1.0 Introduction

Patient Care Encounter (PCE) helps sites collect, manage, and display outpatient encounter data (including providers, procedure codes, and diagnostic codes) in compliance with the 10/1/96 Ambulatory Care Data Capture mandate from the Undersecretary of Health.

PCE also helps sites document patient education, examinations, treatments, skin tests, and immunizations, as well as collect and manage other clinically significant data, such as defining Health Factors.

Although treatments are one of the data types that can be stored in PCE, in practice, they were found not to be useful. As a result, treatment data has not been stored or used since shortly after PCE was released.

PCE data may come from multiple sources, including external data acquisition devices (such as mark sense scanners), provider interaction through CPRS, or clerical data entry. PCE data can be retrieved by patient, ward, or clinic. Information entered through PCE can be viewed on Health Summaries or other reports, and it is also used for clinical decision support, i.e., Clinical Reminders.

1.1. Purpose and Benefits of PCE

The Veterans Health Administration has determined that it must have adequate, accurate, and timely information about each ambulatory care encounter/service provided in order to enhance patient care and to manage our health care resources into the future. Effective October 1, 1996, VHA facilities are required to report each ambulatory encounter and/or ancillary service. Provider, procedure, and diagnosis information is included in the minimum data set that will be reported to the National Patient Care Data Base (NPCDB). The Ambulatory Data Capture Project was formed to coordinate the many software packages and their developers who support this effort.

1.1.1. Goals of Ambulatory Data Capture Project

- Capture purpose of visit/problem, diagnoses, procedures, and providers
- Develop a fast, accurate method for getting ambulatory care data into VistA
- Return clinically relevant data back to the Clinician
- Make data available for workload reporting, DSS, research, MCCR, and other ongoing VHA needs

1.2. Software Necessary to Support ADCP

- Automated Information Collection System (AICS) and other capture solutions
- Patient Care Encounter
- Problem List
• Patient Information Management System
• National Patient Care Data Base

Patient Care Encounter (PCE) ensures that every encounter has an associated provider(s), procedure code(s), and diagnostic code(s), in accordance with this mandate.

PCE also helps fill a gap in current VistA patient information by capturing other clinical data such as exams, health factors, immunizations, skin tests, treatments, and patient education, which can then be viewed on Health Summaries and other clinical reports, and can be used for clinical decision support.

1.3. Functionality of PCE

Version 1.0 of PCE provides options that allow:

• Collection and management of outpatient encounter data.
• Presentation of outpatient encounter data through Health Summary components and Clinical Reports. Outpatient encounter data is captured through interactive and non-interactive interfaces.

1.3.1. Interactive Interfaces

Online data capture using a user interface developed with List Manager tools. Online data capture in which Scheduling integrates with PCE to collect checkout information. PCE data is collected in CPRS through Reminder Dialogs and Encounter Forms.

1.3.2. Non-interactive Interfaces

PCE Device Interface, which supports the collection of encounter form data from scanners such as PANDAS, Pen-based TeleForm, and Automated Information Collection System (AICS). The interface also supports workstation collection of outpatient encounter data.

PCE application programming interface (API) which supports the collection of outpatient encounter data from ancillary packages such as Laboratory, Radiology, Text Integration Utility (TIU).

1.4. Definitions

Outpatient Visit: The visit of an outpatient to one or more units or facilities located in or directed by the provider maintaining the outpatient health care services (clinic, physician’s office, hospital/medical center) within one calendar day.

Encounter: A contact between a patient and a provider who has primary responsibility for assessing and treating the patient at a given contact, exercising independent judgment. A patient may have multiple encounters per visit. Outpatient encounters include scheduled appointments and walk-in unscheduled visits. A clinician’s telephone
communications with a patient may be represented by a separate visit entry. If the patient is seen in an outpatient clinic while an inpatient, this is treated as a separate encounter.

**Episode of Care:** Many encounters for the same problem can constitute an episode of care. An outpatient episode of care may be a single encounter or can encompass multiple encounters over a long period of time. The definition of an episode of care may be interpreted differently by different professional services even for the same problem. Therefore, the duration of an episode of care is dependent on the viewpoints of individuals delivering or reviewing the care provided.

**Ancillary Service/Occasion of Service:** A specified instance of an act of service involved in the care of a patient or consumer which is not an encounter. These occasions of service may be the result of an encounter; for example, tests or procedures ordered as part of an encounter. A patient may have multiple occasions of service per encounter or per visit.

**Provider:** The entity which furnishes health care to a consumer. This definition includes an individual or defined group of individuals who provide a defined unit of health care services (defined = codable) to one or more individuals at a single session.

### 1.5. Potential PCE Workflow

1. A provider has a patient encounter (appointment, walk-in, telephone call, mail conversation, etc.).

   Materials available to provider:
   - Health Summary with new components summarizing previous encounters, and a health reminders component based on clinical repository data
   - Encounter Form with pre-defined terminology for the provider’s clinic/service type
   - Clinical Reminders and Reminder Dialogs
   - PCE Clinical Reports, Action Profile, Daily Order Summary, Lab Interim report, and other VistA reports.

2. The provider documents the encounter.

   Types of data collected and stored in PCE:
   - Providers
   - ICD Diagnoses
   - CPT procedures provided
   - SNOMED CT codes
   - Immunizations (CPT-mappable)
   - Immunization Contraindications/Refusals
• Skin tests (CPT-mappable)
• Patient education
• Exams (non-CPT-mappable)
• Treatments (non-CPT-mappable)

3. Information from a hard copy encounter form is entered into VistA by a data entry clerk or scanned via an interface utility.
4. Encounter form data that isn’t scanned or is scanned incorrectly can be entered or edited through the PCE data entry program described in this manual.
5. Providers can enter immunizations, patient education, or other pieces of clinical information through PCE.
6. Providers can view items entered into PCE on a Health Summary or customized report. If any of these items have been set up for clinical reminders, these reminders will appear on the patient's health summary.

1.6. **Sources of Data**

PCE data can be entered through many mechanisms, including:

- CPRS Encounter Forms and Reminder Dialogs
- Scheduling (PIMS) check-out process
- AICS Encounter Forms
- PANDAS™ scanning system
- TeleForm scanning system
- Imaging workstation
- PCE List Manager Interface

1.7. **Designing Encounter Forms**

To use AICS Encounter Forms with scanners or for direct data entry (either clinician or data entry clerk), you can design encounter forms for your hospital or clinic with the AICS Encounter Form generator. See the AICS User Manual for instructions about creating Encounter Forms.

1.8. **XU*8*27 - New Person File Patch**

As part of the October 1, 1996 mandate, VAMCs must collect provider information. The provider information reported is the "Person Class" defined for all providers associated with ambulatory care delivery.
To comply with this requirement, all VAMC providers must be assigned a Profession/Occupation code (Person Class) so that a Person Class can be associated with each ambulatory patient encounter by October 1, 1996.

Patch XU*8*27 has been developed to provide functionality that will enable you to assign Person Class information.
2.0 Orientation

2.1. PCE List Manager Interface

While clinicians input and view PCE data primarily through CPRS, PCE provides a List Manager interface that can be used to review all of the details of an encounter and update the encounter if needed. To learn more about entering Encounter information, please see the CPRS User Guide: GUI Version.

The List Manager Utility allows PCE to display a list of items in a screen format, with possible actions (add, edit, print) listed below. If the list is longer than one screen, the header and action portions of the screen remain stable, while the center display scrolls. So if there are too many patient encounters to fit within the scrolling portion of the screen, when you press the return key, that portion of the screen scrolls while the top and bottom stay unchanged.

Without leaving the option, you can:

- Browse through the list
- Select items that need action
- Take action on those items
- Select other actions

You select an action by typing the name or abbreviation at the Select Action prompt.

Actions may be preselected by typing the action abbreviation, then the number of the encounter on the list. For example, UE=1 will process entry 1 for Update Encounter.
2.1.1. Other (Hidden) Actions

If you enter two question marks (??) at the Select Item(s) prompt, you will see a list of other actions that you can use with PCE.

