Office of Information and Technology (OI&T)
Enterprise Program Management Office

Revision History

Date	Version	Description	Author
7/6/2017	1.0	Final Version	REDACTED

Artifact Rationale

This document describes the Deployment, Installation, Back-out, and Rollback Plan for new products going into the VA Enterprise. The plan includes information about system support, issue tracking, escalation processes, and roles and responsibilities involved in all those activities. Its purpose is to provide clients, stakeholders, and support personnel with a smooth transition to the new product or software, and should be structured appropriately, to reflect particulars of these procedures at a single or at multiple locations.

Per the Veteran-focused Integrated Process (VIP) Guide, the Deployment, Installation, Back-out, and Rollback Plan is required to be completed prior to Critical Decision Point #2 (CD #2), with the expectation that it will be updated throughout the lifecycle of the project for each build, as needed.

1 Introduction

This document describes how to deploy and install the TIU Unauthorized Abbreviation and Dictation Control (UA and DC) patch, TIU*1*297, as well as how to back-out the product and rollback to a previous version or data set.

1.1 Purpose

The purpose of this plan is to provide a single, common document that describes how, when, where, and to whom the TIU UA and DC patch, TIU*1*297, will be deployed and installed, as well as how it is to be backed out and rolled back, if necessary. The plan also identifies resources, communications plan, and rollout schedule. Specific instructions for installation, back-out, and rollback are included in this document.

1.2 Dependencies

The TIU UA and DC patch, TIU*1*297, possesses a direct application dependency on the VistA Text Integration Utility (TIU) v.1.0 application, and an indirect application dependency on Computerized Patient Record System (CPRS) v.1.0. Patch does require the following patches to be installed:

- TIU*1*218 - TIU ACTIVE TITLE CLEANUP REPORT v2
- TIU*1*225 - TIU DATA STANDARDIZATION ENHANCEMENTS
- TIU*1*256 - ALLOW DELETE/RETRACT NIR AND ANESTHESIA REPORT
- TIU*1*296 - TIU TEXT ALERT NOTIFICATION

2 Roles and Responsibilities

Table 1: Deployment, Installation, Back-out, and Rollback Roles and Responsibilities

ID	Team	Phase / Role	Tasks	Project Phase (See Schedule)
	OIT Regional Support	Deployment	Plan and schedule deployment (including orchestration with vendors)	
	UA and DC Project Team	Deployment	Determine and document the roles and responsibilities of those involved in the deployment.	
	OIT Regional Support	Deployment	Test for operational readiness	
	OIT Regional Support	Deployment	Execute deployment	
	OIT Regional Support	Installation	Plan and schedule installation	
	UA and DC Project Team	Installations	Coordinate training	
	OIT Regional Support	Back-out	Confirm availability of back-out instructions and back-out strategy (what are the criteria that trigger a back-out)	
	UA and DC Project Team	Post Deployment – Warranty Period	Hardware, Software and System Support	
	OIT Regional Support	Post Deployment – Post Warranty	Hardware, Software and System Support	

3 Deployment

The deployment is planned as a concurrent online rollout. During IOC testing and after national release, the TIU UA and DC patch, TIU*1*297, will be distributed via the FORUM Patch Module, and may be deployed at any site without regard to deployment status at other sites.

3.1 Timeline

The deployment and installation is scheduled to run for a period of thirty days, as depicted in the master deployment schedule

3.2 Site Readiness Assessment

This section discusses the locations that will receive the UA and DC patch, TIU*1*297 deployment.

