

Outpatient Pharmacy (PSO)
Version 7.0
Technical Manual / Security Guide

December 1997
(Revised September 2021)
Department of Veterans Affairs (VA)
Office of Information and Technology (OIT)

Revision History

Date	Patch	Description
09/2021	PSO*7*561	Added new routines PSOBPSS2 , PSOBPSU4 , PSOSULB2
08/2021	PSO*7*503	<ul style="list-style-type: none"> • Added new PHARMACY TELEPHONE REFILLS file (#52.444) to Outpatient Pharmacy file Table located in the Files section • Added new routines PSOVEXRX and PSOVEXR1 to Routine List section. • Updated the M AudioFax section with the new M AudioCARE option description.
07/2021	PSO*7*630	<ul style="list-style-type: none"> • Added new routine PSORXFIN to Routine List section
07/2021	PSO*7*524	<ul style="list-style-type: none"> • Updated Dispense Request with the new ZZZ segment for Hazardous Indicators (p. 62) • Updated Segments used in the Outpatient Pharmacy HL7 interface Dispense Request with the new ZZZ segment for Hazardous Indicators (p. 68) • Updated data elements for the Hazardous to Handle Indicator and the Hazardous to Dispose Indicator (p. 73)
05/2021	PSO*7*560	<ul style="list-style-type: none"> • Added new routine PSOREJP6.
04/2021	PSO*7*635	<ul style="list-style-type: none"> • Updated for PSO*7.0*635 (pg2) • HPS Review. Updated file #52.45 to ERX SERVICE REASON CODES file (#52.45) (pg2), Updated Introduction with bullet list format (pg1)
03/2021	PSO*7*635	<ul style="list-style-type: none"> • Update for Patch PSO*7.0*635. Updated Introduction (pg1), updated Related Manuals (pg4)
03/2021	PSO*7*625	<ul style="list-style-type: none"> • Added new routines PSOSPML7, PSOSPML8, PSOSPMV to Routine List section • Added three new menu options to the State Prescription Monitoring Program (SPMP) Menu: <ul style="list-style-type: none"> ○ View/Export Void Prescriptions ○ Manual Export/Prescription Correction ○ CS Prescriptions Not Transmitted • Added ASAP Zero Report Specifications to Appendix E
12/2020	PSO*7*581	<ul style="list-style-type: none"> • Deleted PSO ERX VD SBN and PSO ERX HIDDEN #1 from Inbound ePrescribing protocols list. (p.149)

Date	Patch	Description
12/2020	PSO*7*581	<ul style="list-style-type: none"> • Updated Routine list: <ul style="list-style-type: none"> ○ P14: PSO581EN & PSO581PO ○ P15: PSOERX1D, PSOERX1E, PSOERXA5, PSOERXA6, PSOERXC1, PSOERXEN, PSOERXI1, PSOERXIA, PSOERXIB, PSOERXIC, PSOERXID, PSOERXIE, PSOERXIF, PSOERXIG, PSOERXIH, PSOERXII, PSOERXIU, PSOERXOA, PSOERXOB, PSOERXOC, PSOERXOD, PSOERXOE, PSOERXOF, PSOERXOG, PSOERXOH, PSOERXOI, PSOERXOJ, PSOERXOK, PSOERXOL, PSOERXOM, PSOERXON, PSOERXOU, PSOERXU2, PSOERXU3, PSOERXU5, PSOERXU6, PSOERXU7, and PSOERXU8 • Updated protocol name: PSO ERX CHANGE REQUEST, PSO ERX RX RENEWALREQUEST, PSO ERX SINGLE RXRENEWAL REQUEST (p.148) • Updated File #52.49 (p.150), File #52.46 (p.154), File #52.47 (p.155), File #52.48 (p.156) • Updated to Figure 5 (p.147)
06/2020	PSO*7*612	Added routine PSOCLADD to Routine List (p. 14)
06/2020	PSO*7*546	<ul style="list-style-type: none"> • Added new routines PSOUTOR and PSOUTOR1 • Added the Medication Status Check supervisor function • Updated Title page, Revision History, Table of Contents, Index, and Footers
07/2019	PSO*7*528	Changed name of the TRICARE CHAMPVA Bypass/Override Report (pp. 20, 34, 39, 42).
03/2019	PSO*7*522	Updated Appendix A section B: Processing Rules - Deleted the text, "event type O01" and "event type O02"; and corrected the RDS message from "Pharmacy Encoded Order Message" to "Pharmacy Encoded Order/Treatment Dispense Message". Updated Appendix A section B:Transaction Specifications, subsection "Specific Transaction - Dispense Request" - corrected RDS-O01 references, the implemented message type is RDS-O13
02/2019	PSO*7*481	Added the new menu option for PSO*7*481, Non-VA Provider Import, to the PSO Maintenance Menu which is under the Outpatient Pharmacy Manager. Added the new option Non-VA Provider Inactivate to Standalone Options. Routine List updated.
11/2018	PSO*7*452	<p>Added a summary of Data Dictionary changes introduced by this patch.</p> <p>Added routines PSODIR4, PSODEMSB, PSOEOPNW, and PSOSUCAT to the Routine List.</p> <p>Added the PSO CLINICAL ALERT ENTER/EDIT template to the Templates section.</p>

Date	Patch	Description
11/2018	PSO*7*508	Added new Patch Details for Inbound ePrescribing (PSO*7.0*508) to Intro, pg1; Added PSO*7*508 documents to related manuals pg3; Updated Security Keys: PSO ERX ADV TECH, PSO ERX TECH, pg18 *** PSDRPH, pg32a PSO ERX TECH,pg32b PSO ERX VIEW, pg32c; Appendix G. Updated IEP Protocols; Removed PSO*7.0*508 reference from Inbound ePrescribing Remote Procedures; Updated Fig 5. IEP Process Flow v3.0, pg146; Removed New and Modified labels from Inbound ePrescribing Protocols, p147 and Inbound ePrescribing, pg148: Holding Queue File (File #52.49), p149 ; External Patient File (File #52.46), p152a ; EXTERNAL PHARMACY FILE (#52.47), pg152b EXTERNAL PERSON (File #52.48), pg153a; SERVICE REASON CODES (File #52.45) lists, p153b; Updated Outpatient Pharmacy: PRESCRIPTION FILE (File #52), p153c; and OUTPATIENT SITE (File #59), pg154.
11/2018	PSO*7*517	Routine added PSO7P517 (p.13)
08/2018	PSO*7*482	Added one routine (PSOPTC0) to list of routines (p. 13).
08/2018	PSO*7*505	Clinical Ancillary Services updates: Updates to ORC HL7 segment. Added definition for ORC-30, Authorization mode.
05/2018	PSO*7*463	Added technical components pertaining to the HAPE EDI Revenue Enhancements patch PSO*7*463 and updated the Routine List (PG. 13, 36)
04/2018	PSO*7*502	Updates for ScripTalk enhancement: ScripTalk Printer 508 & OIT Compliance update throughout
02/2018	PSO*7*500	Routine deleted: PSODGAL
02/2018	PSO*7*402	Routines added: PSO7P402, PSODOSU4
01/2018	PSO*7*497	Data Dictionary Updates, Index
12/2017	PSO*7*467	Adding PSO*7*467 information
04/2017	PSO*7*472	Added New Patch Details for Native Domain Standardization Medication Patch PSO*7*472, Data Dictionary Update.
02/2017	PSO*7*465	Added the Confidential Address and revised the Temporary Address.
12/2016	PSO*7*454	Added new OneVA Pharmacy routines; updated sections and added information about the new OneVA Pharmacy label; added Data Base Integration Agreement, added new External packages: eMI, HDR/CDS Repository; added Appendix for OneVA Pharmacy HL7-eMI-HDR/CDS Repository & HL7-eMI-VistA messaging; updated Table of Contents to include changes; updated revision date for December 2016; Updated Index.

Date	Patch	Description
08/2016	PSO*7*451	Routines added: PSOASAP, PSOSPMA3, PSOSPMB3, PSOSPMKY, PSOSPMU0, PSOSPMU2, PSOSPMU3 Added PSO SPMP ADMIN Security Key entry Update the Outpatient Pharmacy Menu Diagrams
06/2016	PSO*7*448	Updated Title Page to current OI&T standards Updated routine list; added the menu option Pharmacy Productivity/Revenue Report; added Electronic Claims Management Engine (ECME) to the External Relations table.
04/2016	PSO*7*411	Updated Routine List with routines PSOCROC, PSODGAL3, PSONEWOA, PSONEWOC, and PSOCKV1.
08/2014	PSO*7*408	Updated [PSO AUTOQUEUE JOBS] option Files added to OP: (#58.4) SPMP ASAP RECORD DEFINITION, (#58.41) SPMP STATE PARAMETERS, (#58.42) SPMP EXPORT BATCH Routines added: PSO408PI, PSOASAP0, PSORTSUT, PSOSPML0, PSOSPML1, PSOSPML2, PSOSPML3, PSOSPML4, PSOSPML5, PSOSPML6, PSOSPMSP, PSOSPMU1, PSOSPMUT Added new Supervisor Functions menu option: State Prescription Monitoring Program Menu with option names Updated the Glossary Added Appendix E: Outpatient Pharmacy ASAP Standard for Prescription Monitoring Programs (PMP) Updated Index
08/2014	PSO*7*313	Added new routine PSOOTMRX
05/2014	PSO*7*423	Updated PID-11 documentation, updated RDX segment example, updated Expense Notes & Dispensing Provider, updated RXD-9 documentation.
03/2014	PSO*7*372 PSO*7*416	Renumber all pages Updated Revision History and Table of Contents. Added to the Related Manuals Update Index
01/2014	PSO*7*434	Two documentation updates: The <u>active</u> Veteran's Health Identity Card (VHIC) number was added to the PID segment (PID-4) on the VistA side. Format: [VIC Card #]~~~USVHA&&0363~PI~VA FACILITY ID&742V1&L The Outpatient Pharmacy Automation Interface (OPAI) has been changed to delimit the text on the pharmacy warning labels, correcting the problem in which text from one warning label runs into the text of another warning label.

Date	Patch	Description
11/2013	PSO*7*421	Changed graphic from VA Seal to VistA logo; changed layout for cover page. Update other front matter including TOC, revision history, etc. Update routine count. Add new routines: PSO7P421, PSOBPSSL Add PSO EPHARMACY SITE MANAGER to security keys (added twice to document).
05/2013	PSO*7*391	Added new routine PSOPKIV2 to the list of routines. PSDRPH key added to Security key section.
01/2013	PSO*7*390	Update Revision History Added option Automate Internet Refill that was missed in the manual for PSO*7*264 Add new routines: PSODGAL2, PSODDPR7, PSODDPR8 Add menu option; Check Drug Interaction Added BSA & CrCL to the Glossary
09/2012	PSO*7*386	Added description of patch's new security key PSO TECH ADV and modifications to the HOLD/UNHOLD functionality.
03/2012	PSO*7*367	Added routine PSOFDAUT. Updated NTE Segment listing.
03/2012	PSO*7*354	Added new menu option Enter/Edit Automated Dispensing Devices Updated list of files with file 52.53 Added file 52.53 to file security section Added new menu option Enter/Edit Automated Dispensing Devices Added RXD-13 Dispense-To location
02/2012	PSO*7*385	Removed "TRICARE" from file 52.87 name Changed name of PSO TRICARE and PSO TRICARE MGR security keys to PSO TRICARE/CHAMPVA and PSO TRICARE/CHAMPVA MGR respectively. Updated ePharmacy Menu with correct menu items Added Advanced Beneficiary Notice Code for ePharmacy Rx in Appendix A references
02/2012	PSO*7*354	Updated list of files with file 52.53
09/2011	PSO*7*382	Added routine PSOMPHRC.
04/2011	PSO*7*343	Added routine PSOFDAMG.
04/2011	PSO*7*316	Removed routine PSOQUAP. Documentation released with PSO*7*343.

Date	Patch	Description
04/2011	PSO*7*251	<p>Updated the Table of Contents.</p> <p>Change the number of files from 24 to 26.</p> <p>Added the following routines for PRE: PSO251PO, PSOCPPRE, PSODDPR1, PSODDPR2, PSODDPR3, PSODDPR4, PSODDPR5, PSODDPRE, PSODGAL1, PSODGDGP, PSODOSCL, PSODOSUN, PSODOSUT, PSOORROC, PSODOSU2, PSOVRPT.</p> <p>Added information under Callable Routines section. And Removed links and added references under the External Interfaces.</p> <p>Updated the External Relations table</p> <p>Change the number of files from 24 to 26.</p> <p>Changed menu item Process Drug/Drug Interactions to Process Order Checks.</p> <p>Removed heading and information under Routine Mapping.</p>
11/2010	PSO*7*358	<p>Update routine list, security keys, file list, and options for the Bypass/Override functionality and added in the TRICARE Active Duty Release.</p>
06/2010	PSO*7*348	<p>Added routines PSORLST & PSORLST2; added options Prescription List for Drug Warnings and List of Patients/ Prescriptions for Recall Notice in Output Reports menu;</p>
10/2009	PSO*7*326	<p>Added routine PSOPATLK.</p>
08/2009	PSO*7*320	<p>Added routines PSORMRX, PSORMRXD, and PSORMRXP.</p>
08/2009	PSO*7*311	<p>Deleted Pharmacy Patient Non-VA Meds Report/Clean-up menu.</p>
07/2009	PSO*7*289	<p>Added files, routines, and the NDC Validation and ePharmacy Site Parameter options to the list.</p>
01/2009	PSO*7*305	<p>Added routine PSOATRFC. Extended the PSOATRFC security key description. Added the Privacy Notification element to the NTE segment.</p>
08/2008	PSO*7*225	<p>The following changes are included in this patch.</p> <p>New routines have been added: PSOCAN3N, PSOHLSN3, PSORFI5, PSORFI6, PSORFL, PSORRL3, PSORRLN, and PSORRLO. Special Escaping Characters information has been added.</p>
07/2008	PSO*7*279	<p>Update for the addition of the PSOATRFC key.</p>
06/2008	PSO*7*288	<p>Update for the new menu option [Pharmacy Patient Non-VA Meds Report/Clean-up].</p>
05/2008	PSO*7*294	<p>Update Routine List with routines PSOQ0076, PSOQ0186, PSOQ0236, PSOQ0496, PSOQ0595, PSOQCF04, PSOQMCAL, PSOQRART, PSOQTIU4, PSOQUAP, PSOQUAP2, and PSOQUTIL.</p>

Date	Patch	Description
10/2007	PSO*7*260	Updated Routine List with routines PSO260PI, PSOBPSR1, PSOBPSRP, PSOBPSU1, PSOBPSU2, PSONVAVW, PSOPMP0, PSOPMP1, PSOPMPPF, and PSOREJP3. Updated menu listing with new ePharmacy menu options.
10/2007	PSO*7*264	Re-numbered pages; removed section heading numbering. Updated Routine List with routines: PSOATRD, PSOATRF, PSOATRF1, PSOATRP, PSOATRPP, PSOATTR, and PSORESUS. Updated menu listing with new option.

1. Introduction

This document briefly describes the technical and security aspects of Outpatient Pharmacy V.7.0. It is intended for members of the Automated Data Processing (ADP)/Information Resources Management Service (IRMS) staff who has had experience with other Veterans Health Information Systems and Technology Architecture (VistA) software and has worked or will work with a package coordinator who is familiar with the functions of the Outpatient Pharmacy V.7.0 in a VA Medical Center. Readers without this background are referred to the documentation for the Kernel, the VA FileMan and the User's Manual for this release.

The Outpatient Pharmacy V.7.0 package provides a method for managing the medications given to veterans who have visited a clinic or who have received prescriptions upon discharge from the hospital. Prescription labels are automatically generated, and refill request forms are printed. Medication histories are kept online to permit checks for potential interactions. Profiles can be generated to assist the clinician in managing the patient's medication regimen. Management reports aid the pharmacy in controlling inventory and costs.

A number of site parameters allow the individual Department of Veterans Affairs Medical Center (VAMC) to customize the package to meet local needs. The User's Manual describes these site parameters and the ways they influence the operation of the package.

Effective with the OneVA Pharmacy Patch PSO*7.0*454 (December 2016), Pharmacists are able to dispense prescriptions that originated in other VistA host sites. The OneVA Pharmacy User Manual and Installation Guide describe the site parameter required to use this functionality.

Effective with the Inbound ePrescribing Patch PSO*7.0*467 (December 13, 2017), pharmacists are able to receive and process prescriptions that originated from external providers. The Inbound ePrescribing User Manual, Installation Guide, and Implementation Guide describe the site parameters required to use this functionality.

Effective with the Inbound ePrescribing Patch PSO*7.0*508 (October 2018), pharmacists are able to receive and process prescriptions that originated from external providers. The Inbound ePrescribing User Manual, Installation Guide, and Implementation Guide describe the site parameters required to use this functionality.

Effective Inbound ePrescribing Patch PSO*7.0*581 (December 2020), pharmacists are able to receive and process incoming electronic prescription (eRX) sent from the IEP Processing Hub down to VistA and into the eRX Holding Queue.

Effective Inbound ePrescribing Patch PSO*7.0*635 (April 2021), Warranty defect remediation provides software fixes for:

- SIG text is supposed to be up to 1000 characters, Inbound eRx software assigns wrong unit of measure in RxRenewal Request, RxRenewal Request failing at hub because "IndicationForUse" segment is not sending in "Sig" segment
- Inbound eRx software assigns wrong unit of measure in RxRenewal Request

- RxRenewal Request failing at hub because "IndicationForUse" segment is not sending in "Sig" segment.
- NewRx coming in with ObservationDateTime, causing a failure at the eRx processing hub when generating an RxRenewal Request
- Updated Data Dictionary - ERX SERVICE REASON CODES file (#52.45), ACR codes in ERX SERVICE REASON CODES file (#52.45) have an extra space at the end
- ACR codes in ERX SERVICE REASON CODES file (#52.45) have an extra space at the end.
- VA 'Refills' displaying incorrectly for RxRenewal response replace response messages
- VA 'Refills' not displaying correct refills for Replace RxRenewal Response message, extend the logic from 365 days to 1 and half year for messages related to display at hub (Track/Audit page), a backlog of messages is queueing up and waiting for outbound delivery to CH during peak hours, reports page columns are missing in the last three reports
- NewRx counts not showing for summary new Rx Only and report totals at the bottom of the tables do not align with the correct column
- Reports - number of records not being displayed at the bottom of all reports and column width for Message Type in Track/Audit not wide enough
- When editing the Validate Drug/SIG for Replace RxRenewal Response, eRx refills are not decrementing correctly and incorrectly displays the # of Refills.

See External Relations Section of this manual for a listing of software not included in this package that must be installed before this version of Outpatient Pharmacy is fully functional.

2. Orientation

2.1. Online Documentation

Throughout the entire Outpatient Pharmacy V. 7.0 package, enter a question mark (?) to obtain online information to assist in choosing actions at any prompt. Where examples of screen dialogs are given, user responses are shown as bolded text.

Additional information about this package is contained in help prompts and comments, which are available online. Detailed information can also be obtained by using the Kernel routine XINDEX to produce detailed listings of the routines and by using the VA FileMan to generate listings of data dictionaries for the files.

The Data Dictionaries (DDs) are considered part of the online documentation for this software application. Use VA FileMan *List File Attributes* [DILIST] option, under the *Data Dictionary Utilities* [DI DDU] option, to print the DDs.

3. Implementation and Maintenance

3.1. Resource Requirements

Outpatient Pharmacy V. 7.0 contains approximately 850 routines including all PSO* routines and compiled templates, PSOX* and APSPT* that take up approximately 3.76MB disk space.

Response Time monitor hooks have been placed in the following routines:

Table 1: Routines

Routine	Purpose
PSO52	File New Prescriptions in File (#52)
PSORN52	File Renewed Prescriptions in File (#52)
PSOR52	File Refill Prescriptions in File (#52)

This package requires 28 files (see “Files” section in this manual). A typical site may require the following disk space:

Table 2: Disk Space

Space	Description
1 Mbyte	DRUG file (#50) (4000 entries)
3 Mbytes per month	DRUG COST file (#50.9) (800 items dispensed by 200 dispensing physicians)
150 Mbytes	PRESCRIPTION file (#52) (500,000 prescriptions)
50 Mbytes	PHARMACY PATIENT file (#55) (500,000 prescriptions)
About 1 to 2 Mbytes	Routines and the other files (except for RX VERIFY file (#52.4), RX SUSPENSE file (#52.5), and PHARMACY ARCHIVE file (#52.8))
3 to 5 Mbytes of “swing space”	RX VERIFY file (#52.4), RX SUSPENSE file (#52.5), and PHARMACY ARCHIVE file (#52.8)

Outpatient Pharmacy V. 7.0 may be expected to require about 350 Mbytes of disk space. The actual disk utilization will, of course, depend primarily on the size of the three large files — PRESCRIPTION file (#52), PHARMACY PATIENT file (#55) and DRUG COST file (#50.9).

