

Outpatient Pharmacy (PSO)

Version 7.0

Pharmacist's User Manual

**December 2007
(Revised June 2022)**

**Department of Veterans Affairs (VA)
Office of Information and Technology (OIT)**

Revision History

When updates occur, the Title Page lists the new revised date and this page describes the changes. Bookmarks link the described content changes to its place within manual. There are no bookmarks for format updates. Page numbers change with each update; therefore, they are not included as a reference in the Revision History.

See the unredacted version in SOFTWARE to view REDACTED information that isn't personally identifying.

Date	Patch	Description

Chapter 1: Introduction

The Outpatient Pharmacy (OP) software provides a way to manage the medication regimen of veterans seen in the outpatient clinics and to monitor and manage the workload and costs in the Outpatient Pharmacy. The Pharmacy Ordering Enhancements (POE) project (patch PSO*7*46 for Outpatient Pharmacy) improves the flow of orders between Inpatient and Outpatient Pharmacy as well as between Computerized Patient Record System (CPRS) and backdoor pharmacy.

The primary benefits to the veteran are the assurance that he or she is receiving the proper medication and the convenience of obtaining refills easily. The clinicians and pharmacists responsible for patient care benefit from a complete, accurate, and current medication profile available at any time to permit professional evaluation of treatment plans. Utilization, cost, and workload reports provide management cost controlling tools while maintaining the highest level of patient care.

The OneVA Pharmacy project (patch PSO*7*454 - December 2016) provided Pharmacists the capability to dispense prescriptions that originated in other VistA host sites. The OneVA Pharmacy User Manual and Installation Guide describe the site parameter required to use this functionality.

The OneVA Pharmacy patch, PSO*7*479, provided Pharmacists the ability to request a reprint of the label when no error messages is returned when retrieving the label information from the host system.

The OneVA Pharmacy patch PSO*7*497 provides Pharmacists new functionality to fix the auto-suspend defect, remedy current OneVA Pharmacy functionality to limit refill permissions to only those personnel who have the correct key(s), block prescriptions that contain a trade name in the "TRADE NAME", identify titration prescriptions at the host site and to disallow refills of such titration prescriptions at the dispensing site.

The OneVA Pharmacy patch, PSO*7*479 requires the patch PSS*1*212 which delivers the 'ONEVA PHARMACY FLAG (#101)' in the 'off' state. When this flag is in the 'off' state, the HDR/CDS Repository is not queried for external prescriptions and other VistA instances will not be able to refill prescriptions that belong to the VistA instance with the flag set to the 'off' state. When in the 'on' state, all prescription queries and actions may be taken for remote queries, refills, and partial fills. In order to process prescriptions from another VistA instance, that instance will also need to have its 'ONEVA PHARMACY FLAG (#101)' set to the 'on' state.

The OneVA pharmacy flag can be turned on/off using the Pharmacy System Parameters Edit [PSS SYS EDIT] option:

```

Documentation Conventions

This *Outpatient Pharmacy V. 7.0 Manager's User Manual* includes documentation conventions, also known as notations, which are used consistently throughout this manual. Each convention is outlined below.

Table 1: Conventions

Convention	Example
Menu option text is italicized.	There are eight options on the Archiving menu.
Screen prompts are denoted with quotation marks around them.	The "Dosage:" prompt displays next.
Responses in bold face indicate user input.	Select Orders by number: (1-6): 5
<Enter> indicates that the Enter key (or Return key on some keyboards) must be pressed. <Tab> indicates that the Tab key must be pressed.	Type Y for Yes or N for No and press <Enter>. Press <Tab> to move the cursor to the next field.
 Indicates especially important or helpful information.	 Up to four of the last LAB results can be displayed in the message.
 Indicates that options are locked with a particular security key. The user must hold the particular security key to be able to perform the menu option.	 This option requires the security key PSOLOCKCLOZ.

Getting Help

?, ??, ??? One, two or three question marks can be entered at any of the prompts for online help. One question mark elicits a brief statement of what information is appropriate for the prompt. Two question marks provide more help, plus the hidden actions, and three question marks will provide more detailed help, including a list of possible answers, if appropriate.

Related Manuals

The following manuals are located on the [VistA Documentation Library \(VDL\)](#).

Main Package Documentation:

- *Outpatient Pharmacy V. 7.0 Release Notes*
- *Outpatient Pharmacy V. 7.0 Manager's User Manual*
- *Outpatient Pharmacy V. 7.0 Pharmacist's User Manual*
- *Outpatient Pharmacy V. 7.0 Technician's User Manual*
- *Outpatient Pharmacy V. 7.0 User Manual – Supplemental*
- *Outpatient Pharmacy V. 7.0 Technical Manual/Security Guide*
- *Dosing Order Check User Manual*
- *VistA to MOCHA Interface Document*
- *Installation Guide – OneVA Pharmacy*
- *Release Notes – OneVA Pharmacy*
- *User Manual – OneVA Pharmacy*

Additional Documentation:

Additional documentation related to specific projects is also located on the VDL. For example, there may be several different Release Notes documents, which apply to specific projects. Also, there may be several sets of “Change Page” documents, which apply to changes made only for a specific package patch.

Chapter 2: List Manager

The screen displayed when processing an order has changed dramatically from the previous version of Outpatient Pharmacy (e.g., v. 6.0). The new screen was designed using List Manager.

This new screen gives more information and easier accessibility to vital reports and areas of a patient’s chart.

Please take the time to read over the explanation of the screen and the actions that can now be executed at the touch of a key. This type of preparation before attempting to use List Manager will reduce the time and effort needed to become skilled in order processing with this new version of List Manager.

Figure 1: Screen Overview

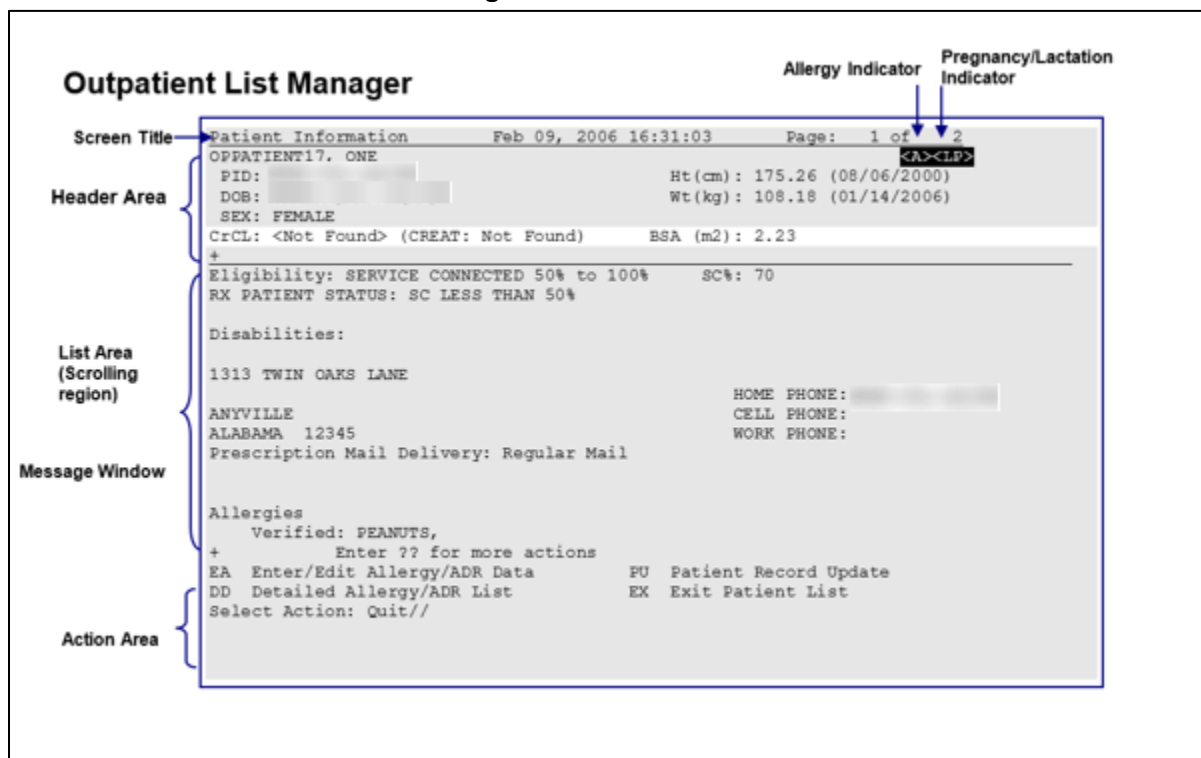

Table 2: Outpatient List Manager

Position	Description
Screen title	The screen title changes according to what type of information List Manager is displaying (e.g., Patient Information, Medication Profile, New OP Order (ROUTINE), etc.).
Allergy indicator	This indicator displays when there has been information entered into the ALLERGY field for the patient. The indicator displays “NO ALLERGY ASSESSMENT” if there is no allergy assessment for the patient.
Pregnancy/Lactation Indicator	This indicator displays a P when the patient is pregnant and a L when the patient is lactating. The indicator does not display if the patient is not pregnant and is not lactating.

Position	Description
Header area	The header area is a "fixed" (non-scrollable) area that displays patient information, including patient demographic information and Clinical Alerts.
List area	(scrolling region) This area scrolls (like the previous version) and displays the information on which action can be taken.
Message window	This section displays a plus (+) sign, minus (-) sign, or informational text (i.e., Enter ?? for more actions). If a plus sign is entered at the action prompt, List Manager will "jump" forward a page. If a minus sign is displayed and entered at the action prompt, List Manager will "jump" back a screen. The plus and minus signs are only valid actions if they are displayed in the message window.
Action area	A list of actions display in this area of the screen. If a double question mark (??) is entered at the "Select Item(s)" prompt, a "hidden" list of additional actions that are available will be displayed.

Figure 2: Indicators and Definitions

The screenshot shows a 'Medication Profile' for 'OPPATIENT16, ONE' dated May 22, 2006. It includes patient demographics (PID, DOB, SEX, CrCL) and physical characteristics (Ht, Wt, BSA). The main table lists medications with columns for RX #, DRUG, QTY, ST, ISSUE DATE, LAST FILL, REF, DAY, and SUP. Annotations include:

- Order Status and CMOP Indicators:** Points to the 'ST' column.
- Allergy Indicator:** Points to the '<A>' symbol.
- Pregnancy/Lactation Indicator:** Points to the '<L>' symbol.
- Copay Indicator:** Points to the 'C' column.
- ePharmacy Indicator:** Points to the 'E' column.
- Pending Orders:** Points to the 'P' column.
- Flagged Order:** Points to the 'F' column.
- Non-VA Meds Orders:** Points to the 'N' column.
- Return To Stock Indicator:** Points to the '<A><L>' symbols.

 The table content is as follows:

#	RX #	DRUG	QTY	ST	ISSUE DATE	LAST FILL	REF	DAY	SUP
-----ACTIVE-----									
1		ACETAMINOPHEN 500MG TAB	60	AT	05-22	05-22	3	30	
2		DIGOXIN (LANOXIN) 0.2MG CAP	60	A>	05-07	05-07	5	30	
3		HISTOPLASMIN 1ML	1	A	03-14	03-14R	5	30	
4		NALBUPHINE HCL INJ 10MG/ML	1	A	03-14	03-14	5	30	
5		SALICYLIC ACID 40% OINT (OZ)	1	S	03-14	03-17	5	30	
-----DISCONTINUED-----									
6		BACLOFEN 10MG TABS	30	DC	04-07	05-01	2	30	
7		TIMOLOL 0.25% OPTH SOL 10ML	1	DE	02-03	02-03	5	30	
-----HOLD-----									
8		ABDOMINAL PAD 7 1/2 X 8 STERILE	1	H	09-28	09-28	5	30	
-----NON-VERIFIED-----									
9		BACLOFEN 10MG TABS	30	N	03-14	03-14	5	30	
-----PENDING-----									
10		AMPICILLIN 250MG CAP	QTY: 40		ISDT: 05-29	REF: 0			
		SIMETHICONE 40MG TAB	QTY: 30		ISDT: 05-30	REF: 3			
-----NON-VA MEDS (Not dispensed by VA)-----									
		GINKO EXT 1 TAB ONCE A DAY BY MOUTH			Date Documented: 01/13/01				
		IBUPROFEN 50MG TAB			Date Documented: 12/10/00				

All orders are sub-grouped by like statuses and then listed alphabetically within the sub-group.

Order Status:

The current status of the order. These statuses include:

- A Active
- S Suspended

- N Non-Verified or Drug Interactions
- HP Placed on hold by provider through CPRS
- H Placed on hold via backdoor Pharmacy
- E Expired
- DA Auto discontinued due to admission
- DP Discontinued by provider through CPRS

The Status column may also reflect the type of Discontinue action performed on the order:

- DF Discontinued due to edit by a provider through CPRS
- DE Discontinued due to edit via backdoor Pharmacy
- DC Discontinued via backdoor Pharmacy
- DD Discontinued due to death

A “B” will be appended to the above statuses if the Bad Address Indicator was set and there was no active temporary address at the time of the last label activity.

Table 3: Indicators

Indicator	Description
CMOP Indicators:	There are two separate indicators when the drug in an order is marked for Consolidated Mail Outpatient Pharmacy (CMOP) processing. This indicator is displayed after the Order Status if applicable. > Drug for the prescription is marked for CMOP. T Displayed when the last fill is either in a Transmitted or Retransmitted. CMOP state. (This indicator can overwrite the “>” indicator.
Copay Indicator:	A “\$” displayed to the right of the prescription number indicates the prescription is copay eligible.
ePharmacy Indicator:	An ‘e’ displayed to the right of the prescription number indicates that the prescription is electronic third-party billable.
Return to Stock Indicator:	An “R” displayed to the right of the Last Fill Date indicates the last fill was returned to stock.
Pending Orders:	Any orders entered through CPRS, or another outside source, that have not been finished by Outpatient Pharmacy.
Non-VA Meds:	Any over the counter (OTC) medications, herbal supplements, medications.

Indicator	Description
Orders:	Prescribed by providers outside the VA, and medications prescribed by the VA, but purchased by the patient at an outside pharmacy are displayed here. Non-VA Meds orders cannot be placed or updated in Outpatient Pharmacy. The user can input information about a patient's use of Non-VA Meds only through CPRS. However, the user can use either CPRS or Outpatient Pharmacy menu options to view Non-VA Meds data in a patient's medical records.
Third Party Rejects	Any prescriptions that are rejected by third-party payers because of Refill Too Soon (code 79) or Drug Utilization Review (DUR - code 88 or code 943) are displayed in this section.

Example: Showing Rejected Prescriptions

Using List Manager with Outpatient Pharmacy

List Manager is a tool designed so that a list of items can be presented to the user for an action.

For Outpatient Pharmacy, the List Manager does the following:

- Allows the pharmacist or technician to browse through a list of actions.
- Allows the pharmacist or technician to take action against those items.
- Allows the user to select an action that displays an action or informational profile.
- Allows the user to select a different action without leaving an option.

Entering Actions

Actions are entered by typing the name(s), or synonym(s) at the "Select Item(s)" prompt. In addition to the various actions that may be available specific to a particular option, List Manager provides generic actions applicable to any List Manager screen. A double question mark (??) may be entered at the "Select Action" prompt for a list of all actions available. The following is a list of generic List Manager actions with a brief description.

The synonym for each action is shown in brackets following the action name. Entering the synonym is the quickest way to select an action.

Table 4: Actions

Action	Description
Next Screen [+]	Move to the next screen (may be shown as a default).
Previous Screen [-]	Move to the previous screen.
Up a Line [UP]	Move up one line.
Down a Line [DN]	Move down one line.
Shift View to Right [>]	Move the screen to the right if the screen width is more than 80 characters.
Shift View to Left [<]	Move the screen to the left if the screen width is more than 80 characters.
First Screen [FS]	Move to the first screen.
Last Screen [LS]	Move to the last screen.
Go to Page [GO]	Move to any selected page in the list.
Re Display Screen [RD]	Redisplay the current.
Print Screen [PS]	Prints the header and the portion of the list currently displayed.
Print List [PL]	Prints the list of entries currently displayed.
Search List [SL]	Finds selected text in list of entries.
Auto Display (On/Off) [ADPL]	Toggles the menu of actions to be displayed/not displayed automatically.
Quit [QU]	Exits the screen (may be shown as a default).

Outpatient Pharmacy Hidden Actions

The Outpatient Pharmacy hidden actions will display with the previous hidden actions once a completed or finished order is selected and a double question mark (??) is entered at the "Select Action" prompt.

The following hidden actions appear on the Medication Profile screen and can only be applied to one order at a time.

Table 5: Hidden Actions

Action	Description
Activity Logs [AL]	Displays the Activity Logs.
Copy [CO]	Allows the user to copy and edit an order.
Check Interactions [CK]	Allows a user to perform order checks against the patient's active medication profile with or without a Prospective drug.
DIN	Displays available drug restriction/guideline information for the Dispense Drug and Orderable Item associated with the selected medication order.
Drug Message [DM]	Displays dispense drug information during data entry. This hidden action will display key information about the order to help aid in the verification process of an order. This action can only be used on a pending order
IN	Intervention Menu
Hold [HD]	Places an order on a hold status.
Other OP Actions [OTH]	Allows the user to choose from the following sub-actions: Progress Note [PN] Action Profile [AP] Print Medication Instructions [MI] Display Orders' Statuses [DO] Non-VA Meds Report [NV] Display FDA Medication Guide [MG] Reprint FDA Medication Guide [RM]]
Patient Information [PI]	Shows patient information, allergies, adverse reactions, and pending clinic appointments.
Pull Rx [PP]	Action taken to pull prescription(s) early from suspense.
Reprint [RP]	Reprints the label.
View Reject [REJ]	Allows the user to view and resolve the Refill Too Soon or Drug Utilization Review returned by the third party payer for a specific prescription/fill claim.
Unhold [UH]	Removes an order from a hold status.
Verify [VF]	Allows the pharmacist to verify an order a pharmacy technician has entered.
View Provider [VP]	Displays Provider information during data entry. This action will display key information about the PROVIDER to help aid the verification process. This action can only be used on a pending order.

The PSO HIDDEN ACTIONS Protocol in PROTOCOL File (#101) includes two hidden actions, PSO LM BACKDOOR MARK AS TITRATION and PSO LM BACKDOOR TITRATION RX REFILL, which are both added to the PROTOCOL File (#101).

```

***** IMPORTANT *****
The enhancements related to Titration/Maintenance dose Rx are made only
for Outpatient Pharmacy package. The corresponding changes to CPRS package
are not included at this time. Therefore, the CPRS Order Copy and Order
Change functionalities will continue to function as is. Furthermore, there
will be no indication of a Titration/Maintenance order in the CPRS
application.
*****

```

There is also a hidden action, TR (Convert Titration Rx), in the Patient Prescription Processing [PSO LM BACKDOOR TITRATION RX REFILL] option. This action populates the MAINTENANCE DOSE RX (#45.2) field in the PRESCRIPTION File (#52). When a titration to maintenance prescription needs to be refilled so the patient can continue on the Maintenance Dose, this option allows the users to create a new prescription with the maintenance dose only. This process works similar to copying an existing prescription; however, it can only be used on prescriptions with the following characteristics:

- Rx is a complex order with a THEN conjunction
- Rx is released
- Rx status is ACTIVE
- Rx does not have refills previously ordered
- Rx # Of Refills is greater than 0 (zero)

Before the new Maintenance Rx can be accepted, the user is prompted to validate the QTY field for the new Rx, which may or may not be automatically re-calculated. Only the last dose from the original prescription is carried over to the new Maintenance Rx, and the # of Refills field is decreased by 1 because the new Maintenance Rx counts as a fill.

Once a user verifies the information for the Maintenance Rx is accurate, they can accept the Maintenance Rx. This action triggers a Duplicate Drug check against the original complex order, which must be discontinued before the new Maintenance Rx can be accepted. After the new Maintenance Rx is accepted, it will have the new indicator 'm' on the right side of the Rx # in the patient's Medication Profile.

#	RX #	DRUG	QTY	ST	ISSUE DATE	LAST FILL	REF REM	DAY SUP
-----ACTIVE-----								
1	XXXXXXXXXX	AMOXAPINE 50MG TAB	30	S	09-26	09-26	1	30
2	XXXXXXXXXX	AMOXICILLIN 250MG CAP	30	A	08-18	08-18	11	30
3	XXXXXXXXXX	KALETRA	3	A	09-29	09-29	0	3

Speed Actions

These Outpatient Pharmacy actions are referred to as “speed actions” and appear on the Medication Profile screen. These actions can be applied to one or more orders at a time.

Table 6: Speed Actions

Action	Description
Reprint [RP]	Reprints the label.
Renew [RN]	A continuation of a medication authorized by the provider.
Refill [RF]	A second or subsequent filling authorized by the provider.
Reprint Signature [RS]	Reprints the signature log.
Discontinue [DC]	Status used when an order was made inactive either by a new order or by the request of a physician.
Release [RL]	Action taken at the time the order is filled and ready to be given to the patient.
Pull Rx [PP]	Action taken to pull prescription(s) early from suspense.
Inpat. Profile [IP]	Action taken to view an Inpatient Profile.
CM	Action taken to manually queue to CMOP.
Fill/Rel Date Disply [RDD]	Switch between displaying the FILL DATE column and the LAST RELD column.
Display Remote [DR]	Action taken to display a patient's remote prescriptions.

Other Outpatient Pharmacy ListMan Actions**Table 7: Other Outpatient ListMan Actions**

Action	Description
Exit [EX]	Exit processing pending orders.
AC	Accept
BY	Bypass
ED	Edit.
FN	Finish

Other Screen Actions**Table 8: Other Screen Actions**

Action	Description
Edit/Enter Allergy/ADR Data [EA]	Provides access to the Adverse Reaction Tracking package to allow entry and/or edit of allergy adverse reaction data for the patient. See the Adverse Reaction Tracking package documentation for more information on allergy/ADR processing.
Detailed Allergy Display [DA]	Displays a detailed listing of the selected item from the patient's allergy/ADR list. Entry to the Edit Allergy/ADR Data action is provided with this list also.
Patient Record Update [PU]	Allows editing of patient data such as SSN, birth date, address, phone, and outpatient narrative. Patient data can also be updated using the <i>Update Patient Record</i> menu option. If implementing Other Language Modifications, either can be used to set a patient's other language preference.
New Order [NO]	Allows new orders to be entered for the patient.

Action	Description
Exit Patient List [EX]	Exit patient's Patient Information screen so that a new patient can be selected.
Refill Rx from Another VA Pharmacy (RF)	OneVA Pharmacy (patch PSO*7*454) introduced the RF action item on the new 'REMOTE OP Medications' profile. The RF action item allows the Pharmacist to refill a prescription order that originated from another VA Pharmacy location.  <p>Note: For additional information regarding OneVA Pharmacy RF processing, please see Appendix A, OneVA Pharmacy User Manual.</p>
Partial from Another VA Pharmacy (PR)	OneVA Pharmacy (patch PSO*7*454) introduced the PR action item on the new 'REMOTE OP Medications' profile. The PR action item allows the Pharmacist to partial a prescription order that originated from another VA Pharmacy location.  <p>Note: For additional information regarding OneVA Pharmacy PR processing, please see Appendix A, OneVA Pharmacy User Manual.</p>
Preg/Lact Display [PL]	Displays a detailed listing of the patient's current pregnant and current breastfeeding/lactating episodes.

Patient Demographics

Patient demographic information and Clinical Alerts display in the List Manager header area when using certain Pharmacy options. The heading "Extended Patient Demographics" immediately precedes the demographic details to orient users and preserve a logical flow.

The extended demographics are derived from existing patient information and include such details as date of birth, weight, height, and gender, as well as information about the patient's primary care team and/or physician, physician contact numbers (office phone/pager), clinician remarks, and assigned or recent facility where care is received.

Note: The Assigned or Most Recent Facility is derived from information in the patient's profile. If the patient has a Primary Care (PC) team, the assigned facility is the one where PC team members practice. If the patient does not have a PC team, the current facility is derived from the visit history; usually, the facility where care was received most recently becomes the patient's assigned facility. If the patient has no PC team and no recent visits, the Assigned or Most Recent Facility field is blank.

Clinical Alerts are used to convey important patient care information, such as drug interactions or the patient's participation in clinical trials. Use the Clinical Alert Enter/Edit [PSO CLINICAL ALERT ENTER/EDIT] option to add, edit, or delete Clinical Alerts from a patient's record. For more information about using Clinical Alerts, refer to the *Outpatient Pharmacy (PSO) Manager's User Manual*.

Patient demographics and any Clinical Alerts are prominently displayed in the [List Manager header area](#) when using any of the following Outpatient Pharmacy options:

- Medication Profile [PSO P]
- View Prescriptions [PSO VIEW]
- Patient Prescription Processing [PSO LM BACKDOOR ORDERS]
- Complete Orders from OERR [PSO LMOE FINISH]

If Extended Patient Demographics and Clinical Alerts cannot be displayed on a single page, the prompt “Type <Enter> to continue or ‘^’ to exit Clinical Alerts:” displays. Demographics and Clinical Alerts remain displayed until the Enter key is pressed, giving the user time to review the information before scrolling to the next page.

Example: Patient Demographics and Clinical Alerts displayed in the List Manager Header

The Primary Care Team **Phone** number comes from the PHONE field in the TEAM file (#404.51).

The Provider Phone number comes from the OFFICE PHONE field in the NEW PERSON file (#200). The Provider Pager number comes from either the DIGITAL PAGER or VOICE PAGER field in the NEW PERSON file (#200). If both fields are populated, then the digital pager number takes precedence and is displayed.

Chapter 3: Using the Pharmacist Menu

The options on the *Pharmacist Menu* are intended for use by pharmacists.

Example: Accessing the Pharmacist Menu

```
Select OPTION NAME: PSO USER1      Pharmacist Menu
Outpatient Pharmacy software - Version 7.0
```

The following options are available on the *Pharmacist Menu*:

- *Bingo Board User ...*
- *Change Label Printer*
- *Change Suspense Date*
- *Check Drug Interaction*
- *DUE Supervisor ...*
- *Enter/Edit Clinic Sort Groups*
- *External Interface Menu ...*
- *Medication Profile*
- *Pharmacy Intervention Menu ...*
- *Print from Suspense File*
- *Process Drug/Drug Interactions*
- *Pull Early from Suspense*
- *Queue CMOP Prescription*
- *Release Medication*
- *Return Medication to Stock*
- *Rx (Prescriptions) ...*
- *Update Patient Record*
- *Verification ...*

Patient Lookup

The ability to look up a patient by prescription number or wand a barcode with the prescription has been added to the patient lookup prompt on the following options.

- *Bingo Board User ... [PSO BINGO USER]*
- *Medication Profile [PSO P]*

- *Rx (Prescriptions) ... [PSO RX]*
- *Update Patient Record [PSO PAT]*

The help text for patient lookup reads as follows.

Enter the prescription number prefixed by a # (ex. #XXXXXXX) or
Wand the barcode of the prescription. The format of the barcode is
NNN-NNNNNNN where the first 3 digits are your station number.
- OR -
Enter the universal Member ID number from the patient's VHIC Card
or wand the barcode of the VHIC card
- OR -
Answer with PATIENT NAME, or SOCIAL SECURITY NUMBER, or last 4 digits
of SOCIAL SECURITY NUMBER, or first initial of last name with last 4
digits of SOCIAL SECURITY NUMBER
Do you want the entire NNNNNNNN-Entry PATIENT List?

Chapter 4: Using the Bingo Board

This chapter describes the options available on the *Bingo Board User* menu.

Bingo Board User

[PSO BINGO USER]

The *Bingo Board User* menu enables use of the bingo board display. The options on this menu allow a patient's name or a number to be displayed, entered, or removed from the bingo board display located in the pharmacy area.

When the routing for an order is set to "Window", the entering of prescription orders stores information in the bingo board PATIENT NOTIFICATION (Rx READY) file. For new, renew, pull early from suspense, refill orders, barcode refill/renew, and finish process for orders entered via CPRS, the date and time is captured when the order is stored in this file. The same occurs for partials, except the time is captured when a prescription number is entered.

Releasing the prescription places the name or ticket number of the patient on the bingo board monitor if a display group exists and stores data in the WAITING TIME file. The options on this menu are used to manually enter, display, or remove a patient's name or number from the monitor.

The following options are available on the *Bingo Board User* menu:

- *Enter New Patient*
- *Display Patient's Name on Monitor*
- *Remove Patient's Name from Monitor*
- *Status of Patient's Order*

Enter New Patient

Use this option to manually enter the name of a new patient on the bingo board. Each prescription number for the patient's order must also be entered.

A "Ticket #" prompt displays if ticket number was chosen as the method of display in the *Enter/Edit Display* option on the *Bingo Board Manager* menu. Enter the ticket number and at the next prompt enter each of the prescription numbers for that patient.

Display Patient's Name on Monitor

Use this option to begin displaying the name or number of a patient whose prescription is ready. The message, "PRESCRIPTIONS ARE READY FOR:" appears as fixed text on the display

screen. This option displays the following reminder for ECME billable prescriptions: “*** This Pharmacy Rx requires a patient signature! ***”

Remove Patient's Name from Monitor

[PSO BINGO DELETE PATIENT]

After the patient picks up the prescription, remove the name or ticket number from the display either manually or through the barcode reader.

It is recommended that a patient’s name be removed from the monitor as soon as the prescription is picked up.

Status of Patient's Order

This option enables checking of the number of prescriptions a patient has ready, the division, time in/time out, and the prescription number(s). There are four possible statuses:

Table 9: Status of Patient’s Order

Status	Description
Pending	Active order input via CPRS that is in the PENDING OUTPATIENT ORDERS file.
Being Processed	Order that is in the PATIENT NOTIFICATION (Rx READY) file, but not displayed.
Ready For Pickup	Order that is in the PATIENT NOTIFICATION (Rx READY) file and is being displayed.
Picked Up	Order that has been picked up.

Example: Status of Patient's Order

```
Select Bingo Board User Option: Status of Patient's Order
Enter Patient Name: OPPATIENT17,ONE      08-30-48      #####      NO      NSC VETERAN

      OPPATIENT17,ONE has the following orders for 10/31/06

Being Processed: ***Entered on OCT 31, 2006***
Division: GENERAL HOSPITAL      Time In: 10:27      Time Out:
Rx #: #####,

Pending:
Orderable Item: ACETAMINOPHEN      Provider: OPPROVIDER24,TWO
Entered By: OPCLERK28,FOUR      Time In: 10/31/06@06:46
Drug: ACETAMINOPHEN 325MG TAB UD      Routing: MAIL

Ready For Pickup:
Division: GENERAL HOSPITAL      Time In: 10:36      Time Out: 10:46
Rx #: #####,

Enter Patient Name: <Enter>
```

ScripTalk Mapping Error Messages

This is a list of the error messages that will be displayed on the screen for a site using the Bingo Board in the event of a mapping issue with the ScripTalk device when ScripTalk labels are printed.

Table 10: Error Messages

Error Level	Error Message	Why is this Message Being Displayed?
System	Please review ScripTalk mapped device setup.	The system has detected that there is a printer in the PRINTER TO BE MAPPED field, but no device has been selected.
System	NO SCRIPTALK PRINTER DEFINED FOR THIS DIVISION!	The system cannot find a division printer defined. However, there is a properly defined printer in the PRINTER TO BE MAPPED field.
System	There is no mapped printer and the division printer is set for manual.	There is no PRINTER TO BE MAPPED and the Division printer is set for manual. No ScripTalk label will print.
System	NO SCRIPTALK PRINTER DEFINED FRO THIS DIVISION! No mapped printer defined. No ScripTalk label will print.	No printers are defined so no label will print.

Chapter 5: Changing the Label Printer

This chapter describes the *Change Label Printer* option.

Change Label Printer

[PSO CHANGE PRINTER]

This option allows the user to change the printer to which labels are printed.

```
Select Outpatient Pharmacy Manager Option: Change Label Printer
Select LABEL PRINTER: LABELPRT2// <Enter> LABELPRT2

OK to assume label alignment is correct? YES//<Enter>

ALBANY's FDA Medication Guide Printer(s) on file:

    BIRM1$PRT
    L8150$PRT

Select FDA MED GUIDE PRINTER: HOME// SUP

    1 SUPPORT LEXMARK LASERJET    SUP HALLWAY - LINE 111
    2 SUPPORT LINE PRINTER      ROOM 273
    3 SUPPORT TEST PRINTER      ROOM 269
Choose 1-3> 1 SUPPORT LEXMARK LASERJET    SUP HALLWAY - LINE 111    Right Margin:

This device cannot be used for printing FDA Medication Guides.
Please, contact your IRM and ask them to update the Windows
Network Printer Name for this device.