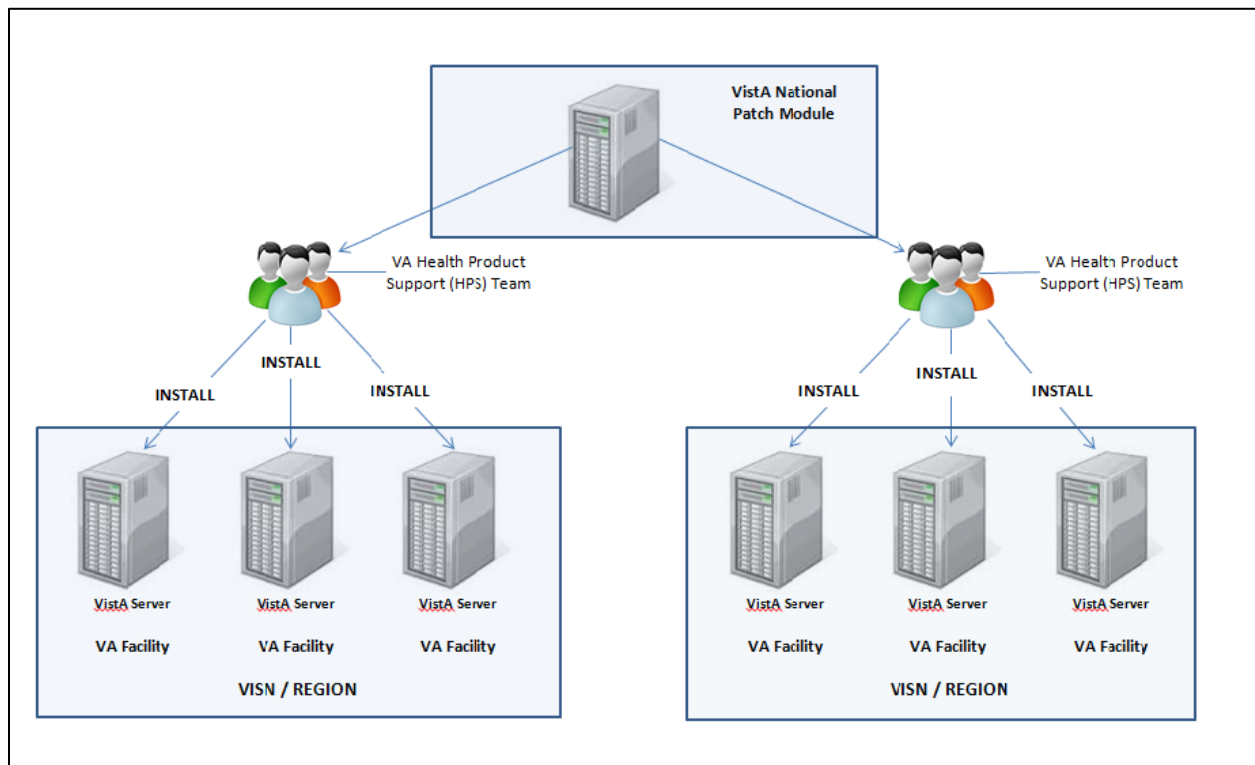

The TIU*1*297 patch must be manually installed, or manually queued for installation, at each VistA instance at which it is deployed, using the standard Kernel Installation Distribution System (KIDS) software. The TIU*1*297 patch should be installed at all VA VistA instances running

the CPRS and TIU applications, and will update the M (Mumps) server software in each VistA instance's TIU namespace.

3.2.1 Deployment Topology (Targeted Architecture)

The deployment topology for the UA and DC patch, TIU*1*297, during IOC testing and after national release, is described below:

Figure 1: Patch TIU*1*297 Topology

3.2.2 Site Information (Locations, Deployment Recipients)

During IOC testing, UA and DC patch, TIU*1*297, will be deployed at the following sites:

REDACTED

After national release, UA and DC patch, TIU*1*297, will be deployed at all sites running the CPRS and TIU applications.

3.2.3 Site Preparation

No special preparation is required by the site prior to deployment.

3.3 Resources

Deployment of UA and DC patch, TIU*1*297, requires an up to date VistA environment running the CPRS v.1.0, TIU v.1.0, and Kernel v.8.0 applications.

3.3.1 Facility Specifics

There are no facility-specific deployment or installation features of UA and DC patch, TIU*1*297.

3.3.2 Hardware

UA and DC patch, TIU*1*297, requires no site hardware specifications during, or prior to, deployment.

3.3.3 Software

The following table describes software specifications required at each site prior to deployment.

