Introduction

Purpose of the Consult/Request Tracking Package

The Consult/Request Tracking package (Consults) was developed to improve the quality of patient care by providing an efficient mechanism for clinicians to order consults and requests using Computerized Patient Record System (CPRS) Order Entry, and to permit hospital services to track the progress of a consult order from the point of receipt through its final resolution.

Scope of the Manual

This manual provides technical descriptions of Consults tracking routines, protocols, files, globals, options, security data, menu diagrams and any other information required to effectively set up and use the Consults package.

From time to time improvements are made to the Consults package. The latest information about Consults, as well as the latest version of this manual, is posted on the Consults Web Page at:

vista.med.va.gov/consults

Audience

Information in this manual is technical in nature and is intended to be used by Veterans Affairs Medical Center (VAMC) Information Resource Management Service (IRMS) staff members and Clinical Application Coordinators (CAC's).
New Features

GMRC*3*73
This patch is part of the Computerized Patient Records System CPRSv30 project. This project will modify the Computerized Patient Record System, Text Integration Utilities, Consults, Health Summary, Problem List, Clinical Reminders, and Order Entry/Results Reporting to meet the requirements proposed by the Dept. of Health and Human Services to adopt ICD-10 code set standards Clinic Orders.

On January 16, 2009, the Centers for Medicare & Medicaid Services (CMS) released a final rule for replacing the 30-year-old ICD-9-CM code set with International Classification of Diseases, Tenth Revision, Clinical Modification (ICD-10-CM) and International Classification of Diseases, Tenth Revision, Procedure Coding System (ICD-10-PCS) with dates of service, or date of discharge for inpatients, that occur on or after October 1, 2013. The classification system consists of more than 68,000 codes, compared to approximately 13,000 ICD-9-CM codes. There are nearly 87,000 ICD-10-PCS codes, while ICD-9-CM has nearly 3,800 procedure codes. Both systems also expand the number of characters allotted from five and four respectively to seven alphanumeric characters. This value does not include the decimal point, which follows the third character for the ICD-10-CM code set. There is no decimal point in the ICD-10-PCS code set. These code sets have the potential to reveal more about quality of care, so that data can be used in a more meaningful way to better understand complications, better design clinically robust algorithms, and better track the outcomes of care. ICD-10-CM also incorporates greater specificity and clinical detail to provide information for clinical decision-making and outcomes research.

This patch installs the necessary routine updates to make the GMRC package compliant with the mandate to use ICD-10 codes. The installation also contains one post-install routine that will populate the new PROVISIONAL DIAGNOSIS DATE (30.2) and PROVISIONAL DIAGNOSIS SYSTEM (30.3) fields for existing entries in the REQUEST/CONSULTATION (#123) file. The PROVISIONAL DIAGNOSIS DATE will be populated using the value pulled from FILE ENTRY DATE (.01) field. The PROVISIONAL DIAGNOSIS SYSTEM field will be populated with "ICD" to indicate these diagnoses are from the ICD-9-CM coding system. These fields are only populated for existing entries where the provisional diagnosis contains an ICD code. Consult records with a free-text diagnosis will not have these fields populated.

GMRC*3.0*83
This patch creates the special MUMPS cross reference ‘AG’ in the REQUEST/CONSULTATION file (#123), field #40. The new cross reference will be used exclusively by the Scheduling Package in support of Patch SD*5.3*627 for the generation of a report of entries in the REQUEST/CONSULTATION file that do not have an appointment scheduled. No user options or menus are affected in
Overview of Consults/Request Tracking

The Consults package provides an interface with CPRS Order Entry which permits clerks or clinicians to enter, edit, and review consults and requests within the CPRS package.

- Service/Specialty personnel targeted to receive consults may use this package to:
  - Have consults or requests electronically relayed to them.
  - Track the service/specialty's activity concerning the consult or request, from the time of its receipt to its final resolution.
  - Associate Text Integration Utility (TIU) consult reports with the consult request.

When a consult or request is updated on-line to a "completed” or “discontinued” status by the specialty service personnel, the original clinician who requested the order is notified electronically of the order's resolution. The clinician may then use “View Alerts” or the Detailed Display option in either the Consults or CPRS packages to review any comments or results which may be associated with the order's resolution.

Note: When using the Group Update functionality, the Ordering Provider will NOT receive an alert when a consult or request is updated online to a “completed” or “discontinued” status.

Functionality has been provided for IRMS/ADPAC personnel to set up and manage the consult service hierarchy.

A checklist is provided (in Appendix A of this manual) to help you install, plan, and implement the Consults package. Use the checklist in conjunction with the detailed information provided in the Implementation and Maintenance section of this manual.
Package Orientation

This technical manual provides IRMS/ADPAC personnel with technical descriptions of Consults routines, files, options, and other necessary information required to effectively implement and use the Consults package.

This manual should assist you in:

Setting up a hierarchy of site specific services/specialties.

Setting up Notification users/teams related to a service, who will be notified when an order is released by CPRS order entry.

Setting up tracking update capabilities for specific services/specialties to track the progress of ordered consults or procedures from receipt to their completion or discontinuance.

Setting up procedures to be used in the resulting process for specified services.

Note: The primary care clinician and clinic clerk add, edit, discontinue, and sign capabilities for ordering consults or requests are provided through CPRS V. 1.0. See the CPRS Clinical Coordinator & User Manual for descriptions of how to use the CPRS options.

For package-specific user conventions, please refer to the Package Orientation section of the Consult/Request Tracking User Manual.
Implementation and Maintenance

Install, Planning, and Implementation Checklist

A checklist is provided to help you install, plan, and implement the Consults package (see Appendix A). Use the checklist in conjunction with the detailed information provided in this "Implementation and Maintenance" section.

Menu/Option Diagram

The tools required to implement and maintain the Consults package are found in the Consult Management [GMRC MGR] menu. The following menu diagram illustrates all of the options distributed with the Consults package.

Consult Management [GMRC MGR]

- RPT  Consult Tracking Reports ...
- ST   Completion Time Statistics
- PC   Service Consults Pending Resolution
- CC   Service Consults Completed

- CCT  Menu for Closure Tools…
- EDT  Consult Closure Tool Edit Configuration
- INQ  Consult Closure Tool Inquire Configuration
RUN    Consult Closure Tool Run Configuration

DS    Duplicate Sub-Service
FS    Define Fee Services
IFC   IFC Management Menu
  TI   Test IFC implementation
  LI   List incomplete IFC transactions
  IFC  IFC Requests
  TR   IFC Transaction Report
  LK   Locate IFC by Remote Cslt #
  BK   Monitor IFC background job parameters
  IP   IFC Requests By Patient
  IR   IFC Requests by Remote Ordering Provider
  PI   Print IFC Requests

To get you started placing “CONSULT...” orders via CPRS, the option above which requires immediate attention is the Set up Consult Services (SS) option. Before setting up services, you should define your service hierarchy and determine service functionality.
Define Service Hierarchy

At this point the site must determine which services/specialties should be set up to receive consults and requests. Consults Tracking Service Worksheets, along with descriptions of the type of information that should be recorded in each field on the worksheets, are provided in Appendix B of this manual to assist you in this process.

The Request Services file (#123.5) is distributed with a small selection of services. The hierarchical relationships are not in place upon distribution. See Appendix C for an example of how these services could be related hierarchically to get you started. Appendix C will:

Illustrate the file's hierarchy capabilities (similar to the Option file (#19) hierarchy) with “ALL SERVICES” representing the top of the hierarchy.

**NOTE:** Due to the tight relationship between CPRS orderable items and this file, a service should NEVER be deleted at any point. The best recommendation would be to disable the service and remove it from the ALL SERVICE hierarchy.

The Service/Specialty hierarchy you define can be as complex as needed to meet service requirements at your site. To get started you will probably want to specify a small subset of services/specialties and add to them over a period of time. "ALL SERVICES" needs to be the top entry in the hierarchy.

**NOTE:** “ALL SERVICES” should be the top hierarchy service. All Services should never be the sub-service of another service.

In order to build the service hierarchy, you will need to know how the service entry in the Request Services file (#123.5) is used. Some services will be used as a GROUPER ONLY and other services may be used for TRACKING ONLY. The SERVICE USAGE field is provided for you to differentiate the services in the hierarchy.

To see your site's hierarchy use the List Consult Service Hierarchy [GMRC LIST HIERARCHY] option.

**Hint:** If your site is getting an allocation of partition space type of error when ALL SERVICES or another service is specified at the "Select Service/Specialty:" prompt, this is an indication that the hierarchy is set up wrong. This is typically caused by a service being made a sub-service of itself. A service being a sub-service of one of its own sub-services will also manifest this error.

Service Usage Definition
Whenever a value is defined for the SERVICE USAGE field in the Set up Consults Services [GMRC SETUP REQUEST SERVICES] option, the Service entry will NOT be selectable to send consults to in the CPRS ordering process. Instead, entries in this field reserve the service for special uses within the Consults flow of information.

Service Usages cause functioning as follows:

BLANK - Permits consults and procedure requests to be sent to this service. A service may be reset to blank by entering an @ sign.

GROUPER ONLY - Permits a service to be used for grouping other services together for review purposes, and aids in defining the service hierarchy (e.g., ALL SERVICES, INPATIENT SERVICES, OUTSIDE SERVICES). During the order process, a user selecting a grouper only service will be shown the service hierarchy under that service grouper. A grouper only service should never be a service a consult is sent to.

TRACKING ONLY - Permits a service to be defined in a hierarchy, but does not permit users ordering consults in CPRS to be able to see or select a service marked for TRACKING ONLY (e.g., Psychology may be defined with its Service Usage blank, and its sub-specialty multiple defined with services of which some or all may be TRACKING ONLY services. This hierarchy facilitates the situation when a service such as Psychology prefers a common location for all related consults to be sent to. A tracking user at the common location then “Forward(s)” the request to one of the TRACKING ONLY services for completion).

These services are viewable and may be selected directly by update users for that service.

DISABLED - Disabled services are not selectable for ordering or tracking.
An example of a potential hierarchy a user would see when ? or ?? are entered at a “Select Service/Specialty: ALL SERVICES” prompt follows. It includes notations for Service Usage definition examples.

and so forth...
Determine Service Functionality

The primary option needed to set up your hierarchy of services is the Set up Consults Services (SS) option. This option updates the Request Services file (#123.5).

You can enable the following functionality, depending on how much information you define for each hospital service in the Request Services file (#123.5).

Functionality you define may vary by Service/Specialty. Also, functionality may or may not be inherited, depending on the setting of the PROCESS PARENTS FOR UPDATES (.07) and PROCESS PARENTS FOR NOTIFS (.08) fields. If a child service has a Yes in these fields, then parents are checked for the appropriate actions. If all services are set to Yes, then all services are checked to the top of the service hierarchy. Alternately, some services can be marked Yes and others marked No. In this case the hierarchy is checked until a No is encountered.

Two options provided in the Consult Management [GMRC MGR] menu option permit definition and maintenance of this functionality. All of the fields below may be updated using the Set Up Consult Services [GMRC SETUP REQUEST SERVICES] option. For ongoing maintenance of service users specified in 3 and 4 below, use the Service User Management [GMRC SERVICE USER MGMT] option.

Set Up Consult Services (SS)

The Set Up Consult Services command creates and maintains new records in the REQUEST SERVICES (#123.5) file. The following fields are involved:

SERVICE NAME: This is the Name of a service or specialty which may receive consult/requests. This may also be a name which represents a group of services or specialties.

ABBREVIATED PRINT NAME: This is a commonly known Abbreviation for this Service/Specialty. This name is used to build Consult Notifications and must be 7 characters or less in length.

INTERNAL NAME in an alternate name for the service. This name does not appear on printouts or displays, but can be used to access the service through the Setup Services (SS) option, or with FileMan.

SYNONYM: Identifies the commonly known names and abbreviations for the Service named in the .01 Name field. Synonyms identified here are used in the look-up of services at “Select Service/Specialty;” prompts as well as during ordering in CPRS.

SERVICE USAGE: Whenever a value is defined in the SERVICE USAGE field, the Service entry will NOT be selectable to send consults TO in the OE/RR ordering process. Service Usages cause functioning as follows:

GROUPER ONLY - Allows a service to be used for grouping other services together for review purposes, and aids in defining the service hierarchy (e.g., ALL SERVICES, INPATIENT SERVICES, OUTSIDE SERVICES). During the order process, a user selecting a grouper only service will be shown the service hierarchy under that service grouper. A Grouper ONLY service should never be a "TO" Service on a consult.

TRACKING ONLY - Allows a service to be defined in a hierarchy, but will not allow users ordering consults in OE/RR to be able to see or select a service marked for TRACKING ONLY. (e.g., Psychology may be defined with its Service Usage blank, and its Sub-specialty multiple defined with services of which some or all may be "TRACKING ONLY" services. This hierarchy facilitates the situation when a service, such as Psychology, prefers a common location for all related consults to be sent to. A Tracking user at the common location then "Forwards" the request to one of the sub-service TRACKING ONLY services for completion.) Update users for the service can see and order directly to a tracking service.

DISABLED - Disabled services are not selectable for ordering or tracking. Existing requests for a disabled service may still be processed to completion.

SERVICE PRINTER: Allows the service/specialty to identify a device that will be used for printing Consult Forms (SF 513) 'automatically' at the service when the consult/request order is released by CPRS. If the device is not defined, the Consult Form
will not print unless a default service copy device is defined for the Consults package for the ordering location. The default service copy device parameter can be found by using the Print Parameters for Wards/Clinics [OR PARAM PRINTS (LOC)] option.

SECONDARY PRINTER: Allows the service/specialty to identify a secondary printer device that will be used for printing Consult Forms (SF 513) at a second location when the consult/request order is released by CPRS and during any print request for SF 513.

NOTIFY SERVICE ON DC: Controls when members configured to receive notifications for this service in the Consult hierarchy will be alerted to a consult being discontinued. This field can be set to ALWAYS, NEVER, or REQUESTOR ACTION. REQUESTOR ACTION stipulates notification only if the user discontinuing the consult is not an update user for the consulting service.

REPRINT 513 ON DC: This field will determine if the SF 513 should reprint to the consulting service when a consult is discontinued. Again the three choices are ALWAYS, NEVER, or REQUESTOR ACTION. REQUESTOR ACTION stipulates reprinting only if the user discontinuing the consult is not an update user for the consulting service.

PROVISIONAL DX PROMPT: Used by CPRS to determine how to prompt for the provisional diagnosis when ordering consults for this service. If this field is set to OPTIONAL, the user will be prompted for the provisional diagnosis but may bypass answering the prompt. If the field is set to SUPPRESS, the user will not be presented with the provisional diagnosis prompt. If set to REQUIRED, the user must answer the prompt to continue placing the order.

Provisional DX Input: Determines the method that CPRS uses to prompt the user for input of the provisional diagnosis when ordering a consult. If set to FREE TEXT, the user may type any text from 2-80 characters in length. If set to LEXICON, the user will be required to select a coded diagnosis from the Clinical Lexicon.

PREREQUISITE: This word-processing field is utilized to communicate pre-requisite information to the ordering person prior to ordering a consult to this service. This field is presented to the ordering person upon selecting a Consult service and allows them to abort the ordering at that time if they choose. TIU objects may be embedded within this field which are resolved for the current patient during ordering. Any TIU objects must be contained within vertical bars (e.g. |BLOOD PRESSURE|).

DEFAULT REASON FOR REQUEST: The default text used as the reason for request when ordering a consult for this service. This field allows a boilerplate of text to be imported into the reason for request when placing consult orders for this service. If the user places an order using a quick order having boilerplate text, that text supersedes any default text stored in this field. This field may contain any text including TIU objects. TIU Objects must be enclosed in vertical bars (e.g. |PATIENT NAME|).

RESTRICT DEFAULT REASON EDIT: If a DEFAULT REASON FOR REQUEST exists for this service this field effects the ordering person's ability to edit the default reason while placing an order. This variable can be set to UNRESTRICTED, NO
EDITING, or ASK ON EDIT ONLY. If the third value, ASK ON EDIT ONLY, is used, the user is only allowed to edit the default reason if the order is edited before releasing to the service.

The following three fields are only filled in if this is an Inter-Facility consult. The first two are used if you are a requesting facility. The third, IFC SENDING FACILITY, is used if you are a consulting facility.

IFC ROUTING SITE: This field contains the VA facility that will perform consults requested for this service. When a consult for this service is ordered, it will automatically be routed to the VA facility in this field.

IFC REMOTE NAME: This field contains the name of the service that will be requested at the VAMC defined in the IFC ROUTING SITE field. Enter the name of the service exactly as it is named at the remote facility. If this name does not match the name of the service at the routing site, the request will fail to be filed at the remote site. This will delay or prohibit the performance and processing of this request.

IFC SENDING FACILITY: This is a multiple containing the facilities from which your site may receive Inter-Facility Consults for this consult. As with all IFC fields, they must be an exact match.

SERVICE INDIVIDUAL TO NOTIFY: A user may be identified in this field as having primary responsibility for receiving consults and tracking them through to completion or discontinuance. This individual will receive a "NEW SERVICE CONSULT" notification type when a new order is released to the service through CPRS. The user must have the "NEW SERVICE CONSULT/REQUEST" notification type enabled.

SERVICE TEAM TO NOTIFY: The name of the Service Team that is to receive notifications of actions taken on a consult. A team of users may be identified (from the OE/RR LIST file #100.21) who will receive a "NEW SERVICE CONSULT" notification when a new order is released to the service through OE/RR. The individuals on the teams must have the "NEW SERVICE CONSULT/REQUEST" notification type turned "ON". Team members will be able to perform update tracking capabilities.

NOTE: The service team does not receive the CONSULT/REQUEST UPDATED notification if another member of that team or an update user is the user adding the comment. (Remedy Ticket 903302 pointed this out.)

NOTIFICATION BY PT LOCATION: A ward location or hospital location which the service wishes to assign a service individual or team to. When a consult or request is ordered, notifications to the receiving service checks to see if the patients location is defined here. If defined, notifications are sent to an individual and/or members of a team specifically associated with this location.
PROCESS PARENTS FOR NOTIFS: This field, if set to YES, causes the parent service of this service to be processed when determining notification recipients. The check is carried up the chain until ALL SERVICES is reached or until a service is marked NO.

UPDATE USERS W/O NOTIFICATIONS: A list of individuals who can do update tracking, but who will not get a notification.

UPDATE TEAMS W/O NOTIFICATIONS: A list of teams to be assigned update authority for this service. All clinicians in the teams have update authority no matter what patients are in the teams.

UPDATE USER CLASS W/O NOTIFS: A list of user classes to be assigned update authority for this service. All persons assigned to the user classes included have update authority with the current service.

ADMINISTRATIVE UPDATE USER: A list of the users for a service who can perform Administrative Completes (Completes without a note attached). Optionally, this individual can be set as a notification recipient.

ADMINISTRATIVE UPDATE TEAM: This is a list that contains the names of team lists from the OE/RR LIST (#100.21) file. All provider/users of the teams will have administrative update authority for requests directed to this service and the teams can optionally be designated as notification recipients.

PROCESS PARENTS FOR UPDATES: This field, if set to YES, will cause the parent services of this service to be screened to determine update authority for a given user. Hence, if an individual is set as an update user in a grouper service, this individual will have privileges for all sub-services that have this field set to YES.

SPECIAL UPDATES INDIVIDUAL: This individual will have privileges to perform group status updates for this service or any of the entries in the SUB-SERVICE/SPECIALTY field. It is recommended that this individual be a responsible service update user or a Clinical Application Coordinator. If given the option Group update of consult/procedure requests [GMRCSTSU], the user will be able to choose all requests within a date range that are pending, active or both and update the request to discontinued or complete. This will also update the related order in CPRS to the same status.

RESULT MGMT USER CLASS: This field defines the Authorization/Subscription User Class that is permitted to disassociate a Medicine result from a Consult request. It is recommended that this function be restricted to a very select group of individuals.