Select FDA MED GUIDE PRINTER: HOME// L8150$PRT
```

Chapter 6: Changing the Suspense Date

This chapter describes the *Change Suspense Date* option.

Change Suspense Date

[PSO PNDCHG]

This option allows the suspense date to be changed for a specific prescription or all prescriptions for a patient. The new suspense date will become the fill/refill date automatically. The opportunity is also given to delete a specific prescription, or all prescriptions for a patient, from suspense while in this option. If a refill is deleted from suspense that has not yet been printed, the refill information will be deleted from the prescription, and the various fill dates will be adjusted accordingly. This option does not produce a label.

When processing a drug/drug interaction, the profile will list the status of the interacting drugs as pending (P).

Chapter 7: Check Drug Interaction

This chapter describes the Check Drug Interaction option shown on the Pharmacist Menu [PSO USER1].

Check Drug Interaction

[PSO CHECK DRUG INTERACTION]

This option allows a user to check drug interactions between two or more drugs.

```
Select Pharmacist Menu Option: CHECK Drug Interaction
Drug 1:  WARFARIN 2MG TAB          BL110
        ...OK? Yes//   (Yes)

Drug 2: SIMVASTATIN 40MG TAB
        Lookup: GENERIC NAME
SIMVASTATIN 40MG TAB          CV350
        ...OK? Yes//   (Yes)

-----
Professional Monograph
Drug Interaction with SIMVASTATIN 40MG TAB and WARFARIN 2MG TAB
This information is generalized and not intended as specific medical
advice. Consult your healthcare professional before taking or
discontinuing any drug or commencing any course of treatment.

MONOGRAPH TITLE:  Selected Anticoagulants/Selected HMG-CoA Reductase
Inhibitors

SEVERITY LEVEL:  3-Moderate Interaction: Assess the risk to the
patient and take action as needed.

MECHANISM OF ACTION:  The exact mechanism of this interaction is
unknown. The HMG-CoA reductase inhibitor may inhibit the hepatic
hydroxylation of warfarin. The HMG-CoA reductase inhibitors, which
are highly plasma protein bound, may displace warfarin from its
binding site.

Press Return to Continue or "^" to Exit:
```

Professional Monograph

Drug Interaction with SIMVASTATIN 40MG TAB and WARFARIN 2MG TAB

CLINICAL EFFECTS: Increase hypoprothrombinemic effects of warfarin.

PREDISPOSING FACTORS: None determined.

PATIENT MANAGEMENT: Patients should be monitored for changes in prothrombin time when a HMG Co-A reductase inhibitor is added to or discontinued from warfarin therapy, or if the dosage of the HMG Co-A reductase inhibitor is adjusted.

DISCUSSION: Case reports in the medical literature and to the manufacturer have documented an interaction between lovastatin and warfarin. A case report has documented an interaction between pravastatin and fluindione (an orally administered indanedione anticoagulant), suggesting that pravastatin could also interact similarly with warfarin. Information concerning a potential interaction with simvastatin is conflicting. A case report has documented an interaction between simvastatin and acenocoumarol while another case report showed no interaction with warfarin. One group of authors reported three case reports of increased international normalized ratios (INRs) following the addition of fluvastatin to warfarin therapy. The addition of rosuvastatin to patients stabilized on warfarin resulted in clinically significant changes in INR.

Chapter 8: Evaluating Drug Usage

This chapter describes the options on the *DUE Supervisor* menu.

DUE Supervisor

[PSOD SUPERVISOR]

This menu provides options to create a questionnaire based on the criteria of a Drug Usage Evaluation. An answer sheet can also be printed for the provider's use in answering the questionnaire. The answer sheet can be distributed to the clinic so that the provider may complete it when ordering a medication being evaluated. An answer sheet can also be generated (optional) when a patient's Action Profile prints, if the profile contains a medication being evaluated. The provider's responses can be entered into the DUE ANSWER SHEET file.

The following options are available on the *DUE Supervisor* menu:

- *Enter a New Answer sheet*
- *Edit an Existing Answer Sheet*
- *Create/Edit a Questionnaire*
- *Batch Print Questionnaires*
- *DUE Report*

Enter a New Answer Sheet

[PSOD CREATE ANSWER SHEET]

In this option the user enters answers to a DUE Questionnaire. This creates an answer sheet entry in the DUE ANSWER SHEET file. These answer sheets can be kept online for statistical and/or compliance studies. Answer sheets are stored in the file using a sequence number. This number is automatically generated by the computer and should be written on the hard copy of the answer sheet immediately so that it can be used later in editing or deleting the entry.

Edit an Existing Answer Sheet

[PSOD EDIT ANSWER SHEET]

Edit a DUE Answer Sheet entry using this option. Ordinarily, the sequence number is available when editing the Answer Sheet; however, the file can be searched if the provider, drug, or questionnaire is known by typing ^S at the "SEQUENCE NUMBER" prompt. The search displays all of the entries containing the combination of provider, drug, or questionnaire used in the search.

Create/Edit a Questionnaire

[PSOD DUE BUILD QUESTIONNAIRE]

To create a questionnaire, first select one or more drugs being evaluated. After selecting the drugs, create a set of questions to be used on the questionnaire. These questions do not have to be added to the DUE QUESTION file since they are being added through this option. The questionnaire must be marked as “Active” and “Active for Profiles” for the Answer Sheet to automatically print with the Action Profiles. A summary can be printed for the questionnaire using the *DUE Report* option. For this reason, when creating a questionnaire, the user should strive to make each question a yes, no, or unknown type question. Questions having a free text or numeric type answer are ignored in the summary.

The PRINT DUE QUESTIONNAIRE site parameter needs to be set to “YES” for the questionnaire to print with the Action Profile.

Batch Print Questionnaires

[PSOD BATCH PRINT QUESTIONNAIRE]

To print a blank for of a selected questionnaire, enter the number of copies and a printer device. These questionnaire answer sheets can be distributed to providers to complete when ordering medications being evaluated.

DUE Report

[PSOD DUE SORT AND PRINT]

This report displays entries from the DUE ANSWER SHEET file. A summary of this report, showing the number of answer sheets, number of questionnaires, and a breakdown of all yes/no/unknown type questions is available. This breakdown shows each question number and the number of times it was answered yes/no/unknown, or unanswered. For this reason, when creating a questionnaire, the user should strive to make each question a yes, no, or unknown type question. Questions having a free text or numeric type answer are ignored in the summary.

Chapter 9: Enter/Edit Clinic Sort Groups

This chapter describes the *Enter/Edit Clinic Sort Groups* option.

Enter/Edit Clinic Sort Groups

[PSO SETUP CLINIC GROUPS]

This option enables a group of clinics to be identified that will print together for the action/informational profiles.

Example: Enter/Edit Clinic Sort Groups

```
Select Pharmacist Menu Option: ENTER/Edit Clinic Sort Groups

Select Clinic Sort Group: ?
Answer with OUTPATIENT CLINIC SORT GROUP NAME
Choose from:
  CLINIC 1
  Clinic 2

  You may enter a new OUTPATIENT CLINIC SORT GROUP, if you wish
  Answer must be 3-30 characters in length.
Select Clinic Sort Group: CLINIC #
Are you adding 'CLINIC #' as
a new OUTPATIENT CLINIC SORT GROUP (the 6TH)? Y <Enter> (Yes)
NAME: CLINIC #// <Enter>
Select SORT GROUPS: ?
Answer with SORT GROUP SORT GROUPS
  You may enter a new SORT GROUP, if you wish
  Enter name of clinic to be included in the sort group.
  Answer with HOSPITAL LOCATION NAME, or ABBREVIATION
Do you want the entire 122-Entry HOSPITAL LOCATION List? N (No)
Select SORT GROUPS: # EAST
Are you adding '# EAST' as a new SORT GROUP (the 1ST for this OUTPATIENT CLINIC SORT
GROUP)? Y (Yes)
Select SORT GROUPS: <Enter>
```

Chapter 10: Using the Interface Menu

This chapter describes the options on the *External Interface Menu*.

This menu is locked with the PSOINTERFACE lock. The PSOINTERFACE key should be assigned to all persons responsible for performing these functions.

External Interface Menu

[PSO EXTERNAL INTERFACE]

- This menu contains the following options for using an external interface device.
- *Purge External Batches*
- *Reprint External Batches*
- *View External Batches*

Purge External Batches

[PSO INTERFACE PURGE]

This option purges entries from the PHARMACY EXTERNAL INTERFACE file.

Example: Purge External Batches

```
Select External Interface Menu Option: Purge External Batches
Enter cutoff date for purge of External Interface file: 022807 (FEB 28, 2007)

Purge entries that were not successfully processed? NO// <Enter>

Purge queued to run in background.

Select External Interface Menu Option:
```

Reprint External Batches

[PSO INTERFACE REPRINT]

This option enables the reprinting of labels for batches of prescriptions that have been sent to the external interface.

Example: Reprint External Batches

```
Select External Interface Menu Option: Reprint External Batches

Enter a date/time range to see all batches sent to the External Interface.

Start date/time: 022807 (FEB 28, 2007)

End date/time: 030707 (MAR 07, 2007)

Chapter 11: Using the Medication Profile

This chapter describes the Medication Profile, its different formats, and how it can be used in patient care.

Medication Profile

[PSO P]

The Medication Profile displays a profile of all prescriptions on file for a particular patient. The profile display includes 'local' and all Non-VA Med orders. Effective with the OneVA Pharmacy (patch PSO*7*454 – December 2016), the Medication Profile displays all active medications from other facilities. The medications are retrieved from the Health Data Repository/Clinical Data Service (HDR/CDS) Repository and are displayed below the 'local' or 'Non-VA Med' orders and are sorted/grouped by facility. The prescriptions originating from other VA Pharmacy locations display under a divider header line showing the site name, site number, and status. The user may view this information directly on the screen or request it to be printed. The medication profile is available in two formats: short or long.

Patient demographics and Clinical Alerts display in the header area when using this option. Refer to [Patient Demographics and Clinical Alerts](#) for more information.

Medication Profile: Short Format

The short format displays the following information:

Figure 3: Short Format

- patient name
- eligibility
- reactions
- pregnancy/lactation status
- prescription number
- Sig
- quantity
- last fill date
- address
- DOB
- narrative
- prescriptions
- drug name
- Status
- issue date
- refills remaining.

The short report format of the fields for Non-VA Med orders include the drug name or orderable item name, dosage, schedule, and date documented.

The short format displays the status in an abbreviated form. The following is an explanation of the codes:

Code	Status/Description
A	Active
B	Bad Address Indicated

DF	Discontinued due to edit by a provider through CPRS
DE	Discontinued due to edit via backdoor Pharmacy
DP	Discontinued by provider through CPRS
DC	Discontinued
DD	Discontinued due to death
DA	Auto discontinued due to admission
E	Expired
HP	Placed on hold by provider through CPRS
H	Placed on hold via backdoor Pharmacy
N	Non Verified
P	Pending due to drug interactions
S	Suspended
\$	Copay eligible
E	Third-party electronically billable
R	Returned to stock prescription (next to last fill date)

For the *Patient Prescription Processing*, *Complete Orders from OERR*, and *Action Profile (132 COLUMN PRINTOUT)* options, if a temporary address has no end date, the following text is displayed in the Status column: “(Temp address from XXX 99,9999 till (no end date))”. \

OneVA Pharmacy and Medication Profile

Effective with the OneVA Pharmacy patch PSO*7*454 – December 2016, the Medication Profile displays all active medications from other facilities. The medications are retrieved from the Health Data Repository/Clinical Data Service (HDR/CDS) Repository and are displayed below the 'local' or 'Non-VA Med' orders and are sorted/grouped by facility. The prescriptions originating from other VA Pharmacy locations display under a divider header line showing the site name, site number, and status.

Note: For additional information regarding OneVA Pharmacy processing, please see Appendix A, OneVA Pharmacy User Manual.

The example shown below displays three pages of a test patient's Medication Profile, displaying the 'local' prescription orders followed by prescription orders that originated at other facilities.

The OneVA Pharmacy patch PSO*7*454 – December 2016 introduces the new view, ‘REMOTE OP Medications’, which displays the details of the remote prescription order. When selecting a OneVA Pharmacy prescription order from the Medication Profile screen, the new ‘REMOTE OP Medications’ page display as shown in the example below.

The OneVA Pharmacy patch PSO*7*497 updates the ‘REMOTE OP Medications’ display and introduces the new view for prescription orders that originated from other VA Pharmacy locations, the dispensing Pharmacy only has two actions available. They are:

- RF Refill Rx from Another VA Pharmacy
- PR Partial Fill Rx from Another VA Pharmacy

```

Users with PSORPH key will be able to use the above Remote OP Medications option. For users without the PSORPH key the system will display the following message for remote fill.

>>> Refill Rx from Another VA Pharmacy may not be selected at this point.

For users without the PSORPH key the system will display the following message for partial fill.

>>> Partial Fill Rx from Another VA Pharmacy may not be selected at this point.

OneVA Pharmacy Exception Messages

The OneVA Pharmacy patch contains specific business rules to prevent refill and/or partial orders that originated at other VA Pharmacy locations from being processed. They include the following list:

- Patient's prescription that originated from another VA Pharmacy location cannot be refilled before the next refill date.

Unable to complete transaction.

Cannot refill Rx# xxxxxxx. Next possible fill date is MM/DD/YYYY

- Patient's prescription that originated from another VA Pharmacy location is not fully or partially dispensed when the prescription status is 'discontinued', 'expired', is on 'hold', or 'suspended'.

Only 'ACTIVE' remote prescriptions may be refilled at this time.

- Patient's prescription that originated from another VA Pharmacy location and cannot be dispensed (refilled) when there are zero remaining refills. Note: Partial fills are allowed.

Unable to complete transaction. Cannot refill Rx # xxxxxxx. No refills left.

- Patient's prescription that originated from another VA Pharmacy location and cannot be dispensed (refill or partial fill) when the drug is classified as a controlled substance on the dispensing site.

This is a controlled substance. Cannot refill Rx # xxxxxxx.

- Patient's prescription that originated from another VA Pharmacy location and cannot be dispensed (refill or partial fill) when the drug is classified as a controlled substance on the host site.

Unable to complete transaction. Rx #xxxxxxx cannot be refilled.

The associated drug is considered a controlled substance at the host facility.

- Patient's prescription that originated from another VA Pharmacy location and cannot be dispensed (refill or partial fill) when the drug is inactive on the dispensing site.

Matched Drug <DRUG NAME> is inactive. Cannot refill.

- Patient's prescription that originated from another VA Pharmacy location and cannot be dispensed (refill or partial fill) when the drug has no dispensing site match.

No local match could be found for <DRUG NAME>

- Patient's prescription that originated from another VA Pharmacy location and cannot be dispensed (refill or partial fill) when no drug on the dispensing site has a matching VA Product ID.

Missing VA Product ID. Rx #xxxxxxx cannot be refilled.

- Patient's prescription that originated from another VA Pharmacy location and cannot be dispensed (refilled or partial fill) when the prescription has a trade name.

This prescription cannot be refilled or partial filled because it has a value entered in the Rx trade name field. Please follow local policy for obtaining a new prescription.

- Patient's prescription that originated from another VA Pharmacy location and cannot be dispensed (refilled or partial fill) when the prescription type is Titration.

Cannot refill prescription - type is Titration. You may request a partial fill.

- Patient's prescription that originated from another VA Pharmacy location will deny the request for a prescription refill to be completed if it is requested "too soon" after the last refill so that prescriptions are not over-distributed.

Unable to complete transaction.

Cannot refill Rx# XXXXXX. Next possible fill date is 11/9/2017

OneVA Pharmacy patch PSO*7*479 modifies routine PSORRX2 to add the following text if no error message is returned when retrieving the label information from the host system. The following text is displayed just prior to the Label Device: ' prompt:

For a refill:

```
TRANSACTION SUCCESSFUL... The refill for RX ##### has been recorded on
the prescription at the host system.

Select a printer to generate the label or '^' to bypass printing.

QUEUE TO PRINT ON
DEVICE:
```

For a partial fill:

```
TRANSACTION SUCCESSFUL... The partial for RX ##### has been recorded on
the prescription at the host system.

Select a printer to generate the label or '^' to bypass printing.

QUEUE TO PRINT ON
DEVICE:
```

Note: For additional information regarding OneVA Pharmacy processing, please see Appendix A, OneVA Pharmacy User.

Medication Profile: Long Format

The long format displays all information contained on the short format as well as the following additional fields:

- physician's name
- fill date
- dates of refills/partial fills
- whether the prescription was filled at the pharmacy window or by mail

- clerk code
- total allowable refills
- which division filled it

The long report format of the fields for Non-VA Med orders include the start date, CPRS order #, status, documented by, order check(s), override reason, override provider, and statement of explanation.

Example: Medication Profile – Long Format

 Patient wants to buy from Non-VA pharmacy

For patients whose birth sex is female, a line with the label, Women’s Health, will appear. It indicates if the patient is pregnant and/or lactating. If the patient is neither pregnant nor lactating, the label will appear with nothing after it. For patients whose birth sex is male, this line does not appear. An example of the Women’s Health label is listed below:

WOMEN'S HEALTH: Pregnant (Expected Due Date: Sep 19, 2021)

The Intervention menu hidden action has been included in the Patient Information, the Medication Profile and Detailed Order ListMan screens when utilizing the following options:

- Patient Prescription Processing [PSO LM BACKDOOR ORDERS]
- Complete Orders from OERR [PSO LMOE FINISH]
- Edit Prescriptions [PSO RXEDIT]

See “Using The Pharmacy Intervention Menu” for more details. Medication Profile and Refill [PSO HRC PROFILE/REFILL]

This option was originally requested by the Health Resource Center (HRC) to provide a new standalone option similar to that of the ePharmacy Medication Profile (View Only) [PSO PMP] option for the Compensation and Pension Record Interchange (CAPRI) system. It allows users to view a medication profile as well as refill prescriptions for a specific patient.

Example 5: Medication Profile list item with Bad Address Indicator:

The Outpatient Pharmacy Medication Profile has a display problem for a prescription with the following characteristics:

1. 2-letter status (e.g., DC)
2. Drug marked for Consolidated Mailout Outpatient Pharmacy (CMOP)
3. Bad Address Indicator

When a prescription with all three features is displayed the DAY SUP column value is being truncated as illustrated below where the Day Supply value is actually 90 and it displays as 9.

#	RX #	DRUG	QTY	ST	ISSUE DATE	LAST FILL	REF DAY	DAY SUP
-----DISCONTINUED-----								
1	#####	TOBRAMYCIN 80MG/2ML INJ	100	DC>	B01-21 01-21	0	9<<	Truncated

To resolve this issue, the BAD ADDRESS INDICATOR is now displayed on a separate line.

Select Orders by number: (1-16): 2						
FILL DATE: (5/2/2011 - 11/2/2011): TODAY// (JUL 12, 2011)						
MAIL/WINDOW: MAIL// MAIL						
Now refilling Rx# ##### Drug: AMITRIPTYLINE 10MG TAB						
Qty: 120 Sig: TAKE ONE TABLET BY MOUTH FOUR TIMES A DAY						
RX# ##### has been suspended until 07-01-11.						

NOTE: The system has the flexibility to sort the Medication Profile by different columns (RX, drug name, date, etc.). When selecting a range of prescriptions from the Medication Profile to be refilled, selection is not limited to active prescriptions. If discontinued or expired prescriptions are included in a range, the system will display a message stating the status of each prescription as they are processed within the range.

For example:

Cannot refill Rx # XXXXXXXX, Rx is in DISCONTINUED status.

Chapter 12: Using the Medication Reconciliation Tools

This chapter describes the tools available to perform Medication Reconciliation functions via the CPRS Reports tab and CPRS Notes tab.

Medication Reconciliation

The Medication Reconciliation functions may be performed via the use of four tools. The tools utilize Health Summary components and Text Integrated Utility (TIU) data objects to create a list of current medications. These Medication Reconciliation tools also leverage the Remote Data Interoperability (RDI) software to include medication data from other sites.

Tool 1 is a Medication Reconciliation Profile health summary component. This report creates an alphabetical list of outpatient prescriptions, unit dose medications, documented non-VA medications, and remote VA medications. This summary can be used at transition points in a patient's care, (admission, discharge, etc.) to identify medications that need to be continued, new items to be ordered, old items to be discontinued, or orders that need to be changed.

Tool 2 is a Medication Worksheet component. This report provides a grid-formatted list of active and pending medications suitable for giving to a patient at a clinic visit or upon discharge from the hospital.

Tool 3 is a TIU data object provided as an alternative to the Medication Chart health summary process. The unique aspect of this object is that the list, generated for the patient, includes recently expired medications but not recently discontinued medications.

Tool 4 is a series of TIU data objects and health summary components that retrieve remote active medications and remote allergy/ADR data.

For a complete list of functionality, please refer to Medication Reconciliation Tools Implementation Guide. Upon completion of the steps listed in the Implementation Guide, users will be able to retrieve reports useful for Medication Reconciliation by selecting the newly created Health Summaries on the CPRS Reports tab or by using the newly created TIU templates and objects from the CPRS Notes Tab's Templates Drawer and/or any progress note titles in which they have been embedded.

Chapter 13: Using the Pharmacy Intervention Menu

This chapter describes the options in the *Pharmacy Intervention Menu*.

This menu is locked with the PSORPH key.

Pharmacy Intervention Menu

[PSO INTERVENTION MENU]

The *Pharmacy Intervention Menu* enables the user to enter, edit, print, delete, or view interventions in the APSP INTERVENTION file.

The following options are available on this menu:

- *Enter Pharmacy Intervention*
- *Edit Pharmacy Intervention*
- *Print Pharmacy Intervention*
- *Delete Intervention*
- *View Intervention*

Enter Pharmacy Intervention

[PSO INTERVENTION NEW ENTRY]

When it is necessary to interrupt the filling of a prescription to contact the provider in order to change, clarify, or cancel the prescription, use this option to add a new intervention entry into the APSP INTERVENTION file.

Edit Pharmacy Intervention

[PSO INTERVENTION EDIT]

Using this option, an already existing entry in the APSP INTERVENTION file can be edited.

Print Pharmacy Intervention

[PSO INTERVENTION PRINTOUT]

Print a captioned printout of pharmacy interventions for a certain date range with this option. The report prints out on normal width paper and can be queued to print at a later time.

The subtotal on this report represents the number of interventions for a specific type of intervention where the recommendation for the intervention was accepted. The total is the sum of all interventions in which the recommendation was accepted.

The sub count on this report is the number of interventions for a specific type of intervention over the specific date range. The count is the total number of all interventions over the specific date range.

Delete Intervention

[PSO INTERVENTION DELETE]

This option can be used to delete an intervention from the APSP INTERVENTION file. An intervention can be deleted only on the same day that it was entered.

View Intervention

[PSO INTERVENTION VIEW]

This option displays pharmacy interventions in a captioned format on the screen. More than one intervention can be viewed at a time.

Chapter 14: Print from Suspense File

This chapter describes the *Print from Suspense File* option used for printing suspended prescriptions.

Print from Suspense File

[PSO PNDLBL]

This option allows the user to print labels from the RX SUSPENSE file. First, enter the “Print Through” date. Any prescriptions with a suspense date on or before the date entered will print. Additionally, if a patient has at least one prescription on or before the date entered, any other prescriptions for that patient that are in suspense for the specified number of days defined in the DAYS TO PULL FROM SUSPENSE field (#3) in the OUTPATIENT SITE file (#59) will be pulled from suspense and printed.

For example, if today’s date is entered and Patient A has a prescription to be printed through today, all of Patient A’s prescriptions for today plus the number of days set in the DAYS TO PULL FROM SUSPENSE field (#3) in the OUTPATIENT SITE file (#59) will be printed. If there are no prescriptions for Patient A through today, no labels will print.

Labels can be sorted by the patient name, the SSN, or the DEA Special Handling code. If sorted by DEA, the labels must then sort by patient name or SSN. Sorting by DEA will send the labels to the printer in three groups:

- **First group** – will contain all the prescriptions with drugs that contain an “A” (narcotics and alcoholics) or a “C” (controlled substances-non narcotic) in the DEA Special Handling field.
- **Second group** – will contain all the prescriptions with drugs containing an “S” (supply) in the DEA Special Handling field.
- **Third group** – will contain all others. If a patient has suspended prescriptions in more than one group, that patient’s labels will not print consecutively.

Only one job is tasked for all of the prescriptions in the batch; therefore, if the job is queued by mistake, only one tasked job must be undone. Any prescription that is put in suspense for the "Print Through Date" between the times the job was queued until the time it actually runs will be included in the job.

Labels for each job printed from suspense will be part of a batch. Each batch is identified by the Division, the user who queued the batch, and the date/time that the job was queued to begin.

A label will not print if the Label Log shows that the label has already printed unless the suspense queue indicates that a user has requested a reprint of the suspended prescription.

Prescriptions pulled early from suspense will not be part of a batch, so they will not be able to be reprinted through the *Reprint Batches from Suspense* option.

Prescriptions with an FDA Medication Guide associated will automatically print along with the labels (if one is available). In order to ensure that the documents are sent to an actual printer users will be required to enter a valid printer for printing the FDA Medication Guides at this option if one has not been selected when they logged on to the Outpatient Pharmacy Division.

A short profile for every patient for whom a label for a new prescription is being printed will also be printed if the local Profile with New Prescriptions site parameter is set to Yes.

If a patient has partial prescriptions with regular fills, only one set of trailing documents will print for that patient. (In V. 6.0 trailer documents were printed after each partial.)

If a prescription is determined to be an ePharmacy prescription (e.g., third party electronically billable), an electronic claim will be sent by the Electronic Claims Management Engine (ECME) to the third party payer. TRICARE and CHAMPVA prescriptions are exceptions, as noted in the TRICARE and CHAMPVA section. The communication events between Outpatient Pharmacy and ECME are recorded in the ECME Log section of each prescription. The ECME log can be viewed in the patient Medication Profile screen (Activity Log option - AL) and also from the View Prescriptions option. If the claim submission returns a Refill Too Soon (79) or Drug Utilization Review (88 or 943) reject, the label is not printed for the prescription and it is moved to the Refill Too Soon/DUR section of the patient Medication Profile screen until the user resolves the reject. The prescription will also display on the Third Party Payer Reject Worklist. If the claim submission returns a Reject Resolution Required reject, the label is not printed for the prescription and it is moved to the Reject Resolution Required section of the Third Party Payer Reject – Worklist.

Print from Suspense by Category

Suspended prescription labels can be printed by category when using the Print from Suspense File [PSO PNDLBL] option.

The new prompt “Select Print Category: (A/N/C/S/R/D/V/E): ALL//” allows users to specify the prescription labels to be printed from the RX SUSPENSE file (#52.5) by selecting from the categories All (A), Non-Controlled Drugs (N), Controlled Substances (C), Supplies (S), Refrigerated Items (R), Drugs (D), and VA Classifications (V). To leave the prompt without choosing a print category, select Exit (E). Typing “?” at the prompt displays help text describing the available print categories.

Note: Refrigerated Items are designated by the presence of a “Q” in the DEA Special Handling field (#3) of the Drug File (#50).

Important: To ensure that all suspended prescriptions have been printed when printing from the suspense file by a category other than “ALL,” either run Print from Suspense by Category “ALL” after printing other categories, or print the Log of Suspended Rx’s by Day (this Division) using the VistA option [PSO PNDLOG]. This step ensures that no prescriptions are unintentionally left on suspense.

Example: Print from Suspense by Category Prompt and Help Text

```
Select Print Category: (A/N/C/S/R/D/V/E): ALL/" ?
Enter `A` ALL Prescriptions on Suspense for the Division
`N` Non-Controlled RX or OTCs (Special Handling Code 6 or 9)
`C` Controlled Substance Prescriptions (DEA 1, 2, 3, 4, 5)
`S` Supply Prescriptions (Special Handling Code `S`)
`R` Refrigerated Prescriptions (Special Handling Code `Q`)
`D` Prescriptions by Selected Drugs
`V` Prescriptions by Selected VA Classifications
Or `E` or `` to Exit

Select one of the following:

A      ALL
N      Non-Controlled Drugs
C      Controlled Substances
S      Supplies
R      Refrigerated Items
D      Drugs
V      VA Classifications
E      Exit

Select Print Category: (A/N/C/S/R/D/V/E): ALL//
```

A variety of additional prompts follow. Extra help text is added to the Refrigerated Items and Supplies prompts to clarify expected results when using the Include or Exclude functionality:

- Selecting Include enables refining the labels to print.
- Selecting Exclude enables refining those labels that should not be sent to print.

Example: Print from Suspense by Category (Include Non-Controlled Drugs)

The following example shows both a summary and the full expanded path with available help text when including Non-Controlled Drugs.

Without help text:

```
Select Print Category: (A/N/C/S/R/D/V/E): ALL/" n Non-Controlled Drugs
Non-Controlled Drugs: Include// Non-Controlled Drugs
Include: Mail (M), Window (W), Both (B): Both// Mail and Window
Include the following: (Rx/OTC/Both): Both// Rx and OTC
```

```
Include Refrigerated Items? YES//
Include Supplies? YES//
Print Suspended 'Non-Controlled Drugs' selections? NO// YES
```

With expanded help text:

1. At the “Print Category: (A/N/C/S/R/D/V/E): ALL//” prompt, type “N” to select Non-Controlled Drugs and then follow the subsequent prompts:
 - a. The “Non-Controlled Drugs: Include//” prompt displays. Type “?” to display the help text:
 - Select one of the following:
 - Include Non-Controlled Drugs
 - Exclude Non-Controlled Drugs
 - b. Type “Include” or press Return to accept the default value “Include.”

Note: All subsequent prompts shown below further refine the selection of “Include Non-Controlled Drugs.” For an example of Exclude functionality, refer to the example [Excluding Non-Controlled Drugs](#).

- c. The “Include: Mail (M), Window (W), Both (B): Both//” prompt displays. This selection refines the labels to print by delivery method. Type “?” to display the help text:
 - Select one of the following:
 - M Mail
 - W Window
 - B Both Mail and Window
- d. To accept the default value, type “Both” or press Return.
- e. The “Include the following: (Rx/OTC/Both): Both//” prompt displays. This selection refines the labels to print by drug type. Type “?” to display the help text:
 - Enter ‘RX’ Prescriptions for Legend Drugs (Special Handling Code 6)
 - ‘OTC’ Prescriptions for OTC Drugs (Special Handling Code 9)
 - ‘Both’ Prescriptions for BOTH Legend and OTC Drugs
 - Select one of the following:
 - Rx Rx
 - OTC OTC
 - Both Both RX and OTC

- f. To accept the default value, type “Both” or press Return.
- g. The “Include Refrigerated Items? YES//” prompt displays. Type “?” to display the help text:
 - “Enter ‘NO’ to EXCLUDE refrigerated Non-Controlled Drugs from printing.”

Note: Drug File entries with a DEA Special Handling Code of “Q” will NOT print from Suspense using this category (absent the additional codes “6” or “9” and depending on user responses to the Non-Controlled Category prompts). To print prescriptions from suspense with a DEA Special Handling Code of “Q” only, use the Refrigerated Category.

- h. The “Include Supplies? YES//” prompt displays. Type “?” to display the help text:
 - “Enter ‘NO’ to EXCLUDE Non-Controlled supplies from printing.”
 - “Enter ‘YES’ to print Non-Controlled supplies.”

Note: Drug File entries with a DEA Special Handling Code of “S” will NOT print from Suspense using this category (absent the additional codes “6” or “9” and depending on user responses to the Non-Controlled Category prompts). To print prescriptions from suspense with a DEA Special Handling Code of “S” only, use the Supply Category.

Example: Print from Suspense by Category (Exclude Non-Controlled Drugs)

The following example shows both a summary and expanded path with available help text when excluding Non-Controlled Drugs.

Without help text:

```
Select Print Category: (A/N/C/S/R/D/V/E): n Non-Controlled Drugs
Non-Controlled Drugs: Include// Exclude Non-Controlled Drugs
Exclude: Mail (M), Window (W), Both (B): Both// Mail and Window
Exclude the following: (Rx/OTC/Both): Both// Rx and OTC
Exclude Refrigerated Items? YES//
Exclude Supplies? YES//

