--------------------------------------	----

Unit 3.Inbound eRx VistA Outpatient Pharmacy

3.1 Introduction

Inbound eRx VistA Outpatient Pharmacy is comprised of two sections:

- Inbound eRx VistA Holding Queue
- Inbound eRx VistA Outpatient Profile - Complete Orders from Order Entry/Results Reporting (OERR) and Patient Prescription Processing

3.2 Purpose of Inbound eRx VistA Holding Queue

The eRx Holding Queue allows for validation and review of eRxes by VA Pharmacy users prior to the eRx being added to the VA record and merging with the existing outpatient functionality. For the fillable prescriptions, VA Pharmacy users can validate patient, provider, and drug/SIG information. Additionally, users can accept, hold, un hold, print, reject, or remove an eRx from the Holding Queue after it has been received by VistA from the eRx Processing Hub. The users can also work with RxRenewal Responses, RxChange Responses and CancelRx Requests, which are described.

3.3 NCPDP 2017071 Messages in the Holding Queue

The message types in the Holding Queue include:

- [NewRx Message](#)
- [RxRenewal Request Message](#)
- [RxRenewal Response Message](#)
- [RxChange Request Message](#)
- [RxChange Response Message](#)
- [CancelRx Request Message](#)
- [CancelRx Response Message](#)
- [Inbound Error Message](#)

3.3.1 NewRx Message

NewRx message is the NCPDP 2017071 format for New Electronic Prescription sent by an external (non-VA) provider.

3.3.2 RxRenewal Request Message

RxRenewal Request message is the NCPDP 2017071 format for RxRenewal Request sent by a VA Pharmacy for electronic Prescriptions.

3.3.3 RxRenewal Response Message

RxRenewal Response message is the NCPDP 2017071 format for RxRenewal Response sent by an External Provider for RxRenewal Request sent by a VA Pharmacy.

3.3.4 RxChange Request Message

RxChange Request message is the NCPDP 2017071 format for RxChange Request sent by a VA Pharmacy for electronic Prescriptions.

3.3.5 RxChange Response Message

RxChange Response message is the NCPDP 2017071 format for RxChange Response sent by an External Provider for RxChange Request sent by a VA Pharmacy.

3.3.6 CancelRx Request Message

CancelRx Request message is the NCPDP 2017071 format for CancelRx Request sent by External Provider on Electronic Prescriptions.

3.3.7 CancelRx Response Message

CancelRx Response message is the NCPDP 2017071 format for CancelRx Response sent by VA Pharmacy for a CancelRx Request sent by External Provider.

3.3.8 Inbound Error Message

ERROR messages are in the NCPDP 2017071 format for Inbound Error message received in VistA under situations such as, the Prescriber's EHR system being unable to receive and process a certain transaction sent from the Pharmacy or a connection between the Transaction Hub and CH is not working.

3.3.9 Inbound vs. Outbound Messages

Inbound messages are those that are sent by the external (non-VA) Providers and are received in the Holding Queue. NewRx, RxRenewal Response, RxChange Response, CancelRx Request, and Inbound Error are Inbound messages.

Outbound messages are those that are sent by VA pharmacies to the external Provider's EHR system. RxRenewal Request, RxChange Request, and CancelRx Response are Outbound messages.

3.4 Accessing the eRx Holding Queue

The inbound eRx message is transmitted from the Processing Hub to VistA and stored in the eRx Holding Queue.

3.5 Traditional View vs. Patient Centric View

3.5.1 Traditional View

To access the Traditional View of the eRx Holding Queue:

1. Follow this navigation path: **Core Applications > Outpatient Pharmacy Manager > (select Division) > RX (Prescriptions) ... > Complete Orders from eRx [PSO ERX FINISH]**

```
FERX      Patient Prescription Processing
          Complete Orders from eRx
          Barcode Rx Menu ...
          Check Drug Interaction
          Complete Orders from OERR
          Discontinue Prescription(s)
          Edit Prescriptions
          ePharmacy Menu ...
          List One Patient's Archived Rx's
          Manual Print of Multi-Rx Forms
          OneVA Pharmacy Prescription Report
          Reprint an Outpatient Rx Label
          Signature Log Reprint
          View Prescriptions
```

Figure 3-1: Complete Orders from eRx Menu Option

2. Select RX Prescription Received Date.

```
Select Rx (Prescriptions) <TEST ACCOUNT> Option: ferx Complete Orders from eRx
Select one of the following:
PT          PATIENT (Grouped)
RX          PRESCRIPTION RECEIVED DATE
E          EXIT
```

Figure 3-2: Select RX

The first screen that displays upon accessing the eRx Holding Queue is the Holding Queue list view screen.

