### Revision History

Each time this manual is updated, the Title Page lists the new revised date and this page describes the changes. If the Revised Pages column lists “All,” replace the existing manual with the reissued manual. If the Revised Pages column lists individual entries (e.g., 25, 32), either update the existing manual with the Change Pages Document or print the entire new manual.

(This page included for two-sided copying.)
### Intervention Menu
Displays, allows actions to be taken on orders where interventions are required or suggested.

### Patient Profiles
Displays the Patient Profile Menu

### Inpatient Medications Profile
Generates an Inpatient Profile for a patient

### IV Medications Profile
Generates an IV Profile for a patient

### Unit Dose Medications Profile
Generates a Unit Dose Profile for a patient

### Outpatient Prescriptions
Generates an Outpatient Profile for a patient

### Action Profile #1
Generates an Action Profile #1

### Action Profile #2
Generates an Action Profile #2

### Patient Profile (Extended)
Generates an Extended Patient Profile

### CWAD Information
Displays the crises, warnings, allergies, and directives information on a patient

### Hidden Actions
The Intervention menu hidden action is available to the Medication Profile and Detailed Order List Manager screens when utilizing the following options:
- *Inpatient Order Entry* [PSJ OE]
- *Non-Verified/Pending Orders* [PSJU VBW]
- *Order Entry* [PSJU NE]
- *Order Entry (IV)* [PSJI ORDER]

### Unit Dose Order Entry Profile Actions
The following actions are available while in the Unit Dose Order Entry Profile.

#### Speed Discontinue
- **Synonym**: DC
- **Description**: Speed discontinue one or more orders (This is also available in the *Inpatient Order Entry* and *Order Entry (IV)* options.)

#### Speed Renew
- **Synonym**: RN
- **Description**: Speed renewal of one or more orders

#### Speed Finish
- **Synonym**: SF
- **Description**: Speed finish one or more orders

#### Speed Verify
- **Synonym**: SV
- **Description**: Speed verify one or more orders

### Order Entry Actions
The following actions are available while viewing an order.

#### Copy an order
- **Synonym**: CO
- **Description**: Allows the user to copy an active, discontinued, or expired Unit Dose order

#### Drug Restriction/Guideline Information
- **Synonym**: DIN
- **Description**: Displays the Drug Restriction/Guideline Information for both the Orderable Item and Dispense Drug

#### Mark Incomplete
- **Synonym**: I
- **Description**: Allows the user to mark a Non-Verified Pending order incomplete

#### Jump to a Patient
- **Synonym**: JP
- **Description**: Allows the user to begin processing another patient

#### Mark Not to be Given
- **Synonym**: N
- **Description**: Allows the user to mark a discontinued or expired order as not to be given
(This page included for two-sided copying.)
The next example shows the Ward Group Sort option ^OTHER that lists patients for whom orders are available for processing.

**Example: Ward Group Sort option ^OTHER**

1) Unit Dose Orders  
2) IV Orders

Select Package(s) (1-2): 1-2  
Select by GROUP (G), WARD (W), CLINIC (C), or PATIENT (P): GROUP <Enter>  
Select by WARD GROUP (W) or CLINIC GROUP (C): WARD <Enter>  
Select WARD GROUP: ^OTHER <Enter>

Select 1 - 4: 1  
Do you want to print a profile for the patient? NO//YES <Enter>  
SHORT, LONG, or NO Profile? SHORT// <Enter> SHORT

**Example: After selecting a patient:**

```
INPATIENT MEDICATIONS 03/05/10 13:56
VAMC: CAMP MASTER (500)

EIGHT, INPATIENT  Ward: 7A GEN MED
DOB: 03/09/45 (64)  Room-Bed: 726-B  Ht(cm): ______ (_______)
Sex: MALE  Wt(kg): ______ (_______)
Admitted: 01/05/09  Dx: stress
Dx: stress  Allergies: No Allergy Assessment
ADR:

1  MULTIVITAMINS 2 ML  C 02/25 03/27 H  
in 0.9% SODIUM CHLORIDE 100 ML QID

2  CEFAZOLIN INJ  ? ***** ***** N  
Give: 1GM/1VIAL IVPB 3ID
```

**Example: After selection, an order (if selected):**

```
Patient: EIGHT, INPATIENT  Status: HOLD
*(1) Additives:  Order number: 1  Type: PIGGYBACK
   MULTIVITAMINS 2 ML
*(2) Solutions:  Duration: *(4)  Start: 02/25/10 18:51
   0.9% SODIUM CHLORIDE 100 ML
*(3) Infusion Rate: INFUSE OVER 125 MINUTES  *(5)  Stop: 03/27/10 23:59
   Med Route: IV
```
After selecting a patient or an order, a profile prompt is displayed asking the pharmacist to choose a profile for the patient. The pharmacist can choose a short, long, or no profile. If NO profile is chosen, the orders for the patient selected will be displayed, for finishing or verification, by login date with the earliest date showing first. When a Unit Dose order has a STAT priority, this order will always be displayed first in the order view and will be displayed in blinking reverse video. If a profile is chosen, the orders will be selected from this list for processing (any order may be selected). The following example displays a short profile.

Example: Short Profile

Non-Verified/Pending Orders  Feb 28, 2002@13:41:21  Page:  1 of  3

PI  Patient Information     SO  Select Order
PU  Patient Record Update   NO  New Order Entry
Select Action: Quit//

The pharmacist can enter a Patient Action at the “Select Action: Quit//” prompt in the Action Area of the screen or choose a specific order or orders.

When the pharmacist holds the PSJ RPHARM key, it will be possible to take any available actions on selected Unit Dose or IV orders.
4.1.3. Inpatient Order Entry
[PSJ OE]

The Inpatient Order Entry option allows the pharmacist to create, edit, renew, hold, and discontinue Unit Dose and IV orders, as well as put existing IV orders on call for any patient, while remaining in the Unit Dose Medications module.

When the user accesses the Inpatient Order Entry option from the Unit Dose Medications module for the first time within a session, a prompt is displayed to select the IV room in which to enter orders. When only one active IV room exists, the system will automatically select that IV room. The user is then given the label and report devices defined for the IV room chosen. If no devices have been defined, the user will be given the opportunity to choose them. If this option is exited and then re-entered within the same session, the current label and report devices are shown. The following example shows the option re-entered during the same session.

Example: Inpatient Order Entry

You are signed on under the BIRMINGHAM ISC IV ROOM
Current IV LABEL device is: NT TELNET TERMINAL
Current IV REPORT device is: NT TELNET TERMINAL
Select PATIENT: PSJPATIENT1

At the “Select PATIENT:” prompt, the user can enter the patient’s name or enter the first letter of the patient’s last name and the last four digits of the patient’s social security number (e.g., P0001). The Patient Information Screen is displayed:

Example: Patient Information Screen

PSOPATIENT,TWO           Ward: W5BI      A

Select Action: Quit//

The pharmacist can now enter a Patient Action at the “Select Action: View Profile//” prompt in the Action Area of the screen.
4.1.4. Patient Actions

The Patient Actions are the actions available in the Action Area of the List Manager Screen. These actions pertain to the patient information and include editing, viewing, and new order entry.

4.1.4.1. Patient Record Update

The Patient Record Update action allows editing of the Inpatient Narrative and the Patient’s Default Stop Date and Time for Unit Dose Order entry.

Example: Patient Record Update

VP View Profile
Select Action: View Profile// PU
INPATIENT NARRATIVE: INP NARR...// Narrative for Patient PSJPATIENT1
UD DEFAULT STOP DATE/TIME: SEP 21,2000@24:00//

The “INPATIENT NARRATIVE: INP NARR.../” prompt allows the pharmacist to enter information in a free text format, up to 250 characters.

The “UD DEFAULT STOP DATE/TIME:” prompt is the date and time entry to be used as the default value for the STOP DATE/TIME of the Unit Dose orders during order entry and renewal processes. This value is used only if the corresponding ward parameter is enabled. The order entry and renewal processes will sometimes change this date and time.

Note: If the Unit Dose order, being finished by the pharmacist, is received from CPRS and has a duration assigned, the UD DEFAULT STOP DATE/TIME is displayed as the Calc Stop Date/Time.

When the SAME STOP DATE ON ALL ORDERS parameter is set to Yes, the module will assign the same default stop date for each patient. This date is initially set when the first order is entered for the patient, and can change when an order for the patient is renewed. This date is shown as the default value for the stop date of each of the orders entered for the patient.
Note: If this parameter is not enabled, the user can still edit a patient’s default stop date. Unless the parameter is enabled, the default stop date will not be seen or used by the module.

Examples of Valid Dates and Times:
- JAN 20 1957 or 20 JAN 57 or 1/20/57 or 012057
- T (for TODAY), T+1 (for TOMORROW), T+2, T+7, etc.
- T-1 (for YESTERDAY), T-3W (for 3 WEEKS AGO), etc.
- If the year is omitted, the computer uses CURRENT YEAR. Two-digit year assumes no more than 20 years in the future, or 80 years in the past.
- If only the time is entered, the current date is assumed.
- Follow the date with a time, such as JAN 20@10, T@10AM, 10:30, etc.
- The pharmacist may enter a time, such as NOON, MIDNIGHT, or NOW.
- The pharmacist may enter NOW+3’ (for current date and time Plus 3 minutes *Note--the Apostrophe following the number of minutes)
- Time is REQUIRED in this response.

4.1.4.2. New Order Entry
The New Order Entry action allows the pharmacist to enter new Unit Dose or IV orders for the patient, depending upon the order option selected (Order Entry, Non-Verified/Pending Orders, or Inpatient Order Entry). Only one user is able to enter new orders on a selected patient due to the patient lock within the VistA applications. This minimizes the chance of duplicate orders.

For Unit Dose order entry, a response must be entered at the “Select DRUG:” prompt. The pharmacist can select a particular drug or enter a pre-defined order set.

Depending on the entry in the “Order Entry Process:” prompt in the Inpatient User Parameters Edit option, the pharmacist will enter a regular or abbreviated order entry process. The abbreviated order entry process requires entry into fewer fields than regular order entry. Beside each of the prompts listed below, in parentheses, will be the word regular, for regular order entry and/or abbreviated, for abbreviated order entry.

- “Select DRUG:” (Regular and Abbreviated)
Pharmacists select Unit Dose medications directly from the DRUG file. The Orderable Item for the selected drug will automatically be added to the order, and all Dispense Drugs entered for the order must be linked to that Orderable Item. If the Orderable Item is edited, data in the DOSAGE ORDERED field and the DISPENSE DRUG field will be deleted. If multiple Dispense Drugs are needed in an order, they may be entered by selecting the DISPENSE DRUG field from the edit list before accepting the new order. After Dispense Drugs are selected and the order is accepted, they will be checked against the patient’s current medications for duplicate therapy, drug-drug/drug-allergy interactions, and the three CPRS order checks that are new. (See Section 4.3 Order Checks for more information.)
Note: No special order checks are performed for specific drugs (e.g., Clozapine). Orders for Clozapine or similar special medications entered through Inpatient Medications will not yield the same results that currently occur when the same order is entered through Outpatient Pharmacy (including eligibility checks and national rollup to National Clozapine Coordinating Center (NCCC) package). Any patients requiring special monitoring should also have an order entered through Outpatient Pharmacy at this time.

The pharmacist can enter an order set at this prompt. An order set is a group of pre-written orders. The maximum number of orders is unlimited. Order sets are created and edited using the Order Set Enter/Edit option found under the Supervisor’s Menu.

Order sets are used to expedite order entry for drugs that are dispensed to all patients in certain medical practices or for certain procedures. Order sets are designed to be used when a recognized pattern for the administration of drugs can be identified. For example:

- A pre-operative series of drugs administered to all patients undergoing a certain surgical procedure.
- A certain series of drugs to be dispensed to all patients prior to undergoing a particular radiographic procedure.
- A certain group of drugs, prescribed by a physician for all patients, that is used for treatment on a certain medical ailment or emergency.

Order sets allow rapid entering of this repetitive information, expediting the whole order entry process. Experienced users might want to set up most of their common orders as order sets.

Order set entry begins like other types of order entry. At the “Select DRUG:” prompt, S.NAME should be entered. The NAME represents the name of a predefined order set. The characters S. tell the software that this will not be a single new order entry for a single drug, but a set of orders for multiple drugs. The S. is a required prefix to the name of the order set. When the user types the characters S.?, a list of the names of the order sets that are currently available will be displayed. If S. (<Spacebar> and <Enter>) is typed, the previous order set is entered.

After the entry of the order set, the software will prompt for the Provider’s name and Nature of Order. After entry of this information, the first order of the set will be entered automatically. The options available are different depending on the type of order entry process that is enabled—regular, abbreviated, or ward. If regular or abbreviated order entry is enabled, the user will be shown one order at a time, all fields for each order of the order set and then the “Select Item(s): Next Screen/” prompt. The user can then choose to take an action on the order. Once an action is taken or bypassed, the next order of the order set will automatically be entered. After entry of all the orders in the order set, the software will prompt for more orders for the patient. At this point, the user can proceed exactly as in new order entry, and respond accordingly. When a drug is chosen, if an active drug text entry for the Dispense Drug and/or Orderable Item linked to this drug exists, then the prompt, “Restriction/Guideline(s) exist. Display?.” will be displayed along with the corresponding defaults. The drug text indicator will be <DIN> and will be displayed on the right hand corner on the same line as the Orderable Item. This indicator will be highlighted.
If the Dispense Drug or Orderable Item has a non-formulary status, this status will be displayed on the screen as “*N/F*” beside the Dispense Drug or Orderable Item.