Print Suspended 'Non-Controlled Drugs' selections? NO// YES
```

With expanded help text:

1. At the “Print Category: (A/N/C/S/R/D/V/E): ALL//” prompt, type “N” to select Non-Controlled Drugs and then follow the subsequent prompts:
 - a. The “Non-Controlled Drugs: Include//” prompt displays. Type “?” to display the help text:

- Select one of the following:
 - Include Non-Controlled Drugs
 - Exclude Non-Controlled Drugs
- b. Type “Exclude” to exclude Non-Controlled Drug labels from printing.

Note: All subsequent prompts shown below further refine the selection of “Exclude Non-Controlled Drugs.” For an example of Include functionality, refer to the example [Including Non-Controlled Drugs](#).

- c. The “Exclude: Mail (M), Window (W), Both (B): Both//” prompt displays. This selection refines the labels to print by delivery method. Type “?” to display the help text:
- Select one of the following:
 - M Mail
 - W Window
 - B Both Mail and Window
- d. To accept the default value, type “Both” or press Return.

Note: A “Both” response will exclude both Mail and Window Non-Controlled prescriptions from printing. A “Mail” response will ONLY exclude Mail Non-Controlled prescriptions from printing. A “Window” response will ONLY exclude Window Non-Controlled prescriptions from printing.

- e. The “Exclude the following: (Rx/OTC/Both): Both//” prompt displays. This selection refines the labels to print by drug type. Type “?” to display the help text:
- Enter ‘RX’ Prescriptions for Legend Drugs (Special Handling Code 6)
 - ‘OTC’ Prescriptions for OTC Drugs (Special Handling Code 9)
 - ‘Both’ Prescriptions for BOTH Legend and OTC Drugs
 - Select one of the following:
 - Rx Rx
 - OTC OTC
 - Both Both RX and OTC
- f. To accept the default value, type “Both” or press Return.

Note: A “Both” response will exclude both Rx and OTC Non-Controlled prescriptions from printing. An “Rx” response will ONLY exclude Non-Controlled prescriptions from printing. An “OTC” response will ONLY exclude Non-Controlled OTCs from printing.

- g. The “Exclude Refrigerated Items? YES//” prompt displays. Type “?” to display the help text:
- “Enter ‘YES’ to EXCLUDE refrigerated Non-Controlled Drugs from printing.”
 - “Enter ‘NO’ to print refrigerated Non-Controlled Drugs in addition to the other categories.”

Note: A ‘YES’ response excludes refrigerated Non-Controlled Drug labels for printing. All Non-Controlled Drugs, including refrigerated items, are excluded.

A “NO” response includes refrigerated Non-Controlled Drug labels for printing, but non-refrigerated Non-Controlled Drugs labels will remain excluded.

- h. The “Exclude Supplies? YES//” prompt displays. Type “?” to display the help text:
- “Enter ‘YES’ to EXCLUDE Non-Controlled supplies from printing.”
 - “Enter ‘NO’ to print Non-Controlled supplies in addition to the other categories.”

Note: A ‘YES’ response excludes Non-Controlled Supplies labels from printing.

A ‘NO’ response includes Non-Controlled Supplies labels for printing. Non-Controlled Drugs remain excluded.

Example: Print from Suspense by Category (Include Controlled Substances)

The following example shows both a summary and the full expanded path with available help text when including Controlled Substances.

Without help text:

```
Select Print Category: (A/N/C/S/R/D/V/E): Controlled Substances
Controlled Substances: Include// Controlled Substances
Include: Mail (M), Window (W), Both (B): Both// Mail and Window
Enter a list or range of CS Federal Schedules to INCLUDE (1-5): 1-5//
Include Refrigerated Items? YES//

Print Suspended 'Controlled Substances' selections? NO//
```

With expanded help text:

1. At the “Print Category: (A/N/C/S/R/D/V/E): ALL//” prompt, type “C” to select “Controlled Substances” and follow the subsequent prompts.
 - a. The “Controlled Substances: Include//” prompt displays. Type “?” to display the help text:
 - Select one of the following:
 - Include Controlled Substances
 - Exclude Controlled Substances

Note: All subsequent prompts further refine the selection of “Include Controlled Substances.” For an example of Exclude functionality for Controlled Substances, refer to the example [Excluding Controlled Substances](#).

- b. The “Include: Mail (M), Window (W), Both (B): Both//” prompt displays. This selection refines the labels to print by delivery method. Type “?” to display the help text:
 - Select one of the following:
 - M Mail
 - W Window
 - B Both Mail and Window
- c. To accept the default value, type “Both” or press Return.
- d. The “Enter a list or range of CS Federal Schedules to INCLUDE (1-5): 1-5//” prompt displays. Type “?” to display the help text:
 - This response must be a list or range, e.g., 2,4 or 3-5.

Note: Controlled Substances are specified by typing a range, for example “1-5.” Labels for all Controlled Substances with a schedule number included in this range will print.

Schedule numbers can also be specified in a list. For example, typing “1,3,5” at this prompt will include Controlled Substances from Schedule 1, Schedule 3, and Schedule 5.

- e. To accept the default value, type “1-5” or press Return.
- f. The “Include Refrigerated Items? YES//” prompt displays. Type “?” to display the help text:
 - “Enter ‘NO’ to EXCLUDE refrigerated Controlled Substances of the selected range from printing.”

- “Enter ‘YES’ to print refrigerated Controlled Substances of the selected range.”

There are no supplies associated with Controlled Substances.

Example: Print from Suspense by Category (Exclude Controlled Substances)

The following example shows both a summary and expanded path with available help text when excluding Controlled Substances.

Without help text:

```
Select Print Category: (A/N/C/S/R/D/V/E): Controlled Substances
Controlled Substances: Include// Exclude Controlled Substances
Exclude: Mail (M), Window (W), Both (B): Both// Mail and Window
Enter a list or range of CS Federal Schedules to INCLUDE (1-5): 1-5//
Exclude Refrigerated Items? YES//

Print Suspended 'Controlled Substances' selections? NO//
```

With expanded help text:

1. At the “Print Category: (A/N/C/S/R/D/V/E): ALL//” prompt, type “C” to select “Controlled Substances” and follow the subsequent prompts:
 - a. The “Controlled Substances: Include//” prompt displays. Type “?” to display the help text:
 - Select one of the following:
 - Include Controlled Substances
 - Exclude Controlled Substances

Note: All subsequent prompts further refine the selection of “Exclude Controlled Substances.” For an example of Include functionality for Controlled Substances, refer to the example [Including Controlled Substances](#).

- b. The “Exclude: Mail (M), Window (W), Both (B): Both//” prompt displays. This selection refines the labels to print by delivery method. Type “?” to display the help text:
 - Select one of the following:
 - M Mail
 - W Window
 - B Both Mail and Window
- c. To accept the default value, type “Both” or press Return.

Note: A “Both” response will exclude both Mail and Window Controlled Substance prescriptions from printing. A “Mail” response will ONLY exclude Mail Controlled Substances from printing. A “Window” response will ONLY exclude Window Controlled Substances from printing.

- d. The “Enter a list or range of CS Federal Schedules to EXCLUDE (1-5): 1-5//” prompt displays. Type “?” to display the help text:
- “This response must be a list or range, e.g., 2,4 or 3-5.”

Note: Controlled Substances are specified by typing a range, for example “1-5.” Labels for all Controlled Substances with a schedule number included in this range will be excluded from printing.

Schedule numbers can also be specified in a list. For example, typing “1,3,5” at this prompt will exclude Controlled Substances from Schedule 1, Schedule 3, and Schedule 5.

- e. To accept the default value, type “1-5” or press Return.
- f. The “Exclude Refrigerated Items? YES//” prompt displays. Type “?” to display the help text:
- “Enter ‘YES’ to EXCLUDE refrigerated Controlled Substances of the selected range from printing.”
 - “Enter ‘NO’ to print refrigerated Controlled Substances of the selected range in addition to the other categories.”

Note: A ‘YES’ response excludes refrigerated Controlled Substance drug labels from printing. No Controlled Substances labels in the selected range will print (refrigerated or non-refrigerated).

A ‘NO’ response includes refrigerated Controlled Substances in the selected range when printing. Labels for non-refrigerated Controlled Substances remain excluded and do not print.

There are no supplies associated with Controlled Substances.

¾ Days Supply Hold

Because of the great number of refill-too-soon third party claim rejections that can occur due to prescriptions being filled too early, the system verifies that ¾ of the days supply has elapsed on the previous fill before the ePharmacy prescription may be refilled. To reduce refill-too-soon third party claim rejections for new prescriptions, prior prescriptions are checked for the same

patient and product to verify that $\frac{3}{4}$ of the days supply has elapsed on the prior prescriptions before the new prescriptions may be filled. The following list describes this functionality.

- ePharmacy prescriptions are delayed from being sent to CMOP and printed for local mail until $\frac{3}{4}$ of the days supply has elapsed. For CMOP suspense and local mail suspense, a partial day will be rounded up (ex.: $\frac{3}{4}$ of 30 days will be 23 days). With the release of PSO*7*367, this rounding functionality will also be available for local mail suspense.
- When checking a prior prescription for the same patient and product, the prior prescription cannot be in a non-verified status, the prior prescription must have a release date, and the prior prescription must have an expiration date no earlier than 120 days prior to the current date. The $\frac{3}{4}$ days' supply change applies to prescriptions that are renewed, locally suspended, suspended via CMOP or modified using the SDC - Suspense Date Calc action.
- An activity log entry will state the date/time that the Rx will be allowed to be removed from suspense. The activity log will be defined on the initial evaluation. The following is an example of the log entry:

```
4 06/18/08  SUSPENSE      REFILL 2      OPHARM,ONE
Comments: 3/4 of Days Supply SUSPENSE HOLD until 6/20/08.
```

- To fill the prescription earlier, users may pull these types of prescriptions early from suspense.

The $\frac{3}{4}$ days supply processing can be bypassed for billable prescriptions with third party insurance by using the hidden action “BY” on the Outpatient Medications Screen or selecting option “BY” on the ePharmacy Menu. Refer to Chapter 23, “Bypass $\frac{3}{4}$ Supply” in this document for the ePharmacy Menu option “BY”. The user will have the ability to undo the Bypass from the Outpatient Medications Screen.

Example of the Bypass set to “NO” on the Outpatient Medications Screen. If the user continues, the Bypass will be set to “YES”:

```
Select Action: Next Screen// BY BY
Currently Bypass 3/4 Day Supply is set to NO.
If you continue, Bypass 3/4 Day Supply will be set to YES and the 3/4 Days
Supply logic will be bypassed when the RX is sent to CMOP.
Continue? Yes//
```

Example of the Bypass set to “YES” on the Outpatient Medications Screen. If the user continues, the Bypass will be set to “NO”, undoing the Bypass:

```
Select Action: Next Screen// BY BY
Currently Bypass 3/4 Day Supply is set to YES.
If you continue, Bypass 3/4 Day Supply will be set to NO and the 3/4 Days
Supply logic will apply when the RX is sent to CMOP.
Continue? Yes//
```

- Bypass activity will be recorded in the activity log capturing each time the Bypass has been set or undone and at the time 3/4 Day Supply was bypassed during CMOP processing.

Example of the Activity Log capturing Bypass activity:

Activity Log:				
#	Date/Time	Reason	Rx Ref	Initiator Of Activity
1	9/01/20@14:39:16	SUSPENSE	ORIGINAL	LAST NAME, FIRST NAME
Comments: Bypass 3/4 Day Supply set to YES				
2	9/01/20@14:40:17	SUSPENSE	ORIGINAL	LAST NAME, FIRST NAME
Comments: Bypass 3/4 Day Supply set to NO				
3	9/01/20@14:45:19	SUSPENSE	ORIGINAL	LAST NAME, FIRST NAME
Comments: Bypass 3/4 Day Supply set to YES				
4	9/01/20@16:50:20	SUSPENSE	ORIGINAL	POSTMASTER
Comments: 3/4 Day Supply logic bypassed during CMOP processing				

- If the Bypass value has been set to “YES” for a prescription and the user performs the action CSD (Change Suspense Date), the following alert will display:

Currently Bypass 3/4 Day Supply is set to YES. If you continue, the prescription fill will transmit to CMOP on the new Suspense Date entered.

Host Errors

Prescriptions (ePharmacy only) will be prevented from being filled/sent to CMOP when a host processing error occurs as a claim is submitted through ECME. Host processing errors are identified by reject codes M6, M8, NN, and 99 which are returned by the third party payer. The following conditions apply when this scenario occurs.

- The transmission of the prescription fill will be delayed 1 day in hopes that the host processing issues will be resolved by the third party payer.
- An activity log entry will state the date/time along with a comment stating that the Rx/fill was left in suspense hold due to a host processing error. The following is an example of the log entry:

2	06/25/08	SUSPENSE	ORIGINAL	OPPHARM, TWO
Comments: SUSPENSE HOLD until 6/26/08 due to host reject error.				

- The Pull Early from Suspense function is not impacted by this added functionality. Users may pull these type prescriptions early from suspense.

There is no user interaction for this function. It initiates when the Print from Suspense [PSO PNDLBL] option is initiated for CMOP prescriptions.

TRICARE and CHAMPVA

If there is an override or bypass for a TRICARE or CHAMPVA prescription and there are no open claim rejections for that prescription, then an electronic claim is not generated from suspense, and the label will be printed when the prescription is processed from suspense. This exception applies to TRICARE and CHAMPVA ePharmacy billable prescriptions and non-billable prescriptions.

If a claim is submitted from suspense for a TRICARE or CHAMPVA prescription, the prescription will be displayed on the Third Party Payer Reject worklist if the claim submission returns any type of reject. Also, non-billable TRICARE and CHAMPVA prescriptions will be displayed on the Third Party Payer Reject worklist. A user must resolve the reject or submit an override before the prescription can be processed through suspense.

Chapter 15: Allergy Order Checks

This chapter describes the display of Allergy Order Checks functionality that appear prior to Clinical Reminder Order Checks (CROCs) and Enhanced Order Checks.

The following changes have been made to the existing allergy order checks:

1. In Backdoor Pharmacy, the system will require the pharmacist to complete an Intervention if the severity value equals 'Severe' before allowing the pharmacist to continue with the order. The intervention functionality will be similar to the Critical Drug-Drug Interactions in backdoor pharmacy today.

Note: Severity for an allergy can ONLY be entered for (O)bserved and NOT (H)istorical Allergy/Adverse Reactions. The user MUST HOLD the GMRA-ALLERGY VERIFY key and complete an observed reaction report to enter MECHANISM and SEVERITY for Observed Allergies/Adverse Reactions.

2. For a Severe Allergy the user is required to enter an intervention and their electronic signature
3. For allergies/adverse reactions with Severity of Mild, Moderate, or Not Entered, the system will continue the same as it does today with the option that allows the pharmacist to enter an intervention at their discretion.
4. All Allergies/adverse reactions are captured and stored with the order number in the ORDER CHECK INSTANCES file (#100.05),, regardless of whether or not an intervention was entered. The information can be viewed from the prescription screen using the hidden action – DA DISPLAY DRUG ALLERGIES .
5. Remote/HDR allergy Signs/Symptoms are now displayed when doing Allergy/ADR Order Checks.
6. Modified Allergy/ADR Order Check to display actual Station Name in lieu of Local or Remote terminology

Examples of Allergy/Adverse Reaction Order Checks:

Mild:

Chapter 16: Clinical Reminder Order Checks

This chapter describes the display of Clinical Reminder Order Checks that appear prior to Enhanced Order Checks. Patch PSO*7*411 brings in new Clinical Reminder Order Checks functionality.

Order Checks now include the ability to view Clinical Reminders (prior to the display of Enhanced Drug-Drug interactions). Reminders are used to aid physicians in performing tasks to fulfill Clinical Practice Guidelines and periodic procedures or education as needed for veteran patients.

```
Now processing Clinical Reminder Order Checks. Please wait ...
=====
*** Clinical Reminder Order Check | Severity: SEVERE ***

Potentially Teratogenic Medication (FDA Category D or C)

Concern has been raised about use of this medication during pregnancy.

1) Pregnancy status should be determined. Discuss use of this medication on the
context of risks to the mother and child of untreated disease. Potential
benefits may warrant use of the drug in pregnant women despite risks.

2) The patient must be provided contraceptive counseling on potential risk vs.
benefit of taking this medication if she were to become pregnant.

*****

Press Return to Continue...:

The 'Teratogenic Medications' Order Check will display for female patients
between the ages of 12 and 50, except those with a known exclusion criterion
(e.g., hysterectomy), or those with a documented IUD placement that is more
recent than a documented IUD removal.
```

Chapter 17: Processing Order Checks

This chapter describes the option used for processing order checks.

Processing Order Checks

[PSO ORDER CHECKS VERIFY]

Using this option, information for medications that have been marked as a drug/drug interaction or a dosing order check warning can be processed. This allows prescriptions with drug/drug interactions or a dosing order check warning to be processed, deleted, or bypassed. An assigned signature code, which will not appear on the screen, must be entered to complete any of these actions. The pharmacist will then be given the option to Verify, Delete, Quit the process, or leave the prescription in a Non-Verified status. The *Electronic Signature code Edit* option can be found under the *User's Toolbox* menu in Kernel V. 8.0.

When processing a drug/drug interaction or dosing order check warning, the profile will list the status of the interacting drug orders to be processed as non-verified (N).

This section describes the Drug/Drug Interaction enhancements made to the Outpatient Pharmacy application included in PSO*7*251 and Maximum Single Dose Check enhancement in PSO*7*372.

Legacy VistA Drug/Drug Interactions have been enhanced to utilize First DataBank's (FDB) Drug Information Framework (DIF) business rules, APIs, and database to provide more clinically relevant Drug Interaction information. No changes have been made to the existing user actions for critical or significant Drug Interactions. The pharmacist will have to log an intervention for local, pending and remote critical interactions and have the option of logging an intervention for local, and remote significant interactions. No action is required for Non-VA medications orders.

FDB custom Drug Interaction tables will be used to store custom changes to FDB standard reference Drug Interaction tables. FDB Drug Interactions that are designated as critical in VistA will have their severity level modified to '1'. All FDB Drug Interactions that are designated as significant in VistA will have their severity level modified to '2'. Any Drug Interaction in VistA that is not in FDB will be added to the FDB custom tables. For these interactions a custom monograph will be created with a clinical effects section.

The following Outpatient Pharmacy order entry processes have been enhanced:

- Entering a new order via backdoor pharmacy options
- Finishing a pending order
- Renewing an order

- Editing an order which results in a new order being created.
- Verifying an order
- Copying an order
- Reinstating a discontinued order

If a dispense drug is associated with an active Non-VA med order, that dispense drug will be used for the Drug Interaction order check. If no dispense drug is associated with an active Non-VA med order, the first active dispense drug marked for Non-VA med use associated with the Orderable Item will be used for the Drug Interaction order check.

If there are no active dispense drugs marked for Non-VA med use that are associated with the Orderable Item, then the first active dispense drug marked for Outpatient use associated with the Orderable item will be used.

If there are no active dispense drugs marked for Outpatient use associated with the Orderable Item, the first active dispense drugs associated with the Orderable Item will be used.

If there are no active dispense drugs associated with the Orderable Item for the Non-VA med order, no Drug Interaction order check will be performed.

Drug interaction order checks will be performed against pending orders.

The software will display to a non-pharmacist (does not hold PSORPH key) when entering a new order via pharmacy backdoor options or when finishing an order entered through CPRS the same Drug Interaction warning information as shown to a pharmacist.

See examples below:

Example: Critical Drug Interaction with Local Rx

```

***CRITICAL*** Drug Interaction with Prospective Drug:
                INDINAVIR 400MG CAP and

                Local Rx#: #####
                Drug: AMIODARONE 200MG TAB (ACTIVE)

*** REFER TO MONOGRAPH FOR SIGNIFICANT INTERACTION CLINICAL EFFECTS

Example: Critical Drug Interaction with Pending Order

CRITICAL Drug Interaction with Prospective Drug:
INDINAVIR 400MG CAP and

Pending Drug: AMIODARONE 200MG TAB
SIG: TAKE ONE TABLET EVERY 8 HOURS

The concurrent administration of amiodarone with indinavir, (1) nelfinavir, (2) ritonavir, (3) or tipranavir coadministered with ritonavir(4) may result in increased levels, clinical effects, and toxicity of amiodarone.

Example: Significant Drug Interaction with Pending Order

SIGNIFICANT Drug Interaction with Prospective Drug:
WARFARIN 5MG TAB and

Pending Drug: ASPIRIN 325MG TAB
SIG: TAKE ONE TABLET EVERY 8 HOURS

*** REFER TO MONOGRAPH FOR SIGNIFICANT INTERACTION CLINICAL EFFECTS

The FDB standard professional Drug Interaction monograph is shown below:

This information is generalized and not intended as specific medical advice. Consult your healthcare professional before taking or discontinuing any drug or commencing any course of treatment.

MONOGRAPH TITLE: Anticoagulants/Salicylates

SEVERITY LEVEL: 2-Severe Interaction: Action is required to reduce the risk of severe adverse interaction.

MECHANISM OF ACTION: Multiple processes are involved: 1) Salicylate doses greater than 3 gm daily decrease plasma prothrombin levels. 2) Salicylates may also displace anticoagulants from plasma protein binding sites. 3) Salicylates impair platelet function, resulting in prolonged bleeding time. 4) Salicylates may cause gastrointestinal bleeding due to irritation.

CLINICAL EFFECTS: The concurrent use of anticoagulants and salicylates may result in increased INR values and increase the risk of bleeding.

PREDISPOSING FACTORS: None determined.

PATIENT MANAGEMENT: Avoid concomitant administration of these drugs. If salicylate use is necessary, monitor prothrombin time, bleeding time, or INR values closely. When possible, the administration of a non-aspirin salicylate would be preferable.

DISCUSSION: This interaction has been reported between aspirin and warfarin and between aspirin and dicumarol. Diflunisal, sodium salicylate, and topical methyl salicylate have been shown to interact with anticoagulants as well. Based on the proposed mechanisms, other salicylates would be expected to interact with anticoagulants as well. The time of highest risk for a coumarin-type drug interaction is when the precipitant drug is initiated, altered, or discontinued.

Following the drug interaction monograph prompts, when a critical or significant drug interaction is generated with a local, pending, Non-VA med or remote medication order, users not holding a PSORPH key shall be presented with the next prompt in the current order entry dialog. They shall not be shown any intervention prompts or dialog.

Following the Drug Interaction monograph prompts, when a significant Drug Interaction is generated with a local, pending, or remote medication order, the user will be presented with ‘Do you want to intervene?’ prompt for the following processes:

- New order entry via backdoor pharmacy options
- Finishing a pending order
- Renewing an order
- Copying an order
- Editing an order which results in creation of a new order
- Verifying an order
- Reinstating an order

Example: Critical Drug Interaction with Local Rx – No Monograph –Backdoor New Order Entry

```
***CRITICAL*** Drug Interaction with Prospective Drug:
                INDINAVIR 400MG CAP and

                Local RX#: #####
                Drug: AMIODARONE 200MG TAB (ACTIVE)
                SIG: TAKE ONE TABLET BY MOUTH THREE TIMES DAILY
                Processing Status: Released locally on 11/08/06@08:55:32 (Window)
                Last Filled On: 11/08/06

The concurrent administration of amiodarone with indinavir, (1) nelfinavir, (2) ritonavir, (3)
or tipranavir coadministered with ritonavir(4) may result in increased levels, clinical
effects, and toxicity of amiodarone.

Professional Monograph
Drug Interaction with WARFARIN and ASPIRIN

This information is generalized and not intended as specific medical advice. Consult your
healthcare professional before taking or discontinuing any drug or commencing any course of
treatment.

MONOGRAPH TITLE: Anticoagulants/Salicylates

SEVERITY LEVEL: 2-Severe Interaction: Action is required to reduce the risk of severe
adverse interaction.

MECHANISM OF ACTION: Multiple processes are involved: 1) Salicylate doses greater than 3 gm
daily decrease plasma prothrombin levels. 2) Salicylates may also displace anticoagulants
from plasma protein binding sites. 3) Salicylates impair platelet function, resulting in
prolonged bleeding time. 4) Salicylates may cause gastrointestinal bleeding due to
irritation.

CLINICAL EFFECTS: The concurrent use of anticoagulants and salicylates may result in
increased INR values and increase the risk of bleeding.

PREDISPOSING FACTORS: None determined.

```

PATIENT MANAGEMENT: Avoid concomitant administration of these drugs. If salicylate use is necessary, monitor prothrombin time, bleeding time, or INR values closely. When possible, the administration of a non-aspirin salicylate would be preferable.

DISCUSSION: This interaction has been reported between aspirin and warfarin and between aspirin and dicumarol. Diflunisal, sodium salicylate, and topical methyl salicylate have been shown to interact with anticoagulants as well. Based on the proposed mechanisms, other salicylates would be expected to interact with anticoagulants as well. The time of highest risk for a coumarin-type drug interaction is when the precipitant drug is initiated, altered, or discontinued.

Drug Interaction with WARFARIN and ASPIRIN

This information is generalized and not intended as specific medical advice. Consult your
healthcare professional before taking or discontinuing any drug or commencing any course of
treatment.

MONOGRAPH TITLE: Anticoagulants/Salicylates

SEVERITY LEVEL: 2-Severe Interaction: Action is required to reduce the risk of severe
adverse interaction.

MECHANISM OF ACTION: Multiple processes are involved: 1) Salicylate doses greater than 3 gm
daily decrease plasma prothrombin levels. 2) Salicylates may also displace anticoagulants
from plasma protein binding sites. 3) Salicylates impair platelet function, resulting in
prolonged bleeding time. 4) Salicylates may cause gastrointestinal bleeding due to
irritation.

CLINICAL EFFECTS: The concurrent use of anticoagulants and salicylates may result in
increased INR values and increase the risk of bleeding.

PREDISPOSING FACTORS: None determined.

PATIENT MANAGEMENT: Avoid concomitant administration of these drugs. If salicylate use is necessary, monitor prothrombin time, bleeding time, or INR values closely. When possible, the administration of a non-aspirin salicylate would be preferable.

DISCUSSION: This interaction has been reported between aspirin and warfarin and between aspirin and dicumarol. Diflunisal, sodium salicylate, and topical methyl salicylate have been shown to interact with anticoagulants as well. Based on the proposed mechanisms, other salicylates would be expected to interact with anticoagulants as well. The time of highest risk for a coumarin-type drug interaction is when the precipitant drug is initiated, altered, or discontinued.

Professional Monograph
Drug Interaction with WARFARIN and IBUPROFEN

MONOGRAPH TITLE: Anticoagulants/NSAIDs

SEVERITY LEVEL: 3-Moderate Interaction: Assess the risk to the patient and take action as
needed.

MECHANISM OF ACTION: The exact mechanism is unknown. Some NSAIDs may displace anticoagulants
from plasma protein binding sites. NSAIDs also have the potential to produce gastrointestinal
ulceration and bleeding. Some NSAIDs may impair platelet function and prolong bleeding times.

CLINICAL EFFECTS: In some patients, NSAIDs have been associated with an increase in the
hypoprothrombinemic effect to anticoagulants.

PREDISPOSING FACTORS: None determined.

PATIENT MANAGEMENT: If concurrent therapy with anticoagulants and NSAIDs is warranted,
patients should be monitored for an increased hypoprothrombinemic response when NSAIDs are
added to the patient's drug regimen. In addition to routine monitoring of INR values, the
patient should be observed for signs of increased effect, including bruising or bleeding. The
time of highest risk for a coumarin-type drug interaction is when the precipitant drug is
initiated or discontinued. Consult with the prescriber before initiating, altering the dose
of, or discontinuing either drug.

DISCUSSION: The effects of NSAIDs on the hypoprothrombinemic response to anticoagulants
appears to vary between patients as well as with different NSAIDs. Documentation is
frequently contradictory - while studies have shown several NSAIDs to have no effect on the

```

pharmacokinetics of warfarin, case reports have documented increased effects with and without bleeding when these same NSAIDs were administered concurrently with warfarin. While celecoxib has been shown not to affect platelet aggregation or bleeding times and had no effects on the anticoagulant effect of warfarin in healthy subjects, increased prothrombin times and bleeding episodes, some of which were fatal, have been reported, predominantly in the elderly, in patients receiving concurrent therapy with celecoxib and warfarin. Rofecoxib has been shown to increase prothrombin times in subjects who received concurrent warfarin therapy. If concurrent therapy with anticoagulants and NSAIDs is warranted, it would be prudent to monitor patients closely for increased anticoagulant effects.

Critical Drug Interaction with Prospective Drug:
WARFARIN (COUMADIN) NA 5MG TAB and

Local Rx#: #####

Drug: AMIODARONE 200MG TAB (SUSPENDED)

SIG: TAKE ONE TABLET BY MOUTH THREE TIMES A DAY

Processing Status: Not released locally (Window)

Last Filled On: 11/08/06

Pending Drug: AMIODARONE HCL (PACERONE) 200MG TAB

SIG: TAKE ONE TABLET BY MOUTH EVERY 8 HOURS

The concurrent administration of amiodarone and an anticoagulant may result
in an increase in the clinical effects of the anticoagulant and an
increased risk of bleeding.(1-22) It may take several weeks of concurrent
therapy before the full effects of this interaction are noted. The effect
of amiodarone on anticoagulant levels may continue for several months after
amiodarone is discontinued.

Allergy/ADR Order Checks (PSO*7*251)

This section will detail the Allergy/ADR order check display within Outpatient Pharmacy.

Outpatient Pharmacy displays the same Allergy/ADR warning only once if both a drug class(es) and drug ingredient(s) are defined for the Allergy/ADR. The drug class and drug ingredient will be listed on the single display. The user is prompted to intervene once. If no intervention is chosen, the standard order entry dialog will resume. Local and remote Allergy/ADRs are combined.

If no Allergy Assessment has been documented for the patient for whom the medication order is being processed, the user will be forced to log an intervention for every medication order entered until the allergy assessment is resolved.

See examples below:

Therapeutic Duplication

This section describes enhancements to the existing VistA Duplicate Class order checks.

The current VistA Duplicate Class checks have been enhanced using the FDB business rules and database, as well as the FDB Enhanced Therapeutic Classification (ETC) system. The Duplicate Class check will now be referred to as the Duplicate Therapy order check. This order check will continue to be performed against active, pending, non-verified orders on hold (initiated through pharmacy or CPRS), expired and discontinued orders. The timeframe for inclusion of expired orders is determined by the display rules on the medication profile. The timeframe for inclusion of locally discontinued orders is determined by the following formula: Discontinued Date (Cancel Date) + Days Supply + 7. This check will be performed on active Non-VA Medication orders.

No changes have been made to the existing user actions for Duplicate Therapy order checks. Users will continue to have the ability to discontinue the order. The existing order will only be discontinued upon acceptance of the order being processed. No discontinue actions can be performed on remote outpatient orders, Non-VA medications, discontinued, and expired orders or orders placed on provider hold through CPRS. If the CANCEL DRUG IN SAME CLASS outpatient site parameter is set to 'No', no discontinue action is allowed on any duplicate class order.

Any remote Outpatient order (from another VAMC or Department of Defense (DoD) facility) using data from Health Data Repository Historical (HDR-Hx) or Health Data Repository-Interim Messaging Solution (HDR-IMS) that has been expired for 120 days or less will be included in the list of medications to be checked.

FDB custom tables will be used to store custom changes to the duplication allowance for a FDB therapeutic classification. Each duplicate therapy class is assigned a duplication allowance. The duplication allowance for a therapeutic allowance determines whether or not the therapeutic duplication warning will be displayed to the user.

The Vendor's (currently FDB) Enhanced Therapeutic Classification (ETC) System is now used in place of the VA Drug Class for the Duplicate Therapy (formerly duplicate class) order checks.

Duplicate Therapy order checks will no longer be processed in pairs. Each duplicate therapy warning includes as many outpatient medication orders as it applies to.

A duplicate therapy warning is only displayed if the number of duplicate therapy matches exceeds the duplication allowance specified for the FDB duplicate therapy class.

The following processes use the enhanced functionality:

- Entering a new outpatient medication order through pharmacy options
- Finishing a pending outpatient medication order
- Renewing an outpatient medication order
- When a new outpatient medication order is created via an edit
- Verification of an outpatient medication order entered or finished by a non-pharmacist
- Copy of an outpatient medication order
- Reinstatement of an outpatient medication order

See illustrations below:

Example: Local RX

```
=====  
*** THERAPEUTIC DUPLICATION(S) *** FAMOTIDINE 20MG TAB with  
  
      Local Rx#: #####  
      Drug: CIMETIDINE 300MG TAB (DISCONTINUED)  
      SIG: TAKE ONE TABLET BY MOUTH AT BEDTIME  
      QTY: 30                      Days Supply: 30  
      Processing Status: Released locally on 3/4/08@08:55:32 (Window)  
      Last Filled On: 11/08/06  
  
Class(es)Involved in Therapeutic Duplication(s): Peptic Ulcer Agents, Histamine-2 Receptor  
Antagonists (H2 Antagonists)  
=====
```

Example: Remote Rx

```
=====  
*** THERAPEUTIC DUPLICATION(S) *** SUCRALFATE 1GM TAB with  
  
      LOCATION: <VA OR DOD FACILITY> Remote Rx#: #####  
      Drug: RANITIDINE HCL 150MG TAB (EXPIRED)  
      SIG: TAKE ONE TABLET BY MOUTH TWICE A DAY  
      QTY: 180                      Days Supply: 90  
      Last Filled On: 11/08/06  
  
Class(es)Involved in Therapeutic Duplication(s): Peptic Ulcer Agents  
=====
```

Example: Pending Order

```
=====  
*** THERAPEUTIC DUPLICATION(S) *** NIZATIDINE 150MG CAP with  
  
      Pending Drug: FAMOTIDINE 20MG TAB  
      SIG: TAKE ONE TABLET BY TWICE DAILY  
  
Class(es)Involved in Therapeutic Duplication(s): Peptic Ulcer Agents  
=====
```

Example: Non-VA Med Order

```
=====
*** THERAPEUTIC DUPLICATION(S) *** FAMOTIDINE 20MG TAB with

      Non-VA Med: CIMETIDINE 300MG TAB
      SIG: 300MG      Schedule: TWICE A DAY

Class(es) Involved in Therapeutic Duplication(s): Peptic Ulcer Agents, Histamine-2 Receptor
Antagonists (H2 Antagonists)
=====
```

If the CANCEL DRUG IN SAME CLASS outpatient site parameter is set to 'No', the following information is shown for the duplicate therapy warning:

```
=====
*** THERAPEUTIC DUPLICATION(S) *** NIZATIDINE 150MG CAP with

      Local Rx ##### (ACTIVE) for CIMETIDINE 300MG TAB

      Local Rx ##### (PROVIDER HOLD) for SUCRALFATE 1MG TAB

      Remote Rx ##### (DISCONTINUED) for RANITIDINE HCL 150MG TAB

      Pending Order for FAMOTIDINE 20MG TAB

      Non-VA Med Order for CIMETIDINE 300MG TAB

Class(es) Involved in Therapeutic Duplication(s): PEPTIC ULCER AGENTS, HISTAMINE-2 RECEPTOR
ANTAGONISTS (H2 ANTAGONISTS)
=====
```

If there is more than one remote, local, pending or Non-VA med order involved in the therapeutic duplication, the order details will be displayed one after the other.

If the same drugs are involved in multiple therapeutic duplications, a single therapeutic duplication warning will be displayed and multiple therapeutic classes will be listed.

If the CANCEL DRUG IN SAME CLASS outpatient site parameter is set to 'No', no discontinue action prompt will be presented.

After all the therapeutic duplication warnings are displayed and if the CANCEL DRUG IN SAME CLASS outpatient site parameter is set to 'Yes', the user will be asked if they want to discontinue any of the orders.

See Examples:

```
Discontinue RX ##### SUCRALFATE 1GM TAB? Y/N

Discontinue Pending Order SUCRALFATE 1GM TAB? Y/N
```

The system will only allow a discontinuation action on active, pending, non-verified and orders placed on hold by pharmacy.

The system will display the following information for the numbered list of orders:

- Prescription number (if applicable)
- Dispense Drug (Orderable item if dispense drug not assigned to order)

- Indicate if the order is pending (with text ‘Pending Order’)

See example below:

```
1. Pending order  AMLODIPINE 5MG/ATORVASTATIN 10MG
2. RX ##### LOVASTATIN 40MG TAB
```

The discontinuation of selected orders by the system will occur at the time the user accepts the order that is being processed.