The requirements for Video Display Terminals (VDTs) and printers also depend on the number of transactions Outpatient Pharmacy V. 7.0 performs. Approximately three VDTs and one printer are needed for each 500 prescriptions (or fraction of 500) issued each day. If mail-out refills are handled separately, at least one VDT and one printer for each 500 refills are required. An additional VDT and a printer may be desired in the supervisor’s office, and 1 VDT in the office of people who are assigned to consult with patients about their medication regimens.

There are no special device requirements for dot matrix labels except to print barcodes on labels. In this case, the label printer must be able to print barcodes and must be able to be set to a form

length of either 4 inches or 24 lines. The section in this document on barcodes provides additional information about this function.

Laser printed labels require one or more specially configured printers. The printer must be able to print to a legal length form and must print barcodes. In addition, the printer must support Hewlett Packard’s Printer Control Language (PCL) version 5 or greater.

Note: The OneVA Pharmacy Patch PSO*7*454 introduced the OneVA Pharmacy label-generation functionality with new/updated label routines. In order to print the OneVA Pharmacy label, each site must use a standard VistA laser label printer and label stock. The printer must be able to print a legal length form and must print barcodes. In addition, the printer must support Hewlett Packard’s Printer Control Language (PCL) version 5 or greater. For additional information related to the label stock go to the VA Software Document Library (VDL), select the Clinical section then choose the “Pharm: Outpatient Pharmacy” page. Locate the “User Manual – Supplemental – Outpatient Pharmacy” document and refer to the section titled “Laser Labels Phase II (PSO*7*161) and FY07 Q2 Release (PSO*7*200).”

Note: The barcode printed on the OneVA Pharmacy label will contain the host site information where the prescription order originated.

3.2. Options to be Deleted during Installation

Note: The options listed below are deleted on the initial installation of Outpatient Pharmacy V. 7.0. No options are deleted after the initial installation, up to patch PSO*7*46.

Table 3: Options to be Deleted during Installation

Option Name	Menu Text
PSO DRUG	Drug Enter/Edit
PSO DRUGMENU	Drug/Drug Interaction Functions
PSO HOLDRX	Hold Rx
PSO INTERACTION	Drug Interactions Menu
PSO INTERACTION LOCAL ADD	Enter/Edit Local Drug Interaction
PSO INTERACTION SEVERITY	Edit Drug Interaction Severity
PSO LAB MONITOR	Mark/Unmark Lab Monitor Drugs
PSO NEW	New Prescription Entry
PSO REF	Refill Prescriptions
PSO RXEDIT	Edit Prescriptions
PSO RXHOLD	Hold Features

Option Name	Menu Text
PSO RXPART	Partial Prescription
PSO SIGED	Medication Instruction File Add/Edit
PSO UNHOLDRX	Unhold Rx
PSO FACILITY SETUP	Enter Facility Data for Clozapine
PSO MARK DRUG	Mark Clozapine Drug
PSOL UNMARK DRUG	Unmark Clozapine Drug
PSOARCCO	Find
PSOARCHLIST	List One Patient's Archived Rxs
PSOARCIN	Tape Retrieval
PSOARCPURGE	Purge
PSOARCSV	Save

3.3. Templates to be Deleted during Installation

Note: The templates listed below are deleted on the initial installation of Outpatient Pharmacy V. 7.0. No options are deleted after the initial installation up to patch PSO*7*46.

Table 4: Templates to be Deleted - Input

Input	File
PSO DRUG	#50
PSO SIGED	#51
PSO BATCH PARTIAL	#52

Table 5: Templates to be Deleted - Print

Print	File
PSO ACTION PROFILE #3	#44
PSOBJP	#52

Table 6: Templates to be Deleted - Dort

Sort	File
PSOBJP	#52

3.4. Routines to be Deleted during Installation

Note: The routines listed below are deleted on the initial installation of Outpatient Pharmacy V. 7.0. No options are deleted after the initial installation up to patch PSO*7*46.

Table 7: Routines to be Deleted

Routine	Routine	Routine	Routine	Routine
PSOCLDRG	PSOCLUS1	PSOCLUS2	PSOCLUS3	PSOCSRL1
PSOCSTAR	PSODRUG	PSOGMINS	PSOGMP12	PSOGMP25
PSOLIST	PSONODIB	PSONUM	PSOPOST3	PSOPRE
PSORX	PSORXPAR			

Prior to the initial installation of Outpatient Pharmacy V. 7.0, it is recommended that all PSO* routines be deleted using the system utility to delete routines. Back up local modifications to any PSO* routines.

After installation of Outpatient Pharmacy V. 7.0, compare routines to note the changes between locally modified routines and the V. 7.0 routines. Take care when installing local modifications as Outpatient Pharmacy V. 7.0 has been modified greatly with patch PSO*7*46.

3.5. M AudioCARE (Telephone Refill Requests)

If telephone refill requests are processed using AudioCARE, the installation of PSO*7*503 patch will add the new class I *Process Telephone Refills* [PSO PROCESS TELEPHONE REFILLS] option and take out-of-order the class III *Process Telephone Refills* [A3A PHONE REFILLS] option. PSO*7*503 enhanced the Process Telephone Refills functionality by replacing the widely distributed class III VEXRX routine with the new class I PSOVEXRX routine suitable for national release. This modification enables enhancements and updates to the Telephone Refills system to be deployed across the enterprise using the National Patch Module.

	<p>***Important***</p> <p>Telephone refill requests (M AudioCARE) cannot be processed without the new PSOVEXRX routine.</p>
---	--

3.6. Setting up the Bingo Board Device

A dedicated device must be set up for use with the bingo board. The device setup is similar to that used to set up a printer, except the sub-type will be C-VT. Only devices with the sub-type C-VT will be allowed for entry at the “DISPLAY DEVICE” prompt in the *Enter/Edit Display* [PSO BINGO ENTER/EDIT DISPLAY] option found on the *Bingo Board Manager* [PSO BINGO MANAGER] menu. For further information, see the site’s systems guide for information on setting up the device. Once a dedicated device is set up, the bingo board can be scheduled to automatically start and/or stop at user-defined times.

3.7. Mail Group Setup for the HL7 External Interface

A mail group and device **must** be set up in order to run the HL7 external interface. The recommended name of the mail group is REDACTED. The recommended device name is REDACTED.

3.8. Using the Maintenance Menu

The *Maintenance (Outpatient Pharmacy)* [PSO MAINTENANCE] menu is used for implementation as well as maintenance of the Outpatient Pharmacy V. 7.0 package. The first five options, *Site Parameter Enter/Edit* [PSO SITE PARAMETERS] (example follows), *Edit Provider* [PSO PROVIDER EDIT], *Add New Providers* [PSO PROVIDER ADD], *Queue Background Jobs* [PSO AUTOQUEUE JOBS], and *Autocancel Rx's on Admission* [PSO AUTOCANCEL1] are used for implementation. The remaining options on this menu may be used for maintenance. (An example is given below for the *Queue Background Jobs* [PSO AUTOQUEUE JOBS] option. See the Outpatient Pharmacy V. 7.0 User Manual for an explanation of the other options on this menu.)

3.8.1. Maintenance (Outpatient Pharmacy) [PSO MAINTENANCE] menu

Site Parameter Enter/Edit
Edit Provider
Add New Providers
Queue Background Jobs
Autocancel Rx's on Admission
Bingo Board Manager
Edit Data for a Patient in the Clozapine Program
Enter/Edit Clinic Sort Groups
Initialize Rx Cost Statistics
Edit Pharmacy Intervention
Delete Intervention
Auto-delete from Suspense
Automate Internet Refill
Delete a Prescription
Enter/Edit Automated Dispensing Devices
Expire Prescriptions
Manual Auto Expire Rxs
Non-VA Provider Import
Prescription Cost Update
Purge Drug Cost Data
Purge External Batches
Recompile AMIS Data

3.9. Queue Background Jobs

[PSO AUTOQUEUE JOBS]

This option is used to queue all background jobs. Once the *Queue Background Jobs* [PSO AUTOQUEUE JOBS] option is selected, the option automatically pre-selects the jobs. Entering "E" for exit will not exit the option. An up arrow (^) must be entered to exit a specific job and go on to the next one. The background jobs are as follows:

- Autocancel Rx's on Admission
- Nightly Rx Cost Compile
- Nightly Management Data Compile
- Compile AMIS Data (NIGHT JOB)
- Expire Prescriptions

- Auto-delete from Suspense
- Scheduled SPMP Data Export

A date and time at least 2 minutes in the future must be entered. The jobs should be set to run at a time convenient for the site.

Note: The options listed above must be scheduled to run through the *Queue Background Jobs* [PSO AUTOQUEUE JOBS] option. Attempting to run them from any other option will cause problems.

Only the following prompts require responses. All others will be left blank.

QUEUED TO RUN AT WHAT TIME: This is the date/time desired for TaskMan to start this option.

RESCHEDULING FREQUENCY: If this field is blank then the job will run only once.

The *Scheduled SPMP Data Export* [PSO SPMP SCHEDULED EXPORT] nightly background job option can also be scheduled via the *Schedule/Unschedule* [XUTM SCHEDULE] option.

Note: When the background job fails to transmit the data to the state, a MailMan message is generated and sent to the subscribers of the REDACTED mail group.

Example: View of Queue Background Jobs Screen

```
Select Maintenance (Outpatient Pharmacy) Option: QUEue Background Jobs

If time to run option is current do not edit.
Autocancel System Parameter must be set to 'YES'
before prescriptions are discontinued.
```

Note: The default values on the screen display below for TASK ID, QUEUED TO RUN AT WHAT TIME, DEVICE FOR QUEUED JOB OUTPUT, and RESCHEDULING FREQUENCY, not to indicate user input.

```
Edit Option Schedule
Option Name: PSO AUTOCANCEL
Menu Text: Autocancel on Admission          TASK ID: 2617405

-----

QUEUED TO RUN AT WHAT TIME: JUN 13,2000@01:00
DEVICE FOR QUEUED JOB OUTPUT: PP6;P-OTHER;132;64
QUEUED TO RUN ON VOLUME SET:

RESCHEDULING FREQUENCY: 1D

TASK PARAMETERS:

SPECIAL QUEUEING:

-----
COMMAND:                               Press <PF1>H for help   Insert
```

4. Files

This package requires the 28 files listed below. Information about the files can be obtained by using the VA FileMan to generate a list of file attributes.

The Data Dictionaries (DDs) are considered part of the online documentation for this software application. Use the VA FileMan *List File Attributes* [DILIST] option, under the *Data Dictionary Utilities* [DI DDU] option, to print the DDs. The following are the files for which DDs should be printed:

4.1. Outpatient Pharmacy Files

FILE #	NAME	UP DATE DD	SEND SEC. CODE	DATA COMES W/FILE	SITE DATA	RSLV PTS	USER OVER RIDE

59.3	GROUP DISPLAY	YES	NO	NO			
59.8	OUTPATIENT CLINIC SORT GROUP	YES	YES	NO			

4.2. EPIP Outpatient Pharmacy Remediation, Patch PSO*7.0*452 Data Dictionary Update

PSO*7.0*452 enables a new warning message that is sent to members of the new PHARMACY SUPERVISORS MailMan group, notifying recipients that one or more Outpatient Pharmacy sites are approaching the upper limit of the defined prescription numbering series. The new warning is intended to prevent an unintentional shutdown of prescription processing that will

occur if the pharmacy reaches the upper limit of the numbering series. For additional information about the early warning message, refer to the *Outpatient Pharmacy (PSO) Manager's User Manual*.

This patch is delivered with companion patch PSS*1.0*215, which adds a new RX# UPPER BOUND WARNING LIMIT field (#48) to the PHARMACY SYSTEM file (#59.7). The value stored in this field determines when the early warning message is sent. If no custom value is entered in this field, then the message will be sent when 1000 numbers remain in the series. For more information about this Data Dictionary change, refer to the *Pharmacy Data Management Technical Manual/Security Guide*.

PSO*7.0*452 also adds a Clinical Alert that displays in the header area with patient demographic information when using certain Outpatient Pharmacy [PSO] options. Pharmacy Supervisors can use the Clinical Alert to make Pharmacy staff aware of information such as drug interactions or the patient's participation in clinical trials. For more information about Clinical Alerts, refer to the *Outpatient Pharmacy (PSO) Manager's User Manual*.

The companion patch PSS*1.0*215 adds a CLINICAL ALERT multiple field (#109) to the PHARMACY PATIENT file (#55). This field stores the date and time of the alert and provides a free-text field for the alert text. For more information about this Data Dictionary change, refer to the *Pharmacy Data Management Technical Manual/Security Guide*.

4.3. Native Domain Standardization Medication Patch PSO*7*472, PSO*7*497, Data Dictionary Update

4.3.1. Description

This patch will add a new field Coding System multiple to files DRUG INGREDIENTS (#50.416), VA GENERIC (#50.6), VA PRODUCT (#50.68), VA DRUG CLASS (#50.605) for the purpose of interoperability.

DRUG INGREDIENTS (#50.416) file shall be updated to include a new field multiple to store the RXNORM / UNII codes from the respective Standards Development Organizations.

VA GENERIC (#50.6) file shall be updated to include a new field multiple to store the RXNORM / UNII codes from the respective Standards Development Organizations.

VA PRODUCT (#50.68) file shall be updated to include a new field multiple to store the RXNORM code from the Standards Development Organization.

VA DRUG CLASS (#50.605) file shall be updated to include a new field multiple to store the RXNORM / UNII codes from the respective Standards Development Organizations.

4.3.2 Patch Components

Table 8: Files & Fields Associated

File Name (Number)	Field Name (Number)	New/Modified/Deleted
DRUG INGREDIENTS (#50.6)	CODING SYSTEM (#5)_	Modified
VA PRODUCT (#50.68)	CODING SYSTEM (#43)	New
VA DRUG CLASS (#50.605)	CODING SYSTEM (#5)	New

5. Routine List

The following routine list for Outpatient Pharmacy appears when the new routine set is loaded. Each routine's first line contains a brief description of the routine's function. Use the First Line Routine Print [XU FIRST LINE PRINT] option to print a list of just the first line of each PSO* routine.

- PSO5241 • PSOARCSV • PSOBPSS2 • PSOCMOPT • PSOCST11

Additional Information

Standards and Conventions Committee (SACC) Exemptions

The following PSO routines will generate errors reported in the XINDEX utility from using non-standard M syntax, due to the need to consume external web services:

PSOERXA1
PSOERXO1

The following waiver permits the use of this non-standard M syntax to allow the use of Cache features to consume external web services. This waiver is located in the HealthVet Web Services Client (HWSC) Developer Guide.

Table 9: Waiver Permit

OITIMB33554520 - Migration from M2J to VistA Web Services Client (VWSC)	
Keywords	M2J,VWSC,J2EE
Decision Date	12/1/2006
Decision Type	Architecture
Decision Making Body	HPMO CCB
Description	On December 1, 2006, the HPMO Change Control Board voted to accept the migration of VistA from the current M2J solution to the VistA Web Services Client (VWSC). This decision was made for a number of reasons, in particular the fact that the existing 12-year-old M standard has been surpassed by evolving technologies and can no longer address today's requirements. Additionally, we are no longer required to support DSM, previously the primary VistA/M hosting environment. Today, all sites are standardized on Caché 5.0 systems. As such, approvals were granted as follows: Waiver of the requirement to adhere to the existing 1995 M standard (that does not address the implementation of web services); Implementation of an industry standard such as web services for VistA/M to J2EE calls using Caché's built in HTTP and web service client feature; Use of VWSC as an interim solution that ensures continuity of integration between VistA/M applications and migrated J2EE applications as HealthVet evolves by enabling the consumption of external web services by legacy VistA applications; and Deprecation of the original M2J approach.
Rationale	This architectural change allows for a number of improvements, including better scalability, resilience, and performance. Deployment and configuration is far less complicated for administrators, and the APIs can be used by a variety of clients rather than solely M-based. It also places responsibility for support, maintenance, etc. with the vendor rather than OI&T.
Record Type	TDR
State	Approved

6. Exported Options

6.1 Menu Assignments

Unless menus have already been assigned, the *Outpatient Pharmacy Manager* [PSO MANAGER] menu should be assigned to the Package Coordinator for Outpatient Pharmacy. It should also be added to the menu of the Site Manager and any ADP/IRMS staff that the Package Coordinator selects to help in the operation of Outpatient Pharmacy. The *Pharmacist Menu* [PSO USER1] option should be assigned to all pharmacists and the *Pharmacy Technician's Menu* [PSO USER2] option should be assigned to all pharmacy technicians and other pharmacy personnel who may view prescriptions and/or inquire into other Outpatient Pharmacy V. 7.0 files.

6.2 Security Keys

Table 10: Security Keys

Key	Description
PROVIDER	Holders of this key will be prompted for ICD-9 Diagnosis code entry.
PSDRPH	<p>This key is assigned to users for accessing the Inbound ePrescribing (eRx) Holding Queue functionality. The key allows users to access all options in the eRx Holding Queue. This key also authorizes pharmacists to verify and dispense controlled substance prescription(s).</p> <p>Introduced by the Controlled Substances patch PSD*3*76. This key authorizes pharmacists to finish/verify a digitally signed Schedule II-V CS orders placed via CPRS. The PSDRPH security key should be given to registered Pharmacists working on controlled substances to honor Drug Enforcement Administration regulations and should not be given to non-pharmacists except in cases where the package coordinator (ADPAC) is not a registered pharmacist.</p>
PSORPH	This key is required to use all of the Outpatient Pharmacy V. 7.0 options. It should be assigned to all pharmacists, the package coordinator, and all appropriate members of the ADP/IRMS staff.
PSO ERX ADV TECH	This key was updated by patch PSO*7*508 for the Inbound eRx Holding Queue. The key allows users to Validate Patient/Provider/Drug/SIG, Accept Patient/Provider/Drug Validations, Reject, Hold/Un Hold, Search, Sort, Remove/UnRemove, and Print Message View (MV), Acknowledge (ACK) – Refill Response, Refill Request (OP), Acknowledge (ACK) – Rx Cancel, Acknowledge (ACK) – Inbound Refill Error..

Key	Description
PSO ERX TECH	This key was updated by patch PSO*7*508 for the Inbound eRx Holding Queue functionality. The key allows users to Validate Patient/Provider/Drug/SIG, Hold/Un Hold, Search, Sort, and Print, Message View (MV), Acknowledge (ACK) – Refill Response, Refill Request (OP).
PSO ERX VIEW	This key was introduced by patch PSO*7*467 for the Inbound eRx Holding Queue functionality. The key allows users to Search, Sort, and View an eRx only.
PSO TECH ADV	This security key is used by pharmacy technicians to HOLD and UNHOLD prescriptions using a subset of the HOLD reasons available to PSORPH key holders.
PSO COPAY	This key is used to identify users to notify when a copay exemption cannot be determined at the time a prescription fill is released. Holders of this key are also notified any time the <i>Exempt Rx Patient Status from Copayment</i> [PSOCP EXEMPTION] option is used to change the copay exemption for an Rx Patient Status.
PSO REJECTS BACKGROUND MESSAGE	When prescriptions remain on the Third Party Payer Reject - Worklist over the specified number of days, the system will send a Mailman Message to holders of this key.
PSOA PURGE	NOTE: <i>Disabled until further notice.</i> This key should be assigned to the package coordinator and/or any person who will be responsible for archiving prescriptions.
PSOLOCKCLOZ	This key is used to override the lockouts in the Clozapine options. All members of the Clozapine treatment team must be entered as users on the system and must be given this key. All pharmacists who have the ability to override the lockouts in this option must also hold this key. The Pharmacy Service representative of the Clozapine treatment team should identify these pharmacists.
PSOINTERFACE	This key is used to access the <i>External Interface Menu</i> [PSO EXTERNAL INTERFACE] option.
PSOAUTRF	This key allows the use of the Automate Internet Refill functionality and the Automate CPRS Refill functionality.
PSO TRICARE/CHAMPVA	This key is required to be able to do an override on TRICARE or CHAMPVA prescription.
PSO TRICARE/CHAMPVA MGR	This key is required to access the <i>TRICARE CHAMPVA Override Report</i> [PSO TRI CVA OVERRIDE REPORT] option
PSO EPHARMACY SITE MANAGER	This key is required to access the <i>PSO ePharmacy Site Parameters</i> [PSO ePHARM SITE PARAMETERS] option.
PSO SPMP ADMIN	This key is used by the Outpatient Pharmacy (OP) package to grant certain users administration privileges to perform configuration updates in the State Prescription Monitoring Program (SPMP) module.

6.3 Package Security

Electronic signatures may be established by using the *Electronic Signature code Edit* [XUSESIG] option.

