Introduction

There are no major changes in this version from PIMS V. 5.3. The purpose of this version is to create Incomplete Records Tracking into its own namespace (DGJ) separate from the Registration package (DG).

This version does send out one new parameter - Default Medical Record Type field (#100.3) - found in the Medical Center Division file (#40.8). Populating this field may be done through the Set Up IRT Parameters option and will be useful at integrated sites with different names for their Medical Record file rooms.

Package Integration

The following package versions (or higher) MUST be installed PRIOR to loading this version of Incomplete Records Tracking.

<u>Package</u>	<u>Version</u>
PIMS	5.3

Installation

Step Description

- 1 The files containing the KIDS installation file and documentation can be found on the ANONYMOUS.SOFTWARE directory:
DGJ1_0_IG.PDF DGJ1_0_TM.PDF DGJ1_0_UM.PDF DGJ1_0.KID
- 2 Print out/review the existing IRT parameters for each division. These are fields (#100.01-100.09, 100.1, and 100.2) found in the Medical Center Division (#40.8) file. Print out/review the IRT Short Form List Group (mail group) (#513) field found in the MAS Parameters (#43) file.
- 3 Backup system(s).
- 4 In order to minimize the impact of protocol [DGPM MOVEMENT EVENTS], install during a non-peak time, disabling the Bed Control [DG BED CONTROL] option. Advise your users not to do any admission, discharges, or transfers during the short time the package is installed.
- 5 Sign into UCI where package is to be loaded. (Use 28k partition for MSM.)
- 6 Prior to loading the Incomplete Records Tracking V. 1.0 host file, it is important to delete the Additional Prefix 'DGJ' entry from the Registration package. (See Installation Dialogue Section of this documentation for description.)
- 7 Load Incomplete Records Tracking V. 1.0 host file. (See Installation Dialogue Section of this document for description.)
- 8 Verify that DUZ, DT, DTIME, and U are defined and DUZ(0)="@". DUZ variable must be defined as an active user number and DUZ(0) variable must equal "@" in order to initialize.
- 9 Please answer all initialization questions carefully. We also recommend you slave print the initialization processes. Data that is printed out during the post-inits should be reviewed.
- 10 Move DGJ* routines to all systems, as appropriate.
- 11 Bring systems back on line.

Step Description

- 12 **(Optional)** Running the Build Primary Menu Trees option on the Menu Management Menu after the install may improve system performance during the first day of operation.
- 13 Review the IRT Parameters and IRT Short Form List Group entries from Step 2.
- 14 **(Optional)** Populate the DEFAULT MEDICAL RECORD TYPE (#100.3) field in the MEDICAL CENTER DIVISION (#40.8) file. This may also be done through the Set Up IRT Parameters option. If the field is left blank, MEDICAL RECORDS record type will be used (compatible with pre-installation functionality). This field will be useful to integrated sites which may have different names for the Medical Records departments.