Select Item(s): Quit/??
The following actions are also available:
+ Next Screen  FS  First Screen  SL  Search List
- Previous Screen  LS  Last Screen  ADPL  Auto Display(On/Off)
UP  Up a Line  GO  Go to Page
DN  Down a Line  RD  Re Display Screen  SP  Leave Update and
> Shift View to Right  PS  Print Screen  Select New Patient
< Shift View to Left  PL  Print List
Press RETURN to continue or '^' to exit:

2.2. Review Screens

PCE provides several different perspectives for viewing encounter data. You can change to any of these views whenever you're at a Select Action: prompt.

- List by Appointment
- List by Encounter
- Select New Patient
- View by Clinic/Ward
- Change Date Range
- Display Detail
- Expand Appointment
- Appointment Lists
2.2.1. List by Appointment

Most encounters are associated with an appointment (the exceptions are Standalone Encounters, which are usually walk-ins, and Historical Encounters, which usually took place at another location). Therefore, you need to identify an appointment to associate encounter information with before you enter this information. You can change your view to List by Encounter if you wish to enter standalone or historical encounters. You can also change your default view (whether you see the Appointment List or the Encounter List when you enter PCE) through the option, PCE Parameters Add/Edit.

3.0 Using PCE List Manager Interface for Encounters

Health Care Providers interact with PCE primarily through CPRS. When there are problems with an encounter such as a missing or incorrect diagnosis the PCE List Manager interface provides a convenient way to make the corrections. Therefore, this interface is used primarily by those who are responsible for correcting encounters.

This section describes how to perform these functions.

3.1. PCE Data Entry Options

Patient Care Encounter lets you add information, edit information, or add a new encounter to a patient's database. When you enter the program through the PCE User Interface described in this manual, you first view a list of encounters for a patient (by appointment). Appointments are provided to the PCE program by the Checkout process of the Scheduling package.

After you select a particular view and the appointments or encounters are displayed on your screen, you can add or edit information.

PCE has four options for adding or editing encounter information.

3.1.1. PCE Encounter Data Entry - Supervisor

This option is for users who can document a clinical encounter in PCE, and can also delete any encounter entries, even though they are not the creator of the entries. This option is intended for the Coordinator for PCE and/or supervisor of the encounter data entry staff.

3.1.2. PCE Encounter Data Entry

This option is for users who can document a clinical encounter in PCE, but can only delete entries they have created. The data entered via this option includes visit information (where and when), and clinical data related to the visit.

3.1.3. PCE Encounter Data Entry and Delete

This option is for users who can document a clinical encounter in PCE, and can also delete any encounter entries, even though they are not the creator of the entries. This option is on the Clinician menu.

3.1.4. PCE Encounter Data Entry without Delete

This option is for users who can document a clinical encounter in the PCE, but should not be able to delete any entries, including ones that they have created.
3.2. PCE Actions

"Actions" are the choices listed at the bottom of the PCE screens (following the shaded bar) which you can select, either to edit or add to the appointments or encounter shown in the top part of the screen, or to see a different view of that information.

</tbody>
</table>

The following actions can be used at the Appointment List or Encounter List screens.

**ADD STANDALONE ENC** – This action lets you add a new encounter not associated with a credit stop.

**APPOINTMENT LISTS** – This action allows you to change which appointments will be displayed based on their status. For example, you may change the display to list cancelled, checked in, checked out, future appointments, inpatient appointments, appointment where no action has been taken, non-count appointments, no show appointments, or all appointments.

**CHANGE CLINIC** – This action lets you change the display list of encounters based on hospital location. If the list includes encounters for all locations, you can select a new location and the list will be redisplayed with only encounters that relate to that location.

**CHANGE DATE RANGE** – This action allows you to change the date range used for displaying encounters or appointments. You may change the beginning and/or ending date.

**CHECKOUT INTERVIEW** – This action allows you to go through the interview questions for an encounter that is associated with an appointment. You may also edit additional information such as provider, diagnosis, and procedure. You may also edit an encounter that is associated with an appointment by entering the number associated with the item at the "Select Action" prompt or using the Update Encounter.

**DISPLAY DETAIL** – This action displays all available information related to one encounter for a selected appointment.

**EXPAND APPOINTMENT** – This action allows you to display all the patient demographics and appointment event log items that have been entered for a selected patient appointment. Expand Appointment displays information from the Scheduling package and not from PCE.

**LIST BY ENCOUNTER** – This action allows you to change the display from a list of appointments for this patient or clinic to a list of encounters for the same patient or clinic. There may be several encounters for one appointment.

**LIST BY APPOINTMENT** – This action allows you to change the display from a list of encounters for this patient or clinic to a list of appointments for the same patient or clinic. Not every appointment may have an encounter associated with it, so you can add encounters from this view.
MAKE HISTORICAL ENC – This action lets you add encounter information for an old encounter or one that took place at another hospital or clinic (VA or non-VA). Although you can't get workload credit for this kind of encounter, it can be used to help compute clinical reminders.

SELECT NEW PATIENT – This action allows you to change the display of encounters based on the patient. If you select a new patient, the display will include encounters or appointments for the selected patient.

UPDATE ENCOUNTER – This action lets you edit an encounter that is associated with an appointment. You may edit information such as provider, diagnosis, procedure, treatment, immunization, skin test, patient education, exams, and treatments, as well as date, service connection, and demographic data.

VIEW BY CLINIC – This action allows you to change the display of appointments or encounters based on a Clinic. For example, if your current list includes all appointments for a specified date range for the selected patient, and you want to display all appointments for a specific clinic, you may use this action to change the display to include appointments or encounters for the desired clinic.

QUIT – This action allows you to exit PCE and return to your menu.

Note: You can add Health Summary, Problem List, and Progress Notes as actions to the PCE screens, to enable you to go directly to these programs. See the PCE Installation Guide for instructions.

3.3. Adding and Editing Patient Care Encounters

Follow the steps in the next few pages to add, delete, or edit encounters.

3.3.1. Adding New Encounters

Use the Add Standalone Enc. action to enter a new encounter which may or may not have an appointment associated with it.

1. Select the PCE Encounter Data Entry option and a patient or clinic.

Select PCE Clinician Menu Option: ENC PCE Encounter Data Entry and Delete
Select Patient or Clinic name: PCEPATIENT, ONE
2. Select Add Standalone Enc. at the Select Action prompt.

```
PCE Encounter List  Jul 26, 2018@07:46:56  Page: 1 of 2
PCEPATIENT,ONE  000-45-6789  Clinic: All
Date range: 07/16/18 to 07/30/18

+  + Next Screen   - Prev Screen   ?? More Actions
UE Update Encounter   SP Select New Patient  VC View by Clinic
LI List by Appointment   CD Change Date Range  DD Display Detail
AD Add Standalone Enc.  CC Change Clinic
HI Make Historical Enc. IN Check Out Interview QU Quit
```

Select Action: Next Screen// AD Add Standalone Enc.

3. Enter the Encounter Date and Time and the Hospital Location where the encounter took place.

```
Encounter Date and Time: N (7/1/18 - 7/26/18): N (JUL 26, 2018@07:47:51)
Hospital Location: DIABETES CLINIC PCEPROVIDER,ONE
APPOINTMENT TYPE: REGULAR// [ENTER]
```

4. Respond to the following classification prompts:

```
--- Classification --- [Required]

Was treatment for SC Condition? NO
Was treatment related to Combat? NO
Was treatment related to Agent Orange Exposure? NO
Was treatment related to Ionizing Radiation Exposure? NO
Was treatment related to SW Asia Conditions? NO
Was treatment related to Military Sexual Trauma? NO
Was treatment related to Head and/or Neck Cancer? NO
```

