1. Introduction
This document provides installation instructions for Clinical Ancillary Services (CAS) Development Delivery of Pharmacy enhancements (DDPE) Inpatient Medications Administration – Transdermal patches.

2. System Requirements
The following table lists the software elements for Inpatient Medications.

2.1. Pre-Installation
The associated patches are the following and should be installed in the following order:

- PSS*1*191
- PSJ*5*315
- PSB*3*83
- OR*3*417
- PSB*3*87 (BCBU)
*** WARNING FOR ALL SITES CURRENTLY USING WMA ***
(Wireless Medication Administration)
From CareFusion

The below 15 VAMC sites should not install patch PSB*3*83 until the site has confirmed they have received CareFusion's software update:

Pyxis Med Administration Verification VA v. 5.1

Bay Pines, FL
Boise, ID
Bonham, TX
Brockton, MA
Dallas, TX
Danville, IL
Kerrville, TX
Little Rock, AR
Loma Linda, CA
Marion, IN
Pittsburgh, PA
Pittsburgh, PA-Heinz
San Antonio, TX
Topeka, KS
West Roxbury, MA

Installation of BCMA Patch PSB*3.0*83 may cause your WMA application to stop functioning as you would expect it to. In order for the WMA devices to work properly with PSB*3.0*83 installed, you must contact CareFusion, the WMA vendor, to obtain the most current version of the WMA software.

2.2. Patch Installations

The scope of this project, as defined by the PWS, is as follows:

1. The Clinical Ancillary Services Development – Delivery of Pharmacy Enhancements (CAS DDPE) Inpatient Medications Administration – Transdermal project provides a solution to address the errors in transdermal medication administration processes that have led to adverse patient events. The following features related to transdermal medications are needed by the business to avert these errors in the future by implementing the following capabilities within Inpatient Medications Administration/VistA:
   a. Create a mechanism to remind the user to “follow-up” on certain medications requiring additional steps in administration or assessment, e.g., alert the user to remove a transdermal medication at a specified time.
b. Ensure previous statuses of multi-step medications appear in the Medication Administration History reports, e.g., the date and time a transdermal medication was applied or an intravenous fluid marked ‘infusing’ will remain visible after it has been marked ‘removed’ or ‘completed’, respectively.

c. Enhance the current mechanism used to document and display the anatomic location of injectable medications to support transdermal medications. Implementation includes changing the terminology of “Injection site” throughout the applications including Inpatient Medication Administration and VistA. Any field names used to store or refer to “location” data within VistA shall be evaluated as to whether or not the terminology needs to be changed. For example, if the field in VistA is named “IV Location,” the name of the field is changed to simply “Location” so that when data from the field are pulled into reports, the field name will adequately reflect the updated contents.

d. A change to any order involving a transdermal medication forces a misleading “remove patch” alert to appear. The Contractor shall change the software to differentiate between a change and a discontinued order and display an appropriate, corresponding alert.

2.2.1. Installation Instructions Overview

******************************************************************************* ATTENTION *************************************************************
Clinical Ancillary Services (CAS) Development-Delivery of Pharmacy Enhancements (DDPE) VA Inpatient Medication Administration - Transdermal enhancement includes 5 patches, which must be installed in the following order:

1. PSS*1*191
2. PSJ*5*315
3. PSB*3*83
4. OR*3*417
5. PSB*3*87

ATTENTION: This enhancement also includes a new Graphical User Interface (GUI) executable, BCMA GUI PSB3_P083.EXE. Installation of this GUI is required immediately after the KIDS install for the Patch to function.

For retrieval and installation instructions, please see the Client Installation Instructions section.
*******************************************************************************

2.2.2. Installing PSS*1*191

Software being released as a host file and/or documentation describing the new functionality introduced by this patch are available, as follows.
The preferred method is to retrieve files from download.vista.med.va.gov. This transmits the files from the first available server. Sites may also elect to retrieve files directly from a specific server.