```
Discontinue order(s)? Y/N  Y es

  1. RX ##### AMLODIPINE 5MG/ATORVASTATIN 10MG TAB
  2. RX ##### CHOLESTYRAMINE 9GM PACKETS

Select (1-2): 1 Duplicate Therapy RX ##### AMLODIPINE 5MG/ATORVASTATIN 10MG TAB will be
discontinued after the acceptance of the new order.
Discontinue order(s)? Y/N  Y es

  1. RX ##### AMLODIPINE 5MG/ATORVASTATIN 10MG TAB
  2. Pending Order CHOLESTYRAMINE 9GM PACKETS

Select (1-2): 2 Duplicate Therapy Pending Order CHOLESTYRAMINE 9GM PACKETS will be
discontinued after the acceptance of the new order.
```

If the user fails to accept the order that is being processed or exits before accepting the order, the system shall not discontinue the order(s) selected.

The message displayed to the user shall contain:

- Indicate that discontinuance was for Duplicate Therapy
- The prescription number or text ‘Pending order’ if order status is pending.
- Dispense Drug (Orderable item if dispense drug not assigned to order)
- Ending with text ‘NOT Discontinued.’

See examples below:

```
Duplicate Therapy  RX ##### CIMETIDINE 300MG TAB NOT Discontinued.
Duplicate Therapy  Pending Order RANITIDINE 150MG TAB NOT Discontinued.
```

Once the order being processed is accepted and there were orders selected for discontinuation, the system shall inform the user when the discontinuation occurs.

The message displayed to the user shall contain:

- Indicate that discontinuance was for Duplicate Therapy
- The prescription number or text ‘Pending order’ if order status is pending.
- Dispense Drug (Orderable item if dispense drug not assigned to order)
- Ending with text ‘has been discontinued.’

See examples below:

```
Duplicate Therapy RX ##### CIMETIDINE 300MG TAB has been discontinued...
Duplicate Therapy Pending Order RANITIDINE 150MG TAB has been discontinued...
```

See Therapeutic Duplication examples below:

Example: Finishing pending order – Therapeutic Duplication with Non-VA med and discontinued order -No discontinue action allowed.

Chapter 18: Dosing Order Checks

MOCHA v2.0 implements the first increment of dosage checks and introduces the Maximum Single Dose Check for simple and complex orders for both Outpatient Pharmacy and Inpatient Medications applications. MOCHA v2.1 b implements the second increment of dosage checks and introduces the Max Daily Dose Check for simple orders for both Outpatient Pharmacy and Inpatient Medications applications. MOCHA v2.0 and MOCHA v2.1 b use the same interface to First Databank (FDB) as MOCHA v1.0.

Note: Please refer to the Dosing Order Checks User Manual for a detailed description of dosing order checks.

Chapter 19: Pull Early from Suspense

This chapter describes the option for pulling prescriptions early from the SUSPENSE file.

Pull Early from Suspense

[PSO PNDRX]

This option is used to pull a specific prescription or all prescriptions for a patient early. If a prescription is pulled early using this option, it will not be associated with any printed batch. A label cannot be reprinted with the *Reprint Batches from Suspense* option if the prescription has been pulled early suspense. In addition, Method of Pickup can be edited. Also, there is no longer a "DELETE FROM SUSPENSE PROMPT." That prompt has been changed to "Pull Rx(s) and delete from Suspense." Yes must be answered to this prompt to pull the prescriptions, and they will always be deleted from suspense. Since prescriptions that are pulled early from suspense do not belong to any printed batch and cannot be reprinted from suspense, there is no reason to leave them in suspense.

If the Label Log indicates that a Label has already printed for this prescription and fill, then the user is asked whether to continue. If the user chooses "No", the label will not print. In addition, the prescription shall be removed from Suspense unless the suspense queue indicates that a user has previously requested a reprint of the suspended prescription. If the user chooses "Yes", the prescription shall continue and will print the label. In the example below, the label will not print but the Prescription will be left on Suspense.

```
Label for Rx#1##### Fill#0 has already been printed
Do you want to continue? No// NO
Reprint Flag is on. Prescription left on suspense.
```

If the prescription being pulled from suspense has an FDA Medication Guide associated, the user will be required to enter a valid FDA Medication Guide printer.

If the routing is changed to "Window" when pulling from suspense early, and the bingo board is being used, those prescriptions will be sent to the bingo board.

If the patient has remote prescriptions, then the text "THIS PATIENT HAS PRESCRIPTIONS AT OTHER FACILITIES" will appear on the report as shown in the following example.

```
PRESCRIPTION PROFILE AS OF 12/30/2008

NAME: PSOPATIENT,ONE

THIS PATIENT HAS PRESCRIPTIONS AT OTHER FACILITIES

PHARMACIST: _____ DATE: _____
```

If a prescription is determined to be an ePharmacy prescription (e.g., third party electronically billable), an electronic claim will be sent by ECME to the third party payer. The communication events between Outpatient Pharmacy and ECME are recorded in the ECME Log section of each prescription. The ECME log can be viewed in the patient Medication Profile screen (Activity Log option - AL) and also from the *View Prescriptions* option. If the claim submission returns a Refill Too Soon (79) or Drug Utilization Review (88 or 943) reject, the label is not printed for the prescription and it is moved to the Refill Too Soon/DUR section of the patient Medication Profile screen until the user resolves the reject. The prescription will also display on the Third Party Payer Reject worklist.

Chapter 20: Queue CMOP Prescription

This chapter describes the option for suspending prescriptions for mail-routed CMOP drugs.

QUEUE CMOP Prescription

[PSO RX QUEUE CMOP]

The *Queue CMOP* Prescription option allows the users (including pharmacy technicians) to put mail-routed prescription(s) for CMOP drugs on suspense for CMOP.

Example: Queue CMOP Prescription

```
Select Suspense Functions Option: QUEUE CMOP Prescription
Enter the Rx # to queue to CMOP: #####
```

If the prescription does not have a routing of Mail, has already been released, or is not for a CMOP drug, and does not pass all the other normal checks for CMOP, it will not be put on suspense for CMOP.

Chapter 21: Releasing Medication

This chapter describes the option used for releasing medications.

Release Medication

[PSO RELEASE]

The *Release Medication* option is used at the time the prescription is filled and ready to be given to the patient. Inventory is decreased, certain fields in the file are updated, and a copay is generated if the action is applicable to the prescription. With this option, prescriptions can be batch processed. Communication is made with the Integrated Funds Control, Accounting and Procurement (IFCAP) and Integrated Billing (IB) software to generate copay charges. IFCAP and IB software handle patient billing, tracking of charges, and payment received.

The copay status of a prescription is re-evaluated whenever a fill is released. Various actions can occur based on changes to the criteria that determine the copay status of a prescription. The actions that may result at the time a fill is released are described below.

1. **No action is taken.** No changes to the criteria that determine copay status of a prescription have occurred.
2. **The copay status of the prescription is automatically reset and an entry is placed in the copay activity log.**

Example: The drug for which the prescription is written is no longer marked for investigational use. The copay status of the prescription is reset from No Copayment to Copay.

3. **The copay status of the prescription is automatically reset, an entry is placed in the copay activity log, and a MailMan message is generated detailing missing information required for user follow up.**

Example: The drug for which the prescription is written is no longer marked for investigational use. The copay status of the prescription is reset from No Copayment to Copay. The patient has been documented as being exposed to Southwest Asia Conditions during Persian Gulf War service since the last fill. A MailMan message will be generated informing the user that the 'Is this Rx for treatment related to service in SW Asia?' question must be addressed and documented using the *Reset Copay Status/Cancel Charges* option.

4. **A MailMan message is generated detailing missing information required for user follow-up.**

Example: A veteran is documented as having Agent Orange exposure. Refill #2 for a prescription entered into the system before the new medication copay exemptions took effect on January 1, 2002 is released. The prescription is copay eligible. A MailMan message will be generated informing recipients that the 'Is this Rx for treatment of Vietnam-Era Herbicide (Agent Orange) exposure?' question must be addressed. The copay status of the Rx may change based on the response entered using the *Reset Copay Status/Cancel Charges* option.

If a MailMan message is generated at the time a prescription fill is released, the recipients of the message will be the provider of record, the pharmacy user who finished the order, and holders of the PSO COPAY key. The message lists the patient name, prescription number, and medication ordered, current copay status, and applicable copay exemption questions that need addressing to determine the prescription's copay status. The *Reset Copay Status/Cancel Charges* option must be used to enter the responses to the medication copay exemption questions listed in the MailMan message. If responses are not entered for the applicable medication copay exemption questions, any subsequent refills when released for this prescription and possibly other prescriptions for this patient will continue to generate the same MailMan message.

Example: MailMan Message

Providers:
Please respond with your answer to the question(s) as a reply to this
message. The prescription will be updated by the appropriate staff.

Staff assigned to update the Prescription responses:
Please use the RESET COPAY STATUS/CANCEL CHARGES option to enter the responses
to the questions above, which may result in a Rx copay status change and/or
the need to remove VA copay charges or may result in a charge to the patient's
insurance carrier.

Note: The SC question is now asked for Veterans who are SC>49% in order to
determine if the Rx can be billed to a third party insurance. These Veterans
will NOT be charged a VA copay.

Supply, nutritional and investigational drugs are not charged a VA copay but could be
reimbursable by third party insurance.

Enter message action (in IN basket): Ignore//
```

An annual copayment cap is applied to patients in specific priority enrollment groups. Once a patient reaches the annual copayment cap, no further medication copay charges will be billed for the calendar year. An entry to that effect is made to the Copay Activity Log. The '\$' indicator remains next to the prescription number to indicate that the prescription is still copay eligible.

Integrated Billing software keeps track of all prescription fills not billed due to the annual cap.

Example: Copay Activity Log When Annual Cap Reached

Copay Activity Log:				
#	Date	Reason	Rx Ref	Initiator Of Activity
1	10/23/01	ANNUAL CAP REACHED	ORIGINAL	OPPHARMACIST11,THREE
Comment: NO BILLING FOR THIS FILL				

If for whatever reason (e.g. prescription fill is returned to stock and copay charges cancelled), a patient falls below the annual copayment cap, the Integrated Billing package can initiate copay charges to bring the patient back up to the annual copayment cap. Integrated billing software will go back and bill a copay charge for those fills previously not charged due to the annual cap, bringing the patient’s total copayment up to the cap. Whenever this occurs an entry will be placed in the copay activity log.

Example: Copay Activity Log With IB-Initiated Charge

Copay Activity Log:				
#	Date	Reason	Rx Ref	Initiator Of Activity
1	10/23/01	ANNUAL CAP REACHED	ORIGINAL	OPPHARMACIST11,THREE
Comment: NO BILLING FOR THIS FILL				
2	10/23/01	IB-INITIATED COPAY	ORIGINAL	OPPHARMACIST11,THREE
Comment: PARTIAL CHARGE				

If a prescription is not in a releasable status, the user will be given an error message, such as:

- Prescription has a status of (status) and is not eligible for release.
- Prescription was deleted.
- Improper barcode format.
- Non-existent prescription.

Copay is not charged for a partial fill.

Important: This is a mandatory function that must be used by the pharmacy.

Fixed Medication Copayment Tiers (FMCT)

Patch PSO*7*460 introduces copay tiers for drugs. The Chief Business Office (CBO) requests updating IT systems to conform with changes to qualified prescription medications within Vista and VA National and Local Drug Files, to establish fixed copayment amounts depending on the class of medication (Tier 1, Tier 2, or Tier 3) while still maintaining the utility of the \$700

copayment cap per calendar year for PG 2-8, as applicable, on an individual Veteran basis. The PBM is requesting the addition of Tier 0 for excluded and exempt products with no copayment. Changes to Outpatient Pharmacy will be seen in the copay activity log.

```
Rx #: ##### Original Fill Released: 08/23/16
Routing: Window Finished by: REDACTED

Copay Activity Log:
# Date Reason Rx Ref Initiator Of Activity
=====
1 08/23/16 COPAY RESET ORIGINAL REDACTED
Comment: Copay Tier 1 Old value=No Copay New value=Copay
```

Changes to Releasing Orders function - Digitally Signed Orders Only

The release function in the *Patient Prescription Processing* option has been modified with patch PSO*7*131 to require that all digitally signed orders for Schedule II controlled substances (CSII orders) be released through the *Outpatient Rx* option in the *Controlled Substances* (CS) menu. If PIV/PKI is activated and an order is digitally signed, the user will be advised that the order must be released through the *Outpatient Rx* option in the *Controlled Substances* (CS) menu. The same message will display if a user attempts to release a digitally signed CSII order during Speed Release or when using the *Release Medications* option.

A new security key named "PSDRPH", was introduced by the Controlled Substances patch PSD*3*76 that authorizes pharmacists to finish/verify digitally signed Schedule II-V CS orders placed via CPRS.

When processing a digitally signed pending order, the integrity of the original order placed in CPRS is now being checked to ensure that the data fields listed below are not altered from the time the order is signed in CPRS and later selected for processing in backdoor pharmacy. This is done by passing the data elements listed below to a Kernel Application Programming Interface (API), Integration Control Registration (ICR) #3539 along with the CPRS hash count provided by ICR #5709. The Kernel API compares these two hash values and returns an "OK" if the pending order is unaltered; otherwise, a "-1^error code^error message" is returned.

Example: "-1^89802016^Mismatched digital signature hash values."

The following fields are used in the hash check:

- Date of Issuance
- Full Name and Address of the Patient
- Drug Name
- Quantity Prescribed
- Directions for Use
- Prescriber Name

- Prescriber Address (site address)
- Prescriber DEA / VA Registration Number
- Order Number (CPRS)

The Kernel API will also check for the validity of the PIV card certificate. If the certificate is revoked or expired, the API will return the appropriate error code.

If the error code is related to 'certificate expired', the pending order will be processed (will not be auto-discontinued), and a notification will be sent to the provider with the message "Rx processed: PIV Card Cert Expired - NO ACTION REQ".

If the error code is related to hash mismatch, or the PIV card certificate is revoked, the following events will be triggered during pending order processing:

- The order will be auto discontinued.
- First line of the pending order screen will have the message "Digital Signature Failed: Corrupted (Hash mismatch)" or "Rx NOT processed: PIV Card Certificate Revoked", and the message will be highlighted.
- The status bar of the screen will have the message "Signature Failed: Corrupted (Hash mismatch)" or "PIV Certificate Revoked."

A mail message will be generated to the holders of the PSDMGR key notifying that the order has been auto-discontinued (similar to the example listed below). If the discontinuation is due to a hash mismatch as a result of altering one of the fields listed above, the mail message will show the altered fields with the discrepancies as shown in the following example.

Example: Mail Message of Discontinuation Due to Hash Mismatch

```

Subj: DIGITALLY SIGNED NEW ORDER AUTO DISCONTINUED [#196353]

Differences in CPRS and Pharmacy Pending File		
Data Name	CPRS File	Pharmacy Pending File
-----	-----	-----
QTY PRESCRIBED	15	30

The following changes have been made for finishing a CS order:

- When finishing a pending CS order, if the user does not hold the new PSDRPH security key, the order will be marked as 'Non-Verified'. To verify a 'Non-Verified' CS order, the PSDRPH security key is now required. To discontinue a pending CS order, the PSDRPH security key is now required.
- The pending order screen will now display the provider's DEA/VA #, the DETOX# (if available), and the site address.
- When finishing a new pending CS order, the dosage, provider name, or the number of refills will not be allowed editing; however, the user will be allowed to select other possible dosages for the same drug if available. If the changes to the dispense drug results in creating a new order, the user will be notified by the message " Digitally Signed Order - No such changes allowed." If pharmacy wants to make such changes, then they have to discontinue (DC) the pending order and start a new order. However, the user will be allowed to select other possible dosages for the same drug that does not change the prescribed dosage.
- When finishing a new pending CS order, the day supply or the quantity will not be allowed to increase but can be decreased. If the day supply is decreased, the number of refills will also be adjusted accordingly depending on the drug setup (maximum refills, not refillable, etc.). The quantity may be auto-calculated to a higher quantity by the system only when the dosage remains the same, but the dispense drug strength is changed – i.e. 2mg tablets #30 is changed to 1mg tablets, the Sig is updated, and the system changes the quantity to 60. A manual change to a higher quantity is not allowed.
- When finishing a pending CS order or verifying a CS order by the PSDRPH key holder, any edit to some of the key fields, such as dispense drug, dosage, dispense units, issue date, day's supply, quantity, or number of refills, will now be captured and stored in the activity log.

In patch PSO*7*99, a change was made for pending orders not to recalculate the quantity for CS drugs on selecting a different strength of the same drug and resulting in the same prescribed dosage. This change is removed in patch PSO*7*391.

Changes to Releasing Orders function - ScripTalk®

The release function in the *Patient Prescription Processing* option has been modified to display a message to the user when the site is using a Bingo Board and when the patient is enrolled in

ScripTalk®. This message will alert the user that the patient is enrolled in ScripTalk® and may need to have a verbal announcement that the prescription(s) is ready, instead of a visual announcement.

Example: Releasing Medication to a ScripTalk® Patient

```
Prescription Number 400693 Released
No Refill(s) to be Released
No Partial(s) to be Released

OPPATIENT16,ONE added to the WAITING display.
This patient is enrolled in ScripTalk and may benefit from
a non-visual announcement that prescriptions are ready.

Press Return to Continue:
```

Changes to Releasing Orders Function – Signature Alert

With Patch PSO*7*385, the release function in the *Patient Prescription Processing* option has been modified to display a message to the user when an ECME-billable prescription is being released as a window fill. This message will alert the user that the patient’s signature must be obtained. The user is not required to press <Enter> to continue or respond to the alert in any other manner.

Example: Releasing an ePharmacy Window Fill

```
Prescription Number ##### Released
No Refill(s) to be Released
No Partial(s) to be Released
```

Changes to Releasing Orders function – HIPAA NCPDP Global

The release function has been modified with patch PSO*7*148 to perform National Drug Code (NDC) validation for ePharmacy prescriptions. These changes also affect the Controlled Substance prescription release, which is performed through the Controlled Substances package.

The user releasing the third-party electronically billable prescription will be prompted for the NDC for the drug being dispensed to the patient. The NDC code previously retrieved when the prescription was finished will be presented as the current (default) NDC for the prescription. The other possible values that the user will be able to choose from are:

- NDC field value in the DRUG file, if valid and different than the current prescription NDC.
- LAST LOCAL NDC field value in NDC BY OUTPATIENT SITE sub-file in the DRUG file for the division filling the prescription, if valid and different than the current prescription NDC.
- NDC CODE field values in the SYNONYM sub-file in the DRUG file, if valid and different than the current prescription NDC.

If the NDC dispensed is not on the list to select, the user must contact the ADPAC or other designated person to add the NDC in a synonym multiple for that drug in file 50.

If the NDC code selected matches the current NDC in the prescription no further NDC processing is required. However, if the user selects a different NDC, the following steps will occur:

1. Outpatient Pharmacy V. 7.0 will instruct ECME to reverse the previous claim for the previous NDC code and submit a new claim for the newly selected NDC code.
2. The newly selected NDC code will be saved in the LAST LOCAL NDC field in NDC BY OUTPATIENT SITE sub-file in the DRUG file for the division filling the prescription.

The following examples show the new prompt for NDC validation during the release process.

Example: Releasing an ePharmacy Order – Selecting Default NDC

```
Select Outpatient Pharmacy Manager Option: RELEASE Medication
Enter PHARMACIST: OPPHARMACIST4,THREE
Enter/Wand PRESCRIPTION number: #####
NDC: #####-####-## // ?
Select one of the following valid NDC code(s) below:
    1 - 00580-0277-10
NDC: #####-####-## // <Enter> #####-####-##
    Prescription Number ##### Released
    No Refill(s) to be Released
    No Partial(s) to be Released
```

Example: Releasing an ePharmacy Order – Selecting Different NDC

```
Select Outpatient Pharmacy Manager Option: RELEASE Medication
Enter PHARMACIST: OPPHARMACIST4,THREE
Enter/#####-####-##// ?
Select one of the following valid NDC code(s) below:
    1 - #####-####-##
    2 - #####-####-##
NDC: #####-####-## // 2 #####-####-##

Chapter 22: Returning Medication to Stock

This chapter describes the option used for returning medication to stock.

Return Medication to Stock

[PSO RETURNED STOCK]

This option is used when a prescription has been released, but has been refused, not picked up, or not given to the patient for some reason. Comments can be entered to explain why the medication was returned to stock.

A prescription can only be returned to stock if the prescription status is Active, Discontinued, or Expired. If the prescription is not released, there is no need to return it to stock. This function increases the inventory so that a more current level is maintained by the Outpatient Pharmacy package and removes the copay charge if it is applicable to the prescription. It is highly recommended that this option be used.

When an ePharmacy prescription is returned to stock, the software checks if the it has a PAYABLE claim, if so, a request is sent to ECME to electronically reverse the claim with the third party payer. Also, if the prescription contains any unresolved DUR or REFILL TOO SOON reject, it will be marked resolved with the reason 'Prescription Returned To Stock'.

If a copay charge is removed by returning a prescription fill to stock, an entry will be placed in the copay activity log documenting the action.

Example: Returning Medication to Stock

```
Copay Activity Log:
#   Date       Reason                Rx Ref      Initiator Of Activity
-----
1   11/21/01    REMOVE COPAY CHARGE  REFILL 1    OPPHARMACIST9,THREE
Comment: RX REFUSED Returned to stock
```

If an original fill is returned to stock and reprinted, it can be released again. If a refill is returned to stock, the refill is deleted so the patient will not lose it.

Chapter 23: Ordering/Processing a Prescription

This chapter describes the menu and options used in processing prescriptions.

Rx (Prescriptions)

[PSO RX]

The *Rx (Prescriptions)* menu allows the pharmacist to manipulate information that pertains to prescriptions. Actions are taken on prescriptions via this menu. Some previous options, such as renew, refill, edit, release, are now actions in the *Patient Prescription Processing* option found on this menu. Also, data now must be entered for the individual fields that are used to build a Sig.

Default values display for possible dosages, schedules, and patient instructions. When possible, default quantities are calculated using data entered into specific fields during medication order entry.

The following options are available on this menu:

- *Patient Prescription Processing*
- *Barcode Rx Menu ...*
- *Check Drug Interaction*
- *Complete Orders from OERR*
- *Discontinue Prescription(s)*
- *Edit Prescriptions*
- *ePharmacy Menu ...*
- *List One Patient's Archived Rx's*
- *Manual Print of Multi-Rx Forms*
- *OneVA Pharmacy Prescription Report*
- *Reprint an Outpatient Rx Label*
- *Signature Log Reprint*
- *View Prescriptions*

Patient Prescription Processing

[PSO LM BACKDOOR ORDERS]

This option is used to process outpatient medication through OERR V. 3.0. The *Patient Prescription Processing* option is found on the *Outpatient Pharmacy Manager Menu* and the *Pharmacist Menu* under the *Rx (Prescriptions)* option. This option uses List Manager features to allow the outpatient pharmacy manager and pharmacist to perform the following actions on a prescription without leaving this option.

- Enter a new Rx
- Discontinue
- Edit
- Refill
- Renew
- Hold
- Unhold
- Order a partial
- Release
- Reprint
- Copy
- Verify a prescription
- Show a profile
- View activity log
- Pull early from suspense

If the order utilizes the EXCEPT conjunction, copy, renew, and reinstate will no longer be allowed.

Patient demographics and Clinical Alerts display in the header area when using this option. Refer to [Patient Demographics and Clinical Alerts](#) for more information.

When a new drug order is processed (new, renewal, finish, verify, copy, or an edit that creates a new order), order checks are performed. These include checking for Duplicate Drug, Maximum Single Dose, Duplicate Drug Therapy, Drug-Drug Interaction, and Drug-Drug Allergy.

With the introduction of enhanced Order checks (PSO*7*251), Outpatient Pharmacy generated order checks are displayed in this sequence:

- System Errors
- Duplicate Drug
- Clozapine
- Allergy/ADR (local & remote) or Non-Assessment
- CPRS checks generated backdoor (3 new checks)
- Drug Level Errors
- Local & Remote Critical Drug Interactions

- Local & Remote Significant Drug Interactions
- Local & Remote Duplicate Therapy

Additionally, the order check display sequence is applied to the following processes:

- Backdoor new order entry
- Finishing a pending order
- When renewing an outpatient medication order
- Creating a new order when editing an outpatient medication order
- Verifying an outpatient medication order.
- Copying an outpatient medication order
- Reinstating a discontinued outpatient medication order.

There are three levels of error messages associated with Enhanced Order Checking (Drug Interactions, Duplicate Therapy, and Dosing):

1. System - When such an error occurs, no Drug Interaction, Duplicate Therapy, or Dosing order checks will be performed. Other order checks that do not use the COTS database (FDB) will still be performed such as allergy/ADRs, duplicate drug (for outpatient only), and new CPRS order checks, etc.
2. Drug - The second error level is for the drug and no Drug Interaction, Duplicate Therapy, or Dosing order checks will be performed for a specific drug. Drug level errors can occur for the prospective drug (drug being processed) or the profile drug. If a drug level error occurs on the prospective drug, no profile drug errors will be displayed. The only exception to this is when you are processing an IV order with multiple prospective drugs (i.e. multiple IV Additives). Profile drug level errors will only be shown once per patient session.
3. There are two reasons that a drug level error is generated; the drug is not matched to NDF or the drug is matched to NDF, but the VA Product to which it is matched does not have a GCNSEQNO assigned or the GCNSEQNO assigned does not match up to the GCNSEQNO in the COTS database. The latter (GCNSEQNO mismatch) is rare.
4. Order - The third error level is for the order. Order level errors will only occur with dosing order checks. Please see the *Dosing Order Check User Manual* for more information.

See table below for an explanation of the errors:

Table 11: Errors

Error Level	Error Message	Reason	Why message is being displayed.
System	No Enhanced Order Checks can be performed.	Vendor Database cannot be reached.	The connectivity to the vendor database has gone down. A MailMan message is sent to the G. PSS ORDER CHECKS mail group when the link goes down and when it comes back up.
System	No Enhanced Order Checks can be performed.	The connection to the vendor database has been disabled.	A user has executed the Enable/Disable Vendor Database Link [PSS ENABLE/DISABLE DB LINK] option and disabled the interface.
System	No Enhanced Order Checks can be performed.	Vendor database updates are being processed	The vendor database (custom and standard data) is being updated using the DATUP (Data Update) process.
System	No Enhanced Order Checks can be performed.	An unexpected error has occurred.	There is a system network problem and the vendor database cannot be reached or a software interface issue.
System	No Dosing Order Checks can be performed	Dosing Order Checks are disabled	A user has executed the Enable/Disable Dosing Order Checks [PSS Dosing Order Checks] option.
Drug	Enhanced Order Checks cannot be performed for Local or Local Outpatient Drug: <DRUG NAME>	Drug not matched to NDF.	The local drug being ordered/ or on profile has not been matched to NDF. Matching the drug to a VA Product will eliminate this message.
Drug	Order Checks could not be done for Remote Drug: <DRUG NAME>, please complete a manual check for Drug Interactions and Duplicate Therapy. Remote order indicator		If this error message is displayed, it means that the VA product that the local or remote drug being ordered/or on the local or remote profile does not have a GCNSEQNO or in rare cases, the GCNSEQNO assigned to the VA Product does not match up with a GCNSEQNO in the vendor database.
Drug	Enhanced Order Checks cannot be performed for Orderable Item: <OI NAME>	No active Dispense Drug found.	Highly unlikely that this error would be seen. At the time the order check was being performed the orderable item did not have an active dispense drug associated.

See Examples below to illustrate error sequences.

OneVA Pharmacy Processing within Patient Prescription Processing

Note: For information regarding OneVA Pharmacy processing, please see Appendix A, OneVA Pharmacy User Manual.

OneVA Pharmacy patch PSO*7*454 introduces new messaging to query the Health Data Repository/Clinical Data Services (HDR/CDS) Repository for prescriptions from other VA Pharmacy locations and displays them in the Medications Profile view. The new query will only execute if the patient has been treated at more than one VA Medical Center. The query retrieves all prescriptions associated with the patient from the repository, which requires additional time. To execute the HDR/CDS Repository query, the user must answer ‘YES’ to the ‘Would you like to query prescriptions from other OneVA Pharmacy locations?’ prompt. When the user responds ‘YES’ to the OneVA Pharmacy prompt, the system displays the OneVA Pharmacy Query Message.

The OneVA Pharmacy’s feature to query the HDR/CDS Repository will not execute if the patient has only one entry in the ‘TREATING FACILITY LIST file (#391.91)’.

The system identifies and queries the HDR/CDS Repository for all the prescriptions that are active, suspended, on hold, expired (within 120 days), or discontinued (within 120 days).

If the query connection to the HDR/CDS Repository fails, a message will display stating ‘The system is down or not responding. Could not query prescriptions at other VA Pharmacy locations. The user should press return to continue and contact local support if this problem persists.

When the system is down message displays, the VistA session will continue to display the local/dispensing sites prescriptions on the Medication Profile view. There will be no indication if a patient is registered or has prescriptions on other sites (i.e., remote site/OneVA Pharmacy prescriptions will not display on the Medication Profile view.)

If the patient does not have any prescription records from other VA Pharmacy locations, matching the search criteria, a message will display stating the “Patient found with no prescription records matching search criteria.”

Example: OneVA Pharmacy Processing

Duplicate Drug Order Check

The Duplicate Drug warning displays the following information for a local or remote outpatient medication order:

Example: Local Rx

Duplicate Drug in Local Rx:

```
Rx #: ####
Drug: ASPIRIN 81MG EC TAB
SIG: TAKE ONE TABLET BY MOUTH EVERY MORNING
QTY: 30 Refills remaining: 11
Provider: PSOPROVIDER,TEN Issued: 03/24/08
Status: Active Last filled on: 03/24/08
Processing Status: Released locally on 3/24/08@08:55:32 (Window)
Days Supply: 30
```

Example: Remote Rx

Duplicate Drug in Remote Rx:

```
LOCATION NAME: <NAME OF FACILITY>
Rx #: ####
Drug: ASPIRIN 81MG EC TAB
SIG: TAKE ONE TABLET BY MOUTH EVERY MORNING
QTY: 30 Refills remaining: 11
Provider: PSOPROVIDER,TEN Issued: 03/24/08
Status: Active Last filled on: 03/24/08
Days Supply: 30
```

Duplicate Drug Order Check for Pending Orders:

Example: Pending Order

DUPLICATE DRUG in a Pending Order for:

```
Drug: ALLOPURINOL 300MG TAB
SIG: TAKE ONE TABLET BY MOUTH EVERY MORNING
QTY: 180 # of Refills: 3
Provider: PSOPROVIDER,TEN Issue Date: 03/24/08@14:44:15
Provider Comments: <only if data present>
```

Duplicate Drug order check for Non-VA Medications

Example: Non-VA Med Order

Duplicate Drug in a Non-VA Med Order for

```
Drug: CIMETIDINE 300MG TAB
SIG: 300MG
Schedule: AT BEDTIME
Medication Route: MOUTH
Start Date: <NOT ENTERED> CPRS Order #: XXXXX
Documented By: PSOPROVIDER,TEN on Mar 24, 2008@14:44:15
```

Duplicate Drug Order Check business rules:

- If the DRUG CHECK FOR CLERK outpatient site parameter is set to NO, the system will not prompt a clerk (no PSORPH key) to discontinue the order when a Duplicate Drug order check occurs.

