Introduction

Purpose of Group Notes

This program was designed to assist providers in documenting group therapy sessions and events such as immunization clinics. It allows the easy assembly of patient groups based on Clinics, Specialties, Wards, Teams, or Provider lists. It then allows the note author to specify parts of a note that apply to the entire group and parts that apply to individuals. It does the same with encounter data. After the note and encounter information is complete, it provides for a single signature for the entire group.

Scope of the Manual

Tasks associated with Group Notes are: System setup, workstation setup, creation of notes for a group, and collection of encounter data. This manual provides information deemed necessary to carry out these functions.

From time to time improvements are made to the TIU package, including improvements to Group Notes. The latest information about TIU, as well as the latest version of this manual, is posted on the Text Integration Utilities (TIU) Web Page at:

vista.med.va.gov/tiu/html/Enhance.htm

or

vaww.vista.med.va.gov/tiu/html/Enhance.htm

This document is intended for use during development and testing of the Group Notes executable. When Group Notes is released this document will cease to exist as a living document and the information in it will be inserted into the appropriate VistA manuals. (However, the document will continue to be available on the above page—it will not be updated with post-release changes.)

Also on release, information about Group Notes will be available on the TIU page of the VDL (VistA Document Library) at http://www.va.gov/vdl/application.asp?appid=142.

Audience

Information in this manual is intended for end users. This usually means providers conducting group sessions and limited scope clinics such as for training or vaccination.
User Section

Group Notes Operation

Group Notes is a companion to the CPRS (Computerized Patient Record System) Notes tab. If you are familiar with creating clinical notes in CPRS you will have little trouble with Group Notes.

Creating notes for a group of patients who have just participated in a group therapy session, education, or an immunization clinic follows these steps:

1. Set the visit location and the date/time for the encounter.
2. Select the patients involved, compiling them into a list.
3. Select a note title common for the group.
4. Enter note information common for the group.
5. Enter encounter data that is common for the group.
6. Select individual patients and enter encounter and note information unique to each individual.
7. Sign the notes.
8. Go back to the patient selection screen and repeat for additional groups.

If you are interrupted and exit the session before signing the notes, Group Notes will file notes individually unsigned and generate notifications that there are notes awaiting signature. Any work subsequent to exiting Group Notes must be accomplished in CPRS.
**Log In**

Users will use two-factor authentication (2FA) to login to Group Notes. To provide increased security, VistA applications now use two-factor authentication, which means using something you have and something you know. The something you have is your PIV (Personal Identification Verification) card, the something you know is your Personal Identification Number (PIN).

1. Launch the Group Notes application using the icon or the start menu.
2. In the dialog that displays, enter your PIN and select OK.

   **Note:** In an emergency, such as a lost card, you can select Cancel and then use your Access and Verify codes.

**Visit Information**

Information filled in or provided in the Group fields (upper right corner) is carried forward by the program into the encounter fields.
Patient Selection

As with CPRS, Group Notes opens with the patient selection screen. This screen is very similar to the CPRS patient selection screen with a number of fields and buttons added to facilitate group notes.

Note: If the patients are being selected from a clinic appointment list, the date and time of the visit MUST match exactly the date and time of the appointment. If there is a mismatch, you will create a duplicate encounter.

An extra button is added below patient demographics that, when pressed, displays detailed patient demographic information. Finally there is a list box provided showing the patient list as you build it.

With the patient list there are two additional buttons: Remove and Remove All. These have the obvious function allowing you full edit control over the list. Once you are satisfied press the Group Notes button.
Common Encounter Data Entry

Note: Information common to the entire group must be entered before data for an individual patient.

Pressing the Group Notes button moves to the note-building dialog screen. To return to patient selection (to add or subtract patients) use the Patient Selection button.

Until you change it by selecting an individual patient, all actions will apply to the entire group.
Common Note Title

Pressing the New Note button will allow you to select a note title. This will be the note title used for each member of the group:

![Image of Progress Note Properties window]

- **Note:** If the provider requires a co-signer, the co-signer must be designated at the time of note title selection. The field for designating a cosigner appears only if the author of the note requires a cosigner. The requirement for cosigner is a product of the author’s User Class and the set up of the document in TIU.

This is the “point of no return.” Once you select a title, a note will be created for each member of the group. If you exit the program without signing, unsigned notes are created for each member of the group and notifications will appear in CPRS that a note awaiting signature is available for each of these patients.