Sites may retrieve the software and/or documentation directly using Secure File Transfer Protocol (SFTP) from the ANONYMOUS.SOFTWARE directory at the following OI Field Offices:

- Albany: fo-albany.med.va.gov
- Hines: fo-hines.med.va.gov
- Salt Lake City: fo-slc.med.va.gov

The following documentation should be available at these sites:

- PHARMACY DATA MANAGEMENT RELEASE NOTES
  pss_1_p191_rn.pdf Binary

- PHARMACY DATA MANAGEMENT TECHNICAL MANUAL/SECURITY GUIDE
  pss_1_tm_r0316_Inpatient_Medications_Transdermal.pdf Binary

- PHARMACY DATA MANAGEMENT USER MANUAL
  pss_1_um_r0316_Inpatient_Medications_Transdermal_.pdf Binary

**Patch Installation:**

**Pre/Post-Installation Overview:**
A post-installation routine PSS1P191 will run with this install and will be automatically deleted after installation. A second post-installation routine PSSP191A may be deleted after install, but will not delete automatically.

**Pre-Installation Instructions:**
This patch may be installed with users on the system, although it is recommended that it be installed during non-peak hours to minimize potential disruption to users. This patch should take less than 5 minutes to install.
Installation Instructions:

1. Choose the PackMan message containing this patch.

2. Choose the INSTALL/CHECK MESSAGE PackMan option.

3. From the Kernel Installation and Distribution System Menu, select the Installation Menu. From this menu, you may elect to use the following options. When prompted for the INSTALL NAME, enter the patch PSS*1.0*191:
   a. Backup a Transport Global - This option will create a backup message of any routines exported with this patch. It will not backup any other changes such as DDs or templates.
   b. Compare Transport Global to Current System - This option will allow you to view all changes that will be made when this patch is installed. It compares all components of this patch (routines, DDs, templates, etc.).
   c. Verify Checksums in Transport Global - This option will allow you to ensure the integrity of the routines that are in the transport global.

4. From the Installation Menu, select the Install Package(s) option and choose patch PSS*1.0*191 to install.

5. When prompted “Want KIDS to Rebuild Menu Trees Upon Completion of Install? NO//,” Respond Yes

6. When prompted “Want KIDS to INHIBIT LOGONs during the install? NO//,” Respond No

7. When prompted “Want to DISABLE Scheduled Options, Menu Options, and Protocols? NO//,” Respond No

Post-Installation Instructions
Check installing users email account. The post-install routine PSS1P191 will provide a list of Orderable Items that were updated during this process. This message will also be sent to all users holding the PSJI MGR and PSJU MGR keys. The update will note which Orderable Items with a Dosage Form that contains the word "PATCH" will be updated to a Prompt For Removal in BCMA value of 1 in order to preserve legacy behavior. The routine PSS1P191 will be deleted after installation.

The post-install via routine PSSP191A will also provide a list of orders tied to users holding the keys PSJ RPH and PSJU RPHARM in addition to the MGR keys. These Orderable Items indicate the approximate number of orders that will eventually need to be discontinued and re-created when the PSJ*5.0*315 patch is finally installed. No action should be taken on these orders until patch PSJ*5.0*315 is installed.
Another version of this report will be available on the Pharmacy Data Management [PSS MGR] menu. The routine PSSP191A should be deleted after the install. The recommendation is to edit the Orderable Items for Medications that Require Removal and set the appropriate value for the field Prompt for Removal in BCMA (#12). The new report installed on the Orderable Item Management [PSS ORDERABLE ITEM MANAGEMENT] menu will aid this process. Once this is done, a more accurate representation will be available of the number and type of orders that will need to be addressed upon install of PSJ*5.0*315.

**Example of PSS*1*191 Installation**

1. Load a Distribution
2. Verify Checksums in Transport Global
3. Print Transport Global
4. Compare Transport Global to Current System
5. Backup a Transport Global
6. Install Package(s)
   Restart Install of Package(s)
7. Unload a Distribution

Select Installation <TEST ACCOUNT> Option: 6 Install Package(s)

Software being released as a host file and/or documentation describing the new functionality introduced by this patch are available as follows. The preferred method is to retrieve files from download.vista.med.va.gov. This transmits the files from the first available server. Sites may also elect to retrieve files directly from a specific server.

Sites may retrieve the software and/or documentation directly using Secure File Transfer Protocol (SFTP) from the ANONYMOUS.SOFTWARE directory at the following OI Field Offices:

- Albany: fo-albany.med.va.gov
- Hines: fo-hines.med.va.gov
- Salt Lake City: fo-slc.med.va.gov

The following documentation should be available at these sites:

- INPATIENT MEDICATIONS NURSE'S USER MANUAL
  psj_5_nurse_um_r0416.pdf Binary

- INPATIENT MEDICATIONS PHARMACIST'S USER MANUAL
  psj_5_phar_um_r0416.pdf Binary

- INPATIENT MEDICATIONS TECHNICAL MANUAL/ SECURITY GUIDE
  psj_5_tm_r0416.pdf Binary

Patch Installation:

Pre/Post-Installation Overview:
A post-installation routine PSJ15P315 will run with this install and will be automatically deleted after installation.

