2.1. Pre-Installation

The following two patches are provided for this project and should be installed in the order listed below, as the logical link, PSJ PADE that is used for this project is transported in the PSJ patch.

PSJ*5*317 - Inpatient Medications V. 5.0
PSS*1*193 - Pharmacy Data Management V. 1.0

The associated patches for PSJ*5*317 are the following:

PSJ*5*191
PSJ*5*228
PSJ*5*244
PSJ*5*281
PSJ*5*285
The associated patch for PSS*1*193 is PSS*1*180.

2.2. Patch Installation

The scope of the Pharmacy Interface Automation Project (PIA) will provide a new standard bi-directional HL7 interface to the Pharmacy Automated Dispensing Equipment (PADE) located at the point of care areas such as Inpatient wards, Outpatient Clinics etc. Depending on the PADE setup, outbound HL7 messages will be sent to the respective PADE via the VistA Interface Engine (VIE), when the following event happens:

- In Inpatient Medications, when orders are verified, edited, renewed, discontinued, reinstated, put on hold/removed from hold etc.
- In Computerized Patient Record System (CPRS), when orders are discontinued.
- In the REGISTRATION package when patients are admitted, discharged, transferred, cancel admit, cancel discharge, cancel transfer, bed switch etc.
- In the Scheduling package when patients are checked in.
- In Pharmacy Data Management, when new drugs are entered or modified.
- Options to schedule nightly jobs to run daily to send patient clinic appointments or surgery cases.
- Options to send medication orders for a single patient or by clinics or by wards.

Installation Instructions

PSJ*5*317 - Inpatient Medications V. 5.0.

This patch should be installed with users off the system during off-peak hours. Installation takes less than five minutes.

1. Use the INSTALL/CHECK MESSAGE option on the PackMan menu.

2. From the Kernel Installation & Distribution System menu, select the Installation menu.

3. From this menu, you may select to use the following options:
   (when prompted for INSTALL NAME, enter PSJ*5.0*317)
   a. Backup a Transport Global - this option will create a backup message of any routines exported with the patch. It will NOT backup any other changes such as DDs or templates.
   b. Compare Transport Global to Current System - this option will allow you to view all changes that will be made when the patch is installed. It compares all components of the patch (routines, DDs, templates, etc.).
   c. Verify Checksums in Transport Global - this option will ensure
the integrity of the routines that are in the transport global.

4. Use the Install Package(s) option and select the package PSJ*5.0*317.

5. When prompted "Want KIDS to Rebuild Menu Trees Upon Completion of Install? NO/" respond NO.

6. When prompted "Want KIDS to INHIBIT LOGONs during the install? NO/" respond NO.

7. When prompted "Want to DISABLE Scheduled Options, Menu Options, and Protocols? NO/" respond NO.

PSS*1*193 – Pharmacy Data Management V. 1.0.

This patch should be installed with users off the system during off-peak hours. Installation takes less than two minutes.

1. Use the install/check message option on the Packman menu.

2. From the kernel installation & distribution system menu, select the installation menu.

3. From this menu, you may select to use the following options:
   (when prompted for install name, enter PSS*1.0*193)
A. BACKUP A TRANSPORT GLOBAL - THIS OPTION WILL CREATE A BACKUP MESSAGE OF ANY ROUTINES EXPORTED WITH THE PATCH. IT WILL NOT BACKUP ANY OTHER CHANGES SUCH AS DDS OR TEMPLATES.

B. COMPARE TRANSPORT GLOBAL TO CURRENT SYSTEM - THIS OPTION WILL ALLOW YOU TO VIEW ALL CHANGES THAT WILL BE MADE WHEN THE PATCH IS INSTALLED. IT COMPARES ALL COMPONENTS OF THE PATCH (ROUTINES, DDS, TEMPLATES, ETC.).

C. VERIFY CHECKSUMS IN TRANSPORT GLOBAL - THIS OPTION WILL ENSURE THE INTEGRITY OF THE ROUTINES THAT ARE IN THE TRANSPORT GLOBAL.

4. USE THE INSTALL PACKAGE(S) OPTION AND SELECT THE PACKAGE PSS*1.0*193.

5. WHEN PROMPTED "WANT KIDS TO INHIBIT LOGONS DURING THE INSTALL? NO//" RESPOND NO.

6. WHEN PROMPTED "WANT TO DISABLE SCHEDULED OPTIONS, MENU OPTIONS, AND PROTOCOLS? NO//" RESPOND NO.

ROUTINE INFORMATION:

THE SECOND LINE OF EACH OF THESE ROUTINES NOW LOOKS LIKE:

2.3. Download and Extract Procedure

N/A

2.4. Database Creation

N/A

2.5. Installation Scripts

N/A
2.6. Cron Scripts
N/A

2.7. System Configuration

2.7.1. Outbound
Outbound to PADE setup will be configured in VistA to send the information to the appropriate PADE. The main purpose of the Outbound setup is to map the send areas to the location of the cabinets in the wards, clinics, and/or operating rooms.

Please refer to the Pharmacy Interface Automation Startup and Troubleshooting Guide for more details.

2.7.2. Inbound
The PADE Inbound HL7 interface must be configured prior to first use. The Inbound HL7 interface does not require the PADE Outbound HL7 interface. However, the inbound interface does require an entry in the outbound system file PADE SYSTEM SETUP (#58.7) before it can be activated.

Please refer to the Pharmacy Interface Automation Startup and Troubleshooting Guide for more details.

2.8. Database Tuning
N/A
3. Implementation
The PIA Implementation Plan specifies how the Pharmacy Interface Automation project will be evaluated and subsequently deployed within the Office of Enterprise Development (OED).

