Preface

This manual has been developed for clinical, IRMS (Information Resource Management Service) and CIOFO (Chief Information Office Field Office) staff for the purpose of describing the implementation and use of the Intake and Output application. The content covers: software implementation, site configurable file maintenance, on-line documentation, functional use of each option, menu access, and prototype screen displays.

The content of this manual was prepared under the auspices of the multi-disciplinary Nursing Focus Group that provided the application's developers with functional specifications.

Introduction

The Intake and Output (I&O) application is designed to store, in the patient's electronic medical record, all patient intake and output information associated with a hospital stay or outpatient visit. This application is not service specific and currently is interfaced with the PIMS, Nursing, and Pharmacy applications.

Functionality:

- Users may electronically document patient intake (e.g., oral fluids, tube feedings, intravenous fluids, irrigations, and other types of intake defined by the facility) and patient output (e.g., excreted patient material such as urine, nasogastric secretions, emesis, drainage, liquid feces/stool, and other types of output defined by the facility).

- Intake data can be entered through either a quick or detailed route. The quick route documents the total fluid consumed. Detailed information requests the user to enter specific type of fluid intake (e.g., orange juice, water, soup) along with the quantity absorbed.

- The Start/Add/DC IV and Maintenance option contains nine protocols associated with intravenous therapy:
  1. Start IV - Start a new IV line or heparin/saline lock/port.
  2. Solution: Replace/DC/Convert/Finish Solution - DC current solution then replace a new solution to the selected IV line or convert the IV according to the user's choice.
  3. Replace Same Solution - Replace the same solution to a selected IV.
  4. D/C IV Lock/Port and Site - Remove IV/lock/port from a selected IV site.
  5. Care/Maintenance/Flush - Check site condition, dressing change, tube change and flush.
  6. Add Additional Solutions(s) - Add additional solution(s) without discontinuing an existing one.
  7. Restart DC'd IV - Restart an IV which was DC'd due to infiltration or other reasons.
  8. Adjust Infusion Rate - Adjust infusion rate for a selected IV.
  9. Flush - Flush all IV line(s) for a selected infusion site.

- The software supports documentation of intravenous intake via both single and multi-lumen catheters.

- The software is interfaced with the IV module of the Pharmacy software.

- The following reports are included:
Print I/O Summary by Patient (by Shift and Day(s))
Print I/O Summary (Midnight to Present)
Print I/O Summary (48 Hrs)
24 Hours Itemized Shift Report
Intravenous Infusion Flow Sheet

The last four reports can be printed for all patients on a ward, for patients in selected rooms on a ward, and for an individual patient.

- Patient Intake and Output information is printed on the following Nursing application reports:
  
  End of Shift Report
  Vital Signs Record

This version of Intake and Output is not interfaced with the Health Summary or the Order Entry/Results Reporting applications.
Section 1 Package Management
Chapter 1 Implementation and Maintenance

Description:

This chapter provides guidelines for implementing the Intake and Output (I&O) application. It is important to complete all of the steps contained in this chapter before assigning menu options to clinical staff.

Virgin Installation of Software:

The following steps should be followed when the Intake and Output software is installed in an environment where no previous installation of the Intake and Output application has taken place.

1. Setting up the software environment.

Information Resource Management Services (IRMS) staff must install the software using the Installation Guide in either a test environment or the production (VAH) directory. The following VISTA (Veterans Health Information Systems and Technology Architecture) packages should reside in the environment where the Intake and Output application is to be installed:

   a. Kernel V. 8.0 or greater,
   b. Kernel Toolkit V. 7.3 or greater,
   c. VA FileMan V. 21 or greater,
   d. PIMS V. 5.3 or greater,
   e. Inpatient Medications V. 4.5 or greater (optional).

The Intake and Output software must be installed before the Nursing (V. 4.0) application can be installed because specific Nursing (V. 4.0) options are dependent upon the Intake and Output routines. Data entered into the test environment CANNOT be transferred into the production environment. It is recommended that a limited amount of data be entered into the test directory in order for the user to become familiar with the application and to establish an acceptable training data base.

The Intake and Output application displays ordered IV solutions (for a patient) from the Inpatient Medications software. Without Inpatient Medications loaded, users may still implement the Start/Add/DC IV and Maintenance module of the Intake and Output package.

2. Name spacing and file listing

Intake and Output is found in the GMRY namespace. All routines, templates and options begin with GMRY. File numbers are in the range of 126 to 126.95 and are stored in the ^GMR and ^GMRD globals.
3. Editing site configurable files

a. The Intake Type option edits the GMRY Input Type (#126.56) file.
b. The Output Type option edits the GMRY Output Type (#126.58) file.
c. The Output Subtype option edits the GMRY Output Subtype (#126.6) file.
d. The Intake Items option edits the GMRY Intake Items (#126.8) file.
e. The IV Site option edits the GMRY IV Site (#126.7) file.
f. The IV Solution option edits the GMRY NUR IV Solution (#126.9) file.
g. The Shift Starting Hour and Other Parameters option edits the GMRY NUR Shift/Other (#126.95) file.
h. The IV Site Description option edits the GMRY IV Site Description (#126.72) file.
i. The IV Catheter option edits the GMRY IV Catheter (#126.74) file.
j. The IV DC'ed Reason option edits the GMRY IV DC'ed Reason (#126.76) file.

A primary concern for the ADP Coordinator is the Configure I/O Files (Option 9) in the GMRYMGR menu option that contains the options listed in a-j (above). This option allows you to enter: a) various IV or oral fluids and the amount in milliliters associated with containers, b) names of IV sites that may be specific to your facility, c) various needle sizes and other items associated with the Intake and Output software. The package is exported with a few file entries but you have the opportunity to enter information which will meet the needs of your facility since these are site configurable files.

4. Queueing TaskMan jobs

No scheduled TaskMan options are associated with this application.

5. GMRY and NUR I/O options
There is a separate set of similar options that are used to document and print I&O data in both the Intake and Output, and the Nursing applications. In the Intake and Output package, the software identifies a patient's ward or clinic location using the Hospital Location (#44) file. The Nursing package uses the Nursing Location (#211.4) file to identify an inpatient's associated nursing unit. Providing access to I&O options through the Nursing application was done for the convenience of nursing to streamline their inpatient workload. All data entered through either package is stored in the Intake and Output application's files.

6. Assigning menus

The GMRYMGR menu contains the following menus and options and is the primary menu for the application's ADP Coordinator.

Select OPTION NAME: **GMRYMGR**  Patient Intake/Output Menu

1. Enter/Edit Patient Intake
2. Enter/Edit Patient Output
3. Start/Add/DC IV and Maintenance
4. Print I/O Summary by Patient (by Shift & Day(s))
5. Print I/O Summary (Midnight to Present)
6. Print I/O Summary (48 Hrs)
7. 24 Hours Itemized Shift Report
8. Intravenous Infusion Flow Sheet
9. Configure I/O Files (ADP Coordinator Only) ...

Clinical staff should be assigned options 1-8. Option 9 is assigned to the Intake and Output application coordinator. You will note that options 4 through 8 are print options. We suggest that options 4 through 7 be given to physicians, dietitians and others who may have an interest in viewing a patient's or group of patient's Intake and Output.

The following table is a reference for print/sort parameters for the reports using menu option numbers.

<table>
<thead>

</tbody>
</table>
*NOTE: For intake to be itemized, DETAILED INPUT in the Enter/Edit Patient Intake option must be used. IV solutions will display names from the Start/ADD/DC IV and Maintenance protocol.

7. Printer related issues

Reports can be printed on a dot matrix printer or a laser printer.

Non-Virgin Installation of Software:

Follow steps 1 through 8 (above) when preparing the Intake and Output software for use in an environment where a previous version of the application has been installed.

Resource Requirements

1. Data Entry and Printer Devices:

The minimal hardware requirements for input and output devices is dependent upon the location in which patient care is provided and the quality of reports generated.

   Input devices: In an inpatient setting, there should be a sufficient number of data input devices at the point of care, in the nurse's station, physician offices, and conference rooms. Ambulatory Care settings should provide input devices at the point of care, physician offices, conference rooms and reception areas.

   Output devices: There should be minimally one to two laser printers on an inpatient unit to support this application. Ambulatory care area should have a printer in both the reception area and a centralized location in each clinic.

2. Disk Storage:

The following statistics regarding the disk storage requirements of the Intake and Output software were compiled by the Alpha/Beta test sites.