Pre-Installation Instructions:
This patch may be installed with users on the system, although it is recommended that it be installed during non-peak hours to minimize potential disruption to users. This patch should take less than five minutes to install. Patch PSS*1.0*191 is required to install this patch.

Installation Instructions:

1. Choose the PackMan message containing this patch PSJ*5.0*315.

2. Choose the INSTALL/CHECK MESSAGE PackMan option.

3. From the Kernel Installation and Distribution System Menu, select the Installation Menu. From this menu, you may elect to use the following options. When prompted for the INSTALL NAME enter the patch PSJ*5.0*315:
   a. Backup a Transport Global - This option will create a backup message of any routines exported with this patch. It will not
backup any other changes such as DDs or templates.

b. Compare Transport Global to Current System - This option will allow you to view all changes that will be made when this patch is installed. It compares all components of this patch (routines, DDs, templates, etc.).

c. Verify Checksums in Transport Global - This option will allow you to ensure the integrity of the routines that are in the transport global.

4. From the Installation Menu, select the Install Package(s) option and choose the patch to install.

5. When prompted “Want KIDS to INHIBIT LOGONs during the install? NO///,” respond Yes

6. When prompted “Want to DISABLE Scheduled Options, Menu Options, and Protocols? NO///,” respond No

Post-Installation Instructions:
Post-install routine QUE^PSJ5P315 checks for active MRR orders generated for Inpatient Medications and creates a report. This report will show orders that have been created for Orderable items with the "Prompt for removal in BCMA" value set to 1 or greater, but do not have the new File 55 fields containing removal information. This indicates that the orders are legacy orders and must be cancelled and re-ordered after the install of PSJ*5*315. This process is needed because, although the BCMA GUI application can display legacy orders as well as the new format, the combination of both displaying simultaneously on the same patient may cause confusion and should be avoided.

This report will be sent to all Pharmacists holding the keys PSJ RPH and PSJU RPHARM as well as the PSS MGR keys and can also be called manually from the PSS MGR menu using the "Orders for MRRs With Removal Properties" option.

Example of PSJ*5*315 Installation

1. Load a Distribution
2. Verify Checksums in Transport Global
3. Print Transport Global
4. Compare Transport Global to Current System
5. Backup a Transport Global
6. Install Package(s)
   Restart Install of Package(s)
   Unload a Distribution

2.2.4. Installing PSB*3*83

The software being released and/or documentation that describes the new functionality introduced by this patch are available from the below sites.

The preferred method is to retrieve files from download.vista.med.va.gov. This transmits the files from the first available server. Sites may also elect to retrieve files directly from a specific server.

Sites may retrieve the software and/or documentation directly using Secure File Transfer Protocol (SFTP) from the ANONYMOUS.SOFTWARE directory at the following OI Field Offices:

- Albany: fo-albany.med.va.gov
- Hines: fo-hines.med.va.gov
- Salt Lake City: fo-slc.med.va.gov

Patch Installation:

Pre-Installation Instructions:

**IMPORTANT** Inpatient menu options listed in the Installation Instructions section should be exited by all users prior to the install of the patches listed at the top of this Patch Description. Also, these menu options should be disabled during these installs.

This patch may be installed with users on the system, although it is recommended that it be installed during non-peak hours to minimize potential disruption to users. This patch should take less than 5 minutes to install.

Installation Instructions:

Client Installation Instructions:

The software distribution includes these modified files:

<table>
<thead>
<tr>
<th>FILE NAME</th>
<th>DESCRIPTION</th>
<th>FILE VERSION</th>
<th>BYTES</th>
<th>FTP MODE</th>
</tr>
</thead>
<tbody>
<tr>
<td>BCMA.CHM</td>
<td>Client help file</td>
<td></td>
<td>1,192 KB</td>
<td>binary</td>
</tr>
<tr>
<td>BCMA.EXE</td>
<td>Client</td>
<td>3.0.83.42</td>
<td>3,112 KB</td>
<td>binary</td>
</tr>
<tr>
<td>BCMAPar.CHM</td>
<td>Parameters Client help</td>
<td></td>
<td>376 KB</td>
<td>binary</td>
</tr>
<tr>
<td>BCMAPar.EXE</td>
<td>Parameters Client</td>
<td>3.0.83.13</td>
<td>1,676 KB</td>
<td>binary</td>
</tr>
</tbody>
</table>