- **“DOSAGE ORDERED:”** (Regular and Abbreviated)
  To allow pharmacy greater control over the order display shown for Unit Dose orders on profiles, labels, MARs, etc., the DOSAGE ORDERED field is not required if only one Dispense Drug exists in the order. If more than one Dispense Drug exists for the order, then this field is required.

When a Dispense Drug is selected, the selection list/default will be displayed based on the Possible Dosages and Local Possible Dosages.

**Example: Dispense Drug with Possible Dosages**

```
Select DRUG: BACLOFEN 10MG TABS MS200
              ...OK? Yes// <Enter> (Yes)

Now Processing Enhanced Order Checks! Please wait...

Press Return to continue...

Available Dosage(s)
1. 10MG
2. 20MG

Select from list of Available Dosages or Enter Free Text Dose: 1 10MG

You entered 10MG is this correct? Yes// <Enter>
```

All Local Possible Dosages will be displayed within the selection list/default.

**Example: Dispense Drug with Local Possible Dosages**

```
Select DRUG: GENTAMICIN CREAM 15GM DE101 DERM CLINIC ONLY
              ...OK? Yes// <Enter> (Yes)

Now Processing Enhanced Order Checks! Please wait...

Press Return to continue...

Available Dosage(s)
1. SMALL AMOUNT
2. THIN FILM

Select from list of Available Dosages or Enter Free Text Dose: 2 THIN FILM

You entered THIN FILM is this correct? Yes// <Enter>
```

**Note:** If an order contains multiple Dispense Drugs, Dosage Ordered should contain the total dosage of the medication to be administered.
The user has the flexibility of how to display the order view on the screen. When the user has chosen the drug and when no Dosage Ordered is defined for an order, the order will be displayed as:

**Example: Order View Information when Dosage Ordered is not Defined**

<table>
<thead>
<tr>
<th>DISPENSE DRUG NAME</th>
<th>Give: UNITS PER DOSE</th>
<th>MEDICATION ROUTE</th>
<th>SCHEDULE</th>
</tr>
</thead>
</table>

When the user has chosen the drug and Dosage Ordered is defined for the order, it will be displayed as:

**Example: Order View Information when Dosage Ordered is Defined**

<table>
<thead>
<tr>
<th>ORDERABLE ITEM NAME</th>
<th>DOSE FORM</th>
<th>Give: DOSAGE ORDERED</th>
<th>MEDICATION ROUTE</th>
<th>SCHEDULE</th>
</tr>
</thead>
</table>

The DOSAGE ORDERED and the UNITS PER DOSE fields are modified to perform the following functionality:

- Entering a new backdoor order:
  1. If the Dosage Ordered entered is selected from the Possible Dosages or the Local Possible Dosages, the user will not be prompted for the Units Per Dose. Either the BCMA Units Per Dose or the Dispense Units Per Dose, defined under the Dispense Drug, will be used as the default for the Units Per Dose.
  2. If a free text dose is entered for the Dosage Order, the user will be prompted for the Units Per Dose. A warning message will display when the entered Units Per Dose does not seem to be compatible with the Dosage Ordered. The user will continue with the next prompt.

- Finishing a pending order:
  1. If the Dosage Ordered was selected from the Possible Dosages or the Local Possible Dosages, either the BCMA Units Per Dose or the Dispense Units Per Dose, defined under the Dispense Drug, will be used as the default for the Units Per Dose.
  2. If a free text dose was entered for the pending order, the UNITS PER DOSE field will default to 1. A warning message will display when the Units Per Dose does not seem to be compatible with the Dosage Ordered when the user is finishing/verifying the order.

- Editing an order:
  1. Any time the DOSAGE ORDERED or the UNITS PER DOSE field is edited, a check will be performed and a warning message will display when the Units Per Dose does not seem to be compatible with the Dosage Ordered. Neither field will be automatically updated.
The Nature of Order abbreviation will display on the order next to the Provider’s Name. The abbreviations will be in lowercase and enclosed in brackets. Written will display as [w], telephoned as [p], verbal as [v], policy as [i], electronically entered as [e], and service correction as [s]. If the order is electronically signed through the CPRS package AND the CPRS patch OR*3*141 is installed on the user’s system, then [es] will appear next to the Provider’s Name instead of the Nature of Order abbreviation.

4.1.4.5. View Profile

The View Profile action allows selection of a Long, Short, or NO profile for the patient. The profile displayed in the Inpatient Order Entry and Non-Verified/Pending Orders options will include IV and Unit Dose orders. The long profile shows all orders, including discontinued and expired orders. The short profile displays recently discontinued/expired orders based on HOURS OF RECENTLY DC/EXPIRED parameter values found in the system and ward parameter files.

Example: Profile View

PI Patient Information  SO Select Order
PU Patient Record Update  NO New Order Entry
The HOURS OF RECENTLY DC/EXPIRED field (#7) has been created in the INPATIENT WARD PARAMETERS file (#59.6). The Inpatient Medications profiles will display the recently discontinued/expired orders that fall within the number of hours specified in this field. The value defined in this field will take precedence over the Inpatient System parameter. The inpatient ward parameter allows for a minimum value of one (1) hour and a maximum value of one hundred twenty (120) hours. The Inpatient Ward Parameters Edit [PSJ IWP EDIT] option allows the user to edit this new ward parameter. If this parameter is not set the software will use the value in the HOURS OF RECENTLY DC/EXPIRED field (#26.8) in the PHARMACY SYSTEM file (#59.7). If neither parameter is set the software will default to twenty-four (24) hours.

The HOURS OF RECENTLY DC/EXPIRED field (#26.8) has been created in the PHARMACY SYSTEM file (#59.7). The Inpatient Medications profiles will display the recently discontinued/expired orders that fall within the number of hours specified in this field. This parameter allows for a minimum value of one (1) hour and a maximum value of one hundred twenty (120) hours. The Systems Parameters Edit [PSJ SYS EDIT] option includes the ability for a user to edit this inpatient site parameter. If neither parameter is set the software will default to twenty-four (24) hours.

On the medication profile in the status column, the codes and the action they represent are as follows:
Order Status: The current status of the order. These statuses include:

- A Active
- N Non-Verified
- O On Call (IV orders only)
- I Incomplete
- HP Placed on hold by provider through CPRS
- H Placed on hold via backdoor Pharmacy
- E Expired
- DP Discontinued by provider through CPRS
- DE Discontinued due to edit via backdoor Pharmacy (Unit Dose orders only)
- D Discontinued via backdoor Pharmacy (IV & UD); discontinued due to edit via backdoor Pharmacy (IV)

The Status column will also display some additional discontinue type actions performed on the order. The codes and the action they represent are as follows:

- DF Discontinued due to edit by a provider through CPRS
- DD Auto discontinued due to death
- DA Auto discontinued due to patient movements

Sets of Complex Orders with a status of “Pending” or “Non-Verified” will be grouped together in the Profile View. They appear as one numbered list item, as shown in the following examples. Once these orders are made active, they will appear individually in the Profile View, with a status of “Active”.

36 Inpatient Medications V. 5.0 Pharmacist’s User Manual PSJ*5*181
If a Unit Dose order has been verified by nursing but has not been verified by pharmacy, it will be listed under the ACTIVE heading with an arrow (\(\Rightarrow\)) to the right of its number. A CPRS Med Order will have a “DONE” priority and will display a “d” to the right of the number on all profiles. These orders will display with active orders under the Active header until the pharmacist verifies them.

Orders may be selected by choosing the Select Order action, or directly from the profile using the number displayed to the left of the order. Multiple orders may be chosen by entering the numbers for each order to be included, separated by commas (e.g., 1,2,3), or a range of numbers using the dash (e.g., 1-3).
Note: The START DATE and DRUG sort may be reversed using the INPATIENT PROFILE ORDER SORT field in the INPATIENT USER PARAMETERS file.

-----------------------------------------report continues----------------------------------------
Example: Selecting and Displaying an Order (continued)

Example: Order View For An Outpatient With Inpatient Orders

The list area displays detailed order information and allows actions to be taken on the selected Unit Dose order. A number displayed to the left of the field name identifies fields that may be edited. If a field, marked with an asterisk (*) next to its number, is edited, it will cause this order to be discontinued and a new one created. If a pending order is selected, the system will determine any default values for fields not entered through CPRS and display them along with the data entered by the provider.
The BCMA ORDER LAST ACTION field will only display when an action has been performed through BCMA on this order. This information includes the date and time of the action and the BCMA action status. If an asterisk (*) appears after the BCMA status, this indicates an action was taken on the prior order that is linked to this order. Actions, displayed in the Action Area, enclosed in parenthesis are not available to the user. In the example above, the action Verify is not available to the user since it was previously verified. If an order was placed for an Outpatient for a clinic appointment date/time for an appropriate clinic, the Order View screen will display the Clinic and the Clinic Date and Time.

Only users with the appropriate keys will be allowed to take any available actions on the Unit Dose or IV order. (See p. 69 under IV.)

4.1.5. Order Actions

The Order Actions are the actions available in the Action Area of the List Manager Screen. These actions pertain to the patient’s orders and include editing, discontinuing, verifying, etc.

4.1.5.1. Discontinue

When an order is discontinued, the order’s Stop Date/Time is changed to the date/time the action is taken. An entry is placed in the order’s Activity Log recording who discontinued the order and when the action was taken. Pending and Non-verified orders are deleted when discontinued and will no longer appear on the patient’s profile. Please see the Patient Profile section of this document for more discussion about the discontinued statuses available and screen captures of how they appear.

Note: Any orders placed through the Med Order Button cannot be discontinued.

Example: Discontinue an Order

*report continues*
Example: Verify an Order (continued)

When orders have been verified, the pharmacist must provide information for the Pre-Exchange Units Report. After verifying an order, the user is prompted to identify the number of units required before the next cart exchange (pre-exchange units). Information will be requested for each order that has been verified. When the user finishes entering new orders, a Pre-Exchange Report will be printed. The report lists the patients’ name, ward location, room and bed, Orderable Item, Dispense Drug, and pre-exchange needs for each order. This report can be printed to the screen or queued to print on a printer. It is advisable that the user prints a copy on the printer. The default device for the Pre-Exchange Units Report is the PRE-EXCHANGE REPORT DEVICE field in the INPATIENT WARD PARAMETER file. If the pharmacist enters an output device that is different from the device in this file, an option to override the field and define a temporary device for the remainder of this session is displayed. Once the user exits this option, the report cannot be reprinted.

Note: The user will have the ability to enter a Progress Note for a “DONE” priority order.
To take the orders off of hold, choose this same option and the following will be displayed:

**Example 2: Take All of a Patient’s Orders Off of Hold**

<table>
<thead>
<tr>
<th>Select Unit Dose Medications Option:</th>

THIS PATIENT'S ORDERS ARE ON HOLD.
DO YOU WANT TO TAKE THIS PATIENT'S ORDERS OFF OF HOLD? Yes// <Enter> (Yes)............
.....DONE!

**Note:** Individual orders can be placed on hold or taken off of hold through the *Order Entry* and *Non–Verified/Pending Orders* options.

**4.1.8. Inpatient Profile**

[PSJ PR]

The *Inpatient Profile* option allows the user to view the Unit Dose and IV orders of a patient simultaneously. The user can conduct the Inpatient Profile search by ward group, ward, or patient. If the selection to sort is by ward, the administration teams may be specified. The default for the administration team is ALL and multiple teams may be entered. If selecting by ward or ward group, the profile may be sorted by patient name or room-bed. To print Outpatients, the user should select the ward group \(^OTHER\) or print by Patient.

When the user accesses this option from the Unit Dose Medications module for the first time within a session, a prompt is displayed to select the IV room. When only one active IV room exists, it will be selected automatically. The user is then given the label and report devices defined for the IV room chosen. If no devices have been defined, the user will be given the opportunity to choose them. If this option is exited and then re-entered within the same session, the current label and report devices are shown.

In the following description, viewing a profile by patient is discussed; however, ward and ward group are handled similarly. The orders on the profile are sorted first by status (*ACTIVE, NON-VERIFIED, NON-VERIFIED COMPLEX, PENDING RENEWALS, PENDING COMPLEX, PENDING, RECENTLY DISCONTINUED/EXPIRED*) then alphabetically by *SCHEDULE TYPE*.

The HOURS OF RECENTLY DC/EXPIRED field (#7) has been created in the INPATIENT WARD PARAMETERS file (#59.6). The Inpatient Medications profiles will display the recently discontinued/expired orders that fall within the number of hours specified in this field. The value defined in this field will take precedence over the Inpatient System parameter. The inpatient ward parameter allows for a minimum value of one (1) hour and a maximum value of one hundred twenty (120) hours. The Inpatient Ward Parameters Edit [PSJ IWP EDIT] option allows the user to edit this new ward parameter. If this parameter is not set the software will use the value in the HOURS OF RECENTLY DC/EXPIRED field (#26.8) in the PHARMACY SYSTEM file (#59.7). If neither parameter is set the software will default to twenty-four (24) hours.
The HOURS OF RECENTLY DC/EXPIRED field (#26.8) has been created in the PHARMACY SYSTEM file (#59.7). The Inpatient Medications profiles will display the recently discontinued/expired orders that fall within the number of hours specified in this field. This parameter allows for a minimum value of one (1) hour and a maximum value of one hundred twenty (120) hours. The Systems Parameters Edit [PSJ SYS EDIT] option includes the ability for a user to edit this inpatient site parameter. If neither parameter is set the software will default to twenty-four (24) hours.