<table>

**Future Plans:**

Intake and Output will be enhanced in later versions to meet the needs of the medical facilities. A link with Health Summary is planned.
Chapter 2 Maintenance of Site Files

GMRYMGR

Patient Intake/Output Menu

Description:

This is the main menu for the Intake and Output (I&O) application. It contains options for (1) documenting patient intake and output, (2) starting and discontinuing IV lines and fluids, (3) documenting IV care, and (4) printing various intake and output reports.

Additional Information:

This is the primary menu for the Intake and Output application, and is assigned to the package's application coordinator. Options 1, 2 and 4-8 may be assigned to clinical staff. Option 3 should be assigned to registered nurses and members of the IV team. The package application coordinator should be assigned option 9.

Menu Display:

Select OPTION NAME: GMRYMGR Patient Intake/Output Menu

1 Enter/Edit Patient Intake
2 Enter/Edit Patient Output
3 Start/Add/DC IV and Maintenance
4 Print I/O Summary by Patient (by Shift & Day(s))
5 Print I/O Summary (Midnight to Present)
6 Print I/O Summary (48 Hrs)
7 24 Hours Itemized Shift Report
8 Intravenous Infusion Flow Sheet
9 Configure I/O Files (ADP Coordinator Only) ...

Menu Access:

The Patient Intake/Output Menu is the main menu.
GMRY FILE EDIT

Configure I/O Files (ADP Coordinator Only)

Description:

This menu is provided for the ADP Coordinator to configure the following file entries:

- GMRY Input Type (#126.56)
- GMRY Output Type (#126.58)
- GMRY Output Subtype (#126.6)
- GMRY IV Site (#126.7)
- GMRY Intake Items (#126.8)
- GMRY NUR IV Solution (#126.9)
- GMRY NUR Shift/Other (#126.95)
- GMRY IV Site Description (#126.72)
- GMRY IV Catheter (#126.74)
- GMRY IV DC'ed Reason (#126.76)

Additional Information:

The first area of concern is to ensure that you have the appropriate entries in the site specific files to use the software at your hospital, ambulatory care facility, or other VHA facility. When the application is installed, all files have a few entries to assist you with initially running the software, but you will have to enter appropriate facility related data in the site configurable files. You may always edit file data if that data does not apply to a specific site; deleting data is not always permitted.

Menu Display:

Select OPTION NAME: **GMRYM**

<table>
<thead>
<tr>
<th>Patient Intake/Output Menu</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>8</td>
</tr>
<tr>
<td>9</td>
</tr>
</tbody>
</table>

Select Patient Intake/Output Menu Option: **9** Configure I/O Files (ADP Coordinator Only)

| 1 | Intake Type |
| 2 | Output Type |
| 3 | Output Subtype |
| 4 | Intake Items |
| 5 | IV Site |
| 6 | IV Solution |
| 7 | Shift Starting Hour and Other Parameters |
Menu Access:

The Configure I/O Files (ADP Coordinator Only) option is accessed through the Patient Intake/Output Menu.
GMRY INPUT FILE1

Intake Type

Description:

This option is used by the ADP coordinator to configure the NON-IV intake type entries for the GMRY Input Type (#126.56) file. For example, PO, TUBE FEEDING, and OTHER are input types.

Additional Information:

This information is used in the following options:
- Enter/Edit Patient Intake
- Print I/O Summary by Patient (by Shift & Day(s))
- Print I/O Summary (Midnight to Present)
- Print I/O Summary (48 Hrs)
- 24 Hours Itemized Shift Report

The entries of the GMRY Input Type Name prompt cannot be deleted except by IRMS staff. A user may change the entry name by editing the information.

When entering and editing the intake type, the coordinator needs to be aware that only the first 5 characters print in the header of the following reports:
- Print I/O Summary by Patient (by Shift & Day(s))
- Print I/O Summary (Midnight to Present)
- Print I/O Summary (48 Hrs)

Menu Display:

Select Patient Intake/Output Menu Option: 9 Configure I/O Files (ADP Coordinator Only)

Screen Prints:

Select Configure I/O Files (ADP Coordinator Only) Option: 1 Intake Type
Select GMRY INPUT TYPE NAME: **GAVAGE**
Are you adding 'GAVAGE' as a new GMRY INPUT TYPE (the 5TH)? No// Y (Yes)

Enter appropriate input type name. The following is an example of possible choices associated with this field:

- IRRIGATION    3
- OTHER         4
- PO            1
- TUBE FEEDING  2

NAME: GAVAGE/<RET>
ORDER: 5

This field is used to print the intake type headers in a specific order on the intake and output reports.

Select GMRY INPUT TYPE NAME: <RET>

**Menu Access:**

The Intake Type option is accessed through the Configure I/O Files (ADP Coordinator Only) option of the Patient Intake/Output Menu.
GMRY OUTPUT FILE1

Output Type

Description:

This option is provided for the ADP coordinator to configure the entries for the GMRY Output Type (#126.58) file. URINE, STOOL and DRAINS, for example, are major output types.

Additional Information:

This information is used in the following options:
- Enter/Edit Patient Output
- Print I/O Summary by Patient (by Shift & Day(s))
- Print I/O Summary (Midnight to Present)
- Print I/O Summary (48 Hrs)
- 24 Hours Itemized Shift Report

The entries in the GMRY Output Type file cannot be deleted except by IRMS staff. A user may change the entry name by editing the information.

When entering and editing the output type, the coordinator needs to be aware that only the first 5 characters print in the header of the following reports:
- Print I/O Summary by Patient (by Shift & Day(s))
- Print I/O Summary (Midnight to Present)
- Print I/O Summary (48 Hrs)

Menu Display:

Select Patient Intake/Output Menu Option: 9 Configure I/O Files (ADP Coordinator Only)

1. Intake Type
2. Output Type
3. Output Subtype
4. Intake Items
5. IV Site
6. IV Solution
7. Shift Starting Hour and Other Parameters
8. IV Site Description
9. IV Catheter
10. IV DC'ed Reason

Screen Prints:

Select Configure I/O Files (ADP Coordinator Only) Option: 2 Output Type
Select GMRY OUTPUT TYPE: OTHER
Are you adding 'OTHER' as a new GMRY OUTPUT TYPE (the 6TH)? No// Y (Yes)

Answer with appropriate output type. The following is an example of possible choices found in the field:
- DRAINAGE 4
- EMESIS 3
- FECES 5
- N/G 2
- URINE 1

OUTPUT TYPE: OTHER/<RET>
ORDER: 6

This field is used to print the output type headers in a specific order on the intake and output reports.

Select GMRY OUTPUT TYPE:<RET>

Menu Access:

The Output Type option is accessed through the Configure I/O Files (ADP Coordinator Only) option of the Patient Intake/Output Menu.
GMRY OUTPUT FILE2

Output Subtype

Description:

This option allows the ADP coordinator to enter the entries for the GMRY Output Subtype (#126.6) file pointed to by the GMRY Patient I/O File (#126). VOID, FOLEY and STRAIGHT CATH, for example, are subtypes of URINE.

Additional Information:

This information is used in the following options:
- Enter/Edit Patient Output
- 24 Hours Itemized Shift Report

The entries of the GMRY Output Subtype prompt cannot be deleted except by IRMS staff. A user may change the entry name by editing the information.

Restrictions:

Only URINE and DRAINAGE output types should have associated output subtypes.

Menu Display:

Select Patient Intake/Output Menu Option: 9  Configure I/O Files (ADP Coordinator Only)

1  Intake Type
2  Output Type
3  Output Subtype
4  Intake Items
5  IV Site
6  IV Solution
7  Shift Starting Hour and Other Parameters
8  IV Site Description
9  IV Catheter
10  IV DC’ed Reason

Screen Prints:

Select Configure I/O Files (ADP Coordinator Only) Option: 3  Output Subtype

Select GMRY OUTPUT SUBTYPE: CHEST TUBE, LEFT
Are you adding 'CHEST TUBE, LEFT' as a new GMRY OUTPUT SUBTYPE (the 6TH)?
No/\ Y (Yes)
Answer with appropriate output subtype. The following is an example of possible choices found in the field:

- CHEST TUBE, RIGHT  DRAINAGE
- FOLEY URINE
- SHEATH CATH URINE
- STRAIGHT CATH URINE
- VOID URINE

GMRY OUTPUT SUBTYPE OUTPUT TYPE: DRAINAGE
OUTPUT SUBTYPE: CHEST TUBE, LEFT/<RET>
OUTPUT TYPE: DRAINAGE/<RET>

Select GMRY OUTPUT SUBTYPE:<RET>

Menu Access:

The Output Subtype option is accessed through the Configure I/O Files (ADP Coordinator Only) option of the Patient Intake/Output Menu.
GMRY INTAKE ITEMS

Intake Items

Description:

This option allows the ADP coordinator to enter items into the GMRY Intake Items (#126.8) file pointed to by the GMRY Patient I/O File (#126). The entries in the 126.8 file are used to identify specific fluid intake items associated with detailed oral fluids, tube feeding preparations, irrigation solution, etc. The information collected includes the name of the intake item (e.g., water), the volume of the fluid's container, and the input type associated with the intake item's name (e.g., po, irrigation).