In Kernel V. 8.0 the *Electronic Signature code Edit* [XUSESIG] option has been tied to the Common Options, under the *User's Toolbox* [XUSERTOOLS] submenu, for easy access by all users.

7. Archiving and Purging

Detailed information is kept for each prescription, including all information about the original prescription, all refills, and all editing. An average prescription requires about 300 bytes (0.3 Kbytes) of disk storage. The archiving options under the manager's menu allow the package coordinator and IRMS/ADP staff to manage this file. Old prescriptions, typically those that have been expired or canceled for more than a year, can be saved to tape and then purged from online storage. NOTE: The purge options under the *Archive Menu* [PRCAK AR SUPERVISOR] option are out of order until further notice. The User's Manual describes the operation of these options. Because not all prescriptions require the same amount of space and because of the way the operating system utilizes the disk, do not expect to regain 300 bytes of disk storage for every prescription purged. As prescriptions are purged, all references to these prescriptions from other files are also deleted.

The RX SUSPENSE file (#52.5) holds information about all prescriptions that have been suspended for later printing. There is an automatic purge for this file for prescriptions printed from 7 to 90 days ago. The package coordinator can run the *Auto-delete from Suspense* [PSO PNDEL] option at regular intervals to purge this file of suspended prescriptions which have been printed 7 to 90 days ago. The purging is tasked to run every 7 days.

Specific entries can be deleted using the *Change Suspense Date* [PSO PNDCHG] or *Pull Early From Suspense* [PSO PNDRX] options.

Drug cost data can now be purged using the *Purge Drug Cost Data* [PSO PURGE DRUG COST] option.

7.1. Setting up the Archive Device

The following examples display archive device setups for file and tape.

These examples may differ from site to site. If a device differs, check with IRMS for information on device set up.

```
HOST FILE SERVER (HFS) DEVICE SETUP:

NAME: HFS $I: ARC0797.TMP
ASK DEVICE: YES ASK PARAMETERS: NO

ASK DEVICE: YES ASK PARAMETERS: YES
SIGN-ON/SYSTEM DEVICE: NO
LOCATION OF TERMINAL: COMPUTER ROOM
*MARGIN WIDTH: 255 *FORM FEED: #
```

```
*PAGE LENGTH: 256 *BACK SPACE: $C(8)
OPEN PARAMETERS: (FORMAT="VAL4";BLOCKSIZE=2048)
SUBTYPE: MAGTAPE TYPE: MAGTAPE
PERFORM DEVICE CHECKING: NO
BAUD RATE (c): UNKNOWN
```

8. Callable Routines

Entry points provided by the Outpatient Pharmacy V. 7.0 package to other packages can be found in the External Relations section of this manual. No other routines are designated as callable from outside of this package. For additional information of other external calls and their entry points go to VA Software Document Library (VDL), see under the Clinical Section on the “Pharm: Outpatient Pharmacy” page. Choose the “API Manual: Pharmacy Reengineering (PRE).”

9. External Interfaces

For information on HL7 External Interface, go to VA Software Document Library (VDL), select the Infrastructure Section, then choose “HL7 (VistA Messaging).”

Note: The HL Logical Link Entry/Node set up for Outpatient Pharmacy V. 7.0 is PSO DISP. This is a new Logical Link installed with Patch PSO*7*156.

Note: The HL Logical Link Entry/Node set up for Outpatient Pharmacy V. 7.0 is PSORRSEND. This is a new Logical Link installed with Patch PSO*7*454.

9.1 Steps for Startup/Shutdown of the External Interface

The following screens depict the steps necessary to startup and shutdown the external interface for Version 1.6 of the VistA Health Level Seven (HL7) application package. See Appendix A of this manual for more information on the Outpatient Pharmacy V. 7.0 HL7 Specification.

The following examples are options from the HL7 package. The top-level menu option being used is the HL MAIN MENU [*HL7 Main Menu*] option.

Example: Starting Up the Interface

```
Select OPTION NAME: HL MAIN MENU           HL7 Main Menu

      Event monitoring menu ...
      Systems Link Monitor
      Filer and Link Management Options ...
      Message Management Options ...
      Interface Developer Options ...
      Site Parameter Edit

Select HL7 Main Menu Option: Filer and Link Management Options

SM      Systems Link Monitor
FM      Monitor, Start, Stop Filers
LM      TCP Link Manager Start/Stop
SA      Stop All Messaging Background Processes
RA      Restart/Start All Links and Filers
DF      Default Filers Startup
SL      Start/Stop Links
PI      Ping (TCP Only)
ED      Link Edit
ER      Link Errors ...

Select Filer and Link Management Options Option: SL Start/Stop Links

This option is used to launch the lower level protocol for the
appropriate device. Please select the node with which you want
to communicate

Select HL LOGICAL LINK NODE: PSO DISP
The LLP was last shutdown on MAY 11, 2004 07:29:53.
This LLP has been enabled!
```

Example: Shutting Down the Interface

```
Select OPTION NAME: HL MAIN MENU           HL7 Main Menu

      Event monitoring menu ...
      Systems Link Monitor
      Filer and Link Management Options ...
      Message Management Options ...
      Interface Developer Options ...
      Site Parameter Edit

Select HL7 Main Menu Option: Filer and Link Management Options

SM      Systems Link Monitor
FM      Monitor, Start, Stop Filers
LM      TCP Link Manager Start/Stop
SA      Stop All Messaging Background Processes
RA      Restart/Start All Links and Filers
DF      Default Filers Startup
SL      Start/Stop Links
PI      Ping (TCP Only)
ED      Link Edit
ER      Link Errors ...

Select Filer and Link Management Options Option: SL Start/Stop Links

This option is used to launch the lower level protocol for the
appropriate device.  Please select the node with which you want
to communicate

Select HL LOGICAL LINK NODE: PSO DISP
The LLP was last started on JUN 02, 2004 09:52:02.

Okay to shut down this job? YES
The job for the PSO DISP Lower Level Protocol will be shut down.
```

10. External Relations

The following software is not included in this package and must be installed before this version of Outpatient Pharmacy is completely functional.

Table 11: Packages - External

Package	Minimum Version Needed
Accounts Receivable (AR)	4.5
Adverse Reaction Tracking (ART)	4.0
Clinical Information Resources Network (CIRN)	1.0
Consolidated Mail Outpatient Pharmacy (CMOP)	2.0
Computerized Patient Record System (CPRS)	3.0
Decision Support System (DSS)	3.0
Electronic Claims Management Engine (ECME)	1.0
Fee Basis	3.5
VA FileMan	22.0
HealthVet Web Services Client (HWSC)	1.0
Integrated Funds Control, Accounting, and Procurement (IFCAP)	5.0
Inpatient Medications (IP)	5.0
Integrated Billing (IB)	2.0
Kernel	8.0
Laboratory	5.2
MailMan	7.1
Master Patient Index/Patient Demographics (MPI/PD)	1.0
National Drug File (NDF)	4.0
Order Entry/Results Reporting (OERR)	3.0
Patient Information Management System (PIMS)	5.3
Pharmacy Data Management (PDM)	1.0
Remote Procedure Call (RPC) Broker	1.1
VistALink	1.5
Enterprise Messaging Infrastructure (eMI) Enterprise Service Bus (ESB)	2.2
Health Data Repository/Clinical Data Service (HDR/CDS) Repository	3.14.1

Note: For Outpatient Medication Copay options to be fully functional, the Pharmacy Ordering Enhancement (POE) project software must be installed, which includes patches to Outpatient Pharmacy (PSO*7*46), Order Entry/Results Reporting (OR*3*94), Pharmacy Data Management (PSS*1*38), and Inpatient Medications (PSJ*5*50).

Note: For Clinical Indicator Data Capture (CIDC) to be fully functional, the Outpatient Pharmacy CIDC software (PSO*7*143) must be installed along with CPRS Version 25.

Note: The OneVA Pharmacy Patch PSO*7*454 introduces new functionality that allows for a pharmacist to remotely refill a prescription from another VistA instance. This patch utilizes Health Level 7 (HL7) messaging to send and receive remote prescription details from another VAMC. This allows a 'dispensing', or 'non-custodial' Pharmacy to refill a prescription that originated from another VA facility. The VA facility where the prescription exists is considered the 'host' facility. VistA utilizes HL7 to send a query message to middleware application. A middleware application is used to query the Health Data Repository/Clinical Data Service (HDR/CDS) Repository for all active medications from all sites. The medications are returned to the querying site. Once the prescriptions are received, they are displayed below any 'local' prescriptions within the Patient Prescription Processing [PSO LM BACKDOOR ORDERS] option sorted by facility. The pharmacist can then view the remote prescriptions and will be able to refill or partially fill any active prescriptions that are not considered controlled substances at either facility. To be fully functional, the site must be configured to middleware.

10.1. Data Base Integration Agreements (IAs)

Outpatient Pharmacy V. 7.0 has Data Base Integration Agreements (IAs) with the packages listed above, in addition to the following: Consolidated Mail Outpatient Pharmacy (CMOP), Drug Accountability (DA), Controlled Substances (CS), and Health Level Seven. For complete information regarding the IAs for Outpatient Pharmacy V. 7.0, please refer to the *Integration Agreement Menu* [DBA IA ISC] option under the *DBA* [DBA] option on FORUM.

11. Internal Relations

Very few of the options in this package can be invoked independently. Those that can be so invoked independently are:

Table 12: Packages - Internal

Package	Description
PSO MANAGER	Outpatient Pharmacy Manager
PSO P	Medication Profile
PSO USER1	Pharmacist Menu
PSO USER2	Pharmacy Technician's Menu
Any other option may not run independently.	

Any locally created menu which includes options from this package *must* have the ENTRY ACTION field read: D:\$D(PSOPAR) ^PSOLSET and should have the MENU EXIT ACTION field read: D FINAL^PSOLSET

12. Package-Wide Variables

The variables PSODIV, PSOINST, PSOIOS, PSOPAR, PSOPAR7, PSOSYS, PSOLAP, PSOPROP, PSOCLC, PSOCNT, PSODTCUT, PSOSITE, PSOPRPAS, PSOBAR0, PSOBAR1 and PSOBARS are used extensively throughout the package. They are set by the routine PSOLSET and are not killed until exiting from the package.

14. Software Product Security

14.1. Mail Group Setup for the HL7 External Interface

A mail group and device should be set up in order to run the HL7 external interface. The recommended name of the mail group is REDACTED. The recommended device name is REDACTED.

14.2. Archiving/Purging

For archiving and purging information, see the section titled “Archiving and Purging” in this manual.

14.3. Interfacing

For interface information, see the section titled “External Interfaces” in this manual.

14.4. Electronic Signatures

Electronic signatures may be established by using the *Electronic Signature code Edit* [XUSESIG] option. In Kernel V. 8.0 the *Electronic Signature code Edit* [XUSESIG] option has been tied to the Common Options, under the *User’s Toolbox* [XUSERTOOLS] submenu, for easy access by all users.

14.5. Menu Assignments

The *Outpatient Pharmacy Manager* [PSO MANAGER] menu should be assigned to the Package Coordinator for Outpatient Pharmacy and also added to the menu of the Site Manager and any ADP/IRMS staff that s/he selects to help in the operation of Outpatient Pharmacy. The *Pharmacist Menu* [PSO USER1] option should be assigned to all pharmacists and the *Pharmacy Technician’s Menu* [PSO USER2] option should be assigned to all pharmacy technicians and other pharmacy personnel who may view prescriptions and/or inquire into other Outpatient Pharmacy files.

14.6. Security Keys

Table 16: Security Keys

Key	Description
PSDRPH	This key is assigned to users for accessing the Inbound ePrescribing (eRx) Holding Queue functionality. The key allows users to access all options in the eRx Holding Queue. This key also authorizes pharmacists to verify and dispense controlled substance prescription(s). The PSDRPH security key should be given to registered Pharmacists working on controlled substances to honor Drug Enforcement Administration regulations and should not be given to non-pharmacists except in cases where the package coordinator (ADPAC) is not a registered pharmacist. This security key is used to Validate Patient (VP), Validate Provider (VM), Validate Drug/SIG (VD), Accept Validation (AV), Accept eRx (AC), Reject (RJ), Remove (RM), Hold (H), Un-Hold (UH), Search/Sort, Print, Message View (MV), Acknowledge (ACK) – Refill Response, Refill Request (OP), Acknowledge (ACK) – Rx Cancel, Acknowledge (ACK) – Inbound Refill Error.
PSORPH	This key is required to use all of the Outpatient Pharmacy V. 7.0 options. It should be assigned to all pharmacists, the package coordinator, and all appropriate members of the ADP/IRMS staff.
PSO ERX ADV TECH	This security key is used by advanced pharmacy technicians to Validate Patient/Provider/Drug/SIG, Accept Patient/Provider/Drug Validations, Reject, Hold/Un Hold, Search, Sort, Remove, and Print Message View (MV), Acknowledge (ACK) – Refill Response, Refill Request (OP), Acknowledge (ACK) – Rx Cancel, Acknowledge (ACK) – Inbound Refill Error in the Inbound ePrescribing Holding Queue.
PSO ERX TECH	This security key is used by pharmacy technicians to Validate Patient/Provider/Drug/SIG, Hold/Un Hold, Search, Sort, and Print Message View (MV), Acknowledge (ACK) – Refill Response, Refill Request (OP) in the Inbound ePrescribing Holding Queue.
PSO ERX VIEW	This security key is assigned to users with the need to Search, Sort, Print, Message View (MV) an eRx only in the Inbound ePrescribing Holding Queue.
PSO TECH ADV	This security key is used by pharmacy technicians to HOLD and UNHOLD prescriptions using a subset of the HOLD reasons available to PSORPH key holders.
PSO COPAY	This key should be assigned to any users who need to be notified when a copay exemption cannot be determined at the time a prescription fill is released. Holders of this key are also notified any time the Exempt Rx Patient Status from Copayment [PSOCP EXEMPTION] option is used to change the copay exemption for an Rx Patient Status.

Key	Description
PSO REJECTS BACKGROUND MESSAGE	When prescriptions remain on the Third Party Payer Reject - Worklist over the specified number of days, the system will send a Mailman Message to holders of this key.
PSOA PURGE	NOTE: Disabled until further notice. This key should be assigned to the package coordinator and/or any person who will be responsible for archiving prescriptions.
PSOLOCKCLOZ	This key is used to override the lockouts in the Clozapine option. All members of the Clozapine treatment team must be entered as users on the system and must be given this key. All pharmacists who have the ability to override the lockouts in this option must also hold this key. The Pharmacy Service representative of the Clozapine treatment team should identify these pharmacists.
PSOINTERFACE	This key is used to access the External Interface Menu [PSO EXTERNAL INTERFACE] option.
PSO TRICARE/CHAMPVA	This key should be assigned to a pharmacist in order to perform an Override and electronically sign a prescription for a TRICARE or CHAMPVA patient.
PSO TRICARE/CHAMPVA MGR	This key is required to access the TRICARE CHAMPVA Override Report [PSO TRI CVA OVERRIDE REPORT] option.
PSO EPHARMACY SITE MANAGER	This key is required to access the PSO ePharmacy Site Parameters [PSO ePHARM SITE PARAMETERS] option.
PSO SPMP ADMIN	This key is used by the Outpatient Pharmacy (OP) package to grant certain users administration privileges to perform configuration updates in the State Prescription Monitoring Program (SPMP) module.

14.7 File Security

This package requires 26 files in addition to those of the Kernel and other files to which it points, for example the PATIENT file (#2). Information about all files, including these can be obtained by using the VA FileMan to generate a list of file attributes.

15. Outpatient Pharmacy V. 7.0 Menu Diagrams

Three main menus are exported with the package. The *Outpatient Pharmacy Manager* [PSO MANAGER] menu should be assigned to supervisors, package coordinators, and members of the ADP/IRMS staff. Pharmacists should have the *Pharmacist Menu* [PSO USER1] option and clerks and technicians should have the *Pharmacy Technician's Menu* [PSO USER2] option.

15.4. Standalone Options

The Transitional Pharmacy Benefit (TPB) options were available in previous releases of Outpatient Pharmacy V. 7.0 but are currently placed "Out of Order" by PSO*7*227.

Non-VA Provider Inactivate [PSO NON-VA PROVIDER INACTIVATE] option was added by patch PSO*7.0*481. This option is only accessible by users with programmer level access and is not attached to a menu. See the Non-VA Provider Import (PSO*7.0*481) Deployment, Installation, Back-out and Rollback Guide for more information.

16. Journaling Globals

The primary global the Outpatient Pharmacy V. 7.0 package uses is ^PSRX. This global is recommended if journaling is used. The majority of the other files used by the Outpatient Pharmacy package are stored in the ^PS global. This global is also recommended for journaling, if used.

17. Barcodes and Label Printer Support

This version of Outpatient Pharmacy includes the ability to print barcodes on the patient copy, the pharmacist's copy, and the patient narrative documents for new label stock and laser labels. Two options utilize the barcodes.

Note: The OneVA Pharmacy Patch PSO*7*454 introduced the OneVA Pharmacy label-generation functionality with new/updated label routines. The barcode printed on the OneVA Pharmacy label will contain the host site information where the prescription order originated not the dispensing site where the prescription is being filled.

Check Quality of Barcode [PSO BARCODE CHECK] option is used to monitor the quality and readability of the barcode before it is mailed.

Barcode Batch Prescription Entry [PSO BATCH BARCODE] option is used to actually refill the prescriptions utilizing barcodes in a batch entry.

If barcodes are not used, enter an "OUT OF ORDER MESSAGE" for these two options.

17.1. Barcodes on Dot Matrix Printers

Three parameters are used.

- X is the barcode height. Values can be "S", "M" or "L". If X is undefined or not equal to one of these, the default value of "S" is used. "S" is 2/10 inch for the DS-220 and 1/6 inch for the MT-290. "M" is 4/10 inch for the DS-200 and 1/3 inch for the MT-290. "L" is one inch for both.
- X1 is the value of \$X at the left edge of the barcode. If X1 is undefined, the default value of 0 is used.
- X2 is the data to be bar coded. Remember the code 39 character set that the VA uses is a limited subset of the ASCII character set containing only the numbers, uppercase letters, and eight punctuation characters. In most cases, any other characters are not printed. For example, the barcode for the string 123abc will be the same as the string 123.

On most printers, printing a barcode is a graphics operation that causes the value of \$Y to be something other than the line count from the top of the page. Forms with barcodes must use a form feed to go to the top of the next form rather than a counted number of line feeds. This is why printers used to print barcodes on outpatient pharmacy labels *must be set for a form length of 24 lines or four inches*.

The following section, New Label Stock, contains barcode on and off sequences for various printers.

17.2. New Label Stock (Version 6.0 and Later Versions) – Dot Matrix Labels

Important

Please test new label stock on all printers that will be used before going into production with new label stock.

Printers used to print the new label stock must be set to print at 12 characters per inch. The form length must be set to 5 inches.

Previously, old label stock printed barcodes in one column at 10 characters per inch. New label stock prints barcodes at 12 characters per inch in 2 columns, (columns 54 and 102). The following barcode entries in the TERMINAL TYPE file (#3.2) have worked at either the Birmingham Office of Information Field Office (OIFO) or at a site.

Note: If you cannot find barcodes that work, please contact the nearest OIFO.

Check to see that a line feed is performed after the barcode off sequence is executed. Due to limited space, information must be printed after certain barcodes print, without relying on a line feed in the Outpatient Pharmacy code. To test this, print a test label for an Rx with no refills. On the center copy of the label, on the next line after the “station number-Rx no.” which prints directly under the barcode, one of the two following lines should print clearly:

```
* NO REFILLS REMAINING ** PHYSICIAN USE ONLY *
```

or

```
*** This prescription CANNOT be renewed ***
```

If there is a problem, insert a line feed at the end of the Barcode Off sequence.

(Add a ,! to the end of the sequence.)

Remember to set the New Label Stock site parameter to Yes.

Three site parameters provide patient instructions that will print after each patient’s prescriptions. They are “NARRATIVE NON-REFILLABLE RX”, “NARRATIVE REFILLABLE RX”, and “NARRATIVE FOR COPAY DOCUMENT”. The “NARRATIVE FOR COPAY DOCUMENT” will only print if at least one of the patient’s prescriptions is subject to a Copay charge.

For the Data South 220

```
BAR CODE ON=  
*27,"[1w",*27,"$70s",*94,"H",$$(' $D(X):"04",X="M":"04",X="S":"02",X="L":"10",1: "04"),*94,  
"BDB"
```

```
BAR CODE OFF=*94,"G",*27,"$70c",*27,"[2w",!
```

For the MT-661

```
BAR CODE ON=  
*27,"[<4h",*94,$S($X<60:"T450",1:"T850"),*94,"W9;5;1",*94,"B1;35;1;3",*13
```

```
BAR CODE OFF=*13,*10,*27,"[<41",*27,"[5w"
```

The character after the [<4 in the BAR CODE OFF above is a lower case L.