UNRESTRICTED ACCESS: This field, if set to yes will allow all users to perform the full range of update activities on consult or procedure requests directed to this service. If this field is set to yes, all other fields related to assignment of update users are ignored. The SERVICE INDIVIDUAL TO NOTIFY and the SERVICE TEAM(S) TO NOTIFY fields are still used to determine notification recipients for each individual service.
SUB-SERVICE/SPECIALTY: This is the list of sub-service/specialties that are grouped under this Service. The sub-service/specialty entries must each be defined as entries in this file. There is no limit on how deep the hierarchy of services may be defined. The only requirement is that the "ALL SERVICES" entry be at the top of the hierarchy. It is also highly recommended that a service be defined as the sub-service of only one entry in the hierarchy.

ADMINISTRATIVE: This field, if set to yes, will allow requests placed to this service to be excluded from the Consults Performance Monitor report. When a request is directed to a service marked as administrative, the request itself is also marked as administrative. This is done via a Trigger cross-reference on the TO SERVICE field of file 123.

Example:

In this example a new service, arthritis, is set up:

```
Select Consult Management Option: SS Set up Consult Services
Select Service/Specialty: ARTHRITIS
    Are you adding 'ARTHRITIS' as a new REQUEST SERVICES (the 38TH)? No// Y (Yes)
SERVICE NAME: ARTHRITIS// <Enter>
ABBREVIATED PRINT NAME (Optional): ARTH
INTERNAL NAME: <Enter>
Select SYNONYM: AR
    Are you adding 'AR' as a new SYNONYM (the 1ST for this REQUEST SERVICES)? No// Y (Yes)
Select SYNONYM: <Enter>
SERVICE USAGE: ?
    Enter '1' if the service is Grouper Only, 2 if the service is to be used for TRACKING Only, and 9 to DISABLE the service.
    Choose from:
        1        GROUPER ONLY
        2        TRACKING ONLY
        9        DISABLED
SERVICE USAGE: 2 TRACKING ONLY

   Choose from:
       0  NO
       1  YES

ADMINISTRATIVE: 0, No
Add/Edit Another Service? N// <Enter>
Note: When you create a new service, it is not automatically linked into the Consult hierarchy. You must explicitly group each service under ALL SERVICES or under another service that in turn is grouped under ALL SERVICES. Until this is done, the new service is not visible in the service hierarchy and cannot be selected for any action.
Use the Set Up Consult Services (SS) action to group services. In the following example, we group the ARTHRITIS service under ALL SERVICES:

<table>
<thead>
<tr>
<th>Select Consult Management Option: SS</th>
<th>Set up Consult Services</th>
</tr>
</thead>

Are you adding 'ARTHritic' as a new Sub-service (the 15th for this Request Services)? No//Y (Yes)
MNEMONIC: <Enter>
Select Sub-SERVICE/SPECIALTY: <Enter>

Add/Edit Another Service?

**HCPS Consult Service Set-up**

Use the following steps to send a consult to HCPS:

1. Select SS Set Up Consult Services.

2. Set up a new consult service that contains ‘NON VA CARE HCPS’ (e.g., NON VA CARE HCPS HEMODIALYSIS). Note that the service name **must** contain “NON VA CARE HCPS” as the prefix in order to be processed by HCPS. This naming convention was created to adhere to existing Non VA Care (NVC) naming and reporting standards. All NVC services begin with “NON VA CARE”. “HCPS” was
also added to identify the transactions that will be sent to the Healthcare Claims Processing System (HCPS). All services that are intended to be sent to HCPS must contain “HCPS” after “NON VA CARE” (e.g., NON VA CARE HCPS…).

3. Associate the new consult service with the appropriate template.

When the template is selected from the Order a Consult screen, it will be routed to HCPS once filled out and accepted.
Quick Orders

Enter/edit quick orders [ORCM QUICK ORDERS] is available within the Order Menu Management (ORCM MGMT) option of the CPRS Configuration (Clin Coord) menu. There are two steps to setting up a quick order:

1. Define the quick order with the Enter/edit quick orders option of the Order Menu Management menu.
2. Put the quick order on an order entry menu with the Enter/edit order menus option of the Order Menu Management menu.

In the following example we set up a quick order called NUTRITION:

<table>
<thead>
<tr>
<th>Select Order Menu Management Option: ?</th>
</tr>

Service Consults Pending Resolution

The purpose of the Service Consults Pending Resolution option is to list the pending and active consults. Use it to stay informed about the overall status of consults for your service. Someone in each clinic or service should review this list daily to make sure that all consults are being attended to.

In the following example, the option is used to view pending and active Pulmonary consults:

```
Select Consult Service Tracking Option: ?
CS    Consult Service Tracking
PC    Service Consults Pending Resolution
ST    Completion Time Statistics

Enter ?? for more options, ??? for brief descriptions, ?OPTION for help text.

Select Item(s): Next Screen//
Service User Management (SU)

This option is used to make the most commonly needed changes after a service has been created. This option changes fields that are all in records in the REQUEST SERVICES (#123.5) file. They are:

SERVICE INDIVIDUAL TO NOTIFY: An individual who will receive a default notification of any action taken on a consult.

SERVICE TEAM TO NOTIFY: The name of the Service Team that is to receive notifications of any actions taken on a consult.

NOTE: The service team does not receive the CONSULT/REQUEST UPDATED notification if another member of that team or an update user is the user adding the comment. (Remedy Ticket 903302 pointed this out.)

NOTIFICATION BY PT LOCATION: The name of a hospital location that is to receive notifications of any actions taken on a consult.

UPDATE USERS W/O NOTIFICATIONS: The name of an individual who can do update tracking, but who will not get a notification.

UPDATE TEAMS W/O NOTIFICATIONS: A team list of users to be assigned update authority for this service.

UPDATE USER CLASS W/O NOTIFS: A user class to be assigned update authority for this service.

ADMINISTRATIVE UPDATE USER: An individual who can perform Administrative Completes (Completes without a note attached).

ADMINISTRATIVE UPDATE TEAM: A team who can perform Administrative Completes (Completes without a note attached).

SPECIAL UPDATES INDIVIDUAL: This is the individual who can perform special updates for this particular service.

In order for the Service users to actually receive a new consult notification, the users must have the notification “NEW SERVICE CONSULT/REQUEST” turned ON for their use. See the CPRS Clinical Coordinator & User Manual, NOTIFICATION MGMT MENU option for more information on notifications and how to set them up.

Teams of users may be defined by an individual or team members with access to the “Team Management Menu” provided by CPRS. See the CPRS Clinical Coordinator & User Manual for more information on Team Management and its recommended menu access. It is important to know that team users are sent the notification regardless of any patients who may be defined in that team list.
An example of setting up notifications is shown on the next page.

In the following example no changes are made. The prompts in the Service User Management option are cycled through so you can see what they are:

```
Select OPTION NAME: GMRC MGR Consult Management menu
Select Consult Management Option: SU Service User Management
Select Service/Specialty: ARTHRITIS
Select SERVICE INDIVIDUAL TO NOTIFY: CPRSPROVIDER,FOUR//
Select SERVICE TEAM TO NOTIFY:
Select NOTIFICATION BY PT LOCATION:
Select UPDATE USERS W/O NOTIFICATIONS: SNOW,CHARLES R //
Select UPDATE TEAMS W/O NOTIFICATIONS:
Select UPDATE USER CLASS W/O NOTIFS:
Select ADMINISTRATIVE UPDATE USER:
Select ADMINISTRATIVE UPDATE TEAM:
Select UPDATE USERS W/O NOTIFICATIONS: SNOW,CHARLES R //
Select UPDATE TEAMS W/O NOTIFICATIONS:
Select UPDATE USER CLASS W/O NOTIFS:
Select ADMINISTRATIVE UPDATE USER:
Select ADMINISTRATIVE UPDATE TEAM:
Select SPECIAL UPDATES INDIVIDUAL:
Select Service/Specialty:
```

The individual and team names that are displayed are the current default values. In most cases they are the most recently used value for that prompt.

To set up an individual to have update activities but receive no notification, do the following. This example sets up CPRSProvider, Three to have update privileges:

```
Select OPTION NAME: GMRC MGR Consult Management menu
Select Consult Management Option: SU Service User Management
Select Service/Specialty: MEDICINE
Select SERVICE INDIVIDUAL TO NOTIFY: CPRSPROVIDER,FOUR//
Select SERVICE TEAM TO NOTIFY:
Select NOTIFICATION BY PT LOCATION:
Select UPDATE USERS W/O NOTIFICATIONS: CPRSPROVIDER,ONE //
Answer with UPDATE USERS W/O NOTIFICATIONS
Choose from:
  CPRSPROVIDER,SIX
  CPRSPROVIDER,SEVEN
  CPRSPROVIDER,FIVE
  CPRSPROVIDER,ONE
You may enter a new UPDATE USERS W/O NOTIFICATIONS, if you wish
Enter the name of individual who can do update tracking, but who will not get a notification.
Answer with NEW PERSON NAME, or INITIAL, or SSN, or VERIFY CODE, or NICK NAME, or KEY DELEGATION LEVEL, or DEA#, or VA#, or SOCIAL WORKER ?, or POSITION/TITLE, or TRANSCRIPTIONIST ID, or ALIAS
```

March 2018 Consult/Request Tracking V. 3.0 Technical Manual 29
Sometimes it is necessary to administratively Complete (CT) consults that for one reason or another have not been resolved. To set up an individual who can complete other people’s consults do the following. This example sets up Ben Casey as an administrative user who can complete any Medicine Consult without a signature.

Select Service/Specialty: MEDICINE
SERVICE INDIVIDUAL TO NOTIFY: AUTRY, MIKE
Select SERVICE TEAM TO NOTIFY: GOLD TEAM
Select NOTIFICATION BY PT LOCATION: 1A
INDIVIDUAL TO NOTIFY:
TEAM TO NOTIFY:
Select NOTIFICATION BY PT LOCATION:
Select UPDATE USERS W/O NOTIFICATIONS: CPRSPROVIDER,EIGHT
Select UPDATE TEAMS W/O NOTIFICATIONS:
Select UPDATE USER CLASS W/O NOTIFS:
Select ADMINISTRATIVE UPDATE USER:
Select ADMINISTRATIVE UPDATE TEAM:
SPECIAL UPDATES INDIVIDUAL:
Select Service/Specialty:
Select Consult Management Option:

Providers in the following categories have the authority to complete a consult for a service by writing a TIU document or attaching a medicine result:
Administrative updates differ from other complete actions in that they do not require a TIU note. The intention is for consults that are not to be completed normally (i.e., pt no-show) to be taken off the books. In the GUI (Windows) interface, Administrative Complete has its own menu command under consults tracking. If the current user has these privileges, then the menu command is activated by the program. In the List Manager interface, there is only the Complete (CT) command. If a user has both regular completion privileges and Administrative Complete privileges, the program inquires about which complete to pursue.

To set up an individual who has update privileges and receives “NEW SERVICE CONSULT/REQUEST” notifications do the following. This example sets up Dr. Maven to receive alerts when a consult comes to the Medicine clinic:

```
Select OPTION NAME: GMRC MGR Consult Management menu
Select Consult Management Option: SU Service User Management
Select Service/Specialty: MEDICINE
SERVICE INDIVIDUAL TO NOTIFY: CPRSPROVIDER,ELEVEN// CPRSPROVIDER,TEN TC PHYSICIAN
Select SERVICE TEAM TO NOTIFY: <Enter>
Select NOTIFICATION BY PT LOCATION: <Enter>
Select UPDATE USERS W/O NOTIFICATIONS: CPRSPROVIDER,ONE // <Enter>
Select UPDATE TEAMS W/O NOTIFICATIONS: <Enter>
Select UPDATE USER CLASS W/O NOTIFS: <Enter>
Select ADMINISTRATIVE UPDATE USER: CPRSPROVIDER,FIVE // <Enter>
ADMINISTRATIVE UPDATE USER: CPRSPROVIDER,FIVE// <Enter>
NOTIFICATION RECIPIENT: <Enter>
Select ADMINISTRATIVE UPDATE TEAM: <Enter>
Select ADMINISTRATIVE UPDATE INDIVIDUAL: CPRSPROVIDER,FIVE// <Enter>
Select Service/Specialty:
```

To set up a predefined team of clinicians for a service that has update privileges and receives NEW SERVICE CONSULT/REQUEST notifications do the following. In this example, to set up the Gold team to receive notifications do the following: (Team set up is discussed in the *CPRS Clinical Coordinator & User Manual*.)

```
Select OPTION NAME: GMRC MGR Consult Management menu
```
Select Consult Management Option: SU Service User Management

SERVICE INDIVIDUAL TO NOTIFY: CPRSPROVIDER,ELEVEN// <Enter>
Select SERVICE TEAM TO NOTIFY: GOLD <Enter>
Select NOTIFICATION BY PT LOCATION: <Enter>

Select UPDATE USERS W/O NOTIFICATIONS: SNOW,CHARLES R // <Enter>
Select UPDATE TEAMS W/O NOTIFICATIONS: <Enter>
Select UPDATE USER CLASS W/O NOTIFS: <Enter>
Select ADMINISTRATIVE UPDATE USER: CPRSPROVIDER,FIVE // <Enter>
    ADMINISTRATIVE UPDATE USER: CPRSPROVIDER,FIVE// <Enter>
NOTIFICATION RECIPIENT: <Enter>
Select ADMINISTRATIVE UPDATE USER: <Enter>
Select ADMINISTRATIVE UPDATE TEAM: <Enter>
SPECIAL UPDATES INDIVIDUAL: CPRSPROVIDER,FIVE// <Enter>

Select Service/Specialty:

To set up individuals and a predefined team associated with a hospital ward location that have update activities and receives “NEW SERVICE CONSULT/REQUEST” notifications: (In this example we set up ward 2B Medical to receive notifications, along with Dr. Snow and the Green team. Team set up is discussed in the CPRS Clinical Coordinator & User Manual.) The users entered in the NOTIFICATION BY LOCATION sub-fields will ONLY be notified if the requesting location for the consult matches the location for which they are entered here. So in the case of the following example CPRSPROVIDER,ONE would only be notified for consults coming from 2B MED

Select Consult Management Option: SU Service User Management

Select Service/Specialty: MEDICINE
SERVICE INDIVIDUAL TO NOTIFY: CPRSPROVIDER,ELEVEN// <Enter>
Select SERVICE TEAM TO NOTIFY: <Enter>
Select NOTIFICATION BY PT LOCATION: 1A// 2B

Searching for a Enter Ward Location
1  2B  2B
2  2B MED  2B MED
CHOOSE 1-2: 2  2B MED
INDIVIDUAL TO NOTIFY: CPRSPROVIDER,ONE OC PHYSICIAN
TEAM TO NOTIFY: GREEN
Select NOTIFICATION BY PT LOCATION: <Enter>
Select UPDATE USERS W/O NOTIFICATIONS: CPRSPROVIDER,ONE // <Enter>
Select UPDATE TEAMS W/O NOTIFICATIONS: <Enter>
Select UPDATE USER CLASS W/O NOTIFS: <Enter>
Select ADMINISTRATIVE UPDATE USER: CPRSPROVIDER,FIVE // <Enter>
    ADMINISTRATIVE UPDATE USER: CPRSPROVIDER,FIVE// <Enter>
NOTIFICATION RECIPIENT: <Enter>
Select ADMINISTRATIVE UPDATE USER: <Enter>
Select ADMINISTRATIVE UPDATE TEAM: <Enter>
Group Update (GU)

A Group Update can only be performed by an individual who has been set as the Special Updates Individual with the Set Up Consult Service (SS) or Service User Management (SU) option of the Consult Management (GMRC MGR) menu. This option should be exercised with great care because it can affect a large number of consults.

In this example, all consults before the first of the year that are not complete are discontinued for a specific service:

Select Consult Management Option: gu  Group update of consult/procedure requests
Select Service/Specialty: ALL SERVICES// CARD
1   CARDIOLOGY
2   CARDIOLOGY (SOUTH) TRACKING ONLY
CHOOSE 1-2: 1   CARDIOLOGY

The first order in Consults has an entry date of MAR 28, 1992
Update Status Start Date:  MAR 28, 1992// <Enter>  (MAR 28, 1992)
Update Status Stop Date:  DEC 31, 2000  (DEC 31, 2000)
1 = Pending
2 = Active
3 = Scheduled
4 = All
Enter any combination of numbers separated by a comma or hyphen:  (1-4): 4
If orders in the date range still have the selected status, this option will change their status in consults, and update the order.
You may change the status to COMPLETE or DISCONTINUED.
Change their status to: DIS  Discontinued
Enter the Comment to be applied to all selected Consults
1>Discontinue old consults ref.
2>
EDIT Option:
Records will be updated for:
------------------------------------------------------------------------------------------------------------------
Service: CARDIOLOGY
Beginning: Mar 28, 1992
Ending: Dec 31, 2000
Update: Active, Pending, and Scheduled Consults
To: DISCONTINUED
Update Comment:
Discontinue old consults ref.
------------------------------------------------------------------------------------------------------------------
Is this correct? NO// Y YES

Searching database for entries matching search criteria
............................

Select one of the following:
1         Print report only
2         Print report & update records
3         Quit

Choose the method to handle the report: 2 Print report & update records

The device selected will print a list of entries from file 123 that will be updated to DISCONTINUED.

If you choose to update records, the update of the consult entries will take place upon completion of the report.

It is highly advised that a printer be selected!
Select device for report: WORK PRINTER ROOM

Do you want your output QUEUED? NO// <Enter> (NO)

Select one of the following:
Y         To Update
N         To Quit without Updating

Enter update status : Y To Update

Select Consult Management Option:

Note: When using the Group Update functionality, the Ordering Provider will NOT receive an alert when a consult or request is updated online to a “completed” or “discontinued” status by the specialty service personnel. The original clinical who requested the order is notified electronically of the order’s resolution.

Consult Tracking Reports
The Consult Tracking Reports [GMRC REPORTS] option provides eight on-screen reports. They are:

Completion Time Statistics (ST) for QA and others interested in volume and service turn-around times.
Service Consults Pending Resolution (PC) helps users track individual consults.
Service Consults Completed (CC) for management and others interested in volume.
Service Consults Completed or Pending Resolution (CP) for clerical staff and others interested in pending consults.
Service Consults by Status either with or without Consults Numbers (NU and SC).
Print Consults by Provider, Location, or Procedure (PL).
Print Completion Time Statistics (TS, same as ST for printed output).
Print Service Consults by Status (PR, same as SC for printed output).
The Service Consults Pending Resolution [GMRC RPT PENDING CONSULTS] option may be added to a service user's primary or secondary option menu. See the Consult/Request Tracking User Manual for details related to this option. This option is also contained on the Consult Service Tracking and Pharmacy TPN Consults menus.
Consults Performance Monitor Report (PM)

This report was added with Consults patch GMRC*3*41 to satisfy performance monitor reporting requirements of the Veterans Integrated Service Network (VISN) Support Services Center (VSSC). For FY08, the VHA Deputy Undersecretary for Health for Operations and Management has published updates to the monitor definitions, and patch GMRC*3.0*60 implements those updates.

This report comes in two forms, a summary report for local use in tracking performance, and a delimited report for use with spreadsheets software. The report will now have the following exclusions: Prosthetics consults, consults with a status of Cancelled or Discontinued, Administrative consults, and Inpatient consults.

The ability to mark a service as administrative (via the Setup Services option) is new in patch GMRC*3.0*60. This new capability is an attempt to further refine the process of measuring the completion rate performance.

With Patch GMRC*3.0*81, developers changed the report to use CLINICALLY INDICATED DATE in place of EARLIEST APPROPRIATE DATE.

In the following example a Summary report is printed for the Cardiology service for the third quarter of FY05:

Select Consult Tracking Reports Option: ?

ST Completion Time Statistics
PC Service Consults Pending Resolution
SH Service Consults Schedule-Management Report
CC Service Consults Completed
CP Service Consults Completed or Pending Resolution
IFC IFC Requests
IP IFC Requests By Patient
IR IFC Requests by Remote Ordering Provider
NU Service Consults with Consults Numbers
PI Print IFC Requests
PL Print Consults by Provider, Location, or Procedure
PM Consult Performance Monitor Report
PR Print Service Consults by Status
SC Service Consults By Status
TS Print Completion Time Statistics Report

Select Consult Tracking Reports Option: PM Consult Performance Monitor Report
Select Service/Specialty: CARDIOLOGY
Ensure you are providing fiscal year, NOT calendar year.
Current Fiscal Year (i.e. 2008): 2005
For which quarter are you running the report: first, second, third or fourth?
Enter a number 1 - 4: (1-4): 3

Select one of the following:

What type of report: S Summary
DEVICE: HOME// <Enter> HOME
Consult/Request Performance Monitor - 2QFY05  
Fiscal Quarter Dates: Jan 01, 2005 - Mar 31, 2005  
30 Days Before Start/End: Dec 02, 2004 - Mar 01, 2005  
60 Days Before Start/End: Nov 02, 2004 - Jan 30, 2005

...EXCUSE ME, JUST A MOMENT PLEASE...

