Pre-Installation

ATTENTION: CMOP SITES ONLY

Do not load and install or queue to install this package while CMOP prescriptions are being transmitted. If transmissions are in progress, incorrect prescription information may be sent to the CMOP. To determine if a CMOP transmission is in progress, examine TaskMan for jobs entitled “CMOP Data Transmission.”

***IMPORTANT***

The environment check routine will check to make sure that the site has the following patches installed:

♦ CPRS sites only

—if any of the above are not installed, the KIDS install will abort and the KIDS transport global will be deleted.

PSS*1*17 is included in the National Drug File V. 4.0 build.

The National Drug File (NDF) software package allows pertinent information from the National Drug File to be merged into your production DRUG file (# 50). This is a method of non-intrusive standardization of the production DRUG file in all VA medical facilities.
This package was exported using the Kernel Installation and Distribution System (KIDS) instead of the VA FileMan DIFROM utility. You will use KIDS to install the software. Please read the KIDS documentation located in Part 5 of the Kernel V. 8.0 Systems Manual and familiarize yourself with KIDS before you install this software.

If the proper version of the global ^PSNDF is not installed, the KIDS install will abort and the KIDS transport global will remain on the system.

National Drug File V. 4.0 relies (minimum) on the following external packages. This software is not included in this package and must be installed before this version of NDF is completely functional.

Before Installing

All pharmacy users must be off the system when the Install is run and, all National Drug File package activity should be idle.

AXP sites: Journaling should be disabled on the ^PSNDF(50.6, ^PSNDF(50.64, ^PSNDF(50.67, ^PSNDF(50.68, and ^PS globals while running the installation.

DUZ must be defined and valid, and DUZ(0) must be “@” before running the install.

Once you begin the install, you must let it run to completion. If the install is not allowed to run to completion, you can lose certain files (see step #4 of the installation).
Installation

Installation Procedure

1. Kill the old NATIONAL DRUG file global (File #50.6) if it is presently on your system by entering K ^PSNDF. If this is not done, data will be corrupted.

   ***IMPORTANT***
   AXP sites: If the global set is protected from unsubscribed kills (purge protection), make sure to change the protection on the ^PSNDF and ^PSNTRAN globals.

2. If your site uses tape, load the new NATIONAL DRUG files in your account by entering D ^%GTI (AXP sites) or D ^%GI (OPENM sites) and answer the following prompts. The user responses are underlined. It will take approximately 2-3 hours for the global tape to load.

   INPUT DEVICE?  47
   MAGTAPE MODE?  <D>  VAL4
   BLOCK SIZE?  <1024>  8192

   If you have received the National Drug files as a host file rather than on tape, use %GTI (AXP sites) or %GI (OPENM sites).

   AXP Sites  Enter the file name at the “Input Device?>” prompt.

3. Delete the PSN* routines by entering D ^%ZTRDEL and selecting the PSN* routines.

4. Install the software using the Kernel V. 8.0 Kernel Installation and Distribution System menu while logged into your account in programmer mode. It will take approximately 120 to 150 minutes to run the install. Once you start the install, you must let it run to completion. If the install is not allowed to run to completion, you will lose the following files:

   VA DRUG CLASS file (#50.605),
   DRUG MANUFACTURER file (#55.95),
   DRUG UNITS file (#50.607),
   PACKAGE SIZE file (#50.609),
   PACKAGE TYPE file (#50.608), and
   DRUG INGREDIENTS file (#50.416).

5. Assign the PSNMGR key to the appropriate users at this time. This key unlocks the options Allow Unmatched Drugs To Be Classed [PSNSTCL] and Local Formulary Report [PSNFRMLY].
Installation Example

**Remember:** Kill the old ^PSNDF global and load the new global before loading the build and running the Install. Once you start the install, you must let it run to completion. DUZ must be defined and DUZ(0) must be defined as an “@” before running the install.

***IMPORTANT***

AXP sites: If the global set is protected from unsubscripted kills (purge protection), make sure to change the protection on the ^PSNDF and ^PSNTRAN globals.

> D ^XUP

Comment: NATIONAL DRUG FILE V. 4.0 10/8/98

This Distribution contains Transport Globals for the following Package(s):
   PSN 4.0
   PSS*1*0*17

Want to Continue with Load? YES// YES
Loading Distribution...
Want to RUN the Environment Check Routine? YES// NO  [Respond NO at this prompt.]

Use INSTALL NAME: PSN 4.0 to install this Distribution.

**Note:** At this point, you can run the **Verify Checksum in Transport Global** option. If any of the routine checksums failed, you should not proceed with the installation process. Contact your distributing CIO Field Office.

Select Installation Option: **INSTALL** Package(s)
Select INSTALL NAME: **PSN 4.0** Loaded from Distribution 10/15/98@09:57:23
=> NATIONAL DRUG FILE V. 4.0 10/8/98 ;Created on Oct 08, 1998@09:56:28

This Distribution was loaded on Oct 15, 1998@09:57:23 with header of NATIONAL DRUG FILE V. 4.0 10/8/98 ;Created on Oct 08, 1998@09:56:28
It consisted of the following Install(s):
PSN 4.0
PSS*1.0*17

**PSN 4.0**
Will first run the Environment Check Routine, PSNPRE

I need to delete the following files:

- **DRUG INGREDIENTS** (50.416)
- **VA DRUG CLASS** (50.605)
- **DRUG UNITS** (50.607)
- **PACKAGE TYPE** (50.608)
- **PACKAGE SIZE** (50.609)
- **DRUG MANUFACTURER** (55.95)

If you wish to retain a copy of these files, you may wish to backup these files before going any further.

If you start this Installation, you must let it run to completion. Are you sure you want to continue? **YES**

Install Questions for PSN 4.0

Incoming Files:

- **50.416** **DRUG INGREDIENTS** (including data)
  Note: You already have the 'DRUG INGREDIENTS' File. I will OVERWRITE your data with mine.

- **50.6** **VA GENERIC**  [This prompt will only be seen during the initial install.]
  *BUT YOU ALREADY HAVE 'NATIONAL DRUG' AS FILE #50.6!*
  Shall I write over your NATIONAL DRUG File? YES// **YES**

- **50.605** **VA DRUG CLASS** (including data)
  Note: You already have the 'VA DRUG CLASS' File. I will OVERWRITE your data with mine.

Assigning Keys, Menus, and Options

The installer must enter users into the test and production accounts, assigning the PSNMGR option as the primary menu option. The PSNMGR key must be assigned to the package coordinator and/or their designee. This key unlocks the Allow Unmatched Drugs To Be Classed [PSNSTCL] and Local Formulary Report [PSNFRMLY] menu options. Only users having this key will see these options on their menus.

National Drug File V. 4.0 Menu

* Formerly Formulary Report
** Formerly Lookup National Drug Info in Local File.
Journaling

The VA GENERIC file (#50.6), VA DISPENSE UNIT (#50.64), NDC/UPN file (#50.67), and VA PRODUCT file (#50.68) are reference files only. Users are allowed read access only through VA FileMan. This file does not require journaling.

AXP sites: If you disabled journaling before running the installation, you should resume journaling on the ^PSNDF and ^PS globals.

Routine Mapping

It is not necessary to map routines.

Technical Assistance

If you experience problems of a technical nature with this software package, you are encouraged to contact the National VISTA Support HELP DESK.