Table 2: Software Specifications

Required Software	Make	Version	Configuration	Manufacturer	Other
CPRS		1.0	Standard	VHA	
TIU		1.0	Standard	VHA	

Please see the Roles and Responsibilities table in Section 2 above for details about who is responsible for preparing the site to meet these software specifications.

3.3.4 Communications

No notifications are required for deployment of UA and DC patch, TIU*1*297.

3.3.4.1 Deployment/Installation/Back-Out Checklist

Table 3: Deployment/Installation/Back-Out Checklist

Activity	Day	Time	Individual who completed task
Deploy			
Install			
Back-Out			

4 Installation

4.1 Pre-installation and System Requirements

Ordinarily, it is recommended that a *Backup Local Patch File* be created that can be re-installed in the event that patch TIU*1*297 must be backed out. However, this method does not back out Database Definitions (DDs); there is no need to create a Backup Local Patch.

Do not install this patch while CPRS users are on the Computerized Patient Record System using "CPRS - Progress Note / Sign Note Now". It is recommended to install this patch during non-

peak hours to minimize potential disruption to users. The installation of this patch should not take more than 5 minutes.

The following options need to be disabled before installing this patch:

- TIU Maintenance Menu [TIU IRM MAINTENANCE MENU]
- Active Title Cleanup Report [TIU ACTIVE TITLE CLEANUP]
- Title Mapping Utilities [TIU MAP TITLES MENU]
- TIU Parameters [TIU BASIC PARAMETER EDIT]
- Text Event Edit [TIU TEXT EVENT EDIT]

The following patches must be installed in the following order before this patch may be installed.

TIU*1*218

TIU*1*225

TIU*1*256

TIU*1*296

Knowledge of, and experience with, the Kernel Installation and Distribution System (KIDS) software is required. For more information, see Section V, Kernel Installation and Distribution System, in the [Kernel 8.0 & Kernel Toolkit 7.3 Systems Management Guide](#).

4.2 Platform Installation and Preparation

Patch TIU*1*297 does not require any platform installation or preparation.

4.3 Download and Extract Files

UA and DC patch, TIU*1*297, is being released as a FORUM Patch via the Patch Module. Therefore, the patch must be downloaded from FORUM and forwarded to the destination site, in the form of a Packman message.

Documentation describing the new functionality introduced by this patch is available. The preferred method is to retrieve files from download.vista.med.va.gov. This transmits the files from the first available server. Sites may also elect to retrieve files directly from a specific server.

Sites may retrieve the software and/or documentation directly using Secure File Transfer Protocol (SFTP) from the ANONYMOUS.SOFTWARE directory at the following OI Field Offices:

REDACTED

The TIU Unauthorized Abbreviation and Dictation Control Training manual provides additional information and can be downloaded from the ANONYMOUS SOFTWARE DIRECTORY above.

The documentation will be in the form of Adobe Acrobat files. Documentation can also be found on the VA Software Documentation Library at: <http://www4.va.gov/vdl/>

Table 4: User Documentation

Title	File Name	FTP Mode
TIU Clinical Coordinator and User Manual	tiuum.PDF	Binary
TIU Technical Manual	tiutm.PDF	Binary
TIU Unauthorized Abbreviation and Dictation Control Deployment, Installation, Back Out and Roll Back Guide	tiu_1_0_297_ig.PDF	Binary
TIU Dictation Control Training Guide	tiu_1_0_297_tg.PDF	Binary

4.4 Database Creation

No new database is required for the UA and DC patch TIU*1*297.

4.5 Installation Scripts

No installation scripts are required for installation of UA and DC patch TIU*1*297.

4.6 Cron Scripts

No CRON scripts are required for installation of UA and DC patch TIU*1*297.

4.7 Access Requirements and Skills Needed for the Installation

Access to national VA network, as well as the local network of each site to receive the UA and DC patch, TIU*1*297, is required to perform the installation, as well as authority to create and install patches.