SERVICE: CARDIOLOGY

| All Requests in 30 Days Before Start/End of Qtr: | 1 | 0 | 0 |
| All Requests in 60 Days Before Start/End of Qtr: | 1 | 0 | 0 |
| Complete with Results in 30 Days of Request: | 0 | 0 | 0 |
| Complete with Results 31-60 Days of Request: | 0 | 0 | 0 |
| All Requests Created 60 Days Before Qtr Start: | 228 | 1 | 15 |
| All Requests Pending 60 Days Before Qtr Start: | 79 | 0 | 7 |
| Percent Complete w/Results in 30 Days of Request: | 0.00% | N / A | N / A |
| Percent Complete w/Results 31-60 Days of Request: | 0.00% | N / A | N / A |
| Percent Still Pending Created Before Qtr Start: | 34.65% | 0.00% | 46.67% |

Resubmitted requests are evaluated based on the original Date of Request.

The following are excluded from this report:
- Requests sent to test patients.
- Services flagged as part of the interface between Consults/Request Tracking and Prosthetics.
- Administrative requests flagged via the Administrative fields in the REQUEST SERVICES and REQUEST/CONSULTATION files. This is not retroactive and only applies to services/requests leveraging the Administrative-flagging capability included in GMRC*3.0*60, available on or about June 2008.
- The report utilizes the CLINICALLY INDICATED DATE field from the REQUEST/CONSULTATION file to determine request totals for a given Date range. This is true even for requests that have been re-submitted using the Edit/Resubmit functionality.

In this example a Delimited report is generated covering the Medicine grouper for second quarter, FY 2005 (setting the columns to 256 will prevent values from wrapping to the next line):
Resubmitted requests are evaluated based on the original Date of Request.

The following are excluded from this report:
- Requests sent to test patients.
- Services not marked as Outpatient in the REQUEST/CONSULTATION file.
- Administrative requests flagged via the Administrative fields in the REQUEST SERVICES and REQUEST/CONSULTATION files. This is not retroactive and only applies to services/requests leveraging the Administrative-flagging capability included in GMRC*3.0*60, available on or about June 2008.
Print Consults by Provider, Location, or Procedure (PL)

This provides three different reports under one menu option [GMRC PRINT BY SEARCH]. The option asks for search criteria: Sending Provider, Location, or Procedure. You can further limit the search by entering a date range and CPRS status. The option also prompts for report format. The report format can be one of the following:

- 80 column standard print [STANDARD].
- 132 column standard print.
- Table without headers (export to another application).

In this example, a list of EKG consults is generated:

Select Consult Tracking Reports Option: ?

<table>
<thead>
<tr>
<th>ST</th>

Enter RETURN to continue or '^' to exit:
Print Test Page (TP)

Sometimes the pagination on SF 513 is correct on some printers but incorrect on others. The Print Test Page command is provided for diagnosing incorrectly paginated SF 513s. Instructions for correcting this situation are printed with the test page. Bring the test page to IRM for resolution of the problem.

In this example, we run the Print Test Page option on a specified printer:

<table>
<thead>
<tr>
<th>Select Consult Management Option: TP Print Test Page</th>
</tr>
</thead>
<tbody>
<tr>
<td>Print consults printer setup page.</td>
</tr>
<tr>
<td>DEVICE: HOME//LAZER PRINTER ROOM LN11 12 PITCH Right Margin: 80//</td>
</tr>
<tr>
<td>Do you want your output QUEUED? NO//&lt;Enter&gt; (NO)</td>
</tr>
</tbody>
</table>

Determine Users' Update Authority (UA)

Sometimes it is necessary to quickly check on the authority of a service user. The Determine Users’ Update Authority option of the Consults Management menu does this.

In this example, the authority for Dr. Snow is checked for the Cardiology service:

<table>
<thead>
<tr>
<th>Select Consult Management Option: UA Determine users' update authority</th>
</tr>
</thead>
<tbody>
<tr>
<td>This option will allow you to check a user's update authority for any given service in the consults hierarchy. If the PROCESS PARENTS FOR UPDATES field is set to YES, all ancestors of the selected service will be checked. The type of update authority and the service to which they are assigned will be displayed.</td>
</tr>
<tr>
<td>Select Consult Service: CARDIOLOGY</td>
</tr>
<tr>
<td>Choose user to check for update status: SNOW SNOW,CHARLES R. CA MD Surgeon</td>
</tr>
<tr>
<td>This user is an update user for: CARDIOLOGY via the UPDATE USERS W/O NOTIFICATIONS field.</td>
</tr>
</tbody>
</table>

Select Consult Service:
Determine if User is Notification Recipient (UN)

Sometimes it is necessary to quickly check a user’s notification status for a service. The Determine if User is Notification Recipient option of the Consults Management menu accomplishes this.

In the following example CPRSPROVIDER,ONE notification status is checked for the Podiatry Clinic:

<table>
<thead>
<tr>
<th>Select Consult Management Option: <strong>UN</strong> Determine if user is notification recipient</th>
</tr>
</thead>
<tbody>
<tr>
<td>This option will list how a given user became a notification recipient for a selected consult service. If the PROCESS PARENTS FOR NOTIFS field is set to YES, all the parents of the service will also be processed to determine if the user is a recipient via that service.</td>
</tr>
</tbody>
</table>

| Select Consult Service: **POD** FOOT CLINIC                |
| Choose notification recipient: **CPRS PROVIDER** CPRSPROVIDER,ONE OC PHYSICIAN |
| This user is a notification recipients for FOOT CLINIC |

Select Consult Service:
**Determine Notification Recipients for a Service (NR)**

Occasionally it is necessary to see the entire list of notification recipients for a service. The Determine Notification Recipients for a Service option of the Consults Management menu performs the function.

In the following example, notification recipients are listed for the Medicine service:

Select Consult Management Option: NR  Determine notification recipients for a service
Select Service: MEDICINE

<table>
<thead>
<tr>
<th>Notification Recipient</th>
<th>Service</th>
</tr>
</thead>
<tbody>
<tr>
<td>CPRSPROVIDER,TWELVE</td>
<td>MEDICINE</td>
</tr>
<tr>
<td>CPRSPROVIDER,FOUR</td>

SS  Select new Service
Select Item(s): Quit//
Test Default Reason for Request (TD)

The Test Default Reason for Request option of the Consults Management menu is provided so that the boilerplate entered in the default reason for request can be tested. It is important to test this boilerplate, especially if it contains TIU objects (TIU objects are contained in vertical bars as such: |PATIENT NAME|.)

TIU can vary from site to site. There are only a certain number of objects that are common to all sites—these are the Supported Objects. The following table contains a list of these objects:

<table>
<thead>
<tr>
<th>Object Name</th>
<th>Object Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>ACTIVE MEDICATIONS</td>
<td>PATIENT HEIGHT</td>
</tr>
<tr>
<td>ACTIVE MEDICATIONS</td>
<td>PATIENT NAME</td>
</tr>
<tr>
<td>ACTIVE MEDS COMBINED</td>
<td>PATIENT RACE</td>
</tr>
<tr>
<td>ALLERGIES/ADR</td>
<td>PATIENT RELIGION</td>
</tr>
<tr>
<td>BLOOD PRESSURE</td>
<td>PATIENT SEX</td>
</tr>
<tr>
<td>CURRENT ADMISSION</td>
<td>PATIENT SSN</td>
</tr>
<tr>
<td>DETAILED ACTIVE MEDS</td>
<td>PATIENT WEIGHT</td>
</tr>
<tr>
<td>DETAILED RECENT MEDS</td>
<td>PULSE</td>
</tr>
<tr>
<td>NOW</td>
<td>RECENT MEDICATIONS</td>
</tr>
<tr>
<td>PAIN</td>
<td>RECENT MEDS COMBINED</td>
</tr>
<tr>
<td>PATIENT AGE</td>
<td>RESPIRATION</td>
</tr>
<tr>
<td>PATIENT DATE OF BIRTH</td>
<td>TEMPERATURE</td>
</tr>
<tr>
<td>PATIENT DATE OF DEATH+ Status</td>
<td>TODAY’S DATE</td>
</tr>
</tbody>
</table>

Further information about objects can be obtained at the following VA intranet address:

vista.med.va.gov/softserv/clin_bro.ad/tiu/html/objects.html

In the following example, we first use the SS option to enter a default reason for request as such:

```
. . .
DEFAULT REASON FOR REQUEST:
1>|PATIENT NAME| is a |PATIENT AGE| y/o |PATIENT RACE| |PATIENT SEX|
2>|currently taking |ACTIVE MEDICATIONS|
3>
4>
5>|Allergies:
6>|ALLERGIES/ADR|
7>
8>|Latest BP: |BLOOD PRESSURE|
9>
10>|Patient to be seen for full cardiac evaluation.
EDIT Option: <Enter>
```

. . .
Now, to check this we use the TD option to check this for a specific patient:

Select Consult Management Option: **TD**  Test Default Reason for Request
Test default for service or procedure? ?

Enter a code from the list.

Select one of the following:

S  service
P  procedure

Test default for service or procedure? Service
Select Service: **CARDIOLOGY**
Select PATIENT: **CPRSPATIENT,EIGHTEEN**  CPRSPATIENT,EIGHTEEN  5-19-46  000180018

Enrollment Priority:  Category: IN PROCESS  End Date:

Gathering Allergy Data..

Default Reason for Request  May 10, 2000  20:15:56  Page: 1 of 1
Service: CARDIOLOGY
Patient: CPRSPATIENT,EIGHTEEN

CPRSPATIENT,EIGHTEEN is a 53 y/o BLACK, NOT OF HISPANIC ORIGIN MALE currently taking Active Inpatient Medications (excluding Supplies):

<table>
<thead>
<tr>
<th>Pending Inpatient Medications</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>1) WARFARIN TAB 10MG PO PRN</td>
<td>PENDING</td>
</tr>
</tbody>
</table>

Allergies:
BEEF

Latest BP: Blood Pressure: 130/80/100 (06/02/1999 13:17)

Patient to be seen for full cardiac evaluation.
List Consult Service Hierarchy (LH)

This option of the Consults Management menu gives a complete list of the Consult Service Hierarchy as it currently exists. All services, including disabled ones, are listed with their current status. At the end of the hierarchy listing it will show any services that are not part of the hierarchy.

In this example we start to list the service hierarchy from our test account on the computer screen:

```
Select Consult Management Option: LH List Consult Service Hierarchy
DEVICE: HOME// <Enter> VAX

Consult Hierarchy list Page: 1

   CARDIOLOGY (SOUTH)

Press RETURN to continue, ^ to exit:
```
Copy Prosthetics Services (CP)

The Copy Prosthetics Services option of the Consult Management menu is provided to assist you in configuring the prosthetics services at your medical center.

The four (4) nationally exported services for Prosthetics are:
1) PROSTHETICS REQUEST
2) EYEGLASS REQUEST
3) CONTACT LENS REQUEST
4) HOME OXYGEN REQUEST

The basis of the interface between Consult/Request Tracking and Prosthetics is the name of the Consult service being requested. When a request for a consult is ordered, if the name of the service requested is one of the nationally exported services, the order will be filed in the Prosthetics package as well as Consult/Request Tracking. Since the name of the service is critical to the stability of the interface, the name of each of the above services will not be editable.

Each of the services have several other fields defined based on requirements of the interface. The fields that are restricted are:

(#.01) NAME
(#1.01) PROVISIONAL DX PROMPT
(#1.02) PROVISIONAL DX INPUT
(#124) DEFAULT REASON FOR REQUEST

When a request is copied, all these fields remain intact so that a request to that service is processed by the Prosthetics Package.

In the following example, the Copy Prosthetics action is used to create an Eyeglass Request service with the location name “Provo” appended to it. To be useful, the following additional actions should be taken:

1. Use the Setup Service (SS) action to place the service in the hierarchy.
2. Use the Setup Service (SS) action to activate the service.

| Select Consult Management Option: CP Copy Prosthetics services |
| Select the Prosthetics Service to clone: Eyeglass Request DISABLED |
| Enter text to append to national service name: Provo |
| The new service name will be: EYEGLASS REQUEST - Provo |
| Is this OK? Y YES |
Consult Closure Tool (CCT)

The Consult Closure Tool provides options to identify consult requests that are incorrectly left in Pending status and efficiently closes out those consults. Search parameters can be configured in the tool, providing a list that allows you to close out consults by attaching a relevant note within the tool. There are also options to export the search results from the tool to a printable format and update a team list in CPRS.

The VistA Consult Closure tool consists of three components:

- **Edit Configuration**: Enables the user to configure the tool to identify pending consults based on search parameters, including clinics, orders, consult services, and procedures. The user also selects relevant note titles to use in closing pending consults. One or more valid configurations must be created prior to using the Run Configuration option.

- **Inquire Configuration**: Enables the user to print and view the configuration to ensure that it is set up properly.

- **Run Configuration**: Enables the user to select eligible note titles to close an open consult, perform the closure action, and/or create team lists that are viewable in CPRS.

The Consult Closure Tool is located in the GMRC MGR menu. This menu is normally allocated to IRMS/ADPAC personnel.

1. Navigate to the GMRC MGR menu option.

2. Type “CCT” to open the Menu for Closure Tools.

   The following options appear:

   - **EDT** Consult Closure Tool Edit Configuration
   - **INQ** Consult Closure Tool Inquire Configuration
   - **RUN** Consult Closure Tool Run Configuration
Edit Configuration Component

The first step is to set up the configuration(s) using the Consult Closure Tool Edit Configuration menu option.

The key points when setting up a Consult Closure configuration are:

- The **Config Name** is free text. It is strongly suggested that simple names be used for the configurations and that they closely match existing consult service naming conventions.

- Configurations may contain Clinical Procedure requests, as well as specific consult orderable items, in addition to standard consult services. For example, one configuration for PULMLAB might encompass Pulmonary Function Test Request Consults, CP Pulmonary Function Test Procedure Requests, and specific orderable items for Pulmonary Sleep Studies.

- In order to view the team lists that can be generated out of this tool in CPRS, team lists must be created in VistA prior to using this tool. It is strongly suggested that a naming convention be established prior to creating the first configuration. For example, begin the team list name with "CONSULT_REPORT_" with the specific configuration name following. In this way, all of the team's patient lists created within this tool are in sequence when browsed for on the CPRS Patient Selection screen in the Patient List pane.

- In the Configuration Editor screen, each of the four “Consults –“ fields are optional, but at least one of the four must be filled in to run the configuration. All four of the options allow for multiple selections. The search operates as a Boolean “AND” search for the entries into these fields. Therefore, each additional entry narrows your search because a consult request must meet all of the entries.

**Note:** Wildcard selection (ABC*) or exclusion (-ABC*) can be used in the editor in all of the entry fields. For example, all note titles beginning with ABC would be selected by entering ABC*. To exclude all note titles beginning with ABC, you would enter –ABC*.

The key components of the editor are shown in the example below.
To create or edit a Consult Closure configuration:

1. In the GMRC MGR menu, type "CCT" and then press Enter to open the Menu for Closure Tools.

2. Type "EDT" and then press Enter.

3. At the initial Consult Closure Tool Edit Configuration prompt, enter the new or existing configuration name. For a new configuration, type “Yes” when asked if you want to add this as a new consult configuration.

4. Press Enter. The Configuration Editor screen opens with the Config Name field highlighted and editable.

5. In the Days Cons -> Apt field, enter the maximum number of days between the date of the consult entry and the clinic appointment. The tool will search for pending consults that fall within this time period. A shorter interval will make the tool run faster.

6. In the CPRS Team field, enter the name of the CPRS team that will be populated when this configuration is run. The team must already exist.

7. In the Days Appt -> Note field, enter the maximum number of days between the clinic appointment date and the date of the eligible note that can be associated with the consult in the Run Configuration option.

8. In the Inactive field, enter NO (the default option) to make this configuration active. If a configuration is marked inactive, it is not selectable when running the Consult Closure Tool. It is still selectable in the Edit and Inquire options.

9. (optional) In the Consults - Service field, enter the name(s) of the consult service(s) to be used as search parameters.
10. (optional) In the **Consults - Procedure** field, enter the Procedure(s) to be used as search parameters. The Consults-Procedure field is for Medicine package procedure requests that do not use the Clinical Procedure (CP) interface.

11. (optional) In the **Consults – Order Item** field, enter specific orderable item(s) to be used as search parameters.

12. (optional) In the **Consults – Clinical Procedure** field, enter the Clinical Procedure(s) to be used as search parameters.

13. In the **Clinics** field, enter the Clinics to be used as search parameters. In lieu of entering individual clinics, you can enter the relevant **Stop Code(s)** to capture all associated clinics if they have already been correctly mapped in VistA. Adding more clinics broadens your search (operating as a Boolean "OR"), as the patient only has to be associated with one of them for their consult request to be returned when running the configuration.

14. In the **Note Titles** field, enter all eligible note titles to be associated with pending consults during Run Configuration. Define an appropriately comprehensive set of note titles, but be aware that an overly broad list might result in a higher likelihood of incorrect association with a pending consult.

   This step is key as it allows non consult-class TIU documents that have been completed subsequent to a consult request to be associated with the consult, thus converting that pending consult’s status to Completed.

15. Press <PF1>E to save and exit. This returns you to the CCT menu. For a complete list of help options, press <PF1>H.

   If the configuration is incomplete, you are notified when saving the configuration. Once the search configuration is completed, you are able to run a report using the Run Configuration option.

**Inquire Configuration Component**

Once a configuration is created, it can be viewed and printed using the Consult Closure Tool Inquire Configuration menu option. This option is useful for verifying that the configuration is set up properly. At the Menu for Closure Tools, type "INQ" to view the configuration information.

**Run Configuration Component**

Use the **Consult Closure Tool Run Configuration** menu option to implement the search for pending consults. When you are done using the Run Configuration, press <PF1>E to return to the CCT menu.
Select **CONSULT CONFIGURATION:** UNIT TEST

Select a consult date range
Monthly, Quarterly, Semi-Annually, Yearly, Fiscal Yearly, User Selectable

Select date range: **U**// USER SELECTABLE

Enter beginning and ending dates for the desired time period:
BEGINNING DATE: 01/01/2017 // 10/1/2010 (OCT 01, 2010)
ENDING DATE: 01/31/2017 // (JAN 31, 2017)

Range selected: 10/01/2010 to 01/31/2017

Select an appointment status for the report
1 - Seen in clinic
0 - Not seen in clinic

Select APPOINTMENT STATUS: 1 // 0 Not seen in clinic

Select a note status for the report
1 - Has a note
0 - Does not have a note

Select NOTE STATUS: 1 // Has a note

Interactive consult update: Yes // YES

Searching for patient consults / appointments / notes

---

To run a configuration:

1. In the GMRC MGR menu, type "CCT" and then press Enter to open the Menu for Closure Tools.

2. On the CCT menu screen, type “RUN” and then press Enter.

3. At the “Select CONSULT CONFIGURATION:” prompt, enter the name of the configuration to be run and then press Enter. This prompt defaults to the your last selection, allowing you to just press Enter to access the last run configuration.

4. At the “Select date range:” prompt, select a consult request date range. Type the first letter of the desired range (e.g., "M" for monthly). The default range is “U” for User Selectable. Note: The larger the selected date range, the longer the Consult Closure Tool takes to run.

5. If you selected User Selectable, enter the desired date range at the “Beginning date:” and “Ending date:” prompts. The default dates are the beginning and ending day of the previous month.
6. At the “Select APPOINTMENT STATUS:” prompt, choose consult requests for which the patients have been seen or not seen in a clinic (the clinic list or stop code was delineated in the Configuration Editor). The default option is “Seen in clinic.”