1. Prior client compatible with patch: NO
2. Client can be copied instead of installed: YES
3. Is your site running the CareFusion Wireless Medication Administration (WMA) software? If YES, please contact CareFusion to ensure your site has the latest compatible WMA patch.
If BCMA is currently running, please exit BCMA. This client installation patch file can be used to 
upgrade an existing version of BCMA, or can be used for a brand new installation.

1. Double Click on PSB3_0P83.EXE, which will launch the InstallShield Wizard.

2. When the “InstallShield Wizard Welcome” screen is displayed, click "Next".

3. On the “Choose Destination Location” screen, simply click "Next"

4. If you would like to change the destination folder to one other than default, click 
"Browse" to navigate to the folder of your choice. Click "Next".

5. On the "Setup Type" screen, select one of the following options:
   a. Typical - installs only the BCMA client program, which is necessary for medication administration.
   b. Complete - installs the BCMA client and the GUI BCMA site parameters definition program.
   c. Custom - allows you to select which programs to install. Typical is selected by default. Click "Next."

6. The “InstallShield Wizard Ready to Install the Program” screen will display. Click 
"Install" to proceed with the installation.

7. The “InstallShield Wizard Complete” screen will be displayed.

8. Click "Finish" and the BCMA installation is now complete.

Vista Patch Install Instructions

1. Choose the PackMan message containing this patch.

2. Choose the INSTALL/CHECK MESSAGE PackMan option.

3. From the Kernel Installation and Distribution System Menu, select the Installation Menu. 
From this menu, you may elect to use the following options. When prompted for the 
INSTALL NAME, enter PSB*3.0*83.

   a. Backup a Transport Global - This option will create a backup 
      message of any routines exported with this patch. It will not 
      backup any other changes such as DDs or templates.
   b. Compare Transport Global to Current System - This option will 
      allow you to view all changes that will be made when this patch 
      is installed. It compares all components of this patch 
      (routines, DDs, templates, etc.).
   c. Verify Checksums in Transport Global - This option will allow 
      you to ensure the integrity of the routines that are in the
transport global.

1. From the Installation Menu, select the Install Package(s) option and enter the patch PSB*3.0*83.

2. When prompted "Want KIDS to Rebuild Menu Trees Upon Completion of Install? NO//," respond NO.

3. When prompted "Want KIDS to INHIBIT LOGONs during the install? NO//," respond NO.

4. When prompted "Want to DISABLE Scheduled Options, Menu Options, and Protocols? YES//," respond YES.

5. Disable the below menu option:
   a. PSJ OE.

6. If prompted "Delay Install (Minutes): (0 - 60): 0//," respond 0.

Post-Installation Instructions:

**Important**
Before running BCMA in a division, the user should run BCMA Site Parameters program. Specifically:
- Start BCMA Parameters client
- Menu File | Open
- Select Division
- The program will silently load the body chart background image to VistA for this Division. This image will be used by BCMA when the user is in the Dermal Site Needed / Injection Site Needed window and clicks Select from Body Diagram.

After these steps are completed, the user can run BCMA in that division.

2.2.5. Installing OR*3*417

The change made by OR*3*417 is in support of requirements for patch PSB*3.0*83. All the patches in this group should be installed prior to patch OR*3.0*417.

The change will add a line to the Order Details report and the Medication Administration History Report in the Computerized Patient Record System (CPRS). These reports will display the Removal times for Medications that Require Removal (MRRs).

Documentation and Software Retrieval Instructions:
Updated documentation describing the new functionality and installation instructions introduced by this patch are available.

Files can be obtained from the ANONYMOUS.SOFTWARE directory at one of the OI Field Offices. The preferred method is to retrieve the file using Secure File Transfer Protocol (SFTP) from DOWNLOAD.VISTA.MED.VA.GOV, which will transmit the file from the first available server. Alternatively, sites may elect to retrieve the file from a specific OI Field Office.