Knowledge of, and experience with, the Kernel Installation and Distribution System (KIDS) software is required. For more information, see Section V, Kernel Installation and Distribution System, in the [Kernel 8.0 & Kernel Toolkit 7.3 Systems Management Guide](#).

4.8 Installation Procedure

Installation:

- 1) Choose the PackMan message containing this patch.
- 2) Choose the INSTALL/CHECK MESSAGE PackMan option.
- 3) From the Kernel Installation and Distribution System Menu, select the Installation Menu.
From this menu, you may elect to use the following options. When prompted for the INSTALL NAME enter the patch # (ex. TIU*1.0*297):
 - a. Backup a Transport Global - This option will create a backup message of any routines exported with this patch. It will not backup any other changes such as DDs or templates.

- b. Compare Transport Global to Current System - This option will allow you to view all changes that will be made when this patch is installed. It compares all components of this patch (routines, DDs, templates, etc.).
 - c. Verify Checksums in Transport Global - This option will allow you to ensure the integrity of the routines that are in the transport global.
- 4) From the Installation Menu, select the Install Package(s) option and choose the patch to install. => Choose TIU*1.0*297
- 5) When prompted 'Want KIDS to Rebuild Menu Trees upon completion of Install? NO// => respond NO.
- 6) When prompted 'Want KIDS to INHIBIT LOGONs during the install? NO// => respond NO.
- 7) When prompted 'Want to DISABLE Scheduled Options, Menu Options, and Protocols? NO// => respond YES.

Select the following option to disable:

<u>Option Name</u>	<u>Menu Text</u>
TIU IRM MAINTENANCE MENU	TIU Maintenance Menu
TIU ACTIVE TITLE CLEANUP	Active Title Cleanup Report
TIU MAP TITLES MENU	Title Mapping Utilities
TIU TEXT EVENT EDIT	TIU Event Edit
TIU BASIC PARAMETER EDIT	Basic TIU Parameters

- 8) If prompted 'Delay Install (Minutes): (0 - 60): 0// => respond 0.

Post-Installation:

- 1) After this TIU*1*297 patch is installed successfully, please make sure that the Post-Installation routine, TIUPS297, is removed.
- 2) If your site wants to use the new functionality implemented for NSR # 20140809 (Prevention of Unauthorized Abbreviations in the TIU Screen), the following should be done for any abbreviations decided upon by the site:
 - a. Determine which of the following provided fourteen Unauthorized Abbreviations from The Joint Commission listing are to be required at your site: IU, MgSO4, MS, MSO4, QD, Q.D., qd, q.d., QOD, Q.O.D., qod, q.o.d., U, u
 - b. Determine if your site has any additional abbreviations it would like to include to prevent usage by users.
 - c. Utilize the Unauthorized Abbreviations (Enter/Edit) [TIU ABBVENTER EDIT] option found on the TIU Maintenance Menu [TIU IRM MAINTENANCE MENU] to do the following:
 - 1. Set the Status field to "Active" for each of the Unauthorized Abbreviations, from The Joint Commission Listing that you prefer to prevent from being used at your site.

2. Enter any new Unauthorized Abbreviations you prefer to prevent at your site.
- 3) If your site wants to use the new functionality implemented for NSR # 20141003 (TIU Dictation Control) the following should be done:
 - a. A user who has the ability to use the Basic TIU Parameters [TIU BASIC PARAMETER EDIT] should use this option to enable/disable dictation control and add dictation instructions as appropriate for your site. Please note that the TIU PARAMETERS (#8925.99) File is defined to have one entry for each division and it will require this step to be done for each division using this functionality. This facilitates usage and/or dictation instructions to be defined by division as needed at multi-divisional facilities.
 - b. Assign the TIUDCT security key to anyone who will need to dictate TIU documents using CPRS.

If your site does not want to use this functionality, no action is required.

4.9 Installation Verification Procedure

Installation of UA and DC patch TIU*1*297 may be verified by running the Kernel checksum tool from the VistA server command line after installation:

D CHECK1^XTSUMBLD

The checksums produced by the checksum tool should match the numeric portion of the “After:” checksums in the UA and DC patch TIU*1*297 patch description.