7. At the “Select NOTE STATUS:” prompt, choose consult requests that have an eligible note or no eligible note. The default option is “Has a note.” This is the standard selection for completing consults with an encounter for which a note has been written. Most commonly, this involves a non-consult class note title being selected for the care documentation.

If you selected “Has a note,” then the “Interactive consult update:” prompt displays. The default response is Yes. Select Yes to interactively view the pending consults and the notes specified in the configuration, and optionally complete each consult by selecting a note to associate with it. More information is provided in the Closing Out Consults section below. Select No to print a report of the pending consults and notes and/or update the CPRS team list associated with the selected configuration. The default selection when selecting No is to both print and update the CPRS team list.

If "Does not have a note" is selected, you have the option to print a report of the pending consults and notes and/or update the CPRS team list associated with the selected configuration.

Closing Out Consults

If you selected Yes at the “Interactive consult update:” prompt while running the configuration, then you can use the Closure Tool to review and close out pending consults. The tool will search for patient consults, appointments, and notes. This might take some time (possibly up to 20 minutes) depending on the search criteria specified in the configuration and the date range. When the search is complete, the number of patients, consults, and notes is displayed.

The Consult Closure Tool has identified
Patients: 6
Consults: 6
Notes: 9
that meet your selected criteria.

Press RETURN to continue

Press Enter to see the first patient’s Consult Narrative. The patients’ Consult Narrative screens appear in alphabetical order by patient last name:

<table>
<thead>
<tr>
<th>Consult closure for patient: CPRSPatient,One (M9668) 09/25/1933</th>
</tr>
</thead>
<tbody>
<tr>
<td>MEDICAL SERVICE OTHER (p) 11/12/2010</td>
</tr>
<tr>
<td>Consult Narrative (1 of 3)</td>
</tr>
<tr>
<td>Current PC Provider: CPRSPartner,One</td>
</tr>
<tr>
<td>Current PC Team: TEAM GLY 1</td>
</tr>
</tbody>
</table>
Current Pat. Status: Outpatient
Primary Eligibility: NSC(VERIFIED)
Patient Type: NSC VETERAN
OEF/OIF: NO

Order Information
To Service: MEDICAL SERVICE OTHER
From Service: C SURGERY
Requesting Provider: CPRSProvider, Two
Service is to be rendered on an OUTPATIENT basis
Place: Consultant's choice
Urgency: Today
Clinically Ind. Date:
Orderable Item: MEDICAL SERVICE OTHER
Consult: Consult Request
Provisional Diagnosis: medical care/management of DM
Reason For Request: management of DM, medical clearance for possible laparotomy in am

Patient and consult information is displayed first, followed by the consult and/or notes associated with the patient. You can scroll through the text by using the arrow and page up/down keys.

The Consult Narrative appears first for each patient. To toggle to the eligible notes on the BROWSE SWITCH MANAGER, select Num-Lock/S or <PF1>S. This opens the BROWSE SWITCH MANAGER screen, where you can view the notes available to close out the consult.

The BROWSE SWITCH MANAGER screen displays the eligible notes selected in the Configuration Editor. Selecting a note displays the contents of the note. When viewing the selected note, press <PF1>S to return to the list of notes on the BROWSE SWITCH MANAGER screen. After you have reviewed the consult and the identified notes and are
ready to close the consult or move on to the next patient, press Num-Lock/E or <PF1>E to exit the current screen. This opens the Consult closure screen.

Note: The notes on the BROWSE SWITCH MANAGER screen are displayed in reverse chronological order, grouped by note title. If there are multiple available and relevant note titles for a given patient within each of the note title groups, then the oldest note appears at the bottom. However, the note at the bottom of the list is only the oldest for that note title group, and might not be the oldest note of all note titles (that is, closest in time to the date of the pending consult itself) that are available for that patient.

Consult closure for patient: CPRSPatient, One 09/25/1933
MEDICAL SERVICE OTHER (p) 11/12/2010

Select the note to close the consult

0 - Do not close the consult
1 - Note 01: 10-10ED EMERGENCY DEPARTMENT NOTE
2 - Redisplay the consult/progress note(s)
^ - Exit the Consult Closure Tool

Select NOTE TO CLOSE CONSULT: 2/

In the Consult closure screen (pictured above), you can select from the following options: a) Do not close the consult, b) Close the consult with one of the identified notes, c) Return to the consult/note display screen for further review, or d) Exit the Consult Closure Tool. If you select option a), then no action is taken on the consult and the tool automatically displays the next consult. If you select option b), then the tool closes the consult with the selected note and automatically displays the next patient’s Consult Narrative. This process continues until all consults are processed or you exit the Consult Closure Tool.

Printing/Updating the CPRS Team List

If you selected No at the "Interactive consult update" prompt in Run Configuration, then you can print a consult/note report list and/or update the CPRS team list associated with the selected configuration. The default is to both print the report and update the team list.

Select the output type for the report

1 - Print report
2 - Team update

Select OUTPUT TYPE: 1,2/

Delimited output: No// NO

This report requires a 132 column output device
DEVICE: HOME// ;;9999999 HOME (CRT) Right Margin: 80//
For the Print option, the report may be printed in a human readable format (the default No option) or a carat (“^”) delimited format for import into another program (such as an Excel spreadsheet). The report requires a 132-column output device.

For the Team update option, the selected configuration updates the CPRS patient team list associated with it. When run, any pre-existing patients on the list are removed and replaced with the newly-identified patients. The user running the Consult Closure Tool and the users associated with the team list will receive alerts when the team update has completed.

**Duplicate Sub-Service (DS)**

The Duplicate Sub-Service option of the Consult Management menu is provided to assist you in debugging your service hierarchy. It displays services that are listed as a sub-service of more than one service. Having a service as a sub-service of more than one service has several undesirable effects. These include:

1. Reports that span more than one level of the hierarchy inaccurately report statistics.
2. Notification recipients may be inaccurately determined.

In this example, we run the DS option on our local test account:

```
Select Consult Management Option: **DS**  Duplicate Sub-Service
Service GASTROENTEROLOGY is a sub service of:
   ALL SERVICES
   MEDICINE

There is 1 service that is a sub-service for more than one service.
```

**Define Fee Services (FS)**

The Define Fee Services option of the Consult Management menu is provided to assist you in modifying the list of services defined as being fee basis services in the GMRC FEE SERVICES system parameter.

In the following example, we begin with an empty list of services.
Services defined in GMRC FEE SERVICES system parameter as fee-basis services.

We then add a service (leaving the “REQUEST SERVICES SERVICE NAME” prompt blank will cancel the entry).

Note: Although trackers and groupers may be available when selecting services to add to the list, they should not be added. Only actual services should be included in this list.
Now, starting with a list of a few services, we delete a service.

Add                      Save
Remove                   Quit
Select Action: Quit//

Select service by number in list above:  (1-4): 2

**CARDIOLOGY REMOVED**

Add                      Save
Remove                   Quit
Select Action: Quit//  r  Remove
Finally, we save our list and quit.

</tr>
</tbody>
</table>

**Note:** The list must be saved for changes to take effect. If the user quits without saving, he or she will be prompted to save changes before quitting.
**Inter-Facility Consults Reports**

The Inter-Facility Consults reports are available on the Consult Tracking Reports menu [GMRC REPORTS] and the IFC Management Menu [GMRC IFC MGMT]. Currently four Inter-Facility Consults reports show up on this menu. They are:

<table>
<thead>
<tr>
<th>Report Synonym</th>
<th>Report Name</th>
<th>Option Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>IFC</td>
<td>IFC Requests</td>
<td>[GMRC IFC RPT CONSULTS]</td>
</tr>
<tr>
<td>IP</td>
<td>IFC Requests by Patient</td>
<td>[GMRC IFC RPT CONSULTS BY PT]</td>
</tr>
<tr>
<td>PI</td>
<td>Print IFC Requests</td>
<td>[GMRC IFC PRINT RPT NUMBERED]</td>
</tr>
<tr>
<td>IR</td>
<td>IFC Requests by Remote Ordering Provider</td>
<td>[GMRC IFC RPT CONSULTS BY REMPR]</td>
</tr>
</tbody>
</table>

IFC Requests (IFC) provides detailed information regarding inter-facility consults. The Inter-Facility Consult Requests (PI) is the same report formatted for a printer.

The IFC Request by Patient (IP) is similar to option Consult Service Tracking, except only displays inter-facility consults as a requesting or consulting facility.

The IFC Requests by Remote Ordering Provider (IR) provides detailed information regarding inter-facility consults by remote ordering provider for consulting sites to utilize. The display is similar to the IFC/PI options.
IFC Requests

This report provides such information as:
- Total Requests to Service
- Total Requests Scheduled to Service
- Total Requests Completed to Service
- Mean Days Completed to Service

This report provides information for both requesting and consulting facilities.

In the following example, we examine all Dental consults originating by us as a requesting facility:

```
Select IFC Management Menu Option: IFC Inter-Facility Consult Requests
Are you the Requesting site or the Consulting site: (R/C): R REQUESTING
Only Display Consults With Status of: All Status's// ?
Enter a code from the list.

   Select one of the following:

   al    All Status's
   ap    All Pending
   dc    Discont.
   c     Completed
   p     Pending
   a     Active
   s     Scheduled
   pr    Incomplete
   x     Cancelled

Only Display Consults With Status of: All Status's// <Enter>  All Status's
Select Service/Specialty: DENTAL
List From Starting Date: ALL DATES// <Enter>
...SORRY, LET ME THINK ABOUT THAT A MOMENT...
```
<table>
<thead>
<tr>

<td>CPRS RELEASED ORDER</td>
<td>10/02/01</td>
<td>CPRSPATIENT,T. (0020)</td>
<td>2B MED</td>
</tr>
</tbody>
</table>

There are additional fields that are not visible on an 80 column screen such as the screen in the example. They can be viewed by using the Shift to View Right action (>). Using the Shift to View Left (<) action restores the screen. If the report is for a consulting site, then the additional fields are: Routing Facility, Days Diff, and Red Date. If the report is for a requesting site, then the additional fields are: Routing Facility and Days Diff.

There are five actions you can do besides the default actions (like Next Screen, Previous Screen, Quit, >, <, …). These are change Service, Number on/off, Description of Data, Status, and Print List.

The change Service action allows you to re-display the report for a different service.

The Number on/off action changes the format of the report to include the consult number. To do this, it preserves the other columns but makes them narrower.

The Description of Data action gives a detailed description for applicable data columns.

The Status action allows you to change which statuses are displayed in the report. In the following example the statuses displayed are changed from All Statuses to just the Pending, Active, and Scheduled consults:
### IF Consult/Request By Status - Requesting Site

**FROM: ALL**  **TO: FEB 7, 2002**

<table>
<thead>
<tr>
<th>Service</th>
<th>Number on/off</th>
<th>Description of Data</th>
</tr>

Select: Quit//
**IFC Requests by Remote Ordering Provider**

If you need to determine the status of consults at your facility ordered from a certain provider at another facility, then you can use the IFC Requests by Remote Ordering Provider option.

When using this option, you must specify the name of the provider exactly at the prompt. If you enter a question mark, a screened list of ordering providers is displayed.

In this example we look at the Medicine consults from a provider at Boise:

```
Select IFC Management Menu Option: IR  IFC Requests by Remote Ordering Provider
Select Requesting site: BOISE

  1  BOISE       ID  VAMC      531
  2  BOISE       ID  RO        347
  3  BOISE       ID  M&ROC     447
  4  BOISE       ID  CHEP      932

CHOOSE 1-4: 1  BOISE       ID  VAMC      531

Enter the ENTIRE name in proper CASE, exactly as it appears in the list (including any credentials).
Use copy/paste to avoid typing errors.
NO partial matches are done.
Enter ? to display a list of possible entries.
Select Remote Ordering Provider: ?

CPRSprovider,TWENTY
CPRSprovider,NINE
CPRSprovider,TWENTYONE
CPRSprovider,TWENTYTWO
CPRSprovider,TWENTYTHREE
CPRSprovider,TWENTYFOUR
CPRSprovider,TWENTYFIVE
CPRSprovider,TWENTYSIX
CPRSprovider,TWENTYSEVEN
CPRSprovider,TWENTYEIGHT

Enter RETURN or '^' to exit: <Enter>

Enter the ENTIRE name in proper CASE, exactly as it appears in the list (including any credentials).
Use copy/paste to avoid typing errors.
NO partial matches are done.
Enter ? to display a list of possible entries.
Select Remote Ordering Provider: CPRSPROVIDER,TWENTYFOUR
Only Display Consults With Status of: All Status's/<Enter>
Select Service/Specialty: MEDICINE
List From Starting Date: ALL DATES/<Enter>

...SORRY, LET ME PUT YOU ON 'HOLD' FOR A SECOND...
```
There are three other fields that are not visible on an 80 column screen such as the screen in the example. They are: Routing Facility, Days Diff, and Rec Date. They can be viewed by using the Shift to View Right action (>). Using the Shift to View Left (<) action restores the screen.

There are five actions you can do besides the default actions (like Next Screen, Previous Screen, Quit, >, <, …). These are change Service, Number on/off, Description of Data, Status, and Print List.

The change Service action allows you to re-display the report for a different service.

The Number on/off action changes the format of the report to include the consult number. To do this, it preserves the other columns but makes them narrower.

The Description of Data action gives a detailed description for applicable data columns.

The Status action allows you to change which statuses are displayed in the report.
Inter-Facility Consults Management Options

The Inter-Facility Consults Options [GMRC IFC MGMT] menu is part of the Consults Management [GMRC MGR] menu. This menu has the following options in it:

<table>
<thead>
<tr>
<th>Synonym</th>
<th>Name</th>
<th>Command</th>
</tr>
</thead>
<tbody>
<tr>
<td>TI</td>
<td>Test IFC implementation</td>
<td>[GMRC IFC TEST SETUP]</td>
</tr>
<tr>
<td>LI</td>
<td>List incomplete IFC transactions</td>
<td>[GMRC IFC INC TRANZ]</td>
</tr>
<tr>
<td>IFC</td>
<td>Inter-Facility Consult Requests</td>
<td>[GMRC IFC RPT CONSULTS]</td>
</tr>
<tr>
<td>TR</td>
<td>IFC Transaction Report</td>
<td>[GMRC IFC TRANS]</td>
</tr>
<tr>
<td>LK</td>
<td>Locate IFC by Remote Cslt #</td>
<td>[GMRC IFC REMOTE NUMBER]</td>
</tr>
<tr>
<td>BK</td>
<td>Monitor IFC background job parameters</td>
<td>[GMRC IFC BKG PARAM MON]</td>
</tr>
<tr>
<td>IP</td>
<td>Inter-facility Consult Requests By Patient</td>
<td>[GMRC IFC RPT CONSULTS BY PT]</td>
</tr>
<tr>
<td>IR</td>
<td>IFC Requests by Remote Ordering Provider</td>
<td>[GMRC IFC RPT CONSULTS BY REMPR]</td>
</tr>
<tr>
<td>PI</td>
<td>Print Inter-facility Consult Requests</td>
<td>[GMRC IFC PRINT RPT NUMBERED]</td>
</tr>
</tbody>
</table>

Inter-Facility Consult Requests (IFC), Inter-Facility Consult Requests by Patient (IP), Print Inter-Facility Consult Requests (PI), and IFC Requests by Remote Ordering Provider (IR) are covered under the Inter-Facility Consults Reports section above.
Test IFC Implementation

The following example shows how to use the Test IFC Implementation option to check the setup of a procedure or consult service:

Select IFC Management Menu Option: **TI** Test IFC implementation

Select one of the following:

P             procedure
C             consult service

Would you like to test a procedure or consult service: procedure

Select the GMRC Procedure that you'd like to test: **EKG**

1  EKG - BOISE
2  EKG ELECTROCARDIOGRAM

CHOOSE 1-2: 1  EKG - BOISE

attempting to connect to remote system...

There is an implementation problem. The remote site indicated:
Multiple services matched to procedure

Would you like to test another implementation?

The following are the 5 most common errors that may be indicated with this option:

- **301** – Service not matched to receiving facility. You need to coordinate with the consulting facility. The consulting facility needs to use the Setup Service (SS) option to make sure your facility is correctly listed in the IFC SENDING FACILITY field.
- **401** – Procedure not matched to receiving facility. You need to coordinate with the consulting facility. The consulting facility needs to use the Setup Procedure (PR) option to make sure your facility is correctly listed in the IFC SENDING FACILITY field.
- **501** – Error in procedure name. Could not find a matching procedure at the consulting facility. You probably need to verify the spelling and use the Setup Procedure (PR) option to make sure the IFC REMOTE PROCEDURE NAME is correct in your Procedure file (#123.3).
- **601** – Multiple services matched to procedure. At the consulting facility, the RELATED SERVICES multiple must only contain a single value.
- **701** – Error in Service name. Could not find a matching service at the consulting facility. You probably need to verify the spelling and use the Setup Service (SS) option to make sure the IFC REMOTE NAME is correct in your Request Services (#123.5).

Note: Any error occurring within the VistA HL7 messaging system is also indicated in this option.
List incomplete IFC transactions

GMRC IFC INC TRANS is a tool for reviewing incomplete Inter-Facility Consult (IFC) Transactions. With this option you can retransmit an action that is not yet resolved.

This option can accept the following inputs when selecting a consult request:

- A Consult number.
- A Patient Name.
- A Service Name.
- A question mark to see a screened list of consults with incomplete activities.

The following screen capture error is inspected and a retransmit if performed:

| Select IFC Management Menu Option: **LI** List incomplete IFC transactions |
| Select a consult request: **?** |
| Answer with REQUEST/CONSULTATION NUMBER, or FILE ENTRY DATE, or PATIENT NAME, or TO SERVICE, or FROM, or DATE OF REQUEST, or CPRS STATUS, or SENDING PROVIDER, or ASSOCIATED RESULTS |
| Do you want the entire REQUEST/CONSULTATION List? **n** (No) |

Type in the number, date of request or patient name.

Select a consult request: **CPRSPATIENT, TWENTY** CPRSPATIENT, TWENTY 12-31-51 000200020 SC VETERAN

![](image)

Select action: Quit//
IFC Transaction Report

This option lists the current contents of the IFC Message Log (#123.6) for one or all consults. This log is used by the Inter-Facility Consults software to insure transmission of Inter-Facility Consult requests. The IFC background job checks this log and takes appropriate action on requests that have not yet successfully completed.

Old transactions are discarded by the software. You can control this function by using the Edit Parameter Values [XPAR EDIT PARAMETER] option, set the GMRC RETAIN IFC ACTIVITY DAYS parameter to a number between 7 and 180. If this parameter is not set, completed transactions will be retained for 7 days. The higher the number set in this parameter the more disk space will be used by the IFC MESSAGE LOG file.

See the section on Error Handling below for more complete details.

At the “Select Consult/Request Number:” prompt, you may enter any one of the following:

- ALL to list all entries.
- The consult number to list that single consult.
- The patient name to select a consult from the consults on file for that patient.
- The to or from service to select a consult from the consults to or from that service.
- The date of request to select a consult originated on that date.
- The CPRS status, such as PENDING or PARTIAL RESULTS, to select a consult with that status.
- The sending provider to select a consult originated by that provider.

In the following example, we list all entries in the IFC Transaction Log:

Select IFC Management Menu Option: ?

| TI | Test IFC implementation |
| LI | List incomplete IFC transactions |
| IFC | IFC Requests |
| TR | IFC Transaction Report |
| LK | Locate IFC by Remote Cslt # |
| BK | Monitor IFC background job parameters |
| IP | IFC Requests By Patient |
| IR | IFC Requests by Remote Ordering Provider |
| PI | Print IFC Requests |

Select IFC Management Menu Option: TR IFC Transaction Report

NOTE: Successful transactions are deleted after one week.

Select Consult/Request Number: ALL// ?
Answer with REQUEST/CONSULTATION NUMBER, or FILE ENTRY DATE, or PATIENT NAME, or TO SERVICE, or FROM, or DATE OF REQUEST, or CPRS STATUS, or SENDING PROVIDER, or ASSOCIATED RESULTS
Do you want the entire 2033-Entry REQUEST/CONSULTATION List?

Locate IFC by Remote Consult Number

This option is designed to assist consulting facilities with consult inquiries from requesting facilities. E.g., “Do you have the consult with Boise number 845?” All other reports are based on the local consult number. When a call is made from a requesting facility for information on the status of a consult, they are not likely to have the consulting facility’s number—only their own number for that consult. This option gets around that problem by keying on the original consult number.