Additional Information:

This information is used in the following options:
  Enter/Edit Patient Intake
  24 Hours Itemized Shift Report

The entries of the GMRY Intake Items Name prompt cannot be deleted except by IRMS staff. A user may change the entry name by editing the information.

Menu Display:

Select Patient Intake/Output Menu Option: 9 Configure I/O Files (ADP Coordinator Only)

1       Intake Type
2       Output Type
3       Output Subtype
4       Intake Items
5       IV Site
6       IV Solution
7       Shift Starting Hour and Other Parameters
8       IV Site Description
9       IV Catheter
10      IV DC’ed Reason

Screen Prints:

Select Configure I/O Files (ADP Coordinator Only) Option: 4 Intake Items

Select GMRY INTAKE ITEMS NAME: SODA
Are you adding 'SODA' as a new GMRY INTAKE ITEMS (the 14TH)? No// Y (Yes)

Enter appropriate intake item.
NAME: SODA/<RET>
VOLUME: 360

Enter amount of intake item.

Select INPUT TYPE: PO
Are you adding 'PO' as a new INPUT TYPE (the 1ST for this GMRY INTAKE ITEMS)? No// Y (Yes)

Enter appropriate input type.

Select INPUT TYPE:<RET>
Select GMRY INTAKE ITEMS NAME:<RET>

Menu Access:

The Intake Items option is accessed through the Configure I/O Files (ADP Coordinator Only) option of the Patient Intake/Output Menu.
GMRY IV SITE

IV Site

Description:
This option allows the ADP coordinator to enter IV sites into the GMRY IV Site (#126.7) file. The entries are names of anatomical sites such as right wrist and left hand.

Additional Information:
This information is used to track the IV insertion site and assist with documentation of the site's status and surrounding skin integrity. Deletion of file data does not affect existing patient I&O information.

Menu Display:

Select Patient Intake/Output Menu Option: 9 Configure I/O Files (ADP Coordinator Only)

1 Intake Type
2 Output Type
3 Output Subtype
4 Intake Items
5 IV Site
6 IV Solution
7 Shift Starting Hour and Other Parameters
8 IV Site Description
9 IV Catheter
10 IV DC’ed Reason

Screen Prints:

Select Configure I/O Files (ADP Coordinator Only) Option: 5 IV Site

Select GMRY IV SITE: WRIST,RT
Are you adding 'WRIST,RT' as a new GMRY IV SITE (the 12TH)? No// Y (Yes)

Enter appropriate IV site.

IV SITE: WRIST,RT/<RET>

Select GMRY IV SITE:<RET>

Menu Access:
The IV Site option is accessed through the Configure I/O Files (ADP Coordinator Only) option of the Patient Intake/Output Menu.
GMRY IV SOL

IV Solution

Description:

This option allows the ADP coordinator to enter IV solutions into the GMRY NUR IV Solution (#126.9) file. There are three fields associated with this option that store information on the IV solution: solution name, the type of solution (hyperal, piggyback, admixture, blood/blood products, and intralipids), and the volume of the solution.

Additional Information:

The IV solutions added to this file include admixtures, hyperals, intralipids, piggybacks and blood/blood products. This data is used only when the Pharmacy IV module interface is not available, when patient IV orders have not been entered into OE/RR and processed by pharmacy, or if an API (application programmer interface) has not been written for a specific package (e.g., Blood Bank). Deletion of file data does not affect existing patient I&O information.

Menu Display:

Select Patient Intake/Output Menu Option: 9 Configure I/O Files (ADP Coordinator Only)

1 Intake Type  
2 Output Type  
3 Output Subtype  
4 Intake Items  
5 IV Site  
6 IV Solution  
7 Shift Starting Hour and Other Parameters  
8 IV Site Description  
9 IV Catheter  
10 IV DC’ed Reason

Screen Prints:

Select Configure I/O Files (ADP Coordinator Only) Option: 6 IV Solution

Select GMRY NUR IV SOLUTION NAME: D10W (1000)

Are you adding 'D10W (1000)' as a new GMRY NUR IV SOLUTION (the 31ST)? No//Y (Yes)

Enter the name of an appropriate IV solution.

GMRY NUR IV SOLUTION TYPE: A ADMIXTURE
Enter appropriate IV solution type. The following is a list of choices distributed in the software:

H  HYPERAL
P  PIGGYBACK
A  ADMIXTURE
B  BLOOD/BLOOD PRODUCT
I  INTRALIPIDS

NAME: D10W (1000)//<RET>
TYPE: ADMIXTURE//<RET>
VOLUME: 1000

Enter amount of IV solution.

Select GMRY NUR IV SOLUTION NAME:<RET>

**Menu Access:**

The IV Solution option is accessed through the Configure I/O Files (ADP Coordinator Only) option of the Patient Intake/Output Menu.
GMRY NURSHIFT

Shift Starting Hour and Other Parameters

Description:

This option allows the application coordinator to edit specific Intake and Output parameters that are stored in the GMRY NUR Shift/Other (#126.95) file. These parameters include the starting hours for the night, day, and evening shift (tour of duty) which are used to calculate a patient's total intake and output for a specific time span.

Additional Information:

In this version of Intake and Output, the application can only assign shift start times for the entire hospital. In a future version, the application's functionality will be modified to accommodate unique shift times for specific wards or units. Also, the displaying of data for units with two tours of duty, (i.e., two 12 hour shifts) within a 24 hour time frame will be explored. The data type for the shift start hours is entered in military time (e.g., 0800, 1600, and 2400).

Menu Display:

Select Patient Intake/Output Menu Option: 9  Configure I/O Files (ADP Coordinator Only)

1  Intake Type
2  Output Type
3  Output Subtype
4  Intake Items
5  IV Site
6  IV Solution
7  Shift Starting Hour and Other Parameters
8  IV Site Description
9  IV Catheter
10 IV DC’ed Reason

Screen Prints:

Select Configure I/O Files (ADP Coordinator Only) Option: 7  Shift Starting Hour and Other Parameters

Select GMRY NUR SHIFT/OTHER NAME: HOSPITAL

The data selected at this prompt cannot be edited.

NIGHT: 2400
Enter start time of night shift. Use military time.

**DAY:** 0700

Enter start time of day shift. Use military time.

**EVENING:** 330??

Enter start time of evening shift. Use military time.

Note: The program did not accept this entry as valid. Only military time is accepted.

**EVENING:** 1530

Select GMRY NUR SHIFT NAME/OTHER:<RET>

**Menu Access:**

The Shift Starting Hour and Other Parameters option is accessed through the Configure I/O Files (ADP Coordinator Only) option of the Patient Intake/Output Menu.
GMRY SITE DESCRP

IV Site Description

Description:
This option allows the ADP coordinator to enter IV site descriptions into the GMRY IV Site Description (#126.72) file. This information describes the condition of the skin around the insertion site of the IV catheter or needle.

Additional Information:
The following descriptions are distributed with the software.

- DRAINAGE
- NO REDNESS/PAIN/SWELLING (This description is the default.)
- NON TENDER
- RED
- SLOUGH
- SWOLLEN
- TENDER

Information is printed on the 24 Hours Itemized Shift Report, the Intravenous Infusion Flow Sheet, and the Nursing application's End of Shift Report. Deleting information from the file does not affect existing patient I&O information.

Menu Display:
Select Patient Intake/Output Menu Option: 9 Configure I/O Files (ADP Coordinator Only)

1. Intake Type
2. Output Type
3. Output Subtype
4. Intake Items
5. IV Site
6. IV Solution
7. Shift Starting Hour and Other Parameters
8. IV Site Description
9. IV Catheter
10. IV DC’ed Reason

Screen Prints:
Select Configure I/O Files (ADP Coordinator Only) Option: 8 IV Site Description
Select GMRY IV SITE DESCRIPTION: WARM
Are you adding 'WARM' as a new GMRY IV SITE DESCRIPTION (the 8TH)? No// Y (Yes)

Answer with IV site description.
DESCRIPTION: WARM/<RET>

Select GMRY IV SITE DESCRIPTION:<RET>

Menu Access:

The IV Site Description option is accessed through the Configure I/O Files (ADP Coordinator Only) option of the Patient Intake/Output Menu.
GMRY IV CATH

IV Catheter

Description:

This option allows the ADP coordinator to enter different types of IV catheters, needles, etc. into the GMRY IV Catheter (#126.74) file.

