Appendix D: VA GEC Reports

In December 2003, a Healthcare Inspection by the Department of Veteran Affairs Office of Inspector General was conducted on the Homemaker/Home Health Aide Program to evaluate Department of Veteran Affairs (VA) Medical facilities compliance with the Veteran Health Administration (VHA) policy for providing services to patients that were clinically appropriate, cost effective, and met customer expectations. The outcome of that Inspection revealed a lack of supportable data for placement of patients.

As part of the Undersecretary for Health’s commitment to complying with VA policy, the need for accurately documenting and reporting patient placements is needed. VA Geriatric Extended Care (VA GEC) Reports will serve as an interim reporting method until the national rollup of VA GEC Referral data is provided through Computerized Patient Record System Reengineered (CPRS-R). VA GEC Reports will display the percent of patients referred to select GEC programs who meet the eligibility criteria as outlined in the Under Secretary for Health’s Information Letter IL 10-2003-005 and VHA Handbook 1140.2.

VA GEC Reports will provide quarterly statistical reports on the following VA funded programs.

- Homemaker/Home Health Aide, when Funding Source=VA
- Adult Day Health Care, when Funding Source=VA
- VA In-Home Respite, when Funding Source=VA
- Care Coordination, when Funding Source=VA

Select data from the VA Geriatric Extended Care Referral screening tool, released with Clinical Reminders 2.0, will be used in calculating the criteria totals for patients screened and referred for each of the four programs listed above.

Data Elements for Reporting taken from the VA GEC Referral Screening of the following:

- Source
- Living Situation
- Instrumental Activities of Daily Living
- Basic Activities of Daily Living
- Patient Behaviors and Symptoms
- Cognitive Status
- Prognosis

Data Elements for Reporting taken from Patient File and Scheduling File
Age of Patient is 75 years or greater
Patient Identified as a High Utilizer of Medical Services

Implementation Requirements
The stakeholder will create an Excel spreadsheet for the purpose of importing the data received from the local sites, according to the specifications provided in the Algorithm that follows.

Local sites must task the job by setting the queue to automatically generate the quarterly reports.
The Office of Geriatric and Extended Care is responsible for importing data received, via electronic email, into a GEC created excel spreadsheet.

Product Features

The main feature of this product is the creation of a report that will allow monitoring compliance of VA patients referred to specified VA funded Geriatric Extended Care programs.

- Create a tool that will extract the data on patients meeting the criteria from the VA funded GEC program.
- The extracted data will be emailed to appropriate compliance office.

New Option

GEC Fiscal Quarterly Rollup [PXRM GEC2 QUARTERLY ROLLUP]
This is a queuable option that will gather and report to Washington DC the Fiscal Quarterly information. This option should never be placed on an individual’s menu. It should be scheduled for the 8th day of the first month of the next calendar quarter at any time of the facility’s choosing. The rescheduling frequency should be set to “3M” (every three months).

New Mail Group

GEC2 NATIONAL ROLLUP
When this mail group is installed, it will contain the email address of the two individuals in Washington DC who will receive the quarterly data. These names should not be removed. Names of local individuals (for example, CACs) may be added, if they desire to receive these reports.

Important NOTE:

We recommend thorough testing of GEC reminder dialogs by staff prior to implementation to avoid GEC report roll-up inaccuracies. Testing of GEC reminder dialogs and reports in a test account should mimic the actual processes and workload capture used in the site's production environment.

Informatics staff and GEC referral staff should work together to identify potential issues that arise during testing that may require modification of clinical processes and/or workload capture. Accurate capture and reporting of GEC referral health factors may require careful analysis of workload capture processes at sites that use Event Capture software. Inaccurate reporting may lead to questions from the Inspector General’s office concerning funding for the patients referred to the “Home Help” type of programs.

Potential issues if you use Event Capture

(report by a test site):

a) Event capture does not pass workload to PCE in real time. Data is not passed to PCE until after hours, so this needs to be taken into account when testing.

b) There are several steps where real front-line users could make minor mistakes that would result in data entry/workload not matching up with the Care coordination note.

1. Event capture date/time must be an exact match to the date/time of PCE/TIU
2. Clinic location must be the same.
3. Data passes after hours from EC to PCE.
4. There is no drop-down menu to select from. 1 and 2 above must be manually entered.
5. Patient name must be re-selected (or use spacebar return).
Algorithm For GEC (Next Generation) Software

The information for the “criteria” is taken from the letter # IL 10-2004-005 entitled UNDER SECRETARY FOR HEALTH’S INFORMATION LETTER dated May 3 2004. pages B-2 and B-3

The following is the Algorithm or thought process that will be used in the software to determine if a patient meets the criteria necessary to be placed in one of the monitored programs. HEALTH FACTORS that are part of the patient record for an evaluation, are designated with capital letters (below).

7D = 7 days
YES or NO = Yes or No response from the Dialog