5. The screen displays the encounter data.

```

3.4. Make a Historical Encounter

You can create encounters for patient visits that occurred at some time in the past (exact time may be unknown) or at some other location (possibly non-VA). Although these are not used for workload credit, they can be used for setting up the reminder maintenance system.

Note: If month or day are not known, historical encounters will appear on encounter screens or reports with zeroes for the missing dates; for example, 01/00/95 or 00/00/94.

Steps to use this action:

1. Change to View by Encounters if you are in the Appointment View.
2. Select the Make Historical Enc action at the Select Action prompt.

3. Enter the date of the encounter and the time, if known.
4. Enter the location where the encounter took place. If it happened at a non-VA hospital or clinic, type that name. Otherwise enter the name or number of the VA Medical Center or other facility.
5. Enter any comments that are needed to clarify the encounter (optional).
3.5. Update Encounter

With the Update Encounter action, you can add or edit encounter information, either through the Edit an Item or Delete an Item actions, or by choosing one of the following:

- CPT (Procedure)
- ICD (Diagnosis)
- Encounter
- Exam
- Health Factors
- Immunization
- Patient Ed
- Provider
- Skin test
- Contraindication/Refusal Event
- Treatment
- SNOMED CT code

Note: IRM or a Clinical Coordinator can change the items or categories available to choose from for many of these actions (Treatment, Patient Ed, Immunization, etc.) through the PCE Table Maintenance Menu. If you wish to define these items, check with your Coordinator.

Follow the steps below to use Update Encounter.

1. A screen like this appears. Type UE at the Select Action prompt.

   ![Screen Screenshot]

   1. Select the appointment you want to add items to or to edit.
3. Select the number of the item to be edited or an action that will let you add or edit encounter information.

3.5.1. Quick Tricks

After Diagnosis has been entered, if the Provider Narrative is an exact match, you can enter = and the diagnosis will be duplicated here.

The equals sign (=) can also be used as a shortcut when selecting an action plus encounters or appointments from a list in a single response (e.g., Select Action: ED=2).

UE=1 will process entry 1 for Update Encounter.
3.6. Edit an Item

When you choose the action Edit an Item, you will be prompted item-by-item to enter information about a selected encounter.

Steps to Edit an Item:

1. Select UE from the PCE Encounter List screen.

2. Select the encounter you want to edit.

3. Select ED from the PCE Update Encounter screen.

4. Respond to each of the following prompts, as appropriate.
Select Entry(s) (1-5): 4

Education Topic: DIABETES DIET
Level of Understanding: GOOD//GOOD
Enter the Event Date and Time: 03/05/2019@13:47:43// (MAR 05, 2019@13:47:43)
Encounter Provider: 
1 STUDENT,EIGHT S8
2 STUDENT,FIVE S5
3 STUDENT,FOUR S4
4 STUDENT,NINE S9
5 STUDENT,ONE
Press <Enter> to see more, '^' to exit this list, OR
CHOOSE 1-5: 2 STUDENT,FIVE S5
Is this provider Primary or Secondary? P//SECONDARY
Comments: Patient is motivated to change diet to lose weight and lower blood sugar

5. The edited screen is then displayed.
3.7. Delete an Item

Steps to Delete an Item:

1. Select UE from the PCE Encounter List screen.
2. Select the encounter you wish to edit.
3. Select DE from the PCE Update Encounter screen.

4. Answer the following prompts to indicate which items you will delete.
5. The edited screen is then displayed.

3.8. How to Add or Edit an Encounter

You can add an encounter for an appointment that doesn’t have an encounter associated with it or edit an existing encounter.

Steps to edit an Encounter:

1. Select UE from the PCE Appointment List screen.
2. Select EN from the PCE Update Encounter screen.
3. Respond to the following prompts for the encounter, as appropriate.

```
Check out date and time:  OCT 17,2018@09:00// [ENTER](OCT 17, 2018@09:00)
--- Classification --- [Required]
Was treatment for SC Condition? YES// [ENTER]
```

4. If you answer NO to the last prompt above, you get additional prompts as shown below.