On the medication profile in the status column, the codes and the action they represent are as follows:

Order Status: The current status of the order. These statuses include:

- **A** Active
- **N** Non-Verified
- **O** On Call (IV orders only)
- **I** Incomplete
- **HP** Placed on hold by provider through CPRS
- **H** Placed on hold via backdoor Pharmacy
- **E** Expired
- **DP** Discontinued by provider through CPRS
- **DE** Discontinued due to edit via backdoor Pharmacy (Unit Dose orders only)
- **D** Discontinued via backdoor Pharmacy (IV & UD); discontinued due to edit via backdoor Pharmacy (IV)

The Status column will also display some additional discontinue type actions performed on the order. The codes and the action they represent are as follows:

- **DF** Discontinued due to edit by a provider through CPRS
- **DD** Auto discontinued due to death
- **DA** Auto discontinued due to patient movements

PI  Patient Information  SO  Select Order
PU  Patient Record Update  NO  New Order Entry

After the user selects the patient for whom a profile view is needed, the length of profile is chosen. The user can choose to view a long or short profile or, if the user decides not to view a profile for the chosen patient, “NO Profile” can be selected. When “NO Profile” is chosen, the system will return to the “Select PATIENT:” prompt and the user may choose a new patient.

Once the length of profile is chosen, the user can print the patient profile (by accepting the default or typing P at the “SHOW PROFILE only, EXPANDED VIEWS only, or BOTH: Profile/” prompt), an expanded view of the patient profile (by typing E), or both (by typing B). The expanded view lists the details of each order for the patient. The activity logs of the orders can also be printed when the expanded view or both, the expanded view and profile, are chosen.
The advantage of this option is that by viewing the combined Unit Dose/IV profile of a patient, the user can quickly determine if any corrections or modifications need to be made for existing or future orders based on Unit Dose or IV medications already being received by the patient. Sometimes the pharmacist must revise a prospective order for a patient based on the Unit Dose or IV medications already prescribed for the patient.

**Note:** For Unit Dose orders, the long activity log shows all activities of an order, while the short activity log excludes the field changes, and shows only the major activities.

**Example: Inpatient Profile**

Select Unit Dose Medications Option: **IPF** Inpatient Profile

Select by WARD GROUP (G), WARD (W), or PATIENT (P): **Patient** <Enter>

--- report continues ---
The pharmacist can now enter a Patient Action at the “Select Action: View Profile//” prompt in the Action Area of the screen.

4.2.2. Inpatient Order Entry

[PSJ OE]

The Inpatient Order Entry option allows the pharmacist to complete, create, edit, renew, and discontinue IV and Unit Dose orders, as well as put existing IV and Unit Dose orders on hold for any patient, while remaining in the IV module. The IV orders can also be put on call. This option expedites order entry since the pharmacist is not required to change modules to enter IV and Unit Dose orders.

When the user accesses the Inpatient Order Entry option for the first time within a session, a prompt is displayed to select the IV room in which to enter orders. When only one active IV room exists, the system will automatically select that IV room. The user is then given the label and report devices defined for the IV room chosen. If no devices have been defined, the user will be given the opportunity to choose them. If this option is exited and then re-entered within the same session, the current label and report devices are shown. The following example shows the option re-entered during the same session.

**Example: Inpatient Order Entry**

Select IV MENU Option: IOE Inpatient Order Entry

You are signed on under the BIRMINGHAM ISC IV ROOM

Current IV LABEL device is: NT TELNET TERMINAL

Current IV REPORT device is: NT TELNET TERMINAL

Select PATIENT: PSJPATIENT1,ONE
At the “Select PATIENT:” prompt, the user can enter the patient’s name or enter the first letter of the patient’s last name and the last four digits of the patient’s social security number (e.g., P0001). The Patient Information Screen is displayed:

**Example: Patient Information**

The pharmacist can now enter a Patient Action at the “Select Action: View Profile/” prompt in the Action Area of the screen.

### 4.2.3. Patient Actions

The Patient Actions are the actions available in the Action Area of the List Manager Screen. These actions pertain to the patient information and include editing, viewing, and new order entry.
4.2.3.1. Patient Record Update

The Patient Record Update action allows editing of the Inpatient Narrative and the Patient’s Default Stop Date and Time for Unit Dose Order entry.

Example: Patient Record Update

DA Detailed Allergy/ADR List IN Intervention Menu
VP View Profile
Select Action: View Profile//

The “INPATIENT NARRATIVE: INP NARR.../” prompt allows the pharmacist to enter information in a free text format, up to 250 characters.

The “UD DEFAULT STOP DATE/TIME:” prompt accepts the date and time entry to be used as the default value for the STOP DATE/TIME of the Unit Dose orders during order entry and renewal processes. This value is used only if the corresponding ward parameter is enabled. The order entry and renewal processes will sometimes change this date and time.

Note: If the Unit Dose order, being finished by the pharmacist, is received from CPRS and has a duration assigned, the UD DEFAULT STOP DATE/TIME is displayed as the Calc Stop Date/Time.

When the SAME STOP DATE ON ALL ORDERS parameter is set to Yes, the module will assign the same default stop date for each patient. This date is initially set when the first order is entered for the patient, and can change when an order for the patient is renewed. This date is shown as the default value for the stop date of each of the orders entered for the patient.

Note: If this parameter is not enabled, the user can still edit a patient’s default stop date. Unless the parameter is enabled, the default stop date will not be seen or used by the module.
Examples of Valid Dates and Times:
- JAN 20 1957 or 20 JAN 57 or 1/20/57 or 012057
- T (for TODAY), T+1 (for TOMORROW), T+2, T+7, etc.
- T-1 (for YESTERDAY), T-3W (for 3 WEEKS AGO), etc.
- If the year is omitted, the computer uses CURRENT YEAR. Two-digit year assumes no more than 20 years in the future, or 80 years in the past.
- If only the time is entered, the current date is assumed.
- Follow the date with a time, such as JAN 20@10, T@10AM, 10:30, etc.
- The pharmacist may enter a time, such as NOON, MIDNIGHT, or NOW.
- The pharmacist may enter NOW+3' (for current date and time Plus 3 minutes *Note--the Apostrophe following the number of minutes)
- Time is REQUIRED in this response.

4.2.3.2. New Order Entry

The New Order Entry action, from the Inpatient Order Entry option, allows the pharmacist to enter new Unit Dose and IV orders for the patient. Only one user is able to enter new orders on a selected patient due to the patient lock within the VistA applications. This minimizes the chance of duplicate orders.

For IV order entry, the pharmacist must bypass the “Select DRUG:” prompt (by pressing <Enter>) and then choosing the IV Type at the “Select IV TYPE:” prompt. The following are the prompts that the pharmacist can expect to encounter while entering a new IV order for the patient.

- “Select IV TYPE:”
IV types are admixture, piggyback, hyperal, syringe, and chemotherapy. An admixture is a Large Volume Parenteral (LVP) solution intended for continuous parenteral infusion. A piggyback is a small volume parenteral solution used for intermittent infusion. Hyperalimentation (hyperal) is long-term feeding of a protein-carbohydrate solution. A syringe IV type order uses a syringe rather than a bottle or a bag. Chemotherapy is the treatment and prevention of cancer with chemical agents.

When an order is received from CPRS, Inpatient Medications will accept and send updates to IV Types from CPRS. When an IV type of Continuous is received, Inpatient Medications defaults to an IV type of Admixture. However, when an IV type of Intermittent is received, Inpatient Medications defaults to an IV type of piggyback.

- “Select ADDITIVE:”
There can be any number of additives for an order, including zero. An additive or additive synonym can be entered. If the Information Resources Management Service (IRMS) Chief/Site Manager or Application Coordinator has defined it in the IV ADDITIVES file, the pharmacist may enter a quick code for an additive. The quick code allows the user to pre-define certain fields, thus speeding up the order entry process. The entire quick code name must be entered to receive all pre-defined fields in the order.
**Example: New Order Entry**

After entering the data for the order, the system will prompt the pharmacist to confirm that the order is correct. The IV module contains an integrity checker to ensure the necessary fields are answered for each type of order. The pharmacist must edit the order to make corrections if all of these fields are not answered correctly. If the order contains no errors, but has a warning, the user will be allowed to proceed.

...............................

N

Next delivery time is 1330 ***
Action (PB) B/\langle Enter\rangle  BYPASS

When the order is correct and verified, and the Activity Ruler site parameter is turned on, the system will display a time line. The time line is a visual representation of the relationship between start of coverage times, doses due, and order start times. The letters P, A, H, S, or C show the start of coverage times for each IV type. If there is an asterisk (*) after the letter, this means that the Ward List has been run for this start of coverage type. The caret (^) shows when the doses are due, and the N indicates current time in relation to the order. The next delivery time will also be listed.
The “Action (PBS)” prompt will appear next, with all of the valid actions listed in parentheses. The following are the codes for the possible actions:

- **P** - Print specified number of labels now.
- **B** - Bypass any more action (entering a caret (^) will also do this).
- **S** - Suspend a specified number of labels for the IV room to print on demand.

The **S** will only appear as a valid action if the USE SUSPENSE FUNCTIONS site parameter is answered with 1 or **YES**. The user can perform more than one action, but each action must be done one at a time. As each action is taken, those that operate on labels will reduce the total labels by that amount (e.g., eight labels are needed, three are suspended, then five are available to print).

### 4.2.3.3. Detailed Allergy/ADR List

The Detailed Allergy/ADR List action displays a detailed listing of the selected item from the patient’s Allergy/ADR List. Entry to the *Edit Allergy/ADR Data* option is provided with this list also.

- **Enter/Edit Allergy/ADR Data**
  Provides access to the Adverse Reaction Tracking (ART) package to allow entry and/or edit of allergy adverse reaction data for the patient. See the Allergy package documentation for more information on Allergy/ADR processing.

- **Select Allergy**
  Allows the user to view a specific allergy.

### 4.2.3.4. Intervention Menu

This option is only available to those users who hold the PSJ RPHARM key.

The Intervention Menu action allows entry of new interventions and edit, delete, view, or printing of an existing intervention. Each kind of intervention will be discussed and an example will follow.
- **New**: This option is used to add an entry into the APSP INTERVENTION file.

**Example: New Intervention**

4.2.3.5. View Profile

The View Profile action allows selection of a Long, Short, or NO profile for the patient. The profile displayed in the Inpatient Order Entry and Non-Verified/Pending Orders options will include IV and Unit Dose orders. The long profile shows all orders, including discontinued and expired orders. Please see the Patient Profile section of this document for more discussion about the discontinued or expired statuses available and screen captures of how they appear.

Example: Profile View

PU  Patient Record Update  NO New Order Entry
Select Action: Next Screen/

The orders on the profile are sorted first by status (ACTIVE, NON-VERIFIED, NON-VERIFIED COMPLEX, PENDING RENEWALS, PENDING COMPLEX, PENDING, RECENTLY DISCONTINUED/EXPIRED) then alphabetically by SCHEDULE TYPE. Pending orders with a priority of STAT are listed first and are displayed in a bold and blinking text for easy identification. After SCHEDULE TYPE, orders are sorted alphabetically by DRUG (the drug name listed on the profile), and then in descending order by START DATE.

Sets of Complex Orders with a status of “Pending” or “Non-Verified” will be grouped together in the Profile View. They appear as one numbered list item, as shown in the following examples. Once these orders are made active, they will appear individually in the Profile View, with a status of “Active”.

If an IV order has been verified by nursing but has not been verified by pharmacy, it will be listed under the ACTIVE heading with an arrow (->) to the right of its number. A CPRS Med Order will have a “DONE” priority and will display a “d” to the right of the number on all profiles. These orders will display with active orders under the Active header until the pharmacist verifies them.

Orders may be selected by choosing the Select Order action, or directly from the profile using the number displayed to the left of the order. Multiple orders may be chosen by entering the numbers for each order to be included, separated by commas (e.g., 1,2,3), or a range of numbers using the dash (e.g., 1-3).
Note: The START DATE and DRUG sort may be reversed using the INPATIENT PROFILE ORDER SORT field in the INPATIENT USER PARAMETERS file.

Select one of the following:

Y    Yes
N    No

Do you want to enter a Progress Note: No// <Enter>

Note: The user will have the ability to enter a Progress Note for a “DONE” priority order.
4.2.4.4.  Hold

Only active orders may be placed on hold. Orders placed on hold will continue to show under the ACTIVE heading on the profiles until removed from hold. Any orders placed on hold through the pharmacy options cannot be released from hold using any of the CPRS options. An entry is placed in the order’s Activity Log recording the user who placed/removed the order from hold and when the action was taken. The codes and the action they represent are as follows:

- HP – Placed on hold by provider through CPRS
- H – Placed on hold via backdoor Pharmacy

If the Dispense Drug tied to the Additive, Solution, and/or Orderable Item has a non-formulary status, this status will be displayed on the screen as “*N/F*” beside the Additive, Solution, and/or Orderable Item. Notice that the order shows a status of “H” for hold in the right side of the Multivitamins order below.