</tbody>
</table>

Documentation can also be found on the VA Software Documentation Library at: http://www4.va.gov/vdl/

Patch Installation:

Pre/Post Installation Overview:

Pre-Installation Instructions:
This patch may be installed with users on the system, although it is recommended that it be installed during non-peak hours to minimize potential disruption to users. This patch should take less than 5 minutes to install. Patches PSS*1.0*191, PSJ*5.0*315 and PSB*3.0*83 should all be installed in listed order prior to install of OR*3.0*417. Patch PSB*3.0*87 is an optional patch for Barcode Medication Administration Backup sites.

Installation Instructions:

1. Choose the PackMan message containing this patch.

2. Choose the INSTALL/CHECK MESSAGE PackMan option.
3. From the Kernel Installation and Distribution System Menu, select the Installation Menu. From this menu, you may elect to use the following options. When prompted for the INSTALL NAME enter the patch OR*3.0*417:
   a. Backup a Transport Global - This option will create a backup message of any routines exported with this patch. It will not backup any other changes such as DDs or templates.
   b. Compare Transport Global to Current System - This option will allow you to view all changes that will be made when this patch is installed. It compares all components of this patch (routines, DDs, templates, etc.).
   c. Verify Checksums in Transport Global - This option will allow you to ensure the integrity of the routines that are in the transport global.

4. From the Installation Menu, select the Install Package(s) option and choose the patch to install.

5. If prompted "Want KIDS to INHIBIT LOGONs during the install? NO/", Respond "No"

6. If prompted "Want to DISABLE Scheduled Options, Menu Options, and Protocols? NO/", Respond "No"

7. If prompted "Delay Install (Minutes): (0 - 60): 0/", Respond "0"

Post-Installation Instructions:
There are no installation routines with this patch. No further action required.

Routine Information:
The second line of each of these routines now looks like:

```
;;3.0;ORDER ENTRY/RESULTS REPORTING;**[Patch List]**;Dec 17, 1997;Build 10
```

The checksums below are new checksums, and can be checked with CHECK1^XTSUMBLD.

Routine Name: ORQ21
   Before: B35534512   After: B37800373  **141,190,195,215,243,361,350,417**

Routine list of preceding patches: 350

2.2.6. Installing PSB*3*87 (BCBU)

The software being released as a host file introduced by this patch is available from the below sites.

The preferred method is to retrieve files from download.vista.med.va.gov. This transmits the files from the first available server. Sites may also elect to retrieve files directly from a specific server.
Sites may retrieve the software and/or documentation directly using Secure File Transfer Protocol (SFTP) from the ANONYMOUS.SOFTWARE directory at the following OI Field Offices when patch is released.

Albany: fo-albany.med.va.gov
Hines: fo-hines.med.va.gov
Salt Lake City: fo-slc.med.va.gov

Prior to release, this KIDS host file build will be located on the ANONYMOUS.PUB directory at the Albany OI Field Office.

The KIDS build is distributed by the host file named:

PSB_3_87.KID

Patch Installation:

Pre-Installation Instructions:

Installation Instructions:
Do not queue this patch to install at a later time nor install this patch while BCMA users are on the system. Installation will take no longer than five minutes.

Suggested time to install: non-peak requirement hours.

1. From the Kernel Installation & Distribution System menu, select the LOAD DISTRIBUTION option and load the host file PSB_3_87.KID

2. From the Kernel Installation & Distribution System Menu, select the INSTALLATION Menu. From this menu, you may elect to use the following options. When prompted for the INSTALL NAME, enter PSB*3*87.
   a. Verify Checksums in Transport Global - This option will allow you to ensure the integrity of the routines that are in the transport global.
   b. Print Transport Global - This option will allow you to view the components of the KIDS build.
   c. Compare Transport Global to Current System - This option will allow you to view all changes that will be made when this patch is installed. It compares all components of this patch (routines, DD's, templates, etc.).
   d. Backup a Transport Global - This option will create a backup message of any routines exported with this patch. It will not backup any other changes such as DD's or templates.

3. Use the Install Package(s) option and select the package PSB*3.0*87.
4. When prompted “Want KIDS to Rebuild Menu Trees Upon Completion of Install? NO/,” respond NO.

5. When prompted "Want KIDS to INHIBIT LOGONs during the install? NO/," respond NO.

6. When prompted "Want to DISABLE Scheduled Options, Menu Options, and Protocols? NO/," respond NO.

**Post-Installation Instructions**

It is recommended that the backup system workstations be re-initialized after the install of this patch. It is also recommended to limit the number of workstations being initialized to no more than 4 at a time, so as to limit the impact to your network’s speed.