Figure 3-3: eRx Holding Queue List View

3.5.1.1 eRx Holding Queue List View

The eRx Holding Queue List columns include the patient’s name (Patient), date of birth of the patient (DOB), the prescribed drug from the external provider (Drug), the prescribing physician’s name (Provider), the status of the eRx (STA), and the date that the eRx was received by VistA (Rec Date). At any given time, 999 eRx records are displayed in the Holding Queue List View with actionable statuses of “N”, “I”, “W”, or with one of the Hold codes (Hxx (where x = letter), HC), CAH, CAO, CAP, CAR, CXD, CXE, CXI, CXN, CXV, CXW, CXY, RXD, RXE, RXF, RXI, RXN, RXR, RXW, or the Inbound Error in RRE and CRE status. The records are sorted by Received Date with oldest records first. Refer to [Appendix B: Holding Queue Status Codes & Descriptions](#) for additional information on the various statuses in the list.

The following actions are available from the eRx Holding Queue List:

- **<SI> Select Item** can be entered to select an item in the Enter a Number prompt. Additionally, the record # can be entered without selecting SI at the “Select Action: Next Screen//” prompt.
- **<SR> Search Queue** can be entered to search for an eRx based on a variety of search criteria.
- **<SO> Sort Entries** can be entered to sort the list.
- **<MV> Message View** can be entered to display various message types.

3.5.1.1.1 Message View

Message View, <MV>, is an action in the Holding Queue. When the user enters <MV>, the system prompts the user to select the message type. By selecting the message type, the user can view all the messages in the various statuses for the selected message type in the order of date received, with the newest records displayed first.

Figure 3-4: Message View

3.5.1.2 Actionable and Non-Actionable eRx Records

There are two types of Inbound eRx records: Actionable records and Non-Actionable records.

Actionable Records are those that are displayed in the eRx Holding Queue List View.

Actionable records include:

- NewRx (status in New, In Process, Hold, and Wait)
- CancelRx Request
- RxRenewal Response (Denied, Denied NewRx to Follow, RxRenewal Response Failed)
- RxRenewal Response – Approved with Changes (when there is a change to the provider data)
- RxRenewal Response – Replace (in statuses of new, in process, hold, wait or error)
- Inbound Errors related to RxRenewal Requests
- RxChange Response (Denied for all request types)
- RxChange Response (Approved for Prior Authorization Required request type)
- RxChange Response (Validated for Prescriber Authorization request type)
- RxChange Response (Approved and Approved with Changes for request types Generic Substitution, Therapeutic Interchange/Substitution, Drug Use Evaluation, Script Clarification and Out of Stock, and in statuses of new, in process, hold, wait, or error)
- Inbound Errors related to RxChange Requests

Non-Actionable records are those that are in the Holding Queue but are not displayed in the List View. All records acknowledged, removed, rejected, processed/completed, and auto-canceled are non-actionable. Non-Actionable records further include:

- RxRenewal Request
- RxRenewal Response – Approved
- RxRenewal Response – Approved with Changes (change to drug data only)
- RxChange Request
- CancelRx Response
- Inbound Errors related to CancelRx Responses

For additional information on Actionable and Non-Actionable eRx Status Codes, refer to the tables in [Appendix B: Holding Queue Status Codes & Descriptions](#).

3.5.1.2.1 eRx Default Lookback Days

A new field, ERX DEFAULT LOOKBACK DAYS file (#10.2), has been added to the OUTPATIENT SITE file (#59), which contains the number of days the user would like to look back before loading the Holding Queue’s list view or completing a Search (SR) or Sort (SO). This is a configurable field that can be updated with the desired value by the local site’s VistA Admin. The addition of this new configurable field facilitates increased processing speed in the eRx Holding Queue.

```
LAST PRESCRIPTION # ISSUED: 2721007    DISPENSE DNS NAME: 10.1.19.9
DISPENSE DNS PORT: 9300                ONEVA PHARMACY FLAG: ON
DEFAULT ERX CLINIC: ANGIO              ERX DEFAULT LOOKBACK DAYS: 30
AUTOMATED DISPENSE: HL7 V.2.4         IB SERVICE/SECTION: PHARMACY
RELATED INSTITUTION: DAYTSHR TEST LAB
NPI INSTITUTION: DAYTSHR TEST LAB
CPRS ORDERING INSTITUTION: DAYTSHR TEST LAB
```

Figure 3-5: eRx Default Lookback Days

- The number of eRx records displayed in the Holding Queue’s list view is based on the ERX DEFAULT LOOKBACK DAYS file (#10.2) configured in OUTPATIENT SITE file (#59).
- By default, the ERX DEFAULT LOOKBACK DAYS field is blank, so the software goes back to 365 days.
- ERX LOOK-BACK DAYS label along with the value and date stamp are displayed both in the Traditional View and the Patient Centric View of the eRx Holding Queue, in the Header section.
- If the Pharmacy user would like to see eRx records received from older dates, the user can use the Search (SR) option and select the ‘Received Date Range’ (#3), to retrieve those records.