Additional Information:

This file contains a list of IV instrumentation (i.e., needles, catheters, locks, butterflys, etc.) that might be used by clinicians to establish an IV infusion (continuous or intermittent) of fluids or drugs. Both the type and size of the catheter should be contained in the IV catheter name (when appropriate). Refer to the example illustrated under Screen Prints. Deleting data in this file does not affect existing patient I&O information.

Menu Display:

Select Patient Intake/Output Menu Option: 9 Configure I/O Files (ADP Coordinator Only)

1 Intake Type
2 Output Type
3 Output Subtype
4 Intake Items
5 IV Site
6 IV Solution
7 Shift Starting Hour and Other Parameters
8 IV Site Description
9 IV Catheter
10 IV DC’ed Reason

Screen Prints:

Select Configure I/O Files (ADP Coordinator Only) Option: 9 IV Catheter

Example 1: Enter the name of a single lumen catheter.

Select GMRY IV CATHETER IV CATHETER TYPE/SIZE: ANGIO CATH-14
Are you adding 'ANGIO CATH-14' as a new GMRY IV CATHETER (the 21ST)? No/// Y
(Yes)
IV CATHETER TYPE/SIZE: ANGIOCATH-14//<RET>
Answer with IV catheter name. The following is a representative list of choices displayed by the software when a user queries the application for a list of IV catheter types/sizes:

- ANGIO CATH-14
- ANGIO CATH-16
- ANGIO CATH-18
- ANGIO CATH-20
- ANGIO CATH-22
- BUTTERFLY-16
- BUTTERFLY-18
- NEEDLE 1 1/4 IN-14
- NEEDLE 1 1/4 IN-16
- NEEDLE 1 1/4 IN-18

Note: In this file when you configure the entries, FileMan will order either numerically or alphabetically depending on your entries. For instance if you enter BUTTERFLY-16 catheter size first, such as 18 and the user selects 18, then NEEDLE 1 1/4 IN-16 all the 18 catheters will be displayed for the user to select from.

Select PORT: <RET>  A single lumen port does not need an entry at this prompt.

Example 2: Enter the name of a multi-lumen catheter and names of associated ports.

Select GMRY IV CATHETER IV CATHETER TYPE/SIZE: DOUBLE LUMEN
Are you adding 'DOUBLE LUMEN' as a new GMRY IV CATHETER (the 19TH)? No// Y (Yes)
IV CATHETER TYPE/SIZE: DOUBLE LUMEN 1// <RET>

The following PORT prompts allow the package coordinator to associate the name of a port with the catheter. Since this is a double lumen port, the port names of PROXIMAL and DISTAL are entered. If this was a triple lumen port, the MEDIAL port would have been added.

Select PORT: PROXIMAL
Are you adding 'PROXIMAL' as a new PORT (the 1ST for this GMRY IV CATHETER)? No// Y (Yes)
Select PORT: DISTAL
Are you adding 'DISTAL' as a new PORT (the 2ND for this GMRY IV CATHETER)? No// Y (Yes)
Select PORT: <RET>

Menu Access:

The IV Catheter option is accessed through the Configure I/O Files (ADP Coordinator Only) option of the Patient Intake/Output Menu.
GMRY DC REASON

IV DC'ed Reason

Description:

This option allows the ADP coordinator to enter and edit reasons for discontinuing an IV into the GMRY IV DC'ed Reason (#126.76) file.

Additional Information:

The information in this file can be edited or deleted through this option. Editing or deleting of information will not affect existing patient I&O information.

Menu Display:

Select Patient Intake/Output Menu Option: 9 Configure I/O Files (ADP Coordinator Only)

1 Intake Type
2 Output Type
3 Output Subtype
4 Intake Items
5 IV Site
6 IV Solution
7 Shift Starting Hour and Other Parameters
8 IV Site Description
9 IV Catheter
10 IV DC'ed Reason

Screen Prints:

Select Configure I/O Files (ADP Coordinator Only) Option: 10 IV DC'ed Reason

Select GMRY IV DC'ED REASON NAME: WRONG PATIENT
Are you adding 'WRONG PATIENT' as a new GMRY IV DC'ED REASON (the 8TH)? No//y (Yes)

Answer with IV DC'ed reason name. The following is a list of choices:
ACCIDENTALLY D/C'D
CLOTTED
COMPLETE A BOTTLE
INFUSED
IV INFILTRATED
ORDER EXPIRED/DC'D
SITE CONDITION

Note: INFUSED is the default.

NAME: WRONG PATIENT/<RET>
Select GMRY IV DC'ED REASON NAME:<RET>

**Menu Access:**

The IV DC'ed Reason option is accessed through the Configure I/O Files (ADP Coordinator Only) option of the Patient Intake/Output Menu.
Section 2 Package Operation
Package Operation
Chapter 3 Package Operation

Having completed the instructions for implementing the software as indicated in the Package Management section, you are now ready to use the options. The content contained in the following sections provides information on all software options which can be assigned to clinical staff. This information includes the name, description or purpose of the option, screen prints, menu access, and other information that supports the use of the options.

Remember that on-line help is available when questions arise. The user can type ? or ??, after any prompt to get a help message that generally tells the user what to do. In some instances, a specific list of possible responses is displayed. All field names in the Intake and Output application have descriptions associated with them. Help is also available at the menu level by typing a ??, or ???.
Package Operation
Chapter 4 Enter/Edit Patient Intake and Output

GMRY EDIT INTAKE

Enter/Edit Patient Intake

Description:

This option allows the user to enter or edit patient intake records (e.g., oral, IV, and nasogastric). Data is stored in the GMRY Patient I/O (#126) file. Refer to Chapter 2, Maintenance of Site Files for editing associated files.

Additional Information:

Enter/Edit Patient Intake is the primary option used to enter patient intake. You will note that two (2) columns display after the patient's hospital location or patient's name is entered:

<table>
<thead>
<tr>
<th></th>
<th>Detailed input from 6 to 9</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>PO</td>
</tr>
<tr>
<td>2</td>
<td>IV Access</td>
</tr>
<tr>
<td>3</td>
<td>Tube Feeding</td>
</tr>
<tr>
<td>4</td>
<td>Irrigation</td>
</tr>
<tr>
<td>5</td>
<td>Other</td>
</tr>
<tr>
<td>6</td>
<td>PO</td>
</tr>
<tr>
<td>7</td>
<td>Tube Feeding</td>
</tr>
<tr>
<td>8</td>
<td>Irrigation</td>
</tr>
<tr>
<td>9</td>
<td>Other</td>
</tr>
</tbody>
</table>

The column on the left side of the screen, permits a user to document only the total intake (in milliliters) associated with a specific intake type (PO, IV, etc.). The column on the right allows users to document the names of specific liquids, fluids, solutions, etc. associated with an intake type. The documenting of specific IV fluids is accomplished through the Start/Add/DC IV and Maintenance option explained later in this chapter. If a user does not document that an IV has been started on a patient through the Start/Add/DC IV and Maintenance option, the software will not allow the user to chart an IV intake amount through this option.

The Intake and Output application does NOT automatically calculate the IV intake totals; this data must be manually entered. Although the intake amount could be calculated based on the date/time the IV solution was hung, the variables adversely affecting the flow rate and producing an erroneous IV intake, counter indicate the automatic calculation of the intravenous intake.

The Enter/Edit Patient Intake option prompts you after you have entered the intake, to enter the patient's output. This was done to simplify the I&O process and save time. The prompt's response is defaulted to YES but you can answer N (for NO) if there is no output at this time.
Enter/Edit Patient Intake and Output

This software does not prevent intake and output measurements from being entered for patients on leave status, (e.g., authorized, unauthorized) or those that are deceased. When the date and time the data was collected is later than the date/time the patient died or was placed on leave, the software displays a reminder. Following this message, the user may continue entering data.

A patient's I&O information is printed on the following reports:
- Print I/O Summary by Patient (by Shift & Day(s))
- Print I/O Summary (Midnight to Present)
- Print I/O Summary (48 Hrs)
- 24 Hours Itemized Shift Report

Information on a patient's detailed intake is printed on the 24 Hours Itemized Shift Report.

Restrictions:

Data can only be edited for the previous 48 hour period. Future data cannot be entered.

Menu Display:

Select OPTION NAME: GMRYMGR Patient Intake/Output Menu

1. Enter/Edit Patient Intake
2. Enter/Edit Patient Output
3. Start/Add/DC IV and Maintenance
4. Print I/O Summary by Patient (by Shift & Day(s))
5. Print I/O Summary (Midnight to Present)
6. Print I/O Summary (48 Hrs)
7. 24 Hours Itemized Shift Report
8. Intravenous Infusion Flow Sheet
9. Configure I/O Files (ADP Coordinator Only) ...