In this example, a CAC at Salt Lake assists a Physician at Boise in looking up Boise consult number 845:

<table>
<thead>
<tr>

Select Action: Next Screen//
Monitor IFC Background Job Parameters

This option lists the current state of parameters covering the IFC background jobs. It also gives an alternate method of changing these parameters. E.G., If the running of the IFC Background job should be delayed for any reason (e.g. to install a GMRC patch or system maintenance), it may be delayed by using the Edit background job start parameter action and setting the start time parameter to a date/time in the future.

In this example, we view the IFC background job parameters:

Select IFC Management Menu Option: BK Monitor IFC background job parameters

Enter ?? for more actions
ES Edit background job start parameter
RL Refresh background parameter list
Select action: Quit//
**Notification Parameters**

There are four (4) Consults notifications:

- #23 CONSULT/REQUEST RESOLUTION
- #27 NEW SERVICE CONSULT/REQUEST
- #30 CONSULT/REQUEST CANCEL/HOLD
- #63 CONSULT/REQUEST UPDATED

Any user who wants to receive these notifications must have the notifications enabled for themselves. To turn on these notifications, use the Enable/Disable Notifications option of the NOTIFICATION MGMT MENU, ORB NOT MGR MENU.

**NOTE:** Unless Consult notifications are set to mandatory, individual users may use the Enable/Disable My Notifications option of the Notifications Management Menu to individually disable the notifications they do not want to receive.

Also, the deletion parameter for these notifications is set to Individual Recipient. This means that when an individual reviews one of these notifications, the notification is deleted for only that individual. This parameter may be set to All Recipients, in which case a notification is deleted for all recipients when any one of them reviews it.

To change the deletion parameter for any of the Consults notifications, use the Set Deletion Parameters for Notifications option of the Notification Mgmt Menu.

The newest notification, #63, CONSULT/REQUEST UPDATED, is triggered when a comment is added to consult or the consult is scheduled. Comments may be added either with the Add Comment (CM) action or the Schedule (SC) action. The text of the alert is altered depending on which one of these actions initiated the alert as follows:

- **Adding a Comment #63** "Comment Added to Consult: . . ."
- **Scheduling #63** "Scheduled Consult: . . ."

**Consult Service Tracking**

**Functionality**

The Consult Service Tracking (GMRC SERVICE TRACKING) option is a generic “User” option that:

Provides a “by patient” lookup of consults and procedure requests which is similar to CPRS’s “by patient” lookup of orders.

Provides a “by Service” lookup of consults and procedure requests. Users may select a service/specialty at any level in the hierarchy of services defined by IRMS/ADPAC personnel.
Note: The Consults “Select Service (SS)” action lumps all consult and procedure request orders under a Display Group called “CONSULT...” The only way for users to breakdown these orders by request service is to use the “Select Service (SS)” action provided by this option.

Displays a review screen of consults/requests in sequence by inverted “order released date/time” (most recent consults first).

Includes the Service’s “Last Activity” update and the updated CPRS status for each consult/request displayed.

Provides basic “Select Action:” prompt capabilities which parallel CPRS actions. Exactly which actions are displayed depends on the privileges accorded to the person using the system. Privileged actions such as Complete (CT), Cancel (DY), Discontinue (DC), Forward (FR), Receive (RC), Schedule (SC), Significant Findings (SF), and Make Addendum (MA) are not displayed if the user cannot perform them.

To make a determination of whether a user can perform privileged actions or not, Consults checks the following fields from the Requests Services (#123.5) file:

- Service Individual to Notify—123.08
- Service Team(s) to Notify—123.08
- Update Users W/O Notifications—123.1
- Update Teams W/O Notifications—123.3
- Administrative update users—123.33
- Administrative update teams—123.34
**Text Integration Utilities (TIU) Setup**

The Text Integration Utilities package is essential for completing consults under V. 3.0. It gives you several benefits not previously available. Among them are the ability to use boilerplate for selected consult types and the ability to file results in the TIU data base.

In this section we first review the process of Consults resulting. Then we present two different document definition hierarchies that may be used for Consults results. Finally, we present the TIU options you need to set up the TIU part of Consults Resulting.

**Consults Resulting Process**

The diagram, Consults Resulting Process, shows the consults process with emphasis on the resulting phase. To complete a consult, three things must happen:

1) An authorized user must select the complete action.
2) The results must be entered or uploaded.
3) The results must be signed (and, if appropriate, cosigned).

If TIU’s upload utility is used, the use of the complete action may be bypassed. TIU generates a notification permitting the responsible person to sign the results and complete the consult.

If the end-user is to enter the results, either the complete action prompts for results, or the results may be entered through TIU directly. If the results are entered through TIU, the user is prompted to link the TIU document with a consult request. In doing this, TIU lists consults that are available for resulting. The parameter GMRC CONSULT LIST DAYS controls how many days back TIU searches for qualifying consults. (The package default for this parameter is 365 days.)

Once these three things are accomplished, the consult is marked as complete and TIU files the results. Also, a chart copy of the completed consult may be printed.

Your site may choose to result consults by use of Progress Notes. In this case the resulting user sees essentially the same prompts, but the results entered are visible both as a consult result and in the Progress Notes system.
Consults Resulting Process

Consult/Request Tracking V. 3.0 Technical Manual
Recommended Document Hierarchies

You should have TIU already set up on your system and be familiar with the *Text Integration Utilities (TIU) Implementation Guide*.

We present here two document hierarchies found useful by hospitals in the VHA system. Strategy A creates Consults as an independent class under Clinical Documents. Strategy B creates Consults as a document class under Progress Notes.

**Strategy A Advantages:**

Provides a CLEAR separation of Consults from Progress Notes, and minimizes the number of choices for the end-user.

1. Simple, with few concerns for maintainability (e.g., no question as to whether heritable methods and properties of Progress Notes were appropriately overridden, etc.).

**Strategy A Disadvantages:**

Not necessarily consistent with the way providers have been documenting their Consult Results in the past. (i.e., if they've been using PN titles to "result" consults, and referring to the notes on the SF 513’s in the past, this will be a departure from that practice).
Limits flexibility of access to the information. (i.e., if set-up this way, they may only access the data through Integrated Document Management options on the TIU-side, and through the Consults tab of the CPRS chart).

**Strategy B Advantages:**

1. Consistent with the way many providers have been documenting their Consult Results in the past. (i.e., if they've been using PN titles to "result" consults, they may continue to do so, with the results showing up on both the 509 and SF 513).

2. Enhances flexibility of access to the information. (i.e., if set-up this way, they may access the data through any option on the TIU side, as well as through EITHER the Consults or Progress Notes tabs of the CPRS chart).
Plan B: Document Class CONSULTS

Strategy B Disadvantages:

1. Does NOT Provide a CLEAR separation of Consults from Progress Notes, and may offer too many choices for the end-user.

2. Complex, with some concerns for maintainability (e.g., if printing or filing appear incorrect, may result from heritable methods and properties of Progress Notes not being appropriately overridden, etc.).

You need to plan the set-up of the Document Definition Hierarchy in some detail, including the titles you want to use at your site, before proceeding with the TIU DEFINE CONSULTS option. The worksheet included in Appendix A of the Text Integration Utilities (TIU) Implementation Guide may prove useful in this process.

The option TIU DEFINE CONSULTS, exported with TIU*1*4, is used to select one or the other of these strategies and set them up at your hospital.
TIU Setup Options

TIU DEFINE CONSULTS

This option is exported with TIU*1*4. Once you have decided which Document Definition strategy to use, run the TIU DEFINE CONSULTS option. This option must be run before Consults may be completed using TIU documents.

In the following example we elect Plan B from the discussion on the preceding pages:

```plaintext
Select OPTION NAME: TIU DEFINE CONSULTS Define CONSULTS for TIU/CT Interface
Define CONSULTS for TIU/CT Interface

I'm going to create a new Document Definition for CONSULTS now.

GREAT! A new Document Definition has been created for CONSULTS. Next, you need to decide whether you want CONSULTS to be set up as a separate CLASS (comparable to DISCHARGE SUMMARY or PROGRESS NOTES), or whether you want CONSULTS defined as a DOCUMENT CLASS under PROGRESS NOTES. The benefits of each strategy are outlined in the POST-INSTALLATION instructions for this patch.

NOTE: If you're not yet CERTAIN which strategy you want your site to adopt, then quit here, and get consensus first (it's easier to get permission than forgiveness, in this case)!

    Select one of the following:
       CL       Class
       DC       Document Class

Define CONSULTS as a CLASS or DOCUMENT CLASS: DC Document Class

Okay, you've indicated that you want to make CONSULTS a Document Class.

Okay to continue? NO// YES

FANTASTIC! Your NEW DOCUMENT CLASS CONSULTS will now be added under the PROGRESS NOTES Class...

Okay, I'm done...Please finish your implementation of CONSULTS by adding any Titles as appropriate using the Create Document Definitions Option under the TIUF DOCUMENT DEFINITION MGR Menu, as described in Step #3 of the Post-Installation Instructions.

Press RETURN to continue...
```
Create Document Definitions

After TIU DEFINE CONSULTS has been run, you need to enter the rest of the TIU hierarchy. You should have planned this out in detail according to instructions given in the Text Integration Utility (TIU) Implementation Guide. The Create Document Definitions option permits you to enter this hierarchy.

In the following example, a document title CARDIOLOGY CONSULT is added to the TIU document hierarchy:

```
Select OPTION NAME: TIU IRM MAINTENANCE MENU

Select TIU Maintenance Menu Option: ?

1   TIU Parameters Menu ...
2   Document Definitions (Manager) ...
3   User Class Management ...

Enter ?? for more options, ??? for brief descriptions, ?OPTION for help text.

Select TIU Maintenance Menu Option: 2  Document Definitions (Manager)

--- Manager Document Definition Menu ---

Select Document Definitions (Manager) Option: ?

1   Edit Document Definitions
2   Sort Document Definitions
3   Create Document Definitions
4   Create Objects

Enter ?? for more options, ??? for brief descriptions, ?OPTION for help text.

Select Document Definitions (Manager) Option: 3  Create Document Definitions....

(Continued on next page.)
```

Correcting Misdirected Results

Occasionally a consult result is linked to the wrong consult. If this is detected prior to signature, it is possible for the author of a consult result to re-direct the record to a different consult request by any of several methods:

1. Through the Link to Request action, when processing the alert for the unsigned Consult Result.
2. Through the Individual Patient Document option.
3. You may choose the Link action from the All My Unsigned Documents Option.
4. From the CPRS Chart.

There are examples of the above four methods in the Consult/Request Tracking User Manual.

Following signature, such corrections can only be made by those persons who are granted permission to do so under the Authorization/Subscription Utility (ASU). Information on how to make this kind of correction is shown here:

--- MIS Managers Menu ---

1 Individual Patient Document
2 Multiple Patient Documents
3 Print Document Menu ...

1> JAN 23, 1998@11:14 759 PULMONARY
2> JAN 23, 1998@11:14 760 PULMONARY
CHOSE 1-2: 2 760

** Item 1 Reassigned. **

Select Action: Quit// <Enter>
**Medicine Interface**

The Procedures module of Consult/Request Tracking has been enhanced. The two major enhancements are:

1. A complete change to the method of creating and activating procedures for use in CPRS and Consult/Request Tracking is introduced including a new file to store the procedures data.
2. The ability to link results stored in the VistA Medicine package to a procedure request has been re-established.
Procedure Setup

The following is the process used to add new procedures or to modify existing procedures:

Warning: The GMRC PROCEDURES (#123.3) file should NOT be edited via VA FileMan. The interface between CPRS and Consult/Request Tracking depends on the use of the Setup procedures [GMRC PROCEDURE SETUP] option.

Select Consult Management Option: PR Setup procedures
Select Procedure: GI ENDOSCOPIC
Are you adding 'GI ENDOSCOPIC' as a new GMRC PROCEDURE (the 39TH)? No// Y (Yes)

Orderable Item Updated

Select Consult Management Option:
INTERNAL NAME in an alternate name for the service. This name does not appear on printouts or displays, but can be used to access the service through the Setup Services (SS) option, or with FileMan.

The RELATED SERVICES field in the procedure setup indicates which services from the Consult hierarchy will receive and process procedures of this type. If more than one related service is entered in this field the ordering person will have to choose which service to direct the procedure to. The users that will be notified and the users allowed to update procedure requests of this type are determined by the receiving service.

The TYPE OF PROCEDURE field in the procedure setup essentially turns on the interface to the Medicine package for this type of procedure. The field is a pointer to the PROCEDURE/SUBSPECIALTY (#697.2) file in the Medicine package. If this field is not set, no medicine procedure results may be linked to this type of procedure request.

PROVISIONAL DX PROMPT: Used by CPRS to determine how to prompt for the provisional diagnosis when ordering this procedure. If this field is set to OPTIONAL, the user will be prompted for the provisional diagnosis but may bypass answering the prompt. If the field is set to SUPPRESS, the user will not be presented with the provisional diagnosis prompt. If set to REQUIRED, the user must answer the prompt to continue placing the order.

PROVISIONAL DX INPUT: Determines the method that CPRS uses to prompt the user for input of the provisional diagnosis when ordering this procedure. If set to FREE TEXT, the user may type any text from 2-80 characters in length. If set to LEXICON, the user will be required to select a coded diagnosis from the Clinical Lexicon.

PREREQUISITE: This word-processing field is utilized to communicate pre-requisite information to the ordering person prior to ordering this procedure. This field is presented to the ordering person upon selecting a procedure and allows them to abort the ordering at that time if they choose. TIU objects may be embedded within this field which are resolved for the current patient during ordering. Any TIU objects must be contained within vertical bars (e.g. |BLOOD PRESSURE| ).

DEFAULT REASON FOR REQUEST: The default text used as the reason for request when ordering this procedure. This field allows a boilerplate of text to be imported into the reason for request when placing orders for this procedure. If the user places an order using a quick order having boilerplate text, that text supersedes any default text stored in this field. This field may contain any text including TIU objects. TIU Objects must be enclosed in vertical bars (e.g. |PATIENT NAME| ).

RESTRICT DEFAULT REASON EDIT: If a DEFAULT REASON FOR REQUEST exists for this service this field effects the ordering person's ability to edit the default reason while placing an order. This variable can be set to UNRESTRICTED, NO EDITING, or ASK ON EDIT ONLY. If the third value, ASK ON EDIT ONLY, is used, the user is only allowed to edit the default reason if the order is edited before releasing to the service.
IFC ROUTING SITE: This field contains the VA facility that will perform consults requested for this service. When a consult for this service is ordered, it will automatically be routed to the VA facility in this field.

IFC REMOTE NAME: This field contains the name of the service that will be requested at the VAMC defined in the IFC ROUTING SITE field. Enter the name of the service exactly as it is named at the remote facility. If this name does not match the name of the service at the routing site, the request will fail to be filed at the remote site. This will delay or prohibit the performance and processing of this request.

IFC SENDING FACILITY: This is a multiple containing the facilities from which your site may receive Inter-Facility Consults for this consult. As with all IFC fields, they must be an exact match.
Linking Med Results to Procedure Request

In the Consult Service Tracking option and in CPRS list manager Consults tab, medicine results can be associated with the procedure request by using the complete/update action. If the selected item is a procedure and is configured for medicine resulting, users will be given the option of attaching medicine procedure result and/or writing a TIU document. In the CPRS GUI, associating medicine procedure results will be done via a separate menu item on the Action Menu of the Consults tab.

Removing Medicine Results from a Request

This action provides a mechanism to disassociate a medicine result from a request that was linked by mistake. The ability to take this action is controlled by membership in a USR USER CLASS. A new field was exported for the REQUEST SERVICES (#123.5). Field (#1.06) RESULT MGMT USER CLASS is a pointer to the USR USER CLASS (#8930) file and the appropriate user class of individuals who may take this action should be listed here. It is recommended that the user class entered here be in line with the business rule involving the LINK action as it pertains to TIU documents.

The action to disassociate a medicine result is provided through an action on the Consult Service Tracking option or the Consults tab of CPRS list manager and CPRS GUI.
Parameters

There are two parameters associated with the Consults package: GMRC CONSULT LIST DAYS and GMRC FEE SERVICES.

GMRC CONSULT LIST DAYS

The GMRC CONSULT LIST DAYS parameter controls the number of days TIU searches for consults that can be associated with a TIU note.

When completing consults from the notes tab, after selecting a title, you are given a list of consults to which the note may be linked. This list is limited to consults entered in the last 365 days by default. The parameter “GMRC CONSULT LIST DAYS” allows sites to vary this value. The default parameter “PKG” is set to 365 days.

The following example shows setting this parameter for a division (in a multi-divisional medical center) to 180 days:

```
XPAR EDIT PARAMETER Edit Parameter Values action
Edit Parameter Values
--- Edit Parameter Values ---
Select PARAMETER DEFINITION NAME: GMRC CONSULT LIST DAYS CONSULT LIST DAYS
GMRC CONSULT LIST DAYS may be set for the following:
6 Division DIV [choose from INSTITUTION]
7 System SYS [DEVCUR.ISC-SLC.VA.GOV]
9 Package PKG [CONSULT/REQUEST TRACKING]

Select INSTITUTION NAME: SALT
1 SALT LAKE CITY 660
2 SALT LAKE OEX UT ISC 5000
CHOOSE 1-2: 2 SALT LAKE OEX UT ISC 5000

-------- Setting GMRC CONSULT LIST DAYS for Division: SALT LAKE OEX --------
Days: 180

GMRC CONSULT LIST DAYS may be set for the following:
6 Division DIV [choose from INSTITUTION]
7 System SYS [DEVCUR.ISC-SLC.VA.GOV]
9 Package PKG [CONSULT/REQUEST TRACKING]

Enter selection:
```

GMRC FEE SERVICES

The GMRC FEE SERVICES parameter controls which services (from the REQUEST SERVICES (#123.5) file) are defined as fee basis services.
When a commercial-off-the-shelf (COTS) fee basis system, such as Fee Basis Claims System (FBCS) or Healthcare Claims Processing System (HCPS), accesses a list of consults, it will use this parameter to limit its search to consults with fee basis services.

The list of consult services is stored internally as a word-processing field consisting of the IENs for FEE Basis or NON-VA Care Consults stored in the REQUEST SERVICES (#123.5) file. This list can be modified using the Define Fee Services [GMRC FEE PARAM] option under the GMRC MGR menu.

Note: This parameter cannot be edited via the XPAR menu. It should only be edited using the Define Fee Services [GMRC FEE PARAM] option under the GMRC MGR menu.
Files

* Request/Consultation (#123)

This file contains consult and request orders originating primarily via the CPRS process. Once the order exists in this file, receiving service users perform update activities. An audit trail of the update activities is maintained in this file.

* Request Action Types (#123.1)

This file identifies the action types that may be used by a service to track activity related to a consult or request.

* GMRC Procedures (#123.3)

This file identifies procedures that may be ordered and processed in CPRS.

File 123.3 must NOT be edited via VA FileMan. The interface between CPRS and Consult/Request Tracking depends on the use of the Setup procedures [GMRC PROCEDURE SETUP] option.

* Request Services (#123.5)

This file permits Services and Specialties to be grouped in a hierarchy representing the site’s available services. This grouping capability may be used with Review screens to filter out consults to a service, sub service, specialty, or sub-specialty of consults/requests.

The main entry in this file is the “ALL SERVICES” entry. Other entries should be subordinate in the hierarchy.

The “ALL SERVICES” entry is used to display the hierarchy of the hospital services when the Clinician ordering the consult is prompted for “Select Service/Specialty:” to send the consult to.

* IFC Message Log (#123.6)

This is a log used by the Inter-Facility Consults software to insure transmission of Inter-Facility Consult requests. The IFC background job checks this log and takes appropriate action on requests that have not yet successfully completed.
## File Globals

The following is a listing of the files contained in the Consults package. Listed for each file are its file number, name, global location, and an indicator as to whether or not data comes with the file.