NOTE: Refer to the Implementation Guide – Inbound ePrescribing (PSO*7.0*p581) on the VA Documentation Library (VDL) for details on configuring the ERX DEFAULT LOOKBACK DAYS for a site.

3.5.2 Patient Centric View

The Patient Centric View allows users to view eR_Xes grouped by patient. This view makes it easier to view the eR_X records in the Holding Queue when there is a high volume of records. Patient Centric View displays the actionable eR_X records only per patient. It allows the user to easily identify the message types that are in outstanding or actionable statuses, such as, N, I, W, Hxx (where x = letter), HC, CAH, CAO, CAP, CAR, CXD, CXE, CXI, CXN, CXV, CXW, CXY, RXD, RXE, RXF, RXI, RXN, RXR, RXW, or the Inbound Error in RRE and CRE status. It also displays the last user information, which identifies which actionable eR_X records have been worked on and/or whom to contact when there is a problem with one or more records.

Once the user selects a patient from the Patient Centric View, the prescription view displays, with only the actionable eR_X records for the selected patient.

To access Patient Centric View:

1. Enter <PT>.

```
Outpatient Pharmacy software - Version 7.0
Division:
A 'DIVISION' must be selected!
Do you want to try again? YES//
Division: 984 DAYTON (984) 984
        You are logged on under the DAYTON (984) division.
Select LABEL PRINTER: HOME// HOME
OK to assume label alignment is correct? YES//
Bingo Board Display: WAITING ROOM//
        Select one of the following:
                PT PATIENT (Grouped)
                RX PRESCRIPTION RECEIVED DATE
                E EXIT
Select By: (PT/RX): PT// █
```

Figure 3-6: PT – Patient (Grouped)

2. Select an option to filter the Patient Centric View by specific actionable status.

```

Select By: (PT/RX): PT// PATIENT(Grouped)

Select By: Status

A      All
1      New
2      In Process
3      Wait
4      Hold
5      CCR

Enter response: A//

```

Figure 3-7: Patient Centric View Filters – Select by Status

While accessing the Patient Centric View, one of the following selections may be made to filter the display results by specific actionable statuses:

- <A> All – Patients with eR_X records in all actionable statuses in the Holding Queue.
- <1> New – Patients with eR_X records in New status in the Holding Queue. (NewRx only)
- <2> In Process – Patients with eR_X records in In Process status in the Holding Queue.
- <3> Wait – Patients with eR_X records in Wait status in the Holding Queue.
- <4> Hold – Patients with eR_X records in one of the Hold statuses in the Holding Queue.
 - If <4> Hold is entered, <S> must then be selected for a single Hold status or <A> for all hold codes.

```

Select By: (PT/RX): PT// PATIENT(Grouped)

Select By: Status

A      All
1      New
2      In Process
3      Wait
4      Hold
5      CCR

Enter response: A// 4 HOLD

Select one of the following:

S      SINGLE CODE
A      ALL HOLD CODES

Enter response: A// █

