Revision History

Each time this manual is updated, the Title Page lists the new revised date and this page describes the changes. If the Revised Pages column lists “All,” replace the existing manual with the reissued manual. If the Revised Pages column lists individual entries (e.g., 25, 32), either update the existing manual with the Change Pages Document or print the entire new manual.

**IB-initiated Medication Copay Charge**

There are times when the medication copay status of a prescription can be changed by a background process. In this example, another prescription for the same veteran was returned to stock, dropping copayments below the annual cap. Integrated Billing (IB) goes through all of the prescriptions looking for any that were not billed a copay because the annual cap was reached. IB initiates a copay charge against any such prescriptions that are found until the copay cap is again reached.

**Example: An IB-initiated Medication Copay Charge**

¾ Days Supply Hold

Sites were seeing a great number of refill-too-soon third party claim rejections due to prescriptions being filled too early. To help prevent this for ePharmacy prescriptions, the system will now verify that ¾ of the days supply has elapsed on the previous fill before the prescription may be refilled. The following list describes the changes.

- ePharmacy prescriptions are delayed from being sent to CMOP and printed for local mail until ¾ of the days supply has elapsed.
- An activity log entry will state the date/time that the Rx will be allowed to be removed from suspense. The activity log will be defined on the initial evaluation. The following is an example of the log entry:

  4 06/18/08 SUSPENSE REFILL 2 OPHARM,ONE
  Comments: 3/4 of Days Supply SUSPENSE HOLD until 6/20/08.

- The Pull Early from Suspense function is not impacted by this added functionality. Users may pull these type prescriptions early from suspense.

Host Errors

Prescriptions (ePharmacy only) will be prevented from being filled/sent to CMOP when a host processing error occurs as a claim is submitted through ECME. Host processing errors are identified by reject codes M6, M8, NN, and 99 which are returned by the third party payer. The following conditions apply when this scenario occurs.

- The transmission of the prescription fill will be delayed 1 day in hopes that the host processing issues will be resolved by the third party payer.
- An activity log entry will state the date/time along with a comment stating that the Rx/fill was left in suspense hold due to a host processing error. The following is an example of the log entry:

  2 06/25/08 SUSPENSE ORIGINAL OPPHARM,TWO
  Comments: SUSPENSE HOLD until 6/26/08 due to host reject error.

- The Pull Early from Suspense function is not impacted by this added functionality. Users may pull these type prescriptions early from suspense.

There is no user interaction for this function. It initiates when the Print from Suspense [PSO PNDLBL] option is initiated for CMOP prescriptions.

TRICARE

If a TRICARE claim is not ePharmacy billable or is not payable by the third-party payer, then the label will not be printed and the RX will not be filled.
Pull Early from Suspense  
[PSO PNDRX]

This option is used to pull a specific prescription or all prescriptions for a patient early. If a prescription is pulled early using this option, it will not be associated with any printed batch, and the user will not be able to reprint a label with the Reprint Batches from Suspense option. Since prescriptions that are pulled early from suspense do not belong to any printed batch and cannot be reprinted from suspense, there is no reason to leave them in suspense.

The user may also edit the “Method of Pickup”. For the prompt "Pull Rx(s) and delete from Suspense”, the user should answer YES to pull the prescriptions, and they will always be deleted from suspense.

If the routing is changed to “Window” when pulling from suspense early and the bingo board is being used, those prescriptions will be sent to the bingo board.

If a prescription is determined to be an ePharmacy prescription (e.g., third party electronically billable), an electronic claim will be sent by ECME to the third party payer. The communication events between Outpatient Pharmacy and ECME are recorded in the ECME Log section of each prescription. The ECME log can be viewed in the patient Medication Profile screen (Activity Log option - AL) and also from the View Prescriptions option. If the claim submission returns a Refill Too Soon (79) or Drug Utilization Review (88) reject, the label is not printed for the prescription and it is moved to the Refill Too Soon/DUR section of the patient Medication Profile screen until the user resolves the reject. The prescription will also display on the Third Party Payer Reject worklist.

Queue CMOP Prescription  
[PSO RX QUEUE CMOP]

The Queue CMOP Prescription option allows the users (including pharmacy technicians) to put mail-routed prescription(s) for CMOP drugs on suspense for CMOP.

Example: Queue CMOP Prescription

Select Suspense Functions Option: QUEUE CMOP Prescription
Enter the Rx # to queue to CMOP: 300486

If the prescription does not have a routing of mail, has already been released, or is not for a CMOP drug, and does not pass all the other normal checks for CMOP it will not be put on suspense for CMOP.