```
Check out date and time:  OCT 23,2018@15:17//[ENTER](OCT 23, 2018@15:17)
--- Classification --- [Required]
Was treatment for SC Condition? YES// n  NO
Was treatment related to Combat? n  NO
Was treatment related to Agent Orange Exposure? n  NO
Was treatment related to Ionizing Radiation Exposure? n  NO
Was treatment related to SW Asia Conditions? n  NO
Was treatment related to Military Sexual Trauma? n  NO
Was treatment related to Head and/or Neck Cancer? n  NO
```

3.9. How to Add or Edit a Provider

When you enter or edit a provider for an encounter, you will be prompted to enter whether the provider is Primary and/or Attending. The default provider entered at checkout is the primary provider.

Steps to add or edit a Provider:

1. Select UE, from the PCE Appointment List screen.
2. Select the appointment and encounter you wish to edit.
3. Select PR from the PCE Update Encounter screen.
4. Choose whether you want to edit or add and respond to the other prompts, as appropriate.

--- Provider ---

1 PROVIDER, FIVEHUNDREDTHREE PRIMARY Physician/Physician/Osteopa
Enter 1-1 to Edit, or 'A' to Add: 1

Provider: PROVIDER, FIVEHUNDREDTHREE
Is this Provider Primary: YES//
Is this Provider Attending: NO//

5. The edited screen is then displayed.

3.10. How to Add or Edit ICD Diagnoses

You can enter a diagnosis and/or an ICD diagnosis code for a patient’s encounter. You will be prompted to designate the diagnosis as primary or secondary. CIDC (Clinical Indicator Data Capture) has added functionality that displays patient Service Connected and Rated Disabilities for those SC patients. In addition, an optional Ordering/Resulting Diagnosis prompt asks, “Is this Diagnosis Ordering, Resulting, or Both.” See Note in Step 3.

With functionality put in place by the Code Set Versioning project, only ICD Codes that are active for the encounter date and time will be available.

Steps to add a Diagnosis:

1. Select UE from the PCE Appointment List screen.
2. Select DX from the PCE Update Encounter screen.

The sample below is from PCE Data Entry, also note that these prompts are seen in the Appointment Management Check-Out option.

PCE Update Encounter   Aug 21, 2018@15:57:33   Page: 1 of 1

</tr>
</tbody>
</table>

When Ordering/Resulting Diagnosis is not entered, IB personnel must research the Provider's documentation for Ordering and Resulting diagnosis information.

4. The edited screen is then displayed.
3.11. How to Add or Edit a CPT (Procedure)

When you choose CPT (Procedure) under Update Encounter, you will also be prompted to enter the Provider Narrative, Quantity, Diagnosis, Principal Procedure, Encounter Provider, and comments. With functionality put in place by the Code Set Versioning project, only CPT Codes that are active for the encounter date and time will be available.

One Primary diagnosis and up to seven Secondary diagnoses may be associated with a procedure as clinical indicators. The example below shows the association as it appears on the PCE Encounter Profile screen.

<table>
<thead>
<tr>
<th>CPT Code: 76003</th>

3.12. How to Add or Edit an Immunization

When you choose Immunization under Update Encounter, you will also be prompted to enter the Dose, Units, Route of Administration, Site of Administration, Lot Number, Ordering Provider, Encounter Provider, Series, Reaction, Repeat Contraindicated, Administered Date and Time, and Comments.

Note: Lot numbers stored in the immunization inventory with an associated facility are available for selection based upon the institution/division of the hospital location of the encounter. Lot numbers with no associated facility are available for selection at any hospital location. All new lot numbers added to the immunization inventory must have an associated facility.

Immunizations are mapped to CPT codes. When an Immunization is entered, if the supervisor option is used, the user will be prompted for diagnoses which are associated with the mapped CPT code. If the diagnoses have not already appeared in the encounter, the user will be prompted for additional information to qualify the diagnosis such as modifiers, comments and SC/EI classifications.
Steps to add an Immunization:

1. Select UE from the PCE Appointment List screen.
2. Select IM from the PCE Update Encounter screen.

---

4. The edited screen is then displayed.
3.13. How to Add or Edit Immunization Contraindication or Refusal Events

When you choose Contra/Refusal Event under Update Encounter, you will also be prompted to enter the Immunization, Event Date and Time, Encounter Provider, Warning Until Date, and Comments.

Steps to add a Contra/Refusal Event:

1. Select UE from the PCE Appointment List screen.
2. Select CR from the PCE Update Encounter screen.

3. Respond to the following prompts for the immunization, as appropriate.

4. The edited screen is then displayed.
3.14. How to Add or Edit a Patient Ed

When you choose Patient Ed under Update Encounter, you will be prompted to enter the Education Topic, Level of Understanding, Encounter Provider, and Comments.

Note: A Clinical Coordinator can change the items or categories available to choose from for Patient Ed through the PCE Table Maintenance Menu. If you wish to help define the Patient Education list, check with your Coordinator.

Steps to add Patient Ed:

1. Select UE from the PCE Appointment List screen.
2. Select PE from the PCE Update Encounter screen.

3.17. How to Add or Edit Health Factors

When you choose Health Factors under Update Encounter, you will also be prompted to enter the Level/Severity and comments.

Note: A Clinical Coordinator can change the items to choose from for Health Factors through the PCE Table Maintenance Menu. If you wish to help define the Health Factor list, check with your Coordinator.

Steps to add a Health Factor:

1. Select UE from the PCE Appointment List screen.

2. Select HF from the PCE Update Encounter screen.

3. Respond to the following prompts for the Health Factor, as appropriate.

4. The edited screen is then displayed.
3.18. How to Add or Edit the Checkout Interview

The "Checkout Interview" which is done for all outpatients through the Scheduling package, can also be done through PCE. You are prompted to enter Provider (and to designate if Primary Provider), Service-connection status, CPT codes, Diagnosis, etc. You may also designate if the Diagnosis should be added to the patient's Problem List.

REMEMBER: Entering one or two question marks will provide help (including lists of acceptable CPT codes, Diagnoses) on how to respond to prompts. With functionality put in place by the Code Set Versioning project, only ICD and CPT Codes that are active for the encounter date and time will be available.

3.18.1. Steps to add a Checkout Interview:

1. Select Checkout Interview from the Encounter or Appointment List screen or from the Update Encounter screen. Note that the input prompts may vary depending on what data is already stored for the encounter.

2. If prompted, confirm or edit the checkout date and service-connection status.

--- Classification --- [Required]

Was treatment for SC Condition? YES// [ENTER]
3. Enter the provider associated with the procedure performed during this encounter. (You can enter more than one provider and more than one procedure for each provider.)

3.19. Adding or Editing Directions to Patient’s Home

The Directions to Patient's Home Add/Edit option lets you enter directions to a patient's home, which can then be displayed on a Health Summary.

This feature is especially useful for Hospital-Based Home Care staff.

Steps to add directions to patient's home:

1. Choose HOME from the main PCE menu.
2. Select a patient name.
3. If no directions have already been entered, type in free text at the prompt.
   
   Note: The screen editor you use in all your work will determine how you enter text.

   Select PCE Coordinator Menu Option: home Directions to Patient's Home Add/Edit

   Select PATIENT NAME: PCEPATIENT
   1 PCEPATIENT,ONE 06-04-08 000456789 NON-VETERAN (OTHER)
   2 PCEPATIENT, TWO 02-16-33 666000000 NSC VETERAN

   LOCATION OF HOME:
   1> On the dock.
   2>
   EDIT Option: [ENTER]

   Select PATIENT NAME: [ENTER]

   4. To edit directions that were previously entered, select the edit option and proceed to edit according to the screen editor process you normally use.

   Select PCE Coordinator Menu Option: home Directions to Patient's Home Add/Edit

   Select PATIENT NAME: PCEPATIENT,EIGHT  PCEPATIENT,EIGHT  09-12-44 666777888 SC VETERAN

   LOCATION OF HOME: . .
   6> WIER STREET. TURN LEFT ON WEIR STREET AND GO TO END.
   7> TO THE LEFT OF THE DEADEND IS A DIRT PATH.

   EDIT Option: 8
   REPLACE: WHITE WITH: GREEN REPLACE: [ENTER]
   EDIT Option: [ENTER]

   Select PATIENT NAME: [ENTER]
3.20. Key Concepts

- Clinicians can add individual types of data (immunizations, patient education) through the PCE user interface.
- Clerks can add encounter form data that was incorrectly scanned or was missing.
- The equals sign (=) can be used as a shortcut when selecting an action plus encounters or appointments from a list (e.g., Select Action: ED=2).
- Information added to PCE can be viewed on the Health Summary or on PCE Clinical Reports.
- PCE data elements can be used as Clinical Reminders findings in reminder definitions and remind dialogs. This is explained in detail in Clinical Reminders Manager’s Manual.
- Each site can modify the choices available in PCE files for health factors, patient education, etc.
- You can enter encounter information for an inexact time in the past or from another site through Make Historical Enc.
- Information entered through the Checkout Interview goes into the Scheduling package. The Checkout Interview information can also be entered directly through the Scheduling package. The dialogues, screens and resulting data are identical between the two packages.
**4.0 PCE and Health Summary**

Information such as Patient Education, Health Factors, and Immunizations, as well as clinical reminders about when these things are due, can be displayed on Health Summaries. Health Summary has special components designed to include these elements. See PCE Clinical Reports in this manual for setting up Clinical Reminders to appear on Health Summaries.

Patch PX*1*211 added a Print Name field to Exams and Health Factors; Education Topics already had one. Previously, the PCE Health Summary extract routines for Education Topics, Exams, and Health Factors returned the .01 field for Health Summary to display as the name. Now, if the Print Name is defined it will be returned instead of the .01. If it is not defined, then the .01 will be returned.

An example of Health Summary with PCE components appears below.

```

Press <RET> to continue, ^ to exit, or select component:
5.0 Managing PCE

IRM staff and Clinical Coordinators manage PCE by assigning menus, setting site parameters, defining clinical reminders, setting up clinical reports, and modifying local tables containing patient education, health factors, and other items through the Table Maintenance options.

5.1. PCE Menus and Options

The following menus and options are exported with PCE:

PCE IRM Main Menu:

| SP  | PCE Site Parameters Menu ... |
| TBL | PCE Table Maintenance ...   |
| DE  | PCE/SD Debugging Utilities ... |
| INFO| PCE Information Only ...    |
| RM  | PCE Reminder Maintenance Menu ... |
| CR  | PCE Clinical Reports ...    |
| HOME| Directions to Patient's Home Add/Edit |
| CO  | PCE Coordinator Menu ...    |
| CL  | PCE Clinician Menu ...      |
| DEWO| PCE Delete Encounters W/O Visit |

- Assign the IRM Main Menu or at least the first five options/menus to IRM staff or coordinators who will be responsible for setting up PCE, maintaining the entries in the PCE tables (such as Patient Education, Health Factors, etc.), and defining the clinical reminders/maintenance system for your site.

- Assign the PCE Coordinator Menu to the Application Coordinator who will use all of the PCE options.

- Assign the PCE Clinician Menu to clinicians who will be entering or editing data, who will use clinical reports, who need the PCE Information Only menu to see the basis for reminders, and who might add or edit directions to a patient's home for appearance on a health summary.

- Assign Directions to Patient's Home Add/Edit to anyone who needs to enter directions to a patient's home. This is especially useful for Hospital-Based Home Care staff (directions can be viewed on Health Summaries).
5.2. **PCE Coordinator Menu**

The PCE Coordinator Menu includes all of the user interface options as well as the options for file maintenance.

Assign PCE Encounter Data Entry - Supervisor to users who can document a clinical encounter and can also delete any encounter entries, even though they are not the creator of the entries. This option also allows, contrary to all other PXCE Encounter Data Entry, users to display, and even modify ancillary encounters so it should be assigned with caution.

Assign PCE Encounter Data Entry to data entry staff who can document a clinical encounter and who can delete their own entries.

Assign PCE Encounter Date Entry and Delete to users who can document a clinical encounter and can also delete any encounter entries, even though they are not the creator of the entries.

Assign PCE Encounter Data Entry without Delete to users who can document a clinical encounter, but should not be able to delete any entries, including ones that they have created.
5.3. **Key Concepts**

- PCE menus and options are designed for two main types of users: 1) end users (clinicians and clerks) and 2) managers and coordinators.
- The end user options included data entry options and clinical reports.
- The manager and coordinator options include the maintenance menus and the site parameters set-up option.

5.4. **PCE Site Parameters**

The PCE Site Parameters Menu on the PCE IRM Main Menu contains the PCE HS/RPT Parameter menu, PCE Edit Disposition Clinics, and PCE Site Parameters Edit.