Example: Place an Order on Hold

PI Patient Information  SO Select Order
PU Patient Record Update  NO New Order Entry
Select Action: Quit//
4.2.5.4. Syringe-Type Order Entry

Once the pharmacist selects the syringe-type order, the system will prompt if the syringe is intermittent. If a syringe is continuous (not intermittent), the user will follow the same order entry procedure as in entering a hyperal or admixture order. If the syringe is intermittent, the user will follow the same order entry procedure as a piggyback order.

On all syringe orders, a separate volume prompt appears during order entry to allow any necessary volume changes to the solution (if any) for the order. The pharmacist should use caution during order entry of syringe types to ensure that the total volume for the syringe additive and solution is not greater than the total syringe volume. There is no “BOTTLE” prompt as in other order entry types, and a separate “SYRINGE SIZE” prompt appears during order entry to allow the user to enter the syringe size for the order. All syringe sizes are printed on the labels.

If the pharmacist uses additive quick codes for an intermittent syringe order, they will be handled like they are for piggyback orders. If quick codes are used for a continuous syringe order, they will be handled like they are for admixture orders.

4.2.5.5. Chemotherapy-Type Order Entry

Chemotherapy is the treatment and prevention of cancer with chemical agents. A chemotherapy IV order can be one of three types: admixture, piggyback, or syringe. Once the pharmacist selects chemotherapy as the type of order, the system will prompt the user to further identify the order as admixture, piggyback, or syringe. Once the type is established, the prompts are the same as the examples for regular admixture, piggyback, and syringe. All chemotherapy orders have warnings on the labels.

4.2.6. Profile (IV)

The Profile (IV) option shows all IV medications a patient has received during his most recent episode of care. The pharmacist is allowed to view all information on file for any or all orders in the profile. Unlike the Patient Profile (Unit Dose) option, this option does not allow the user to print a report. To print a report, the Patient Profile Report (IV) option under the Reports (IV) option must be used.

After selecting the patient for whom a profile view is needed, the length of the profile is chosen. The user may choose to view a long or short profile or, if the user decides not to view a profile for the chosen patient, “NO Profile” can be selected. When “NO Profile” is chosen, the system will return to the “Select PATIENT:” prompt and the user may choose a new patient.
Each profile includes:

- Patient Name
- Ward Location
- Patient Identification Number (PID)
- Room-Bed Location
- Height & date/time of measurement
- Weight & date/time of measurement
- Date of Birth
- Sex of Patient
- Admission Date
- Admitting Diagnosis
- Verified Drug Allergies and Adverse Reactions

The patient’s orders are displayed depending on the type of profile chosen. The long profile shows all orders, including discontinued and expired orders. Orders are sorted first by status, with active orders listed first, followed by pending and non-active orders. Within each status, orders are displayed in order of entry, with the most recent order first. Please see the Inpatient Profile section for more discussion on possible statuses and sample displays.

The information is displayed for each order under the following column headings:

- **Number** - The user can choose a number at the left of the screen to view detailed information about the orders, or to look at the activity log.

- **Additive** - The data listed under Additive includes strength of additive, type and volume of solution, and infusion rate or schedule.

- **Last fill** - The number of labels printed and the date and time of the last one printed.

- **Type of order** - Type will be **A** for admixture, **P** for piggyback, **H** for hyperal, **C** for chemotherapy, or **S** for syringe.

- **Start and stop dates** - The start and stop dates for this specific order

- **Status of the order** - (Column marked Stat) **A** for active, **P** for pending, **E** for expired, **D** for order discontinued, **O** for on call, and **H** for hold.

After the patient profile is displayed, the user can choose one or more order numbers (e.g., 1, 3, 5) for a detailed view of the order(s) or, <Enter> can be pressed when a order view is not needed.
The detailed view of the order presents all available data pertaining to the order. This includes patient identification and location, status of the order, additive(s) with strength, solution(s), infusion rate, medication route, the schedule, administration times, remarks, and other print information. Other information includes type of order, IV room, start and stop date and time, entry date and time (when order was entered into the system), last fill (date and time when last label was printed), and quantity (the number of labels printed). The entry by field of the user placing the order, provider, provider comments, and the number of cumulative doses is also included.

After the detailed view is displayed, the user may select the activity log, label log, or both for the order. The activity log provides a trace of every action taken on an order since the original entry. The activity log contains a log number, the date and time of the activity, the reason of activity (i.e., edit, renew, place on call, or discontinue an order), and the user entering the activity. The reason for activity comment allows the user to explain why the activity was necessary. Also, the system will display the field(s) that was affected, the original data contained in that field, and what it was changed to as a result of the activity.

The label log contains a log number, date/time the label is printed, action on the order, user, number of labels printed, track (possible entries are individual, scheduled, suspended, order action labels, or other), and count (which indicates whether the label was counted for that particular day).

4.2.7. Inpatient Profile

The Inpatient Profile option allows the user to view the Unit Dose and IV orders of a patient simultaneously. The user can conduct the Inpatient Profile search by ward group, ward, or patient. If the selection to sort is by ward, the administration teams may be specified. The default for the administration team is ALL and multiple teams may be entered. If selecting by ward or ward group, the profile may be sorted by patient name or room-bed. To print Outpatients, the user should select the ward group ^OTHER or print by Patient.

When the user accesses this option from the Unit Dose Medications module for the first time within a session, a prompt is displayed to select the IV room. When only one active IV room exists, it will be selected automatically. The user is then given the label and report devices defined for the IV room chosen. If no devices have been defined, the user will be given the opportunity to choose them. If this option is exited and then re-entered within the same session, the current label and report devices are shown.

In the following description, viewing a profile by patient is discussed; however, ward and ward group are handled similarly. The orders on the profile are sorted first by status (ACTIVE, NON-VERIFIED, NON-VERIFIED COMPLEX, PENDING RENEWALS, PENDING COMPLEX, PENDING, RECENTLY DISCONTINUED/EXPIRED) then alphabetically by SCHEDULE TYPE.

The HOURS OF RECENTLY DC/EXPIRED field (#7) has been created in the INPATIENT WARD PARAMETERS file (#59.6). The Inpatient Medications profiles will display the recently discontinued/expired orders that fall within the number of hours specified in this field. The value defined in this field will take precedence over the Inpatient System parameter. The inpatient ward parameter allows for a minimum value of one (1) hour and a maximum value of one hundred twenty (120) hours. The Inpatient Ward Parameters Edit [PSJ IWP EDIT] option allows the user to edit this new ward parameter. If this parameter is not set the software will use the value in the HOURS OF RECENTLY DC/EXPIRED field (#26.8) in the PHARMACY SYSTEM file (#59.7). If neither parameter is set the software will default to twenty-four (24) hours.

The HOURS OF RECENTLY DC/EXPIRED field (#26.8) has been created in the PHARMACY SYSTEM file (#59.7). The Inpatient Medications profiles will display the recently discontinued/expired orders that fall within the number of hours specified in this field. This parameter allows for a minimum value of one (1) hour and a maximum value of one hundred twenty (120) hours. The Systems Parameters Edit [PSJ SYS EDIT] option includes the ability for a user to edit this inpatient site parameter. If neither parameter is set the software will default to twenty-four (24) hours.

On the medication profile in the status column, the codes and the action they represent are as follows:
Order Status: The current status of the order. These statuses include:
### Active
1. **Amiodarone Tab**
   - **Give:** 400mg PO TID
   - **Date Modified:** 10/19 11/18 A

2. **Cimetidine Tab**
   - **Give:** 15mg PO QHS

### Expired
9. **Naproxen Tab**
   - **Give:** 250mg PO QID
After the user selects the patient for whom a profile view is needed, the length of profile is chosen. The user can choose to view a long or short profile or, if the user decides not to view a profile for the chosen patient, “NO Profile” can be selected. When “NO Profile” is chosen, the system will return to the “Select PATIENT:” prompt and the user may choose a new patient.

Once the length of profile is chosen, the user can print the patient profile (by accepting the default or typing P at the “SHOW PROFILE only, EXPANDED VIEWS only, or BOTH: Profile//” prompt), an expanded view of the patient profile (by typing E), or both (by typing B). The expanded view lists the details of each order for the patient. The activity logs of the orders can also be printed when the expanded view or both, the expanded view and profile, are chosen.

The advantage of this option is that by viewing the combined Unit Dose/IV profile of a patient, the user can quickly determine if any corrections or modifications need to be made for existing or future orders based on Unit Dose or IV medications already being received by the patient. Sometimes the pharmacist must revise a prospective order for a patient based on the Unit Dose or IV medications already prescribed for the patient.

**Note:** For Unit Dose orders, the long activity log shows all activities of an order, while the short activity log excludes the field changes, and shows only the major activities. For IV orders, the short and long activity logs give the user the same results.

4.3. Order Checks

Order checks (allergy/adverse drug reactions, drug-drug interactions, duplicate therapy, dangerous medications for patient over 64 years of age, glucophage lab results, and aminoglycosides ordered) are performed when a new medication order is placed through Inpatient Medications or when various actions are taken on medication orders through the Inpatient Medications application. This functionality will ensure the user is alerted to possible adverse drug reactions and will reduce the possibility of a medication error due to the omission of an order check when a non-active medication order is acted upon.

Note: The check for remote data availability is performed when entering a patient’s chart, rather than on each order.

The following actions will initiate an order check:

- Action taken through Inpatient Medications to enter a medication order will initiate order checks (allergy, drug-drug interaction, and duplicate therapy) against existing medication orders.
- Action taken through Inpatient Medications to finish a medication order placed through CPRS will initiate order checks (allergy, drug-drug interaction, and duplicate therapy) against existing medication orders.
- Action taken through IV Menu to finish a medication order placed through CPRS will initiate order checks (allergy, drug-drug interaction, and duplicate therapy) against existing medication orders.
- Action taken through Inpatient Medications to renew a medication order will initiate order checks (allergy, drug-drug interaction, and duplicate therapy) against existing medication orders.
- Action taken through IV Menu to renew a medication order will initiate order checks (allergy, drug-drug interaction, and duplicate therapy) against existing medication orders.
- Action taken through IV Menu to copy a medication order, thereby creating a new order.

The following are the different items used for the order checks:

- Checks each Dispense Drug within the Unit Dose order for allergy/adverse drug reactions.
- Checks each Dispense Drug within the Unit Dose order against existing orders for drug-drug interaction, and duplicate therapy.
- Checks each additive within an IV order for drug-drug interaction, and duplicate therapy against solutions or other additives within the order.
- Checks each IV order solution for allergy/adverse reactions.
- Checks each IV order solution for drug-drug interaction against other solutions or additives within the order if they are defined as a PreMix.
- Checks each IV order additive for allergy/adverse reaction.
- Checks each IV order additive for drug-drug interaction, and duplicate therapy against existing orders for the patient.
- Checks each IV order solution for drug-drug interaction against existing orders for the patient.
Override capabilities are provided based on the severity of the order check, if appropriate.

Order Checks will be displayed/processed in the following order:

- System Errors
- Allergy/ADR (local & remote)
- CPRS checks generated backdoor (3 new checks)
- Drug Level Errors
- Inpatient Critical Drug Interaction
- Local & Remote Outpatient Critical Drug Interactions
- Inpatient Significant Drug Interactions
- Local & Remote Outpatient Significant Drug Interactions
- Order Level Error Messages – Drug Interactions
- Duplicate Therapy – Inpatient, Local & Remote Outpatient
- Order Level Error Messages – Duplicate Therapy

These checks will be performed at the Dispense Drug level. Order checks for IV orders will use Dispense Drugs linked to each additive/solution in the IV order. All pending, non-verified, active and renewed Inpatient orders, active Outpatient orders and active Non-Veterans Affairs (VA) Meds documented in CPRS will be included in the check. In addition, with the release of OR*3*238, order checks will be available using data from the Health Data Repository Historical (HDR-Hx) and the Health Data Repository Interim Messaging Solution (HDR-IMS). This will contain both Outpatient orders from other VAMCs as well as from Department of Defense (DoD) facilities, if available. Any remote Outpatient order that has been expired for 30 days or less will be included in the list of medications to be checked.

