# Introduction

---

**Purpose.** The purpose of the template is to identify which patients with complaints of inattention and/or hyperactivity/impulsivity should have further evaluation for ADHD. The template DOES NOT diagnose ADHD or assist in the diagnosis of other conditions where inattention, impulsivity, or hyperactivity are present.

**Rationale.** There is significant variation within VA regarding the diagnosis of ADHD and the prescription of stimulant medication. Data suggests that ADHD may be underdiagnosed in VA, and clinical decision making in support of ADHD diagnosis or stimulant prescribing often lacks standardization and appropriate documentation. Thus, it is clear that VA providers (primarily mental health and primary care teams) need support for determining which patients with complaints of inattention/hyperactivity, or other concerns consistent with ADHD, actually necessitate a comprehensive diagnostic evaluation by mental health. Improving care for ADHD starts with improved screening. This template is the first step towards a standardized approach to the identification of ADHD.