### 5.4.1. PCE Site Parameters Menu

</tbody>
</table>

### 5.4.2. Option Descriptions

**PCE Site Parameters Edit**

This option is used to edit entries in the PCE PARAMETERS file. The parameters that are set are used as the default controls for the user interface when it starts up. You can set your default view as Appointment or Encounter, and a range of dates.

**PCE HS/RPT Parameters Print**

This option prints the current PCE Parameter definitions that are used by Health Summary and some of the PCE Reports.

**PCE Report Parameter Edit**

This option is used to define parameters that will be used by the PCE Report Module. The report edit option allows your site to specify which clinics in file #44 represent "Emergency Room" clinics, and what Lab tests from file #60 should be used for looking up patient data for Glucose, Cholesterol, LDL Cholesterol and HBA1C lab results. These fields are used by the reports Caseload Profile by Clinic, and Patient Activity by Location. To get a printout of current definitions in the PCE Parameters fields for these fields, use the PCE HS/RPT Parameters Print.

**5.4.3. PCE HS/RPT Parameter Menu**

The PCE HS/RPT Parameter menu contains print and edit options for PCE fields related to the Health Summary package and PCE Reports module.

Use the print option to see what the current definition is for these fields.
Two PCE Clinical Reports—Caseload Profile by Clinic and Patient Activity by —track Critical Lab Values and Emergency Room Visits. The PCE Report Parameter Edit option allows your site to specify which clinics in Hospital Location file (#44) represent "Emergency Room" clinics and what tests from the Laboratory Test file (#60) should be used for looking up patient data for Glucose, Cholesterol, LDL Cholesterol and HBA1C lab results. (This is necessary since the Laboratory Test File is not standardized and each site may have customized it differently.)

5.4.4. PCE Site Parameters Edit Example

The parameters that are set through this option are used as the default controls for the user interface when it starts up.

```
SITE   PCE Site Parameters Edit
RPT    PCE HS/RPT Parameter Menu ...

Select PCE Site Parameter Menu Option: site   PCE Site Parameters Edit

Select PCE PARAMETERS ONE: 1
STARTUP VIEW: APPOINTMENT// ??
   This is the default list that PCE Encounter Data Entry starts in for all
   users.
   Choose from:
   V        VISIT/ENCOUNTER
   A        APPOINTMENT

STARTUP VIEW: APPOINTMENT// v  VISIT/ENCOUNTER
BEGINNING PATIENT DATE OFFSET: -30// [ENTER]
ENDING PATIENT DATE OFFSET: 2// [ENTER]
BEGINNING HOS LOC DATE OFFSET: -14// -30
ENDING HOS LOC DATE OFFSET: 2// [ENTER]
RETURN WARNINGS: YES// ?
   Enter YES if you want the Device Interface to return warnings if there
   are no diagnoses or procedures passed.
   Choose from:
   0        NO
   1        YES
RETURN WARNINGS: YES// [ENTER]
MULTIPLE PRIMARY DIAGNOSES: RETURN WARNING//
NO PRIMARY DIAGNOSIS:
SD/PCE SWITCH OVER DATE: AUG 21,1996//
HEALTH SUMMARY START DATE: OCT 10,1997//
MANAGEMENT MAIL GROUP: PCE MANAGEMENT//

Select PCE PARAMETERS ONE: [ENTER]
```

5.4.5. Key Concepts

- Coordinators can set the parameters that are used as the default controls for the user interface when it starts up. You can set your default view as Appointment or Encounter, and also a range of dates.

- Coordinators can specify which clinics in file #44 represent "Emergency Room" clinics, and what Lab tests from file #60 should be used for looking up patient data for Glucose, Cholesterol, LDL Cholesterol, and HBA1C lab results.
5.5. **PCE/SD Debugging Utilities**

The PCE/SD Debugging Utilities menu is available from the PCE IRM Main Menu [PX IRM MAIN MENU].

<table>
<thead>
<tr>
<th>Select Option: PCE IRM Main Menu PX IRM MAIN MENU</th>

</tr>
</tbody>
</table>

Select PCE/SD Debugging Utilities <TEST ACCOUNT> Option:

The main menu for the PCE/Scheduling Debugging Utilities contains these two options. Below is a description of the options.

**PXQ USER REVIEW – User's Visit Review**

This is a report of the visits and the files that store the visit-related information.

**PX V File Repair – PCE V File Cross Reference Repair**

This option provides a number of options that allow the user to both report on and fix broken V File Cross References.

**Note:** Only experienced Programmers should access this option.

Here is the User's Visit Review option and menu:

<table>
<thead>
<tr>

```
The Following is the OUTPATIENT ENCOUNTER entry and most of the records pointing back to it.

OUTPATIENT ENCOUNTER --- #3063

The Following is the SCHEDULING VISITS file. This is where Scheduling stores the CPT codes.

END OF DISPLAY

Note: The D, A, or C options produce a similar report, as does the selecting by IEN instead of Patient Name.

PCE Delete Encounters W/O Visit

This option provides a tool for IRM to correct Encounters that have missing Visits. The missing Visits can cause a problem where the Encounters cannot be checked out. Under this menu option, there are 4 sub options described in detail in the text of patch PX*1*153:

- **BUILD** will find the missing encounters based on date range entries
- **REPORT** will print the problem encounters per build
- **FIX ALL** will fix all the encounters that are indicated by the build
- **FIX INDIVIDUAL** will fix encounters for one patient
6.0 Table Maintenance

The Table Maintenance options let sites add or edit the items in the tables for Health Factors, Patient Education, Skin Tests, etc.

Patch PX*1*211 replaced the various options for managing Education Topics, Exams, and Health Factors with an integrated management tool. Immunizations and Skin Tests have been standardized and cannot be edited. The available Immunizations and Skin Tests can be viewed via the PCE Information Only menu.

6.1.1. Option Descriptions

Education Topic Management, Exam Management, and Health Factor Management

The integrated management systems for each of these data types are very similar, so if you understand one of them you will understand all three. Accordingly, an explanation of the Health Factor Management functionality will serve as an explanation of all three. When you start Health Factor management, it opens a List Manager screen that lists all the health factors defined on the system.

<table>

Select Action: Next Screen//
The Health Factor column is an alphabetically sorted list of the .01’s of the health factors. It will display up to the first 52 characters of the .01. If a Description is defined up to the first 17 characters will be displayed. Since this is a List Manager screen all the standard List Manager actions such as SL (search list), FS (first screen), and LS (last screen) can all be used. Typing a “?” will display the help in the FileMan Browser.

The ADD action lets you add a new health factor. Once the required fields have been entered you are taken to a ScreenMan editing form where the remaining fields can be entered.

The EDIT action opens the ScreenMan editing form. Note that entries whose Class is National cannot be edited.

The COPY action prompts for a new .01 and then copies the selected health factor into the new health factor. Once the copy is complete there is a prompt asking if you want to edit it, if you respond YES you are taken to the ScreenMan editing form.

The INQ action displays a detailed listing of the selected health factor.

The CL action displays the Change Log.

Details for each of these actions follows.

**ADD:**

- **Enter a new Health Factor Name:** NEW HEALTH FACTOR
- **Enter the Entry Type:** FACTOR
- **Enter the Category:** REMINDER FACTORS [C] LOCAL
- **Enter the Class:** LOCAL
- **Enter Display on Health Summary:** N
- **Enter a new Health Factor Name:** NEW HEALTH FACTOR CATEGORY
- **Enter the Entry Type:** CATEGORY
  - Category names must end with '][]', appending it for you.
  - NEW HEALTH FACTOR CATEGORY [C]
- **Enter the Class:** LOCAL
- **Enter Display on Health Summary:** N
EDIT opens a ScreenMan form for editing the selected health factor. If you are not familiar with using ScreenMan, see the “ScreenMan” section in the VA FileMan User Manual.

DOSES UNUSED: 99/ [ENTER]
NDC CODE (VA): [ENTER]

6.3. Key Concepts

- User must hold the PXV IMM INVENTORY MGR security key to access this menu option.
- Multi-division functionality requires selection of an associated facility upon accessing this menu option. Inventory information to be updated or displayed will be related to the selected facility.
- Only active immunization lots may be selected when documenting an immunization.
- When documenting an immunization, only immunization lots with an associated facility that matches the institution/division of the hospital location may be selected. Older immunization lots with no associated facility will be available for selection at any hospital location.
Entries in the IMMUNIZATION LOT file (#9999999.41) must be unique, that is, the immunization name, lot number and manufacturer combination must be unique to the associated facility.

An immunization lot that has been assigned to a patient’s immunization record may not be deleted from the IMMUNIZATION LOT file (#9999999.41).

When an immunization lot number is assigned to a patient’s immunization record, the number in the DOSES UNUSED field is decremented.

6.4. Display Immunization Inventory Report

Select PCE Table Maintenance Option: LOT [ENTER] Immunization Lot Add/Edit/Display

7.1.1. Active Educ. Topic List – Detailed

This lists the current detailed definition of the goals and standards defined for the active education topics.

7.1.2. Education Topic List

This option prints a brief list of ALL Education Topics using only two fields: Inactive Flag status and Topic Name.

7.1.3. Education Topic Inquiry

This option can be used to print the definition of a specific Education Topic definition.

7.1.4. Exam List

This option lists all of the exam names, with their Active Status, that are defined in the Exam file for use with PCE.

7.1.5. Health Factor List

This option lists the Health Factors by Category, with their Active Status, that have been defined in the Health Factor file for use with PCE.

7.1.6. Immunization List

This option lists all immunizations, with their Active Status, which have been defined in the Immunization file for use with PCE.

Note: To see what CPT codes may be related to the immunization entries, print the PCE Code Mapping List.
7.1.7. Skin Test List
This option lists all skin tests, with their Active Status, that have been defined in the Skin Test file for use with PCE.

7.2. Key Concepts
- Options on the Information Only menu list clinical terminology used in the PCE files/tables to represent patient education, exams, health factors, immunizations, and skin tests.
- The terminology in these tables determines what clinical data will be collectable for these classes of clinical data.

7.3. PCE Clinical Reports
The PCE Clinical Reports options provide clinicians and managers with summary data about their patients, workload activity, and encounter counts. The reports extract data from various files in VistA, including laboratory, pharmacy, and PIMS to create output reports which have been requested by physicians throughout the VA.

Clinical Reports Menu:

</tr>
</tbody>
</table>

The Caseload Profile by Clinic and Patient Activity by Location reports track Critical Lab Values and Emergency Room Visits (among other things). The PCE Report Parameter Edit option on the PCE HS/RPT Parameter menu allows your site to specify which clinics in the Hospital Location file (#44) represent "Emergency Room" clinics and what tests from the Laboratory Test file (#60) should be used for looking up patient data for Glucose, Cholesterol, LDL Cholesterol and HBA1C lab results. (This is necessary since the Laboratory Test File is not standardized and each site may have customized it differently.)

Note: If month or day are not known, historical encounters will appear on encounter screens or reports with zeroes for the missing dates; for example, 01/00/95 or 00/00/94.

7.3.1. Patient Activity by Location
This report may be set up for hospital location or stop code. The report format is a summary of all selected locations. For each location, scheduling data is used to identify patients whose appointments were either scheduled, unscheduled, cancelled, or are no-shows during the patient appointment date range. VistA data for these patients is then examined for possible patient activities for admissions/discharges, emergency room encounters, and critical lab values during the patient activity date range. If any of these...
activities has occurred, data specific to the activity is reported along with the patient’s address, phone, and future appointments that fall in the future appointment date range.

This report was developed as a measure of continuity of care. If a provider of record has his or her care-giving interrupted through clinical rotation, leave, reassignment, or for any other reason, this report may be used to get an update on patient activities in his/her caseload.

This report is also useful when care is not interrupted. Clinical staff may wish to review patient activity by clinic for events, which they might be unaware of.

Patient activities that are included in this report are:

7.3.1.1. Admission/Discharge Activities

All admissions and discharges within the selected date range are reported. If corresponding discharges exist for admissions, the discharges are shown, and vice versa; corresponding admissions are shown for discharges.

7.3.1.2. Emergency Room Clinic Activities

All Emergency Room stops within the selected date range are reported. Emergency Room visit date and time are displayed for all encounters with an identified Emergency Room stop. Emergency rooms are identified through the PCE PARAMETERS file. This data is entered by the clinical coordinator or IRM staff through the PCE Report Parameter Setup option.
7.3.1.3. Critical Lab Values

All critical lab values reported within the selected date range are presented, along with a column to identify whether the value is critically high or critically low.

**7.3.2. Caseload Profile by Clinic**

This report generates a profile of the patients in a clinic's caseload for a selected date range. One or more clinics or a stop code may be selected to represent the caseload. If a stop code is selected, a report is generated for each clinic within that stop code. The percentage and overall mean are calculated based on the patient data for all of the clinics selected. Where only one clinic is selected, these values are not applicable.

Note: There must be at least one PCE encounter within the selected date range for this report, even though there may be lab, radiology, and outpatient pharmacy occasions of service with the other timeframes (6 & 12 months).
This report combines PCE encounter, Lab, Radiology, Outpatient Pharmacy, and Admissions data. It provides a profile of the patients making up a clinic's caseload, over a representative period of time. Clinical staff will decide the appropriate date range. Report areas are demographics of clinic caseload, preventive medicine, quality of care markers, and utilization. Patient age, diagnosis, gender, Lab assay, RX, and procedure are all used to generate the patient profile.

There are three separate timeframes for the report output:

- SELECTED DATE RANGE
- THE SIX (6) MONTHS PREVIOUS TO BEGINNING DATE
- THE TWELVE (12) MONTHS PREVIOUS TO BEGINNING DATE

Search ranges are listed at the top of each report section.

DEMOGRAPHICS are based on the selected date range.

PREVENTIVE MEDICINE is based on 1) ICD codes recorded in PCE encounter diagnoses and 2) Radiology for the period 12 months previous to the beginning date.

QUALITY OF CARE MARKERS are based on Laboratory results, PCE encounter diagnoses, and scheduling data for the period six months previous to the beginning date.