For the Genicom 4440:

```
BAR CODE ON=*27,"[;3;1;;4;;4;;1;}"*27,"[3t"  
BAR CODE OFF=*27,"[0t",!
```

For the MT290:

```
BAR CODE ON=*26,"F0",$$('$D(X):2,X="M":2,X="S":1,X="L":6,1:2),";000",*25,*20,"**"
```

```
BAR CODE OFF="**",*20,!,$S($D(X1):X1,1:0),$S($D(X2):X2,1:"")
```

or

```
BAR CODE ON=*26,*34,"F3;000",*25,*20,"**"
```

```
BAR CODE OFF="**",*20
```

For the OTC 560:

```
BAR CODE ON=*27,"[;"$S('$D(X):3,X="M":6,X="L":12,1:3),)" " ,*27,"[3t"
```

```
BAR CODE OFF=*27,"[0t"
```

For the Genicom 4490:

```
BAR CODE ON=*27,"[3t",*14
```

```
BAR CODE OFF=*15,*27,"[0t",*13
```

**The setup of the MT290 will not allow for a form length of 5 inches. It skips from 4 to 5.5. Following is the terminal type information that will allow the MT290 to print the labels at a form length of 5 inches.

```
NAME: P-MANNESMANN MT290/132 (PHAR) RIGHT MARGIN: 132  
FORM FEED: # PAGE LENGTH: 30  
BACK SPACE: $C(8)  
OPEN EXECUTE: W *27,"[4w",*27,"[0Y",*27,"[30t"  
10 PITCH: $C(27)_"[4w" 12 PITCH: $C(27)_"[5w"  
DESCRIPTION: MANNESMANN TALLY 290/132 COLUMNS  
16 PITCH: $C(27)_"[6w" DEFAULT PITCH: $C(27)_"[4w"  
BAR CODE OFF: "**",*20,!,$S($D(X1):X1,1:0),$S($D(X2):X2,1:"")  
BAR CODE ON: *26,"F0",$$('$D(X):2,X="M":2,X="S":1,X="L":6,1:2),";000", *25,*20,"**"
```

The *27,"[30t" was added to the Open Execute.

17.3. Laser Label Printers

The Outpatient Pharmacy package, with the release of PSO*7*120, supports the use of laser printers to print prescription labels and all associated documents.

17.3.1. Hardware Setup

The printer must be physically connected to the network and then defined in the DEVICE (#3.5) and TERMINAL TYPE (#3.2) files just as any other laser printer on your network is defined.

In addition, the CONTROL CODES field (#55) of the TERMINAL TYPE file (#3.2) must be defined correctly. To facilitate this, a new routine assists with the setup. At the programmer

prompt enter: D ^PSOLLU2. You will be prompted for the device. Enter the device you want to use for printing laser labels. Then, you will be prompted for HP or LexMark. Enter the appropriate selection.

Phase I of Laser Labels introduced the routine PSOLLU2. A pre-release to Phase II introduced the PSOLLU3 routine and Phase II introduced the PSOLLU4 routine. (Instructions for running the PSOLLU3 and PSOLLU4 routines are the same as running the PSOLLU2 routine above.) If you are setting up a laser printer for the first time, run all three routines in order – PSOLLU2, PSOLLU3, and PSOLLU4. If you are already running laser labels, you will only need to run the PSOLLU4 routine to update the control codes.

Note: If you are not using either an HP or a LexMark printer, select one. Then, you may need to modify the control codes to work correctly with your printer.

Note: Since there are many options for the barcode chip your printer supports, you may have to modify the codes that control the barcode. The names of the codes are: BLBC, EBLBC, SBT and EBT. If you were already using this printer to print barcodes, you can use the information in the fields BAR CODE ON (#60) and BAR CODE OFF (#61) from the TERMINAL TYPE file (#3.2) as a guide. If you weren't, the barcode chip should have come with documentation showing the sequences necessary. If the documentation is not available, many printers have the ability to print the font set, with escape sequences, from the control panel of the printer.

Note: The OneVA Pharmacy Patch PSO*7*454 introduced the OneVA Pharmacy label-generation functionality with new/updated label routines. The barcode printed on the OneVA Pharmacy label will contain the host site information where the prescription order originated not the dispensing site where the prescription is being filled.

Example Session:

```
>D ^PSOLLU2
DEVICE: HOME// FIDO PRINTERS CORNER - LINE 000    Right Margin: 132//
HP or LexMark: L
You will be copying the CONTROL CODES to device: _LTA9053: are you sure? Y Copying...
```

17.3.2. Sample Control Code Entries

The following are sample control code entries from one TERMINAL TYPE. Actual entries may vary depending on make and model of printer or barcode chip.

```
NUMBER: 1                                CTRL CODE ABBREVIATION: LLI

17.3.3. VMS Print Queue Setup

If you use VMS print queues, an additional setup may be necessary. The form for laser labels must have specific characteristics. If you need help defining the form, please contact the National Help Desk.

Note: The form must have a length of 255 and a width of 512.

The following is an example form:

Form name	Number	Description
LABELFORM	2	LASER LABEL
/LENGTH=255 /MARGIN=(BOTTOM=6) /STOCK=LABELFORM /TRUNCATE /WIDTH=512		

17.3.4. Control Codes

To modify the control codes to work appropriately with your device, use the following information.

Control Codes in use by Laser Labels:

ACI = ADDRESS CHANGE INITIALIZATION
ALI = ALLERGY SECTION INITIALIZATION
AWI = ALLERGY WARNING INITIALIZATION
BLB = BOTTLE LABEL BODY INITIALIZATION
BLBC = BOTTLE LABEL BARCODE
BLF = BOTTLE LABEL FOOTER INITIALIZATION
BLH = BOTTLE LABEL HEADER INITIALIZATION
CDII = CRITICAL DRUG INTERACTION INITIALIZATION
CNI = COPAY NARRATIVE INITIALIZATION
EBLBC = END OF BOTTLE LABEL BARCODE
EBT = END OF BARCODE TEXT
F10 = TEN POINT FONT - NO BOLD
F10B = TEN POINT FONT, BOLDED
F12 = TWELVE POINT FONT - NO BOLD
F12B = 12 POINT FONT BOLDED
F6 = SIX POINT FONT - NO BOLD
F6B = SIX POINT FONT BOLDED
F8 = EIGHT POINT FONT - NO BOLD
F8B = EIGHT POINT FONT BOLDED
F9 = NINE POINT FONT - NO BOLD
F9B = NINE POINT FONT BOLDED
FDU = FONT DISABLE UNDERLINE
FWU = FONT WITH UNDERLINE
LL = LASER LABEL
LLI = LASER LABEL INIT
MLI = MAILING LABEL INITIALIZATION
NR = NORMAL ROTATION
PFDI = PHARMACY FILL DOCUMENT INITIALIZATION
PFDQ = PHARMACY FILL DOCUMENT QUANTITY
PFDT = PHARMACY FILL DOCUMENT TRAILER
PFDW = PHARMACY FILL DOCUMENT WARNING
PFI = PATIENT FILL INITIALIZATION
PII = PATIENT INSTRUCTION INITIALIZATION
PMII = PMI SECTION INITIALIZATION
RMI = RETURN MAIL INITIALIZATION
RNI = REFILL NARRATIVE INITIALIZATION
RPI = REFILL PRINT INITIALIZATION
RT = ROTATE TEXT
SBT = START OF BARCODE TEXT
SPI = SUSPENSE PRINT INITIALIZATION
ST = START OF TEXT
WLI = WARNING LABEL INITIALIZATION

In addition to escape sequences to control printer output, variables are defined in the control codes that allow the routine to correctly position text and use the appropriate font.

The following is the description of the variables and their usage:

- PSOX – X coordinate
- PSOY – Y coordinate
- PSOYI – Y increment, used to determine spacing between lines
- PSOFont – font size to be used. The font used is Arial.
- PSOYM – bottom margin for this section

Some sections contain variables specific only to that section. They are as follows:

Table 18: Variables

Control Code	Variable
MLI	PSOHFont – font for header lines
ACI	PSOHFont – font for header lines
RMI	PSORYI – Y coordinate for return mail name
	PSOHYI – Y coordinate for header line
	PSOTFont – font for trailer line
	PSOTY – Y coordinate for trailer line
SPI	PSOCX – X coordinate for date
RPI	PSOBYI – Y increment for barcode
	PSOTYI – Y increment for trailer information
	PSOLX – X coordinate for left side of page
	PSORX – X coordinate for right side of page
	PSOSYI – Y increment for signature line
	PSOXI – X increment
BLB	PSOBX – X coordinate for barcode
BLF	PSODY – Y coordinate for discard line
	PSOCX – X coordinate for continued line
	PSOQY – Y coordinate for quantity information
	PSOTY – Y coordinate for trailer information
	PSOQFont – font for quantity
	PSODFont – font for discard line
	PSOTFont – font for trailer information
PFDQ	PSOCX – X coordinate for continued line
	PSOQFont – font for quantity
PFDT	PSOBYI – Y increment for barcode
	PSOTFont – font for trailer information
	PSOBY – Y coordinate for barcode
PFI	PSOHFont – font for header
	PSOBYI – Y increment for barcode

17.3.5. ScripTalk® Printers

ScripTalk® is a registered trademark of En-Vision America.

The Outpatient Pharmacy V. 7.0 package, with the release of PSO*7*135, supports the use of ScripTalk® printers that print to microchip-embedded label stock. The label will have printed text on it, along with the microchip containing the contents of the label. Pharmacy or other designated staff will enroll patients to receive these labels and issue those patients a special reader. When the patient holds a ScripTalk® label near the reader and presses a button, the content of the label is read aloud.

The ScripTalk label, released in 2003, has a 2K memory capacity, which limits the amount of prescription data that can be audibly read to the blind or low-vision Veteran using the system. New ScripTalk labels with 10K capacity are now available. Patch PSO*7*502 takes advantage of that capacity by sending more prescription data, including Drug Warnings, to the ScripTalk label.

The data sent to the ScripTalk label (either 2K or 10K), will now be controlled by one of two new parameters, depending on how your ScripTalk device definitions are set up. If they are set up at the system level using a mapped device, the dataset will be controlled by the new SCRIPTALK PRINTER TYPE SubField (#.03) in the SCRIPTALK PRINT DEVICE MAPPING SubFile (#59.747) of the PHARMACY SYSTEM File (#59.7), which patch PSS*1.0*217 introduces. If your ScripTalk device definition is set at the Outpatient Site level, the dataset will be controlled by the new SCRIPTALK PRINTER TYPE Field (#107.2) in the OUTPATIENT SITE File (#59), which this patch introduces. Neither of these new fields will be populated upon patch install of PSO*7*502, and the software assumes a 2k dataset when either parameter is null.

The new ScripTalk 10K printers and labels are backward compatible with the 2K dataset. When a site upgrades to the new 10K equipment, once the hardware is set up and ready for implementation of the new 10K dataset, simply set the applicable parameter to 10K.

In addition, sites will now be able to control whether or not the non-ScripTalk label prints as voided or not voided. This will be in the OUTPATIENT SITE File (#59) and will be by division (outpatient site).

The TCP/IP-enabled printer must be physically connected to the network and then defined in the DEVICE (#3.5) and TERMINAL TYPE (#3.2) files. To connect the printer to the network, a micro print server is necessary for communication to VistA. En-Vision America can assist in identifying the micro print server necessary for the site.

Note: when using 10k printers make sure that the device is set up to use a Print Queue. If it is not then the 10k labels will not print.

The following are examples of the file set-ups. These examples are provided to guide the user in this set up. Please note that these are only examples and there will be some differences in the settings.

Example: DEVICE File (#3.5) Set Up for VMS Sites

18. Glossary

Table 19: Glossary

Term	Description
ADP	Automated Data Processing
Archive	Prescriptions, typically those that have been expired or canceled for more than a year, can be saved to tape, and then purged from online storage.
ASAP	American Society for Automation in Pharmacy
BSA	<p>Body Surface Area. The Dubois formula is used to calculate the Body Surface Area using the following formula:</p> $BSA (m^2) = 0.20247 \times \text{Height (m)}^{0.725} \times \text{Weight (kg)}^{0.425}$ <p>The equation is performed using the most recent patient height and weight values that are entered into the vitals package.</p> <p>The calculation is not intended to be a replacement for independent clinical judgment.</p>
CPRS	Computerized Patient Record System. CPRS is a Graphical User Interface (GUI) in VistA that provides order entry and results reporting for multiple packages.
CrCL	<p>Creatinine Clearance. The CrCL value that displays in the pharmacy header is identical to the CrCL value calculated in CPRS. The formula approved by the CPRS Clinical Workgroup is the following:</p> <p>Modified Cockcroft-Gault equation using Adjusted Body Weight in kg (if ht > 60in)</p> <p>This calculation is not intended to be a replacement for independent clinical judgment.</p>
DHCP	See VistA.
eMI	Enterprise Messaging Services
eRx	ePrescription
ESB	Enterprise Service Bus
HDR/CDS	Health Data Repository/Clinical Data Services
IRMS	Information Resources Management Service
Non-VA Meds	Term that encompasses any Over-the-Counter (OTC) medications, Herbal supplements, Veterans Health Administration (VHA) prescribed medications but purchased by the patient at an outside pharmacy, and medications prescribed by providers outside VHA. All Non-VA Meds must be documented in patients' medical records.

Term	Description
OneVA Pharmacy Label	Labels printed for traveling Veterans against prescriptions that originated from another VistA instance other than the site dispensing the prescription.
OPAI	Outpatient Pharmacy Automated Interface
PDMP	Prescription Drug Monitoring Programs
POE	Pharmacy Ordering Enhancements project. POE is a series of enhancements to improve the ordering processes between Inpatient Medications and Outpatient Pharmacy. For Outpatient Pharmacy, POE changes occur in patch PSO*7*46.
Prescription	This term is now referred to throughout the software as medication orders.
Purge	Prescriptions, typically those that have been expired or canceled for more than a year, are saved to tape. Purging removes them from online storage.
Reprinted Label	Unlike a partial prescription, a reprint does not count as workload.
SPMP	State Prescription Monitoring Program
VDEF	VistA Data Extraction Framework
VHA	Veterans' Health Administration
VHIC	Veterans' Health Identification Card
VistA	Acronym for Veterans Health Information Systems and Technology Architecture, the new name for Decentralized Hospital Computer Program (DHCP).
VUID	VHA Unique Identifier. A unique integer assigned to reference terms VHA wide.

19. Appendix A: Outpatient Pharmacy HL7 Interface Specifications

19.1. A. General Information

19.1.1. Introduction

This document specifies an interface between the VistA Outpatient Pharmacy V. 7.0 application and any automatic dispensing system. It is based upon the Health Level 7 Standard (HL7) V. 2.4.

The term “Level 7” refers to the highest level of the Open System Interconnection (OSI) model of the International Standards Organization (ISO). The OSI model is divided into seven levels or layers. The HL7 Standard is primarily focused on what happens within the seventh or application layer. At this layer, the definitions of the data to be exchanged, the timing of the exchanges, and the communication of certain application specific errors occurs. The lower levels support the actual movement of data between systems.

The high-level communication requirements for this interface include TCP/IP, HL7 Logical link and bi-directional communications for the BusinessWare server at the VAMC. BusinessWare will support MLLP connection.

19.1.2. Message Rules

The HL7 Standard describes the basic rules for the exchange of information between two computer systems. The unit of data transferred is referred to as the message. It is comprised of a group of segments in a defined sequence. Each message has a three-character code called a message type that defines its purpose. The real-world event that initiates an exchange of messages is called a trigger event. There is a one-to-many relationship between message types and trigger event codes. A message type may be associated with more than one trigger event, but the same trigger event code may not be associated with more than one message type. All message type and trigger event codes beginning with Z are reserved for locally defined messages. No such codes will be defined within the HL7 Standard.

Some special characters are used to construct messages. They are the segment terminator, field separator, component separator, sub-component separator, repetition separator, and escape character. The segment terminator is always a carriage return (CR in ASCII or hex OD). The other characters recommended by HL7 are used in this application (See HL7 Standard V. 2.4, Chapter 2 for details).

19.1.3. Segment Rules

A segment is a logical grouping of data fields. Segments of a message may be required or optional. They may occur only once in a message or they may be allowed to repeat. Each segment is given a name and is identified by a unique three-character code. All segments beginning with Z are reserved for locally defined messages. No such code will be defined within the HL7 Standard.

19.1.4. Field Rules

A field is a string of characters. HL7 does not care how systems actually store data within an application. Except where noted, HL7 data fields may take on the null value. Sending the null value, which is transmitted as two double quote marks (""), is different from omitting an optional data field. The difference appears when the contents of a message will be used to update a record in a database rather than create a new one. If no value is sent (i.e., it is omitted) the old value should remain unchanged. If the null value is sent, the old value should be changed to null. In defining a segment, the following information is specified about each field:

- a) position - position of the data field within the segment.
- b) name - unique descriptive name for the field.
- c) ID number - integer that uniquely identifies the data field throughout the Standard.
- d) maximum length - maximum number of characters that one occurrence of the data field may occupy.
- e) optionality - whether the data field is required (R), optional (O), or conditional (C) in a segment.
- f) repetition - whether the field may repeat (N=no; Y=yes; (integer)= no. of repeats).
- g) table - a table of values for a field (See HL7 Standard V. 2.4, Section 2.7.6 for source of tables).
- h) data type - restrictions on the contents of the data field (See HL7 Standard V. 2.4, Section 2.9).

19.1.5. Special Escaping Characters

Standard HL7 field delimiters represented by the “~ , & , | ” (tilde, ampersand, pipe) characters, as well as the commonly used Vista “^” (caret), are sometimes needed by users of Outpatient Pharmacy in various fields to provide complete information about a patient or order. The use of these characters can cause sending and receiving software to format HL7 messages incorrectly, and/or construct/deconstruct the information incorrectly. Data loss can also occur if data is truncated at one of the special delimiter characters.

The following fields require special escaping characters.

- Dosage Ordered field – RXE segment / piece 1 / subpiece 1
- Schedule field – RXE segment / piece 1 / subpiece 2
- VA Product Name field – RXE segment / piece 2 / subpiece 2
- Generic drug name field – RXE segment / piece 2 / subpiece 6
- Units name field – RXE segment / piece 5 / subpiece 5
- Dose Form name field – RXE segment / piece 6 / subpiece 5

- Provider Comments field – NTE 6 segment / piece 3
- Expanded Patient Sig field – NTE 7 segment / piece 3
- Front Door Sig field – NTE 21 segment / piece 3
- Back Door Sig field – NTE 21 segment / piece 3

19.2. B. Transaction Specifications

19.2.1. Communication Protocol

The lower level communication protocol used by Outpatient Pharmacy V. 7.0 to transmit data between systems is either X3.28 or HLLP over an RS-232 connection.

A site parameter in the Outpatient Pharmacy V. 7.0 application called External Interface controls transmission of data to the dispensing machine. If the parameter is set to **0**, no transmission will occur.

There is also a new parameter that is used for sites running HL7 V.2.4. It is in the OUTPATIENT SITE file (#59) and is called AUTOMATED DISPENSE. This must be set to determine which version of HL7 the site is running.

19.2.2. Processing Rules

A Pharmacy Encoded Order Message is transmitted whenever an order is placed in Outpatient Pharmacy V. 7.0 and the criteria are met for the dispensing machine. Upon successful receipt and storage of the message, the dispensing machine will generate and transmit a Pharmacy Encoded Order Acknowledgement Message.

Table 20: HL7 Messages will be used to Support the Exchange of Outpatient Pharmacy Data with Any Automatic Dispensing System

RDS	Pharmacy Encoded Order / Treatment Dispense Message
RRD	Pharmacy Encoded Order Ack. Message
ACK	General Ack. Message

Table 21: Messages for the Dispense Request will consist of the following HL7 Segments

IAM	Patient Adverse Reaction Information
MSH	Message Header
NTE	Notes and Comments
PID	Patient Identification
PV1	Patient Visit
PV2	Patient Visit – additional information
ORC	Common Order
RXE	Pharmacy/Treatment Encoded Order

RXD	Pharmacy/Treatment Dispense
RXR	Pharmacy/Treatment Route

19.2.3. Specific Transaction – Dispense Request

Table 22: Pharmacy Encoded Order/Treatment Dispense Message

RDS	Pharmacy Encoded Order/Treatment Dispense Message
MSH	Message Header
[PID]	Patient Identification
[PV1]	Patient Visit
[PV2]	Patient Visit – additional information
{IAM}	Patient Adverse Reaction Information
{ORC}	Common Order
{NTE}	Notes and Comments
RXE	Pharmacy/Treatment Encoded Order
RXD	Pharmacy/Treatment Dispense
{NTE}	Notes and Comments (contains PMI)
{RXR}	Pharmacy/Treatment Route
ZZZ	Hazardous Drug Information
}

```

19.2.4. Active Veteran's Health Information Card (VHIC) Numbers Added to PID-4 Segment:

Sites that use the Outpatient Pharmacy Automated Interface (OPAI) interface and COTS products, such as ScriptPro and OptiFill, rely on patient identifying information contained in the PID segment of HL7 messages. The new Veteran's Health Information Card (VHIC) no longer contains the patient's Social Security Number (SSN). Patch PSO*7*434 utilized Patch DG*5.3*874 to include the current *active* VHIC card numbers in the HL7 PID-4 component, providing an interoperability between the barcode on the VHIC card and data in the HL7 PID segment. As of Patch PSO*7*434, the *active* VHIC number(s) were added to the list of identifiers in the PID Segment in sequence PID-4.