<table>
<thead>
<tr>
<th>Number</th>
<th>Name</th>

</table>

A file diagram of the above Consults package files and their relationship to other packages is shown on the following page.
## Exported Menus

There are five menus distributed with the Consults package. The GMRC MGR option is a composite of all Option file (#19) entries distributed in the GMRC namespace. The GMRC REPORTS is a composite of reports distributed with Consults. The GMRC GENERAL SERVICE USER, and GMRC PHARMACY USER contain the most frequently performed actions for their respective user types.

</table>
It should be noted that the following options:

GMRC PHARMACY TPN CONSULTS

GMRC SERVICE TRACKING

are options which utilize review screens and “Select Action:” capabilities similar to CPRS review screen protocol menus. These three options should be distributed to the appropriate users, based on the “Menu/Option Access” recommendations found in the Package Security section of this manual.

In addition to the Option file (#19) menu, the Protocol file (#101) has several protocol menus distributed in the GMRC namespace. These menus are not for distribution to users. These menus represent the set of responses permitted at specific prompts during Consults processing.
**Cross-References**

The Consults files contain the following cross-references:

Request/Consultation file (#123)

**AC**  
^GMR(123, “AC”, OE/RR FILE NUMBER, DA)

This cross-reference permits determination of the request entry in this file based on the ORIFN (pointer to File 100) from CPRS.

**AD**  
^GMR(123, “AD”, Patient, Inverted Date of Request, DA)

This is the primary cross-reference used by Consults to display consults/requests for a patient, with the most recent Date of Request first.

**AD1**  
^GMR(123, “AD1”, Date of Request, DA)

**AE**  
^GMR(123, “AE”, To Service, CPRS Status, Inverted Date of Request, DA)

This cross-reference is used to display consults/requests for a particular service and CPRS status, with the most recent Date of Request first.

**AE1**  
^GMR(123, “AE1”, Date of Request, DA)

**AE2**  
^GMR(123, “AE2”, CPRS Status, DA)

**AIFC**  
^GMR(123,"AIFC",ROUTING FACILITY,REMOTE CONSULT FILE ENTRY,DA)

This cross-reference is used to prevent duplicate entries from being filed if a new inter-facility consult is sent multiple times.
AG  This cross reference contains entries of the REQUEST/CONSULTATION file that do not have an appointment scheduled. This is determined based on the content and order of the entries in the REQUEST PROCESSING ACTIVITY multiple field 40. This cross reference will be updated with any update to the ACTIVITY field under the REQUEST PROCESSING ACTIVITY multiple and that update will be determined based on all REQUEST PROCESSING ACTIVITY entries. This cross reference was added in GMRC*3.0*83.

AL  \textasciigolden{^GMR(123,"AL",PATIENT LOCATION,DA)}

AP  \textasciigolden{^GMR(123,"AP",PROCEDURE/REQUEST TYPE,DA)}

B  \textasciigolden{^GMR(123, "B", File Entry Date, DA)}

The “B” Cross-reference is the regular cross-reference for this file.

C  \textasciigolden{^GMR(123, "C", TO Service, DA)}

The “C” cross-reference enables VA FileMan look-up of information based on the TO Service.

D  \textasciigolden{^GMR(123, "D", CPRS Status, DA)}

The “D” cross-reference enables VA FileMan lookup of information based on the CPRS status.

E  \textasciigolden{^GMR(123, "E", Date of Request, DA)}

The “E” cross-reference enables VA FileMan lookup of information based on the Date of Request.

F  \textasciigolden{^GMR(123, "F", Patient, DA )}

The “F” cross-reference enables VA FileMan lookup of information based on the Patient Name.

G  \textasciigolden{^GMR(123,"G",sending provider,DA)}

The “G” cross-reference allows look-up of consults by sending provider.

H  \textasciigolden{^GMR(123,"H",requesting location,DA)}
The “H” cross-reference allows look-up of consults by the requesting location.

\[ \text{R} \quad \text{^GMR(123,"R",associated result,DA)} \]

The “R” cross-reference allows look-up of consults based on the results associated with them.

Request Action Types file (#123.1)

\[ \text{AC} \quad \text{^GMR(123.1, "AC", CPRS Status, DA)} \]

This cross-reference is used when the call to RESULT^GMRCR returns a CPRS status. This CPRS status is used to determine the action type to use to update activity tracking.

\[ \text{B} \quad \text{^GMR(123.1, "B", Action Type, DA)} \]

The “B” cross-reference is the regular cross-reference for this file.

\[ \text{C} \quad \text{^GMRC(123.1, "C", Related Action Protocol, DA)} \]

This cross-reference is used to associate the action type with the protocol selected from the “Select Action:” prompt. The action type internal number is then used to set the variable GMRCA for audit trail processing.
GMRC PROCEDURES file (#123.3)

AP  \^GMR(123.3,"AP", protocol number, DA)

This cross-reference is utilized during the procedure conversion process and will be removed in a future enhancement.

B  \^GMR(123.3,"B", procedure name, DA)

The “B” cross-reference is the regular cross-reference for this file, permitting lookup by procedure name.

C  \^GMR(123.3,"C", synonym, DA)

The “C” cross-reference permits SYNONYMS to be used to look up the procedure by synonym.

E  \^GMR(123.3,"E", internal name, DA)

Request Services file (#123.5)

B  \^GMR(123.5, “B”, Service Name, DA)

The “B” cross-reference is the regular cross-reference for this file, permitting lookup by Service Name.

C  \^GMR(123.5, “C”, Related Treating Specialty, DA)

The “C” cross-reference enables VA FileMan lookup of information, based on the RELATED TREATING SPECIALTY. (Note: This field exists, but is not currently used by the package.)

D  \^GMR(123.5, “D”, Synonym, DA)

The “D” cross-reference permits SYNONYMS to be used to find the Service to send a consult/request to.

E  \^GMR(123.5,"E", internal name, DA)

AAT  \^GMR(123.5, ADMINISTRATIVE UPDATE TEAM, DA)

This cross-reference is used to locate and delete pointers to the OE/RR LIST (#100.21) file that have been deleted.
Cross-References

AC1 \(^{GMR(123.5, \text{SERVICE NAME, DA})}\)

This cross-reference is what helps maintain the alphabetical look-up of services.
ANT  ^GMR(123.5, TEAM TO NOTIFY, DA)

The "ANT" cross reference is used for deletion of pointer values when an entry is deleted from the OE/RR LIST (#100.21) file.

APC  ^GMR(123.5, SUB-SERVICE/SPECIALTY, DA)

This cross-reference is used to find the parents of a given service. This helps identify AC cross-references that need to be updated when the .01 name changes, and helps manage forwarding to services.

APR  ^GMR(123.5, PROCEDURE TYPE, DA)

This cross reference is used to find all services which process a procedure type.

AST  ^GMRC(123.5, SERVICE TEAM TO NOTIFY, DA)

The "AST" cross reference is used for deletion of pointer values when an entry is deleted from the OE/RR LIST (#100.21) file.

AUT  ^GMR(123.5, UPDATE TEAMS W/O NOTIFICATIONS, DA)

This cross-reference is used to locate and delete pointers to the OE/RR LIST (#100.21) file that have been deleted.

IFC MESSAGE LOG (#123.6)

AC  ^GMR(123.6,"AC",CONSULT/REQUEST #,ACTIVITY #,INCOMPLETE,DA)

This cross-reference is used by the IFC background job to manage incomplete entries.

AI  ^GMR(123.6, INCOMPLETE, DA)

The “AI” cross-reference is used to locate IFC consults that have not been processed successfully.
The “AM” cross-reference is used to locate the HL7 message number.
B  \(^{\text{GMR(123.6, DATE/TIME OF ENTRY, DA)}}\)

The “B” cross-reference if the regular cross-reference for this file, permitting lookup by DATE/TIME of Entry.

C  \(^{\text{GMR(123.6,"C",CONSULT/REQUEST #,ACTIVITY #,DA)}}\)

This cross-reference is used to look up IFC MESSAGE LOG entries by consult number.
Archiving and Purging

No archiving or purging utilities are provided in this version for the Consults distributed files.
External Relations

The Consults package is dependent upon other VA software to function correctly.

<tr>
<td>}</td>
<td>8</td>
<td>Abnormal Flag</td>
<td>N</td>
<td>table 78</td>
</tr>
</tbody>
</table>
Notes:

Sending Application is the name of the DHCP package generating the message; Sending Facility is the station number.

Originating Referral Identifier is the IEN of the record entry in the Request/Consultation file.

Patient ID is patient DFN (pointer to file 2)

Patient Location, for an inpatient, is Hospital Location IEN\(^\text{Room-Bed}\). For an outpatient, it is the Hospital Location IEN. In both cases it is the location from which the order is being placed.

VIP Indicator is ‘R’ if patient is restricted/sensitive.

Visit Number is the IEN of the visit in the Visit file.

Placer Order Number is the OE/RR order number.

Filler Order Number is the Consult order number.

Order Status is needed when Consults releases an order; possible values from HL7 table 38 include:

<table>
<thead>
<tr>
<th>DC=Discontinued</th>
<th>SC=Active</th>
<th>A=Partial Results</th>
</tr>
</thead>
<tbody>
<tr>
<td>CM=Completed</td>
<td>ZC=Scheduled</td>
<td>CA=Cancelled (Denied)</td>
</tr>
<tr>
<td>IP=Pending</td>
<td></td>
<td>RP=DC’d due to Edit</td>
</tr>
</tbody>
</table>

Quantity/Timing will contain Clinically Indicated Date in the fourth \(^\text{-piece and urgency in the sixth }^\text{-piece, whose possible values include:}

<table>
<thead>
<tr>
<th>S=Stat</th>
<th>Z24=Within 24 hours</th>
<th>ZW=Within 1 week</th>
</tr>
</thead>
<tbody>
<tr>
<td>R=Routine</td>
<td>Z48=Within 48 hours</td>
<td>ZM=Within 1 month</td>
</tr>
<tr>
<td>ZT=Today</td>
<td>Z72=Within 72 hours</td>
<td>ZNA=Next available</td>
</tr>
<tr>
<td>ZE=Emergency</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Entered By and Ordering Provider are IENs in the New Person file.

Universal Service ID is a national code in the first part. The alternate code is a pointer to either the Request Services or GMRC Procedures file.

Placer Field 1 will contain the place of consultation, as a set of codes. Possible values include:

- B=Bedside
- E=Emergency Room
- OC=Consultant’s choice

Placer Field 2 will contain the IEN in the New Person file of the user to whom this consult should be directed.
The OBX segment is used to transmit related data about the patient when placing a consult request; possible observation ID’s include:

- Reason for Request (AS4 2000.02) = text
- Provisional Diagnosis (not coded) = text
- Provisional Diagnosis (coded element) = ICD ^ text

The Observation ID is used for ordering OBX segments.
HL7 Protocols

Patch GMRC*3.0*75 added the capability of using the following HL7 protocols to enable the communications between the consult system communication with the Healthcare Claims Processing System (HCPS), which processes Non-VA healthcare.

- **GMRC CONSULTS TO HCP** - Creates and sends an REF^12, REF^13, or REF^14 HL7 message to the HCPS application when a consult is generated for Non-VA Care.

- **GMRC HCP REF-I12 SERVER** - Sends REF^I12 HL7 messages to the HCPS application for new Non-VA Care Referrals.

- **GMRC HCP REF-I12 CLIENT** - Sends REF^I12 HL7 messages to the HCPS application for new Non-VA Care referrals.

- **GMRC HCP REF-I13 SERVER** - Sends HL7 REF^I13 messages to CPRS application for updated Non-VA Care Referrals originating in HCPS (RAS).

- **GMRC HCP REF-I13 CLIENT** - Sends HL7 REF^I13 messages from HCPS to CPRS application for updated Non-VA Care Referrals originating in HCPS (RAS).

- **GMRC HCP RRI-I13 SERVER** - Sends HL7 RRI^I13 messages to CPRS application for updated Non-VA Care Referrals originating in HCPS (RAS).

- **GMRC HCP RRI-I13 CLIENT** - Sends HL7 RRI^I13 messages from HCPS to CPRS application for updated Non-VA Care Referrals originating in HCPS (RAS).

- **GMRC HCP REF-I14 SERVER** - Sends REF^I14 HL7 messages to the HCPS application for canceled or discontinued Non-VA Care referrals.

- **GMRC HCP REF-I14 CLIENT** - Sends REF^I14 HL7 messages to the HCPS application for cancelled or discontinued Non-VA Care referrals.

HL7 Application Parameters

Patch GMRC*3.0*75 added the capability of using the following HL7 application parameters to enable communication between the consult system and the HCPS.

- **GMRC HCP SEND** - This parameter is used to set up the sending facility.

- **GMRC HCP RECEIVE** - This parameter is used to set up the receiving facility.

HL7 Logical Link
GMCHCP - Logical link is used to setup the network path between Consults and Healthcare Claims Processing System (HCPS).

**HL7 Referral Messages**

Patch GMRC*3.0*75 added the capability of using the following HL7 referral messages to enable communication between the consult system and HCPS.

- **REF_I12** will be sent from CPRS to HCPS for new referrals (signed Non-VA Care Consult). NTE segments will contain the “Entered By”, “Date/time stamp”, the “Reason for Request” header, and Non-VA Care Referral template data.
- **REF_I13** will be sent from CPRS to HCPS for status updates and resubmitted referrals. NTE segments will contain the “Entered By” and “Date/time stamp”, “Progress Note” header, and Non-VA Care Referral template data.
- **REF_I13** will be sent from CPRS to HCPS for complete and addended note referrals. NTE segments will contain the “Entered By”, “Date/time stamp”, “Progress Note” header, and Non-VA Care Referral template data.
- **RRI_I13** will be sent from HCPS to CPRS for changes made in HCPS-RAS. A proxy user will be implemented in VistA to populate the “Entered By” field. The proxy user will identify updates to CPRS/Consults originating in HCPS-RAS and transmitted via the interface.
- **REF_I14** will be sent from CPRS to HCPS for cancelled or discontinued referrals. NTE segments will contain “Activity Comment” header and Non-VA Care Referral template date.

The REF messages will contain the following standard segments:

- MSH – Message Header REQUIRED
- RF1 – Referral Information REQUIRED
- PRD – Provider Data REQUIRED
- PID – Patient Identification REQUIRED
- DG1 – Diagnosis OPTIONAL
- OBR – Observation Request REQUIRED
- PV1 – Patient Visit REQUIRED
- NTE – Notes and Comments REQUIRED

A standard HL7 v2.5 RRI message will be generated for status updates and/or changes made to an existing referral in HCPS. This event triggers a message to update CPRS with changes made in HCPS. The RRI message will contain the following standard segments:

- MSH – Message Header REQUIRED
- RRI – Return Referral Information REQUIRED
- PRD – Provider Data REQUIRED
- PID – Patient Identification REQUIRED
- DG1 – Diagnosis OPTIONAL
The following tables contain the HL7 message definition for the REF/RRI/ACK messages.

The table columns are:
1. **SEQ** = HL7 sequence#
2. **LEN** = HL7 field length
3. **DT** = HL7 data type
4. **R/O** = R=Require, O=Optional, C=Conditional, NS=Not supported
5. **TBL#** = HL7 table definition
6. **Element Name** = HL7 field name
7. **VistA Description** = information on what will be pulled from VistA for this element, or hard-coded data.

### RRI_I13 PV1 – Patient Visit Segment (same for all message types)

The PV1 segment data is created using the IN5^VADPT call to determine current inpatient status. See PIMS technical manual for definition of the returned array VAIP.

Fields not returned by the IN5^VADPT API are not used in the PV1 segment.

HL7 ACK Messages

Patch GMRC*3.0*75 added the ability to use the following HL7 ACK messages to enable communications between the consult system communication with the Healthcare Claims Processing System (HCPS). Accept Acknowledgment (AA) will be sent for messages that are parsed correctly and sent to HCPS. Application Error (AE) will be sent when a parsing issue is discovered, such as missing a required field.

HL7 v2.5 ACK messages will sent to HCPS in enhanced mode as follows:

- **Commit accept (CA)** in MSA-1 acknowledgment code if the message can be accepted for processing
- **Commit reject (CR)** is MSA-1 acknowledgment code if one of the values of MSH-9 message type, MSH-12 version ID or MSH-11 processing ID is not acceptable to the receiving application
- **Commit error (CE)** in MSA-1 acknowledgment code if the message cannot be accepted for any other reason

A standard HL7 v2.5 ACK message will be returned by HCPS for each consult message received. The ACK message will contain the following standard segments:

- MSH – Message Header **REQUIRED**
- MSA – Message Acknowledgment **REQUIRED**
- ERR – Error **OPTIONAL**

The following tables contain the HL7 message definition for the ACK messages.

The table columns are:
1. **SEQ** = HL7 sequence#
2. **LEN** = HL7 field length
3. **DT** = HL7 data type
4. **R/O** = R=Require, O=Optional, C=Conditional, NS=Not supported
5. **TBL** = HL7 table definition
6. **Element Name** = HL7 field name
7. **VistA Description** = information on what will be pulled from VistA for this element, or hard-coded data.

HL 7 Mailbox

GMRC HCP HL7 MESSAGE - Used to report errors in HL7 message generation and processing for GMRC consults.

Order Event Messages

The following tables identify the HL7 fields that are passed in each kind of event associated with OE/RR. For each event there is an order control code and a set of fields listed. For any given event, however, some of the fields may be empty (observation sub-id, for example).

The protocols identified in the tables use OE/RR namespacing conventions. The messages sent by OE/RR will use the OR namespaced protocols indicated. Individual packages may use whatever protocol names they wish.

Call:  D MSG^XQOR("GMRC EVSEND OR",.MSG); Consults accepts, returns order #
Back Door Consults

Back door orders are handled by sending OE/RR the ORM message for a Consult order with a ‘send number’ order control code. This permits OE/RR to store the order in its database and return the OE/RR order number to consults with a ‘number assigned’ order control code. OE/RR cannot actually reject Consult events. The ‘data errors’ order control code is just used as some way to communicate to Consults that OE/RR could not interpret the ORM message. This should generally not happen. Use of the ‘back door’ by packages for ordering is optional. It is still necessary to post an event when results are available.

Orderable Item Updates

When Consults makes request services available for ordering, OE/RR needs to be notified. This is done via a protocol event point which should be defined by Consults. When this event point is invoked, an HL7 master file update message is sent. Information that should be available in this segment is listed in the following table.

<table>
<thead>
<tr>
<th>SEG</th>
<th>SEQ</th>
<th>FIELD NAME</th>
<th>EXAMPLE</th>
<th>HL7 TYPE</th>
</tr>
</thead>
<tbody>
<tr>
<td>MSH</td>
<td>1</td>
<td>Field Separator</td>

<tr>
<td>{ZSY}</td>
<td>1</td>
<td>Set ID</td>
<td>1</td>
<td>Numeric</td>
</tr>
<tr>
<td>{   }</td>
<td>2</td>
<td>Synonym</td>
<td>CARD</td>
<td>string</td>
</tr>
</tbody>
</table>
Notes:

When doing the initial population of the orderable items file, the File Level Event Code should be REP. After the initial population, subsequent changes should have the UPD code.

Orderable item updates always originate from Consults.

There may be multiple MFE segments passed in a single transaction.

The record-level event code tells whether this transaction is an update, addition, inactivation, etc.

The primary key is the coded element that is normally passed when creating an order. By using the coded element, we can know the national and local names for a consult.

Example:

<table>
<thead>
<tr>
<th>Adding new request services</th>
</tr>
</thead>
<tbody>

</tbody>
</table>
Notes:

When doing the initial population of the orderable items file, the File Level Event Code should be REP. After the initial population, subsequent changes should have the UPD code.

Orderable item updates always originate from Consults.

There may be multiple MFE segments passed in a single transaction.

The record-level event code tells whether this transaction is an update, addition, inactivation, etc.

The primary key is the coded element that is normally passed when creating an order. By using the coded element, we can know the national and local names for a procedure.