- If the DRUG CHECK FOR CLERK outpatient site parameter is set to NO, and a new order is being entered by a clerk (no PSORPH key) via the pharmacy backdoor, the order being processed will be deleted by the system immediately after the duplicate drug warning is displayed.
- If the duplicate drug is a remote order, the system will allow the clerk to process the new order after the display of the duplicate drug warning.
- If the DRUG CHECK FOR CLERK outpatient site parameter is set to NO, and a clerk (no PSORPH key) is finishing a pending order:
 - When the VERIFICATION outpatient site parameter is set to YES and the duplicate drug is a local order, the system will return the user back to the detailed order ListMan display with the available actions of Accept/Edit/Discontinue.
 - When the VERIFICATION outpatient site parameter is set to YES and the duplicate drug is a remote order
 - A duplicate drug warning will be displayed
 - The clerk will be allowed to finish the order
 - The finished order will have a status of non-verified
 - When the VERIFICATION outpatient site parameter is set to NO, the clerk will not be allowed to finish the order,
 - If the DRUG CHECK FOR CLERK outpatient site parameter is set to Yes, a clerk (no PSORPH key) will see the same discontinue prompts as a pharmacist,
- If the VERIFICATION outpatient site parameter is set to YES when reinstating an order, no duplicate message will be displayed and the reinstated order will have a non-verified status.
- No discontinuation prompt will be displayed for a duplicate Non-VA medication order in any situation.

After the Duplicate Drug warning is displayed, the system will ask the user if they wish to discontinue the order.

Active Order

Discontinue RX ##### SUCRALFATE 1GM TAB? Y/N

Pending Order

Discontinue Pending Order for ALLOPURINOL 300MG? Y/N

If the user chooses not to discontinue the displayed order when entering a new order via the pharmacy backdoor, the system will delete the order being entered (prospective drug).

If the user chooses not to discontinue the displayed order when finishing a pending order, the system will redisplay the pending order and prompt them to accept, edit or discontinue the order.

If the DRUG CHECK FOR CLERK outpatient site parameter is set to NO, and if the clerk (no PSORPH key) is copying an order, the system will return them back to the detailed order ListMan display where the copy action was initiated.

If the DRUG CHECK FOR CLERK outpatient site parameter is set to NO and the VERIFICATION outpatient site parameter is set to YES when a clerk (no PSORPH key) is reinstating a discontinued order for a medication for which an active local order exists, the system will delete the active order and reinstate the discontinued order.

If the DRUG CHECK FOR CLERK outpatient site parameter is set to NO and the VERIFICATION outpatient site parameter is set to NO when a clerk is reinstating a discontinued order for a medication for which an active local order exists, the system will display a duplicate drug warning, but the order will not be reinstated.

If the DRUG CHECK FOR CLERK outpatient site parameter is set to YES or NO and the VERIFICATION outpatient site parameter is set to NO when a clerk is reinstating a discontinued order for a medication for which a remote order exists, the system will display a duplicate drug warning and the reinstated order will be assigned an active status.

If the DRUG CHECK FOR CLERK outpatient site parameter is set to YES or NO and the VERIFICATION outpatient site parameter is set to YES when a clerk is reinstating a discontinued order, the system will not display a duplicate drug warning and the reinstated order will be assigned a non-verified status.

If a duplicate drug warning is displayed for a medication order, it will not be included in a duplicate therapy order check.

The following examples illustrate the conditions described above.

Example: Duplicate Pending Order

```

The CPRS Auto Refill field can be updated using the *Pharmacy Systems Parameter Edit* [PSS MGR] option. This parameter works in conjunction with the PSOUATRF security key.

- When the CPRS Auto Refill field is set to YES and the PSOUATRF security key has been assigned to at least one user, all refills placed in CPRS by the provider are processed and suspended with the next fill date and all routing is set to Mail automatically.

- When the CPRS Auto Refill field is set to NO or if the PSOAUTRF security key is not assigned, the manual refill process is required.

If the auto refill process fails, the order will not be processed and will require manual refilling. A MailMan message will be sent to the holders of the PSOAUTRF key describing the reason for not filling the auto refill. All of the refill activity, manual or automatic, is recorded in the Activity Log entry notes.

With Patch PSO*7*233, when a name is selected, if the patient's address is flagged with a Bad Address Indicator, a warning message is displayed. If the user has proper authorization (i.e., the PSO SITE parameter "EDIT PATIENT DATA" is set to Yes or the user holds the new PSO ADDRESS UPDATE security key), a prompt appears asking if the user wants to update the address. Also, for the *Patient Prescription Processing, Complete Orders from OERR, and Action Profile (132 COLUMN PRINTOUT)* options, if a temporary address has no end date, the following text is now displayed: "(Temp address from XXX 99,9999 till (no end date))".

Following the installation of patches PSO*7*207 and OR*3*238 (Remote Data Interoperability (RDI) trigger patch), order checks will be made using additional data from the Health Data Repository Interim Messaging Solution (HDR-IMS) and the HDR-Historical (HDR-Hx). This will contain both Outpatient orders from other VAMCs as well as from Department of Defense (DoD) facilities, if available. All remote prescription statuses will be included in order checking for a new order being processed from within backdoor outpatient pharmacy and for new orders being placed by CPRS or by Inpatient Medications. Any remote Outpatient order that has been expired or discontinued for 30 days or less will be included in the list of medications to be checked.

The check for remote data availability is performed upon entering the patient's profile, rather than on each order, to ensure that both remote data and local data are used for order checking.

Once the above patches have been installed, a new comment for remote order checks, "Now doing remote order checks. Please wait..." has been added to the screen. The previous comment, "Now doing order checks. Please wait..." is replaced by: "Now doing drug interaction and allergy checks. Please wait..."

The following will not be included in order checks (after patch PSO*7*243):

- Prescriptions with a status of "DELETED" in the STATUS field in the PRESCRIPTION file from a remote facility.
- Prescriptions with a missing expiration date, unless the ISSUE DATE field of the PRESCRIPTION file is within the past year.

Remote order checking added (after patch PSO*7*243):

- For drug class when orders are placed for locally defined drugs.

- Allergy Analgesic class order checks only match against the specific 5-character class if the class begins with “CN10”.

If for any reason remote order checks cannot be performed, the following message displays:

```
Remote data not available - Only local order checks processed.
```

For remote order checking, if the remote order does not have a VA PRODUCT file VUID, then it will not be included in drug-drug order checks. However, future patches are planned to send/receive the drug class to the HDR, and then it will be possible to use non-standardized remote orders for duplicate drug class checks.

When an order is an ePharmacy order (determined to be third party billable), the billing data is sent to the Electronic Claims Management Engine (ECME) when an order is finished. ECME sends a message back to Outpatient Pharmacy displaying the status of the claim. This message displays for new, edited, copied, and renewed ePharmacy orders.

```
Is this correct? YES// <Enter>

Titration

Introduced in PSO*7*313, the user has the ability to mark prescriptions as 'Titration to Maintenance' when finishing prescriptions from CPRS as well as via the Patient Prescription Processing [PSO LM BACKDOOR ORDERS] option by invoking the new hidden action 'TM' - Mark Rx as Titration. This action will result in preventing the following actions to be taken on the prescription: Refill, Renewal (including via CPRS), and Copy and editing of any field that requires a new Rx to be created. This action will also set the new field TITRATION RX FLAG (#45.3) in the PRESCRIPTION File (#52) as well as the new field TITRATION DOSE RX (#45.1) in the PRESCRIPTION File (#52). Prescriptions that are marked as Titration/Maintenance will have the letter 't' postfix to the RX # as seen below (entry #1):

```

:                               :                               :
#  RX #      DRUG                QTY ST  DATE  FILL  REM  SUP
-----ACTIVE-----
1 ##### AMOXAPINE 50MG TAB      30 S  09-26 09-26  2  30
2 ##### AMOXICILLIN 250MG CAP  30 A  08-18 08-18 11  30
3 ##### KALETRA                  3 A  09-29 09-29  0  3
:                               :

```

Note: A prescription can be unmarked as Titration/Maintenance by invoking the same TM action on an already marked prescription.

Note: With the release of PSO*7*505, the ‘Titration and Maintenance’ functionality is blocked for all controlled substance prescriptions.

There is also a new hidden action in the Patient Prescription Processing [PSO LM BACKDOOR ORDERS] option called TR (Convert Titration Rx). This action populates the MAINTENANCE DOSE RX (#45.2) field in the PRESCRIPTION File (#52). When a titration to maintenance prescription needs to be refilled so the patient can continue on the Maintenance Dose, this option allows users to create a new prescription with the maintenance dose only. The process works similar to copying an existing prescription; however, it can only be used on prescriptions with the following characteristics:

- Rx is a complex order with a THEN conjunction
- Rx is released
- Rx status is ACTIVE
- Rx does not have refills previously ordered
- Rx # Of Refills is greater than 0 (zero)

Before the new Maintenance Rx can be accepted, the user is prompted to validate the QTY field for the new Rx, which may or may not be automatically re-calculated. Only the last dose from the original prescription is carried over to the new Maintenance Rx, and the # of Refills field is decreased by 1 because the new Maintenance Rx counts as a fill. Once the user verifies the information for the Maintenance Rx is accurate, they can accept the Maintenance Rx. This action will trigger a Duplicate Drug check against the original complex order, which must be discontinued before the new Maintenance Rx can be accepted.

After the new Maintenance Rx is accepted, it will have the new indicator 'm' on the right side of the Rx # in the patient's Medication Profile as seen below (entry #1):

#	RX #	DRUG	QTY	ST	ISSUE DATE	LAST FILL	REF REM	DAY SUP
-----ACTIVE-----								
1	#####	AMOXAPINE 50MG TAB	30	S	09-26	09-26	1	30
2	#####	AMOXICILLIN 250MG CAP	30	A	08-18	08-18	11	30
3	#####	KALETRA	3	A	09-29	09-29	0	3

Entering a New Order

Actions display in the action area of the screen. Actions with parentheses () around them are invalid actions for that order. A double question mark (??) displays all the actions available, including the Outpatient Pharmacy actions described in the section "Using List Manager." If one of the hidden actions is selected and it is invalid, a message will display in the message window.

Example: Entering a New Order

```
Select Option: RX (Prescriptions)

Orders to be completed for all divisions: 14

Do you want an Order Summary? No//
```

A summary list of the number of pending orders can be displayed by Division or by each Clinic within the Division where the user is signed on. This is helpful when completing batch orders. In this example, an individual patient name is entered.

```

Patient Prescription Processing

```

The system checks the medication selected for any duplicate drugs or classes, interactions, or allergies that are noted in the patient’s local and remote record. This also includes any local Non-VA Meds. See the following example of local and remote order checking.

If the new order is for Clozapine, there are additional restrictions for filling a prescription. See Chapter 9: Controlling the Dispensing of Clozapine” in the Outpatient Pharmacy Manager’s Manual for more information.

Note: More than one ingredient and more than one VA Drug Class may be associated with an Allergy/ADR.

See output below:

```

A Drug-Allergy Reaction exists for this medication and/or class!

Prospective Drug: DILTIAZEM 120MG SA CAP
Causative Agent: DILTIAZEM (LOCAL or REMOTE SITE - 12/23/13)
Historical/Observed: OBSERVED
Severity: MODERATE
Ingredients: DILTIAZEM
Signs/Symptoms: ITCHING,WATERING EYES, ANOREXIA, NAUSEA,VOMITING,
                ANXIETY, DROWSINESS, DRY MOUTH, DRY NOSE, RASH,
Drug Class: CV200 CALCIUM CHANNEL BLOCKERS

Provider Override Reason: N/A - Order Entered Through Vista

```

After the Allergy/ADR warning is displayed, the system ask the user if they want to intervene.

If the user chooses to intervene after the Allergy/ADR warning is displayed, the intervention dialog will launch.

If the user chooses not to intervene after the Allergy/ADR warning is displayed, the order entry dialog will start.

Note: If the Severity is ‘Severe’, an intervention is REQUIRED.

Example: Remote Allergy/ADR – New Order Entry Backdoor – Both Ingredient and Drug Class defined for Allergy/ADR

Entering a New Order - ePharmacy (Third Party Billable)

For patients who have active third party insurance and have the appropriate eligibility requirements, the software will submit electronic claims to their insurance companies when prescriptions for billable drugs are ordered.

After a WINDOW order is entered and finished, the billing data is sent to the Electronic Claims Management Engine (ECME). ECME sends a message back to Outpatient Pharmacy displaying the status of the claim. For MAIL orders, the communication between Outpatient Pharmacy and ECME happens either during the Local Mail Label Print or during the CMOP transmission.

The following example shows the creation of a new WINDOW order starting with the "DRUG:" prompt.

Example: Entering a New Order for ePharmacy Billing

```

DRUG: PREDNISONE
  Lookup: GENERIC NAME

Reason    : ER (OVERUSE PRECAUTION)
DUR Text  : ANDRODERM    DIS 5MG/24HR
Insurance : TEST INS
Group Name : RXINS
Cardholder ID: #####
Contact: XXX XXX-XXXX
Group Number: XXXXX
-----

Select one of the following:

O          (O)VERRIDE - RESUBMIT WITH OVERRIDE CODES
I          (I)GNORE - FILL Rx WITHOUT CLAIM SUBMISSION
Q          (Q)UIT - SEND TO WORKLIST (REQUIRES INTERVENTION)

(O)verride, (I)gnore, (Q)uit: Q// O  OVERRIDE
```

When a claim is rejected, typically the Payer provides a “Reason for Service Code”, which displays on the reject as “Reason”. The user can use this reason to then select which code is entered for “Professional Service Code” and “Result of Service Code”. To see a list of service codes, enter ? at the specified prompt.

```
Reason for Service Code : ER - OVERUSE
Professional Service Code: RT          RECOMMENDED LABORATORY TEST
Result of Service Code  : 1G          FILLED, WITH PRESCRIBER APPROVAL

Reason for Service Code : ER - OVERUSE
Professional Service Code: RT - RECOMMENDED LABORATORY TEST
Result of Service Code  : 1G - FILLED, WITH PRESCRIBER APPROVAL

Confirm? ? YES// <Enter>

Veteran Prescription ##### successfully submitted to ECME for claim generation.
```

```

Claim Status:
IN PROGRESS-Waiting to start
IN PROGRESS-Waiting for packet build
IN PROGRESS-Packet being built
IN PROGRESS-Waiting for transmit
IN PROGRESS-Transmitting
IN PROGRESS-Waiting to process response
E PAYABLE

```

For Refill Too Soon rejects, the same choices apply.

Example: Handling a Reject Resolution Required rejected New Prescription for ePharmacy Billing.

For VETERAN prescriptions, a reject code can be specified in the Reject Resolution Required section of the ePharmacy Site Parameter screen to stop a prescription from being filled. The Reject Resolution Required reject codes will prevent a prescription from being filled during any claims processing under the following conditions:

- VETERAN eligibility
- The prescription is an original fill
- The prescription is not released
- The reject is on the Reject Resolution Required list for the division
- The total gross amount of the prescription is at or above the specified threshold amount

For VETERAN prescription rejections that have Reject Resolution Required rejects, the user will be able to select from (I)gnore, which bypasses claims processing and allows the prescription to be filled, or (Q)uit which sends it to the Third Party Payer Rejects – Worklist. Prescriptions with these type rejects cannot be filled until the reject is resolved. See following example.

Example: Handling a Reject Resolution Required rejected New Order for ePharmacy Billing (continued)

```

Claim Status:
IN PROGRESS-Waiting to start
IN PROGRESS-Building the claim
IN PROGRESS-Building the HL7 packet
IN PROGRESS-Transmitting
IN PROGRESS-Processing response

If ECME's status on the claim remains in an "In Progress" state past the processing timeout during finish of the prescription, TRICARE prescriptions will not be allowed to be filled. Instead it will be placed on suspense until the rejection is resolved. Below is an example of this screen:

```

TRICARE Prescription 101607 submitted to ECME for claim generation.

Claim Status:
IN PROGRESS-Building the claim
IN PROGRESS-Transmitting
IN PROGRESS-Parsing response

          *** TRICARE - 'IN PROGRESS' ECME status ***
-----
Division : ANYTOWN          NPI#: #####
Patient  : OPTRICARE,ONE (XXX-XX-XXXX) Sex: M      DOB: REDACTED
Rx/Drug  : #####/# - ACETAZOLAMIDE 250MG
Date/Time: APR 20, 2008@20:11:17
Reason   : ECME Status is in an 'IN PROGRESS' state and cannot be filled
-----

This prescription will be suspended. After the third party claim is resolved,
it may be printed or pulled early from suspense.

Press <RETURN> to continue...

```

If a pharmacy is active for ePharmacy processing but an insurance plan is not linked or not active, TRICARE prescription will be allowed to be filled without third party claim submission. The phrase "Inactive ECME TRICARE" will be displayed during Finish and an ECME log entry will be added stating such.

Example of message during finish:

```
Do you want to enter a Progress Note? No// NO

Rx # #####          08/27/08
OPTRICARE,TEST          #180

OPPROVIDER,ONE          OPPHAR,ONE
# of Refills: 3

Is this correct? YES// ...
-Rx ##### has been discontinued...

Inactive ECME TRICARE
```

Example of ECME Activity Log entry:

```
ECME Log:
# Date/Time          Rx Ref          Initiator Of Activity
-----
1 8/27/08@11:07:45  ORIGINAL      OPPHARM,ONE
Comments: TRICARE-Inactive ECME TRICARE
```

Example: Handling a CHAMPVA Rejected New Order for ePharmacy Billing

Rejected CHAMPVA claims will be denoted with “CHAMPVA” during submission to ECME and within the subsequent reject notification screen. Also, the reject codes will be displayed in both places. The following example shows a prescription being submitted to ECME and this process occurs directly following the “Is this correct? YES//” prompt during finish. Where DUR or RTS are one of the reject codes, the user will be able to select from (D)iscontinue the prescription, submit (O)verride codes, or (Q)uit which sends the rejection to the Third Party Payer Rejects - Worklist. A CHAMPVA rejection may not be (I)gnored.

```
CHAMPVA Prescription ##### submitted to ECME for claim generation.

Claim Status:
IN PROGRESS-Waiting to start
IN PROGRESS-Building the claim
IN PROGRESS-Transmitting
IN PROGRESS-Processing response
E REJECTED
  79 - Refill Too Soon
  14 - M/I Eligibility Clarification Code

*** REJECT RECEIVED FOR CHAMPVA PATIENT ***

```

Received on MAR 03, 2008@14:40:57.

Insurance : CHAMPVA Contact: ###-###-####
Group Name : XXXXXXXXXXXX Group Number: #####
Cardholder ID: #####
Patient Billing Comment(s):
MAR 01, 2008@12:22:42 - NON BILLABLE FILLS FOR DIABETIC SUPPLIES (USER,ONE)

Select one of the following:

O (O)VERRIDE - RESUBMIT WITH OVERRIDE CODES
D (D)ISCONTINUE - DO NOT FILL PRESCRIPTION
Q (Q)UIT - SEND TO WORKLIST (REQUIRES INTERVENTION)

(O)verride, (D)iscontinue, (Q)uit: Q//

Example: Handling a non-DUR/RTS or non-clinical CHAMPVA rejected New Order for ePharmacy Billing.

For CHAMPVA prescription rejections that have non-DUR/RTS or non-clinical rejects, the user will be able to select from (D)iscontinue the prescription or (Q)uit which sends it to the Third Party Payer Rejects - Worklist. CHAMPVA prescriptions with these type rejects cannot be filled until the rejection is resolved. Example:

```
CHAMPVA Prescription ##### submitted to ECME for claim generation.

Claim Status:
IN PROGRESS-Waiting to start
IN PROGRESS-Building the claim
IN PROGRESS-Building the HL7 packet
IN PROGRESS-Transmitting
E REJECTED
  07 - M/I Cardholder ID Number
  14 - M/I Eligibility Clarification Code

*** REJECT RECEIVED FOR CHAMPVA PATIENT ***
-----
Division : ANYTOWN NPI#: #####
Patient : OPCHAMPVA,ONE(###-##-####) Sex: M DOB: REDACTED
Rx/Drug : #####/# - SIMETHICONE 40MG TAB ECME#: #####
Reject(s): M/I Eligibility Clarification Code (14), M/I Cardholder ID
          Number (07). Received on MAR 03, 2008@14:43:42.

Insurance : CHAMPVA Contact: ###-###-####
Group Name : C Group Number: #####
Cardholder ID: #####
-----

Select one of the following:

D (D)iscontinue - DO NOT FILL PRESCRIPTION
Q (Q)UIT - SEND TO WORKLIST (REQUIRES INTERVENTION)

(D)iscontinue, (Q)uit: Q//
```

For non-billable CHAMPVA prescriptions, an abbreviated version of the reject notification screen will be displayed. Because the prescription is non-billable, the insurance and ECME information that's currently provided for DUR/RTS rejects will not be displayed (i.e. insurance, group name, group #, ECME #, contact, cardholder ID). In this case, the prescription must be discontinued.

```
Is this correct? YES// ...

CPRS Order Checks

Three CPRS order checks have been added to the list of order checks performed within the Outpatient Pharmacy application.

- Aminoglycoside Ordered
- Dangerous Meds for Patient >64
- Glucophage –Lab Results

The CPRS order checks shall be incorporated in the following Outpatient Pharmacy order entry processes:

- Entering a new order via backdoor pharmacy options
- Finishing a pending order
- Renewing an order
- Editing an order which results in a new order being created
- Verifying an order
- Copying an order
- Reinstating a discontinued order

No user action/intervention shall be required after a CPRS order check warning is displayed.

The following information is displayed for the Aminoglycoside Ordered order check:

- Order Check Name
- Text message displaying an estimated CrCl if available or a message that it is not.

```
***Aminoglycoside Ordered***  
Aminoglycoside - est. CrCl: <VALUE> (CREAT: <result> BUN: <result>) [Est. CrCl  
Based on modified Cockcroft-Gault equation using Adjusted Body Weight (if ht > 60 in)].
```

-OR-

```
***Aminoglycoside Ordered***  
Aminoglycoside - est. CrCl: <Unavailable> (<Results Not Found>) [Est. CrCl  
Based on modified Cockcroft-Gault equation using Adjusted Body Weight (if ht > 60
```

The following information is displayed for the Dangerous Meds for Patient >64 order check:

- Order Check Name
- Text message displaying a message if patient is greater than 64 and has been prescribed Amitriptyline.

```
***Dangerous Meds for Patient >64***  
Patient is <age>. Amitriptyline can cause cognitive impairment and loss of balance in older  
patients. Consider other antidepressant medications on formulary.
```

-OR-

Text message displaying a message if patient is greater than 64 and has been prescribed Chlorpropamide.

```
***Dangerous Meds for Patient >64***
```

Patient is <age>. Older patients may experience hypoglycemia with Chlorpropamide due do its long duration and variable renal secretion. They may also be at increased risk for Chlorpropamide-induced SIADH.

-OR-

Text message displaying a message if patient is greater than 64 and has been prescribed Dipyridamole.

```
***Dangerous Meds for Patient >64***
```

```
Patient is <age>. Older patients can experience adverse reactions at high doses of Dipyridamole (e.g., headache, dizziness, syncope, GI intolerance.) There is also questionable efficacy at lower doses.
```

The following information is displayed for the Glucophage Lab Results order check:

- Order Check Name
- Text message displaying a serum creatinine does not exist or it is greater than 1.5

```
***Metformin Lab Results***
```

```
Metformin - no serum creatinine within past 60 days.
```

-OR-

```
***Metformin Lab Results***
```

```
Metformin - Creatinine results: <creatinine greater than 1.5 w/in past <x> days>
```

Clinic Orders

Clinic orders are created via CPRS generally using the Meds Inpatient tab or the IV Fluids tab. Drug orders that have a clinic and an appointment date and time are considered clinic orders. The clinic must be defined with ‘ADMINISTER INPATIENT MEDS?’ prompt answered YES under the SETUP A CLINIC [SDBUILD] option in the Scheduling package. Defining the clinic in this manner ensures that an appointment date and time are defined. Orders placed via backdoor inpatient medications are not considered clinic orders.

MOCHA 1 Enhancement 1 adds drug interaction and therapeutic duplication order checks for clinic orders to Outpatient Pharmacy. Previously Inpatient Medications package performed order checks on active, pending, and non-verified clinic orders. With the MOCHA 1 Enhancement 1, Inpatient medications will perform enhanced order checks for recently discontinued and expired inpatient medications clinic orders.

For both packages, the system will display clinic orders in a standard format to differentiate them from Inpatient Medications and Outpatient Pharmacy order checks.

Discontinued/expired orders must have a stop date within the last 90 days to be evaluated during enhanced order checks. For pending clinic orders, a variety of start and stop dates are available based on the information that the provider enters during initial order entry. The following are the scenarios that drive which dates will be displayed for the clinic order:

- If there are start/stop dates defined, they are displayed.
- If there are no stop/start dates defined, the ‘requested start/stop dates’ will be displayed with the word “Requested” prior to the start/stop date header.
- If there are no requested start/stop dates defined, the order date will be displayed and the start/stop date headers will be displayed with “*****” for the date.
- If there is either a requested start date or a requested stop date, the available date will be displayed and “*****” will be displayed for the undefined date.

Unit Dose Clinic Order Check Example:

```
Now Processing Enhanced Order Checks! Please wait...

***CRITICAL*** Drug Interaction with Prospective Drug:
                CIMETIDINE 300 MG and

                Clinic Order: PHENYTOIN 100MG CAP (DISCONTINUED)
                Schedule: Q8H
                Dosage: 100MG
                Start Date: FEB 27, 2012@13:00
                Stop Date: FEB 28, 2012@15:22:27

                Concurrent use of cimetidine or ranitidine may result in elevated levels
                of and toxicity from the hydantoin. Neutropenia and thrombocytopenia have
                been reported with concurrent cimetidine and phenytoin.
```

IV Clinic Order Check Example:

```
***CRITICAL*** Drug Interaction with Prospective Drug:
                WARFARIN 2MG TAB and
```

```
Clinic Order: POTASSIUM CHLORIDE 20 MEQ (ACTIVE)
Other Additive(s): MAGNESIUM SULFATE 1 GM (1), CALCIUM GLUCONATE 1 GM (2),
HEPARIN 1000 UNITS, CIMETIDINE 300 MG
Solution(s): DEXTROSE 20% 500 ML 125 ml/hr
AMINO ACID SOLUTION 8.5% 500 ML 125 ml/hr
Start Date: APR 05, 2012@15:00
Stop Date: APR 27, 2012@24:00

The pharmacologic effects of warfarin may be increased resulting in severe
bleeding.
```

Therapeutic Duplication – IV and Unit Dose clinic order therapeutic duplications display in the same format as drug interactions.

Unit Dose Clinic Order Check Example:

```
*** THERAPEUTIC DUPLICATION(S) *** POTASSIUM CHLORIDE 30 MEQ with

Clinic Order: POTASSIUM CHLORIDE 10MEQ TAB (PENDING)
Schedule: BID
Dosage: 20MEQ

```
*** THERAPEUTIC DUPLICATION(S) *** CEFAZOLIN 1 GM with

Clinic Order: CEFAZOLIN 2 GM (PENDING)
Solution(s): 5% DEXTROSE 50 ML OVER 30 MINUTES
Schedule: Q8H
Order Date: NOV 20, 2012@11:01
Start Date: *****
Stop Date: *****

Clinic Order: CEFAZOLIN SOD 1GM INJ (EXPIRED)
Solution(s): 5% DEXTROSE 50 ML OVER 30 MINUTES
Schedule: Q12H
Start Date: OCT 24, 2012@16:44
Stop Date: OCT 25, 2012@24:00

Class(es) Involved in Therapeutic Duplication(s): Beta-Lactams,
Cephalosporins, Cephalosporins - 1st Generation
```

The list of available possible dosages shown after order checks is linked to the drug ordered. One of the dosages listed may be chosen or a different, free text dosage may be entered. Confirmation of the dosage is required and the value entered is displayed again to allow the user to confirm that it is correct.

With patch PSO*7*402, there were changes made to the display of the available dosage list to break only after the third dosage. Text changes were also made to existing prompts (with or without a page break) to inform a user of the number of dosages defined for the drug selected and that more dosages exist should a break occur. Text changes were also made when no dosages are available.

```
There are 3 Available Dosage(s):
1. 250MG
2. 500MG
3. 1000MG

Select from list of Available Dosages (1-3), Enter Free Text Dose
or Enter a Question Mark (?) to view list: 3 500MG

You entered 500MG is this correct? Yes// <Enter> YES
```

Break only after 3 dosages with text changes

```
There are 5 Available Dosage(s) :
  1. 10MG
  2. 20MG
  3. 40MG
Enter RETURN to view additional dosages or '^' to exit list of dosages:
-----<Page Break>-----
  4. 80MG
  5. 120MG

Select from list of Available Dosages (1-5), Enter Free Text Dose
or Enter a Question Mark (?) to view list:
```

No Available Dosages

```
There are NO Available Dosage(s) .

Please Enter a Free Text Dose:
```

For numeric dosages, the Dispense Units Per Dose value is calculated based on the strength of the dosage ordered divided by the strength of the medication ordered. The 500 mg Dosage Ordered will require two 250 mg capsules. The Dosage Ordered is re-displayed after the Dispense Units to allow the entry to be double-checked.

```
DISPENSE UNITS PER DOSE(CAPSULES) : 2// <Enter> 2
Dosage Ordered: 500MG
```

With PSO*7*525, if there is no default Medication Route defined for the Orderable Item, the user is prompted to enter a route. Please see section [Medication Route Prompt](#) for a detailed description of the Medication Route lookup functionality . The Route is not required to complete a prescription. If the abbreviation entered is found in the MEDICATION ROUTES file, the entry will be expanded in the Sig based on the OUTPATIENT EXPANSION field.

A default schedule associated with the Orderable Item of the drug ordered is displayed at the “Schedule:” prompt. The default can be accepted or a different free text schedule can be entered. Free text entries cannot contain more than two spaces or be more than twenty characters long. Entries will be compared against a list of common abbreviations, first in the ADMINISTRATION SCHEDULE file and then in the MEDICATION INSTRUCTION file, and expanded if the entry matches. Any entry not found in the list of common abbreviations will be displayed in the Sig as entered.

With patch PSO*7*402, the user will be informed from which file the schedule selection is made and if the value entered will be considered as free text. The NAME, OLD SCHEDULE NAME(S) fields will be used for lookup from the ADMINISTRATION SCHEDULE file. The NAME, SYNONYM, and OLD MED INSTRUCTION NAME(S) fields will be used for lookup from the MEDICATION INSTRUCTION file. The user will first be presented with selections from the ADMINISTRATION SCHEDULE file based on the value entered at the schedule prompt. If the user selects an entry, the lookup is complete. If the user chooses not to select a value from the ADMINISTRATION SCHEDULE file, the software displays selections from the MEDICATION INSTRUCTION file. If a selection is made, the lookup is complete. If the user chooses not to select a value, the software informs the user that the value as entered will be accepted at the schedule prompt as a free text entry. Patch PSO*7*507 introduces the ability for users to view if an Administration Schedule is Inactive.

```

Schedule: BID
Now searching ADMINISTRATION SCHEDULE (#51.1) file...
  BID  BID  TWICE A DAY
    ...OK? Yes// N  (No)

  1  BID EXCLUDE MDD  BID

CHOOSE 1-6:
Now searching MEDICATION INSTRUCTION (#51) file...
  BID  TWICE A DAY
    ...OK? Yes// N  (No)
AP  BIDAP  TWICE A DAY  IN MORNING AND EVENING
    ...OK? Yes// N  (No)

```

The LIMITED DURATION field is used only when a medication should be taken for a limited period of time. Days are assumed for numeric entries. The user should follow the number with an “H” to specify hours or an “M” to specify minutes.

Do not use the LIMITED DURATION field for Days Supply.

Example: Entering a New Order (continued)

```
LIMITED DURATION (IN DAYS, HOURS OR MINUTES): 10 (DAYS)
```

The CONJUNCTION field is used to join dosing sequences in complex orders. Entries are limited to AND or THEN. AND is used for concurrent doses, such as “Take 1 tablet every morning AND take 2 tablets at bedtime.” THEN is used for consecutive doses, such as “Take 2 tablets daily for one week THEN take 1 tablet for five days.” See Chapter 2 in the *User Manual - Supplemental* for examples.

```
CONJUNCTION: <Enter>
```

Any entry in the PATIENT INSTRUCTIONS field will first be checked to see if it contains any abbreviations that can be expanded. The entry will be added to the end of the Sig, after the dosing information, and the entire Sig will be displayed.