UTILIZATION data is based on PCE encounters and outpatient pharmacy prescriptions for the period 12 months previous to the beginning date.

The six and twelve-month profiles probably won't change much month-to-month. How long the report takes to run varies according to the number of selected clinics, the number of encounters within that clinic, and the complexity of the patient data for any selected clinic.

### 7.3.3. Technical Description

This option executes the Scheduling Package Clinic Workload (SET^SDCW3) routines to identify patients whose appointments were either scheduled, unscheduled, cancelled, or no-shows during the selected date range.

Admissions are found by a call to IN5^VADPT for each date within the selected date range. Temporary storage of this data, for report purposes is at the global node ^TMP($J,"ADM","DFN",ADMISSION DATE). This node is set to discharge date^room-bed^street address^address line 2^city^state^zipcode^phone number.

Emergency clinics must be defined in field 801 of the PCE PARAMETERS file, which is a multiple pointing to the HOSPITAL LOCATION file. The ER clinic names are stored permanently at the global location: ^PX(815,D0,RR1,D1,0). A call is made to SDA^VADPT for stops occurring within the selected date range for the array of clinics listed at the above global location.

Laboratory data assessed for critical values is based on the Subfile 63.04 of the Lab DATA file (63), which stores results from Chemistry, Hematology, Toxicology, RIA, Serology, and others. Critical values are identified through a pattern match of a numeric
value followed by a "***". The global location read is ^LR(LRDFN,"CH",INVERSE LAB DATE, LAB TEST FIELD NUMBER). Piece one contains the result. Piece 2 indicates a critical value and if it is high or low (e.g. "H").

7.3.4. PCE Encounter Summary

This report provides a summary of PCE encounters. For the purposes of this report an encounter is any entry in the Visit File. The report can be run by location or by provider. Encounters included in the report are selected by a combination of date range, service categories, and encounter types.

Data for the selected encounters is categorized and summarized in several ways. CPT codes associated with encounters are classified by Evaluation and Management Code. Those falling into the E&M group are sorted into the categories new, established, consult, and other.

The number of unique patients is determined for each location and for all the locations selected for the report. The sum of the uniques for each location will generally be larger than the total number of uniques because a patient may be counted as a unique in more than one location but will only be counted once for the entire facility.

Three visit totals are calculated. A visit is defined as any patient activity at a location in one day. Thus, a patient having multiple encounters at a location on one day will count as one visit. The three visit totals given are total visits, inpatient visits, and outpatient visits. The sum of the inpatient and outpatient visits will not be equal to the total visits if a patient had both an inpatient and outpatient visit on the same day.

For each selected encounter an attempt is made to find an associated appointment. This is done using the Outpatient Encounter file which provides a link between encounters and appointments. Purpose of Visit data is tabulated for each appointment that is found. Purpose of Visit includes the categories C&P, 10-10, scheduled, and unscheduled.
If there is an appointment without an associated encounter it will not be tabulated on this report. Cancelled and no-show appointments do not have an associated encounter so they cannot be included in this report. Even if they could, the information on cancelled and no-show appointments stored in Scheduling is not complete making it impossible to give accurate counts.

7.3.5. Diagnoses Ranked by Frequency

This report lists the most frequent diagnostic codes (ICD) and the most frequent diagnostic categories that were entered for PCE outpatient encounters in your facility. These are presented in inverted frequency sequence (most frequent on top).

You can modify this report to show very selective views by choosing the elements to be included. These selection criteria include:

- The maximum number of diagnosis entries to be displayed (e.g., top 50). If this is blank, then all of the diagnoses satisfying the selection criteria will be ranked.
- Primary diagnosis or all diagnoses related to outpatient encounters.
- A date range when the PCE outpatient encounters occurred.
- Service Category (A - Ambulatory, H - Hospitalization, I - In Hospital, T - Telecommunications, E - Event (Historical), D - Daily Hospitalization Data, X - Ancillary Package Daily Data).
- Clinic Stop Code.
- Provider.
- Age of Patient.
- Sex of Patient.

### 7.3.6. Location Encounter Counts

This report counts PCE outpatient encounters in a date range by location. The location selection can be based on facility, hospital location(s), or clinic stop(s). The report can be run for all hospital locations or clinic stops in a facility or selected hospital locations, or clinic stops.

Select PCE Clinical Reports Option: Location Encounter Counts

7.3.7. Provider Encounter Counts

This report lists provider counts related to PCE outpatient encounters. The selection criteria include facility, service category, encounter provided, and date range.

Person Class selection is based on the PERSON CLASS file, used to support Ambulatory Care Reporting. Person Class entries are composed of three pieces:

- Occupation (required in class definition)
- Specialty (optional)
- Sub-specialty (optional)
Once the selection criteria are chosen, the user can request a detailed or a summary report. The detailed report gives totals by date and hospital location (clinic) for each provider. The summary report lists total encounters for each provider. In patch PX*1*211 CPRS Teams were added as an additional way to select the providers to run the report on.

7.4. Key Concepts

- You can produce reports for Patient Activity by Location, Caseload Profile by Clinic, PCE Encounter Summary, Frequency of Diagnosis, Location Encounter Counts, and Provider Encounter Counts.

- All reports can be customized to show only specified date ranges, clinics, providers, types of encounters (cancelled, walk-ins, etc.), etc.

- The reports extract data from various files in VistA, including laboratory, pharmacy, and PIMS to create output reports which have been requested by physicians throughout the VA.

- Patient Activity by Location provides a measure of continuity of care. If a provider of record has his or her care-giving interrupted through clinical rotation, leave, reassignment, or for any other reason, this report may be used to get an update on patient activities in his/her caseload.

- PCE Encounter Summary provides a summary of clinic workload based on the evaluation and management codes associated with encounters.

7.5. Missing Data Report

The Missing Data Report (MDR) option is available from the PCE Coordinator menu. The MDR identifies CIDC data elements missing from PCE.

Who can use this report?

This report provides the HIMS (Health Information Management Systems) staff the ability to sort encounters missing CIDC data using a variety of specific data items. It allows the printing of two formats, statistics versus detail, in order to perform trending for possible follow-up with providers for education/training purposes.
**Note:** The MDR must be printed to a 132 column device in order to view the entire data set.

### 7.6. Accounting of Immunization Disclosures Report

The Accounting of Immunization Disclosures Report [PXV IMM DISCLOSURE REPORT] option is available from the PCE Coordinator Menu [PX PCE COORDINATOR MENU]. This option is used for generating a list of immunization administration records transmitted to external agencies. This option allows for a date range selection as well as one, multiple or all agencies and one, multiple or all patients. The list is sorted by disclosure date/time, agency, and then by patient.
Note: This report must be printed to a 132 column device in order to view the entire data set.

Select PCE Coordinator Menu Option: DIS <ENTER> Accounting Of Immunization Disclosures Report

BEGIN DATE: T-30 <ENTER> (MAY 23, 2016)

END DATE: TODAY//T <ENTER> (JUN 22, 2016)

8.0 Supplementary Material

8.1. Helpful Hints

The Automated Information Collection System (AICS) package includes a Print Manager that allows sites to define reports that should print along with the encounter forms. This can save considerable time preparing and collating reports for appointments. See the Automated Information Collection System User Manual for instructions.

You can add Health Summary, Problem List, and Progress Notes as actions to PCE, to allow quick access to these programs. When you press the [RETURN] key at the quit prompts (or up-arrow out), you are automatically returned to PCE.

Since problems can occur if you delete patients (the internal entry number of the file can be reassigned, causing discrepancies in the data), we recommend that you should NEVER delete any patients.

If you see zeroes instead of numbers on encounter dates (e.g., 00/00/95 or 01/00/96)—on reports or encounter displays—they are for Historical Encounters where the exact date is not known.

Shortcuts

After Diagnosis has been entered, if the Provider Narrative is an exact match, you can enter = and the diagnosis is duplicated.

The equals sign (=) can also be used as a shortcut when selecting an action plus encounters or appointments from a list in a single response (e.g., Select Action: ED=2).

To quickly add or edit encounter information, select an appointment number at the first appointment screen.

8.2. Frequently Asked Questions

Q: What is the 10/1/96 mandate and how does PCE fit into it?

A: The Veterans Health Administration has determined that it must have adequate, accurate, and timely information about each ambulatory care encounter/service provided in order to enhance patient care and to manage our health care resources into the future. Effective October 1, 1996, VHA facilities are required to report each ambulatory encounter and/or ancillary service. Provider, procedure, and diagnosis information is included in the minimum data set that will be reported to the National Patient Care Data Base (NPCDB). The Ambulatory Data Capture Project (ADCP) was formed to coordinate the various VistA packages involved in meeting this mandate.

Patient Care Encounter (PCE) ensures that every encounter has an associated provider(s), procedure code(s), and diagnostic code(s), in accordance with this mandate.
Software necessary to support ADCP:

- Automated Information Collection System (AICS) and other capture solutions
- Patient Care Encounter (including):
  - Visit Tracking v.2.0
  - Patch SD*5.3*27
  - Patch GMT*2.7*8
- Problem List
- Patient Information Management System
- National Patient Care Data Base.

Other Patches involved in the 10/1/96 mandate:

</tr>
</tbody>
</table>

Q. How does PCE collect and report on diagnosis and procedures that are checked off on the DIAGNOSIS and CPT PROCEDURE tool kit boxes on Encounter Forms?

A: Items that are checked off in the above mentioned tool kit boxes are validated and stored by PCE into PCE files and then shared with other subscribing packages such as Scheduling.