There is a slight difference in the display of local Outpatient orders compared with remote Outpatient orders. Below are examples of the two displays:

**Example: Local Outpatient Order Display**

**Duplicate Drug in Local Rx:**

<table>
<thead>
<tr>
<th>Rx #: 2608</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drug: ASPIRIN 81MG EC TAB</td>
</tr>
<tr>
<td>SIG: TAKE ONE TABLET BY MOUTH EVERY MORNING</td>
</tr>
<tr>
<td>QTY: 30 Refills remaining: 11</td>
</tr>
<tr>
<td>Provider: PSOPROVIDER,TEN Issued: 03/24/08</td>
</tr>
<tr>
<td>Status: Active Last filled on: 03/24/08</td>
</tr>
<tr>
<td>Processing Status: Released locally on 3/24/08@08:55:32 (Window)</td>
</tr>
<tr>
<td>Days Supply: 30</td>
</tr>
</tbody>
</table>

**Example: Remote Outpatient Order Display**

**Duplicate Drug in Remote Rx:**

| LOCATION NAME: <NAME OF FACILITY> |
| Rx #: 2608          |
| Drug: ASPIRIN 81MG EC TAB |
| SIG: TAKE ONE TABLET BY MOUTH EVERY MORNING |
| QTY: 30 Refills remaining: 11 |
| Provider: PSOPROVIDER,TEN Issued: 03/24/08 |
| Status: Active Last filled on: 03/24/08 |
| Days Supply: 30 |

In the Remote Outpatient Order Display example above, notice the name of the remote location has been added. In addition, the number of refills is not available.
If the order is entered by the Orderable Item only, these checks will be performed at the time the Dispense Drug(s) is specified. The checks performed include:

- **Duplicate Therapy** - If the patient is already receiving orders containing a Dispense Drug in the same class as one of the Dispense Drugs in the new order, the orders containing the drug in that class are displayed. Inpatient duplicate orders of this kind are displayed in a numbered list. The user is first asked whether or not to continue the current order. If the user selects to continue the order then the user is prompted with which, if any, numbered Inpatient duplicate orders to discontinue. The user may enter a range of numbers from the numbered list of duplicate orders or bypass the prompt by selecting `<Enter>` and continue with the order. Entry of orders with duplicate drugs of the same class will be allowed.

The concurrent administration of amiodarone and an anticoagulant may result in an increase in the clinical effects of the anticoagulant and an increased risk of bleeding. (1-22) It may take several weeks of concurrent therapy before the full effects of this interaction are noted. The effect of amiodarone on anticoagulant levels may continue for several months after amiodarone is discontinued.

Drug: CIMETIDINE 300MG TAB (Active)
SIG: TAKE TWO TABLETS BY MOUTH EVERY 3 HOURS
Processing Status: Not released locally (Mail)
Pending Order: CIMETIDINE 300MG TAB
SIG: TAKE TWO TABLETS BY MOUTH EVERY 3 HOURS
The pharmacologic effects of warfarin may be increased resulting in severe bleeding.
Display Interaction Monograph? No// NO

***Critical*** Drug Interaction with Prospective Drug:
WARFARIN (COUMADIN) 5MG INJ and
Pending Order: RIFAMPIN 300MG CAP
SIG: TAKE ONE CAPSULE BY MOUTH EVERY DAY
Concurrent or recent use of a rifamycin may result in decreased levels of and clinical effects from anticoagulants. If the rifamycin is withdrawn, levels and effects of the anticoagulant may increase, increasing the risk of hemorrhage. This effect may be dose-related and continue beyond discontinuation of the rifamycin.
Display Interaction Monograph? No// NO

***Significant*** Drug Interaction with Prospective Drug:
WARFARIN (COUMADIN) 5MG INJ and
Local RX#: 504280
Drug: INDINAVIR SULFATE 400MG CAP (Active)
SIG: TAKE ONE CAPSULE BY MOUTH EVERY DAY
Processing Status: Not released locally (Window)
*** Refer to MONOGRAPH for SIGNIFICANT INTERACTION CLINICAL EFFECTS

***Significant*** Drug Interaction with Prospective Drug:
WARFARIN (COUMADIN) 5MG INJ and
Local RX#: 504426
Drug: SIMVASTATIN 40MG TAB (Suspended)
SIG: TAKE 20 TABLETS BY MOUTH EVERY 4 HOURS AND TAKE 15 TABLETS TWICE A DAY BEFORE MEALS AND TAKE TEN TABLETS TWICE A DAY AND TAKE FIVE TABLETS EVERY 3 HOURS AND TAKE ONE SIXTY MG TABLET(S) Q5H AND TAKE ONE FORTY MG TABLET(S) EVERY EVENING PAT INSTRUCTIONS
Processing Status: Not released locally (Mail)
*** Refer to MONOGRAPH for SIGNIFICANT INTERACTION CLINICAL EFFECTS
Display Interaction Monograph? No// NO
Do you want to Continue? Y// NO
Drug-Allergy Interactions – Drug allergy interactions will be either critical or significant. If the Dispense Drug selected is identified as having an interaction with one of the patient’s allergies, the allergy the drug interacts with will be displayed.

Note: For a Significant Interaction, the user who holds the PSJ RPHARM key is allowed to enter an intervention, but one is not required. For a Critical Interaction, the user who holds the PSJ RPHARM key must enter an intervention before continuing.

CPRS Order Check: Aminoglycoside Ordered

**Aminoglycoside Ordered**

**Trigger:** Ordering session completion.

**Mechanism:** For each medication order placed during this ordering session, the CPRS Expert System requests the pharmacy package to determine if the medication belongs to the VA Drug Class ‘Aminoglycosides’. If so, the patient’s most recent BUN results are used to calculate the creatinine clearance then OERR is notified and the warning message is displayed.

(Note: The creatinine clearance value displayed in some order check messages is an estimate based on adjusted body weight if patient height is > 60 inches. Approved by the CPRS Clinical Workgroup 8/11/04, it is based on a modified Cockcroft-Gault formula and was installed with patch OR*3*221. For more information: http://www.ascp.com/public/pubs/tcp/1999/jan/cockcroft.shtml

\[
\text{CrCl (male)} = \frac{(140 - \text{age}) \times (\text{adj body weight}\text{ in kg})}{(\text{serum creatinine}) \times 72}
\]

\[
\text{CrCl (female)} = 0.85 \times \text{CrCl (male)}
\]

To calculate adjusted body weight, the following equations are used:

Ideal body weight ($\text{IBW}$) = 50 kg x (for men) or 45 kg x (for women) + 2.3 x (height in inches - 60)

Adjusted body weight ($\text{Adj. BW}$) if the ratio of actual $\text{BW/IBW}$ > 1.3 = \(0.3 \times (\text{Actual BW - IBW}) + \text{IBW}\)

Adjusted body weight if the ratio of actual $\text{BW/IBW}$ is not > 1.3 = $\text{IBW}$ or $\text{Actual BW}$ (whichever is less)

Message: Aminoglycoside - est. CrCl: <value calculated from most recent serum creatinine>. (CREAT: <result> BUN: <result>).

Danger Lvl: This order check is exported with a High clinical danger level.

CPRS Order Check: Dangerous Meds for Patients >64

**DANGEROUS MEDS FOR PT > 64 - Yes**

This is based on the BEERS list. This order check only checks for three drugs: Amitriptyline, Chlorpropamide and Dipyridamole. The workgroup felt that the list of drugs should be expanded. A request can be sent to CPRS for this.

**Trigger:** Acceptance of pharmacy orderable items amitriptyline, chlorpropamide or dipyridamole.

**Mechanism:** The CPRS Expert System determines if the patient is greater than 64 years old. It then checks the orderable item of the medication ordered to determine if it is mapped as a local term to the national term DANGEROUS MEDS FOR PTS > 64.

Message: If the orderable item text contains AMITRIPTYLINE this message is displayed:

Patient is <age>. Amitriptyline can cause cognitive impairment and loss of balance in older patients. Consider other antidepressant medications on formulary.

If the orderable item text contains CHLORPROPAMIDE this message is displayed:

Patient is <age>. Older patients may experience hypoglycemia with Chlorpropamide due to its long duration and variable renal secretion. They may also be at increased risk for Chlorpropamide-induced SIADH.
If the orderable item text contains DIPYRIDAMOLE this message is displayed:
Patient is <age>. Older patients can experience adverse reactions at high doses of Dipyridamole (e.g., headache, dizziness, syncope, GI intolerance.) There is also questionable efficacy at lower doses.
Danger Lvl: This order check is exported with a High clinical danger level.

● CPRS Order Check: Glucophage Lab Results

Glucophage-Lab Results Interactions
Trigger: Selection of a Pharmacy orderable item.
Mechanism: The CPRS Expert System checks the pharmacy orderable item’s local text (from the Dispense Drug file [#50]) to determine if it contains “glucophage” or “metformin”. The expert system next searches for a serum creatinine result within the past x number of days as determined by parameter ORK GLUCOPHAGE CREATININE. If the patient’s creatinine result was greater than 1.5 or does not exist, OE/RR is notified and the warning message is displayed.
Message: Metformin- no serum creatinine within past <x> days. else:
   Metformin - Creatinine results: <creatinine greater than 1.5 w/in past <x> days>
Danger Lvl: This order check is exported with a High clinical danger level.

4.3.1. Inpatient Duplicate Therapy

Inpatient orders are checked for therapeutic duplication with drugs within the same class. If orders have the same drug (meaning the same class), they will be included in the list. The header for Inpatient Duplicate Therapy will be like: This patient is already receiving the following:

INPATIENT and/or OUTPATIENT order(s) for a drug in the same therapeutic class(es) as SIMVASTATIN 40MG TAB:
The user will have the opportunity to discontinue duplicate order(s) after the banner..

Example: Duplicate Therapy Banner

=================================================================================================
This patient is already receiving the following INPATIENT and/or OUTPATIENT order(s) for a drug in the same therapeutic class(es) as SIMVASTATIN 40MG TAB:
GEMFIBROZIL TAB, ORAL  C  02/08  05/19  A
Give: 600MG PO BID
GEMFIBROZIL TAB, ORAL  C  02/08  05/19  A
Give: 600MG PO BID
Local Rx #504563 (ACTIVE) for FLUVASTATIN NA 20MG CAP
SIG: TAKE ONE CAPSULE BY MOUTH TWICE A DAY
Processing Status: Not released locally (Window)
Class(es) Involved in Therapeutic Duplication(s): HMGCo-A Reductase Inhibitors, Antihyperlipidemics
=================================================================================================
Do you wish to continue with the current order? YES//

Give: 15.3MG PO QPM

Class(es) Involved in Therapeutic Duplication(s): Oral Anticoagulants, Antiplatelet and Antithrombotic Drugs

Do you wish to continue with the current order? YES/

4.3.2 Discontinuing Duplicate Inpatient Orders

When duplicate Inpatient orders are found, the user will be asked if they want to discontinue any of the orders:

Example: Discontinued Order

This patient is already receiving the following INPATIENT and/or OUTPATIENT order(s) for a drug in the same therapeutic class(es) as WARFARIN (COUMADIN) NA 1MG TAB:

DIFYRIDAMOLE TAB   ? ***** ***** P
Give: 50MG PO TID

WARFARIN TAB       ? ***** ***** P
Give: 15.3MG PO QPM

Class(es) Involved in Therapeutic Duplication(s): Oral Anticoagulants, Antiplatelet and Antithrombotic Drugs

Do you wish to continue with the current order? YES/

Do you wish to DISCONTINUE any of the listed INPATIENT orders? NO// YES
| 1. | DIPYRIDAMOLE TAB | ? ***** ***** P |
|    | Give: 50MG PO TID |
| 2. | WARFARIN TAB     | ? ***** ***** P |
|    | Give: 15.3MG PO QPM |

Enter a list or range of numbers (1-2): 2

Do you want to discontinue this order? No// Y (Yes)

NATURE OF ORDER: WRITTEN//

> Note: If the user selects the default of NO, the order process continues.

If the user enters YES to the DISCONTINUE prompt, the following prompt is presented to allow selecting orders:

Choose for DISCONTINUE 1-N:

> Note: N represents the highest numbered duplicate order in the numbered list.

### 4.3.1.1. Exiting the Order Process

When duplicate Inpatient therapies have been found, the following prompt is displayed after the numbered list of duplicate Inpatient orders:

Do you wish to continue with the current order? YES//

> Note: The wording of this existing prompt has been slightly modified. Also, the current default of NO has been changed to YES.

Each time a user chooses to discontinue an Inpatient duplicate order(s), a prompt is presented to enter a value for NATURE OF ORDER. This value applies to all orders just selected to be discontinued.

Also, each time a user chooses to discontinue an Inpatient duplicate order(s), a prompt is presented to enter a value for Requesting PROVIDER. This value applies to all orders just selected to be discontinued.

### 4.3.2. Allergy/ADR Example Order Checks

Inpatient Medications (Unit Dose and IV) order entry process with check for adverse allergy/ADR reactions:

- Entering a new IV or Unit Dose medication order through pharmacy options
- Finishing a pending IV or Unit Dose medication order
- Renewing an IV or Unit Dose order
• Creating a new Unit Dose order when editing the orderable item (to a new orderable item) through pharmacy options
• When editing the IV additive field (changing existing additive or adding new additive) for an IV order through pharmacy options
• When editing the IV solution field (changing existing solution or adding a new solution) for an IV order through pharmacy options – This applies only to IV solutions marked as a PreMix
• Entering a new Unit Dose medication order through pharmacy options
• using order sets
• Copying an IV or Unit Dose medication order, thereby creating a new order.

Only one warning will be displayed for an Allergy/ADR. The Allergy/ADR warning shall display the following information:
  • Drug Text ‘A Drug-Allergy Reaction exists for this medication and/or class:
  • Drug Name
  • Ingredient(s) (Indicate Local and/or Remote sites) – if available
  • VA Drug Class(es) (Indicate Local and/or Remote sites) – if available

More than one Ingredient and more than one VA Drug Class may be associated with an Allergy/ADR. After the Allergy/ADR warning is displayed, the system shall prompt the user if they want to intervene. The default for this prompt shall be ‘No’. If the user chooses to intervene, the system will proceed with the intervention dialog. If the user chooses not to intervene, the system will proceed with the order entry dialog.

Professional Monograph
Drug Interaction with WARFARIN AND ASPIRIN

This information is generalized and not intended as specific medical advice. Consult your healthcare professional before taking or discontinuing any drug or commencing any course of treatment.