Screen Prints:

Select Patient Intake/Output Menu Option: 1 Enter/Edit Patient Intake by (A)ll patients on a unit, (S)elected Rooms on unit, or (P)atient? P

Select PATIENT NAME: IOPATIENT, ONE 01-19-25 000632111 NSC VETERAN

Enter patient name.

Select HOSPITAL LOCATION: If the patient is an outpatient, the hospital location prompt displays.
The following example demonstrates the use of the left column for documenting ingested items. More than one (1) entry can be entered by separating numbers by a comma (','), or a hyphen ('-') for a range of numbers.

Note: The following screen display can be edited through the Intake Type option (refer to Chapter 2).

```
1    PO
2    IV ACCESS
3    TUBE FEEDING
4    IRRIGATION
5    OTHER

Select from 1 to 9 (enter 1,3-5 etc.) or "^" to quit: 1
```

No records in the database within the last 48 hours

Note: The system alerts the user when no information for this intake type has been recorded in the previous 48 hours. If entries are present the program displays data entered within the last 48 hours and a prompt which allows the user to edit, delete and add a new entry, (i.e., Select a number (i.e., 1 to edit; 1@ to delete or N to add; ^ to quit selection) 6).

Please enter a new DATE/TIME: T@0902 (DEC 28,1992@09:02:00)

Enter appropriate date/time.

Enter PO dated DEC 28,1992@09:02
Unit ml is not required.

TOTAL AMOUNT: 560

Enter the intake volume. Ml does not have to be entered after the volume.

Total PO intake for this time: 560 mls

Do you want to enter OUTPUT? Yes//<RET> (Yes)

Enter 'N' to exit if there is no output for this patient.

```
1    URINE
2    N/G
3    EMESIS
4    DRAINAGE
5    FECES
6    OTHER
```

Select from 1 to 6 (enter 1,3-5 etc.) or "^" to quit: URINE/<RET>

Note: The above screen display can be changed/edited through the Output Type option (refer to Chapter 2).

Enter output: URINE

Urine is the default, but the user may enter another output type from the above list.
Enter/Edit Patient Intake and Output

No records in the database within the last 48 hours

Note: The system alerts the user when no information for this output type has been documented in the previous 48 hours. If entries are present the program displays those entered within the last 48 hours.

Please enter a new DATE/TIME: N (DEC 28, 1996@09:05:04)

Enter appropriate date/time.

Enter URINE dated DEC 28, 1996@09:05
Unit ml is not required

1. VOIDED
2. FOLEY CATHETER
3. SUPRAPUBLIC CATHETER

Note: The above screen display of urine subtypes can be adjusted by editing the Output Subtype file through the Configure I/O Files (ADP Coordinator Only) option.

You may document how the output was obtained by entering a urine output subtype (i.e., voided, foley catheter, suprapubic catheter). If you do not wish to enter a subtype, enter <RET>. The user is then asked to enter an amount that is a numeric entry; you do not have to enter cc/ml. If the actual amount cannot be determined, an estimated amount using S = small, M = medium, and L = large may also be entered.

Select a number for the URINE SUBTYPE (optional): 2
FOLEY CATHETER

Enter appropriate subtype.

Enter numeric value for measured output in cc/ml or enter S(mall), M(edium) or L(arge) for estimated output.

OUTPUT AMOUNT: 340

The following example demonstrates patient intake using specific entries (right column). This display can be changed by editing the intake type data through the Intake Type option (refer to chapter 2).

Select Patient Intake/Output Menu Option: 1 Enter/Edit Patient Intake by (A)ll patients on a unit, (S)elected Rooms on unit, or (P)atient? P

Select PATIENT NAME: IOPATIENT, ONE 01-19-25 000632111 NSC VETERAN

Detailed input from 6 to 9

1. PO
2. IV ACCESS
3. TUBE FEEDING
4. IRRIGATION
5. OTHER

Select from 1 to 9 (enter 1, 3-5 etc.) or "^" to quit: 6, 7
Enter intake: PO
1. DEC 28, 1996@09:02 Total: 560 mls
In this example, the software displays the previous oral intake (documented within the last 48 hours).

Select a number (i.e., 1 to edit; 1@ to delete or N to add; ^ to quit selection): N

You can edit the previous entry, delete the entry or enter 'N' for a new entry.

Please enter a new DATE/TIME: T@1115 (DEC 28,1996@11:15)

Enter appropriate date/time. Time can be entered for the past 48 hours or the present, but cannot be entered in the future.

A list of items from the Intake Items file is displayed.

<table>
<thead>
<tr>
<th>Item</th>
<th>Volume</th>
</tr>
</thead>
<tbody>
<tr>
<td>SOUP</td>
<td>120 mls</td>
</tr>
<tr>
<td>ICE CREAM</td>
<td>50 mls</td>

</tr>
<tr>
<td>MILK</td>
<td>240 mls</td>
</tr>
<tr>
<td>TEA</td>
<td>150 mls</td>
</tr>
<tr>
<td>WATER</td>
<td>125 mls</td>
</tr>
<tr>
<td>COFFEE</td>
<td>150 mls</td>
</tr>
<tr>
<td>JUICE</td>
<td>125 mls</td>
</tr>
<tr>
<td>SODA</td>
<td>360 mls</td>
</tr>
</tbody>
</table>

Intake items are specific to the facility. The ADP coordinator is responsible for maintaining the Intake Items file through the Configure I/O Files (ADP Coordinator Only) option.

Enter PO dated DEC 28,1996@11:15
Unit ml is not required.

Select INTAKE ITEM: SOUP

Enter appropriate intake item.

VOLUME: 120// 150

Enter amount ingested. The user may either accept the default by entering <RET> or enter a different amount.

Select INTAKE ITEM: MILK
VOLUME: 240//<RET>
Select INTAKE ITEM:<RET>

The software displays a total intake volume associated with this oral intake type.

Total PO intake for this time: 390 mls

Enter intake: TUBE FEEDING

No records in the database within the last 48 hours
Please enter a new DATE/TIME: N (DEC 28,1996@11:15:20)
Enter appropriate date/time.

A list of items found in the Intake Items file is displayed.

- MILK 240 mls
- WATER 125 mls
- SOUP 180 mls
- SUSTACAL 240 mls

You may have more or less items listed, depending on what the ADP coordinator entered into the Intake Items file through the Configure I/O Files (ADP Coordinator Only) option.

Enter TUBE FEEDING dated DEC 28, 1996@11:15
Unit ml is not required.
Select INTAKE ITEM: SOUP

Enter the tube feeding product.

VOLUME: 180// 300

Enter amount ingested.

Select INTAKE ITEM: WATER
VOLUME: 125// 60
Select INTAKE ITEM: <RET>

Total TUBE FEEDING intake for this time: 360 mls

Do you want to enter OUTPUT? Yes// N (No)

IV Access.

Under this option, the user is able to enter the amount of the IV solution left in the container at the end of the shift or at any time an IV intake total must be entered. The Start/Add/DC IV and Maintenance option does not automatically calculate an accurate amount of absorbed solution per shift.

Select Patient Intake/Output Menu Option: 1 Enter/Edit Patient Intake by (A)ll patients on a unit, (S)elected Rooms on unit, or (P)atient? P

Select PATIENT NAME: IOPATIENT,ONE 01-19-25 000632111 NSC VETERAN

Select from 1 to 9 (enter 1,3-5 etc.) or "^" to quit: 2
Enter intake: IV ACCESS

1. D5W 1000 mls 1000 mls (A) LEFT HAND Started on FEB 11, 1996@10:39
The software displays a list of the patient's IVs that were entered through the Start/Add/DC IV and Maintenance option.

Enter the number of the IV you wish to enter/edit INTAKE: 1
Enter IV INTAKE for D5W 1000 mls A LEFT HAND 1000 mls
    Started @FEB 11,1996@10:39
    Total amount absorbed: 0 mls

The software indicates the total IV intake previously documented through the option and associated with this IV.

No intake records for this IV line within the last 48 hours

If no IV intake was entered, the display appears on the screen.

Please enter a new DATE/TIME: @1500 (FEB 11, 1996@15:00:00)

Enter ADMIXTURE intake dated FEB 11,1996@15:00
    Enter * for AMOUNT LEFT if amount of solution absorbed is unknown.
    Unit mls is not required.

AMOUNT LEFT: 600

This is the amount of the IV solution left at 1500 hours or 3pm.

Intake for this period: 400 mls ? Yes//<RET> (Yes)

This is the amount of IV fluid absorbed from the 1000 ml bag from the time it was started at 10:39am this morning..