The PIA Implementation Plan:
   a. Describes the phased implementation for the implementation
   b. States objectives for the implementation
   c. Addresses risks associated with implementation

Refer to the PIA Implementation Plan for more detailed information.

4. Back-out Procedure
The following section details the back-out procedure for PIA.

4.1. Back-out Strategy
See section 4.6 for more details.

4.2. Back-out Considerations
Back-out pertains to a return to the last known good operational state of the software and appropriate platform settings.

4.2.1. Load Testing
To be determined

4.2.2. User Acceptance Testing
User Acceptance Testing is in progress.

4.3. Back-out Criteria
The project is canceled and the implemented features are no longer wanted by the stakeholders.

4.4. Back-out Risks
To be determined

4.5. Authority for Back-out
The authority would come from the IPT and the VA project manager.
4.6. **Back-out Procedure**

In the event that the Pharmacy Interface Automation enhancements must be backed out, the modified routines must have been backed-up during patch installation using the following option:

**Backup a Transport Global [XPD BACKUP]**

This option creates a MailMan message of any routines exported with this patch. (If you need to preserve components that are not routines, you must back them up separately.)

**SELECT KERNEL INSTALLATION & DISTRIBUTION SYSTEM OPTION: INSTALLATION**

1. **LOAD A DISTRIBUTION**
2. **VERIFY CHECKSUMS IN TRANSPORT GLOBAL**
3. **PRINT TRANSPORT GLOBAL**
4. **COMPARE TRANSPORT GLOBAL TO CURRENT SYSTEM**
5. **BACKUP A TRANSPORT GLOBAL**
6. **INSTALL PACKAGE(S)**
7. **RESTART INSTALL OF PACKAGE(S)**
8. **UNLOAD A DISTRIBUTION**

**SELECT INSTALLATION <TEST ACCOUNT> OPTION: 5 BACKUP A TRANSPORT GLOBAL**

**SELECT INSTALL NAME: BACKUP OF PATCH XXXXX 12/5/15@13:29:01**

$=> BACKUP OF PATCH XXXXX$

**THIS DISTRIBUTION WAS LOADED ON FEB 05, 2013@13:29:01 WITH HEADER OF PATCH XXXXX TEST VERSION**

**IT CONSISTED OF THE FOLLOWING INSTALL(S): PATCH XXXXX TEST VERSION**

**SUBJECT: BACKUP OF PATCH XXXXX INSTALL ON FEB 05, 2013**

**REPLACE**

**LOADING ROUTINES FOR XXXXX**

**ROUTINE YYYY1**

**ROUTINE YYYY2**

**ROUTINE YYYY3**

**SEND MAIL TO: ADPAC,ONE// ADPAC,ONE**

**SELECT BASKET TO SEND TO: IN// BACKUP PATCH (FOLDER FOR FORUM)**

**AND SEND TO:**

**Restore Pre-Patch Routines (MailMan)**

Go to the **Backup of Patch XXXXX** message in Mailman.

At the **Enter message action prompt**, enter “X” to “Xtract PackMan”

At the **Select PackMan Function** prompt enter the number **6 to Install/Check Message**

At the end of this process the pre-patch routines are restored.

---

Note: See header “Install the Patch Backup” for detail
Install the Patch Backup

5. Rollback Procedure

The following sections detail the rollback procedure for PIA.

5.1. Rollback Considerations

A follow-up patch would be needed to remove new data entries established by the data dictionary. Specific rollback details will be incorporated in subsequent versions, but a patch would only be created if necessary.

Note: These new data entries are the result of a new field added to the data dictionary or the modification of an existing field in the data dictionary.

5.2. Rollback Criteria

The back-out of PHARMACY INTERFACE AUTOMATION (PIA) patches that modified existing fields, and established new fields would be justification for rollback.

5.3. Rollback Risks

None

5.4. Authority for Rollback

The authority would come from the IPT and the VA project manager.

5.5. Rollback Procedure

A follow-up patch for each namespace would be needed to delete/modify that namespace’s data dictionary entries that were added/modified and other non-routine components added/modified by this project’s patches and would follow the basic logic flow below.

Logic flow using FileMan API calls as much as possible for the below actions

1. New data fields would need to be erased that were likely populated by the new functionality, while the new data fields are still valid in the data dictionary.
2. New file cross references would now need to be deleted.
3. New fields need to be deleted out of the data dictionary.
4. Modified data dictionary fields would need to be restored.
5. New SECURITY KEY file (#19.1) entries needs to be deleted.
6. Existing PROTOCOL file (#101) entries would need to be restored while new file entries would be deleted from the site.
7. Existing OPTION file (#19) entries would need to be restored while new file entries would be deleted from the site.
8. Existing PARAMETERS file (#8989.5) entries would need to be restored while new file entries would be erased and then deleted from the Kernel Parameter Definition file at the site.
9. Existing PARAMETER DEFINITION file (#8989.51) entries would need to be restored while new file entries would be erased and then deleted from the PARAMETER DEFINITION file at the site.

10. New INPUT TEMPLATES file (.402) entries need to be deleted.

11. New HL LOGICAL LINK file (#870) entry needs to be deleted.

12. New HL7 APPLICATION PARAMETER file (#771) entries needs to be deleted.
6. Disaster Recovery and Continuity of Operations

Each VistA facility as well as regional data centers are responsible for their own disaster recovery (DR) and Continuity of Operations (COOP). Please refer to the VistA Disaster Recovery and Continuity of Operations Plans at the specific facility. Most of these documents are considered confidential in that information that could disrupt any of these facilities DR or COOP could cause catastrophic data loss. Therefore the following link is just an example:

REDACTED