```

PATIENT INSTRUCTIONS: WF          WITH FOOD
(TAKE TWO CAPSULES BY MOUTH FOUR TIMES A DAY FOR 10 DAYS WITH FOOD)
OTHER PATIENT INSTRUCTIONS: WF    CON ALIMENTO

```

Two optional fields, OTHER LANGUAGE PREFERENCE and PMI LANGUAGE PREFERENCE in the PHARMACY PATIENT file, store if a patient has another language preference and if the patient’s PMI sheets should print in English or Spanish at the CMOP. The CMOP functionality was requested for future CMOP use. When printing locally from Outpatient Pharmacy this parameter is not used. These fields are accessed through the *Update Patient Record* option and the protocol Patient Record Update [PSO PATIENT RECORD UPDATE]. If the other language preference is indicated for a patient, the user will be prompted to enter OTHER PATIENT INSTRUCTIONS after selecting the PATIENT INSTRUCTIONS field to enter/edit. If a quick code is entered at the OTHER PATIENT INSTRUCTIONS prompt, the

expansion entered at the OTHER PATIENT INSTRUCTIONS EXPANSIONS will print on the prescription label.

A default value for Days Supply based on patient status is displayed. A default quantity is calculated when possible. See Chapter 2 in the *User Manual - Supplemental* for more information on QUANTITY calculations.

```
DAYS SUPPLY: (1-90): 30// 10
QTY ( CAP ) : 80// <Enter> 80
```

Example: Entering a New Order (continued)

```

# of Refills: 11

      SC Percent: 40%
      Disabilities: NONE STATED

Was treatment for Service Connected condition?
```

To determine if the order should be charged copay, eligible copay exemptions for the order are displayed one at a time. The user is asked if it the first applies to the order. In this example, the user is first asked if the order is being prescribed for any of the service-connected conditions displayed. If yes had been entered at this prompt, the fill would have been set for No Copay and no other exemption questions would have been asked. In this example, the patient has reported exposure to herbicides during Vietnam-era service.

```
Was treatment related to Agent Orange exposure? NO
Is this correct? YES// <Enter>
Another New Order for OPPATIENT16,ONE? YES//
```

Medications with non-numeric dosages, such as ointments and creams, will display non-numeric possible dosages as a default. Because the dosage is non-numeric, values for dispense units per dose and quantity cannot be calculated.

Example: Entering a New Order (continued)

```
DRUG:      HYDROCORTISONE 0.5% CREAM      DE200      VISN FORM; 30 GM/TUBE (IEN)
          ...OK? Yes//      (Yes)

```

Editing a New Order

An asterisk or star (*) is shown in front of each field that will create a new order if it is changed. The Sig field cannot be edited directly, but it will change if the fields used to construct the Sig are edited.

When editing fields preceded by an asterisk (*) in an ePharmacy order (or electronically third party billable prescription), upon acceptance of the edited order the original prescription will be discontinued and a new order created. If the latest fill of the original order has not been released and is E Payable, the claim for that fill will be reversed. A new claim is submitted for the new prescription. For more information, see the example Editing an ePharmacy Order.

Note: Do not use the up-arrow (^) after editing one field to jump past the rest of the fields. Using just the up-arrow results in the changes just entered being deleted. The user must press <Enter> through *all* the order fields when editing to save the changes.

Example: Editing a New Order

```

If a new order is created due to the editing of a field that affects copay, like Duration, the values previously entered display as defaults.

Edits to fields that are not starred (*), like Patient Instructions, will not create a new order. Note that the new Patient Instruction text now appears at the end of the Sig.

Example: Editing a New Order (continued)

```

Editing an ePharmacy Order

When editing fields preceded by an asterisk (*) in an ePharmacy order (or electronically third party billable prescription), upon acceptance of the edited order the original prescription will be discontinued and a new order created. If the latest fill of the original order has not been released and is E Payable, the claim for that fill will be reversed. A new claim is submitted for the new prescription.

If the original claim was E Payable, and edits are made to any of these fields – Provider, Qty, Days Supply, Division, Fill Date, NDC, or DAW Code – then the original payable claim is reversed and a new claim is submitted to ECME. If the original claim was rejected, then a reversal is not necessary, and a new claim is submitted to ECME.

```

Press <Enter> twice to scroll to page 3 of the Medication Profile. Notice that a new field displays on the profile: **DAW Code**. DAW stands for “Dispense as Written “and refers to a set of ten NCPDP codes (0-9) that tells third party payers why a brand or generic product was selected to fill a prescription. When a new prescription is entered for a specific drug, the DAW code from the drug is stored in the PRESCRIPTION file (#52) for each fill. This field is solely being used for electronic billing purposes. It communicates to the third party payer that a drug has a special characteristic, which may prevent the payer from rejecting the claim. The available codes include:

Table 12: NCPDP Codes

Code	Description
0	NO PRODUCT SELECTION INDICATED
1	SUBSTITUTION NOT ALLOWED BY PRESCRIBER
2	SUBSTITUTION ALLOWED-PATIENT REQUESTED PRODUCT DISPENSED
3	SUBSTITUTION ALLOWED-PHARMACIST SELECTED PRODUCT DISPENSED
4	SUBSTITUTION ALLOWED-GENERIC DRUG NOT IN STOCK
5	SUBSTITUTION ALLOWED-BRAND DRUG DISPENSED AS A GENERIC
6	OVERRIDE
7	SUBSTITUTION NOT ALLOWED-BRAND DRUG MANDATED BY LAW
8	SUBSTITUTION ALLOWED-GENERIC DRUG NOT AVAILABLE IN MARKETPLACE
9	OTHER

The DAW Code default is 0 – No Product Selection Indicated, unless the DAW Code has been set for this drug at the DRUG file level.

Enter 21 to edit the field.

Using the Copy Action

When a double question mark (??) is entered at the "Select Action" prompt above, the hidden actions below will display in the action area.

The following actions are also available:

AL	Activity Logs (OP)	REJ	View REJECT	DN	Down a Line
VF	Verify (OP)	VER	View ePharmacy Rx	FS	First Screen
CO	Copy (OP)	RES	Resubmit Claim	GO	Go to Page
TR	Convert Titration Rx	REV	Reverse Claim	LS	Last Screen
TM	Titration Mark/Unmark	IN	Intervention Menu	PS	Print Screen
RP	Reprint (OP)	DA	Display Drug Allergies	PT	Print List
HD	Hold (OP)	DIN	Drug Restr/Guide (OP)	QU	Quit
UH	Unhold (OP)	+	Next Screen	RD	Re Display Screen
PI	Patient Information	-	Previous Screen	SL	Search List
PP	Pull Rx (OP)	<	Shift View to Left	UP	Up a Line
IP	Inpat. Profile (OP)	>	Shift View to Right		
OTH	Other OP Actions	ADPL	Auto Display (On/Off)		

If the order utilizes the EXCEPT conjunction, copy will no longer be allowed. The message bar will display: Cannot COPY. Invalid 'except' conjunction!

Copy is a hidden action used to create a new order exactly like the original order. Any field of the new order can be edited. This action does not affect the status of the original order but the duplicate order checks will occur.

Example: Using the Copy Action

```

Copying an ePharmacy Order

When copying an ePharmacy order, upon acceptance of the copied order the original prescription will be discontinued and a new order created. If the latest fill of the original order has not been released and is E Payable, the claim for that fill will be reversed. A new claim is submitted for the new prescription.

```

Reversing an ePharmacy Claim

Reverse Claim is another hidden action, used to reverse a claim. Claims are almost always reversed by the ePharmacy Site Manager and not by untrained Pharmacy staff members. If the prescription has a primary and secondary claim, neither claim may be reversed with this action. In that case, contact an OPECC to resolve the issue.

The action will prompt for a fill number with a default value of the most recent fill.

Example: Reversing an ePharmacy Claim

```

Select Action: Next Screen// REV Reverse Claim
Enter the line numbers for the Payable claim(s) to be Reversed.

You've chosen to REVERSE the following prescription for OPPATIENT,ONE
2.62 COLCHICINE 0.6MG ##### 05/06 ##### #/##### W RT AC/N
Enter REQUIRED REVERSAL REASON: ?

This response must have no more than 60 characters
and must not contain embedded up arrow.

Enter REQUIRED REVERSAL REASON: TESTING
Are you sure?(Y/N)? YES

Processing Primary claim...

Claim Status:
Reversing...
IN PROGRESS-Building the claim
IN PROGRESS-Transmitting
E REVERSAL ACCEPTED

Reversal Accepted
1 claim reversal submitted.

```

Holding and Unholding a Prescription

If a double question mark (??) is entered at the “Select Action” prompt, the hidden actions on the following page will display in the action area.

```

The following actions are also available:

OTH	Other OP Actions	ADPL	Auto Display (On/Off)		

Use the Hold (HD) action to put a prescription on hold. Use the Unhold (UH) action to remove a prescription from hold.

Only key holders of the PSORPH security key or the PSO TECH ADV security key can hold or unhold a prescription.

PSORPH security key holders are allowed to put a prescription on hold using the following HOLD reasons:

- 1 INSUFFICIENT QTY IN STOCK
- 2 DRUG-DRUG INTERACTION
- 4 PROVIDER TO BE CONTACTED
- 6 ADVERSE DRUG REACTION
- 7 BAD ADDRESS
- 8 PER PATIENT REQUEST
- 9 CONSULT/PRIOR APPROVAL NEEDED
- 98 OTHER/TECH (NON-CLINICAL)
- 99 OTHER/RPH (CLINICAL)

HOLD reasons 98 and 99 require the user to enter a HOLD comment.

PSO TECH ADV security key holders are allowed to put a prescription on hold using the following HOLD reasons:

- 1 INSUFFICIENT QTY IN STOCK
- 7 BAD ADDRESS
- 8 PER PATIENT REQUEST
- 98 OTHER/TECH (NON-CLINICAL)

HOLD reason 98 requires the user to enter a HOLD comment.

While PSORPH security key holders are allowed to remove a prescription from HOLD under any HOLD reason, PSO TECH ADV security key holders are only allowed to remove a prescription from hold under the above HOLD reasons (reasons 1,7, 8, and 98).

Example: HOLD with PSORPH Security Key or PSO TECH ADV Security Key

```

Select Action: Next Screen// HD HD
Nature of Order: WRITTEN//    W
  
```

If the user has the PSORPH security key, the following HOLD reasons are available:

```

HOLD REASON: ?

Enter reason medication is placed in a 'Hold' status.
Choose from:
1      INSUFFICIENT QTY IN STOCK
2      DRUG-DRUG INTERACTION
4      PROVIDER TO BE CONTACTED
6      ADVERSE DRUG REACTION
7      BAD ADDRESS
8      PER PATIENT REQUEST
9      CONSULT/PRIOR APPROVAL NEEDED
98     OTHER/TECH (NON-CLINICAL)
99     OTHER/RPH (CLINICAL)
  
```

If the user has the PSO TECH ADV security key, the following HOLD reasons are available:

```

HOLD REASON: ?

Enter reason medication is placed in a 'Hold' status.
Choose from:
1      INSUFFICIENT QTY IN STOCK
7      BAD ADDRESS
8      PER PATIENT REQUEST
98     OTHER/TECH (NON-CLINICAL)
  
```

The same conditions apply for Unholding a prescription. Users with the PSORPH security key can unhold for the following reason:

```

1      INSUFFICIENT QTY IN STOCK
2      DRUG-DRUG INTERACTION
4      PROVIDER TO BE CONTACTED
6      ADVERSE DRUG REACTION
7      BAD ADDRESS
  
```

```

8 PER PATIENT REQUEST
9 CONSULT/PRIOR APPROVAL NEEDED
98 OTHER/TECH (NON-CLINICAL)
99 OTHER/RPH (CLINICAL)

```

Users with only the PSO TECH ADV security key can unhold for the following reasons:

```

1 INSUFFICIENT QTY IN STOCK
7 BAD ADDRESS
8 PER PATIENT REQUEST
98 OTHER/TECH (NON-CLINICAL)

```

If a user does not have a PSORPH security key and tries to unhold a prescription, the message “**The HOLD can only be removed by a pharmacist**” is displayed.

Each time a user holds or unholds a prescription, an entry is created in the Activity Log. These entries include HOLD COMMENTS and the HOLD REASON when a prescription is placed on HOLD and UNHOLD COMMENTS when the prescription is removed from HOLD. Again, HOLD reasons 98 and 99 require the user to enter a HOLD comment.

Example: Activity Log with HOLD/UNHOLD Comments

```

Activity Log:
# Date Reason Rx Ref Initiator Of Activity
...
8 05/10/12 HOLD REFILL 1 USER, PHARMACY
Comments: Rx placed on HOLD (Reason: BAD ADDRESS) and removed from
SUSPENSE - HOLD COMMENTS ENTERED BY THE USER MANUALLY.
...
9 05/10/12 UNHOLD REFILL 1 USER, PHARMACY
Comments: Rx Removed from HOLD - UNHOLD COMMENTS ENTERED BY THE USER
WHEN REMOVING THE RX FROM HOLD. Renewing a Prescription

```

This action allows the pharmacy manager, pharmacist, or pharmacy technician to process renewals for existing orders.

Example: Renewing a Prescription

(This example begins after an order is selected from the Medication Profile screen.)

```

The user may renew more than one order on the same patient by typing the desired order numbers separated by a comma (for example: 1,3,5). Original provider comments are not carried over to any renewals in Outpatient Pharmacy.

Renewing an ePharmacy Order

When renewing an ePharmacy order, upon acceptance of the renewed order the original prescription will be discontinued and a new order created. If the latest fill of the original order has not been released and is E Payable, the claim for that fill will be reversed. A new claim is submitted for the new prescription.

(This example begins after an order is selected from the Medication Profile screen.)

Flagging and Unflagging Pending Orders

Flagging a pending order allows you to prevent an order from processing and attach a note known as a flag to the pending order. Flag/Unflag functionality is only available for Pending new orders and Pending renewals; only holders of the PSORPH security key can flag or unflag an order.

The following provides examples of how to flag and unflag a pending order from a medication profile within *Patient Prescription Processing*.

If a pending order is flagged, the row number is highlighted on the Medication Profile screen (shown in the following example). Select the order to view the flag or to flag the new pending order.

Example: A Flagged Pending Order

```

Medication Profile          Mar 13, 2008@16:31:24          Page: 1 of 1
OPPATIEN16,ONE             <NO ALLERGY ASSESSMENT>

Select Orders by number: (1-2): 2

```

From the Pending OP Orders screen, you can flag and unflag an order, as well as view the flagged reason. To flag the order, enter FL and then enter a “REASON FOR FLAG”, alert the proper individual that the flag has been added by pressing <Enter> to select the default name or entering a different user name and pressing <Enter>, and the flagging process is complete.

Example: Flagging an Order

```

REASON FOR FLAG: DOUBLE CHECK WITH PATIENT FOR HEART CONDITION BEFORE DISPENSING.
Send alert to: PSUSER,ONE//          BIRMINGHAM  ALABAMA  OP          PHARMACIST

```

... order flagged.

When an order is flagged, “FL-” is placed in front of “Pending OP Orders” in the upper left corner, and the flagged reason is listed below the patient identifying information.

Example: A Flagged New Pending Order

```

  CMOP Drug: THIORIDAZINE 30MG/ML CONC.
  NDC: #####-###-##
  Patient Status: OPT NSC
(1) Issue Date: JUN 12,2012
(2) Fill Date: JUN 12,2012
  Dosage: 20 (MG)
  Verb: TAKE
  Dispense Units: 2
  Noun: TABLETS
  Route: ORAL (BY MOUTH)
  Schedule: BID-PRN
+ Enter ?? for more actions
AC Accept DC Discontinue FL Flag/Unflag
BY Bypass ED Edit
Select Item(s): Next Screen//
```

To unflag an order, enter FL at the “Select Item(s)” prompt, and then enter your “COMMENTS”. When you press <Enter>, the order is no longer flagged.

Example: Unflagging an Order

```
FLAGGED: 03/13 23:14 by OPPHARM,TWO
      DOUBLE CHECK WITH PATIENT FOR HEART CONDITION BEFORE DISPENSING.
COMMENTS: CHECKED WITH PATIENT. NO HEART CONDITION.
      ... order unflagged.
```

At that point, the flag from the Medication Profile is removed, but the flagged/unflagged reason remains on the Pending OP Orders screen unless you reflag the order.

Note: If a user does not have the PSORPH security key, they cannot unflag an order and will receive the following message when selecting the Accept (AC) action:

```
+      Enter ?? for more actions
AC  Accept          DC  (Discontinue)          FL  (Flag/Unflag)
BY  Bypass          ED  (Edit)
Select Item(s): Next Screen// AC  Accept

Order must be unflagged by a pharmacist before it can be finished.

Enter RETURN to continue:
```

After pending orders have been unflagged, they can be processed.

If you attempt to process a flagged order and are a user with a PSORPH security key, you are prompted “Unflag Order? NO//”. If you respond YES, enter comments to unflag the order and continue with processing. If you respond NO, you cannot process the order because it is still flagged. Users with only the PSO TECH ADV security key cannot unflag an order and will receive the following message when selecting the Accept (AC) action:

```

+ Enter ?? for more actions
AC Accept          DC (Discontinue)      FL (Flag/Unflag)
BY Bypass          ED (Edit)
Select Item(s): Next Screen// AC Accept

Order must be unflagged by a pharmacist before it can be finished.

Enter RETURN to continue:

```

Medication Route Prompt

PSO*7*525 added a medication route “short list” and “long list” for selection of a medication route during the order finishing and order entry process. The short list includes only the routes associated with the dosage form for the selected medication in the PHARMACY ORDERABLE ITEM file (#50.7). When entering an outpatient prescription, entering “?” at the Medication Route prompt will display the short list of routes. Entering “??” at the Medication Route prompt will display the long list of routes. The system will allow either partial matches for routes that are found in the short list, or exact full-text matches or abbreviation matches for other routes in the MEDICATION ROUTES file (#51.2).

Prescriptions may be entered without medication route, such as prescriptions for supplies.

Prior to PSO*7*525 if no default med route was defined, the system set the med route to PO or ORAL. This patch removes that automatic PO or ORAL default and leaves the route blank if the prompt is unanswered.

If a route entered does not match any of the defined medication routes, then “??” displays.

Example: Short List for Route

Numeric selection from the short list:

```
ROUTE: OPHTHALMIC//?  
1 OPHTHALMIC OPHTH  
2 LEFT EYE OS  
3 RIGHT EYE OD  
4 BOTH EYES OU  
Select MED ROUTE: 4 BOTH EYES OU BOTH EYES
```

Leading character selection from the short list:

```
ROUTE: OPHTHALMIC//?  
1 OPHTHALMIC OPHTH  
2 LEFT EYE OS  
3 RIGHT EYE OD  
4 BOTH EYES OU  
Select MED ROUTE: BOTH EYES OU BOTH EYES  
Schedule: ONCE DAILY//
```

Here is another example of two same leading character:

```
ROUTE: OPHTHALMIC//?  
1 OPHTHALMIC OPHTH  
2 LEFT EYE OS  
3 RIGHT EYE OD  
4 BOTH EYES OU  
5 BOTH EARS AU  
Select MED ROUTE: B  
1 BOTH EARS  
2 BOTH EYES  
CHOOSE 1-2:
```

In the short list you can either select by entering the leading character or by selecting the number from the displayed list.

Barcode Rx Menu

[PSO BARCODE MENU]

If the order utilizes the EXCEPT conjunction, renew will no longer be allowed. The message bar will display: Cannot be Reinstated – dosage contains an invalid Except conjunction.

Use this menu to batch barcode refills and renewals of prescriptions, and check the quality of the barcode print. The menu contains the following options:

- *Process Telephone Refills*
- *Barcode Batch Prescription Entry*
- *Check Quality of Barcode*
- *Process Internet Refills*

Process Telephone Refills

[PSO PROCESS TELEPHONE REFILLS]

Process telephone refills and renewals originating from the AudioCARE third-party system.

Patch PSO*7*653 replaced the class III option Process Telephone Refills [A3A PHONE REFILLS] with the class I option Process Telephone Refills [PSO PROCESS TELEPHONE REFILLS].

Example: Process Telephone Refills

```
Outpatient Pharmacy software - Version 7.0
Division: ### REDACTED TEST CLINIC ###
    You are logged on under the ALABAMA TEST CLINIC division.
Select LABEL PRINTER: HOME// Linux Telnet /SSh
OK to assume label alignment is correct? YES//
Bingo Board Display: OUTPATIENT//

    Division: REDACTED TEST CLINIC

Please answer the following for this session of prescriptions
FILL DATE: (DEC 17, 2020-DEC 31, 2699): TODAY// (JUN 15, 2021)
MAIL/WINDOW: MAIL// WINDOW
METHOD OF PICK-UP:
Will these refills be Queued or Suspended ? S// QUEUED
Allow refills for Inpatient ? NO//
Allow refills for CNH ? NO//

Process telephone refill requests at this time? YES//

Process telephone refills for all divisions? NO// YES
```

1. A new Class I option, Process Telephone Refills [PSO PROCESS TELEPHONE REFILLS], available from the Barcode RX Menu [PSO BARCODE MENU], copies all prescription refill and renewal requests contained in the Class III global ^VEXHRX into the new Fileman-compatible Class I PHARMACY TELEPHONE REFILLS file (#52.444). Only refill/renewal prescription requests that do not yet have a processed date are copied from ^VEXHRX.
2. The new option will then process the refill and renewal prescriptions just copied into the new PHARMACY TELEPHONE REFILLS file (#52.444).
 - a. User prompts are identical to the current Class III Option, A3A PHONE REFILLS.
 - b. Prescriptions are to be updated in PHARMACY TELEPHONE REFILLS file (#52.444) the same as they are in the current Class III global array, ^VEXHRX.
 - c. On-screen messages are displayed indicating the status of each refill and renewal request.
3. The telephone refills system processes prescriptions by refilling, renewing, or marking the order as not filled or not sent to the provider. These actions produce various processing results that are recorded into the PHARMACY TELEPHONE REFILLS file (#52.444). These results include the processed date and renewal processing codes. This information is then sent back to the ^VEXHRX global array to enable further processing functions by the AudioCARE system.

4. When processing is complete, the new option will send Mailman messages to the G.AUTORENEWAL mail group with counts of Refills Processed and Refills Not Processed, Renewals sent to provider and Renewals not sent to provider.
5. The Class III global array (^VEXHRX) shall be updated from PHARMACY TELEPHONE REFILLS (#52.444) that contains the results of the order processing.

The new PROC TEL REFILLS ALL DIVISIONS field (#4.2) in the OUTPATIENT SITE file (#59) acts as a parameter to store the default selection for the "Process Telephone Refills for all divisions" prompt, which can be set at the site level to default to either "YES" or "NO." If this field does not contain a value, then a default will not exist at the prompt and the end-user will need to enter a value each time the prompt is issued. To enter a default value at the PROC TEL REFILLS ALL DIVISIONS field (#59,4.2), the end-user will need to use the Site Parameter Enter/Edit [PSO SITE PARAMETERS] option.

The software that supports the following 2 prompts was enhanced to retrieve the stored values and implement as the default response:

"Allow refills for CNH ?"

"Allow refills for Inpatient ? "

These prompts are implemented when processing refills for Community Nursing Home (CNH) and Inpatient facilities when using any of the following Outpatient Pharmacy options: Process Internet Refills [PSO INTERNET REFILLS], Barcode Batch Prescription Entry [PSO BATCH BARCODE], and Process Telephone Refills [PSO PROCESS TELEPHONE REFILLS]. The existing PROCESS AUTO REFILLS FOR CNH field (#2035) and PROCESS AUTO REFILLS FOR INPAT field (#2030) in the OUTPATIENT SITE file (#59) stores the default selection for each pharmacy division. The existing Site Parameter Enter/Edit [PSO SITE PARAMETERS] option enables setting the default values. If these fields are not populated, then "Allow refills for CNH ?" and "Allow refills for Inpatient ? " defaults to "NO".

6. The Class I PHARMACY TELEPHONE REFILLS, file (#52.444) is purged of all requests that have a processed date.
 - a. The new Purge Processed Telephone Refill Requests [PSO PURGE PROCESSED 52.444] has been scheduled to run daily by the patch post-installation routine. The option purges the new PHARMACY TELEPHONE REFILLS file (#52.444) of prescriptions that have been processed, as determined by the presence of a processed date in the file.
 - b. A mailman message is sent to members of the AUTORENEWAL mail group upon completion of the purge.
 - c. Prescriptions with no processed date remain in the file.

Barcode Batch Prescription Entry

[PSO BATCH BARCODE]

Enter refills or renewals by batch entry using barcodes with this option. Select either refills or renewals. Then fill in information for the prescriptions to be batch barcode, i.e., fill date, route, etc. Next, use a barcode wand to enter the barcodes for the prescriptions to be refilled or renewed.

When using the Barcode Batch Prescription Entry option [PSO BATCH BARCODE], if the prescription has been marked as a Titration/Maintenance Rx, and the user attempts to renew or refill the prescription, the following message will display:

For a renewal:

"Rx# XXXXXX is marked as Titration Rx and cannot be renewed."

For a refill:

"Rx# XXXXXX is marked as Titration Rx and cannot be refilled."

Check Quality of Barcode

[PSO BARCODE CHECK]

No action is taken on the prescription by using this option. Use this option to check the quality of the printed barcodes or use it to practice using the barcode reader. After the barcode is scanned the barcode number will echo back on the screen and the screen will return to the "Read Barcode" prompt. No action is taken on the prescription by using this option.

The following are some common causes for failure of the barcode reader and how they can be corrected.

1. Barcode too faint (change printer ribbon)
2. Improper scanning (move the wand at a steady rate)
3. Defective barcode reader (replace the reader)

Process Internet Refills

[PSO INTERNET REFILLS]

This option allows the pharmacist to process prescription orders entered on the Internet through My Health_Vet. The system will prompt the user for the information as shown in the following example. The user enters the appropriate response for each prompt by pressing Enter on the keyboard to accept the default setting for a prompt. The user must type the appropriate word or letter to enter a response contrary to the default.

The recommended usage of this option is three times a day to ensure the requested refills are processed in a timely manner.

Example: Process Internet Refills Screen

```
FILL DATE: (1/28/2005 - 12/31/2699): TODAY// <Enter> (AUG 11, 2005)
MAIL/WINDOW: MAIL// <Enter> MAIL
Will these refills be Queued or Suspended? Q// S <Enter> USPENDEED
Allow refills for inpatient ? N// <Enter> O
```

```
Allow refills for CNH ? N//<Enter> 0
Allow early refills? N// <Enter> 0

Process internet refill requests at this time? YES// <Enter> YES
Process internet refills for all divisions? NO// <Enter> 0
```

Users can process refills for their division or all divisions within a site. However, sites can set parameters in the PHARMACY SYSTEM file for the INTERDIVISIONAL PROCESSING and DIVISION PROMPT ASKED fields that control responses to user input on the Internet Refills Screen. Note that site control parameters override any entries made by the user in the Process Internet Refills screen.

If the INTERDIVISIONAL PROCESSING parameter is set to No, regardless of the user's input at the "Process internet refills for all divisions?" prompt, only the refills for the user's division will be filled.

If the INTERDIVISIONAL PROCESSING parameter is set to Yes and the DIVISION PROMPT ASKED parameter is set to No, then the refill orders are processed for all divisions without any additional user input.

If the INTERDIVISIONAL PROCESSING parameter is set to Yes and the DIVISION PROMPT ASKED parameter is set to Yes, refills for the user's division will be processed without any additional input. If unprocessed refills outside the user's division exist, the "Continue?" prompt displays, allowing the user to confirm each refill, as shown in the example below.

Example: Process Internet Refills for all Divisions?

```
Process internet refills for all divisions? NO// Y YES
Now refilling Rx# ##### Drug: CAPTOPRIL 100MG TABS
Qty: 60 Sig: TAKE ONE TABLET BY MOUTH TWICE A DAY
Rx # ##### is for (ANYTOWN) division.
Continue? N// Y YES < This refill is outside the user's division.
```

If the user enters Yes at the "Continue?" prompt, the refill will be processed.

If the user enters No at the "Continue?" prompt, the refill will not process at this time, and the refill request will remain in the PRESCRIPTION REFILL REQUEST file. These refill requests may be processed later by a user in the same division, or any division, depending on the PHARMACY SYSTEM file parameters.

Refills processed successfully are flagged as FILLED in the RESULTS field of the PRESCRIPTION REFILL REQUEST file. Refills not processed due to conditions such as: Rx Expired, Discontinued, On Hold, Deleted, are flagged as NOT FILLED in the RESULTS field of PRESCRIPTION REFILL REQUEST file.

Complete Orders from OERR

[PSO LMOE FINISH]

When a clinician has created an order for a patient, the pharmacist then completes and verifies the order. The *Complete Orders from OERR* option is used to complete orders entered into the patient record through Order Entry Results Reporting (OERR) V. 3.0. This option uses the List Manager features. PSO*7*391 added a new sort selection, 'CS' enabling users to select digitally signed CS orders separately.

Patient demographics and Clinical Alerts display in the header area when using this option. Refer to [Patient Demographics and Clinical Alerts](#) for more information.

Patch PSO*7*505 adds new sort selection 'SU', enabling users to select supply item orders separately. This patch also adds new sort selections under the 'CS' controlled substances sort. Users may now choose NON-CS+SCHEDULES III-V, or NON-CS ONLY orders.

PSO*7*505 also introduces a new secondary sort feature, allowing users to further sort the list of orders that will be presented in option Complete Orders from OERR. After a user has selected a primary sort filter, a prompt will appear asking if the user would like to select a secondary sort filter. If the user answers yes, a new prompt appears for the user to again select from the list of sort selections. This secondary list does not include the item selected as the primary sort filter. For example, if the user chooses to first sort by 'PA' (Patient), the 'PA' (Patient) sort item will not appear in the secondary list.

The user may select orders by patient, route, priority, clinic, flag, supply items, or controlled substances. If Clinic is selected, the user may then choose to select by Clinic or Clinic Sort Group. In any sort, orders are completed on a first-in/first-out basis by patient. Clinic Sort Groups can be added or edited in the *Enter/Edit Clinic Sort Groups* option, found under the *Maintenance (Outpatient Pharmacy)* menu option. Orders entered before implementation of patch PSO*7*46 (Pharmacy Ordering Enhancements (POE)) must have the fields used to build the Sig filled in before processing can be completed.

If a temporary address has no end date, the following text is now displayed: “(Temp address from XXX 99,9999 till (no end date))”.

For ePharmacy orders, after an order is finished, the billing data is sent to the Electronic Claims Management Engine (ECME). ECME sends a message back to Outpatient Pharmacy displaying the status of the claim. For an example, see “Finishing an ePharmacy Order” in this section.

Example: Finishing an Order from OERR

```
Select Outpatient Pharmacy Manager Option: RX (Prescriptions)

      Orders to be completed for all divisions: 16

Do you want an Order Summary? No//  <Enter> NO

      Patient Prescription Processing
      Barcode Rx Menu ...
      Check Drug Interaction
      Complete Orders from OERR
      Discontinue Prescription(s)
```

```

Select Rx (Prescriptions) Option: Complete Orders from OERR

There are multiple Institutions associated with this Outpatient Site for
finishing orders entered through CPRS. Select the Institution for which to
finish orders from. Enter '?' to see all choices.

Select CPRS ORDERING INSTITUTION: ANYTOWN// <Enter>   NY  VAMC  500

You have selected ANYTOWN.
After completing these orders, you may re-enter this option and select again.

Select By: (PA/RT/PR/CL/FL/CS/E): PATIENT// <Enter>
All Patients or Single Patient: (A/S/E): SINGLE// <Enter>
Select Patient: OPPATIENT16,ONE  OPPATIENT16,ONE    4-3-41    #####
  YES      SC VETERAN

Do you want to see Medication Profile? Yes//

```

The user may enter a question mark at the “Select Patient” prompt to view a list of patients with pending orders. A single patient may be selected for processing, or pending orders for all patients may be processed in sequence by the time of each order’s entry into the system.

Flagged orders will not be processed. They are not a part of any pending orders. To process flagged orders, you should enter FL at the “Select By” prompt. This ensures you will view all patients with flagged pending orders, allowing you to address their flagged orders; however, if you know which patients have flagged orders, you can access the flagged orders through the Medication Profile.

After selecting a primary sort filter, the user will be asked if they wish to select a secondary sort filter. The filter chosen in as the primary filter will not appear in the secondary filter list.

```

Select Patient: ZZTEST,PATIENTONE    5-20-70    #####    YES
  SC VETERAN
Would you like to select a secondary filter? N// YES
Select another filter: (RT/PR/CL/FL/CS/SU/C/E): ROUTE// ?

Enter:
  'RT' to process orders by route (mail/window)
  'PR' to process orders by priority
  'CL' to process orders by clinic
  'FL' to process flagged orders
  'CS' to process digitally signed CS orders
  'SU' to process supply item orders
  or 'C' to continue with one filter
  or 'E' or '^' to exit

Select one of the following:

```

```

RT      ROUTE
PR      PRIORITY
CL      CLINIC
FL      FLAGGED
CS      CONTROLLED SUBSTANCES
SU      SUPPLY
C       CONTINUE W/PRIMARY
E       EXIT

```

Select another filter: (RT/PR/CL/FL/CS/SU/C/E): ROUTE//

If the user answers YES to “Do you want to see Medication Profile?” and the patient has remote prescription(s), the following prompt appears.

```

REMOTE PRESCRIPTIONS AVAILABLE!
Display Remote Data? N//

```

If the user answers YES to “Display Remote Data?” then the “Remote Facilities Visited” screen appears, allowing the user to see what facilities the patient has prescriptions at and what those prescriptions are.