Do you want to enter OUTPUT? Yes// N (No)

Menu Access:

The Enter/Edit Patient Intake option is accessed through the Patient Intake/Output Menu option.
GMRY EDIT OUTPUT

Enter/Edit Patient Output

Description:

This option allows user to enter or edit patient output records only. Patient data is stored in the GMRY Patient I/O (#126) file.

Additional Information:

This option only permits entry of OUTPUT. URINE and DRAINAGE are the only output types with associated output subtypes, (e.g., foley, voided), but entering data for these subtypes is optional.

Patient output information is printed in the following options:
- Print I/O Summary by Patient (by Shift & Day(s))
- Print I/O Summary (Midnight to Present)
- Print I/O Summary (48 Hrs)
- 24 Hours Itemized Shift Report

A report of a patient's detailed output is found on the 24 Hours Itemized Shift Report.

Restrictions:

Data can only be edited for the previous 48 hour period. Future data cannot be entered.

Menu Display:

Select OPTION NAME: GMRYMGR Patient Intake/Output Menu

1 Enter/Edit Patient Intake
2 Enter/Edit Patient Output
3 Start/Add/DC IV and Maintenance
4 Print I/O Summary by Patient (by Shift & Day(s))
5 Print I/O Summary (Midnight to Present)
6 Print I/O Summary (48 Hrs)
7 24 Hours Itemized Shift Report
8 Intravenous Infusion Flow Sheet
9 Configure I/O Files (ADP Coordinator Only) ...

Screen Prints:

4. DRAINAGE
5. FECES
6. OTHER

Select from 1 to 6 (enter 1,3-5 etc.) or "^" to quit: URINE/<RET>

Enter output: URINE

Select a number(i.e., 1 to edit; 1@ to delete or N to add; ^ to quit selection): N

Please enter a new DATE/TIME: @0845 (FEB 02, 1996@08:45:00)

Enter date/time of output.

Enter URINE dated FEB 2,1996@08:45
Unit ml is not required

1. VOIDED 3. SUPRAPUBLIC CATHETER
2. FOLEY CATHETER

Select a number for the URINE SUBTYPE(optional): 1

Enter numeric value for measured output in cc/ml or enter S(mall), M(edium) or L(arge) for estimated output.

OUTPUT AMOUNT: S// 240

DELETING ERRORS: The entry number, followed by an @ deletes the entry as shown below.

Select Patient Intake/Output Menu Option: 2 Enter/Edit Patient Output by (A)ll patients on a unit, (S)elected Rooms on unit, or (P)atient? P

Select PATIENT NAME: IOPATIENT,TWO 04-25-38 000222111

If the patient is an outpatient, the hospital location prompt displays.

Select HOSPITAL LOCATION: 1 EAST

1. URINE
2. N/G
3. EMESIS
4. DRAINAGE
5. FECES
6. OTHER

Select from 1 to 6 (enter 1,3-5 etc.) or "^" to quit: URINE/<RET>
Enter/Edit Patient Intake and Output

Urine is the software's default response.

Enter output: URINE
1. FEB 2,1996@08:45 240 mls VOIDED
2. FEB 2,1996@08:00 245 mls VOIDED
3. FEB 1,1996@14:24 455 mls FOLEY CATHETER
4. FEB 1,1996@09:49 100 mls SUPRAPUBIC CATHETER

Select a number (i.e., 1 to edit; 1@ to delete or N to add; ^ to quit selection): 2@

Select the entry to be deleted.

Are you sure you want to delete this record? Yes// <RET> (Yes)
URINE Entered on FEB 2,1996@08:00 has been deleted!!

The user can reenter the date/time and enter the correct amount if appropriate.

Menu Access:

The Enter/Edit Patient Output option is accessed through the Patient Intake/Output Menu option.
GMRY IV CARE

Start/Add/DC IV and Maintenance

Description:

This option contains seven protocols associated with intravenous therapy:
1. Start IV - Start a new IV line or heparin/saline lock/port.
2. Solution: Replace/DC/Convert/Finish Solution - DC current solution then replace a new solution to the selected IV line or convert the IV according to the user's choice.
3. Replace Same Solution - Replace the same solution to a selected IV.
4. D/C IV Lock/Port and Site - Remove IV/lock/port from a selected IV site.
5. Care/Maintenance/Flush - Check site condition, dressing change, tube change and flush.
6. Add Additional Solutions(s) - Add additional solution(s) without discontinuing an existing one.
7. Restart DC'd IV - Restart an IV which was DC'd due to infiltration or other reasons.
8. Adjust Infusion Rate - Adjust infusion rate for a selected IV.
9. Flush - Flush all IV line(s) for a selected infusion site.

Information on a patient's IV line, solutions hung and absorbed, IV site care, etc., are stored in the GMRY Patient I/O (#126) file.

Additional Information:

A patient's IV intake cannot be documented through the Enter/Edit Patient Intake option (IV ACCESS) until an IV has been started through the Start IV option. This software option does not automatically calculate the amount of fluid absorbed during a specific 8 hour shift. There are multiple variables influencing the fluid's absorption rate (such as positioning, pathway, etc.), therefore, the total IV volume absorbed per shift must be manually entered through the Enter/Edit Patient Intake option (IV ACCESS). When the intake of an IV is unknown, the nurse may document this unknown amount by entering an asterisk (*).

The patient data entered through this option is reflected in the following reports:
- 24 Hours Itemized Shift Report
- Intravenous Infusion Flow Sheet

Restrictions:

Data can only be edited for the previous 48 hour period. Future data cannot be entered.
Enter/Edit Patient Intake and Output

Menu Display:

Select OPTION NAME: GMRYMGR  

Patient Intake/Output Menu

1. Enter/Edit Patient Intake

5. Print I/O Summary (Midnight to Present)
6. Print I/O Summary (48 Hrs)
7. 24 Hours Itemized Shift Report
8. Intravenous Infusion Flow Sheet
9. Configure I/O Files (ADP Coordinator Only) ...

Screen Prints:

The following pages contain separate examples of each option's use. There is no continuity in IV displays between individual examples.

Select Patient Intake/Output Menu Option: 3 Start/Add/DC IV and Maintenance

by (A)ll patients on a unit, (S)elected Rooms on unit, or (P)atient? P

Select PATIENT NAME: IOPATIENT,ONE 11-04-85 000334443 500-3
NO NSC VETERAN

When the patient is an outpatient, a Hospital Location prompt appears and the patient's clinic or ward should be entered. If the patient is an inpatient, the location prompt does not appear.

1. Start IV
2. Solution: Replace/DC/Convert/Finish Solution
3. Replace Same Solution
4. DC IV/Lock/Port and Site
5. Care/Maintenance/Flush
6. Add Additional Solution(s)
7. Restart DC'd IV
8. Adjust Infusion Rate
9. Flush

1a. Start IV using a single lumen catheter.

Select from 1 to 9 (enter 1,3-5 etc.) or <RET> to exit: 1
*** START IV ***

There is no IV running for this patient.

Start new IV

Please enter a new DATE/TIME: N (FEB 14, 1997@14:39:34)
Select from the following IV sites

1. HAND 7. JUGULAR
2. WRIST 8. ANKLE/FOOT
3. LOWER ARM 9. LEG
4. UPPER ARM 10. FEMORAL
5. ANTECUBITTAL
6. SUBCLAVIAN

Enter a number with a qualifier L for LEFT/R for RIGHT, default (L)eft.
(e.g., 2R for RIGHT WRIST; 2 or 2L for LEFT WRIST): 3

LEFT LOWER ARM

The ADP coordinator can add entries to the display list through the Configure I/O Files option, specifically the IV Site option.

Select from the following IV CATHs

1. ANGIO CATH-14
2. ANGIO CATH-16
3. ANGIO CATH-18
4. ANGIO CATH-20
5. ANGIO CATH-22
6. BUTTERFLY-16
7. BUTTERFLY-18
8. NEEDLE 1 1/4 IN-14
9. NEEDLE 1 1/4 IN-16
10. NEEDLE 1 1/4 IN-18
11. BUTTERFLY-20
12. TRIPLE LUMEN CVP
13. RA-PA CATH
14. VENOUS INTRODUCER
15. HICKMAN LOCK
16. DOUBLE LUMEN PERIPHERAL
17. SUBCLAVIAN
18. DOUBLE LUMEN SUBCLAVIAN
19. DOUBLE LUMEN 1
20. TRIPLE LUMEN 1
21. ANGIOCATH-14
22. BUTTERFLY-20

Select a number between 1 and 21: 3

The ADP coordinator can add entries to the display list through the Configure I/O Files option, specifically the IV Catheter option.