MONOGRAPH TITLE: Anticoagulants/Salicylates
SEVERITY LEVEL: 2-Severe Interaction: Action is required to reduce the risk of severe adverse interaction.
MECHANISM OF ACTION: Multiple processes are involved: 1) Salicylate doses greater than 3 gm daily decrease plasma prothrombin levels. 2) Salicylates may also displace anticoagulants from plasma protein binding sites. 3) Salicylates impair platelet function, resulting in prolonged bleeding time. 4) Salicylates may cause gastrointestinal bleeding due to irritation.
CLINICAL EFFECTS: The concurrent use of anticoagulants and salicylates may result in increased INR values and increase the risk of bleeding.
PREDISPOSING FACTORS: None determined.
PATIENT MANAGEMENT: Avoid concomitant administration of these drugs. If salicylate use is necessary, monitor prothrombin time, bleeding time or INR values closely. When possible, the administration of a non-aspirin salicylate would be preferable.
DISCUSSION: This interaction has been reported between aspirin and warfarin and between aspirin and dicumarol. Diflunisal, sodium salicylate, and topical methyl salicylate have been shown to interact with anticoagulants as well. Based on the proposed mechanisms, other salicylates would be expected to interact with anticoagulants as well. The time of highest risk for a coumarin-type drug interaction is when the precipitant drug is initiated, altered, or discontinued.

Drug Interaction with ASPIRIN and HEPARIN/SODIUM CHLORIDE

This information is generalized and not intended as specific medical advice. Consult your healthcare professional before taking or discontinuing any drug or commencing any course of treatment.

MONOGRAPH TITLE: Heparin/Salicylates

MECHANISM OF ACTION: Additive prolongation of bleeding time.

CLINICAL EFFECTS: Increased risk of bleeding which may extend for several days beyond discontinuation of salicylates.

PREDISPOSING FACTORS: None determined.

PATIENT MANAGEMENT: Avoid concomitant administration of these drugs. If this combination is used, monitor hematological status carefully. A non-acetylated salicylate may be used to avoid antiplatelet activity.

DISCUSSION: This interaction is likely to occur.

5. Maintenance Options

5.1. Unit Dose

All of the Unit Dose Maintenance Options are located on the Unit Dose Medications menu.

5.1.1. Edit Inpatient User Parameters

[PSJ UEUP]

The Edit Inpatient User Parameters option allows users to edit various Inpatient User parameters. The prompts that will be encountered are as follows:

- “PRINT PROFILE IN ORDER ENTRY:”
  Enter YES for the opportunity to print a profile after entering Unit Dose orders for a patient.

- “INPATIENT PROFILE ORDER SORT:”
  This is the sort order in which the Inpatient Profile will show inpatient orders. The options will be sorted either by medication or by start date of order. Entering the words “Medication Name” (or the number 0) will show the orders within schedule type (continuous, One-time, and then PRN) and then alphabetically by drug name. Entering the words “Start Date of Order” (or the number 1) will show the order chronologically by start date, with the most recent dates showing first and then by schedule type (continuous, One-time, and then PRN).

  Note: The Profile first shows orders by status (active, non-verified, and then non-active).

- “LABEL PRINTER:”
  Enter the device on which labels are to be printed.

- “USE WARD LABEL SETTINGS:”
  Enter YES to have the labels print on the printer designated for the ward instead of the printer designated for the pharmacy.

  NOTE: Any changes made take effect immediately.
5.1.2. Edit Patient’s Default Stop Date

[PSJU CPDD]

This option is locked with the PSJU PL key.

The “UD DEFAULT STOP DATE/TIME:” prompt accepts the date and time entry to be used as the default value for the STOP DATE/TIME of the Unit Dose orders during order entry and renewal processes. This value is used only if the corresponding ward parameter is enabled. The order entry and renewal processes will sometimes change this date and time.

Note: If the Unit Dose order, being finished by the user, is received from CPRS and has a duration assigned, the UD DEFAULT STOP DATE/TIME is displayed as the Calc Stop date/time.

When the SAME STOP DATE ON ALL ORDERS parameter is set to yes, the module will assign a default stop date for each patient. This date is initially set when the first order is entered for the patient. A new default stop date is assigned for the patient when an order is renewed and the order’s stop date plus three days is greater than the current default stop date. This date is shown as the default value for the stop date of each order entered for the patient. However, if a day or dose limit exists for the selected Orderable Item, and the limit is less than the default stop date, the earlier stop date and time will be displayed.

5.2. IV

All of the IV Maintenance Options are located on the IV Menu option. Non-Standard Schedules is not an option on a menu, but is listed here for informational purposes.

5.2.1. Change Report/Label Devices (IV)

[PSJI DEVICE]

The Change Report/Label Devices (IV) option allows the user to change the print output devices. When the user first signs into the IV module, the current default devices will be shown. This option does not change the default devices that are defined in the LABEL device or REPORT device site parameters, but will queue the report to the selected device.

This would be useful if the user wishes to print a short report to the screen. The new settings will remain unless the user changes them again or exits the system, at which time the settings will revert to the output devices defined in the site parameters.
Once the pharmacist has finished with a pick list, the prompt, “MAY I FILE THE DATA IN THIS PICK LIST AWAY? NO/” is displayed. Enter N (or press <Enter>) if the need to enter or edit the data at a later date is desired. Enter Y if no more data is to be entered or edited. When a pick list is filed away, the data is placed in the respective patients' orders and in a file used for printing cost reports. If an order does not have the units dispensed entered, the units needed value is used.

Example: Enter Units Dispensed Report

Select Pick List Menu Option: ENTER Units Dispensed

Select WARD GROUP or PICK LIST: <Enter> TEAM 2 GROUP PHARMACY

ARE YOU FINISHED WITH THIS PICK LIST? Yes// <Enter> (Yes)

MAY I FILE THE DATA IN THIS PICK LIST AWAY? No// <Enter> (No)
6.3. **EXtra Units Dispensed**

[PSJU EUD]

The *EXtra Units Dispensed* option allows the pharmacist to enter the number of extra units dispensed for an order, and is used when the nurse on the ward has medications that have been destroyed, lost, etc. and replacements are dispensed. Any data entered here is included in the various cost reports.

The user can choose the length of patient profile needed to view. The long profile lists all orders, but the short profile lists only active orders. The user will be asked to select the order on which an action is to be taken.

If the site is using an ATC for the dispensing of Unit Dose medications, the user will be given the opportunity to use the ATC to dispense any extra units entered for medication designated for the ATC. The prompt “DO YOU WANT TO DISPENSE THESE EXTRA UNITS THROUGH THE ATC: NO/” is displayed. The default is NO, but the user can enter Y or YES for the drug to be dispensed through the ATC.

**Note:** Pick lists are filed away when the user exits this option. Please allow approximately two hours for data to be entered before running any cost reports.

**Example: Extra Units Dispensed Report**

```
Select Pick List Menu Option: EXtra Units Dispensed
Select PATIENT:  PSJPATIENT1,ONE  000-00-0001  08/18/20  1 EAST

Select PATIENT:  <Enter>
Select Pick List Menu Option:
```
6.4. Report Returns
[PSJU RET]

The Report Returns option allows the pharmacist to enter the number of returned units into the medication order record. Units can be returned when a patient is discharged or when the medication is discontinued, for example. Usually positive numbers are entered; however the system will allow negative numbers to be entered to allow for corrections. Any data entered here is reflected in the various cost reports.

Only active, discontinued, or expired orders are selectable. Once the user selects the patient, the system prompts to choose the length of patient profile needed to view. The profile will list the orders for that patient. The user can then select the order(s) needed to enter returns.

Example: Reporting Medication Returns

Select PATIENT: <Enter>

Select Pick List Menu Option:
6.5. Reprint Pick List  
[PSJU PLRP]

The Reprint Pick List option allows the pharmacist to print or reprint any pick list or pick list update previously run. This option does not recalculate any data; it simply reprints the pick list. If the pick list selected has had an update run for it, the choice of printing the entire pick list or only the last update run will be given. The entire pick list will include any data generated from an update. Any dispensed units that have been entered will also print.

Example: Reprint Pick List

Select Pick List Menu Option: RPL  Reprint Pick List

8. Output Options

8.1. Unit Dose

Most of the Output Options are located under the Reports Menu option on the Unit Dose Medications menu. The other reports are located directly on the Unit Dose Medications menu.

8.1.1. PAatient Profile (Unit Dose)

[PSJU PR]

The PAatient Profile (Unit Dose) option allows a user to print a profile (list) of a patient’s orders for the patient’s current or last (if patient has been discharged) admission, by group (G), ward (W), clinic (C), or patient (P). When group is selected, a prompt to select by ward group (W) or clinic group (C) displays. If the user’s terminal is selected as the printing device, this option will allow the user to select any of the printed orders to be shown in complete detail, including the activity logs, if any.

8.1.3. Align Labels (Unit Dose)
[PSJU AL]

The Align Labels (Unit Dose) option allows the user to align the label stock on a printer so that Unit Dose order information will print within the physical boundaries of the label.

Example: Align Labels (Unit Dose)

Select Unit Dose Medications Option: ALIGN Labels (Unit Dose)

Select LABEL PRINTER: <Enter> TELNET
\----------------- FIRST LINE OF LABEL --------------/
<
\----------------- LABEL BOUNDARIES ------------------>
<
/---------------- LAST LINE OF LABEL ---------------/
XX/XX | XX/XX | XX/XX XX:XX (PXXXX) | A T PATIENT NAME
ROOM-BED DRUG NAME SCHEDULE TYPE | D I XXX-XX-XXXX DOB (AGE)
TEAM DOSAGE ORDERED MED ROUTE SCHEDULE | M M SEX DIAGNOSIS
SPECIAL INSTRUCTIONS | I E ACTIVITY DATE/TIME ACTIVITY
WS HSM NF RPH:_____ RN:_____ | N S WARD GROUP
WARD

Are the labels aligned correctly? Yes// Y (Yes)

8.1.4. Label Print/Reprint
[PSJU LABEL]

The Label Print/Reprint option allows the user to print new unprinted labels and/or reprint the latest label for any order containing a label record. When entering this option, the pharmacist will be informed if there are any unprinted new labels from auto-cancelled orders (i.e., due to ward or service transfers). The pharmacist will be shown a list of wards to choose from if these labels are to be printed at this time. The pharmacist can delete these auto-cancel labels; however, deletion will be for all of the labels.

Next, the pharmacist will be instructed if there are any unprinted new labels. The pharmacist can then decide whether to print them now or later.

The pharmacist can choose to print the labels for a group (G), ward (W), clinic (C), or patient (P). When group is selected, a prompt to select by ward group (W) or clinic group (C) displays. If ward, ward group, clinic, or clinic group is chosen, the label start date will be entered and the labels will print on the specified printer device. When the option to print by individual patient is chosen, an Inpatient Profile will be displayed and the pharmacist can then choose the labels from the displayed Unit Dose and IV orders to be printed on a specified printer.
8.1.5. Patients on Specific Drug(s)  
[PSJ PDV]

The Patients on Specific Drug(s) option creates a report that lists patients on specific Orderable Item(s), Dispense Drug(s), or Veterans Affairs (VA) class(es) of drugs. When more than one of these drugs is chosen, the user will have the option to only display patients with orders containing ALL of the selected drugs or classes. The default behavior will be to display patients with orders of ANY of the selected drugs or classes.

This option can be found under the Supervisor’s menu or may have been added to a locally created pharmacist’s menu.

The user will be prompted for the start and stop dates. Orders that are active between these two dates will be listed on the report. The user then has the choice to see only IV orders, Unit Dose orders, or both types of orders. These orders may be sorted by patient name or by the start date of the orders. The user will choose to sort by Orderable Items, Dispense Drug, or VA class of drugs and then choose one or multiple drugs or classes. If a single drug or class is chosen, the orders for that drug or class will be listed. If multiple matches for drugs or classes are designated, the report will only include patients for whom orders are found meeting the designated number of matches to drugs or classes. By using the “Select number of matches” prompt, the user may select how many of the items entered must be on the patient’s record in order for the patient to be displayed in the report.

For example: Patient A has an order for ACETAMINOPHEN TAB, patient B has an order for ASPIRIN TAB, and patient C has orders for both. If the user chooses two Orderable Items (ACETAMINOPHEN TAB and ASPIRIN TAB), and enters ‘1’ (default) on the number of matches screen, the orders of all three patients will print. If the user chooses two Orderable Items and enters ‘2’ on the number of matches screen, only patient C’s orders will print.

Selecting a parent VA class will function as if the user had selected all of its children classes manually. Users will also be able to select one or more divisions and/or wards, which will limit the results to print only patients from the locations entered. When selecting all divisions and all wards, an additional prompt is shown to allow selection of one pharmacy ward group for selected locations.