After the user answers the medication profile prompt, a warning displays if no allergy assessment has been made. The patient’s eligibility and RX patient status also displays.

Example: Finishing an Order from OERR (continued)

```

OPPATIENT16,ONE      4-3-41      #####

Flagging and Unflagging Pending Orders

Flagging a pending order allows you to prevent an order from processing and attach a note known as a flag to the pending order. Flag/Unflag functionality is only available for Pending new orders and Pending renewals; only holders of the PSORPH security key can flag or unflag an order.

Flagged orders will not be processed. They are not a part of any pending orders. When you have flagged orders to process from the *Complete Orders from OERR* option, you should enter FL at the “Select By” prompt (shown in the following example). This ensures you will view all patients with flagged pending orders, allowing you to address their flagged orders; however, if you know which patients have flagged orders, you can access the flagged orders through the Medication Profile.

The following provides examples of how to flag and unflag pending orders from a medication profile within the *Complete Orders from OERR* option.

Example: Finishing an Order from OERR

```

Select Outpatient Pharmacy Manager Option: RX (Prescriptions)

    Orders to be completed for all divisions: 16

Select Action: Quit// SO Select Order
Select Orders by number: (1-2): 2
```

From the Pending OP Orders screen, you can flag and unflag an order, as well as view the flagged reason. To flag the order, enter FL and then enter a “REASON FOR FLAG”, alert the proper individual that the flag has been added by pressing <Enter> to select the default name or entering a different user name and pressing <Enter>, and the flagging process is complete.

Example: Flagging an Order

```
REASON FOR FLAG: DOUBLE CHECK WITH PATIENT FOR HEART CONDITION BEFORE DISPENSING.
Send alert to: PSUSER,ONE//      ANYTOWN  ALABAMA  OP      PHARMACIST
... order flagged.
```

When an order is flagged, “FL-” is placed in front of “Pending OP Orders” in the upper left corner, and the flagged reason is listed below the patient identifying information.

Example: A Flagged Order

```
FL-Pending OP Orders (ROUTINE)March 13, 2008 16:31:33      Page: 1 of 2
OPPACIENT16,ONE      <NO ALLERGY ASSESSMENT>

```

After pending orders have been unflagged, they can be processed.

If you attempt to process a flagged order, you are prompted “Unflag Order? NO//”. If you respond **YES**, enter comments to unflag the order and continue with processing. If you respond **NO**, you cannot process the order because it is still flagged.

Changes to Finishing Pending Orders Process - Digitally Signed Orders Only

Digitally signed orders will be identifiable by the “Digitally Signed Order” message in reverse video on the message bar.

If the terminal in use is set up as a VT-100, there may be problems with this message display and the “Processing Digitally Signed Order” message. Updating the Vista terminal session to use VT-320 will avoid this problem.

The provider’s PIV/PKI certificate is re-validated when accessing a digitally signed order. If the validation check is unsuccessful, an error code is sent to the pharmacist and an entry is made in the Rx Activity Log. The error code type will result in either the order being automatically rejected/discontinued or the pharmacist being given the choice to finish, bypass, or discontinue the order. Digitally signed prescriptions that have been discontinued cannot be reinstated. The Speed Discontinuation functionality will no longer delete unverified prescriptions.

Finishing an Order from OERR with Multiple Institutions

Multiple Institution entries can be added using the *Site Parameter Enter/Edit* option. If the local site has multiple entries in the CPRS ORDERING INSTITUTION field the user will be prompted for an Institution when entering the *Complete Orders from OERR* option. After an Institution is selected, then the Pending Orders that will be shown for completion will be those Pending Orders from clinics that are associated with the Institution selected.

Example: Finishing an Order from OERR with Multiple Institutions

```
Select Outpatient Pharmacy Manager Option: RX (Prescriptions)
      Orders to be completed for all divisions: 21
Do you want an Order Summary:? No// <Enter> NO
Select Rx (Prescriptions) Option: Complete Orders from OERR
There are multiple Institutions associated with this Outpatient Site for finishing orders
entered through CPRS. Select the Institution from which to finish orders. Enter '?' to see
all choices.
Select CPRS ORDERING INSTITUTION: ANYTOWN, AL.// <Enter> ANYTOWN, AL.521
You have selected ANYTOWN, AL..
After completing these orders, you may re-enter this option and select again.
Select By: (PA/RT/PR/CL/E): PATIENT// PA
```

[See the previous example for completion of this option.]

Finishing an ePharmacy Order

After the user reviews the ePharmacy order and chooses to accept the order, the billing data is sent to ECME, which sends a message back to Outpatient Pharmacy displaying the status of the claim. The ECME section of the Activity Log is also updated.

```
Is this correct? YES// <Enter>
-Rx ##### has been discontinued...

Veteran Prescription ##### successfully submitted to ECME for claim generation.

Claim Status:
IN PROGRESS-Waiting to start
IN PROGRESS-Waiting for packet build
IN PROGRESS-Packet being built
IN PROGRESS-Waiting for transmit
IN PROGRESS-Transmitting
E PAYABLE
```

Activity Log

Multiple Activity Logs exist for a completed or finished order. Any single activity log or all activity logs can be viewed.

Use the hidden action (AL) to view the activity log once a completed or finished order is selected.

Example: Activity Log

```
OP Medications (ACTIVE)      Jun 08, 2001 11:01:29      Page: 1 of 3
OPPATIENT29,ONE
  PID: REDACTED  N                      Ht (cm): 175.26 (06/07/2000)
  DOB: REDACTED                      Wt (kg): 79.09 (06/07/2000)
  SEX: MALE
  CrCL: <Not Found> (CREAT: Not Found)    BSA (m2): 1.95

  Rx #: #####

The activity log has an entry indicating that the Rx has been sent to the external interface. With patch PSO*7*354, this activity entry is enhanced to indicate the routing automated dispensing device. The Domain Name Server (DNS) information of the automated dispensing device is appended to the Comment field of the activity log. This is usually an IP address or the DNS name.

The activity log was also updated to display the mail tracking information available in the RXD-13 segment of the HL7 message received by VistA from the external dispensing interface.

Example: Activity Log with Multiple Dispensing Devices

```
Rx Activity Log                      May 23, 2011@12:30:12          Page: 2 of 3

```

When a prescription is discontinued, the software checks for any unresolved ECME rejections for that prescription. If a DUR REJECT or REFILL TOO SOON REJECT is found, it will be marked resolved with the reason PRESCRIPTION DISCONTINUED.

When an ePharmacy prescription is discontinued, the software checks for any unreleased fills with a PAYABLE claim. If found, a reversal request is sent to ECME, which forwards it on to the third party payer.

When a pending renewal order is discontinued, Outpatient Pharmacy verifies if there is an active prescription for the same drug. If an active prescription is found, you are prompted with “There is an active Rx for this pending order, Discontinue both (Y/N)?” If you respond YES, both the pending order and the active order are discontinued. If you respond NO, only the pending order is discontinued and the active order is not discontinued.

Edit Prescriptions

[PSO EXEDIT]

This option allows changes to be made to entered orders. Newly entered orders can be edited before release by typing in the corresponding field number. Previously entered orders can be edited by entering the prescription number, then specifying the field to be edited. An asterisk or star (*) is shown in front of each field that will create a new order if it is changed. See the section “Editing an Order” for an example.

When editing fields preceded by an asterisk (*) in an ePharmacy order (or electronically third party billable prescription), upon acceptance of the edited order the original prescription will be discontinued and a new order created. If the latest fill of the original order has not been released, the claim for that fill will be reversed. A new claim is created for the new prescription. See “Editing an ePharmacy Order” for an example of editing ePharmacy orders.

MAXIMUM DAYS SUPPLY

Maximum Days Supply has been added to both the VA PRODUCT File (50.68) and the Drug File (#50.0). This field allows the user to increase the Max Days supply allowed for a drug to greater than 90 up to 365. Controlled substances will remain at 1-90 days supply.

With the addition of Max Days Supply, Days Supply can now be entered from 1-365 for a drug.

Important Note: When the MAXIMUM DAYS SUPPLY is populated in both the VA PRODUCT File (50.68) and the Drug File (#50), the lower of the two values takes priority.

Example: DAYS SUPPLY: (1-90): 90// (Active Order)

The MAXIMUM DAYS SUPPLY in the Drug File (#50) and the MAXIMUM DAYS SUPPLY in the VA PRODUCT File (#50.68) are NOT set.

The MAXIMUM DAYS SUPPLY for the Drug File (#50) is a NULL value.

The MAXIMUM DAYS SUPPLY for the VA PRODUCT File (#50.68) is a NULL value.

The DAYS SUPPLY for this prescription can be set to a maximum of 90.

```

DAYS SUPPLY: (1-90): 90//

```

Example: DAYS SUPPLY: (1-265): 90// (Active Order)

MAXIMUM DAYS SUPPLY in the Drug File (#50) is greater than the MAXIMUM DAYS SUPPLY in the VA PRODUCT File (#50.68).

The MAXIMUM DAYS SUPPLY for the Drug File (#50) is 365.

The MAXIMUM DAYS SUPPLY for the VA PRODUCT File (#50.68) is null.

After an update from the Pharmacy Product System for a maximum days supply of 265 the following would occur:

The MAXIMUM DAYS SUPPLY for the Drug File (#50) is 365.

The MAXIMUM DAYS SUPPLY for the VA PRODUCT File (#50.68) is 265.

In this scenario, the value in the VA PRODUCT File (#50.68) takes priority since it is the lower of the two values.

The DAYS SUPPLY for this prescription can be set to a maximum of 265.

DAYS SUPPLY: (1-365): 90//
```

**Table 13: MAXIMUM DAYS SUPPLY
VA Product File (#50.68) vs Local Drug File (#50)**

Days Supply	VA Product File	Local Drug File	Outpatient Pharmacy 'Days Supply' Prompt
60	NULL	NULL	Days Supply (1-90): 60//
60	NULL	365	Days Supply (1-365): 60//
60	365	365	Days Supply (1-365): 60//
60	300	265	Days Supply (1-265): 60//

Days Supply	VA Product File	Local Drug File	Outpatient Pharmacy 'Days Supply' Prompt
60	300	365	*****
60	150	NULL	Days Supply (1-150): 60//

The above table displays the MAXIMUM DAYS SUPPLY for files 50.68 and 50, and the effect on the days supply range displayed to the user in Outpatient Pharmacy. The maximum value for the days supply is always the lesser value if the MAXIMUM DAYS SUPPLY is populated in both files.

**The default of 60 is set by the days supply established in the Rx Patient Status file (#53).

When entering a MAXIMUM DAYS SUPPLY value using the *Drug Enter/Edit* [PSS DRUG ENTER/EDIT], and the value is greater than the VA Product File value, the following message displays to the user:

“Cannot be greater than NDF Maximum Days Supply: <value>”

The MAXIMUM DAYS SUPPLY value in the Local Drug File (#50) should not exceed the MAXIMUM DAYS SUPPLY value in the VA Product File (#50.68).

DAW/NDC Edit

The Dispensed As Written (DAW)/National Drug Code (NDC) field for discontinued and expired orders can be edited.

For ePharmacy prescriptions, the DAW/NDC field for discontinued and expired orders can be edited. The following statuses are editable.

- 11 – EXPIRED
- 12 – DISCONTINUED
- 14 - DISCONTINUED BY PROVIDER
- 15 - DISCONTINUED (EDIT)

These are additional status results from the prescription being discontinued from CPRS. For status 14 - DISCONTINUED BY PROVIDER, the user can choose to discontinue the prescription in CPRS by selecting “Requesting Physician Cancelled” for the reason.

The following is an example of the activity log entry stored on the prescription for this type of discontinue:

```
1 06/20/08  DISCONTINUED  ORIGINAL  OPPHARM, ONE
Comments: Discontinued by OE/RR.
```

For status 15 - DISCONTINUED (EDIT), the user can edit a prescription in CPRS which discontinues the prescription being edited resulting in status 15 in the Outpatient Pharmacy package. The following is an example of the activity log entry on the prescription in OP:

2 06/05/08 DISCONTINUED ORIGINAL OPHARM, ONE

Hazardous Medication Warnings – Order Checks

ePharmacy Menu

[PSO EPHARMACY MENU]

The following menu items are locked with the PSORPH key: ePharmacy Medication Profile Division Preferences, Third Party Payer Rejects – View/Process and Third Party Payer Rejects – Worklist. The following menu item is locked with the PSO TRICARE/CHAMPVA MGR key: TRICARE CHAMPVA Override Report. The ePharmacy

Site Parameters [PSO ePHARM SITE PARAMETERS] menu is locked with the PSO EPHARMACY SITE MANAGER Key.

The following menu items allow the user to perform ePharmacy specific functions including rejections by third party payers including DUR/RTS and has the following options:

- *Ignored Rejects Report*
- *ePharmacy Medication Profile (View Only)*
- *NDC Validation*
- *ePharmacy Medication Profile Division Preferences*
- *ePharmacy Site Parameters*
- *Third Party Payer Rejects – View/Process*
- *Third Party Payer Rejects – Worklist*
- *TRICARE CHAMPVA Override Report*
- *Pharmacy Productivity/Revenue Report*
- *ePharmacy Patient Comment*
- *View ePharmacy Rx*
- *Bypass 3/4 Day Supply*

DURs can occur when a third party determines there are safety issues involved with an Rx claim submission, and they can be due to high dose, drug interaction, and excessive utilization. The third party payer returns an NCPDP rejection code of 88 or 943 to indicate a DUR.

Refill Too Soon rejections happen when a third party payer determines that a prescription is being processed too early compared to the last time the prescription was filled. This can occur for several reasons, including third party payer's policy differs from VA policy, patient receiving medication at another pharmacy, or the provider may have increased the dosage or frequency of the medication. The third party payer returns an NCPDP rejection code of 79 to indicate a Refill Too Soon.

Prescriptions rejected as DUR, Reject Resolution Required, and Refill Too Soon are moved to the REFILL TOO SOON/DUR REJECT RESOLUTION REQUIRED (Third Party) section of the Medication Profile. Prescriptions rejected as Reject Resolution Required, TRICARE and CHAMPVA are displayed in the OTHER REJECTS PENDING RESOLUTION section of the Medication Profile. The user must resolve a rejected prescription before other actions such as release, label print, renew, and refill, among others, can be performed on it. Actions may still be taken on these prescriptions through CPRS.

Ignored Rejects Report

[PSO IGNORED REJECTS REPORT]

This option gives the user the ability to run a report for third-party rejects that have been ignored and consequently closed by the pharmacy users.

The user can select one of the following parameters to filter the data in the report:

- **DIVISION:** Allows the user to select one, some or all divisions.
- **DATE RANGE:** Allows the user to select a date range.
- **SORT BY:** Allows the user to choose different fields to sort the report by. Any combination can be selected:
- **PATIENT:** Allows the user to select a single, multiple or all patients
- **DRUG:** Allows the user to select a single, multiple or all drugs.
- **USER:** Allows the user to select a single, multiple or all users that have ignored third party rejects.

Even though the report displays the Billed Amount, that amount cannot be used to determine potential revenue. The Billed Amount shows what was billed to the third-party payer.

Example: Ignored Rejects Report

```
Select ePharmacy Menu Option: IR Ignored Rejects Report
```

```
You may select a single or multiple DIVISIONS,

ePharmacy Medication Profile (View Only)

[PSO PMP]

Although the name indicates “ePharmacy Medication Profile”, this option can be used to list the medication profile for any patient on file. It will be used mostly by ePharmacy users for claims research purposes. This functionality is also available from the Reject Worklist through the Medication Profile (MP) action.

Example 1: Medication Profile with default view

```

The following options are available as Hidden Menu actions on this screen.

- DR - Sort by Drug LF - Sort by Last Fill
- RX - Sort by Prescription ID - Sort by Issue Date
- RDD - Switch between LAST FILL and LAST RELD (release date)

After selecting a prescription on this screen, the *REJ* option is available on the “RX View” screen’s hidden menu. This action displays third party reject information for the prescriptions with third party rejects.

The *CV (Change View)* option allows the user to change some characteristics of the screen above. The user can also save and/or delete preferences, which will be used every time the user runs the *Medication Profile* option or invokes it from the Reject Worklist. The users can have one set of preferences for each Division defined.

Example 2: Change View action

Enter CV at the “Select:” prompt to change the view preferences.

```

NDC Validation

The initial validation of the NDC can be performed by a pharmacy technician. This functionality only applies to local fills that are not sent to OPAI. This function provides a pharmacy technician the ability to manually enter the prescription number or scan the bar code of the existing prescription label. Then the user may manually enter or scan the NDC of the stock bottle used to fill the prescription. When the system matches the NDC, confirmation is provided to the pharmacy tech and allows the technician to continue processing. However, if the system detects a mismatch and the NDC of the stock bottle has an associated entry in the synonym file, the NDC will be updated in Prescription file (#52) for the fill. The system will then prompt the technician to press enter to continue, a new label will be printed, the original electronic claim reversed, and a new claim submission will be transmitted with the new NDC. In the event that the revised NDC prompts a RTS/DUR rejection, the system will immediately send the item to the Reject Worklist.

In a case where the NDC entered is not defined for the drug in the Drug File, the system prompts the technician that a mismatch has occurred and the prescription needs to be validated by a pharmacist. The system notes that the NDC had not been validated and allows the pharmacy tech to move to the next prescription. In the event of a change of NDC prompted a rejection, the system immediately sends the item to the Reject Worklist.

The releasing pharmacist will receive a notation that NDC has been validated by technician when processing. If the NDC change has prompted a claim reversal and produced a RTS/DUR rejection, the pharmacist will be presented with a Reject Processing screen at release.

Example: Matched NDC:

```

Select ePharmacy Menu Option: NV NDC Validation
Prescription: ##### DIPYRIDAMOLE 25MG TAB
Rx: ##### Fill: 0 Patient: OPPATIENT,ONE
Drug: DIPYRIDAMOLE 25MG TAB NDC: #####-###-##

```

```

Prescription label NDC: #####-###-##
Stock NDC: #####-###-##

NDC match confirmed

Prescription:

```

Example: Non-matched NDC:

```

Prescription: 101341 BIPERIDEN 2MG TAB
Rx: ##### Fill: 0 Patient: OPPATIENT,ONE
Drug: BIPERIDEN 2MG TAB NDC: #####-###-##
Prescription label NDC: #####-###-##
Stock NDC: #####
Due to a change in NDC, a claims reversal and resubmission will be performed.

Veteran Prescription 101341 successfully submitted to ECME for claim generation.

ePharmacy Medication Profile Division Preferences

[PSO PMP SITE PREFERENCES]

This option allows the user to specify certain settings that will control how the *ePharmacy Medication Profile* option works for that user. Below is the list of settings that can be specified through this option:

- **EXP/CANCEL CUTOFF:** Indicates the maximum number of days for an expired and/or discontinued prescription to be cut from the profile.
- **SORT BY:** Indicates the default sorting column. The options are: Rx#, Drug Name, Issue Date or Last Fill Date.
- **SORT ORDER:** Indicates the order in which the column above will be sorted: Ascending or Descending.
- **DISPLAY SIG:** Indicates whether the SIG should be displayed under each prescription or if it should be hidden.
- **GROUP BY STATUS:** Indicates whether the list should be grouped by status (Active, Discontinued, Hold, etc...) or not.
- **DISPLAY ORDER COUNT:** Indicates whether the number of orders under each group should be displayed beside the group name. Example _____ACTIVE (3 orders)_____

```

Select ePharmacy Menu Option: PF ePharmacy Medication Profile Division Preferences

ALBANY's current default view:
-----

DISPLAY ORDER COUNT: OFF//<Enter>

Saving...OK!

```

If there is a set of preferences already on file for the division the user is logged under, the option to delete such preferences is presented to the user as seen above.

ePharmacy Site Parameters

The ePharmacy Site Parameters file (#52.86) stores the ePharmacy Site parameters by division. The EPHARMACY SITE PARAMETERS [PSO ePHARM SITE PARAMETERS] option can be accessed from the ePharmacy Menu [PSO EPHARMACY MENU].

This option requires the PSO EPHARMACY SITE MANAGER security key.

The following site parameters are definable in the General Parameters section:

- **REJECT WORKLIST DAYS:** This is the number of days an unresolved reject can remain on the Third Party Payer Rejects – Worklist without being included in the nightly reject worklist alert mail message.
- **EPHARMACY RESPONSE PAUSE:** This defines the length of an optional pause after the display of the claim transmission messages for rejects resolved from the Reject Worklist. The pause can be set to a value from zero (0) to three (3) seconds with a default of two (2) seconds. The delay appears at the end of claims transmission messaging and will allow the pharmacist to read the transmission messages before displaying the next screen.
- **IGNORE THRESHOLD:** This is the threshold value that is compared to the gross amount due for a rejected claim. If the gross amount due is greater than or equal to the IGNORE THRESHOLD, the EPHARMACY SITE MANAGER security key is required to ignore the reject. The value can be blank which will turn off the feature. If the value is set to 0, then no rejects can be ignored unless the user has the security key.

In the Transfer Reject Parameters section, the user may enter as many reject codes as they desire along with the manner in which each will be allowed to be placed on the Third Party Payer Rejects – Worklist. This is what appears in the Transfer Reject Parameters section:

- **REJECT CODE:** A valid third party claim reject code should be entered. A listing of these codes is provided when double question marks (??) are entered for this prompt. Valid codes are contained within the BPS NCPDP REJECT CODES file (#9002313.93). Also, a value defined in this field triggers definition of USER field (#2) and DATE OF LAST UPDATE field (#3).
- **AUTO SEND:** This prompt is a companion to the REJECT CODE prompt. Enter YES to allow the entered REJECT CODE to be automatically placed on the Pharmacy Reject Worklist or NO to require Outpatient Pharmacy Electronic Claims Coordinator (OPECC) intervention to do so. A null value will be treated the same as entering NO in this field.

In the Reject Resolution Required Parameters section, the user may enter as many reject codes as they desire along with the manner in which each will be allowed to be placed on the Third Party Payer Rejects – Worklist. This is what appears in the Reject Resolution Required Parameters section:

- **REJECT RESOLUTION REQUIRED CODE:** A valid third party claim reject code should be entered. A listing of these codes is provided when double question marks (??) are entered for this prompt. Valid codes are contained within the BPS NCPDP REJECT CODES file (#9002313.93).
- **THRESHOLD AMOUNT:** This prompt is a companion to the Reject Resolution Required Code prompt. The threshold amount is compared to the gross amount due for the prescription. If the gross amount due is equal to or greater than the threshold amount, then the gross amount due has met the threshold.

If a reject code is specified as a reject resolution required code, and that reject code is received from a third party payer, the system will evaluate the prescription for Reject Resolution Required processing. The prescription will not be filled if these criteria are met: original fill, Veteran eligibility, not released, the reject is on the Reject Resolution Required list for the current division, and the total gross amount of the prescription is at or above the specified threshold.

The short format displays the status in an abbreviated form. The following is an explanation of the Site Parameter actions:

Table 14: Site Parameter Actions

Action	Description
Edit All Parameters [EA]	Edit all parameters on the screen. This action is a compilation of Edit General Parameters [EG], Edit Transfer Reject Code [ET], and Edit Rej. Resolution Required Code [ER].
Edit General Parameters [EG]	Edit the General Parameters section of the screen. Add, edit, or delete data.
Edit Transfer Reject Code [ET]	Edit the Transfer Reject Code section of the screen. Add, edit, or delete reject codes and the associated auto-send parameter.

Action	Description
Edit Rej. Resolution Required Code [ER]	Edit the Edit Rej. Resolution Required Code section of the screen. Add, edit, or delete reject codes and the associated threshold parameter.
Copy Parameters [CP]	The parameters for the division displayed on the screen will be copied to one or more selected divisions. All parameters for the destination divisions are overwritten when the copy action is used.
Display Site Parameters [DP]	Select multiple divisions to display parameters
Change Division [CD]	Select a division to display on the screen
Exit [EX]	Exit the ePharmacy Site Parameters option

Example: ePharmacy Site Parameter Screen

```

Select Action: Next Screen//
```

Example: Edit General Parameters (EG) Action

```
Select Action: Next Screen// EG  Edit General Parameters
REJECT WORKLIST DAYS: 1// ??
    The number of days an uncommented reject can remain on the reject
    worklist without being included in the nightly reject worklist alert
    mail message.

REJECT WORKLIST DAYS: 1//
EPHARMACY RESPONSE PAUSE: 2// ??
    This field contains the number of seconds the claim status message will
    be displayed on the screen after the transmission message. The number
    of seconds to delay may be from 0 to 3 with the default of 2 seconds.

EPHARMACY RESPONSE PAUSE: 2//
IGNORE THRESHOLD: 1// ??
    The value of the Ignore Threshold field is compared to the Gross Amount
    Due of the prescription.
    If the Gross Amount Due is greater than or equal to the value of this
    field, then the user must hold the EPHARMACY SITE MANAGER security key in
    order to Ignore the reject.
    If the value of this field is set to 0, then no rejects can be Ignored
```

unless the user has the security key.
If the value of this field is left blank, the Gross Amount Due will not be considered.

IGNORE THRESHOLD: 1//

Example: ET (Edit Transfer Reject Code) Action

Select Action: Next Screen// ET Edit Transfer Reject Code

All transfer rejects will automatically be placed on the Third Party Payer Rejects - Worklist if the reject code is defined in the site parameter file and the AUTO SEND parameter is set to yes. The OPECC must manually transfer the reject if the reject code is defined in the site parameter file and the AUTO SEND parameter is set to no. (To be used when Pharmacy can possibly correct a locally filled or CMOP Rx.)

TRANSFER REJECT CODE: ??

Choose from:

- 10 M/I Patient Gender Code
- 11 M/I Patient Relationship Code
- 12 M/I Place of Service
- 13 M/I Other Coverage Code
- 14 M/I Eligibility Clarification Code
- 15 M/I Date of Service
- 16 M/I Prescription/Service Reference Number
- 17 M/I Fill Number
- 18 M/I Metric Quantity

.
.
.

TRANSFER REJECT CODE: 81 Claim Too Old

You are entering a new transfer reject code - 81.

TRANSFER REJECT CODE: 81//

AUTO SEND: NO// ??

Enter YES to allow the Third Party claim reject code to be automatically placed on the Pharmacy Reject Worklist or NO to require Outpatient Pharmacy Electronic Claims Coordinator (OPECC) intervention to do so. A null value will be treated the same as entering NO in this field.

Choose from:

- 0 NO
- 1 YES

AUTO SEND: NO//

ANOTHER TRANSFER REJECT CODE:

Example: ER (Edit Rej. Resolution Required Code) Action

Select Action: Next Screen// ER Edit Rej. Resolution Required Code

All Reject Resolution Required reject codes will automatically be placed on the Third Party Payer Rejects - Worklist. This parameter applies to rejects for original unreleased fills only. Prescriptions will not be filled until the rejects identified by the Reject Resolution parameter are resolved.

REJECT RESOLUTION REQUIRED CODE: ??

Choose from:

- 10 M/I Patient Gender Code
- 11 M/I Patient Relationship Code
- 12 M/I Place of Service
- 13 M/I Other Coverage Code
- 14 M/I Eligibility Clarification Code
- 15 M/I Date of Service
- 16 M/I Prescription/Service Reference Number
- 17 M/I Fill Number
- 18 M/I Metric Quantity

```

19      M/I Days Supply
20      M/I Compound Code
21      M/I Product/Service ID
22      M/I Dispense As Written (DAW)/Product Selection Code
23      M/I Ingredient Cost Submitted
24      M/I SALES TAX
25      M/I Prescriber ID
26      M/I Unit Of Measure
27      Product Identifier not FDA/NSDE Listed
28      M/I Date Prescription Written
29      M/I Number Of Refills Authorized
.. . .

REJECT RESOLUTION REQUIRED CODE: 27          Product Identifier not FDA/NSDE Listed
  You are entering a new reject resolution required code - 27.
REJECT RESOLUTION REQUIRED CODE: 27//
DOLLAR THRESHOLD: 0// ??
  If a Reject Resolution Required Code is received on an ECME claim reject,
  the value of this field is compared to the Gross Amount Due of the
  prescription.

  If the Gross Amount Due is greater or equal to the value of this field
  then the reject is transferred to the Third Party WorkList for Reject
  Resolution Required (RRR) processing.

  If the value of this field is left blank or set to 0, then all rejects
  with the RRR reject code will be transferred to the Third Party Worklist
  for RRR processing.

DOLLAR THRESHOLD: 0//
ANOTHER REJECT RESOLUTION REQUIRED CODE:

```

Example: CP (Copy Parameters) Action

```

Select Action: Next Screen// CP   Copy Parameters

The parameters will be copied from CHEYENNE VAM&ROC Division.

Select the Pharmacy Division(s) to overwrite.
You may select a single or multiple Pharmacy Divisions,
or enter ^ALL to select all Pharmacy Divisions.

Select a Pharmacy Division to be overwritten: ??

  Choose from:

  ANYTOWN CLINIC      #####
  MOC - ANYTOWN       #####
  ANYTOWN CLINIC      #####

Select a Pharmacy Division to be overwritten: ANYTOWN CLINIC      #####

ANOTHER ONE:

The parameters from Pharmacy Division ANYTOWN VAM&ROC
will overwrite the parameters in Pharmacy Division:

ANYTOWN CLINIC

Do you want to continue? NO//

```

Third Party Payer Rejects - View/Process

[PSO REJECTS VIEW/PROCESS]

This option provides information about rejects that have been on the Third Party Payer Rejects – Worklist. This option allows the user to find, display and reopen rejects previously resolved from the Third Party Payer Rejects – Worklist in order to take action on them again.

The user can choose to view rejects for one, multiple, or all Outpatient Pharmacy Divisions.

Example: Viewing and Resolving Open Rejects

```
Select ePharmacy Menu Option: VP Third Party Payer Rejects - View/Process

You may select a single or multiple DIVISIONS,
or enter ^ALL to select all DIVISIONS.

DIVISION: ^ALL
```

The user can select one of the following selections to filter the data displayed:

- **DATE RANGE:** Selects a date range (Default: Last 90 days).

```
BEGIN REJECT DATE: T-90// <Enter> (MAR 09, 2007)
END REJECT DATE: T// <Enter> (JUN 07, 2007)
```

- **(P)ATIENT:** Selects a single patient, multiple patients, or all patients.
- **(D)RUG:** Selects a single drug, multiple drugs, or all drugs.
- **(R)x:** Selects single or multiple prescription numbers, or ECME number preceded by “E”.
- **(I)NSURANCE:** Selects a single insurance, multiple insurances, or all insurances.
- **(C) REJECT CODE:** Selects a single reject code, multiple reject codes, or all reject codes.

```
Select one of the following:

      P      PATIENT
      D      DRUG
      R      Rx
      I      INSURANCE
      C      Reject Code

By (P)atient, (D)rug, (R)x, (I)nsurance or Reject (C)ode: P// INSURANCE

You may select a single or multiple INSURANCES,
or enter ^ALL to select all INSURANCES.

INSURANCE: TEST
  1  TEST INS PLUS      111 STREET ADDRESS      CITY      MONTANA      Y
  2  TEST INSURANCE    123 MAIN ST      ANYTOWN    ILLINOIS      Y
CHOOSE 1-2: 2  TEST INSURANCE    123 MAIN ST      ANYTOWN    ILLINOIS
Y  TEST INSURANCE

ANOTHER ONE:
```

Next, the user can choose to display either Unresolved, Resolved, or Both types of rejects.

```
Select one of the following:

      U      UNRESOLVED

DR  Sort by Drug          RE  Sort by Reason          RX  Sort by Prescription
PA  Sort by Patient       RF  Screen Refresh         GI  Group by Insurance
Select: Quit//
```

The following options are available on the screen above:

- DR – Sorts the list by the drug name.
- PA – Sorts the list by the patient’s last name.
- RE – Sorts the list by the reject reason.
- RF – Refreshes the screen. (This selection retrieves DUR/ REFILL TOO SOON rejects that happened after the screen was originally populated.)
- RX – Sorts the list by Prescription number.
- GI – Groups the rejects by Insurance Company name.

The following hidden actions are also available (excluding standard ListManager hidden actions):

- TRI (Show/Hide TRICARE) – Toggle that indicates whether to display or hide TRICARE rejections.
- CVA (Show/Hide CHAMPVA) – Toggle that indicates whether to display or hide CHAMPVA rejections.

- PSX (Print to Excel) – Allows the current display list of rejection to output in a format that can easily be imported into a spreadsheet.

The following two sets of characters denote the order by which the list is being sorted: [^] for ascending and [v] for descending. The order inverts every time the user selects the same column by which the list is already ordered. Thus, if the list is currently ordered by Patient in ascending order ([^]) and the user types “PA”, the list will be re-sorted in descending order and the order indicator will change to ([v]).

The user selects a specific record to display all relevant information about the prescription and the claim submitted to the payer.

VW View Rx          IGN Ignore Reject          OVR Submit Override Codes
MP Medication Profile RES Resubmit Claim      CSD Change Suspense Date
Select: Next Screen// IGN Ignore Reject
```

These options are available on the screen above:

- VW (View RX) – Takes the user to the *View Prescription* option to review details for that prescription.
- MP (Medication Profile) – Invokes the patient’s list of medication.
- IGN (Ignore Reject) – Allows the user to close or resolve the DUR/REFILL TOO SOON/REJECT RESOLUTION REQUIRED Reject without resubmission to the payer. The user will be required to enter a free-text comment and his/her electronic signature. Comments from Ignored rejects will be displayed in the ECME Reject Log (Activity Log), including when a TRICARE or CHAMPVA non-billable prescription with open

pseudo-rejection codes of eT or eC is ignored from the Reject Notification screen. If the gross amount due exceeds the Ignore Threshold, the user must have security key EPHARMACY SITE MANAGER to complete the ignore action.