Two PCE Health Summary Components, Outpatient Diagnosis and Outpatient Encounter, display diagnosis and procedure information:

- The Outpatient Diagnosis Component displays the date of the encounter, the facility, the hospital location, the encounter eligibility, the provider(s), the diagnoses, ICD-9 or ICD-10 code, ICD-9 or ICD-10 text and Provider Narrative.
The Outpatient Encounter component displays all the information included in the Outpatient Diagnosis component plus the procedure(s), CPT code, short description and Provider Narrative.

If an immunization or skin test is collected by PCE through any of the four data collection interfaces PCE supports, data is stored in the procedure file and the Immunization or Skin Test file. Immunization or Skin Test information is included in the Outpatient Encounter component displays.

In addition, there are separate PCE Skin Test and Immunization components which only display information specific to Skin Tests and Immunizations. The Immunization component displays immunization, series, date, facility, and reaction. The Skin Test component displays skin test, reading, results, reading date, facility.

If you want to display Patient Education, Examinations, and Health Factor information using the PCE Health Summary components, check the specific EF tool kit boxes. Otherwise that information is to be entered manually either through AICS manual data entry or PCE manual data entry.

PCE also exports six clinical reports. Two of those reports display diagnosis data related to the numbers of patients associated with the identified diagnoses: Caseload Profile by Clinic and Diagnosis Ranked by Frequency.

Q: Explain how "Health Factors" in PCE and AICS are to be used and how this data may eventually be shared within a VISN. How are the level/severity modifiers (SEVERE, MOD and MIN) used in health factors when the health factors are not consistent with such quantification?

A: Here’s a little background. The Indian Health Service used the Health Factors originally. The HEAVY, MODERATE, MINIMUM SEVERITY modifiers can be used with a health factor if clinicians wish to define their factors in a manner that makes these modifiers useful. They do not have to be used where they do not make sense.

AICS allows encounter form designers to include health factors on their encounter forms, with or without these modifiers. The health factors that are checked off by clinicians can be captured via scanning and stored in the V Health Factor file.

The initial set of health factor entries was defined by Indian Health Service. Additional health factors, based on feedback from a supporting clinical team, and the Ambulatory Care EP were added as part of the original development of PCE.

The Health Summary package has a Health Factor component which shows the latest health factors for each health factor category. If modifiers were collected for the health factors, they would be displayed in this component.

The health factor information can be viewed as risk assessment or risk factor data which could provide useful information to guide the clinician as the care giver. For example, the PCE package includes a predefined clinical reminder for determining whether tobacco education needs to be given to the patient. The
Health factors distributed with PCE include the Health factor category of TOBACCO and within that category of health factors is a factor for "LIFETIME NON-SMOKER." If a clinician had a patient who never has smoked or used any form of tobacco, the reminder will not come up for the patient if the health factor for "LIFETIME NON-SMOKER" has been captured off the encounter form.
9.0 Device Interface Error Reports

The PCE Device Interface Error Report lets you look up PCE device interface errors by Error Number, Error Date and Time, Encounter Date and Time, or by Patient Name.

Select PCE Coordinator Menu Option: die PCE Device Interface Error Report

10.0 Glossary

**ADCP**: Ambulatory Data Capture Project. ADCP was formed to coordinate the various VistA packages involved in meeting this mandate. AICS Automated Information Collection System, formerly Integrated Billing, the program that makes Encounter Forms.

**Action**: A functional process that a clinician or clerk uses in the PCE computer program. For example, “Update Encounter” is an action that allows the user to pick an encounter and edit information that was previously entered (either through PCE or the PIMS Checkout process), or add new information (such as an immunization or patient education).

**Appointment**: A scheduled meeting with a provider or at a clinic; can include several encounters with other providers or clinics for tests, procedures, etc.

**Checkout Process**: Part of Medical Administration (the PIMS package), the checkout process can create appointments which are entered into the PCE component.

**Clinic**: An entry in the HOSPITAL LOCATION File #44 with a TYPE="C". Clinics must have stop codes in compliance with their restriction type. (See: Conforming Clinics; Non-conforming Clinics).

**Clinician**: A doctor or other provider in the medical center who is authorized to provide patient care.

**Conforming Clinics**: Clinics that have stop codes in compliance with their restriction types. Stop codes are used in accordance to their assigned restriction types. Stops codes with restriction type 'P' can only be used in the primary stop code position. Stop codes with restriction type 'S' can only be used in the secondary stop code position. Stop codes with restriction type 'E' can be used in either the primary or secondary stop code position.

**CPRS**: Computerized Patient Record System, a clinical record system which integrates many VistA packages to provide a common entry and data retrieval point for clinicians and other hospital personnel.

**CPT**: Common Procedure Terminology; a method for coding procedures a performed on a patient, for billing purposes.

**CSV**: Code Set Versioning is mandated under the Health Information Portability and Accountability Act (HIPAA). PCE uses the Lexicon APIs that support CSV, this allows users to select codes based upon a date that an event occurred with the Standards Development Organization (SDO)-established specific code that existed on that event date.

**Encounter**: Each patient meeting with a provider, during an appointment, by telephone, or as a walk-in. A patient can have multiple encounters for one appointment or during a single visit to a VAMC.

**Encounter Form**: A paper form used to display data pertaining to an outpatient visit and to collect additional data pertaining to that visit. The AICS package is automating encounter forms.
**Episode of Care:** Many encounters for the same problem can constitute an episode of care. An outpatient episode of care may be a single encounter or can encompass multiple encounters over a long period of time. The definition of an episode of care may be interpreted differently by different professional services even for the same problem. Therefore, the duration of an episode of care is dependent on the viewpoints of individuals delivering or reviewing the care provided.

**Health Summary:** A Health Summary is a clinically oriented, structured report that extracts many kinds of data from VistA and displays it in a standard format. The individual patient is the focus of health summaries, but health summaries can also be printed or displayed for groups of patients. The data displayed covers a wide range of health-related information such as demographic data, allergies, current active medical problems, laboratory results, etc.

**Indian Health Service (IHS):** IHS developed a computer program similar to VA’s VistA, which contains Patient Care Component (PCC) from which PCE and many of its components were derived.

**Inpatient Visit:** Inpatient encounters include the admission of a patient to a VAMC and any clinically significant change related to treatment of that patient. For example, a treating specialty change is clinically significant, whereas a bed switch is not. The clinically significant visits created throughout the inpatient stay would be related to the inpatient admission visit. If the patient is seen in an outpatient clinic while an Inpatient, this is treated as a separate encounter.

**Integrated Billing (IB):** A VistA package responsible for identifying billable episodes of care, creating bills, and tracking the whole billing process through to the passing of charges to Accounts Receivable (AR). Includes the Encounter Form utility.

**MCCR:** Medical Care Cost Recovery, a VistA entity which supports Integrated Billing and many data capture pilot projects related to PCE.

**Non-conforming Clinics:** Clinics with stop codes that do not comply with the assigned stop code restriction types of P=Primary, S=Secondary and E=Either.

**NPCDB:** National Patient Care Database, a database maintained in Austin which stores the minimum data set for all ambulatory care encounters.

**Occasion of Service:** A specified instance of an act of service involved in the care of a patient or consumer which is not an encounter. These occasions of service may be the result of an encounter; for example, tests or procedures ordered as part of an encounter. A patient may have multiple occasions of service per encounter or per visit.

**Outpatient Visit:** The visit of an outpatient to one or more units or facilities located in or directed by the provider maintaining the outpatient health care services (clinic, physician’s office, hospital/medical center) within one calendar day. Outpatient encounters include scheduled appointments and walk-in unscheduled visits. A clinician’s telephone communications with a patient may be represented by a separate visit entry.
**Person Class:** An enhancement to the New Person file, XU*8*27 NEW PERSON File Patch (8/5/96), which enables all VAMC providers to be assigned a Profession/Occupation code (Person Class) so that a Person Class can be associated with each ambulatory patient encounter by October 1, 1996.

**Procedure (CPT):** A test or action done for or to a patient that can be coded with the CPT coding process.

**Provider:** A person who furnishes health care to a consumer; such as a professionally licensed practitioner who is authorized to operate a health care delivery facility. This definition includes an individual or defined group of individuals who provide a defined unit of health care services (defined = codable) to one or more individuals at a single session.

**Standard Code:** There are a number of systems to classify and code medical terminology, examples include CPT (Current Procedural Terminology), ICD (International Classifications of Diseases), and SNOMED CT (Systemized Nomenclature of Medicine- Clinical Terms)

**Stop Code:** A three-digit number corresponding to an additional stop/service a patient received in conjunction with a clinic visit. Stop code entries are used so that medical facilities may receive credit for the services rendered during a patient visit.

**Visit:** Each encounter with a provider during a patient’s appointment; can also be a telephone call or a walk-in.

**Visit Tracking:** A VistA package which links patient-related information in a file structure that allows meaningful reporting and historically accurate categorization of patient events and episodes of care. It was originally a separate package but was made part of PCE by patch PX*1*76.

**VistA:** Veterans Information System Technology Architecture.