```

Figure 3-8: Patient Centric View Filters – Hold

If <S> is entered to filter the display results by a single Hold status, the desired Hold status to filter by must be selected.

```

      S          SINGLE CODE
      A          ALL HOLD CODES

Enter response: A// SINGLE CODE
Select eRx Status: ??

Choose from:
118          HPT - PATIENT NOT FOUND
119          HPD - PROVIDER NOT FOUND

Figure 3-13: Configured ERX LOOK-BACK DAYS Field

The table below describes the columns visible in the Patient Centric View.

Table 1: Patient Centric View

Column Label	Description
ERX PATIENT	Name of the patient sent on the New prescription
DOB	eRx patient's date of birth
ED	The number of days elapsed since the oldest eRx that is still in an actionable status was received for that patient
LOCKED BY	Name of the current user that applied lock on the patient record successfully
NW	Number of NewRxes
WT	Number of eRxes in WAIT status. WAIT status displays if all validations have been performed, but the eRx has not been Accepted (AC) (Includes all fillable prescriptions).
IP	Number of eRxes In Process (includes all fillable prescriptions)
HD	Number of eRxes on Hold (includes all fillable prescriptions)
CCR	CancelRx Request, RxChange Response, and RxRenewal Response records in actionable statuses; (also, includes RXF, RXE and CXE records)
OTH	Inbound Error related to RxRenewal/RxChange Request (Status – RRE/CRE)
TOT	Total number of eRxes in actionable statuses

- If an eRx patient does not have user name displayed in the LOCKED BY column, this means that the patient's eRx record is available to the user.
- Under columns NW, IP, HD, WT, CCR, and OTH the maximum count displayed is 99, even if the patient has more actionable eRx records, which the TOT (Total) column would indicate.
- Under the TOT column, the maximum count displayed is 999, even if the patient has more than 999 items in actionable status.
- Patient Centric View displays up to 999 records.
- Patient Centric View records are sorted by Elapsed Days, in descending order.

To select a patient to view the eRxes associated with them, select the patient record number. A list of actionable eRx records displays.

3.5.3 eRx Holding Queue Summary/Details Screen NewRx Message

A record from the eRx Holding Queue List View can be selected by both typing <SI> and the record number or by typing the record number itself. The first screen displayed is the Summary/Details screen, which displays information about the original eRx from the external provider and matched VistA information (if any).

On this screen, the header contains the eRx Patient Name and eRx Reference #, which is an internal VA reference number assigned for tracking the eRx. Below the header is information received from the external provider for the patient, provider, and the drug/SIG. Where applicable, VistA information displays below the eRx information.

NOTE:

- “eRx Written Date” – Date the eRx was received in the VistA Holding Queue.
- “eRx Issue Date” – Effective Date, if sent by the provider.

```

3.5.3.1 eRx Actions

- Manual Validation:
 - <VP> Validate Patient
 - <VM> Validate Provider
 - <VD> (Validate Drug/SIG) - Note that this action is not available unless a VistA patient has been linked, as indicated with parenthesis around the action.
- <AC> Accepting eRxes in the eRx Holding Queue action is not available until the validation of the eRx Patient, provider, and drug/SIG have been completed. Also note that the <AC> action is not available if the eRx is on Hold.
- <RJ> Rejecting an eRx in the eRx Holding Queue removes the eRx from the main list display and prevents further processing of the eRx.
- <P> Printing in the eRx Holding Queue displays all details of an eRx and allows the user to select a local printer and print the eRx.
- <H> Places eRx on Hold in the eRx Holding Queue.
- <UH> UnHold eRx in the eRx Holding Queue.
- <RM> Removing the eRx in the eRx Holding Queue removes eRx from the main list display and prevents further processing of the eRx.
- <??> For hidden actions.

For more details on the above actions, refer to the sections identified in this guide.

NOTE: From the Summary/Details screen, users cannot edit any of the VistA information. The validate screens contain the option for editing the VistA information. For further information on editing and validating VistA information for an eRx, refer to section [3.6 Manual Validation](#).

3.5.3.1.1 Jump to OP

The Jump to OP <JO> hidden action allows the user to navigate to Complete Orders from OERR, from the eRx Holding Queue Summary/Details screen. Once the user has completed reviewing on the Outpatient side, the user is navigated back to the same Summary/Details screen in which <JO> was initiated from.

The Jump to OP <JO> hidden action allows the user to navigate to Complete Orders from OERR only if the following conditions are true:

1. The R_X record is a fillable prescription only.
2. The VistA Patient is already matched to an eR_X Patient under the Validate Patient <VP> action.
3. The matched VistA Patient has a current pending line entry on the Outpatient side.

To use the Jump to OP action, enter <??> to view a list of hidden actions.

Figure 3-32: eRx Change Request

3.5.3.2 Patient-Level Record Lock

Note that when either the Summary/Details screen or any of the validate screens of an eRx are open, all the eRxs for that same patient in the Holding Queue are locked and inaccessible for other users to access until the lock is released (the screens are closed). This is referred to as a patient-level record lock.

The following message displays if a user attempts to access an eRx for the same patient that another user has opened.

```
██████████ is editing orders for this patient (JUN 18,2020@15:34:42)
Type <Enter> to continue or '^' to exit:
```

Figure 3-33: Patient-Level Record Lock

3.5.3.3 Prohibit Renewals

The Prohibit Renewal Request flag is used to denote that a RxRenewal Request should not be sent to the sending prescriber for an original NewRx or a subsequent fillable RxChange Response when the flag is set on the original NewRx. This is usually used when the visit is for a one time prescription (i.e., Urgent Care Center or Emergency Department).

NOTE:

- (i) The Prohibit Renewal Request information is not displayed for RxRenewal Request and Response records.
- (ii) The Prohibit Renewal Request information is displayed both in VistA and on web GUI under Track/Audit details screen, whenever it is sent on the inbound NewRx record.