Note: The changes in HL7 message generated by OPAI are tested with ScripPro and Optifill, only. Sites using other vendors are requested to inform them of the changes, so that they can make necessary changes to ensure smooth running of interface at their sites.

Example:

```
[VHIC Card #]~~~USVHA&&0363~PI~VA FACILITY ID&742V1&L
```

The following example shows an *active* VHIC number repeated twice in PID-4 for interoperability between DoD and VA because this patient has two *active* VHIC numbers.

Example:

```
PID|||5000002199V009321~~~USVHA&&0363~NI~VA FACILITY

ZZZ	4	1	TX	R		0136	Hazardous to Handle Indicator	Y (Data Value is either Y or N)
	5	1	TX	R		0136	Hazardous to Dispose Indicator	N (Data Value is either Y or N)

Notes pertaining to some of the data elements:

[MSH-3] Sending Application is the station ID along with the DNS name of the sending facility.

[MSH-5] Receiving Application is the DNS name and DNS port number of the dispensing application.

[MSH-10] Message Control ID is the number that uniquely identifies the message. It is returned in MSA-2 of the dispense completion message.

[PID-3] Patient ID will contain the following possibilities to identify a patient:

- NI = ICN #
- SS = Social Security #
- PN = Claim #
- PI = DFN #

[PID-4] Alternate Patient ID will contain the active Veteran's Health Identification Card (VHIC) number(s) to identify a patient.

[PID-11] Patient Address

The PID-11 segment contains the following data:

- Patient Permanent Address 1st up-arrow piece
- Patient Place of Birth (City & State) 2nd up-arrow piece
- Confidential Address 3rd up-arrow piece if it is Active
If Confidential Address is Active, for each Confidential Address Category, an entry will be made into the HL7 record starting in the up-arrow piece 3.
- Patient Temporary Address 3rd up-arrow piece or piece after the last Confidential Address entry if the Confidential Address is active.

PID|||Permanent Address^Place of Birth^Temporary Address|||

[PID-11] Patient Permanent Address

When the permanent address is active, it is the only address in PID-11

Example: 321 Dakota Ave. ~ " " ~ WASHINGTON ~ DC ~ 20032 ~ USA ~ P ~ " " ~ 001

[PID-11] Patient Confidential Address

When the confidential address is active, both the confidential and permanent addresses are located in PID-11.

[PID-11] Patient Temporary Address

When the temporary address is active, both the temporary and permanent addresses are located in PID-11.

```
Example: 100 PERMANENT ADDRESS~" " ~NEW YORK~NY~10018~USA~P~" " ~061^~~SAN
ANTONIO~TX~~~N^1 CONFIDENTIAL STREET~" " ~NEW
YORK~NY~10019~USA~VACAE~" " ~061~20160628&20160718^1 CONFIDENTIAL STREET~" " ~NEW
YORK~NY~10019~USA~VACAA"
^HL(772,35537819,"IN",3,0)~" " ~061~20160628&20160718^1 CONFIDENTIAL STREET~" " ~NEW
YORK~NY~10019~USA~VACAM~" " ~061~20160628&20160718^200 TEMPORARY ADDRESS~" " ~NEW
YORK~NY~10017~USA~C
```

[PID-11] If the BAD ADDRESS INDICATOR (BAI) field (#.121) of the PATIENT file (#2) is set, the text "VAB" concatenated with the BAI code is sent in the Address field of the PID segment of the HL7 message to the filling equipment.

Example: Permanent address – active:

```
PADD-1~PADD-2~SPRING~TX~77379~P~PADD-3~201^~~" " ~~~N| " | | | | | | | |
```

Example: Confidential address – active:

```
PADD-1~PADD-2~SPRING~TX~77379~P~PADD-3~201^~""~""~""~""~""~N^1 CONFIDENTIAL STREET~""~""~NEW YORK~NY~10019~USA~VACAM~
```

Example: Temporary address – active:

```
PADD-1~PADD-2~SPRING~TX~77379~P~PADD-3~201^~""~""~""~""~""~N^TADD-1~TADD-2 TADD-3~PLANO~TX~12345~C~""~""~""~""
```

Example: Address flagged as BAI:

```
PADD-1~PADD-2~SPRING~TX~77379~VAB1~PADD-3~201^~""~""~""~""~""~N|""|""|""|""|""|""|""|""|""|""|""|
```

"VAB1" - indicates Bad Address Indicator and 1 is for UNDELIVERABLE (2 for HOMELESS, 3 for OTHER)

Note: For each Active Confidential Address Category entered for the patient, an entry will be made into the HL7 record delimited by ^.

The code is looping down the Confidential Address Categories and creating an entry for each one.

- category=1 (ELIGIBILITY/ENROLLMENT): VACAE
- category=2 (APPOINTMENT/SCHEDULING): VACAA
- category=3 (COPAYMENTS/VETERAN BILLING): VACAC
- category=4 (MEDICAL RECORDS): VACAM
- category=5 (ALL OTHERS): VACAO
- otherwise= null

The “C” is hardcoded after USA (the country) on the Temporary Address record.

The vendor will need to read through the addresses (^ pieces) until it finds the C in the 7th ~ piece of data for a temporary address.

The following determines whether to send the Temporary Address.

It first checks the TEMPORARY ADDRESS ACTIVE? flag, if set to Yes then checks the TEMPORARY ADDRESS START DATE against the processing date range start date and if passes then checks the TEMPORARY ADDRESS END DATE against the processing date range end date. If these pass then the Temporary Address is sent in the HL7 record.

There can be up to 5 Confidential address entries (one for each active Confidential Address Category) , 1 Permanent address and 1 Temporary address.

Below is an example of a PID-11 segment with all 7 addresses populated.

```
^HL(772,35537804,"IN",0)=^^241^241^3160628^"

```

[PV1-2] Patient Class is hard-coded to an O for outpatient.

[PV2-24] Patient Status Code contains the patient status from the prescriptions file followed by a tilde and then whether or not the patient is COPAY.

[IAM-2] Allergen Type Code is the allergy type of F=Food, DF=Drug/Food, D=Drug, DP=Drug/Other, O=Other, DFO=Drug/Food/Other.

[IAM-5] Allergy Reaction Code will contain the possible reactions ALLERGY, PHARMACOLOGIC or UNKNOWN.

[IAM-17] Allergy Clinical Status Code is VERIFIED or NON-VERIFIED.

[ORC-2] Placer Order Number is a composite field. The first component is the IEN from the PRESCRIPTION file (#52). The second component is hard-coded to a value of OP7.0.

[ORC-10] Entered By is the person's pointer to the NEW PERSON file (#200) and name in VistA who keyed in the order.

[ORC-12] Ordering Provider is a composite ID field. The first component is the Provider's pointer to the NEW PERSON file (#200) in VistA and the second component is his/her name.

[ORC.13] Enterer's Location is the printer where the dispensing machine should print the label.

[ORC-15] Order Effective Date is the date/time the order took effect.

[ORC-16] Order Control Code Reason is a coded element field. The fifth component reflects the status of the order (for example, New, Refill, Partial, Reprint, or Partial Reprint).

[ORC-17] Entering Organization is the Clinic number and name.

[ORC-19] Action By is the physician who cosigned, if any, and is a composite field. The first component is the physician's pointer to the NEW PERSON file (#200) in VistA and the second component is his/her name.

[ORC-20] Advanced Beneficiary Notice Code is used to send an indicator to an automated dispensing system that the RX being dispensed is for an electronically billed prescription and that a patient signature is needed. The value of "VA5" will be sent as the indicator in the RDS^O13 Dispense Request message for an ePharmacy patient prescription.

[ORC-21] Ordering Facility Name is the facility name and number found in the OUTPATIENT SITE file (#59).

[ORC-30] Enterer Authorization Mode is passed for digitally signed controlled substance orders. The value of 'EL' is used, representing a value of 'Electronic'.

[NTE] The Set ID field will identify the NTE segment (1=Med. Instructions; 2=Patient Instructions Narrative; 3=Drug Warning Narrative; 4=Profile Information; 5=Drug Interactions; 6=Drug Allergy Indications; 7=PMI Sheet; 8=Medication Instructions; 9=Privacy Notification.) The Comment field will contain the respective information.

Note: The separator value “\sp\” has been added to NTE-3, 3 = Drug Warning Narrative, to separate the different warning labels.

[RXE-1] Quantity Timing is a required field, but it will not be used in Outpatient Pharmacy V. 7.0. It will always be a null value (“”).

[RXE-2] Give Code identifies the substance ordered as encoded by the Pharmacy. The components, in order, are the VA Product ID, VA Product Name, National Drug File, local file pointer, local drug name, and the local file.

[RXE-3] Give Amount - Minimum is a required field but it will not be used in Outpatient Pharmacy V. 7.0. It will always be a null value (“”).

[RXE-5] Give Units identifies the units for the give amount as encoded by the VA National Drug file.

[RXE-6] Give Dosage Form is a coded element field. The fourth component is the pointer to the DOSAGE FORM file (#50.606). The fifth component is the form name, and the sixth component is the name of coding system (99PSF).

[RXE-8] Deliver-To-Location is the Method of Pickup (Window or Mail).

[RXE-9] Substitution Status is the value of the TRADE NAME field (#6.5) found in the PRESCRIPTION file (#52).

[RXE-10] Dispense Amount identifies the quantity.

[RXE-11] Dispense Units identifies the units for the dispense amount as encoded by the Pharmacy.

[RXE-13] Ordering Provider’s DEA Number will contain the physician’s DEA number if the drug is a controlled substance.

[RXE-14] Pharmacist/Treatment Supplier’s Verifier ID identifies the pharmacist who verified the order. The first component is the DFN pointer in the NEW PERSON file (#200) of VistA and the second component is the name.

[RXE-18] D/T of Most Recent Refill or Dose Dispensed contains the last date/time the patient received this particular drug. This is the PRIOR FILL DATE field (#102.1) from the PRESCRIPTION file (#52).

[RXE-21] Pharmacy/treatment dispense Instructions. (Label name & VA PRINT NAME).

[RXE-31] Supplementary Code contains three pieces of information:

- An indicator that the drug is a controlled substance or not (Y/N).
- An indicator if the patient is a ScripTalk patient (0 or 1).
- An indicator if the patient’s PMI language preference is something other than English (Y/N).

[RXD-1] Dispense Sub-ID Counter identifies the prescription fill number.

[RXD-2] Dispense/Give code will contain the same give code as in RXE-2.

[RXD-9] Dispense Notes have two pieces of information:

- DEA, SPECIAL HDLG field (#3) from the DRUG file (#50).
- NDC field (#27) from the PRESCRIPTION file (#52).

[RXD-10] Dispensing Provider is the person who finished the order.

[RXD-12] Total Daily Dose is the days of supply for a partial fill.

[RXD-13] Dispense-To-Location will contain how the patient will receive the medication. Possible answers are WINDOW, REGULAR MAIL, CERTIFIED MAIL or DO NOT MAIL.

[RXD-15] Pharmacy/Treatment Supplier's Special Dispensing Instructions will indicate what sort of bottle cap should be employed. It is a safety cap or non-safety cap.

[RXD-25] Supplementary Code is the drug warning number and text.

[NTE] This segment following the RXD segment will contain the Patient Medication Instructions if any.

Note: The separator value “.sp\” has been added to NTE-3, 3 = Drug Warning Narrative, to separate the different warning labels.

[RXR-1] Route is the medication route.

[ZZZ-4] The Hazardous to Handle Indicator identifies the medication is Hazardous to Handle as identified in the PSNDF file (#50.68). Data value is either Y or N.

[ZZZ-5] The Hazardous to Dispose Indicator identifies the medication is Hazardous to Dispose as identified in the PSNDF file (#50.68). Data value is either Y or N.

19.2.5. Specific Transaction – Dispense Release Date/Time

The messages for the Dispense Release Date/Time will consist of the following HL7 segments:

MSH Message Header
PID Patient Identification
PV1 Patient Visit
PV2 Patient Visit – additional information
RXE Pharmacy/Treatment Encoded Order
RXD Pharmacy/Treatment Dispense

Example:

```

	7	20	ST	R			Prescription Number	100002202
	9	25	ST	O			Dispense Notes – Release Date/Time, Bingo Wait time, NDC Code	200312120830^3 5^6505-00-584- 0398

Notes pertaining to some of the data elements:

[MSH-3] Sending Application is the station ID along with the DNS name of the sending facility.

[MSH-5] Receiving Application is the DNS name and DNS port number of the dispensing application.

[MSH-10] Message Control ID is the number that uniquely identifies the message. It is returned in MSA-2 of the dispense completion message.

[PID-3] Patient ID will contain the following possibilities to identify a patient:

- NI = ICN #
- SS = Social Security #

- PN = Claim #
- PI = DFN #

[PID-4] Alternate Patient ID will contain the active Veteran's Health Identification Card (VHIC) number(s) to identify a patient.

[PV1-2] Patient Class is hard-coded to an O for outpatient.

[PV2-24] Patient Status Code contains the patient status from the prescriptions file followed by a tilde and then whether or not the patient is COPAY.

[RXE-1] Quantity Timing is a required field, but it will not be used in Outpatient Pharmacy V. 7.0. It will always be a null value ("").

[RXE-2] Give Code identifies the substance ordered as encoded by the Pharmacy. The components, in order, are the VA Product ID, VA Product Name, National Drug File, local file pointer, local drug name, and the local file.

[RXE-3] Give Amount - Minimum is a required field but it will not be used in Outpatient Pharmacy V. 7.0. It will always be a null value ("").

[RXE-5] Give Units identifies the units for the give amount as encoded by the VA National Drug file.

[RXE-6] Give Dosage Form is a coded element field. The fourth component is the pointer to the DOSAGE FORM file (#50.606). The fifth component is the form name, and the sixth component is the name of coding system (99PSF).

[RXD-1] Dispense Sub-ID Counter identifies which fill the prescription is.

[RXD-2] Dispense/Give code will contain the same give code as in RXE-2.

[RXD-9] Dispense Notes has three pieces of information:

- FILE RELEASE DATE/TIME field (#105.1) from the PRESCRIPTION file (#52).
- BINGO WAIT TIME field (#32) from the PRESCRIPTION file (#52).
- NDC field (#27) from the PRESCRIPTION file (#52).

19.2.6. Specific Transaction – Dispense Completion

The messages for the dispense completion will consist of the following HL7 segments:

MSA Message Acknowledgment
 MSH Message Header
 PID Patient Identification
 ORC Common Order
 RXD Pharmacy/Treatment Dispense

