnosis in the CD REASONS File (#27.17).
Must specify a CD REASON that is a diagnosis.
Answer with CATASTROPHIC DISABILITY REASONS NAME, or
HL7 TRANSMISSION VALUE

Do you want the entire CATASTROPHIC DISABILITY REASONS List? Y (Yes)

4. **Present on Admission (POA) Indicator**

A Present on Admission (POA) indicator for ICD-10 Diagnosis codes has been added to the following PTF menu options:

- Load/Edit PTF Data
- Quick Load/Edit PTF Data
- Set up Non-VA PTF Record
- DRG Calculation
- Close Open Census Record

**NOTE:** The POA indicator is only available for ICD-10 Codes. ICD-9 codes do not prompt users to enter a POA indicator.

**NOTE:** The POA indicator is now included in the 501 transmission.

**NOTE:** The examples within this section represent dates on or after the ICD-10 activation date.

POA indicator choices and selection behavior are as follows:

- **Y** = present at the time of inpatient admission.
- The POA is set to **Yes** for the particular diagnosis code, and the user is prompted to enter the next diagnosis.
- **N** = not present at the time of inpatient admission.
- The POA is set to **No** for the particular diagnosis code, and the user is prompted to enter the next diagnosis.
- **U** = documentation is insufficient to determine if condition is present on admission.
- The POA is set to **U** for the particular diagnosis code.
- **W** = provider is unable to clinically determine whether condition was present on admission or not.
- **"** = null, no POA entered, user pressed <Enter>.

**Example of POA Display**

```

5. **Patient Treatment File (PTF)**

The PTF has been modified to prompt the user for either ICD-9 or ICD-10 data, based on whether the Discharge date or the current system date are before or after the ICD-10 activation date.

Additionally, a field to hold the POA indicator has been added for all diagnoses entered on the 501 and 701 screens.

**Example of 701 Screen with ICD-10 and POA Indicator**

6. **ICD-10 Searches**

The ADT package provides the ability to search on ICD-10-CM Diagnosis codes and ICD-10-PCS procedure codes.

**NOTE:** Existing ICD-9 functionality has not changed.

6.1. **ICD-10-CM Diagnosis Code Search**

The ADT ICD-10 diagnosis code search functionality allows the end user to select a single, valid ICD-10 diagnosis code and display its description. The ADT user interface prompts the user for input, invokes the Lexicon utility to get data, and then presents that data to the end user.

This search method provides a “decision tree” type search that uses the hierarchical structure existing within the ICD-10-CM code set, as defined in the ICD-10-CM Tabular List of Diseases and Injuries, comprising categories, sub-categories, and valid ICD-10-CM codes.

ICD-10-CM diagnosis code search highlights include:

- Text-based search using one or more words as search terms, finding matches based on full descriptions, synonyms, key words, and shortcuts associated with ICD-10-CM diagnosis codes, which are inherently built into the Lexicon coding system.
- The more refined the search criteria used (i.e., the more descriptive the search terms), the more streamlined the process of selecting the correct valid ICD-10 diagnosis code will be.
- The user is presented with a manageable list of matching codes with descriptions, consisting of any combination of categories, sub-categories, and valid codes. The length of the list of items that is presented is set to a default of 20,000. If the list is longer, the user is prompted to refine the search.
- The user can “drill down” through the categories and sub-categories to identify the single, valid ICD-10-CM code that best matches the patient diagnosis.
- Short descriptions for the valid ICD-10-CM codes display.
- Partial code searches are also possible, as is full ICD-10-CM code entry, for situations where all or part of the code is known.

**Example of ICD-10 Diagnosis Code Entry**

Enter PRINCIPAL diagnosis (ICD 10): T3

<table>
<thead>
<tr>
<th>9 matches found</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. T30.‐ Burn and corrosion, body region unspecified (2)</td>
</tr>
<tr>
<td>2. T31.‐ Burns classified accord extent body involv (55)</td>
</tr>
<tr>
<td>3. T32.‐ Corrosions classified accord extent body involv (55)</td>
</tr>
<tr>
<td>4. T33.‐ Superficial frostbite (111)</td>
</tr>
</tbody>
</table>
If a user enters fewer than two characters during a DIAGNOSIS code search, the system will respond with a prompt to explain the issue and provide a resolution:

```
Please enter at least the first two characters of the ICD-10 code or code description to start the search.
```

### 6.1.1. Sample ICD-10 Diagnostic Code PTF Record Search

The PTF file has been modified to prompt the user for either ICD-9 or ICD-10 data, based on whether the Discharge date or the current system date are before or after the ICD-10 activation date. PTF searches can be performed for either the ICD-9 or ICD-10 code set, but not for both during the same search.

2. Toxic effect of Carbon Tetrachloride, Accidental (Unintentional), Subsequent Encounter (ICD-10-CM T53.0X1D)
3. Toxic effect of Carbon Tetrachloride, Accidental (Unintentional), Sequela (ICD-10-CM T53.0X1S)

6.2. ICD-10-PCS Procedure Code Search

The ADT ICD-10 procedure code search functionality allows the end user to select a single, valid ICD-10 procedure code and display its description. The procedure code selection is based on the individual characters of ICD-10-PCS codes. The user must enter at least one character of a code. The system displays the possible values for the next digit, so the user can build the procedure code dynamically. The ADT ICD-10 procedure code search utility provides the user interface, which prompts the user for input and invokes the Lexicon utility to get data and then presents that data to the end user for selecting either a single, valid ICD-10 procedure code character or ICD-10 procedure code.

This search method provides a “decision tree” type presentation which makes use of the specific ICD-10-PCS code format and structure, where all codes consist of seven characters, with each position in the code having a specific meaning, as shown in the following table:

<table>
<thead>
<tr>
<th>Position</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
<th>7</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aspect</td>
<td>Section</td>
<td>Body System</td>
<td>Root Operation / Type</td>
<td>Body Part</td>
<td>Approach</td>
<td>Device</td>
<td>Qualifier</td>
</tr>
</tbody>
</table>

ICD-10-PCS procedure code search highlights include:

- This is a completely code-based search (i.e., not text-based). The user essentially “builds” the ICD-10 procedure code as they go, character by character.
- The user is presented with the list of possible values, with their descriptions, for each character (position) in the code, as they enter/select a value for each character.
- The list of options presented for each character is based on the values selected for each previous character up to that point. Initially, the user is presented with the list of possible values for character 1 (Section). Then, as the value for each character is entered/selected, the list of possible values for each subsequent character displays.
- Additional information (i.e. Definitions, Explanations, and/or Includes Examples) is provided along with the values and descriptions for each character, if applicable, to assist with the selection of the correct value.
- If part of the full ICD-10-PCS code is known, the user can enter the initial characters and the system displays the list of possible values for the subsequent character. Full code entry is also possible, if the full ICD-10-PCS code is known.
- When values for all seven characters have been entered/selected, the code and full description display for user verification. Short descriptions for the ICD-10-PCS codes display.

Example of ICD-10 Procedure Code Entry

Name: PTFPATIENT, TEST  MALE SSN: 000001234 Dt of Adm: NOV 9, 2014 08:00<601-1>  
Specialty:

[2] Procedures: (ICD-10-PCS)
ALTERATION OF RIGHT SHOULDER REGION WITH AUTOLOGOUS TISSUE
SUBS(0X0247Z)

Enter <RET> to continue, 1-2 to edit, 'T' to add a Procedure Segment, '^N' for screen N, or '^' to abort: <MAS>//

PROCEDURE CODE 1: 0X0247Z//
PROCEDURE CODE 2: 5a1
ICD-10 Procedure code: 5A1
5 - Extracorporeal Assistance and Performance
A - Physiological Systems
1 - Performance

5 matches found for character 4.

1. 2 Cardiac
2. 5 Circulatory
3. 9 Respiratory
4. C Biliary
5. D Urinary

Select 1-5: 2
5 - Extracorporeal Assistance and Performance

7. **Modified Reports**

The following reports have been modified to accommodate the ICD-10 code set:

- PTF Expanded Code Listing Report
- Third Party Insurance Report
- Comprehensive Report by Admission
- Comprehensive Census Report

7.1. **PTF Expanded Code Listing Option**

The *PTF Expanded Code Listing* option has been updated so that users can choose to view either ICD-9 or ICD-10 code sets.

**Example of PTF Expanded Code List Prompt**

<table>
<thead>
<tr>
<th>099</th>
<th>099 Transmission</th>

8. Technical Information

8.1. Integration Control Registration (ICR)

Changes have been made to Integration Control Registration (ICR) #3157 to accommodate both ICD-9 and ICD-10 codes, and to include a new Data Element that contains a Present on Admission (POA) indicator for Principal Diagnosis, and the first nine Secondary Diagnoses.

Complete information is available on the Database Administrator (DBA) menu on FORUM.

8.2. New File Fields

The below table lists new fields that have been added to the CATASTROPHIC DISABILITY REASONS (#27.17), PTF (#45), and PTF EXPANDED CODE (#45.89) files.

<table>
<thead>
<tr>
<th>File Name</th>
<th>New Fields</th>
</tr>
</thead>
<tbody>
<tr>
<td>CATASTROPHIC DISABILITY REASONS (#27.17)</td>

8.3. New Associated Print Templates
The below table lists new templates that have been added to the PTF file.

<table>
<thead>
<tr>
<th>Template Name</th>
<th>File Name/Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>DGICD-9</td>
<td>PTF (#45)</td>
</tr>
<tr>
<td>DGICD-10</td>
<td>PTF (#45)</td>
</tr>
</tbody>
</table>

### 8.4. New Routines

Some ADT routines were added to replace direct global reads and old Application Program Interfaces (APIs) with new Standards and Terminology Services (STS) APIs and Lexicon APIs wherever possible.

The following table contains a list of new routines:

<table>
<thead>
<tr>
<th>Routine Name</th>
<th>Function</th>
</tr>
</thead>
<tbody>
<tr>
<td>DG53C850</td>
<td>Post Install</td>
</tr>
<tr>

<td>PTF Transmission ICD-10</td>
</tr>
<tr>
<td>DGPTRI3</td>
<td>PTF Transmission ICD-10</td>
</tr>
<tr>
<td>DGPTRI4</td>
<td>PTF Transmission ICD-10</td>
</tr>
</tbody>
</table>

### 8.5. Help for ICD-10 Code Prompts

Help text (?) and extended help text (??, ???) are included for prompts related to ICD-10 codes.

When entering ?:

Enter code or "text" for more information.

When entering ??:

Enter a "free text" term or part of a term such as "femur fracture".

Or

Enter a "classification code" (ICD/CPT etc) to find the single term associated with the code.

Or

Enter a "partial code". Include the decimal when a search criterion includes 3 characters or more for code searches.
When entering ???:

<table>
<thead>
<tr>
<th>Number of Code Matches</th>
</tr>
</thead>
</table>

The ICD-10 Diagnosis Code search will show the user the number of matches found, indicate if additional characters in ICD code exist, and the number of codes within the category or subcategory that are available for selection.

14 matches found

M91. - Juvenile osteochondrosis of hip and pelvis (19)

This indicates that 14 unique matches or matching groups have been found and will be displayed.

M91. - the "-" indicates that there are additional characters that specify unique ICD-10 codes available.

(19) Indicates that there are 19 additional ICD-10 codes in the M91 "family" that are possible selections.