Example:

Adding new procedures

Array:

```
MSG(1)="MSH|\&&\&|PROCEDURES|660|\&&|MFN"
MSG(2)="MFI|123.3^GMRC PROCEDURE^99DD||REP|||NE"
MSG(3)="MFE|MAD|||^\&^1688^Atrial Lead Implant^99PRC"
MSG(4)="ZZY|1|A-L Imp"
MSG(5)="MFE|MAD|||^\&^1705^Bone Marrow Aspirate^99PRC"
```

Call:

```
D MSG^XQOR("GMRC ORDERABLE ITEM UPDATE",.MSG)
```

Inactivating a procedure

Array:

```
MSG(1)="MSH|\&&\&|PROCEDURES|660|\&&|MFN"
MSG(2)="MFI|123.3^GMRC PROCEDURE^99DD||UPD|||NE"
MSG(3)="MFE|MDC|||^\&^1705^Bone Marrow Aspirate^99PRC"
```

Call:

```
D MSG^XQOR("GMRC ORDERABLE ITEM UPDATE",.MSG)
```
Ordering Parameters

There are no Consult ordering parameters identified at this time.

Procedure Calls

We need entry points defined in the Consults package that will handle the following procedure calls. It is up to the developers exactly how entry points are defined and named. Note that to behave properly in a windowed environment, all variables used in the calls must be NEWed properly. The calls must also be silent (no reads or writes).

Return Consult/Procedure List

OER^GMRCSLM1(DFN,SERV,BEG,END,STS,CPRS)

passed:  
DFN:  Patient DFN  
SERV:  Request service IEN  
BEG:  Beginning date  
END:  Ending date  
STS:  Order status IEN  
CPRS:  1=CPRS List Manager, 2=CPRS GUI

returned:  ^TMP("GMRCR",$J,"CS",#,0) = IEN^request date^order status^service^procedure name or consult

Return Narrative of Report

DT^GMRCSLM2(IEN)

passed:  IEN:  IEN of request in Request/Consultation file #123

returned:  ^TMP("GMRCR",$J,"DT",#,0) = line of report text

Return Results Report

RT^GMRCGUIA(IEN,ARRAY)

passed:  IEN:  IEN of request in Request/Consultation file #123  
ARRAY:name of array to return report text

returned:  @ARRAY@(#,0) = line of report text

Return List of Services the Current User may Order From

SERV1^GMRCASV

passed:  GMRCTO:  1  
GMRCDG:  1

returned:  ^TMP("GMRCSLIST",$J,#,) = IEN^service name^grouper IEN^+^usage  
where + indicates a grouper with members following,  
and Usage is 1 if Grouper Only or 2 if Tracker Only

Return List of Services for a Procedure

GETSVC^GMRCPRO(.ARRAY,ID)

passed:  ARRAY:array to return list of services  
ID:  procedure identifier, in HL7 format `IEN;99PRC'

returned:  ARRAY=number of services in list  
ARRAY(#) = IEN ^ name of service
Return Default Reason for Request

GETDEF^GMRCDRFR(ARRAY, SERV, DFN, RESLV)

passed: ARRAY: name of array to return default text
        SERV: IEN of Request Service in file #123.5
        DFN: Patient DFN [optional]
        RESLV: 1 or 0, if embedded TIU objects are to be resolved

returned: @ARRAY@(#,0) = line of text

Return Allowable Editing Flag for Reason

$$REAF^GMRCDRFR(SERV)

passed: SERV: IEN of Request Service in file #123.5

returned: 0 if unrestricted, 1 for Edit only, or 2 if no editing allowed

Return Provisional Diagnosis requirements

$$PROVDX^GMRCUTL1(SERV)

passed: SERV: IEN of Request Service in file #123.5

returned: A^B: A = O (optional), R (required), or S (suppress)
          B = F (free text) or L (Lexicon entry)
How to Generate On-Line Documentation

Routines

The namespace for the Consults package is GMRC. A listing/printout of any or all of the Consults routines can be produced by using the Kernel option XUPRROU (List Routines). This option is found on the XUROG (Programmer Options) menu, which is a sub-menu of the EVE (Systems Manager Menu) option. When prompted with “routine(s) ? >;” type in GMRC* to get a listing of all Consults routines.

The first line of each routine contains a brief description of the general function of the routine. A listing of just the first line of each Consults routine can be produced by using the Kernel option XU FIRST LINE PRINT (First Line Routine Print). This option is found on the XUROG (Programmer Options) menu, which is a sub-menu of the EVE (Systems Manager Menu) option.

Globals

The globals used in the Consults package are ^GMR(123, ^GMR(123.1, ^GMR(123.3, ^GMR(123.5 and ^GMR(123.6. A listing/printout of any of these globals can be produced by using the Kernel option XUPRGL (List Global). This option is found on the XUROG (Programmer Options) menu, which is a sub-menu of the EVE (Systems Manager Menu) option.

Files

The number-space for Consults files is 123. A listing of these files can be obtained by using the VA FileMan option DILIST (List File Attributes). Depending on the FileMan template used to print the listing, this option will print out all or part of the data dictionary for the Consults files.
Menu/Options

The menu and options exported by the Consults package all begin with the GMRC namespace. Individual options can be viewed by using the Kernel option XUINQUIRE (Inquire). This option is found on the menu XUMAINT (Menu management), which is a sub-menu of the EVE (Systems Manager Menu) option.

A diagram of the structure of the Consults menu and its options can be produced by using the Kernel option XUUSERACC (Diagram Menus). Choosing XUUSERACC permits you to further select XUUSERACC1 or XUUSERACC2 menu diagrams with entry/exit actions or abbreviated menu diagrams. This option is found on the menu XUMAINT (Menu management), which is a sub-menu of the EVE (Systems Manager Menu) option.

XINDEX

XINDEX is a routine that produces a report called the VA Cross-Referencer. This report is a technical and cross-reference listing of one routine or a group of routines. XINDEX provides a summary of errors and warnings for routines that do not comply with VA programming standards and conventions, a list of local and global variables and what routines they are referenced in, and a listing of internal and external routine calls.

XINDEX is invoked from programmer mode: D ^XINDEX.

When selecting routines, select GMRC*.
# Glossary

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Action</strong></td>
<td>An action in Consults can be selected throughout processing to 1) control screen movement, or 2) process existing orders.</td>
</tr>
<tr>
<td><strong>Consult</strong></td>
<td>Referral of a patient by the primary care physician to another hospital service/specialty, to obtain a medical opinion based on patient evaluation and completion of any procedures, modalities, or treatments the consulting specialist deems necessary to render a medical opinion. For instance, if a primary care physician orders a patient evaluation from Cardiology Service, and the cardiology specialist orders an Electrocardiogram (EKG) to complete the evaluation and provide an opinion concerning the patient’s condition, this type of order is considered a “Consult.”</td>
</tr>
<tr>
<td><strong>Discontinued Orders</strong></td>
<td>Orders that are discontinued. When an order is discontinued, it must be completely re-entered to be resubmitted. However, if an order is canceled, it can be edited to correct some deficiency and resubmitted.</td>
</tr>
<tr>
<td><strong>Order</strong></td>
<td>A request for a consult (service/sub-specialty evaluation) or procedure (Electrocardiogram) to be completed for a patient.</td>
</tr>
<tr>
<td><strong>Order Cancellation</strong></td>
<td>The cancellation of a consult or procedure request which allows the requesting provider to edit a portion of the original request and re-submit the request to the consulting service.</td>
</tr>
<tr>
<td><strong>Order Discontinuation</strong></td>
<td>A request to stop (discontinue) performance of a consult/procedure request.</td>
</tr>
<tr>
<td><strong>HCPS</strong></td>
<td>The Healthcare Claims Processing System is a centralized, automated system that will support the management of purchased care referrals/authorizations.</td>
</tr>
<tr>
<td><strong>IFC</strong></td>
<td>Inter-Facility Consults permits the transmitting of consults and related information between Department of Veterans Affairs facilities. Consult requests are made to remote facilities because the needed service is not locally available or for patient convenience. Although the Consult Package is utilized in the hospital settings, Consult requests between facilities have been done manually in the past.</td>
</tr>
<tr>
<td><strong>MPI</strong></td>
<td>Master Patient Index. An index of VA patients that is global in nature, showing patients that have been seen by more than one VA facility and giving information about which facilities are involved.</td>
</tr>
<tr>
<td>---</td>
<td>---</td>
</tr>
<tr>
<td><strong>NVC</strong></td>
<td>Non VA Care. Care provided to eligible Veterans when VA facilities are not feasibly available.</td>
</tr>
<tr>
<td><strong>Procedure Request</strong></td>
<td>Any procedure (EKG, Stress Test, etc.) which may be ordered from another service/specialty without requiring formal consultation first.</td>
</tr>
<tr>
<td><strong>Result</strong></td>
<td>A consequence of an order. Refers to evaluation or status results. In regards to Consult/Request Tracking, results refer to a TIU document or Medicine procedure result attached to the consult or procedure request.</td>
</tr>
<tr>
<td><strong>Requestor</strong></td>
<td>This is the health care provider (e. g., the physician/clinician) who requests the order to be done.</td>
</tr>
<tr>
<td><strong>Screen Context</strong></td>
<td>This term refers to the particular selection of orders displayed on the screen (e. g., Medicine consults for the patient Ralph Jones).</td>
</tr>
<tr>
<td><strong>Service</strong></td>
<td>A clinical or administrative specialty (or department) within a Medical Center.</td>
</tr>
<tr>
<td><strong>Status</strong></td>
<td>A result that indicates the processing state of an order; for example, a Cardiology Consult order may be “discontinued (dc)” or “completed (c)”.</td>
</tr>
<tr>
<td><strong>Status Symbols</strong></td>
<td>Codes used in order entry and Consults displays to designate the status of the order.</td>
</tr>
</tbody>
</table>
Appendix A: Install, Planning, and Implementation Checklist

This checklist can help you determine if you have completed the steps needed to implement the Consults package. IRMS/ADPAC personnel should carefully read the Consult/Request Tracking Technical Manual for the details related to IRMS/ADPAC implementation.

NOTE: Important changes since Consults/Request Tacking Version 2.5 are emphasized with a note.

INSTALL NOTES:

☐ The Consult/Request Tracking V. 3.0 package installs automatically when CPRS V. 1.0 installed.

PLANNING NOTES:

Participants: IRMS/ADPAC and Service personnel.

NOTE: Effective with Consults/Request Tracking V. 3.0:
1) A service is only selectable for update/tracking if it is defined as part of the ALL SERVICES hierarchy.
2) Disabled services can be left in the ALL SERVICES hierarchy so their order results can be returned, but are not selectable in the ordering process.
3) Tracking services must be in the ALL SERVICES hierarchy in order to be receive forwarded consults. The tracking service can only be selectable in the order forwarding process if the user is an update user for the tracking service or its parent service.

Plan the Consult Service Hierarchy

☐ 1a. Identify services to receive consults or to be Inter-Facility Services.

☐ 1b. Determine if the service should be selectable in the ordering process from CPRS.

For some consults, the order may need to be sent to a Service control point for Forwarding by the control point to a service which has been identified as a “Tracking Only” service. (Tracking Only services are not selectable during the initial CPRS order process.) Where a service control point is preferred, the tracking services should be sub-specialties under the control point service within the ALL SERVICES hierarchy.
1c. Determine if there should be a service that would be used as a “Grouper Only” (e.g., Inpatient Services, Outpatient Services, and Outside Services might be good Services to define as groupers).

When a Grouper Only service is selected in the CPRS order process, the service hierarchy defined under the grouper service will be displayed to select from. The Grouper Only cannot be selected to receive an order. The ALL SERVICES service is a Grouper Only provided to build the Consult Service hierarchy upon.
For each Service:

Identify the Service

☐ 2a. Select a unique name to identify the service while ordering. If the service is to be on Inter-Facility Consults (IFC) service, we suggest you include the site name in the service (Example: Eye Clinic—Boise).

☐ 2b. Optionally, select an abbreviated print name to be used when displaying notifications. This should be a short name that is easily recognized by users as belonging to the service.

☐ 2c. Optionally, select one or more synonyms that can be used when entering the service name into the computer.

☐ 3. Identify the service printer which will be used to automatically print Consult Form SF 513 when a consult order is received from CPRS.

NOTE: Effective with Consult/Request Tracking V. 3.0, All Consult Form SF 513 prints are done from consult routines. OE/RR print formats are no longer used for consult prints.

Plan Actions to take for a Discontinued Consult

☐ 4a. Decide if the service should be notified when a consult is discontinued.

☐ 4b. Decide if the SF 513 should be reprinted to the receiving service when a consult is discontinued.

Determine Provisional Diagnosis requirements for the service.

☐ 5a. Decide if consults going to this service should be required to have a provisional diagnosis. The provisional diagnosis can be required, set as optional, or suppressed.

☐ 5b. Decide if provisional diagnosis going to this service should be taken from the Clinical Lexicon, or if free text is allowed.

Plan Prerequisites and Boilerplate

☐ 6. Decide if consults going to this service should have a prerequisite. A prerequisite is a text message that reminds the referring physician what needs to be done before a consult can be sent to this service. The prerequisite message gives the referring physician a chance to back out of the consult dialog.
7a. Decide if consults going to this service should provide a default reason for request when an order is placed. This is a piece of boilerplate text, including TIU objects, that is consistent for each consult received.

7b. If this service is to be an IFC service, then enter the IFC Remote Site name and IFC Remote Service name.

7c. If this service is to be an to receive IFC requests from other sites, then enter the IFC Sending Facility name(s).

7d. Decide if editing of the default reason for request should be restricted. Editing can be unrestricted, restricted, or allowed only before release to the service.

Plan Notification Recipients

8a. Identify individuals at the receiving service who should be notified when a consult is being sent to the receiving service.

8b. Identify service teams of clinicians or service users which should receive notifications. Team definitions may be used in addition to or in lieu of naming individuals to receive notifications.

8c. Identify hospital locations that are assumed to be part of this service. Any consult activity on patients in that location triggers a notification. Specify one individual to notify and/or a team to notify.

9. Decide if parent services of this service should be notified of activities occurring on consults for this service.

10. Decide if notifications should be deleted on an individual basis, or if all notifications should be deleted when one individual reviews it. The default is Individual Recipient, so if All Recipients is desired, use the Set Deletion Parameters for Notifications option of the Notification Mgmt Menu to change this value for each of the four consult notifications. These are:

- #23 CONSULT/REQUEST RESOLUTION
- #27 NEW SERVICE CONSULT/REQUEST
- #30 CONSULT/REQUEST CANCEL/HOLD
- #63 CONSULT/REQUEST UPDATED
Plan Service Users

10. Decide if you are going to allow unrestricted access to this service. If so, you may skip to step 13.

11a. Identify individuals at the receiving service who will NOT receive notifications about new consults, but should be able to perform update capabilities for this service.

11b. Identify teams at the receiving service who will NOT receive notifications about new consults, but should be able to perform update capabilities for this service.

11b. Identify user classes who will NOT receive notifications about new consults, but should be able to perform update capabilities for this service.

11e. Identify administrative update users. Such a user can perform administrative completions on consults at this service. These users can, optionally, be included as notifications recipients for this service.

11f. Identify administrative update teams for this service. The members of these teams can, optionally, be included as notifications recipients for this service.

12. Decide if update users of the parent services should be allowed to update consults for this service.

13. Identify a special updates individual (someone who can perform group updates) for this service. This individual should already be a service user.

14. Identify sub-services of this service.
IMPLEMENTATION AND MAINTENANCE (Abbreviated guidelines)

Participants: IRMS/ADPAC

1. You may set up a team for each consult service. The team members being the identified clinical users. Use the Team Mgmt Menu option, ORLPL TEAM MENU.

2. Turn on the NEW SERVICE CONSULT/REQUEST notification for each of the individuals who were identified to receive notifications. Use the Enable/Disable Notifications option of the NOTIFICATION MGMT MENU, ORB NOT MGR MENU.

NOTE: Unless Consult notifications are set to mandatory, individual users may use the Enable/Disable My Notifications option of the Notifications Management Menu to individually disable the notifications they do not want to receive.

3. Turn on the CONSULT/REQUEST RESOLUTION notification for each ordering provider identified to receive this notification, or train them to do it themselves. Use the Enable/Disable Notifications option of the NOTIFICATION MGMT MENU, ORB NOT MGR MENU.

4. Turn on the CONSULT/REQUEST CANCEL/HOLD notification for each ordering provider identified to receive this notification, or train them to do it themselves. Use the Enable/Disable Notifications option of the NOTIFICATION MGMT MENU, ORB NOT MGR MENU.

5. Turn on the CONSULT/REQUEST UPDATED notification for each ordering provider identified to receive this notification, or train them to do it themselves. Use the Enable/Disable Notifications option of the NOTIFICATION MGMT MENU, ORB NOT MGR MENU.

6. Define the Service hierarchy in the Request Services File (#123.5) with the associated users and service printer. Use the “Set up Consult Services” option, GMRC SETUP REQUEST SERVICES.

NOTE: You must NOT use VA FileMan to modify services in the hierarchy. The Consult/Request Tracking interface to CPRS depends on the services being defined using the GMRC SETUP REQUEST SERVICES option.
7. Assign the Setup Service Users GMRC SETUP SERVICE USERS option to the users permitted to manage service users.

8. Assign the following two options to Service update users’ primary or secondary menu option: Consult Tracking [GMRC SERVICE TRACKING] and Service Consults Pending Resolution [GMRC RPT PENDING CONSULTS].
TIU Setup

☐ 10. If you have not already done so, install TIU*1*4.

☐ 11. Run the TIU DEFINE CONSULTS option.

NOTE: If you do not run the TIU DEFINE CONSULTS option, no status update takes place when the TIU note is entered.

☐ 12. Enter the rest of your planned TIU document hierarchy using the Manager Document Definition Menu.

☐ 13. Define consult document parameters (as recommended on page 90 of this manual) using the Document Parameter Edit option.

NOTE: We particularly recommend entering Yes to ALLOW >1 RECORDS PER VISIT.

☐ 14. Check the value for parameter GMRC CONSULT LIST DAYS. The parameter controls how many days are searched when looking for consult to associate with a progress note. The default is 365 days.
Appendix B: Consult Tracking Worksheets

In this section there are several worksheets that may be removed from the manual and copied. These worksheets assist you in setting up each Service/Specialty and in setting up Service Notification assignments for individuals or teams who will be receiving consult results.

The first and second worksheets may be used for small Services, with very few Specialty services under them, who will be receiving on-line consults and/or procedure requests.

The third and fourth worksheets should be used by large complex Services with multiple Specialty services under them, who will be receiving on-line consults and/or procedure requests.
Appendix B: Consult Tracking Worksheets

Consult Services Worksheet
Service Set up

Service/Specialty Name: ____________________
Abbreviated Print Name: ____________________

This optional abbreviation are used when building notifications.

Synonyms: _______ _______ _______

These optional abbreviations are used when selecting the service.

Service Usage: □ Blank □ Grouper □ Tracking

Service Printer: ____________________

A service may define a device to which its Consult forms automatically print.

Notify Service on DC: □ Yes □ No
Update users of a service may be notified when a consult is discontinued.

Reprint 513 on DC: □ Yes □ No
The SF 513 may be reprinted to the consulting service when a consult is discontinued.

Provisional DX Prompt: □ Required □ Optional □ Suppressed
Set whether a diagnosis is required, optional, or suppressed when ordering.

Provisional DX Input: □ Lexicon □ Free Text
If the diagnosis is not suppressed, specifies whether the diagnosis must be from the Clinical Lexicon or not.

Prerequisite:
Prerequisite information may be displayed to the consult ordering physician before proceeding with the ordering of a consult to this service. This may include TIU fields (enclosed in |).

________________________________________________________________________________

________________________________________________________________________________

________________________________________________________________________________

Default Reason for Request:
Boilerplate may be supplied for the reason for request. This may include TIU fields (enclosed in |).

________________________________________________________________________________

________________________________________________________________________________

________________________________________________________________________________

Restrict Default Reason Edit: □ Unrestricted □ No Editing □ Ask
Determines if the boilerplate can be edited by the ordering physician.