Example:

```
MSH|^~\&|PSO DISPENSE|521|PSO VISTA|521|20031215125043||RRD^O14^RRD_O14|10001|P|2.4|||AL|AL

	19	26	TS	O			Substance Expiration Date	20050405
	20	250	CE	O		0227	Substance Manufacturer Name	BAXTER

Notes pertaining to some data elements:

[MSH-3] Receiving Application is the DNS name and DNS port number of the dispensing application.

[MSH-5] Sending Application is the station ID along with the DNS name of the facility.

[MSH-10] Message Control ID is the number that uniquely identifies the message.

[MSA-2] Message Control ID is the same number that was in MSH-2 in the dispense request message.

[PID-3] Patient ID will contain the following possibilities to identify a patient:

- NI = ICN #
- SS = Social Security #
- PN = Claim #
- PI = DFN #

[PID-4] Patient ID will contain the active Veteran's Health Identification Card (VHIC) number(s) to identify a patient.

[ORC-2] Placer Order Number is the RX internal entry number.

[ORC-10] Entered By is the name of the Filling Person for the prescription.

[ORC-11] Verified By is the name of the Checking Pharmacist for the prescription.

[RXD-1] Dispense Sub-ID Counter is the fill number for the prescription.

[RXD-3] Date/Time Dispensed is the fill date and time.

[RXD-9] Dispense Notes contains 3 components: 1) The NDC code. 2) The release date time. 3) The Vendor Dispense Code.

[RXD-10] Dispensing Provider is the name of the releasing pharmacist.

[RXD-13] Dispense-To-Location will contain the mail tracking number of the medication sent to the patient.

20. Appendix B: HL7 Messaging with an External System

20.1. New Protocol

A new protocol, PSO RECEIVE ORDER, is exported for processing orders from an external system. To use this functionality, this protocol must be added as a SUBSCRIBER to the Event Driver protocol in the PROTOCOL file (#101), which sends the external order message.

20.2. New Application Parameter

A new HL7 application parameter, PSO RECEIVE, is exported as the Receiving Application of the PSO RECEIVE ORDER protocol from the HL7 APPLICATION PARAMETER file (#771).

20.3. New Logical Link

A new HL7 logical link, PSO LLPO from the HL LOGICAL LINK file (#870), is being exported as the Logical Link of the PSO RECEIVE ORDER protocol. This link information will need to be edited to match the communication method of the interface if this interface is activated.

For any orders received from an external source, two new fields are stored with the Outpatient Pending Order and with the prescription, once the Pending Order is finished. These fields are EXTERNAL PLACER ORDER NUMBER field (#114) and EXTERNAL APPLICATION field (#116) in the PENDING OUTPATIENT ORDERS file (#52.41). These fields are also within the PRESCRIPTION file (#52) and are the EXTERNAL PLACER ORDER NUMBER field (#123) and EXTERNAL APPLICATION field (#124).

Any external systems that send orders through this interface to VistA must comply with having **unique** external placer order numbers within the orders from this system. This number is used for various look-ups within the interface, in conjunction with the EXTERNAL APPLICATION field (#116) in the PENDING OUTPATIENT ORDERS file (#52.41) and the EXTERNAL APPLICATION field (#124) in the PRESCRIPTION file (#52).

Any message sent through this interface to VistA, whether it is a New Order message or a Discontinue message must contain only one order per message. The interface is not set up to receive multiple orders per message.

20.4. HL7 Order Message Segment Definition Table

When the PSO RECEIVE ORDER protocol is enabled to process orders from an external system, the following table defines the data elements required for each segment of the incoming order message. This is a unilateral interface. No order information will be returned to the external system.

Table 27: HL7 Order Message Segment

Segment	Piece	Description / Field Name	Data	Data Type
MSH	1	Field Separator		String
	2	Encoding Characters	^~\&	String
	3	Sending Application	Sending Application Name	String
	4	Sending Facility		String
	5	Receiving Application	PSO RECEIVE	String
	6	Receiving Facility		String
	9	Message Type	ORM^O01	Coded Value
	10	Message Control ID		String
	11	Processing ID	P	Coded Value
	12	Version ID	2.3.1	Coded Value
	15	Accept Acknowledgement	NE	Coded Value
	16	Application Acknowledgement	AL	Coded Value
	17	Country Code	USA	Coded Value
PID	3	Patient (pointer to File #2)	VistA IEN of Patient from File #2	Composite ID
	5	Patient Name		Person Name
PVI	3	Clinic (pointer to File #44)	VistA IEN of Hospital Location from File #44	Composite
ORC	1	Order Control Code	'NW'	Coded Value
	2	Placer Order Number*	External Placer Order Number	Composite
	9	Date/Time of Transaction	Current Date/Time	Time Stamp
	10	Entered By	VistA IEN of Provider from File #200	Composite ID Number and Name
	12	Ordering Provider	VistA IEN of Provider from File #200	Composite ID Number and Name
	15	Order Effective Date	Current Date/Time	Time Stamp
RXO	10	Dispense Drug	VistA IEN of Drug from File #50	Coded Element

Segment	Piece	Description / Field Name	Data	Data Type
	11	Quantity	Quantity	Numeric
	13	Number of Refills	Number of Refills	Numeric
NTE	6	Provider's Instructions to Dispensing Pharmacy	Free Text Provider Comments	String
	7	Patient's Instructions	Expanded Sig	String
ZRN	1	Non-VA	N	Coded Element (N=Non VA med)
	2	Statement/Reason	Non-VA Medication not recommended by VA provider or Medication prescribed by non-VA provider	String
ZRX	4	Routing	'W' (for Window)	String

* Field must contain unique data

The PSO RECEIVE ORDER protocol can also receive discontinue order messages. The following table gives the details of the fields that need to be received in the incoming order message.

Table 28: Segment

Segment	Piece	Description / Field Name	Data	Data Type
MSH	1	Field Separator		String
	2	Encoding Characters	^~\&	String
	3	Sending Application	Sending Application Name	String
	4	Sending Facility		String
	5	Receiving Application	PSO RECEIVE	String
	6	Receiving Facility		String
	9	Message Type	ORM^O01	Coded Value
	10	Message Control ID		String
	11	Processing ID	P	Coded Value

Segment	Piece	Description / Field Name	Data	Data Type
	12	Version ID	2.3.1	Coded Value
	15	Accept Acknowledgement	NE	Coded Value
	16	Application Acknowledgement	AL	Coded Value
	16	Country Code	USA	Coded Value
PID	3	Patient (pointer to File #2)	VistA IEN of Patient from File #2	Composite ID
	5	Patient Name		Person Name
PVI	3	Clinic (pointer to File #44)	VistA IEN of Hospital Location from File #44	Composite
ORC	1	Order Control Code	'CA'	Coded Value
	2	Placer Order Number*	External Placer Order Number	Composite
	9	Date/Time of Transaction	Current Date/Time	Time Stamp
	10	Entered By	VistA IEN of Provider from File #200	Composite ID Number and Name
	12	Ordering Provider	VistA IEN of Provider from File #200	Composite ID Number and Name
	15	Order Effective Date	Current Date/Time	Time Stamp
ZRN	1	Non-VA	N	Coded Element (N=Non VA med)
	2	Statement/Reason	Non-VA Medication not recommended by VA provider or Medication prescribed by non-VA provider	String

* Field must contain unique data

An Application Acknowledgement message is returned for new and discontinue messages received from the external system. Sequence 1 (Acknowledgement Code) of the MSA segment will always be Application Accept (AA), regardless of whether or not the incoming message passed all of the exception checks. Sequence 3 (Text Message) of the MSA segment will be null if the message was accepted and passed all of the exception checks. If the message is rejected by the receiving application, Sequence 3 (Text Message) will contain the reason for the rejection.

Table 29: Segment

Segment	Piece	Description / Field Name	Data	Data Type
MSH	1	Field Separator		String
	2	Encoding Characters	^~\&	String
	3	Sending Application	PSO RECEIVE	String
	4	Sending Facility	(Sending Facility)	String
	5	Receiving Application	(Receiving Application Name)	String
	6	Receiving Facility	(Receiving Facility)	String
	7	Date/time of Message	Current Date/Time	Time Stamp
	9	Message Type	ORR^O01	Coded Value
	10	Message Control ID		String
	11	Processing ID	P	Coded Value
	12	Version ID	2.3.1	Coded Value
	15	Accept Acknowledgement	NE	Coded Value
	16	Application Acknowledgement	NE	Coded Value
	17	Country Code	US	Coded Value
MSA	1	Acknowledgement Code	AA	Coded Value
	2	Message Control ID		String
	3	Text Message	(Null, or Rejection Reason)	String

20.4.1. Order Messaging Exceptions

Exceptions will occur when VistA rejects a new or discontinue order message. For new order messages, the rejections are largely based on the drug, provider, or patient associated with the prescription order.

Drug exceptions

- Drug is inactive (less than today's date)
- Drug is not marked for outpatient use
- Drug is not associated with a Pharmacy Orderable Item
- Invalid drug entry

Provider exceptions

- Provider is not authorized to write med orders
- Provider has an inactive date (date of today or less)
- Provider has a termination date (date of today or less)
- Provider does not hold the PROVIDER key
- Invalid provider entry

Patient exceptions

- Patient is deceased
- Invalid patient entry

Other exceptions

- Invalid NTE segment, greater than 245 characters
- Invalid message structure
- Missing MSH segment
- Missing PID segment
- Missing PVI segment
- Missing ORC segment
- Missing RXO segment
- External order, unable to successfully transmit to CPRS
- Unable to derive Institution from Clinic
- Unable to add order to Pending file
- Missing sending application name
- Invalid Order Control Code
- No Patient Location
- Missing CHCS Placer Order Number
- Duplicate order number in Outpatient Pending file
- Duplicate order number in Outpatient Prescription file
- Missing number of refills
- Missing effective date
- Missing Entered by data

For discontinue order messages, these are the possible exceptions:

Provider exceptions

- Provider is not authorized to write med orders
- Provider has an inactive date (date of today or less)
- Provider has a termination date (date of today or less)
- Provider does not hold the PROVIDER key
- Invalid provider entry

Other exceptions

- Invalid message structure
- Missing MSH segment
- Missing PID segment
- Missing ORC segment
- Missing sending application name
- Missing CHCS Placer Order Number
- Unable to find order in Pharmacy
- Patient mismatch in Pending order
- Pending order is being edited by another user
- Unable to cancel Pending order, status is HOLD
- Unable to cancel Pending order, status is RENEW
- Unable to cancel Pending order, status is DISCONTINUE (EDIT)
- Unable to cancel Pending order, status is DISCONTINUE
- Unable to cancel Pending order, status is REFILL REQUEST
- Patient mismatch in prescription
- Prescription is being edited by another user
- Unable to cancel prescription, status is DISCONTINUED
- Unable to cancel prescription, status is DELETED
- Unable to cancel prescription, status is DISCONTINUED BY PROVIDER
- Unable to cancel prescription, status is DISCONTINUED (EDIT)

21. Appendix C:

The Transitional Pharmacy Benefit (TPB) functionality has been placed “Out of Order” with the PSO*7*227 patch.

22. Appendix D: HL7 Messaging for VistA Data Extraction Framework (VDEF)

Important

Patch PSO*7*190 should not be installed prior to the site's assigned HDR installation date. Each site will be contacted approximately two weeks prior to the assigned HDR installation date and provided instructions on when and in what order to install this patch and the VDEF V. 1.0 software. Additionally, sites should not configure or attempt to utilize the VDEF software associated with this patch prior to the assigned HDR installation date. Technical Support Office personnel will work with each site to activate that application and start the site's data transmissions to the HDR database.

Please refer to the VistA Data Extraction Framework (VDEF) Installation & User Configuration Guide for all technical assistance.

22.1. New Protocols

Patch PSO*7*190 adds six new protocols to the PROTOCOL file (#101) to facilitate the VistA Data Extraction Framework (VDEF) Outpatient Pharmacy messaging.

PROTOCOL: (VS = Event Driver protocol, HR = Subscriber protocol)

PSO VDEF RDE O11 OP PHARM PRES VS

PSO VDEF RDE O11 OP PHARM PRES HR

PSO VDEF RDS O13 OP PHARM PPAR VS

PSO VDEF RDS O13 OP PHARM PPAR HR

PSO VDEF RDS O13 OP PHARM PREF VS

PSO VDEF RDS O13 OP PHARM PREF HR

22.2. New Application Parameters

Patch PSO*7*190 adds four new HL7 application parameters to the HL7 APPLICATION PARAMETER file (#771):

HDRPPAR is exported as the Sending Application for the PSO VDEF RDS O13 OP PHARM PPAR VS protocol.

HDRPREF is exported as the Sending Application for the PSO VDEF RDS O13 OP PHARM PREF VS protocol.

HDRPRES is exported as the Sending Application for the PSO VDEF RDE O11 OP PHARM PRES VS protocol.

PSO VDEF IE SIDE is exported as the Receiving application for the three Subscriber protocols:

PSO VDEF RDE O11 OP PHARM PRES HR
 PSO VDEF RDS O13 OP PHARM PPAR HR
 PSO VDEF RDS O13 OP PHARM PREF HR

22.3. New Logical Link

There are currently four HL7 logical links (VDEFVIE_n) exported with VDEF V. 1.0. The VDEFVIE_n links will transmit messages from the local site to the HDR Receiving host system at Austin. VDEFVIE3 is the logical link assigned to Outpatient Pharmacy and it has been added to the HL LOGICAL LINK file (#870).

22.4. HL7 Outpatient Pharmacy VDEF Message

When particular events (listed below) occur to a prescription within the Outpatient Pharmacy package, a VDEF request will be queued up at the VDEF Request Queue, with the MessageType, EventType, SubType, and the internal entry number to the PRESCRIPTION file (#52). VDEF will then go through the VDEF Request Queue to generate an HL7 message that contains all of the prescription information and send the message to the Receiving Facility through the VDEFVIE3 Logical Link.

Outpatient Pharmacy VDEF messages will be generated when:

- A new order is entered through the Outpatient Pharmacy options
- A Pending Order from Computerized Patient Record System (CPRS) is finished in the Outpatient Pharmacy options
- A refill is entered for a prescription
- A partial fill for a prescription is entered
- All prescription status changes
- A Prescription is edited and does not create a new order

Example of VDEF HL7 Message

22.5. HL7 Outpatient Pharmacy VDEF Message

Some data values in the following table represent VistA data fields that have been assigned VUIDs (VHA Unique Identifiers). In these instances, when a VUID is available, the data value will be the VUID, along with the appropriate coding scheme. If for some reason the VUID is not available, the data value will be the VistA data value, along with the appropriate coding scheme.

The exception to this format would be the data value for the coded element for Give Code in the segment RXE 2. If a VUID is available, the first three pieces would be:

VUID from the VA PRODUCT file (#50.68)
VA PRODUCT Name from the VA PRODUCT file (#50.68)
99VA_52_6

If a VUID is not available, for example if the local drug from the DRUG file (#50) is not matched to the National Drug File, the first three pieces would be:

Null
DRUG Name from the DRUG file (#50)
(Station Number)_52_6

Also in the following table, dosing information is sent in the RXE 1 segment. There are different formats for the dosing information, depending on the type of dosage. Here are examples, which include a possible dosage, a local possible dosage, and a possible dosage with complex dosing instructions.

Example 1: This example is for a possible dosage, which is a numeric dosage, with a numeric dispense units per dose. These types of dosages are limited to single ingredient drugs, with a numeric strength, usually with a dosage form of tablets or capsules.

2&200MG~10D~20050720~20060721~FILL/EXPIRATION

The dosage in this case is 2&200MG~10D, where 2 represents the dispense units per dose, 200MG represents the total dosage for the 2 tablets or capsules, and 10D represents the duration, which in this case is 10 days. (duration is optional)

Example 2: This example is for a local possible dosage, which is a text dosage, with no dispense units per dose. These types of dosages apply to items such as multi-ingredient drugs, creams, ointments, drops, etc.

&1 DROP~20050720~20060721~FILL/EXPIRATION

The dosage in this case is &1 DROP, where 1 DROP represents the dosage. Since it is a local possible dosage, there is no dispense units per dose, and in this case, there is no duration, though a duration can be applied to any type of dosage.

Example 3: This example is for a possible dosage, with complex dosing instructions.

1&100MG~10D~20050720~20060721~FILL/EXPIRATION|2&200MG~5D

The first set of dosing instructions is 1&100MG~10D, where 1 represents the dispense units per dose, 100MG represents the total dosage, and 10D represents a duration of 10 Days. The next set of dosing instructions is 2&200MG~5D, where 2 represents the dispense units per dose, 200MG represents the total dosage, and 5D represents a duration of 5 Days.

Note: The dosage will only appear in the RXE segment associated with the original fill, it will not appear in RXE segments associated with refills or partial fills.

23. Appendix E: Outpatient Pharmacy ASAP Standard for Prescription Monitoring Programs (PMP)

2.3.1. Introduction

The data elements in this standard include those described in the Prescription Monitoring Program Model Act of October 2002 developed by the Alliance of States with Prescription Monitoring Programs and the National Association of State Controlled Substances Authorities.

Per the model act, the information submitted for each prescription, should include, but not be limited to:

- Dispenser identification number
- Date prescription filled
- Prescription number
- Prescription is new or is a refill
- NDC for drug dispensed
- Quantity dispensed
- Number of days supply of the drug
- Patient identification number
- Patient name
- Patient address
- Patient date of birth
- Prescriber identification number
- Date prescription issued by prescriber
- Person who received the prescription from the dispenser, if other than the patient
- Source of payment for prescription
- State issued serial number (If state chooses to establish a serialized prescription system.)

23.2. Safety Updates for Medication Prescription Management (SUMPM) Patch *7*408 – State Prescription Drug Monitoring Program

The State Prescription Monitoring Program (SPMP) menu is used to identify prescriptions for controlled substance drugs, Schedule 2 through 5, dispensed by the VA Outpatient Pharmacy facilities, and to create and transmit an export file containing this information to the Prescription Drug Monitoring Programs (PDMP) of each state. This menu allows Veterans Health Administration (VA) Outpatient Pharmacies to comply with mandatory reporting to State Controlled Substance Rx databases as required by the Consolidated Appropriations Act, 2012, PL 112-74.

Each state has established its own PDMP to manage an electronic database that collects designated data on dispensed controlled substances. States distribute data from the database to individuals authorized under state law to receive the information for purposes of their profession. The information is reported to the state using the American Society for Automation in Pharmacy (ASAP) data format, which was developed by the Alliance of States with Prescription Monitoring Programs and the National Association of State Controlled Substances Authorities.

Note: Prescription fills **Administered in Clinic** will not be sent to the states. Only outpatient prescriptions (new and updated) dispensed to patients will be submitted to the states.

23.3. ASAP Segment Hierarchy Layout