Example: Patients on Specific Drug(s) Report

Select MANagement Reports Menu Option: Patients on Specific Drug(s)
Enter start date: T-9 (JAN 30, 2001)
Enter stop date: T (FEB 08, 2001)
List IV orders, Unit Dose orders, or All orders: ALL// <Enter>
Do you wish to sort by (P)atient or (S)tart Date: Patient// <Enter>
List by (O)rderable Item, (D)ispense Drug, or (V)A Class of Drugs: Orderable Item
Select PHARMACY ORDERABLE ITEM NAME: WARFARIN TAB
Example: Patients on Specific Drug(s) Report (continued)

Dispense Drugs for WARFARIN are:
WARFARIN 10MG U/D
WARFARIN 5MG U/D
WARFARIN 2.5MG U/D
WARFARIN 2MG U/D
WARFARIN 5MG
WARFARIN 7.5MG U/D
WARFARIN 2.5MG
WARFARIN 2MG
WARFARIN 7.5MG
WARFARIN 10MG

Select PHARMACY ORDERABLE ITEM NAME: <Enter>
Select number of matches: 1// <Enter>
Select division: ALL// <Enter>
Select ward: ALL// <Enter>

You may optionally select a ward group...
Select a Ward Group: <Enter>

Select PRINT DEVICE: NT/Cache virtual TELNET terminal
...this may take a few minutes...
...you really should QUEUE this report, if possible...

8.2. IV

All of the IV Output Options are located under the specified menus on the IV Menu option.

8.2.1. Label Menu (IV)  
[PSJI LBLMENU]

The Label Menu (IV) option allows the printing or reprinting of labels for all IV orders. All labels will have a unique Bar Code ID. This ID number is comprised for the patient internal entry number (IEN), a “V” as a delimiter, and the label sequential number for the patient (not the order). Orders suspended for a particular delivery time; however, cannot be printed from here, but must be printed from the suspense functions. This option contains five sub-options.

Example: IV Label Menu

Select IV Menu Option: Label Menu (IV)
Select Label Menu (IV) Option: ?

- Align Labels (IV)
- Individual Labels (IV)
- Scheduled Labels (IV)
- Reprint Scheduled Labels (IV)
- Test Control Codes (IV)

8.2.1.1. Align Labels (IV)  
[PSJI ALIGNMENT]

The Align Labels (IV) option allows the user to align the labels on the Label printer. It will always print three test labels which display a generic Bar Code ID.

Example: IV Align Labels

Select Label Menu (IV) Option: Align Labels (IV)

(Please make any initial adjustments before selecting the label device.)

Print labels on DEVICE: VIRTUAL TELNET// <Enter> VIRTUAL

*nnnVnnn*

---------------------------------------------------------------------------------------------------

Report continues-----------------------------------------------------------------------------------
Example: IV Align Labels (continued)

Is the label alignment correct? Yes// <Enter>  (Yes)

8.2.1.2. Individual Labels (IV)
[PSJI LBLI]

The Individual Labels (IV) option allows the printing of labels for a patient’s order. The pharmacist can choose whether or not the labels are to be counted as daily usage. This is often used for On-call orders or those not automatically delivered.

Once an order is selected from the patient profile, all of the printed labels that have not been marked as Completed or Given by BCMA, or have not been Reprinted, Recycled, Cancelled, or Destroyed, display on the order view. The pharmacist can select to print new labels or reprint IV labels.

Example: IV Individual Labels

10. CPRS Order Checks – How They Work

In CPRS, Order Checks occur by evaluating a requested order against existing patient data. Most order checks are processed via the CPRS Expert System. A few are processed within the Pharmacy, Allergy Tracking System, and Order Entry packages. Order Checks are a real-time process that occurs during the ordering session and is driven by responses entered by the ordering provider. Order Check messages are displayed interactively in the ordering session.

Order Checks review existing data and current events to produce a relevant message, which is presented to patient caregivers. Order Checks use the CPRS Expert System (OCX namespace), to define logical expressions for this evaluation and message creation. In addition to the expert system Order Checks have some hard-coded algorithms. For example, the drug-drug interaction order check is made via an entry point in the pharmacy package whereas Renal Functions for Patients Over 65 is defined as a rule in the CPRS Expert System.

10.1. Order Check Data Caching

Data caching was recently added to improve the speed of order checks. Before data caching, order checks could be slow because each order check retrieved data from the other VISTA packages—even if the order checks used the same data. With data caching, the first order check in an ordering session retrieves data from other VISTA packages, uses the data to evaluate whether it should display a warning, and then stores the retrieved data in the ^XTMP ("OCXCACHE" global for five minutes. The order checks that occur in the next five minutes can use the cached data, if it is the appropriate data, instead of retrieving data from the other packages. After five minutes, the cached data expires, and order checks must retrieve new data from the VISTA packages.

For example, before data caching was implemented, if an order check took 3 seconds to retrieve data from other VISTA packages, and there were 12 order checks, clinicians might wait 36 seconds to sign orders. With data caching, the first order check might take 3 seconds to retrieve the data, but subsequent order checks could use the cache and might take only .03 seconds each. That would be 3.33 seconds compared to 36 seconds. The numbers in this example are for illustration only and do not reflect real system speed. However, data caching should speed up order checks.

To avoid using all available disk space for storing data from order checks, there are several ways to clear the ^XTMP ("OCXCACHE" global. ORMTIME removes data from the global when it runs. The suggested frequency for running ORMTIME is every 30 minutes, but not every site runs it that frequently. Kernel clean up utilities also remove data from the cache when they run, which is usually every 24 hours. If needed, users that have access to the programmer’s prompt can manually clear the cache from that prompt by using PURGE^OCXCACHE.
(This page included for two-sided copying.)
## 11. Error Messages

<td>A user has executed the Enable/Disable Vendor Database Link [PSS ENABLE/DISABLE DB LINK] option and disabled the interface.</td>
</tr>
<tr>
<td>System</td>
<td>No Enhanced Order Checks can be performed.</td>
<td>Vendor database updates are being processed</td>
<td>The vendor database (custom and standard data) is being updated using the DATUP (Data Update) process.</td>
</tr>
<tr>
<td>Drug</td>
<td>Enhanced Order Checks cannot be performed for Local or Local Outpatient Drug: &lt;DRUG NAME&gt;</td>
<td>Drug not matched to NDF</td>
<td>The local drug being ordered/or on profile has not been matched to NDF. Matching the drug to a VA Product will eliminate this message.</td>
</tr>
<tr>
<td>Drug</td>
<td>Order Checks could not be done for Remote Drug: &lt;DRUG NAME&gt;, please complete a manual check for Drug Interactions and Duplicate Therapy. Remote order indicator.</td>
<td></td>
<td>If this error message is displayed, it means that the VA product that the local or remote drug being ordered/or on the local or remote profile does not have a GCNSEQNO or in rare cases, the GCNSEQNO assigned to the VA Product does not match up with a GCNSEQNO in the vendor database.</td>
</tr>
<tr>
<td>Drug</td>
<td>Enhanced Order Checks cannot be performed for Orderable Item: &lt;OI NAME&gt;</td>
<td>No active Dispense Drug found</td>
<td>Highly unlikely that this error would be seen. At the time the order check was being performed the orderable item did not have an active dispense drug associated.</td>
</tr>
<tr>
<td>Drug</td>
<td>Enhanced Order Checks cannot be performed for Orderable Item: &lt;OI NAME&gt;</td>
<td>No active, marked for IV Fluid Order Entry IV Additive/Solution found</td>
<td>The orderable item associate with an IV Fluid order did not have an active IV Additive/IV Solution marked for IV fluid order entry use at the time the order check was executed. This is another error the user will probably not see.</td>
</tr>
</tbody>
</table>
11.1. Error Information

The text in the error message and reason column will be displayed to the user. The type of error is displayed in Column 1.

There are three levels of error messages:

System  When such an error occurs, no drug interaction or duplicate therapy order checks will be performed. Other order checks that do not use the COTS database (FDB) will still be performed such as allergy/ADRs, duplicate drug (for outpatient only) and new CPRS order checks, etc.

Drug  The second error level is for the drug and no drug interaction/duplicate therapy order checks will be performed for a specific drug. When you are processing an order, you may see a drug level error for a drug that is on the profile. This indicates that a drug interaction or duplicate therapy order check will not be performed for the drug in the order you are processing against this profile drug. Profile drug errors will only be shown once per patient session. So if you process several more orders, you will not see the error again. However, if you exit the option and at some later time reselect this patient to process new orders or take action on any existing orders, you will be shown the profile drug error once again.

If a drug level error occurs on the drug in the order you are processing, no profile drug errors will be displayed. No order checks (duplicate therapy or drug interaction) will occur for the processing drug (prospective drug). The only exception to this is when you are processing an IV order with multiple prospective drugs (i.e. multiple additives).

Order  There is only one type of order level error for Drug Interactions and Duplicate Therapy Order checks that you will see. However, functionally it is treated as a drug level error and will be displayed with other drug level errors. Most of the order level errors that you will see will be generated when dosage order checks are performed.
12. Glossary

**Action Prompts**

There are three types of Inpatient Medications “Action” prompts that occur during order entry: ListMan, Patient/Order, and Hidden action prompts.

### Active Order

Any order which has not expired or been discontinued. Active orders also include any orders that are on hold or on call.

### Activity Reason Log

The complete list of all activity related to a patient order. The log contains the action taken, the date of the action, and the user who took the action.

### Activity Ruler

The activity ruler provides a visual representation of the relationship between manufacturing times, doses due, and order start times. The intent is to provide the on-the-floor user with a means of tracking activity in the IV room and determining when to call for doses before the normal delivery. The activity ruler can be enabled or disabled under the *Site Parameters (IV)* option.
<table>
<thead>
<tr>
<th>Term</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Additive</td>
<td>A drug that is added to an IV solution for the purpose of parenteral administration. An additive can be an electrolyte, a vitamin or other nutrient, or an antibiotic. Only electrolyte or multivitamin type additives can be entered as IV fluid additives in CPRS.</td>
</tr>
<tr>
<td>ADMINISTRATION SCHEDULE file</td>
<td>File #51.1. This file contains administration schedule names and standard dosage administration times. The name is a common abbreviation for an administration schedule type (e.g., QID, Q4H, PRN). The administration time entered is in military time, with each time separated from the next by a dash, and times listed in ascending order.</td>
</tr>
<tr>
<td>Administering Teams</td>
<td>Nursing teams used in the administration of medication to the patients. There can be a number of teams assigned to take care of one ward, with specific rooms and beds assigned to each team.</td>
</tr>
<tr>
<td>Admixture</td>
<td>An admixture is a type of intravenously administered medication comprised of any number of additives (including zero) in one solution. It is given at a specified flow rate; when one bottle or bag is empty, another is hung.</td>
</tr>
<tr>
<td>APSP INTERVENTION file</td>
<td>File #9009032.4. This file is used to enter pharmacy interventions. Interventions in this file are records of occurrences where the pharmacist had to take some sort of action involving a particular prescription or order. A record would record the provider involved, why an intervention was necessary, what action was taken by the pharmacists, etc.</td>
</tr>
<tr>
<td>Average Unit Drug Cost</td>
<td>The total drug cost divided by the total number of units of measurement.</td>
</tr>
<tr>
<td>BCMA</td>
<td>A VistA computer software package named Bar Code Medication Administration. This package validates medications against active orders prior to being administered to the patient.</td>
</tr>
<tr>
<td>Calc Start Date</td>
<td>Calculated Start Date. This is the date that would have been the default Start Date/Time for an order if no duration was received from CPRS. Due to the existence of a duration, the default Start Date/Time of the order becomes the expected first dose.</td>
</tr>
</tbody>
</table>
Calc Stop Date

Calculated Stop Date. This is the date that would have been the default Stop Date/Time for an order if no duration was received from CPRS. Due to the existence of a duration, the default Stop Date/Time of the order becomes the expected first dose plus the duration.

Chemotherapy

Chemotherapy is the treatment or prevention of cancer with chemical agents. The chemotherapy IV type administration can be a syringe, admixture, or a piggyback. Once the subtype (syringe, piggyback, etc.) is selected, the order entry follows the same procedure as the type that corresponds to the selected subtype (e.g., piggyback type of chemotherapy follows the same entry procedure as regular piggyback IV).

Chemotherapy “Admixture”

The Chemotherapy “Admixture” IV type follows the same order entry procedure as the regular admixture IV type. This type is in use when the level of toxicity of the chemotherapy drug is high and is to be administered continuously over an extended period of time (e.g., seven days).

Chemotherapy “Piggyback”

The Chemotherapy “Piggyback” IV type follows the same order entry procedure as the regular piggyback IV type. This type of chemotherapy is in use when the chemotherapy drug does not have time constraints on how fast it must be infused into the patient. These types are normally administered over a 30 - 60 minute interval.

Chemotherapy “Syringe”

The Chemotherapy “Syringe” IV type follows the same order entry procedure as the regular syringe IV type. Its administration may be continuous or intermittent. The pharmacist selects this type when the level of toxicity of the chemotherapy drug is low and needs to be infused directly into the patient within a short time interval (usually 1-2 minutes).

Child Orders

One or more Inpatient Medication Orders that are associated within a Complex Order and are linked together using the conjunctions AND and OR to create combinations of dosages, medication routes, administration schedules, and order durations.
**CLINIC DEFINITION File**

File #53.46. This file is used in conjunction with Inpatient Medications for Outpatients (IMO) to give the user the ability to define, by clinic, default stop dates, whether to auto-dc IMO orders, and whether to send IMO orders to BCMA.

**Clinic Group**

A clinic group is a combination of outpatient clinics that have been defined as a group within Inpatient Medications to facilitate processing of orders.