- **Warning:** Objects in boilerplate are problematic for group notes. The first patient on the list gets filled in and then the note text is given to each patient. So, do not use objects in the boilerplate of these notes titles that would be different for each patient.
Common Note Text Entry

If the note title selected contains boilerplate text, it will appear in the Common note content pane. You may edit the contents of this boilerplate and/or add additional text.

Note: For CACs and ADPACs: When setting up boiler plate that will be used in Group Notes be aware that inserted objects that import specific patient data will not work properly. Generally speaking, do not put TIU objects in this boiler plate. Exceptions to this rule are objects that are general in nature such as the current date.
Common Encounter Entry

The Group Notes encounter form is customized for group entry. At this point in the program only tabs that would be common to all patients are displayed:

Fill out the encounter form the way you would normally perform this operation, and then press the OK button.

When finished press the OK button.
Select an individual patient by clicking on the patient’s name:

When finished with common data, select a single patient that you need to enter individual data for.

Group encounter data appears in this pane.

ICD-9-CM Diagnosis information will display if the encounter date is prior to the ICD-10-CM activation date.

ICD-10-CM Diagnosis information will display if the encounter date is on or after the ICD-10 activation date.
Individual Note Text Entry

When an individual patient is selected, the Additional note text pane becomes active.

- Type information specific to the selected patient here.
- Repeat for each patient that needs specific note text.
- When finished customizing individual notes, press this button to customize individual encounter data.

ICD-9-CM Diagnosis information will display if the encounter date is prior to the ICD-10-CM activation date.

ICD-10-CM Diagnosis information will display if the encounter date is on or after the ICD-10 activation date.
**Individual Encounter Entry**

When an individual patient is selected the encounter form now shows all tabs.

- Encounter data that applies only to this single patient may now be entered.
- If the patient is in any of these categories, you must indicate if the group session was related.
- ICD-9-CM Diagnosis information will display if the encounter date is prior to the ICD-10-CM activation date.
- ICD-10-CM Diagnosis information will display if the encounter date is on or after the ICD-10 activation date.
When all data has been entered press the sign note button.

The individual encounter data only appears when that patient is selected.

ICD-9-CM Diagnosis information will display if the encounter date is prior to the ICD-10-CM activation date.

ICD-10-CM Diagnosis information will display if the encounter date is on or after the ICD-10 activation date.
Group Signing

When the sign note button is pressed the program automatically selects For All Patients. If any encounter data is missing such as service connected status, the program will prompt you for it at this time.

When you sign the note, you are signing for every patient in the group:

ICD-9-CM Diagnosis information will display if the encounter date is prior to the ICD-10-CM activation date.

ICD-10-CM Diagnosis information will display if the encounter date is on or after the ICD-10 activation date.

If business rules specify that you need a cosigner, then notifications will appear in CPRS to the effect that the expected cosigner has notes ready to sign.
After the signature has been accepted, the Additional Signer button becomes active. If this button is pressed the following dialog appears:

**Notice that the Additional Signer button is now active.**

Only a single patient can be selected.

**ICD-9-CM Diagnosis information will display if the encounter date is prior to the ICD-10-CM activation date.**

**ICD-10-CM Diagnosis information will display if the encounter date is on or after the ICD-10 activation date.**
Repeat

To return to the patient selection dialog with a clean slate to enter another group, press the Start New Group Notes button. Otherwise press the Exit Group Notes button.

<tbody>
<tr>
<td>ADPAC</td>
<td>Automated Data Processing Application Coordinator. A VistA software expert who usually works for IRMS.</td>
</tr>
</tbody>
</table>
| Boilerplate | A pre-defined TIU template that can be filled in for Titles, speeding up the text entry process. TIU exports several Titles with boilerplate text which can be modified to meet specific needs; sites can also create their own.  
For Group Notes a title with information that would be common for each member of the group works well. Any TIU objects used in boilerplate are filled in as if for the first patient, so avoid objects in Group Notes boilerplate. |
| CAC    | Clinical Application Coordinator. A software specialist who usually works for one of the medical center services. |
| CPRS   | Computerized Patient Record System. A front-end program that attempts to provide all VistA functionality in a Windows interface. Currently CPRS is being re-written to work in any windowing system that supports a web browser. This will allow users to access VistA from UNIX and Macintosh based systems. The target date for release of this advanced system is third quarter 2005. |
| TIU    | Text Integration Utilities. An umbrella package with the purpose of combining all clinical note processing into a single entity. In CPRS, TIU is represented by the Notes tab. |
| VDL    | VistA Document Library. A service of the Department of Veterans Affairs to provide documentation to all users. Anyone can access the VDL at web address: [www.va.gov/vdl/](http://www.va.gov/vdl/) |