Use one of the below VistA menu options, depending on your Site’s configuration, for the BCMA Backup System.

<table>
<thead>
<tr>
<th>Select OPTION NAME:</th>
<th>PSB BCBU VISTA MAIN</th>
<th>BCMA Backup System (VISTA)</th>
</tr>
</thead>
<tbody>
<tr>
<td>PSB BCBU VISTA MAIN BCMA Backup System (VISTA)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>DFT</td>
<td>Default Workstation Initialize</td>
<td></td>
</tr>
<tr>
<td>DIV</td>
<td>Divisional Workstation Initialize</td>
<td></td>
</tr>
<tr>
<td>USR</td>
<td>Initialize a Backup Workstation with BCMA Users</td>
<td></td>
</tr>
</tbody>
</table>

2.8. Database Tuning

N/A

3. Implementation

Implementation steps and procedures were described above by installing the patches in the order referenced and following each patches specific installation instructions.

Important reminders:

The post install mailman messages sent by patch PSS*1*191 point to Orderable items that need file maintenance prior to implementing the full functionality of this project.

The post install mailman message sent by PSJ *5*315 post install also lists Orders that need to be re-entered to work correctly with the new functionality in BCMA Client.

4. Backout Procedure

Backout pertains to a return to the last known good operational state of the software and appropriate platform settings.

4.1. Backout Strategy

See section 4.6.

4.2. Backout Considerations

4.3. User Acceptance Testing

User Acceptance Testing is in progress.

4.4. Backout Criteria

The project is canceled and the implemented features are no longer wanted by the stakeholders.

4.5. Authority for Backout

The authority would come from the IPT and the VA project manager.

4.6. Automated Backout Steps

The normal recommended process for backout is an automated process to enforce section 4.4 Backout Criteria requirements.

In the event that a backout of code was needed for all Transdermal patches, a patch would be developed to remove all components added by patches PSS*1*191, PSJ*5*315, PSB*3*83 and PSB*3*87. This patch would restore existing routines to their prior state.
The following components would be backed out by the new patch:

### Menu Options:

<table>

4.7. Manual Backout Steps for PSB*3*83 and PSB*3*87

If Class 3 GUI software (Pyxis Med Administration Verification VA v. 5.1) updates are not available at National Release for PSB*3*83 and PSB*3*87 and if sites running Wireless Medication Administration (WMA) software inadvertently install PSB*3*83 and PSB*3*87, please follow the steps in the below process documents:

Note: in the .pdf version of this document, click the attachments icon (paperclip) at the top left of the navigation pane in Adobe Reader to view these attachments.
5. Rollback Procedure

Rollback pertains to data and elements other than routines.

5.1. Rollback Considerations

A follow-up patch for each namespace would be needed to delete/modify that namespace’s data dictionary entries that were added/modified and other non-routine components added/modified by this project’s patches and would follow the basic logic flow below.

Logic flow using FileMan API calls as much as possible for the below actions

1. New data fields would need to be erased that were likely populated by the new functionality, while the new data fields are still valid in the data dictionary.
2. New file cross references would now need to be deleted.
3. New fields need to be deleted out of the data dictionary.
4. Modified data dictionary fields would need to be restored.
5. Existing REMOTE PROCEDURE file (#8994) entries would need to be restored while new file entries would need to be deleted from the site.
6. Existing PROTOCOL file (#101) entries would need to be restored while new file entries would be deleted from the site.
7. Existing OPTION file (#19) entries would need to be restored while new file entries would be deleted from the site.
8. Existing PARAMETERS file (#8989.5) entries would need to be restored while new file entries would be erased and then deleted from the Kernel Parameter Definition file at the site.
9. Existing PARAMETER DEFINITION file (#8989.51) entries would need to be restored while new file entries would be erased and then deleted from the PARAMETER DEFINITION file at the site.
10. Existing PARAMETER TEMPLATE file (#8989.52) entries would need to be restored.

Note: These new data entries are the result of a new field added to the data dictionary or the modification of an existing field in the data dictionary.

5.2. Rollback Criteria

The back-out of INPATIENT MEDICATION ADMINISTRATION - TRANSDERMAL patches that modified existing fields, and established new fields would be justification for rollback.

5.3. Rollback Risks

None

5.4. Authority for Rollback

The authority would come from the IPT and the VA project manager.
5.5. Rollback Procedure
See section 5.1.