**Complex Order**

An order that is created from CPRS using the Complex Order dialog and consists of one or more associated Inpatient Medication orders, known as “child” orders. Inpatient Medications receives the parent order number from CPRS and links the child orders together. If an action of FN (Finish), VF (Verify), DC (Discontinue), or RN (Renew) is taken on one child order, the action must be taken on all of the associated child orders. For example:

- If one child order within a Complex Order is made active, all child orders in the Complex Order must be made active.
- If one child order within a Complex Order is discontinued, all child orders in the Complex Order must be discontinued.
- If one child order within a Complex Order is renewed, all child orders in the Complex Order must be renewed.

**Continuous IV Order**

Inpatient Medications IV order not having an administration schedule. This includes the following IV types: Hyperals, Admixtures, Non-Intermittent Syringe, and Non-Intermittent Syringe or Admixture Chemotherapy.

**Continuous Syringe**

A syringe type of IV that is administered continuously to the patient, similar to a hyperal IV type. This type of syringe is commonly used on outpatients and administered automatically by an infusion pump.
Coverage Times
The start and end of coverage period designates administration times covered by a manufacturing run. There must be a coverage period for all IV types: admixtures and primaries, piggybacks, hyperals, syringes, and chemotherapy. For one type, admixtures for example, the user might define two coverage periods; one from 1200 to 0259 and another from 0300 to 1159 (this would mean that the user has two manufacturing times for admixtures).

CPRS
A VistA computer software package called Computerized Patient Record Systems. CPRS is an application in VistA that allows the user to enter all necessary orders for a patient in different packages from a single application. All pending orders that appear in the Unit Dose and IV modules are initially entered through the CPRS package.

Cumulative Doses
The number of IV doses actually administered, which equals the total number of bags dispensed less any Recycled, Destroyed, or Cancelled bags.

Default Answer
The most common answer, predefined by the system to save time and keystrokes for the user. The default answer appears before the two slash marks (//) and can be selected by the user by pressing <Enter>.

Dispense Drug
The Dispense Drug name has the strength attached to it (e.g., Acetaminophen 325 mg). The name alone without a strength attached is the Orderable Item name.

Delivery Times
The time(s) when IV orders are delivered to the wards.

Dosage Ordered
After the user has selected the drug during order entry, the dosage ordered prompt is displayed.

DRUG ELECTROLYTES File
File #50.4. This file contains the names of anions/cations, and their concentration units.

DRUG File
File #50. This file holds the information related to each drug that can be used to fill a prescription.
Duration

The length of time between the Start Date/Time and Stop Date/Time for an Inpatient Medications order. The default duration for the order can be specified by an ordering clinician in CPRS by using the Complex Dose tab in the Inpatient Medications ordering dialog.

Electrolyte

An additive that disassociates into ions (charged particles) when placed in solution.

Entry By

The name of the user who entered the Unit Dose or IV order into the computer.

Hospital Supplied Self Med

Self med which is to be supplied by the Medical Center’s pharmacy. Hospital supplied self med is only prompted for if the user answers Yes to the SELF MED prompt during order entry.

Hyperalimentation (Hyperal)

Long term feeding of a protein-carbohydrate solution. Electrolytes, fats, trace elements, and vitamins can be added. Since this solution generally provides all necessary nutrients, it is commonly referred to as Total Parenteral Nutrition (TPN). A hyperal is composed of many additives in two or more solutions. When the labels print, they show the individual electrolytes in the hyperal order.

Infusion Rate

The designated rate of flow of IV fluids into the patient.

INPATIENT USER PARAMETERS file

File #53.45. This file is used to tailor various aspects of the Inpatient Medications package with regards to specific users. This file also contains fields that are used as temporary storage of data during order entry/edit.

INPATIENT WARD PARAMETERS file

File #59.6. This file is used to tailor various aspects of the Inpatient Medications package with regards to specific wards.

Intermittent Syringe

A syringe type of IV that is administered periodically to the patient according to an administration schedule.

Internal Order Number

The number on the top left corner of the label of an IV bag in brackets ([ ]). This number can be used to speed up the entry of returns and destroyed IV bags.
**IV ADDITIVES file**  
File #52.6. This file contains drugs that are used as additives in the IV room. Data entered includes drug generic name, print name, drug information, synonym(s), dispensing units, cost per unit, days for IV order, usual IV schedule, administration times, electrolytes, and quick code information.

**IV CATEGORY file**  
File #50.2. This file allows the user to create categories of drugs in order to run “tailor-made” IV cost reports for specific user-defined categories of drugs. The user can group drugs into categories.

**IV Duration**  
The duration of an order may be entered in CPRS at the IV DURATION OR TOTAL VOLUME field in the IV Fluids order dialog. The duration may be specified in terms of volume (liters or milliliters), or time (hours or days). Inpatient Medications uses this value to calculate a default stop date/time for the order at the time the order is finished.

**IV Label Action**  
A prompt, requesting action on an IV label, in the form of “Action ( )”, where the valid codes are shown in the parentheses. The following codes are valid:  
- P – Print a specified number of labels now.  
- B – Bypass any more actions.  
- S – Suspend a specified number of labels for the IV room to print on demand.

**IV Room Name**  
The name identifying an IV distribution area.

**IV SOLUTIONS file**  
File #52.7. This file contains drugs that are used as primary solutions in the IV room. The solution must already exist in the DRUG file (#50) to be selected. Data in this file includes: drug generic name, print name, status, drug information, synonym(s), volume, and electrolytes.

**IV STATS file**  
File #50.8. This file contains information concerning the IV workload of the pharmacy. This file is updated each time the Compile IV Statistics option is run and the data stored is used as the basis for the AMIS (IV) report.

**Label Device**  
The device, identified by the user, on which computer-generated labels will be printed.
Local Possible Dosages
Free text dosages that are associated with drugs that do not meet all of the criteria for Possible Dosages.

LVP
Large Volume Parenteral — Admixture. A solution intended for continuous parenteral infusion, administered as a vehicle for additive(s) or for the pharmacological effect of the solution itself. It is comprised of any number of additives, including zero, in one solution. An LVP runs continuously, with another bag hung when one bottle or bag is empty.

Manufacturing Times
The time(s) that designate(s) the general time when the manufacturing list will be run and IV orders prepared. This field in the Site Parameters (IV) option (IV ROOM file, (#59.5)) is for documentation only and does not affect IV processing.

MEDICATION ADMINISTERING TEAM file
File #57.7. This file contains wards, the teams used in the administration of medication to that ward, and the rooms/beds assigned to that team.

MEDICATION INSTRUCTION file
File #51. This file is used by Unit Dose and Outpatient Pharmacy. It contains the medication instruction name, expansion, and intended use.

MEDICATION ROUTES file
File #51.2. This file contains medication route names. The user can enter an abbreviation for each route to be used at their site. The abbreviation will most likely be the Latin abbreviation for the term.

Medication Routes/Abbreviations
Route by which medication is administered (e.g., oral). The MEDICATION ROUTES file (#51.2) contains the routes and abbreviations, which are selected by each VAMC. The abbreviation cannot be longer than five characters to fit on labels and the MAR. The user can add new routes and abbreviations as appropriate.

Non-Formulary Drugs
The medications that are defined as commercially available drug products not included in the VA National Formulary.
Non-VA Meds  Term that encompasses any Over-the-Counter (OTC) medications, Herbal supplements, Veterans Health Administration (VHA) prescribed medications but purchased by the patient at an outside pharmacy, and medications prescribed by providers outside VHA. All Non-VA Meds must be documented in patients’ medical records.

Non-Verified Orders  Any order that has been entered in the Unit Dose or IV module that has not been verified (made active) by a nurse and/or pharmacist. Ward staff may not verify a non-verified order.

Orderable Item  An Orderable Item name has no strength attached to it (e.g., Acetaminophen). The name with a strength attached to it is the Dispense Drug name (e.g., Acetaminophen 325mg).

Order Sets  An Order Set is a set of N pre-written orders. (N indicates the number of orders in an Order Set is variable.) Order Sets are used to expedite order entry for drugs that are dispensed to all patients in certain medical practices and procedures.

Order View  Computer option that allows the user to view detailed information related to one specific order of a patient. The order view provides basic patient information and identification of the order variables.

Parenteral  Introduced by means other than by way of the digestive track.

Patient Profile  A listing of a patient’s active and non-active Unit Dose and IV orders. The patient profile also includes basic patient information, including the patient’s name, social security number, date of birth, diagnosis, ward location, date of admission, reactions, and any pertinent remarks.

PECS  Pharmacy Enterprise Customization System. A Graphical User Interface (GUI) web-based application used to research, update, maintain, and report VA customizations of the commercial-off-the-shelf (COTS) vendor database used to perform Pharmacy order checks such as drug-drug interactions, duplicate therapy, and dosing.
Pending Order
A pending order is one that has been entered by a provider through CPRS without Pharmacy or Nursing finishing the order. Once Pharmacy or Nursing has finished and verified the order, it will become active.

PEPS
Pharmacy Enterprise Product System. A re-engineering of pharmacy data and its management practices developed to use a commercial off-the-shelf (COTS) drug database, currently First DataBank (FDB) Drug Information Framework (DIF), to provide the latest identification and safety information on medications.

PHARMACY SYSTEM file
File # 59.7. This file contains data that pertains to the entire Pharmacy system of a medical center, and not to any one site or division.

Piggyback
Small volume parenteral solution for intermittent infusion. A piggyback is comprised of any number of additives, including zero, and one solution; the mixture is made in a small bag. The piggyback is given on a schedule (e.g., Q6H). Once the medication flows in, the piggyback is removed; another is not hung until the administration schedule calls for it.

Possible Dosages
Dosages that have a numeric dosage and numeric dispense units per dose appropriate for administration. For a drug to have possible dosages, it must be a single ingredient product that is matched to the VA PRODUCT file (#50.68). The VA PRODUCT file (#50.68) entry must have a numeric strength and the dosage form/unit combination must be such that a numeric strength combined with the unit can be an appropriate dosage selection.

Pre-Exchange Units
The number of actual units required for this order until the next cart exchange.

Primary Solution
A solution, usually an LVP, administered as a vehicle for additive(s) or for the pharmacological effect of the solution itself. Infusion is generally continuous. An LVP or piggyback has only one solution (primary solution). A hyperal can have one or more solutions.

Print Name
Drug generic name as it is to appear on pertinent IV output, such as labels and reports. Volume or Strength is not part of the print name.

</tbody>
</table>
PSJ PHARM TECH

The name of the key that must be assigned to pharmacy technicians using the Unit Dose Medications module.

PSJ RNFINISH

The name of the key that is given to a user to allow the finishing of a Unit Dose order. This user must also be a holder of the PSJ RNURSE key.

PSJ RNURSE

The name of the key that must be assigned to nurses using the Unit Dose Medications module.

PSJ RPHARM

The name of the key that must be assigned to a pharmacist to use the Unit Dose Medications module. If the package coordinator is also a pharmacist he/she must also be given this key.

Quick Code

An abbreviated form of the drug generic name (from one to ten characters) for IV orders. One of the three drug fields on which lookup is done to locate a drug. Print name and synonym are the other two. Use of quick codes will speed up order entry, etc.

Report Device

The device, identified by the user, on which computer-generated reports selected by the user will be printed.

Schedule

The frequency of administration of a medication (e.g., QID, QDAILY, QAM, STAT, Q4H).

Schedule Type

Codes include: O - one time (i.e., STAT - only once), P - PRN (as needed; no set administration times). C - continuous (given continuously for the life of the order; usually with set administration times). R - fill on request (used for items that are not automatically put in the cart - but are filled on the nurse’s request. These can be multidose items (e.g., eye wash, kept for use by one patient and is filled on request when the supply is exhausted). And OC - on call (one time with no specific time to be given, e.g., 1/2 hour before surgery).

Scheduled IV Order

Inpatient Medications IV order having an administration schedule. This includes the following IV Types: IV Piggyback, Intermittent Syringe, IV Piggyback Chemotherapy, and Intermittent Syringe Chemotherapy.

Self Med

Medication that is to be administered by the patient to himself.
**Standard Schedule**  
Standard medication administration schedules stored in the ADMINISTRATION SCHEDULE file (#51.1).

**Start Date/Time**  
The date and time an order is to begin.

**Status**  

**Stop Date/Time**  
The date and time an order is to expire.

**Stop Order Notices**  
A list of patient medications that are about to expire and may require action.

**Syringe**  
Type of IV that uses a syringe rather than a bottle or bag. The method of infusion for a syringe-type IV may be continuous or intermittent.

**Syringe Size**  
The syringe size is the capacity or volume of a particular syringe. The size of a syringe is usually measured in number of cubic centimeters (ccs).

**TPN**  
Total Parenteral Nutrition. The intravenous administration of the total nutrient requirements of the patient. The term TPN is also used to mean the solution compounded to provide those requirements.

**Units per Dose**  
The number of Units (tablets, capsules, etc.) to be dispensed as a Dose for an order. Fractional numbers will be accepted.

**VA Drug Class Code**  
A drug classification system used by VA that separates drugs into different categories based upon their characteristics. IV cost reports can be run for VA Drug Class Codes.

**VDL**  
Virtual Due List. This is a Graphical User Interface (GUI) application used by the nurses when administering medications.

**Ward Group**  
A ward group indicates inpatient nursing units (wards) that have been defined as a group within Inpatient Medications to facilitate processing of orders.