Example:

Checksum for routine RA127PO as displayed by Kernel checksum tool CHECK1^XTSUMBLD:

RA127PO value = **8722416**

The “After:” checksum for routine RA127PO as displayed in the patch description:

Routine Name: RA127PO

Before:n/a After: **B8722416 **127****

4.10 System Configuration

No System Configuration is required before or after deployment of UA and DC patch TIU*1*297.

4.11 Database Tuning

No Database Tuning is required before or after deployment of UA and DC patch TIU*1*297.

5 Back-Out Procedure

The Back-out Procedure consists of restoring the patch components to their pre-patch state with the guidelines outline in the following sections.

The back-out is to be performed by persons with programmer-level access and in conjunction with the STS Team.

5.1 Back-Out Strategy

The back-out strategy for this patch is as follows:

- Restore the TIULP routine using the Transport Global Backup message created in section 4.8, Installation Step 3 a.
- Delete the new TIUABBV, TIUABBV1, TIUABBV1C, TIUABBV1P, and TIUDCT, and TIUPS297.INT routines.
- Delete the updates to the “TIU BASIC PARAMETER EDIT” Input Template.
- Remove the new “TIU ABBV ENTER EDIT” and “TIU ABBV LIST” Options in the “TIU IRM MAINTENANCE MENU” Menu Option and then delete these two new options.
- Delete the new TIU UNAUTHORIZED ABBREVIATION file (#8927.9) and the new ENABLE DICTATION CONTROL field (#.23) and DICTATION INSTRUCTIONS word processing field (#6) in the TIU PARAMETER file (#8925.99)

5.2 Back-Out Considerations

The back-out should only be done in the event that the facility systems management determines that Patch TIU*1.0*297 is not appropriate for that facility, and should only be done as a last resort. HPS Clinical 1 team may be consulted if needed.

5.2.1 Load Testing

No load testing is required for patch TIU*1*297.

5.2.2 User Acceptance Testing

N/A

5.3 Back-Out Criteria

Facility Systems Management must determine if patch TIU*1*297 is not appropriate for their facility. HPS Clinical 1 team may be consulted, if needed.

5.4 Back-Out Risks

By backing out TIU*1.0*297, the local facility will not be able to use the new functionality for the prevention of unauthorized Abbreviations in the TIU Screen or the TIU Dictation Control.

5.5 Authority for Back-Out

The Facility Systems Management has the authority to back-out patch TIU*1.0*297. HPS Clinical 1 team may be consulted, if needed.

5.6 Back-Out Procedure

The back-out is to be performed by persons with programmer-level access and in conjunction with the STS Team.

The assigned person will perform the following steps to complete the back-out procedure:

1. Restore the TIULP routine using the Transport Global Backup message created in section 4.8, Installation Step 3 a.
2. Delete the new TIUABBV, TIUABBV1, TIUABBV1C, TIUABBV1P, and TIUDCT, and TIUPS297.INT routines.
3. Delete the updates to the “TIU BASIC PARAMETER EDIT” Input Template.
4. Remove the new “TIU ABBV ENTER EDIT” and “TIU ABBV LIST” Options in the “TIU IRM MAINTENANCE MENU” Menu Option and then delete these two new options.
5. Delete the new TIU UNAUTHORIZED ABBREVIATION file (#8927.9) and the new ENABLE DICTATION CONTROL field (#.23) and DICTATION INSTRUCTIONS word processing field (#6) in the TIU PARAMETER file (#8925.99)

Details for each of the above steps follow:

1. Restore the TIULP routine:
 - Access the Transport Global Backup message in Mailman. If you are not the person who installed the patch and were not included on this message, you will need to request the patch installer to forward this message to you in Mailman
 - At the message action prompt utilize the “Xtract PackMan”. Then use option 6, INSTALL/CHECK MESSAGE, to update the routines to the state prior to the patch installation.
 - Example follows of how to do this using the Transport Global Backup message in Mailman. It should be executed using MailMan (User input depicted below in bold italicized font):

```