```
TH – Transaction Header (one per file)
  IS – Information Source (one per TH)
    PHA – Pharmacy Header (one to 2,000 per IS)
      PAT – Patient Information (one to 25,000 per PHA)
        DSP – Dispensing Record (one to 300 per PAT)
          PRE – Prescriber Information (one per DSP)
            CDI – Compound Drug Ingredient Detail (zero to 25 per DSP)
              AIR – Additional Information Reporting (zero to one per DSP)
        PAT – Patient Information
          DSP – Dispensing Record
            PRE – Prescriber Information
              CDI – Compound Drug Ingredient Detail
                AIR – Additional Information Reporting
          DSP – Dispensing Record
            PRE – Prescriber Information
              CDI – Compound Drug Ingredient Detail
                AIR – Additional Information Reporting
          DSP – Dispensing Record
            PRE – Prescriber Information
              CDI – Compound Drug Ingredient Detail
                AIR – Additional Information Reporting
```

PAT – Patient Information
 DSP – Dispensing Record
 PRE – Prescriber Information
 CDI – Compound Drug Ingredient Detail
 AIR – Additional Information Reporting
 TP – Pharmacy Trailer (one per PHA)
 PHA – Pharmacy Header
 PAT – Patient Information
 DSP – Dispensing Record
 PRE – Prescriber Information
 CDI – Compound Drug Ingredient Detail
 AIR – Additional Information Reporting
 PAT – Patient Information
 DSP – Dispensing Record
 PRE – Prescriber Information
 CDI – Compound Drug Ingredient Detail
 AIR – Additional Information Reporting
 TP – Pharmacy Trailer
 TT – Transaction Trailer (one per TH)

23.4. SPMP Data Source (PSO*7*408)

Data Element	Name Description	Data Source
TH–Transaction Header		
TH01	Version/Release Number Code uniquely identifying the transaction Format = xx.x	File: SPMP STATE PARAMETERS (#58.41) Field: ASAP VERSION field (#1) Option: View/Edit SPMP State Parameters [PSO SPMP STATE PARAMETERS] Example: 4.0, 4.1, 4.2
TH02	Transaction Control Number Sender-assigned code uniquely identifying a transaction This number must be used in TT01	ASAP 3.0 : Business Partner Implementation Version (Not Used) ASAP 4.0+: Transaction Control Number VA Site Number – Export Batch Number Example: 500-3038

Data Element	Name Description	Data Source
TH03	<p>Transaction Type</p> <p>Identifies the purpose of initiating the transaction</p> <p>01 Send/Request Transaction</p> <p>02 Acknowledgment (Used in Response only)</p> <p>03 Error Receiving (Used in Response only)</p> <p>04 Void (Used to void a specific Rx in a real-time transmission, or an entire batch file that was transmitted)</p>	<p>ASAP 3.0 : Transaction Control Number</p> <p>ASAP 4.0+: Transaction Type (Always "01" - Send/Request Transaction)</p>
TH04	<p>Response ID</p> <p>Contains the Transaction Control Number of a transaction that initiated the transaction</p> <p>Required in response transaction only</p>	<p>ASAP 3.0 : Transaction Type (Not Used)</p> <p>ASAP 4.0+: Response ID (Not Used)</p>
TH05	<p>Creation Date</p> <p>Date the transaction was created</p> <p>Format: CCYYMMDD</p>	<p>ASAP 3.0 : Message Type (Not Used)</p> <p>ASAP 4.0+: Creation Date (Format: YYYYMMDD)</p> <p>Date the Export Batch was created</p> <p>Example: 20130115</p>
TH06	<p>Creation Time</p> <p>Time the transaction was created</p> <p>Format: HHMMSS or HHMM</p>	<p>ASAP 3.0 : Response ID (Not Used);</p> <p>ASAP 4.0+: Creation Time. Format: HHMMSS or HHMM</p> <p>Time the Export Batch was created</p> <p>Example: 091522</p>
TH07	<p>File Type</p> <p>Code specifying the type of transaction</p> <p>P Production</p> <p>T Test</p>	<p>ASAP 3.0: Project ID (Not Used)</p> <p>ASAP 4.0+: File Type.</p> <ul style="list-style-type: none"> • P is reported when running from a production account • T is reported when running from a non-production account
TH08	<p>Routing Number</p> <p>This field is reserved for real-time transmissions that go through a network switch to indicate, if necessary, the specific state PMP to whom the transactions should be routed</p>	<p>ASAP 3.0: Creation Date (Format: YYYYMMDD)</p> <p>ASAP 4.0 : Composite Element Separator (:)</p> <p>ASAP 4.1+: Routing Number (Real-time transactions only) (Not Used)</p>

Data Element	Name Description	Data Source
TH09	Segment Terminator Character This terminates the TH segment and sets the actual value of the data segment terminator for the entire transaction	ASAP 3.0: Creation Time. Format: HHMMSS or HHMM ASAP 4.0+: Segment Terminator Character <ul style="list-style-type: none"> For ASAP version 4.0, the separator is set to “\” (backward slash) For ASAP version 4.0, 4.1 and 4.2, the separator is set to “~” (tilde)
TH10	File Type Code specifying the type of transaction P Production T Test	ASAP 3.0 only <ul style="list-style-type: none"> P is reported when running from a production account T is reported when running from a non-production account
TH11	Message Free-form text message.	ASAP 3.0 only (not used)
TH12	Composite Element Separator The delimiter used to separate component data elements within a composite data structure.	ASAP 3.0 only
TH13	Data Segment Terminator Character This terminates the TH segment and sets the actual value of the data segment terminator for the entire transaction set Note: This Data Element was released as NOT USED because ASAP 3.0 does not require the actual segment terminator value to be in the TH13 field.	ASAP 3.0 only
IS–Information Source		
IS01	Unique Information Source ID Reference number or identification number as defined by the business partners Example: Phone number	VA concatenated with the VA Site Number Example: VA500
IS02	Information Source Entity Name Entity name of the Information Source	File: INSTITUTION (#4) Field: OFFICIAL VA NAME (#100) Example: OKLAHOMA CITY VA MEDICAL CENTER
IS03	Message Free-form text for a message Used for more detailed information if required by the PMP	Not Used

Data Element	Name Description	Data Source
IS04- IS10	ASAP 3.0 only	Not Used
IR–Information Receiver (ASAP 3.0 Only)		
IR01	Unique Information Receiver ID Reference number or identification number as defined by the business partners Example: Phone number	VA concatenated with the VA Site Number Example: VA500
IR02	Information Receiver Entity Name Entity name of the Information Receiver	File: STATE (#5) Field: NAME (#.01) Concatenated with “PMP PROGRAM” Example: OKLAHOMA PMP PROGRAM
IR03- IR10	ASAP 3.0 only	Not Used
PHA–Pharmacy Header		
PHA01	National Provider Identifier (NPI) Identifier assigned to the pharmacy by Centers for Medicare and Medicaid Services (CMS) Used if required by the PMP	Retrieved via the Kernel API \$\$NPI^XUSNPI (DBIA # 4532) using the NPI INSTITUTION field (#101) in the OUTPATIENT SITE file (#59) Example: 1043278211
PHA02	NCPDP/NABP Provider ID Identifier assigned to the pharmacy by the NCPDP/NABP. Used if required by the PMP	File: OUTPATIENT SITE (#59) Field: NCPDP NUMBER (#1008) Option: Site Parameter Enter/Edit [PSO SITE PARAMETERS] Example: 3706972
PHA03	DEA Number Identifier assigned to the pharmacy by the Drug Enforcement Administration (DEA) Used if required by the PMP	Retrieved via the Kernel API \$\$WHAT^XUAF4 (DBIA # 2171) using the RELATED INSTITUTION field (#100) in the OUTPATIENT SITE file (#59) Example: AV4597211
PHA04	Pharmacy Name or Dispensing Prescriber Name Free-form text for the name of the pharmacy	File: OUTPATIENT SITE (#59) Field: NAME (#.01) Option: Site Parameter Enter/Edit [PSO SITE PARAMETERS] Example: OKLAHOMA CITY

Data Element	Name Description	Data Source
PHA05	Address Information – 1 Free-form text for address information	File: OUTPATIENT SITE (#59) Field: MAILING FRANK STREET (#.02) Option: Site Parameter Enter/Edit [PSO SITE PARAMETERS] Example: 921 N.E. 13th. Street (119)
PHA06	Address Information – 2 Free-form text for additional address information	Not Used
PHA07	City Address Free-form text for city name	File: OUTPATIENT SITE (#59) Field: MAILING FRANK CITY (#.07) Option: Site Parameter Enter/Edit [PSO SITE PARAMETERS] Example: OKLAHOMA CITY
PHA08	State Address U.S. Postal Service state code	File: STATE (#5) Field: ABBREVIATION (#1) Option: Site Parameter Enter/Edit [PSO SITE PARAMETERS] Example: OK Note: The pointer to STATE file (#5) is retrieved from OUTPATIENT SITE file (#59) MAILING FRANK STATE field (#.08).
PHA09	ZIP Code Address U.S. Postal Service ZIP code Use if available	File: OUTPATIENT SITE (#59) Field: MAILING FRANK ZIP+4 CODE (#.05) Option: Site Parameter Enter/Edit [PSO SITE PARAMETERS] Example: 731045028 (no dash)
PHA10	Phone Number Complete phone number including area code	File: OUTPATIENT SITE (#59) Field: PHONE NUMBER (#.04) Option: Site Parameter Enter/Edit [PSO SITE PARAMETERS] Example: 4056948387 (no dashes)
PHA11	Contact Name Free-form text for contact name	Not Used

Data Element	Name Description	Data Source
PHA12	Chain Site ID Store number assigned by the chain to the pharmacy location Used when PMP needs to identify the specific pharmacy from which information is required	Not Used
PHA13	Message Free-form text message	Not Used
PAT–Patient Information		
PAT01	ID Qualifier of Patient Identifier Code identifying the jurisdiction that issues the ID in PAT03 Used if the PMP requires such identification	Always US (United States), except ASAP 3.0 (not used)
PAT02	ID Qualifier Code to identify the type of ID in PAT03. If PAT02 is used, PAT03 is required 01 Military ID 02 State Issued ID 03 Unique System ID 04 Permanent Resident Card (Green Card) 05 Passport ID 06 Driver’s License ID 07 Social Security Number 08 Tribal ID 99 Other (Trading partner agreed upon ID, such as cardholder ID)	Always 07 (Social Security Number)
PAT03	ID of Patient Identification number for the patient as indicated in PAT02 An example would be the driver’s license number	ASAP 3.0 : Unique System ID - Patient (Not Used) ASAP 4.0+: ID of Patient (SSN) Retrieved via the Kernel API \$\$DEM^VADPT (DBIA #10061) return variable VADM(2) Example: 666554444 (no dashes)

Data Element	Name Description	Data Source
PAT04	<p>ID Qualifier of Additional Patient Identifier</p> <p>Code identifying the jurisdiction that issues the ID in PAT06</p> <p>Used if the PMP requires such identification</p>	<p>ASAP 3.0 : SSN</p> <p>Retrieved via the Kernel API \$\$DEM^VADPT (DBIA #10061) return variable VADM(2)</p> <p>Example: 666554444 (no dashes)</p> <p>ASAP 4.0+: ID Qualifier of Additional Patient Identifier (Not Used)</p>
PAT05	<p>Additional Patient ID Qualifier</p> <p>Code to identify the type of ID in PAT06 if the PMP requires a second identifier</p> <p>If PAT05 is used, PAT06 is required</p> <p>01 Military ID</p> <p>02 State Issued ID</p> <p>03 Unique System ID</p> <p>04 Permanent Resident Card (Green Card)</p> <p>05 Passport ID</p> <p>06 Driver's License ID</p> <p>07 Social Security Number</p> <p>08 Tribal ID</p> <p>99 Other (Trading partner agreed upon ID, such as cardholder ID)</p>	<p>Not Used</p>
PAT06	<p>Additional ID</p> <p>Identification that might be required by the PMP to further identify the individual</p> <p>An example: in PAT03, driver's license is required and in PAT06, Social Security number is also required</p>	<p>Not Used</p>
PAT07	<p>Last Name</p> <p>Patient's last name</p>	<p>Retrieved via the Kernel API \$\$DEM^VADPT (DBIA #10061) return variable VADM(1) – first value before the comma (e.g., SMITH, JOHN F)</p> <p>Example: SMITH</p>
PAT08	<p>First Name</p> <p>Patient's first name</p>	<p>Retrieved via the Kernel API \$\$DEM^VADPT (DBIA #10061) return variable VADM(1) – first value after the comma and before blank space (e.g., SMITH, JOHN F)</p> <p>Example: JOHN</p>

Data Element	Name Description	Data Source
PAT09	Middle Name Patient's middle name or initial if available Used if available in pharmacy system and required by the PMP	Retrieved via the Kernel API \$\$DEM^VADPT (DBIA #10061) return variable VADM(1) –value following the first name (e.g., SMITH, JOHN F) Example: F
PAT10	Name Prefix Patient's name prefix such as Mr. or Dr. Used if available in pharmacy system and required by the PMP	Not Used
PAT11	Name Suffix Patient's name prefix such as Jr. or the III Used if available in pharmacy system and required by the PMP	Not Used
PAT12	Address Information – 1 Free-form text for street address information	Retrieved via the Registration API \$\$ADD^VADPT (DBIA #10061) return variable VAPA(1) Example: 1235 STREET NAME ST
PAT13	Address Information – 2 Free-form text for additional address information, if required by the PMP and is available in the pharmacy system	Retrieved via the Registration API \$\$ADD^VADPT (DBIA #10061) return variable VAPA(2) Example: BLDG 101 APT #102
PAT14	City Address Free-form text for city name	Retrieved via the Registration API \$\$ADD^VADPT (DBIA #10061) return variable VAPA(4) Example: ARDMORE
PAT15	State Address U.S. Postal Service state code if required by the PMP Note: Field was sized to handle international patients not residing in the U.S.	Retrieved via the Registration API \$\$ADD^VADPT (DBIA #10061) return variable VAPA(5) Example: OK
PAT16	ZIP Code Address U.S. Postal Service ZIP code Populate with zeros if the patient address is outside the U.S.	Retrieved via the Registration API \$\$ADD^VADPT (DBIA #10061) return variable VAPA(6) Example: 723005500 (no dash)
PAT17	Phone Number Complete phone number including the area code when the PMP requires and is available in the pharmacy system	Retrieved via the Registration API \$\$ADD^VADPT (DBIA #10061) return variable VAPA(8) Example: 4245556666 (no dashes)

Data Element	Name Description	Data Source
PAT18	Date of Birth Date patient was born Format: CCYYMMDD	ASAP 3.0 : Email Address (Not Used) ASAP 4.0+: Patient DOB Retrieved via the Kernel API \$\$DEM^VADPT (DBIA #10061) return variable VADM(3) Example: 19661112
PAT19	Gender Code Code indicating the sex of the patient if required by the PMP F Female M Male U Unknown	ASAP 3.0 : Patient DOB Retrieved via the Kernel API \$\$DEM^VADPT (DBIA #10061) return variable VADM(3) Example: 19661112 ASAP 4.0+: Patient Gender Code Retrieved via the Kernel API \$\$DEM^VADPT (DBIA #10061) return variable VADM(5). If no value is found ,reports U Example: F
PAT20	Species Code Used if required by the PMP to differentiate a prescription for an individual from one prescribed for an animal 01 Human 02 Veterinary Patient	ASAP 3.0 : Patient Gender Code Retrieved via the Kernel API \$\$DEM^VADPT (DBIA #10061) return variable VADM(5). If no value is found ,reports U ASAP 4.0+: Species Code Always 01 (Human)

Data Element	Name Description	Data Source
PAT21	Patient Location Code Code indicating where the patient is located when receiving pharmacy services if required by the PMP 01 Home 02 Intermediary Care 03 Nursing Home 04 Long-Term/Extended Care 05 Rest Home 06 Boarding Home 07 Skilled-Care Facility 08 Sub-Acute Care Facility 09 Acute-Care Facility 10 Outpatient 11 Hospice 98 Unknown 99 Other	Always 10 (Outpatient)
PAT22	Country of Non-U.S. Resident Used when the patient's address is a foreign country and PAT12 through PAT16 are left blank. This is a free-form text field	ASAP 3.0 : Primary Prescription Coverage Type (Not Used) ASAP 4.0+:Country of Non-U.S. Resident Retrieved via the Registration API \$\$ADD^VADPT (DBIA #10061) return variable VAPA(25) Example: MX
PAT23- PAT40	Not Used	

Data Element	Name Description	Data Source
DSP–Dispensing Record		
DSP01	<p>Reporting Status</p> <p>DSP01 requires one of the codes below. An empty or blank field no longer indicates a new prescription dispensing transaction. Individual PMPs may elect to require a subset of the codes below, specifically 00 and 02, but not 01.</p> <p>00 New Record (indicates a new prescription dispensing transaction)</p> <p>01 Revise (indicates that one or more data element values in a previously submitted transaction will be revised)</p> <p>02 Void (message to the PMP to remove the original prescription transaction from its database, to mark the record as invalid, or to be ignored)</p>	<p>ASAP 4.0</p> <ul style="list-style-type: none"> • (Blank) New Record • 01 Revise Record • 02 Void Record <p>ASAP 4.1 and 4.2</p> <ul style="list-style-type: none"> • 00 New Record • 01 Revise Record • 02 Void Record
DSP02	<p>Prescription Number</p> <p>Serial number assigned to the prescription by the pharmacy</p>	<p>File: PRESCRIPTION (#52)</p> <p>Field: RX # (#.01)</p> <p>Example: 10930393</p>
DSP03	<p>Date Written</p> <p>Date the prescription was written (authorized)</p> <p>Format: CCYYMMDD</p>	<p>File: PRESCRIPTION (#52)</p> <p>Field: ISSUE DATE (#1)</p> <p>Example: 20130117</p>
DSP04	<p>Refills Authorized</p> <p>Number of refills authorized by the prescriber</p>	<p>File: PRESCRIPTION (#52)</p> <p>Field: # OF REFILLS (#9)</p> <p>Example: 5</p>
DSP05	<p>Date Filled</p> <p>Date prescription was filled</p> <p>Format: CCYYMMDD</p>	<ul style="list-style-type: none"> • Original Fill <p>File: PRESCRIPTION (#52)</p> <p>Field: RELEASED DATE/TIME (#31)</p> <ul style="list-style-type: none"> • Refill <p>Sub-File: REFILL (#52.1)</p> <p>Field: RELEASED DATE/TIME (#17)</p> <ul style="list-style-type: none"> • Partial <p>Sub-File: PARTIAL (#52.2)</p> <p>Field: RELEASED DATE/TIME (#8)</p> <p>Example: 20130118</p>

Data Element	Name Description	Data Source
DSP06	Refill Number Number of the fill of the prescription 0 indicates original dispensing 01-99 is the refill number	<ul style="list-style-type: none"> • Original 0 • Refill Refill # (e.g., 1, 2, ...) • Partial 0
DSP07	Product ID Qualifier Used to identify the type of product ID contained in DSP08 01 NDC 02 UPC 03 HRI 04 UPN 05 DIN 06 Compound (used to indicate it is a compound' if used, the CDI segment then becomes a required segment)	Always 01 (NDC)
DSP08	Product ID Full product identification as indicated in DSP07, including leading zeros without punctuation If the product is a compound, use 99999 for the first five characters of the product code. The remaining characters are assigned by the pharmacy. The CDI then becomes a required segment.	<ul style="list-style-type: none"> • Original Fill File: PRESCRIPTION (#52) Field: NDC (#27) • Refill Sub-File: REFILL (#52.1) Field: NDC (#11) • Partial File: PRESCRIPTION (#52) Field: NDC (#27) Example: 55555444422 (no dashes)

24. Appendix F: OneVA Pharmacy HL7 Messaging using Middleware Application for External System

24.1. OneVA Pharmacy General Information

The overall OneVA Pharmacy design has several components. They are:

- Veterans' Health Information Systems and Technology Architecture (VistA) (Patch PSO*7.0*454)
- Health Level 7 (HL7) Messaging
- A middleware application
- Health Data Repository/Clinical Data Service (HDR/CDS) Repository
- Patch PSO*7*497, which fixes the following OneVA Pharmacy critical defects:
 1. To fix the auto-suspend defect.
 2. To limit refill permissions to only those personnel who have the correct key(s).
 3. "Trade Name" prevented from being refilled/partial filled by a remote OneVA pharmacy location so that dispensing errors are reduced on prescriptions due to the lack of information.
 4. To identify titration prescriptions at the host site and to disallow refills of such titration prescriptions at the dispensing site.
 5. Update OneVA Pharmacy functionality to add menu item for turning OFF/ON Switch for OneVA Pharmacy ADPACs

VistA is the user interface where a pharmacist uses the "Patient Prescription Processing [PSO LM BACKDOOR ORDERS]" menu (found within the VistA Pharmacy Outpatient Pharmacy Manager package) to query for and refill patient's active and refillable prescriptions from other VA Pharmacy VistA instances. The OneVA Pharmacy VistA patch, PSO*7.0*454, uses Health Level 7 (HL7) messaging to query and receive remote prescription details to and from the Health Data Repository/Clinical Data Services (HDR/CDS) Oracle Repository.

The VistA instance the Veteran is refilling the prescription is considered the 'dispensing' VistA instance. This patch allows a Pharmacist from a 'dispensing' VistA instance to refill a prescription that originated from another VA Pharmacy VistA instance and print a prescription label at the dispensing site. The VA Pharmacy VistA instance where the prescription originated and currently exists is the 'host' VistA instance. The host VistA instance is where the update to the prescription record is made after the fill is processed and the host label file is being extracted to return to the dispensing site via HL7.

The OneVA Pharmacy patch sends the HL7 query message through a middleware application. The middleware application executes a Web Service call to query the HDR/CDS Repository for specific medication information from all VA Pharmacy's VistA sites. The middleware's

configuration contains filtering processes that applies specific business rules against the HDR/CDS Web Service call to return the appropriate prescriptions to the dispensing VistA. VistA and middleware communicate using HL7 v2.5.1 over Minimal Layer Protocol (MLLP). Communication to the HDR/CDS Repository is done via Simple Object Access Protocol (SOAP) Web Services.

The medications return to the dispensing site via HL7 messaging. Once the prescription reaches the dispensing site, they display below any 'local' prescriptions on the 'Medication Profile' screen. The prescriptions displayed to the Pharmacist by VA Pharmacy site. The dispensing Pharmacist can then view the 'remote' prescriptions and select one to refill or partially fill.

For label printing, VistA triggers the HL7 message stream that executes during the full or partial refill prescription processes. The event triggers the handling of the printing of the host label information at the dispensing printing device.

24.2. OneVA Pharmacy New Menu

A new option has been created to allow reporting regarding what 'remote' prescriptions have been filled by a particular facility, and what facilities have refilled prescriptions that belong to a target facility. This menu is OneVA Pharmacy Prescription Report [PSO REMOTE RX REPORT].

24.3. OneVA Pharmacy New Logical Link

A new HL7 logical link, PSORRSEND will facilitate the sending of the HL7 messages to middleware. The PSO VISTA PHARM and PSO EMI PHARM application parameters will control the message processing within VistA. The existing multi-threaded listener will be leveraged at each facility for receiving the HL7 messages into VistA.

24.4 OneVA Pharmacy New Flag

Important	
	DO NOT turn on the OneVA Pharmacy Flag until directed to do so. The software will be released, deployed, and installed with the activation flag set to the "off" position. The Existing Product Intake Program (EPIP) Implementation Team will coordinate with the sites Pharmacy Automatic Data Processing Application Coordinator (ADPAC) on the specific date in which to activate the software.

To use OneVA Pharmacy, the user turns on the 'ONEVA PHARMACY FLAG (#101)'. The 'ONEVA PHARMACY FLAG (#101)' is located on the 'PHARMACY SYSTEM FILE (#59.7)'. This field will allow sites to toggle the OneVA Pharmacy logic 'on' or 'off' depending on current needs. The user changes the field by using option, PSS SYS EDIT and editing the 'ONEVA PHARMACY FLAG (#101)' field.

The patch PSS*1*212 delivers the 'ONEVA PHARMACY FLAG (#101)' in the 'off' state. When this flag is in the 'off' state, the HDR/CDS Repository is not queried for external prescriptions and other VistA instances will not be able to refill prescriptions that belong to the VistA instance with the flag set to the 'off' state. When in the 'on' state, all prescription queries and actions may be taken for remote queries, refills, and partial fills. In order to process

prescriptions from another VistA instance, that instance will also need to have its 'ONEVA PHARMACY FLAG (#101)' set to the 'on' state.

To turn on the 'ONEVA PHARMACY FLAG (#101)'

```
Select OPTION NAME: PSS SYS EDIT          Pharmacy System Parameters Edit
Pharmacy System Parameters Edit