Select one of the IV types listed below
A - admixture
B - blood/blood product
H - hyperal
I - intralipid
P - piggyback
L - locks/ports

Please enter a character: A admixture

Active pharmacy IV order for the patient:
5% DEXTROSE;HEPARIN 1,000 U/ML .05 UNITS;AMPHOTERICIN-B 50MG... 1000 100 ml/hr

Select a number between 1 and 1: <RET>

Enter Return to bypass the pharmacy orders and to select an entry from the Nursing Solution file.

Select a(n) admixture from the following Nursing Solution file listing

1. OTHER 0 mls
2. 1/2 NS (1000) 1000 mls

- DEXTROSE 5%; AMINOSYN 7%; SODIUM CHLORIDE (2.5 MEQ/ML) 40 MEQ;... (H)
  - 1000 mls (02/14/97@14:44)

Do you want to add another solution to MEDIAL port? No\<RET> (No)

1. DISTAL
2. MEDIAL
3. PROXIMAL

Select the port number used for medication infusion or ^ to quit: ^

Since the user wishes to exit, an ^ is entered.

1. Start IV
2. Solution: Replace/DC/Convert/Finish Solution
3. Replace Same Solution
4. DC IV/Lock/Port and Site
5. Care/Maintenance/Flush
6. Add Additional Solution(s)
7. Restart DC'd IV
8. Adjust Infusion Rate
9. Flush

7. Restart DC'd IV.

Select from 1 to 9 (enter 1,3-5 etc.) or <RET> to exit: 7
*** RESTART DC'd IV ***

Select one of the following IV(s) to restart

1. 5% DEXTROSE; HEPARIN 1,000 U/ML .05 UNITS; AMPHOTERICIN-B 50MG... (A) 1000 ml
   100 ml/hr
   - started on FEB 14,1997@14:44
   - DC'd on FEB 14,1997@15:03 250 ml left
   - DC reason: ORDER CHANGED

2. D5W.2%NS (1000) (A) 1000 ml 50 ml/hr
   - started on FEB 14,1997@14:39
   - DC'd on FEB 14,1997@14:59 900 ml left
   - DC reason: ORDER CHANGED

Note: An IV can't be restarted for one or more of the following reasons:
1. The specific item has been running over 24 hrs.
2. The solution has been discontinued for over 8 hrs.
3. The remaining solution is under 5 mls.
4. The reason for discontinuation is 'INFUSED'.
Enter/Edit Patient Intake and Output

Please enter your choice: 2

After the IV solution is selected, the user must validate the information displayed.

Amount of solution in mls in the container: 900// <RET>
Enter a number for infusion rate (Example: 125 = 125 ml/hr): 50// <RET>
D5W.2%NS (1000) admixture 900 mls 50 ml/hr Is it correct ? Yes// <RET>
(Yes)

The software then prompts for IV site and catheter information to complete the restart cycle.

Please enter a new DATE/TIME: n (FEB 14, 1997@15:15:47)
Select from the following IV sites

Menu Access:

The Start/Add/DC IV and Maintenance option is accessed through the Patient Intake/Output Menu option.
Chapter 5 Intake and Output Reports

GMRY I/O SUM

Print I/O Summary by Patient (by Shift & Day(s))

Description:

This option summarizes patient intake/output by major category and shift for a period of time as defined by the user. Patient data is stored in the GMRY Patient I/O (#126) file.

Additional Information:

Patient information displayed in the report has been entered through the following options:

Enter/Edit Patient Intake
Enter/Edit Patient Output
Start/Add/DC IV and Maintenance

The aggregation of I&O data by shift is determined from the shift start time information stored in the GMRY NUR Shift/Other (#126.95) file.

Menu Display:

SELECT OPTION NAME: GMRYMGR Patient Intake/Output Menu

1. Enter/Edit Patient Intake
2. Enter/Edit Patient Output
3. Start/Add/DC IV and Maintenance
4. Print I/O Summary by Patient (by Shift & Day(s))
5. Print I/O Summary (Midnight to Present)
6. Print I/O Summary (48 Hrs)
7. 24 Hours Itemized Shift Report
8. Intravenous Infusion Flow Sheet
9. Configure I/O Files (ADP Coordinator Only) ...

TOTAL INTAKE MEASURED: 2735
TOTAL OUTPUT MEASURED: 1350

IOPATIENT,THREE 000-84-8807 AUG 4,1918 (73 YRS) MALE
UNIT: SICU RM/BED: 560-2
DIVISION: HINES, IL

Note: In the above report, only the first 5 characters of the intake and output types print in the header.

Menu Access:

The Print I/O Summary by Patient (by Shift & Day(s)) option is accessed through the Patient Intake/Output Menu.
GMRY I/O CURRENT

Print I/O Summary (Midnight to Present)

Description:

This option summarizes the current day's intake and output information for all patients on a ward, in a selected room on a ward, and individual patients. Patient data is stored in GMRY Patient I/O (#126) file.

Additional Information:

The aggregation of I&O data by shift is determined from the shift start time information stored in the GMRY NUR Shift/Other (#126.95) file.

The information displayed in the report has been entered through the following options:
   Enter/Edit Patient Intake
   Enter/Edit Patient Output

Menu Display:

SELECT OPTION NAME: GMRYMGR Patient Intake/Output Menu

1   Enter/Edit Patient Intake
2   Enter/Edit Patient Output
3   Start/Add/DC IV and Maintenance
4   Print I/O Summary by Patient (by Shift & Day(s))
5   Print I/O Summary (Midnight to Present)
6   Print I/O Summary (48 Hrs)
7   24 Hours Itemized Shift Report
8   Intravenous Infusion Flow Sheet
9   Configure I/O Files (ADP Coordinator Only) ...

Screen Prints:

Select Patient Intake/Output Menu Option: 5 Print I/O Summary (Midnight to Present)
By (A)ll patients on a ward, (S)elected Rooms on ward, or (P)atient? S

Select WARD LOCATION NAME: SICU

Enter appropriate ward location.

Ward SICU has the following rooms:
Select the NUMBER(S) of the rooms: 4

Enter the number(s) associated with the rooms you want, separated by commas or hyphens if there is more than one room (e.g., 1-3,5 would be entries 1,2,3 and 5).

DEVICE: Enter appropriate response

---

**Menu Access:**

The Print I/O Summary (Midnight to Present) option is accessed through the Patient Intake/Output Menu.
GMRY I/O 48HRS

Print I/O Summary (48 Hrs)

Description:

This option summarizes patient intake/output for the previous and current day. Patient data is stored in the GMRY Patient I/O (#126) file.

Additional Information:

The aggregation of I&O data by shift is determined from the shift start time information stored in the GMRY NUR Shift/Other (#126.95) file. Patient I&O may be printed for all patients on a ward, for patients in selected rooms, and for individual patients.

The information displayed in the report has been entered through the following options:

- Enter/Edit Patient Intake
- Enter/Edit Patient Output

Menu Display:

SELECT OPTION NAME: GMRYMGR Patient Intake/Output Menu

1 Enter/Edit Patient Intake
2 Enter/Edit Patient Output
3 Start/Add/DC IV and Maintenance
4 Print I/O Summary by Patient (by Shift & Day(s))
5 Print I/O Summary (Midnight to Present)
6 Print I/O Summary (48 Hrs)
7 24 Hours Itemized Shift Report
8 Intravenous Infusion Flow Sheet
9 Configure I/O Files (ADP Coordinator Only) ...

By (A)ll patients on a ward, (S)elected Rooms on ward, or (P)atient? P
Select PATIENT NAME: IOPATIENT,THREE 08-04-18 000848807 SC VETERAN

Enter patient name.

DEVICE: Enter appropriate response
### Menu Access:

The Print I/O Summary (48 Hrs) option is accessed through the Patient Intake/Output Menu.
GMRY I/O SHIFT AND EVENT

24 Hours Itemized Shift Report

Description:
This option produces itemized patient intake and output reports by shift for a period of time as defined by the user. Patient data is stored in the GMRY Patient I/O (#126) file.

Additional Information:
The aggregation of I&O data by shift is determined from the shift start time information stored in the GMRY NUR Shift/Other (#126.95) file. Patient I&O may be printed for all patients on a ward, for patients in selected rooms, and for individual patients.

The information displayed in the report has been entered through the following options:
- Enter/Edit Patient Intake
- Enter/Edit Patient Output
- Start/Add/DC IV and Maintenance

Menu Display:

SELECT OPTION NAME: GMRYMGR

Patient Intake/Output Menu

Menu Access:

The Intravenous Infusion Flow Sheet option is accessed through the Patient Intake/Output Menu.
Glossary

Access Code  A unique sequence of characters known by and assigned only to the user, the system manager and/or designated alternate(s). The access code (in conjunction with the verify code) is used by the computer to identify authorized users.

