## Revision History

Each time this manual is updated, the Title Page lists the new revised date and this page describes the changes. If the Revised Pages column lists “All,” replace the existing manual with the reissued manual. If the Revised Pages column lists individual entries (e.g., 25, 32), either update the existing manual with the Change Pages Document or print the entire new manual.

**File Descriptions**

This package requires the files listed below. Information about the files can be obtained by using the VA FileMan to generate a list of file attributes.

The Data Dictionaries (DDs) are considered part of the online documentation for this software application. Use the VA FileMan List File Attributes [DILIST] option, under the Data Dictionary Utilities [DI DDU] option, to view/print the DDs.

Exported Options

Stand-Alone Options
The following is a list of all stand-alone options that are NOT exported as part of the main PDM menu [PSS MGR]:

- Other Language Translation Setup
  [PSS OTHER LANGUAGE SETUP]

- Drug Inquiry (IV)
  [PSSJI DRUG INQUIRY]

- Electrolyte File (IV)
  [PSSJI ELECTROLYTE FILE]

- Enable/Disable Vendor Database Link
  [PSS ENABLE/DISABLE DB LINK]

- Add Default Med Route
  [PSS ADD DEFAULT MED ROUTE]

- Find Unmapped Local Possible Dosages
  [PSS LOCAL DOSAGES EDIT ALL]

The Enable/Disable Vendor Database Link option exists ONLY as a way for technical personnel to turn on/off the database connection if required for debugging. Normally, it is enabled and the Vendor Database updates are performed centrally on the MOCHA Servers, not at the individual sites. It is NOT exported as part of the main PDM menu [PSS MGR].

In the rare case where this option is used and the database link is disabled, NO drug-drug interaction, duplicate therapy, or dosing order checks will be performed in Pharmacy or in the Computerized Patient Record System (CPRS).
Protocols

NAME: PSS EXT MFU CLIENT  
DESCRIPTION:  This protocol will be used as the ACK from the external interface for a MFN_M01 message.

NAME: PSS EXT MFU SERVER  
DESCRIPTION:  This protocol will be used to send event notification and data when new drugs are added to the DRUG file (#50) and when certain fields are updated in the same file. This information will be sent to the automated dispensing machines through HL7 V.2.4 formatted messages.

NAME: PSS HUI DRUG UPDATE  
DESCRIPTION:  This protocol will be used to send event notification and data when new drugs are added to the Drug file (#50) and when certain fields are updated in same file.

NAME: PSS MED ROUTE RECEIVE  
DESCRIPTION:  This protocol processes updates to the Standard Medication Routes (#51.23) File.

HL7 Messaging with an External System

A protocol, PSS HUI DRUG UPDATE, is exported and has been created to generate HL7 messages when new drugs are added to the DRUG file (#50) and existing entries are updated. This protocol is exported with the text “DELETE ONLY TO SEND DRUG UPDATE MESSAGES” in the DISABLE field (#2) of the PROTOCOL file (#101). To activate the sending of these HL7 messages, the text from the DISABLE field (#2) of the PROTOCOL file (#101) must be deleted and at least one receiving protocol added as a subscriber. The drug data elements included in the HL7 message are defined in the following HL7 Drug Message Segment Definition table.
### HL7 Drug Message Segment Definition Table

When the PSS HUI DRUG UPDATE protocol is enabled, the following table defines the data elements sent in each segment of the HL7 drug message.