PMIS PRINTER: PP8//
PMIS LANGUAGE: English//
WARNING LABEL SOURCE: NEW//
CMOP WARNING LABEL SOURCE: NEW//
OPAI WARNING LABEL SOURCE: NEW//
AUTOMATE CPRS REFILL:
ONEVA PHARMACY FLAG: ON//
```

24.5. OneVA Pharmacy Modified Protocols

Patch PSO*7*497 modifies the following protocols to the PROTOCOL file (#101) to remediate critical defects found in PSO*7*454. They are:

1. PSO LM REFILL REMOTE ORDER (Modified)
2. PSO LM REMOTE ORDER MENU (Modified)
3. PSO LM REMOTE PARTIAL (Modified)

24.6. OneVA Pharmacy New Protocols

Patch PSO*7*454 adds new protocols to the PROTOCOL file (#101) to facilitate the OneVA Pharmacy messaging. They are:

1. PSO LM MEDICATION PROFILE (Modified)
2. PSO LM REFILL REMOTE ORDER (New)
3. PSO LM REMOTE ORDER MENU (New)
4. PSO LM REMOTE ORDER SELECTION (New)
5. PSO LM REMOTE PARTIAL (New)
6. PSO LM REMOTE REPORT DETAILS (New)
7. PSO LM REMOTE RX REPORT (New)
8. PSO LM REMOTE RX REPORT MENU (New)
9. PSO LM SELECT REPORT ITEM (New)
10. PSO REMOTE RX QBP Q13 ESUBS (New)
11. PSO REMOTE RX QBP Q13 EVENT (New)

12. PSO REMOTE RX RDS O13 ESUBS (New)

13. PSO REMOTE RX RDS O13 EVENT (New)

24.7. OneVA Pharmacy New Application Parameters

Patch PSO*7*454 adds two new HL7 application parameters to the HL7 APPLICATION PARAMETER file (#771). They are:

PSO EMI PHARM

PSO VISTA PHARM

24.8. New Fields on Existing Files

Patch PSO*7*454 adds new fields to the PRESCRIPTION (#52) REFILL file (#52.1). They are:

REMOTE FILL SITE (#52.1,91)

REMOTE PHARMACMIST (#52.1,92)

REMOTE PHARMACIST PHONE (#52.1,93)

Patch PSO*7*454 adds new fields to the PRESCRIPTION (#52) PARTIAL DATE file (#52.2). They are:

REMOTE FILL SITE (#52.2,91)

REMOTE PHARMACMIST (#52.2,92)

REMOTE PHARMACIST PHONE (#52.2,93)

Patch PSO*7*454 adds the new ONEVA PHARMACY FLAG field (#3001) to the OUTPATIENT SITE (#59) file).

24.9. OneVA Pharmacy New File

The Remote Prescription Log File (#52.09) logs all activity related to OneVA Pharmacy ‘remote refills’ and ‘partial fills’. The log file will record all actions taken by the local or dispensing site as well as all actions taken by any external facility for any remote or host prescription. The log is input into the OneVA Pharmacy reports found on the OneVA Pharmacy Prescription Report [PSO REMOTE RX REPORT] menu.

REMOTE PRESCRIPTION LOG file (#52.09)

PATIENT (.02)

24.10. OneVA Pharmacy Component Diagram

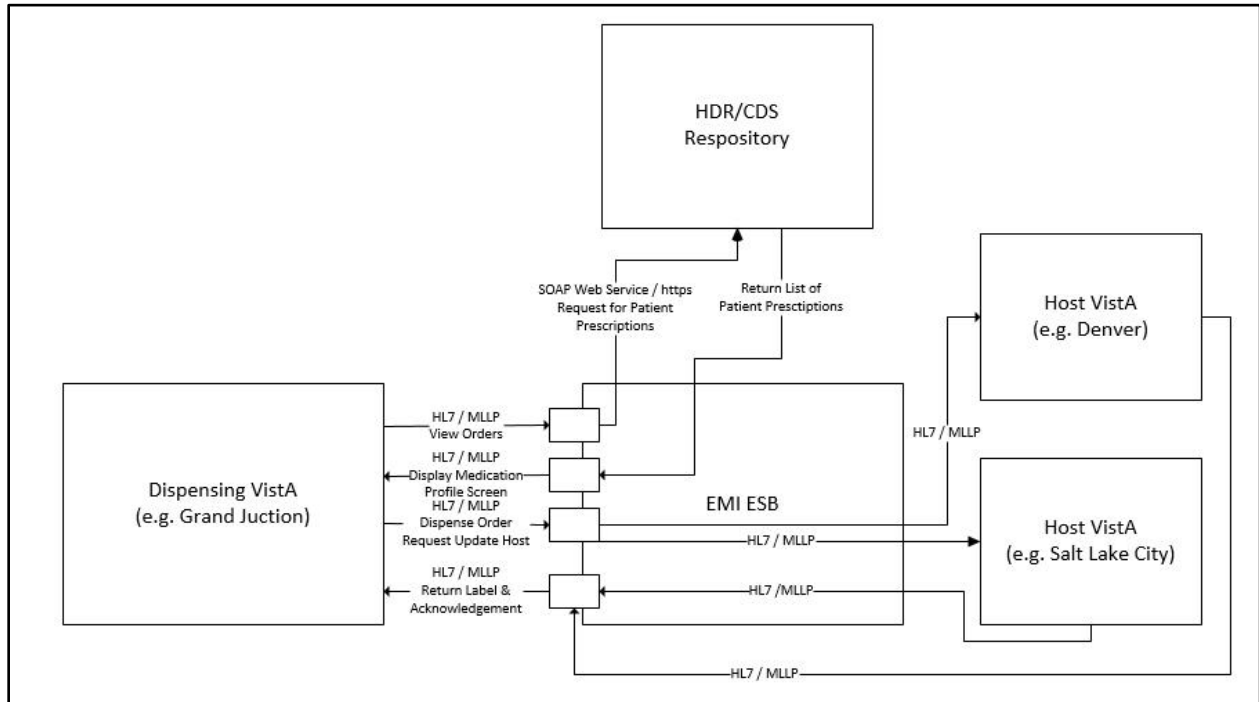

Version 2.5.1 of the HL7 specification will be used for the message format. The SOAP message versions are directed by the HDR/CDSs endpoint requirements. The following image shows the dispensing VistA instance query to the HDR/CDS Repository and the message communication flow from the dispensing VistA instance to one or more host VistA systems.

Figure 1: Dispensing VistA Instance to HDR/CDS Repository

The following figure provides the business capability the components are processing specifically for the OneVA Pharmacy Patch.

Figure 2: Business Capability Processed for OneVA Pharmacy Patch

When the Pharmacist enters a request to display the Medication Profile screen from a dispensing VistA instance, the QBP^Q13 HL7 ‘Query By Parameter Request’ message is sent to a middleware application. A middleware application will harvest the necessary information to send a SOAP request to the HDR/CDS Repository for the patient’s prescriptions. The SOAP response is transformed into a RTB^K13 HL7 ‘Prescription Query Service Response’ message that contains the patient’s prescription data. The patient’s prescription data is returned to the dispensing VistA instance and displayed on the Medication Profile screen. The following image displays the sequence of events and message types for this processing.

Figure 3: Processing Sequence of Events and Message Type

When a Pharmacist selects a prescription from the Medication Profile screen from a dispensing VistA instance, the RDS^O13 HL7 'Pharmacy/Treatment Dispense' message is sent to a middleware application will receive the request, determine the destination facility, and then forward the message to the host VistA instance. The host VistA instance will process the message and return a response message containing the prescription label. The middleware will route the message back to the dispensing VistA, displaying the completion of the transaction to the Pharmacist on the screen. The following image displays the sequence of events and message types for the Dispense Order from Another VA Pharmacy Location functionality.

Figure 4: Dispense Order from another VA Pharmacy Location Functionality

24.11. OneVA Pharmacy HL7 Message Types

There are four HL7 message types created within the OneVA Pharmacy software. They are:

1. QBP^Q13 Query by Parameter Request
2. RTB^K13 Prescription Query Service Request
3. RDS^O13 Pharmacy/Treatment Dispense Message Request
4. RRD^O14 Prescription Refill/Partial Service Response

24.11.1 QBP^Q13 Query by Parameter Request

The following table defines the data elements required for each of the following segments of the QBP^Q13 Query by Parameter Request.

Message Header (MSH) segment

Query Parameter Definition (QPD) segment

Patient Identification (PID) segment

Note: The MUMPS code is designed to use the ‘D BLDPID^PSOTPHL2(DFN,"",.PSORRDAT,.HL,.ERR)’ routine to create the Patient Identification (PID) segment.

Response Control Parameter (RCP) segment

24.11.2. RTB^K13 Prescription Query Service Responses

Middleware will query the HDR/CDS Repository and apply the filter and transformation logic. The Middleware application will formulate the RTB^K13 HL7 message, which contains the prescription records for the selected patient.

The following table defines the data elements required for each of the following segments of the RTB^K13 Prescription Query Service Response.

- Message Header (MSH) segment
- Message Acknowledgement (MSH) segment
- Query Acknowledgement (QAK) segment
- Query Parameter Definition (QPD) segment
- Table Row Definition (RDF) segment

Table 33: Segment

Segment	Piece	Description/Field Name	Data Type/Description
MSH	1	Field Separator	ST
	2	Encoding Characters	ST
	3	Sending Application	HD
	4	Sending Facility	HD

Example RTB^K13 HL7 RDF Segment

The Table Row Definition (RDF) segment defines the content for the Table Row Data (RDT) segment in the RTB^K13 HL7 message. The following is an example of the RDF segment created for the RTB^K13 HL7 message. The image displays the format to use for each prescription order.

Figure 6: Example RTB^K13 HL7 RDF Segment

24.11.3. RDS^O13 Pharmacy/Treatment Dispense Message Request

The ‘RDS^O13’ is a pass through message that requires no transformation by a middleware application. The message can either be for a ‘Refill’ or ‘Partial Fill’ request. For a ‘Partial Fill’ request, the NTE segment will exist; it will not be there for a ‘Refill’ request.

The following table defines the data elements required for each of the following segments of the RTB^K13 Prescription Query Service Response.

Message Header (MSH) segment

Patient Identification (PID) segment

Note: The MUMPS code uses BLDPID^PSOTPHL2(DFN,"",.PSORRDAT,.HL,.ERR)’ to create the Patient Identification (PID) segment.

Common Order (ORC) segment

Pharmacy/Treatment Prescription Order (RXO)

Notes and Comments (NTE) segment

Notes: The Notes and Comments (NTE) segment will be present if the request is for a ‘Partial Fill’.

Table 34: Segment

24.12. OneVA Pharmacy Messaging Exceptions

With this integrated VistA patch, several points of failure could occur. The systems design will allow the process to continue if any of the various integration points fail, however, remote prescriptions will not display to the Pharmacist on the Medication Profile view.

There are application error messages that will display during the search for the patient and the patient's prescriptions. They are:

- No patient error message:
PATIENT IDENTIFIER NOT FOUND
- Multiple patients returned error messages:
MORE THAN ONE PATIENT RETURNED IN CALL TO HDR-CDS
MORE THAN ONE PATIENT FOUND ON RX DATABASE, CHECK ICN
- Patient returned, no prescription data returned error message:
PATIENT FOUND WITH NO PRESCRIPTION RECORDS
- Patient returned, no prescription data matching filters returned error message:
PATIENT FOUND WITH NO PRESCRIPTION RECORDS MATCHING SEARCH
CRITERIA
- Call to HDR/CDS Repository Failed
THE RX DATABASE IS NOT RESPONDING TO THE REQUEST
- HDR/CDS Repository Reports a Failure
THE RX DATABASE RESPONDED WITH AN ERROR
- HL7 from VistA does not pass basic validation with a middleware application
Response Type: ACK
MSA-01: CR
MSA-03: {MESSAGE INDICATING INVALID DATA}

25. Appendix G: Inbound ePrescribing (IEP)

25.1. Inbound ePrescribing Process Flow

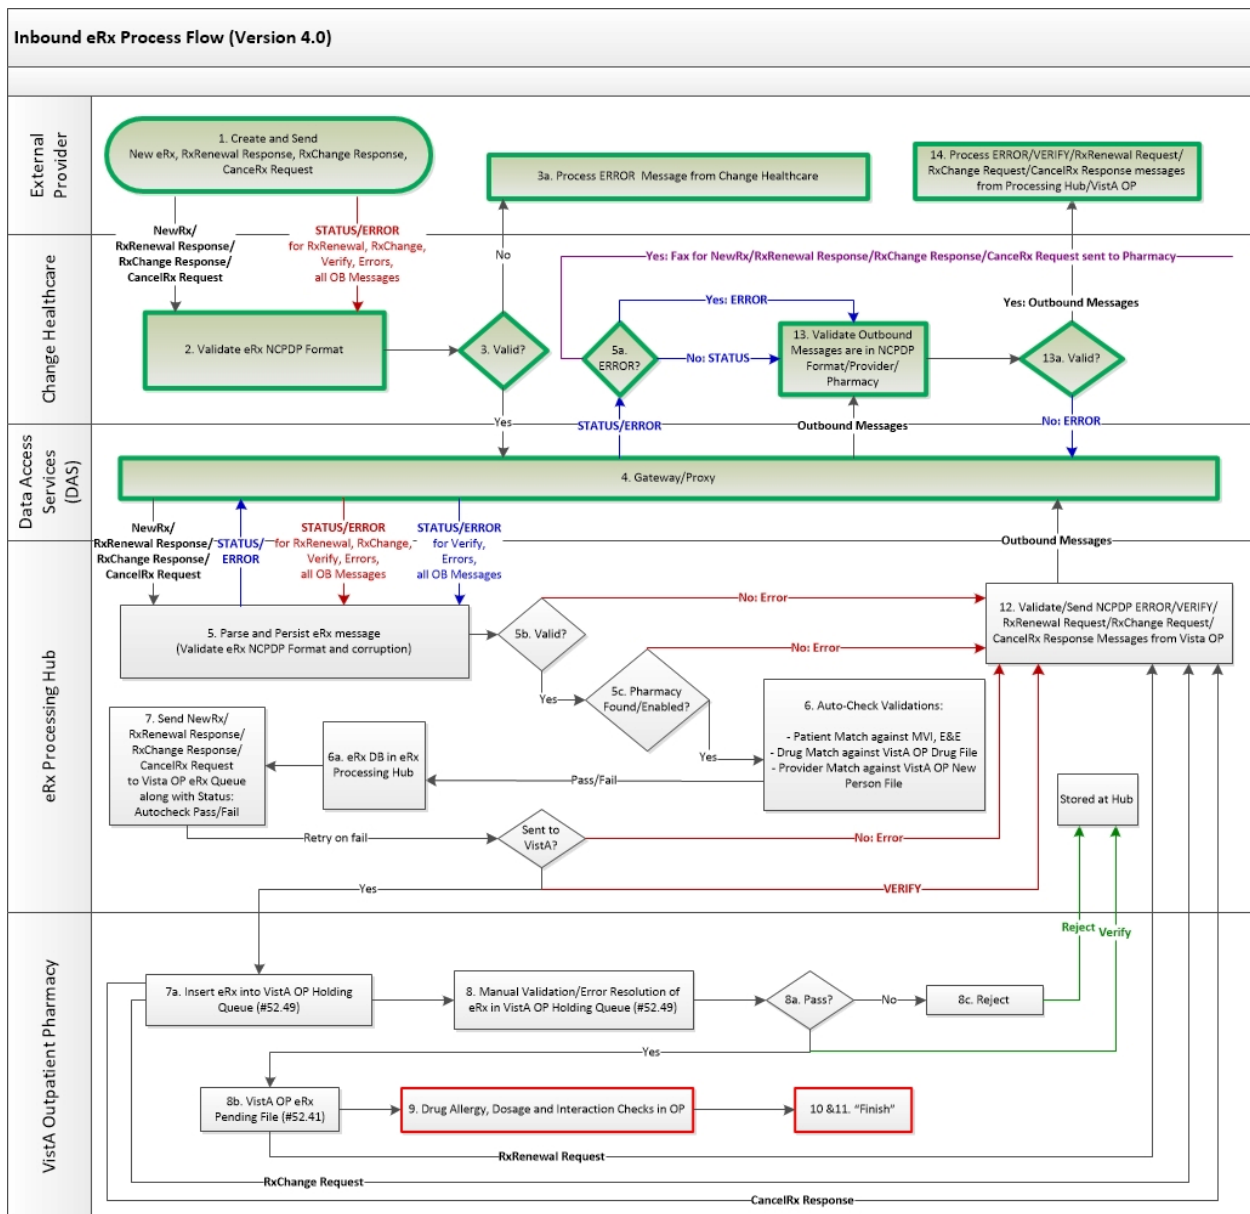

A high-level overview of the Inbound ePrescribing (IEP) process flow for pharmacy data messages is outlined in Figure 9 below.

The IEP process flow depicts five (5) swim-lanes – one external to IEP (External Provider) and four (4) Inbound eRx processing tiers (Change Healthcare, Data Access Service (DAS), eRx Processing Hub and VistA Outpatient Pharmacy [OP]):

- External Provider:
 - External physicians (outside of the VA) who, with the use of a third party Electronic Medical Record (EMR) software, issue a prescription for a Veteran
 - The EMR system is registered with SureScripts and/or Change Healthcare and is responsible for creating and sending the eRx in NCPDP 2017071 XML format
 - The External Provider is registered with SureScripts and/or Change Healthcare and their provider information (e.g., National Provider Identification [NPI] number) is known and verified by Change Healthcare
- Change Healthcare:
 - Serves as proxy for all messages between the External Providers and the VA infrastructure (i.e., the DAS/eRx Processing Hub)
 - Supports and validates NCPDP 2017071 XML format and structure
- Data Access Services (DAS):
 - Serves as secured-layer gateway/proxy for all messages (in NCPDP 2017071 XML format) between Change Healthcare and the eRx Processing Hub
- eRx Processing Hub:
 - Receives, persists, validates, manipulates, and sends NCPDP 2017071 XML messages
 - Validates designated pharmacy from NCPDP XML message and match to VistA OP instance
 - Performs auto-validation and matching (including patient, enrollment/registration, provider, drug)
 - Sends prescription data to VistA eRx Holding Queue.
 - Maintains processing statuses and errors
 - Provides administrative user interface (UI) to track, enable/disable transmission, and run reports

- VistA Outpatient Pharmacy (OP)
 - Provides VistA UI for pharmacy users (manual steps, review and validate patient, provider, and drug/SIG)
 - Processes ePrescription (eRx) Holding Queue transactions. Once the eRx is validated, it is processed into the PENDING OUTPATIENT ORDERS (#52.41) file

Figure 9: Inbound ePrescribing Process Flow (Version 4.0)

The Inbound eRx processing flow is sequential in nature as depicted in Figure 5 (above):

- Step 1: The Inbound eRx process flow begins with the External Provider, using their EMR system, creates and sends to Change Healthcare eRx message data in NCPDP

2017071 XML format. EMR Systems could also send via SureScripts, which are routed then through Change Healthcare.

- Step 2: In Change Healthcare, the eRx message is validated against the NCPDP 2017071 format to ensure that the message is in valid construct without any corruption.
- Step 3: If the message is valid, Change Healthcare routes the message to the VA infrastructure via DAS for further processing.
 - Step 3a: If the eRx message is invalid, an Error message is sent back to the External Provider (as per the NCPDP 2017071 specifications) without sending the message to VA.
- Step 4: DAS proxies the message to the eRx Processing Hub.
- Step 5: The eRx Processing Hub validates the NCPDP XML 2017071 format to ensure that the message is in a valid construct without any corruption and stores the message; the message is recorded in a transaction/processing table, which tracks the processing status of the message, as well as coordinates auto-validations and the synchronization with the VistA OP instance.
- Step 6: The eRx Processing Hub performs patient, provider, and drug/SIG auto-validations. The prescription record is updated to capture the auto-validation results – passed/failed.
- Step 7: The eRx Processing Hub constructs the eRx data into the format of the eRx Holding Queue and sends to the respective VistA OP. The eRx system utilizes the NPI Institution in the Outpatient site file (#59) to identify the eRx institution. The institution identified as the NPI Institution is a pointer to the Institution file (#4). The NPI value for this NPI Institution in the Institution file (#4) is used to map the eRx.
- Step 8: In the respective VistA OP instance, pharmacy personnel perform manual validation of the eRx (e.g., patient match, drug match, etc.).
- Step 9: Once all the validations are completed successfully, the prescription is fulfilled in VistA OP based on the existing fulfillment routines.

NOTE: Change Healthcare validates all messages received back from eRx Processing Hub against the NCPDP 2017071 format to ensure that the message is in valid construct without any corruption and sends it to the External Provider. The Inbound eRx process flow ends with the External Provider receiving the message update from VA. In some cases, some of the EMR's send Status messages back to the Hub upon successful receipt of messages from VA.

25.2. Inbound ePrescribing Protocols

Inbound ePrescribing adds the following new protocols to facilitate the Inbound ePrescribing processing.

- PSO ERX ACCEPT ERX
- PSO ERX ACCEPT VALIDATION
- PSO ERX ACKNOWLEDGE
- PSO ERX ADD COMMENT
- PSO ERX CHANGE REQUEST
- PSO ERX DISPLAY MENU
- PSO ERX EDIT
- PSO ERX HIDDEN ACTIONS
- PSO ERX HOLD
- PSO ERX HQ MENU
- PSO ERX HQ SEARCH
- PSO ERX HQ SELECT
- PSO ERX HQ SORT
- PSO ERX JUMP TO OP
- PSO ERX MESSAGE VIEW
- PSO ERX OP PRINT
- PSO ERX PCV MENU
- PSO ERX PCV MESSAGE VIEW
- PSO ERX PCV SEARCH QUEUE
- PSO ERX PCV SELECT BY NUMBER
- PSO ERX PCV SELECT PATIENT
- PSO ERX PCV SORT ENTRIES
- PSO ERX PRINT
- PSO ERX REFILL REQUEST
- PSO ERX REJECT
- PSO ERX REMOVE
- PSO ERX RX RENEWAL REQUEST
- PSO ERX SELECT BY NUMBER
- PSO ERX SINGLE REFILL REQUEST
- PSO ERX SINGLE RXRENEWAL REQUEST
- PSO ERX STATUS HISTORY
- PSO ERX UNHOLD
- PSO ERX VALIDATE DRUG
- PSO ERX VALIDATE PATIENT
- PSO ERX VALIDATE PROVIDER
- PSO ERX VALIDATION MENU
- PSO HIDDEN ACTIONS
- PSO HIDDEN ACTIONS #3
- PSO LM HIDDEN OTHER
- PSO LM HIDDEN OTHER #2

25.3. Inbound ePrescribing Remote Procedures

Inbound ePrescribing added the following new remote procedures to facilitate the Inbound ePrescribing messaging:

- PSOERXA0 DRGMTCH: Drug matching logic

PSOERXA0 PRVMTCH: Provider match logic

PSOERXA1 INCERX: Read and file incoming eRx (XML message)

PSOERX1 INCERX: Read and file incoming eRx (XML message) in the 2017 script format, which replaces PSOERXA1 INCERX, which was the RPC used for the 10.6 script format

25.4. Inbound ePrescribing Menu Option

A new VistA option has been created that allows a pharmacist to view all inbound eRx, validate patient, provider, and drug/SIG information, and ultimately, accept the eRx for sending to PENDING OUTPATIENT ORDERS file (#52.41). This menu is Complete Orders from eRx [PSO ERX FINISH] and is found on the Rx (Prescriptions) [PSO RX] menu.

25.5. Inbound ePrescribing Holding Queue File (File #52.49)

A new VistA Inbound eRx Holding Queue (ERX HOLDING QUEUE FILE #52.49) was created that holds all of the prescription information received on an eRx from an external provider. New Remote Procedures (RPC) were created within the OP package to accept the incoming HealthVet Web Services Client (HWSC) messages (e.g., PSOERXA0 DRGMTCH, PSOERXA0 PRVMTCH, PSOERXA1 INCERX, etc.), which contains all of the needed elements for a prescription from a non-VA medical facility. Using the inbound HWSC message, a new entry is placed in the eRx Holding Queue file.

The Inbound eRx Holding Queue uses List Manager for user interaction. The Inbound eRx Holding Queue lists all eRx received from external providers, with extended options available for users to view all of the details about the prescriptions. Additional extended options were created to allow the pharmacist to validate patient, provider, and drug/SIG information.