Administration Schedule  This is a common abbreviation for a schedule. A schedule is the frequency for which an action is to take place, such as every eight hours (Q8H) or every other day (QOD).

ADP Coordinator/ADPAC/Application Coordinator  Automated Data Processing Application Coordinator. The person responsible for implementing a set of computer programs (application package) developed to support a specific functional area such as nursing, PIMS, etc.

Application  A system of computer programs and files that have been specifically developed to meet the requirements of a user or group of users. Examples of VISTA applications are the PIMS and Vitals/Measurements application.

Archive  The process of moving data to some other storage medium, (i.e., disk, CD-ROM and magnetic tape), and deleting the information from active storage in order to free-up disk space on the system.

Audit Trail/Logging Features  The use of automated software procedures to determine if the security controls implemented for protection of computer systems are being circumvented and to identify the potential source of the security breach.

Backup Procedures  The provisions made for the recovery of data files and program libraries and for restart or replacement of ADP equipment after the occurrence of a system failure.

Baud Rate  The rate at which data is being transmitted or received from a computer. The baud rate is equivalent to the number of characters per second times 10.

Block  The unit of storage transferred to and from disk drives, typically 512, 1024, or 2048 bytes (characters).

Boot  The process of starting up the computer.

Bulletin  A canned message that is automatically sent by MailMan to a user when something happens to the database.

Byte  A unit of computer space usually equivalent to one character.
Glossary

CIOFO  Chief Information Office Field Office, formerly known as Information Resource Management Field Office, and Information Systems Center.

Contingency Plan  A plan which assigns responsibility and defines procedures for use of the backup/restart/recovery and emergency preparedness procedures selected for the computer system based on risk analysis for that system.

CORE  A collection of VA developed programs (specific to PIMS, Pharmacy Service, and Laboratory Service) which is run at VA Medical Centers.

CPRS  Computerized Patient Record System.

CPU  Central Processing Unit, the heart of a computer system.

CRT  Cathode Ray Tube, similar to a TV monitor but used in computer systems for viewing data. Also called a Video Display Terminal (VDT).

Cursor  A visual position indicator (e.g., blinking rectangle or an underline) on a CRT that moves along with each character as it is entered from the keyboard.

Data Dictionary  A description of file structure and data elements within a file.

Device  A hardware input/output component of a computer system (e.g., CRT, printer).

Disk  A magnetic storage device used to hold information.

Edit  Used to change/modify data typically stored in a file.

Field  A data element in a file. For example, PATIENT is a field in the GMRY Patient I/O File.

File  The M construct in which data is stored for retrieval at a later time. A computer record of related information (e.g., GMRY Patient I/O File, Patient file).

File Manager or FileMan  Within this manual, FileManager or FileMan is a reference to VA FileMan. FileMan is a set of M routines used to enter, edit, print, and sort/search related data in a file; a data base.

Focus Group  Previously referred to as the Expert Panel, or SIUG (Special Interest User Group). A committee which advises programmers about the development of a particular system/package.

Global  An M term used when referring to a file stored on a storage medium, usually a magnetic disk. In the Intake and Output software, for example, intake and output data is stored in one global, and patient data is stored in another global.
GMRV  This signifies the namespace assigned to the Vitals/Measurements application.

GMRY  This signifies the namespace assigned to the Intake and Output application.

Hardware  The physical or mechanical components of a computer system such as CPU, CRT, disk drives, etc.

I&O  Intake and output.

Intake/Output Type  The type denotes a category from where the intake or output is derived, i.e., oral, intravenous, etc.

IV  Intravenously; by intravenous injection.

Kernel  A set of software utilities. These utilities provide data processing support for the application packages developed within the VA. They are also tools used in configuring the local computer site to meet the particular needs of the hospital. The components of this operating system include: MenuMan, TaskMan, Device Handler, Log-on/Security, and other specialized routines.

Kilobyte  More commonly known as Kbyte or "K". A measure of storage capacity equivalent to 1024 characters.

LAYGO  An acronym for Learn As You Go. A technique used by VA FileMan to acquire new information as it goes about its normal procedure. It permits a user to add new data to a file.

M  Formerly known as MUMPS or the Massachusetts (General Hospital) Utility Multi-Programming System. This is the programming language used to write all VISTA applications.

MailMan  An electronic mail, teleconferencing, and networking system.

Megabyte  A measure of storage capacity; approximately 1 million characters. Abbreviated as Mbyte or Meg.

Memory  A storage area used by the computer to hold information.

Menu  A set of options or functions available to users for editing, formatting, generating reports, etc.

Menu Manager  A part of the Kernel that allows each site to manage the various options or functions available to individual users.
Glossary

ML  Milliliters; a unit of volume used in the Intake and Output application.

Modem  An electronic device which converts computer signals to enable transmission through a telephone.

Namespace  A naming convention followed in the VA to identify various applications and to avoid duplication. It is used as a prefix for all routines and globals used by the application. The Intake and Output Package uses GMRY as its namespace.

Operating System  The innermost layer of software that communicates with the hardware. It controls the overall operation of the computer such as assigning places in memory, processing input and output. One of its primary functions is interpreting M computer programs into language the system can understand.

Option  A functionality that is invoked by the user. The information defined in the option is used to drive the menu system. Options are created, associated with others on menus, or given entry/exit actions. For example, the GMRVMGR is the main menu for the Vitals/Measurements application.

Package  Otherwise known as an application. A set of M routines, files, documentation and installation procedures that support a specific function within VISTA (e.g., the ADT and Vitals/Measurements applications).

Password  A protected word or string of characters that identifies or authenticates a user, a specific resource, or an access type (synonymous with Verify Code).

PIMS  Patient Information Management System previously known as the MAS Package.

PO  Per orum; refers to an item consumed orally or through the mouth.

Pointer  A special data type of VA FileMan that takes its value from another file. This is a method of joining files together and avoiding duplication of information.

Port  An outlet in the back of the computer into which terminals can be connected.

Printer  A device for printing (on paper) data which is processed by a computer system.

Program  A set of M commands and arguments, created, stored, and retrieved as a single unit in M.

Protocol  A single entry point referencing multiple routine entry points to execute several inter related, required processes which perform specific functions. When multiple protocols are associated with a single procedure (i.e., intravenous lines or IV lines), they are found grouped under a single option.
Glossary

Qualifier  A word that gives a more detailed description of an item.

Queuing  The scheduling of a process/task to occur at a later time. Queuing is normally done if a task uses up a lot of computer resources.

Response Time  The average amount of time the user must wait between the time the user responded to a question at the terminal and the time the system responds by displaying data and/or the next question.

Restart/Recovery Procedures  The actions necessary to restore a system's data files and computational capability after a system failure or penetration.

<RET>  Carriage return.

Routine  A set of M commands and arguments, created, stored, and retrieved as a single unit in M.

Risk Analysis  An analysis of system assets and vulnerabilities to establish an expected loss from certain events based on estimated probabilities of the occurrence of such events.

Security Key  A function which unlocks specific options and makes them accessible to an authorized user.

Security System  A part of Kernel that controls user access to the various computer applications. When a user signs-on, the security system determines the privileges of the user, assigns security keys, tracks usage, and controls the menus or options the user may access. It operates in conjunction with MenuMan.

Sensitive Information  Any information which requires a degree of protection and which should be made available only to authorized users.

Site Configurable  A term used to refer to features in the system that can be modified to meet the needs of each site.

Software  A generic term referring to a related set of computer programs. Generally, this refers to an operating system that enables user programs to run.

Subroutine  A part of a program which performs a single function.

Task Manager or TaskMan  A part of Kernel which allows programs or functions to begin at specified times or when devices become available. See Queuing.

Telecommunications  Any transmission, emission, or reception of signs, signals, writing, images, sounds or other information by wire, radio, visual, or any electromagnetic system.
Glossary

Terminal  A device used to send and receive data from a computer system (i.e., keyboard and CRT, or printer with a keyboard).

TIU  Text Integration Utility.

UCI  User Class Identifier. The major delimiter of information structure within the operating system.

User  A person who enters and/or retrieves data in a system, usually utilizing a CRT.

Utility  An M program that assists in the development and/or maintenance of a computer system.

VDT  Video Display Terminal. Also called a Cathode Ray Tube (CRT).

Verify Code  A unique security code which serves as a second level of security access. Use of this code is site specific; sometimes used interchangeably with a password.

VISTA  Veterans Health Information Systems and Technology Architecture.