Consult Services Worksheet

Notification Users

Service Individual to Notify:
*Individual who needs to receive Notifications for this service should be listed here.*

Service Team to Notify:
*All full update users to receive notifications need to be defined on one of these teams.*

_________________  _________________  _________________

Notification by Pt Location:
*Locations in which all patients are considered belonging to this service should be listed here. For each location, you can specify one individual and one team to be notified.*

Location _________________  Individual _________________
Team _________________

Location _________________  Individual _________________
Team _________________

Process Parents for Notifications:☐ Yes ☐ No
*Determines whether the notification recipients defined for the parent service should be notified of actions on consults directed to this service.*

Update Users

Update Users without Notifications:
*Service users who should be able to perform update capabilities, but DO NOT receive notifications should be defined here. The same algorithm is used to determine the recipients for all types of consult notifications.*

_________________  _________________  _________________

_________________  _________________  _________________

Update Teams without Notifications:

Update User Class without Notifications:

_________________  _________________  _________________

Page 2 of 3
Consult Services Worksheet

Administrative Update Users:

*Users who may close consults without attaching a TIU note are defined here.*

_________________ Notification Recipient? □ Yes □ No
_________________ Notification Recipient? □ Yes □ No

Administrative Update Teams:

*Teams whose members may close consults without attaching a TIU note are defined here.*

_________________ Notification Recipient? □ Yes □ No
_________________ Notification Recipient? □ Yes □ No

Process Parents for Updates:

*Determines whether the update users defined for the parent service should have the same update privileges on consults directed to this service.*

_________________ Notification Recipient? □ Yes □ No

Special Update Individual:

*A user who is allowed to perform batch updating of status on consults.*

_________________

Unrestricted Access:

*If marked yes, any user may have update access to this service.*

□ Yes □ No

Miscellaneous

Sub-Service Specialty:

*Services that are below this one in the Consults Service Hierarchy.*

## Appendix C: Request Services Distributed with Consults

**Note:** The distributed services are those services shown below with an asterisk (*). The hierarchy shown below via the sub-service specialty column is not distributed. Use the Set up Consults Services option to build the hierarchy for your service. Remember, the top of the hierarchy must be ALL SERVICES.

### REQUEST SERVICES LIST

<table>
<thead>
<tr>
<th>NAME</th>
<th>SUB-SERVICE SPECIALTY</th>
</tr>
</thead>
<tbody>
<tr>
<td>*ALL SERVICES</td>
<td></td>
</tr>
<tr>
<td>MEDICINE</td>
<td></td>
</tr>
<tr>
<td>PHARMACY SERVICE</td>
<td></td>
</tr>
<tr>
<td>*CARDIOLOGY</td>
<td></td>
</tr>
<tr>
<td>*GASTROENTEROLOGY</td>
<td></td>
</tr>
<tr>
<td>*HEMATOLOGY</td>
<td></td>
</tr>
<tr>
<td>*MEDICINE</td>
<td></td>
</tr>
<tr>
<td>CARDIOLOGY</td>
<td></td>
</tr>
<tr>
<td>GASTROENTEROLOGY</td>
<td></td>
</tr>
<tr>
<td>HEMATOLOGY</td>
<td></td>
</tr>
<tr>
<td>PULMONARY</td>
<td></td>
</tr>
<tr>
<td>RHEUMATOLOGY</td>
<td></td>
</tr>
<tr>
<td>*PHARMACY SERVICE</td>
<td></td>
</tr>
<tr>
<td>*PULMONARY</td>
<td></td>
</tr>
<tr>
<td>*RHEUMATOLOGY</td>
<td></td>
</tr>
</tbody>
</table>

The indented services represent sub-service/specialties making up the hierarchy.

**Caution:** New services must be added to ALL SERVICES if not a sub-service specialty.
Appendix D: Package Security

Service Update and Tracking Security

You can use the Consult Service User Management option, in conjunction with availability to various menus and options, to control access to Consults functionality. The menus that can be provided are:

- Consult Service Tracking
- Pharmacy Consult User

The Consult Service Tracking menu provides access to basic consult tracking functions and reports, but can also provide complete update capabilities if you have been granted update privileges by your ADPAC.

Individual options in the Consults package that may be useful to users, and what access they provide, are detailed in the following table:

<table>
<thead>
<tr>
<th>Option</th>
<th>Services</th>
</tr>
</thead>
<tbody>
<tr>
<td>Consult Service Tracking</td>
<td>Tracking and/or update functionality depending upon your individual privileges.</td>
</tr>
<tr>
<td>Pharmacy TPN Consults</td>
<td>Tracking, and update functionality.</td>
</tr>
<tr>
<td>Completion Time Statistics</td>
<td>Reporting.</td>
</tr>
<tr>
<td>Service Consults Pending Resolution</td>
<td>Reporting.</td>
</tr>
</tbody>
</table>
With the GMRC Service User Management option you can set users up to be update users for one or more services at your hospital. In addition, you can grant the ability to receive consult notifications according to criteria outlined in the following table:

<table>
<thead>
<tr>
<th>Category</th>
<th>Notifications Received</th>
</tr>
</thead>
<tbody>
<tr>
<td>UPDATE USERS W/O NOTIFICATIONS</td>
<td>Unless otherwise set up, will not receive notifications.</td>
</tr>
<tr>
<td>SERVICE INDIVIDUAL TO NOTIFY</td>
<td>Receive consult notifications for your service.</td>
</tr>
</tbody>
</table>
| SERVICE TEAM TO NOTIFY                     | Receive consult notifications for your service. *These teams send notifications regardless of the patients contained on them.*
| NOTIFICATION BY PT LOCATION INDIVIDUAL TO NOTIFY | Receive all consult notifications for your service for patients in a specified ward. |
| NOTIFICATION BY PT LOCATION TEAM TO NOTIFY | Receive consult notifications for patients in a specified ward.                        |

These categories are not mutually exclusive, meaning a user may receive notifications based on being present on one or more of the lists detailed in the preceding table.

The following table lists privileges a user may want and who that privilege is granted to:

<table>
<thead>
<tr>
<th>Privilege</th>
<th>Granted</th>
</tr>
</thead>
<tbody>
<tr>
<td>Originate a consult</td>
<td>Anyone with access to CPRS</td>
</tr>
<tr>
<td>Sign a consult</td>
<td>Anyone who can sign an order</td>
</tr>
<tr>
<td>Change a consult status</td>
<td>Anyone with update privileges</td>
</tr>
<tr>
<td>View or print a consult</td>
<td>Anyone with the Consult Service Tracking option or access to CPRS.</td>
</tr>
</tbody>
</table>

In summary, update user capabilities vary depending on

1) The option(s) that you are assigned.
2) Privileges granted in the Consults Service User Management option.

**Menu/Option Access**

The following menus/options are available with the Consults package for distribution to users.
Appendix D: Package Security

<table>
<thead>
<tr>
<th>Option Name</th>
<th>File</th>
</tr>
</thead>
<tbody>
<tr>
<td>GMRC MGR</td>
<td>19</td>
</tr>
<tr>
<td>GMRC GENERAL SERVICE USER</td>
<td>19</td>
</tr>
<tr>
<td>GMRC PHARMACY USER</td>
<td>19</td>
</tr>
<tr>
<td>GMRC SERVICE TRACKING</td>
<td>19</td>
</tr>
<tr>
<td>GMRC TPN CONSULTS</td>
<td>19</td>
</tr>
<tr>
<td>GMRC RPT PENDING CONSULTS</td>
<td>19</td>
</tr>
<tr>
<td>GMRC REVIEW SCREEN</td>
<td>101</td>
</tr>
</tbody>
</table>

**GMRC MGR menu**

This option should be given to IRMS/ADPAC personnel. It is composed of all options distributed with the Consults package.

**GMRC GENERAL SERVICE USER menu**

This menu provides access to the most commonly used Consults options that a general user, other than Medicine, would be interested in. This option should be added to their primary or secondary menu options.
GMRC PHARMACY USER menu

This menu provides access to the most commonly used Consults options that a user of the Pharmacy TPN option would be interested in. This option should be added to their primary or secondary menu options.

**GMRC SERVICE TRACKING option**

The Consult Service Tracking (GMRC SERVICE TRACKING) option may be given to “review only” AND service “update” users. This option should be added to their primary or secondary menu options.

You may want to add the GMRC SERVICE TRACKING option to the OR MAIN MENU options in the Option file (#19) as well, since users of these OR options are likely interested in reviewing consult/request activities services may have taken.

**GMRC PHARMACY TPN CONSULTS option**

Pharmacy personnel who need to be able to update File 123, REQUEST/CONSULTATION file, with service activity tracking updates should have the GMRC PHARMACY TPN CONSULTS option added to their primary or secondary menu options.

**Security Keys**

**File Security**

The following is a list of recommended VA FileMan access codes associated with each file contained in the Consults package:

<table>
<thead>
<tr>
<th>File Number</th>
<th>File Name</th>
<th>DD Access</th>
<th>RD Access</th>
<th>WR Access</th>
<th>DEL Access</th>
<th>LAYGO Access</th>
</tr>
</thead>
<tbody>
<tr>
<td>(#123)</td>
<td>Request/Consultation</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>(#123.1)</td>
<td>Request Action Types</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>(#123.3)</td>
<td>GMRC Procedures</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>(#123.5)</td>
<td>Request Services</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>@</td>
</tr>
</tbody>
</table>

**Service Update Tracking Security**

The Consults Package is distributed for *all* Services at a facility to track consult/request activity. Security at the Service level is set up by IRMS/ADPAC personnel in the Request Services file (#123.5). Specific fields which provide security restrictions include:
GMRCACTM PHARMACY PKG MENU

This is the PROTOCOL ACTION MENU exported for use by Pharmacy Service personnel to process Pharmacy TPN Consults.
Routine Descriptions

GMRC101 Create Protocol entries for OE/RR ADD orders screens.

GMRC101C Create Protocol entries for OE/RR ADD orders screens (Continued)

GMRC101H Set up HL-7 message to update OERR orderable items file with new consult type.

GMRC15EN Environment check GMRC*3*15

GMRC513U Obsolete utility deleted with GMRC*3*4.

GMRC7L List Template Exporter.

GMRC75P Add the ‘HCPS, APPLICATION PROXY’ user the the NEW PERSON (#200) file.

GMRCA1 Actions taken from Review Screens.

GMRCA2 Select prompt for processing actions.

GMRCAAC Administrative Complete action consult logic.

GMRCACMT Comment Action and alerting.

GMRCACTM Set GMRCACTM with action menu based on Service.

GMRCADC Discontinue Action taken from List Manager.

GMRCAFRD Forward Req (FR) Action from Review Screen.

GMRCALOR Process a consult from an alert notification.

GMRCALRT List Manager alert action interface.

GMRCAR Associate Results (AR) Action taken from Review Screen.

GMRCART Result display logic.

GMRCASF Significant Findings Action.

GMRCAST Select OE/RR Status (ST) Action.

GMRCASV Build ^TMP("GMRCS" of Svc(s)/Specialties.

GMRCASV1 Hierarchy Mgmt cont'd.

GMRCP5   Print Consult form 513 (main entry).
GMRCP513   Print Consult form 513.
GMRCP5A   Print Consult form 513 (Gather Data - TIU Results).
GMRCP5B   Print Consult form 513 (Gather Data - Footers, Provisional Diagnosis and
Reason For Request).
GMRCP5C   Print Consult form 513 (Assemble Segments And Print).
GMRCP5D   Print Consult form 513 (Gather Data - Addendums, Headers, Service
reports and Comments).
GMRCPC   List Manager Routine: Collect and display consults by service and status.
GMRCPC1   List Manager Routine: Collect and display consults by service and status.
GMRCPH   Process XQORM helps.
Appendix D: Package Security

GMRCPOR  Get DOC, LOC, TS in interactive defaults.

GMRCPOS  Consult postinit file maintenance.

GMRCPOS1  Post init to move Services from file 123.5 to the orderable items file, 101.43, and orderables in file 101 to file 101.43.

GMRCPOS2  Consult postinit file maintenance.

GMRCPOST  Post init driver routine.

GMRCPP  Print GMRC consult/request tracking protocols - List Manager routine.

GMRCPR  GMRC List Manager Routine - Get information for abbreviated print of GMRC protocols and format for List Manager.

GMRCPR0  Data Entry Promptint actions.

GMRCPREF  Setup package/procedure protocols.

GMRCPR0T  Consult postinit file maintenance.

GMRCPRP  Set protocol information into ^TMP global for print and display by List Manager.

GMRCPRPS  List Manager GMRC Routine -- List GMRC (Consults/Request) Protocols in abbreviated form.

GMRCPS  Select Service/specialty to send Consult to.

GMRCPSL1  Main entry point for reports search by provider, location, or procedure.

GMRCPSL2  Build ^TMP("GMCRPRT") for GMRCPSL1.

GMRCPSL3  Generate reports using ^TMP("GMCRPRT").

GMRCPSL4  Generate reports using ^TMP("GMCRPRT").

GMRCPSL1  Special Consult reports.

GMRCPSL2  Special Consult reports.

GMRCPSL3  Special Consult reports.

GMRCPSL4  Special Consult reports.

GMRCPSL5  Select Range Of Items From List.

GMRCPURG  Purge orders from the Order File 100.
Appendix D: Package Security

GMRCPX  Select a new pharmacy patient for list manager consult tracking display.

GMRCPZ  GMRC List Manager Routine -- Main menu actions for Pharmacy consults request tracking.

GMRCQC  GMRC List Manager routine to print Consults pending resolution for QC purposes.

GMRCQCST  Gather all consults for QC that do not have status of discontinued, complete, or expired.

GMRCR  Driver for reviewing patient consult/requests - Used by Medicine Package to link Consults to Medicine results.

GMRCR0  Add original consult via backdoor service.

GMRCR06  Complete a consult/request.

GMRCRA  Build $TM("GMRCR",$J, array of consults.

GMRCREXT  Clean-up all variables and $TM globals upon exit.

GMRCRFIX  Consult postinit save GMRCR protocol file links.

GMRCRPOS  Consult postinit save GMRCR protocol file links.2

GMRCR  Review consults by Patient and Service.

GMRCRSL  Active Consults by Service.

GMRCRSLDT  Get a consults detailed tracking history formatted for List Manager.

GMRCRSLM  List Mgr routine for consult tracking list.

GMRCRSLM1  Gather data and format $TM global for consult tracking Silent call for use by List Manager and GUI.

GMRCRSLM2  List Manager routine - Detailed consult display and printing.

GMRCRSLM3  Extract medicine results for consult tracking.

GMRCRSLM4  List Manager routine - Activity Log Detailed Display.

GMRCRSLMA  List Manager protocol entry, exit actions.

GMRCRSLMU  Utilities for displaying consults in List manager.

GMRCRSLMV  Set Video attributes for list manager screens.
Appendix D: Package Security

GMRCSPD  Change Date Range in CSLT Tracking Module.

GMRCSRVS  Add/Edit services in File 123.5.

GMRCSSP  List Manager Format Routine To Collect Pharmacy TPN Consults that are Not Completed Or Have Been Discontinued.

GMRCST  Statistics on how long to complete consult/requests for a service.

GMRCST0  Statistics on how long to complete consult/requests for a service.

GMRCST00  Statistics on how long to complete consult/requests for a service.

GMRCSTAT  List Manager Ancilliary routine - Restrict display of consults to a given status or statuses on List Manager Screen.

GMRCSTL1  List Manager Format Routine - Get Active Consults by service - pending, active, scheduled, incomplete, etc.

GMRCSTL2  List Manager Format Routine - Get Active Consults by service - pending, active, scheduled, incomplete, etc.

GMRCSTLM  List Manager Format Routine - Get Active Consults by service - pending, active, scheduled, incomplete, etc.

GMRCSTS  Group update status of consult and order.

GMRCSTS1  Group update of consults cont'd.

GMRCSTS2  Change status based on result activity.

GMRCSTSI  Special processing to change status of selected consult and order

GMRCSTSU  Change status based on current order status.

GMRCSTSZ  Loop "AE" and get entries, dump in ^TMP.

GMRCSTU  Statistic Utilities for Consult/Request Package.

GMRCSTU1  Statistic Utilities for Consult/Request Package.

GMRCSUBS  Routine to check if a Service has more that one patient service.

GMRCSVCU  Utility to put services from file 123.5 into file 101.43 when service exists in 123.5 but not.

GMRCCT  Get DUZ's of users for notification to service.
Appendix D: Package Security

GMRCTIU  TIU utilities for exchanging info with Consults.
GMRCTIU1  More CT/TIU interface modules.
GMRCTIU2  Enter TIU Browse with DFN and TIUDA.7
GMRCTIU3  Extract medicine results for consults tracking.
GMRCTIUA  Add the TIU note to the results multiple.
GMRCTIUE  Complete/Update TIU notes.
GMRCTIUL  Get list of existing results for consults.
GMRCTIUP  TIU utilities for exchanging info with Consults.
GMRCTU  Consults - Terminated users/remove pointers.
GMRCTU1  Get DD Info.
GMRCU  Consult/Request Utilities.
GMRCUTL  Utilities for formatting word processing fields and setting into ^TMP("GMRCR" globals for use by List Manager routines.
GMRCUTL1  General Utilities.
GMRCUTL2  Secondary Printer for printing SF 513
GMRCXQ  Routine to allow follow-up on legacy alerts.
GMRCYP15  Convert procedures from 101 to 123.3
GMRCYP16  PRE/POST INSTALL FOR GMRC*3*16.
GMRCYP18  Post Install for patch 18.
GMRCYP23  Post Install for patch 23.
GMRCYP7  Consult clean-up unreleased at test sites.
GMRCYP8  Post Install for GMRC*3*8.
Routine Mapping

For systems that can use routine mapping, this is a list of routines in the Consults package that should be mapped.

<table>
<thead>
<tr>
<th>Routine Prefix</th>
<th>Routine Usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>GMRCA*</td>
<td>Action routines</td>
</tr>
<tr>
<td>GMRCP*</td>
<td>CPRS interface routines</td>
</tr>
<tr>
<td>GMRCR*</td>
<td>Consults review/tracking routines</td>
</tr>
<tr>
<td>GMRCXS</td>
<td>Service entry point to review/tracking</td>
</tr>
<tr>
<td>GMRCU*</td>
<td>Utility routines</td>
</tr>
<tr>
<td>GMRCXQ</td>
<td>View Alerts followup</td>
</tr>
</tbody>
</table>

The asterisk (*) is a wild card specification. Any routines beginning with the characters before the asterisks are included in the set.

The other routines do not need to be mapped due to their smaller frequency of usage.
Appendix D: Algorithms

User Authority

The flow chart on the next page represents processing accomplished to determine the user authority for any given user. This authority can be check by using the Determine Users' Update Authority (UA) action on the Consult Management Menu.

Example:

Select Consult Management Option: ua  Determine users' update authority

This option will allow you to check a users update authority for any given service in the consults hierarchy. If the PROCESS PARENTS FOR UPDATES field is set to YES, all ancestors of the selected service will be checked. The type of update authority and the service to which they are assigned will be displayed.

Select Consult Service: arth  Arthritis
Choose user to check for update status: CPRSPROVIDER,ONE  OC  PHY  SICIAN

This user is an update user for: Arthritis via the UPDATE TEAMS W/O NOTIFICATIONS field.

Select Consult Service: arth  Arthritis
Choose user to check for update status: CPRSPROVIDER,THREE  TC  CHIEF, MEDICAL SERVICE

This user has no update authority

Select Consult Service:
Enhanced User Authority

Service of consult being acted upon

Result of Validate User

ADMIN or UPDATE USER

NO AUTHORITY

Check PROCESS PARENTS FOR UPDATES (#.07)

Check for parent service

PARENT SERVICE

Validate parent service

Loop stops with current user authority

VALIDATE USER

Check UNRESTRICTED ACCESS (#.06)

NOT FOUND

Check SERVICE INDIVIDUAL TO NOTIFY (#123.08)

NOT FOUND

Check UPDATE USERS W/O NOTIFICATIONS (#123.3)

NOT FOUND

Check ADMINISTRATIVE USERS W/O NOTIF (#123.33)

NOT FOUND

Check to see if user is member of any team in SERVICE TEAMS TO NOTIFY (#123.1)

NOT FOUND

Check to see if user is member of any team in UPDATE TEAMS W/O NOTIFICATIONS (#123.31)

NOT FOUND

Check to see if user is member of any team in ADMINISTRATIVE TEAMS W/O NOTIF (#123.31)

NOT FOUND

Check to see if user is member of any user class in UPDATE USER CLASSES W/O NOTIFS (#123.35)

NOT FOUND

1) Update user will have full range of actions including clinical consult completion.
2) Administrative user will have full range of actions but only allowed administrative completion of consults.
3) If no update authority, user will only have review capabilities.