- RES (Resubmit Claim) – Allows the user to re-submit the claim to the payer. This will automatically mark the reject resolved. The RES action can be used to submit a claim for TRICARE and CHAMPVA non-billable prescriptions with open pseudo-rejection codes of eT and eC. The Reject Information screen only displays the RESUBMISSION indicator if the claim was resubmitted from the ECME User Screen.
- OVR (Submit Override Codes) – Allows the user to re-submit the claim by entering NCPDP override codes, which shall trigger a new claim submission be sent to the payer.
- CSD (Change Suspense Date) – Allows the user to change the fill date for suspended prescriptions.
- DC (Discontinue Rx) – C (Discontinue Rx) – Allows the user to discontinue a TRICARE, CHAMPVA or Veteran prescription. • Note that this is primary action when the prescription is for a TRICARE or CHAMPVA patient and a hidden action when the prescription is for a Veteran patient.

Hidden Actions:

- COM (Add Comments) – Allows the user to add reject specific comments or patient specific comments. The comments are local to the Reject Worklist and View/Process options and are not transmitted to ECME. The reject-specific comments also display in the ECME Log section of the Activity Log and the patient-specific comments display on the reject notification screen.
- CLA (Submit Clarif. Code) – Allows the user to re-submit a claim with Clarification Codes.
- ED (Edit Rx) – Allows the user to edit the prescription. If, after editing the prescription, the fill date is equal to the current date or is in the future and the prescription is not already suspended, the user will get the LABEL prompt, which will allow the user to suspend the prescription.
- DC (Discontinue Rx) – Allows the user to discontinue a TRICARE, CHAMPVA or Veteran prescription. Note that this is primary action when the prescription is for a TRICARE or CHAMPVA patient and a hidden action when the prescription is for a Veteran patient.
- PA (Submit Prior Auth.) – Allows the user to re-submit a claim with Prior Authorization information.

- ARI (View Addtl Rej Info) – Allows the user to display additional reject information from the payer, if available.
- SDC (Suspense Date Calculation) – Allows the user to calculate a new suspense date based on Last Date of Service and Last Days Supply. The suspense date calculation will also consider prior prescriptions for the same patient and drug to allow calculation of a suspense date for a new prescription.
- SMA (Submit Multiple Actions) – Allows the user to resubmit a claim with multiple actions, including the following information: Prior Authorization, Submission Clarification Code, Reason for Service Code, Professional Service Code, and Result of Service Code.
- VER (View ePharmacy Rx) - Allows the user to view and print information for one prescription, combining information from Outpatient Pharmacy, Integrated Billing and ECME.
- ECS (Edit Claim Submitted) – Allows the user to resubmit a claim with specified NCPDP fields. The user may select a date of service if the prescription is released. The action is available if the claim response was rejected or payable.

Example: Viewing and Resolving Open Rejects (continued)

```

Enter your Current Signature Code:    SIGNATURE VERIFIED

Third Party Payer Rejects - Worklist

[PSO REJECTS WORKLIST]

This option gives the user the ability to process Third Party Payer Rejects, CHAMPVA Non-billable rejects and TRICARE Non-billable rejects for one, multiple, or all Outpatient Pharmacy Divisions. The user is also able to process rejects for dual eligible patients. Only OPEN/UNRESOLVED rejects that have clinical significance, such as DUR and Refill Too Soon, and rejects transferred from the ECME user screen, are added to the Worklist. Once the reject is marked CLOSED/RESOLVED, it is automatically removed from the Worklist.

Discontinued TRICARE and CHAMPVA prescriptions no longer appear on the Third Party Payer Rejects - Worklist [PSO REJECTS WORKLIST].

Example: Resolving Open Rejects

```

VW View Rx           IGN Ignore Reject       OVR Submit Override Codes
MP Medication Profile RES Resubmit Claim     CSD Change Suspense Date
Select: Quit// OVR Submit Override Codes

```

These options are available on the screen above:

- VW (View Rx) – Takes the user to the View Prescription option to review details for that prescription.
- MP (Medication Profile) – Invokes the patient’s list of medication.
- IGN (Ignore Reject) – Allows the user to close or resolve the DUR/REFILL TOO SOON Reject or the Reject Resolution Required Reject without resubmission to the payer. The user will be required to enter a free-text comment and his/her electronic signature. If the gross amount due exceeds the Ignore Threshold, the user must have security key EPHARMACY SITE MANAGER to complete the ignore action.
- RES (Resubmit Claim) – Allows the user to re-submit the claim to the payer. This will automatically mark the reject resolved. The RES action can be used to submit a claim for TRICARE and CHAMPVA non-billable prescriptions with open pseudo-rejection codes of eT and eC. The Reject Information screen only displays the RESUBMISSION indicator if the claim was resubmitted from the ECME User Screen.
- OVR (Submit Override Codes) – Allows the user to re-submit the claim by entering NCPDP override codes, which shall trigger a new claim submission be sent to the payer. This option is active for DUR rejects only.
- CSD (Change Suspense Date) – Allows the user to change the fill date for suspended prescriptions.
- DC (Discontinue Rx) – Allows the user to discontinue a TRICARE, CHAMPVA or Veteran prescription. Note that this is a primary action when the prescription is for a TRICARE or CHAMPVA patient and a hidden action when the prescription is for a Veteran patient.

Hidden Actions:

- COM (Add Comments) – Allows the user to add reject specific comments. These comments are local to the Reject Worklist and View/Process options and are not transmitted to ECME. The comments also display in the ECME Log section of the Activity Log.
- CLA (Submit Clarif. Code) – Allows the user to re-submit a claim with Clarification Codes.
- ED (Edit Rx) – Allows the user to edit the prescription.

- DC (Discontinue Rx) – Allows the user to discontinue a TRICARE, CHAMPVA or Veteran prescription. Note that this is primary action when the prescription is for a TRICARE or CHAMPVA patient and a hidden action when the prescription is for a Veteran patient.
- PA (Submit Prior Auth.) – Allows the user to re-submit a claim with Prior Authorization information.
- ARI (View Addtln Rej Info) – Allows the user to display additional reject information from the payer, if available.
- SDC (Suspense Date Calculation) – Allows the user to calculate a new suspense date.
- SMA (Submit Multiple Actions) – Allows the user to resubmit a claim with multiple actions.
- ECS (Edit Claim Submitted) – Allows the user to resubmit a claim with specified NCPDP fields. The user may select a date of service if the prescription is released. The action is available if the claim response was rejected or payable.

When a claim is rejected, typically the Payer returns a “Reason for Service Code”, which becomes the default for the “Reason for Service Code” prompt. The user can use this reason to then select which code is entered for “Professional Service Code” and “Result of Service Code”.

Available codes for “Professional Service Code” include:

Code	Description
00	NO INTERVENTION
AS	PATIENT ASSESSMENT
CC	COORDINATION OF CARE
DE	DOSING EVALUATION/DETERMINATION
DP	DOSAGE EVALUATED
FE	FORMULARY ENFORCEMENT
GP	GENERIC PRODUCT SELECTION
M0	PRESCRIBER CONSULTED
MA	MEDICATION ADMINISTRATION
MB	OVERRIDING BENEFIT
MP	PATIENT WILL BE MONITORED
MR	MEDICATION REVIEW
NM	COUNSELING SVCS NOT RELATED TO MED THERAPY OR DX
P0	PATIENT CONSULTED
PA	PREVIOUS PATIENT TOLERANCE
PE	PATIENT EDUCATION/INSTRUCTION
PH	PATIENT MEDICATION HISTORY
PM	PATIENT MONITORING
PT	PERFORM LABORATORY REQUEST
R0	PHARMACIST CONSULTED OTHER SOURCE
RT	RECOMMENDED LABORATORY TEST

SC	SELF-CARE CONSULTATION
SW	LITERATURE SEARCH/REVIEW
TC	PAYER/PROCESSOR CONSULTED
TH	THERAPEUTIC PRODUCT INTERCHANGE
ZZ	OTHER ACKNOWLEDGEMENT

Available codes for “Result of Service Code” include:

Code	Description
00	NOT SPECIFIED
1A	FILLED AS IS, FALSE POSITIVE
1B	FILLED PRESCRIPTION AS IS
1C	FILLED, WITH DIFFERENT DOSE
1D	FILLED, WITH DIFFERENT DIRECTIONS

OTH	Other OP Actions	<	Shift View to Left	UP	Up a Line

Resubmit Claim is a hidden action used to resubmit a claim to the third-party payer. Claims are almost always resubmitted by the ePharmacy Site Manager and not by untrained Pharmacy staff members. A resubmission is not allowed for the following:

- TRICARE non-billable prescription with a pseudo-rejection of eT
- CHAMPVA non-billable prescription with a pseudo-rejection of eC
- Any prescription with a primary and secondary claim

The action will prompt for a fill number with a default value of the most recent fill.

If a user resubmits a claim and resolves a Reject Resolution Required rejection, additional information will display below the claim processing message. The additional information only displays if the resubmit occurs from Outpatient Pharmacy, not ECME.

If a user resubmits a claim that is marked as non-billable in Claims Tracking a message "Reason Not Billable (RNB) must be removed from Claims Tracking prior to resubmitting" is displayed.

If a user attempts to resolve a reject that has a bill in Claims Tracking a message "OPECC to Cancel Existing Bill in IB & Resubmit Claim" is appended to the existing message of "Existing IB Bill in CT".

Example: Resubmitting an ePharmacy Claim to Resolve a Reject Resolution Required rejection

```

Select: Quit// ECS

Enter ^ at any prompt to exit

When you confirm, a new claim will be submitted for
the prescription and this REJECT will be marked
resolved.

Confirm? YES//

Rx is not released. Date of Service will be 7/20/2018.

Submit NCPDP Field Not on Payer Sheet (Y/N)? N// YES

Enter a valid NCPDP Field name or number. Enter '??' for
a list of possible choices. Fields already on the payer sheet
are excluded from the list of possible choices. Also excluded
are any fields that do not have logic to pull data from Vista
(i.e. fields that will always be <blank>).

NCPDP Field Name or Number: PRESCRIBER DEA NUMBER ### PRESCRIBER DEA NUMBE
R
Value to transmit: XXXXXXXX
Transmit with claim (Y/N)? Y// ES

NCPDP Field Name or Number:

Fields entered to transmit:
D01-KV PRESCRIBER DEA NUMBER: #####

A claim will be submitted now.

Are you sure (Y/N)? Y// ES
```

```
Payer Overrides are enabled at this site. If this is production environment,
do not enter overrides (enter No at the next prompt) and disable this
functionality in the BPS SETUP table.
```

```
Entering No at the next prompt will delete any current overrides for the
request, if they exist.
```

```
Do you want to enter overrides for this request? NO// No
```

```

```
Type <Enter> to continue or '^' to exit:
```

If the prescription is not released, the date of service will display for informational purposes. If the prescription is released, the system will present a list of dates to allow the user to override the default date of service. The default date of service is always the release date. If all of the dates are the same, the system does not prompt for a date selection.

```
Enter ^ at any prompt to exit
```

```
When you confirm, a new claim will be submitted for
the prescription and this REJECT will be marked
resolved.
```

```
Confirm? YES//

2          5/23/2018 Date of Service
3          5/24/2018 Release Date
```

```
Date of Service: 3//
```

[PSO TRI CVA Override Report]

This menu option is locked with the [PSO TRICARE/CHAMPVA MGR](#) security key.

This option provides information in a detail or summary report format that will list prescriptions where the Override was performed to enable processing of these TRICARE and CHAMPVA prescriptions. The user has the ability to list (I)npatient; (N)on-Billable Product; (R)eject Override; or (A)ll. Besides allowing the selection of all types, the report allows the selection of one or two types. For example, the user can select Non-billable and Reject for the same report.

Example: Accessing the TRICARE CHAMPVA Override Report

```

REPORT HAS FINISHED

Press RETURN to continue, '^' to exit: TRICARE/CHAMPVA Reject Processing

The Third Party Payer Rejects - Worklist [PSO REJECTS WORKLIST] and Third Party Payer Rejects - View/Process [PSO REJECTS VIEW/PROCESS] options have been modified in the following manner:

Display of non-DUR/RTS rejects

- Non-DUR/RTS TRICARE and CHAMPVA rejections each will be segregated at the end of the displayed information. They will be denoted with a "TRICARE - Non-DUR/RTS" or "CHAMPVA - Non-DUR/RTS" header. This header remains regardless of whether the GI - Group by Insurance action is toggled on or off. The TRICARE and CHAMPVA sections sort in the same manner as the main sort for non-TRICARE/CHAMPVA prescriptions (by Rx, drug, patient).

```

When GI - Group by Insurance action is toggled ON, the headers "TRICARE" and "CHAMPVA" display, and these "TRICARE" and "CHAMPVA" sections sort alphabetically within RTS/DUR insurances. These TRICARE/CHAMPVA sections are separate from the Non-DUR/RTS section that displays at the end of the listing.

Example with GI action toggled on:

```

The TRI - Show/Hide TRICARE and CVA - Show/Hide CHAMPVA toggle actions appear on the hidden menu on the Insurance Rejects screen. When the TRI action is toggled to Show,

TRICARE Non-DUR/RTS rejects will automatically display at the end of the listing. Toggling the TRI action to Hide will remove them from the screen. The CVA action behaves likewise for CHAMPVA Non-DUR/RTS rejects.

Example with TRICARE and CHAMPVA rejects displayed:

```

Processing of TRICARE and CHAMPVA Rejections – TRICARE/CHAMPVA Eligible Bypass/Override Functions

- A bypass function is provided to allow continued processing of prescriptions for TRICARE and CHAMPVA eligible inpatients who have Environmental Indicators at the time the prescription is issued.
- Whenever an TRICARE or CHAMPVA inpatient prescription is auto-reversed by the ECME NIGHTLY BACKGROUND JOB, the prescription will be recorded to the TRICARE CHAMPVA Override Report as payment will not be received for this prescription

In the following example a TRICARE patient has Military Sexual Trauma The system displays the Non-Billable Reason “MILITARY SEXUAL TRAUMA” on the screen.

```
ISSUE DATE: JAN 27,2015// (JAN 27, 2015)
FILL DATE: (1/27/2015 - 1/28/2016): JAN 27,2015// (JAN 27, 2015)
Nature of Order: WRITTEN// W
WAS THE PATIENT COUNSELED: NO//
Do you want to enter a Progress Note? No// NO

Rx # ##### 01/27/15
OPTRICARE,TWO #360
TAKE TWO TABLETS BY MOUTH TWICE A DAY

BACLOFEN 10MG TABS
REDACTED REDACTED
# of Refills: 3

Was treatment related to Military Sexual Trauma? y YES

Is this correct? YES//

MILITARY SEXUAL TRAUMA

Another New Order for OPTRICARE,TWO? YES//
```

The following is a sample of the View Prescription ECME Log update. The Non-Billable Reason “MILITARY SEXUAL TRAUMA” is now displayed on the View Prescription ECME Log. This allows the system to record why a TRICARE prescription was allowed to be bypassed.

Example: View Prescription ECME Log entry: TRICARE INPATIENT/DISCHARGE

```
Rx View (Active) Jun 25, 2015@16:13:31 Page: 5 of 5
OPTRICARE,TWO
PID: REDACTED Ht (cm) : _____ (_____)
DOB: REDACTED Wt (kg) : _____ (_____)
+
ECME Log:
# Date/Time Rx Ref Initiator Of Activity
=====
1 1/27/15@15:28:54 ORIGINAL REDACTED
Comments: TRICARE-Not ECME Billable: MILITARY SEXUAL TRAUMA
```

In a similar situation where a prescription is issued to a CHAMPVA patient with an Environmental Indicator would be displayed on the reject processing screen and in the View Prescription ECME Log.

TRICARE/CHAMPVA Eligible Outpatient Override Function

- **An override function is provided to allow continued processing of prescriptions for TRICARE or CHAMPVA eligible outpatients when a rejected response is received from the TRICARE or CHAMPVA payer/PBM.**
- The Reject Action prompt will default to “Quit”. If the Q (Quit) action is selected, the rejected claim will go to the TRICARE or CHAMPVA section, as appropriate, of the Pharmacy Third Party Payer Rejects – Worklist. If the D (Discontinue) action is selected, the next prompt “Nature of Order” will default to “Service Reject”. The I (Ignore) action is available if the user holds the “PSO TRICARE/CHAMPVA” security key and if selected, continued processing will occur. If the gross amount due exceeds the Ignore Threshold, the user must also have security key EPHARMACY SITE MANAGER to complete the ignore action.
- The Reject Action prompt will be updated to a default of “Quit”.

Example of Reject Notification Screen Non-DUR/RTS with the default action of D (Discontinue)

```

Gross Amount Due is $67.29. Do you want to continue (Y/N)? NO// y YES
You are bypassing claims processing. Do you wish to continue? NO// y YES

```

- For Non-Billable TRICARE or CHAMPVA rejects, a Non-Billable Notification Screen is provided to allow continued processing of prescriptions. The Reject Action prompt will default to “Discontinue”. If the action D (Discontinue) is selected, the prompt “Nature of Order” will default to “Service Reject”. The I (Ignore) action is available if the user holds the “PSO TRICARE/CHAMPVA” security key and if it is selected, continued processing will occur. If the gross amount due exceeds the Ignore Threshold, the user must also have security key EPHARMACY SITE MANAGER to complete the ignore action. If the action Q (Quit) is selected, the Non-Billable TRICARE or CHAMPVA eligible prescription will go to the **Pharmacy Third Party Payer Rejects – Worklist** utilizing either Reject Code “eT” with reject description “TRICARE-NON BILLABLE” or Reject Code “eC” with reject description “CHAMPVA-NON BILLABLE.” (The reject codes “eT” and “eC” are for use internal to the VistA system only and have no relation to any NCPDP reject code listing.) The new entry will be displayed in the TRICARE or CHAMPVA section of the **Pharmacy Third Party Payer Rejects – Worklist**, as applicable.

In the following example a TRICARE Active Duty patient with Outpatient status submits an OTC, Non-Billable drug or supplies prescription for dispensing. The pharmacist will have the option of Discontinuing the Rx, Ignoring the Rx or Quitting. Discontinue is the option displayed below.

Example of Non-Billable Notification Screen

```

Is this correct? YES//
DRUG NOT BILLABLE

- The Non-Billable TRICARE prescriptions will appear on the Reject Information screen shown in the example below once the TRICARE Non-Billable claim has been selected from the Pharmacy Third Party Payer Rejects – Worklist. The screen will display:
- ECME# field – will be blank.

- Insurance Information – will be blank.
- Reject code section will have the reject code eT and status will state “NO CLAIM SUBMITTED”.
- Available Actions will be DC – Discontinue Rx, VW -View Rx, MP – Medication Profile, FIL – Fill Rx and IGN Ignore Reject (FIL and IGN will require PSO TRICARE/CHAMPVA Security key).
- Available Hidden Actions will be COM – Add Comments, ED – Edit Rx, VER – View ePharmacy Rx and all other standard List Manager hidden actions.
- If the action DC is chosen, the system will discontinue the prescription and the prompt “Nature of Order” will default to “SERVICE REJECT”.
- The following actions will *not* be selectable when processing a TRICARE or CHAMPVA eligible Non-Billable reject: Change Suspense Date (CSD)/Submit Override Codes (OVR)/Submit Clarif Code (CLA)/Submit Prior Auth (PA)/Suspense Date Calculation (SDC)/Submit Mult Actions (SMA). If selected for a TRICARE reject, an error message will appear: “[action] not allowed for TRICARE Non-Billable claim”. If selected for a CHAMPVA reject, an error message will appear: “[action] not allowed for CHAMPVA Non-Billable claim”. The only actions available are to Discontinue, Fill the prescription, View prescription, Resubmit Claim or Medication Profile.

TRICARE/CHAMPVA Without an Active Insurance Policy

- For TRICARE or CHAMPVA rejects without an active TRICARE or CHAMPVA insurance policy on file, a reason of ‘Not Billable’ will be displayed on the Reject Notification Screen. The Reject Action prompt will default to Q (Quit) and reject sent to the **Pharmacy Third Party Payer Rejects – Worklist** utilizing either Reject Code “eT” with reject description “TRICARE-NON BILLABLE” or Reject Code “eC” with reject description “CHAMPVA-NON BILLABLE. The new entry will display in the TRICARE or CHAMPVA section of the Pharmacy Third Party Payer Rejects – Worklist, as applicable.

In the following example, a prescription is processed for a TRICARE patient without an active TRICARE insurance policy on file. The Reject Action prompt defaulted to Q (Quit) and the prescription will be sent to the Pharmacy Third Party Payer Rejects – Worklist with an internal reason code “eT”.

Example of TRICARE reject due to an active TRICARE insurance policy is not on file

```
• Not Insured:
*** TRICARE - NON-BILLABLE ***
-----
Division : XXXXXXXX XXX&XXX NPI: ##### NCPDP: #####
Patient : XXXX,XXXXX(XXPX) Sex: M DOB: REDACTED
Rx/Drug : #####/# - CETIRIZINE HCL 5MG T
Date/Time: NOV 26, 2019@14:06:15
Reason : Not Billable
-----

This is a non-billable TRICARE prescription.

Select one of the following:
```

D (D)iscontinue - DO NOT FILL PRESCRIPTION
 Q (Q)UIT - SEND TO WORKLIST (REQUIRES INTERVENTION)
 I (I)GNORE - FILL Rx WITHOUT CLAIM SUBMISSION

(D)iscontinue, (Q)uit, (I)gnore: Q//

Reject Information Screen – Electronic Signature and TRICARE/CHAMPVA Justification

This action requires the security key PSO TRICARE/CHAMPVA.

A user must hold the “PSO TRICARE/CHAMPVA” security key to perform the Fill Rx (FIL) and Ignore Reject (IGN) actions on the Third Party Payer Rejects – Worklist and the “Ignore” action on the TRICARE or CHAMPVA Reject Notification screen. If the gross amount due exceeds the Ignore Threshold, the user must have security key EPHARMACY SITE MANAGER to complete the ignore action. If the user holds the security key “PSO TRICARE/CHAMPVA”, the prompt will display: “You are bypassing claims processing. Do you wish to continue?” If the user enters (No=Default), the user will return to the reject notification screen. If the user selects Yes to continue, the system will mimic the current Ignore action/functionality and allow processing of the prescription. The user will be prompted to enter their electronic signature code and asked to enter data into the TRICARE Justification or CHAMPVA Justification field, which is required. The user will be allowed to “^” out of the process. If the user opts to “^” out of the process, they will be taken back to the Reject Information screen prompt.

In the following example a TRICARE patient with Outpatient status submits a prescription for processing and a rejected response is received from the TRICARE payer/PBM. The pharmacist initially sends the prescription to the Third Party Payer Rejects – Worklist then later decides to finish processing the prescription and chooses the FIL action.

Example of Reject Information Screen – Electronic Signature and TRICARE Justification

- The person that resolves TRICARE and CHAMPVA non-DUR/RTS rejects is dependent upon the type of reject. Dispense As Written (DAW) reject code 22 can be resolved by the pharmacy staff by editing the prescription and entering the appropriate DAW code which results in a claims resubmission. Other insurance-related rejects (missing eligibility or cardholder ID number) are resolved by the Outpatient Pharmacy Electronic Claims Coordinator (OPECC). Once the rejection has been resolved, the Reject Information screen under the pharmacy reject worklist shows the status of the prescription as E PAYABLE. At this point the user may select the FIL action that will prompt for label print.

- For rejects that remain in suspense, the user will be allowed to process the rejection as indicated above; however no labels will be printed until the prescription is pulled early or printed from suspense. Upon resolving the reject, the user will be notified of this information. CMOP prescriptions will function in the same manner.

Other Rejects

[PSO REJECTS WORKLIST]

Rejects under the OTHER REJECTS section of the screen contain non-clinical rejects and are resolved in the same manner as DUR/RTS rejects. The comments section denotes whether the reject was transferred automatically as is the case in the example below or “Transferred by OPECC” will denote those rejects where the OPECC manually transferred them to pharmacy for resolution.

The following example shows the user selecting to resolve sequence 16 from the Third Party Payer Rejects - Worklist option shown above. The user selects ED to edit the DAW code for the prescription, then resubmits the claim afterward. Since the claim was payable, both the RTS reject in sequence 13 and the DAW reject in sequence 16 were marked resolved. Also both are removed from the worklist after submission. The user then proceeds to Patient Prescription Processing option to view the ECME logs which show that claim resubmission was payable and that both rejects have been resolved.

The *View ePharmacy Rx* option allows you to view information for one prescription, combining information from Outpatient Pharmacy, Integrated Billing and ECME. More information on this report is available in the *Electronic Claims Management Engine (ECME) User Manual*.

Bypass 3/4 Day Supply

[PSO BYPASS 3/4 SUPPLY]

The Bypass 3/4 Day Supply option allows you to enter one or more prescriptions to bypass the 3/4 days supply processing. This option applies to the most current fill for billable prescriptions with third party insurance and the prescription must be on the CMOP Suspense Queue.

- The 3/4 Day Supply bypass will take precedence over a date entered into the Change Suspense Date from the Worklist. If the suspense date is in the future, suspense date will be changed to current date at the time the user sets the Bypass to “YES”.
- Similar to functionality on other ePharmacy screens, entering a prescription twice will remove it from the list. If an invalid prescription is entered, ?? will be displayed.

Example: Option BY Bypass 3/4 Day Supply

```

Select ePharmacy Menu      Option: BY Bypass 3/4 Day Supply

Select one or more prescriptions currently on the CMOP suspense queue.
For each prescription entered, the 3/4 days Supply logic will be bypassed when
the CMOP process runs. This will apply only to the current fill on each ePharmacy billable
prescription selected.

Select PRESCRIPTION RX #: ##### METFORMIN HCL 500MG 24HR SA TAB
Another one: ##### METFORMIN HCL 500MG 24HR SA TAB
Another one: ##### ??
Another one: #####
RX is not on CMOP suspense queue
Another one: #####

1 9/01/20@14:39:16 SUSPENSE ORIGINAL LAST NAME, FIRST NAME
Comments: Bypass 3/4 Day Supply set to YES
2 9/01/20@16:50:20 SUSPENSE ORIGINAL POSTMASTER
Comments: 3/4 Day Supply logic bypassed during CMOP processing

```

Productivity/Revenue Report

[PSO PRODUCTIVITY REVENUE RPT]

This option gives the user the ability to run a report for Pharmacy productivity, or for Revenue associated with Reject Resolution Required.

The user can select one of the following parameters to filter the data on the report:

- **DIVISION:** Allows the user to select one, some, or all divisions.
- **RRR Revenue or Productivity:** Allows the user to run the RRR Revenue report, or the Productivity report.
- **Closed/Resolved:** Allows the user to choose a claim status of Closed/Resolved E PAYABLE, Closed/Resolved E REJECTED, or both.
- **Begin Date Resolved:** Allows the user to pick the beginning date to begin the search. The beginning resolved date defaults to T-90.
- **End Date Resolved:** Allows the user to pick the ending date to end the search. The ending resolved date defaults to T.
- Any combination can be selected:
 - **PATIENT:** Allows the user to select a single, multiple, or all patients
 - **DRUG:** Allows the user to select a single, multiple, or all drugs.

- **RX:** Allows the user to select a single, multiple, or all prescriptions.
- **INSURANCE:** Allows the user to select a single, multiple, or all insurances.
- **REJECT CODE:** Allows the user to select a single, multiple, or all reject codes.
- **Sort:** Allows the user to choose one option for the report sort. Options include:
 - Division
 - Date Resolved
 - Resolved By
 - Drug Name
 - Reject Code
- **Patient Name:** Allows the user to include, or exclude the patient name on the report.

The report can also be exported to Excel.

For the Productivity option, prescriptions will be reported if the fill has a rejection that is displayed, or has been displayed on the Pharmacy Worklist, or is an Auto-resolved reject. A reject is auto-resolved for:

- Refills or renewals only (no original fills)
- Back-billed or resubmitted prescriptions only
- All patient eligibilities
- Limit to rejects of 79
- Limit to rejects of 88 and 943 with a Reason for Service Codes of ID (INGREDIENT DUPLICATION) or ER (OVERUSE)
- Only rejected claims for prescriptions that have been released

Auto resolved rejects appear on the Productivity report with a message in the Action Taken field of "BACK-BILL/RESUBMISSION AUTO RESOLVED" and Resolved By will be "Postmaster".

Example: Productivity Report

Pharmacy Productivity Report							Print Date: Oct 20, 2015@15:52
Page: 1

ePharmacy Patient Comment

[PSO EPHARMACY PATIENT COMMENTS]

The Patient Comment option allows comments to be entered at the patient level rather than the prescription level. Patient comments display on the reject notification screen and the reject information screen.

This option requires the PSO EPHARMACY SITE MANAGER security key.

After selecting the option, select a patient to continue to the comment screen. The patient comment screen displays comments in reverse chronological order and existing comments cannot be edited. Use the Inactivate or Activate Comment action to inactivate if the comment is no longer needed.

Example: ePharmacy Patient Comment

#	STATUS	DATE/TIME	USER	COMMENT

```

1  A      JAN 11, 2018@12:09:57  PSOUSER,TWO
   The second patient comment goes here in reverse order.
2  A      JAN 11, 2018@12:09:31  PSOUSER,THREE
   This is a patient comment.

      Enter ?? for more actions
A  Add Patient Comment          C  Comment History
I  Inactivate or Activate Comment  EX  Exit
Select action:Quit//

```

These actions are available on the patient comment screen:

- A (Add Patient Comment) – Allows a user to add a patient comment.
- I (Inactivate or Activate Comment) – Comments cannot be deleted. Use this action to make a comment inactive to suppress display. Acting as a toggle, this action will inactivate comments that are active and vice versa.
- C (Comment History) –For a selected line number, display the history of add, inactivate, and activate.

MailMan Message for Open/Unresolved Rejects

When prescriptions remain on the Third Party Payer Reject – Worklist over the specified number of days, the system will send a Mailman Message. This message will be sent to the PSO REJECTS BACKGROUND MESSAGE mail group. Those users needing access to this information will need to be added manually to this mail group.

The specified number of days referred to above is the number of days an uncommented reject can remain on the reject worklist without being included in the nightly reject worklist alert mail message. The number of days are defined in the EPHARMACY SITE PARAMETERS file (#52.86) in the REJECT WORKLIST DAYS field.

The following are the criteria for generating a Mailman message regarding a rejected claim:

- Prescription is active
- Prescription is unreleased
- Claim is on the Reject Worklist for specified number of days or greater
- Claim has no comments added within date range

Adding a comment to the reject will automatically reset the clock for the alert. The specified number of days will be site configurable and stored in EPHARMACY SITE PARAMETERS file (#52.86). The initial patch default setting will be five (5) days; however, the site will be able to reset the parameter between one (1) and thirty (30) to generate the alert message. MailMan message will be sent as a Priority message, and there will be a separate MailMan message for each division. The following is an example of the message:

Subj: ePharmacy - OPEN/UNRESOLVED REJECTS LIST for GENERIC SITE [#2417022]
 11/17/14@13:18 70 lines
 From: OUTPATIENT PHARMACY PACKAGE In 'IN' basket. Page 1

 No action has been taken within the past 3 days to resolve the rejects listed in this message. They will continue to show on the Third Party Payer Rejects - Worklist until acted upon. Please use the Third Party Payer Rejects - Worklist option to resolve the rejection or add a comment to the rejection.

Prescriptions will not be filled for Unresolved DUR, RTS, RRR, TRICARE and CHAMPVA rejects.

# RX/FILL	PATIENT(ID)	DRUG	FILL DATE	REJECT DATE

Alerts for Discontinued CMOP Prescription

Discontinued by a Background Process

When a CMOP prescription with a status of Transmitted or Retransmitted is discontinued by a background process to the Outpatient Pharmacy options, e.g. CPRS or Registration V. 5.3 packages, an email will be sent to the PSX EXTERNAL DISPENSE ALERTS mail group. If no recipients are defined in the new mail group, the message will be sent to PSXCMOPMGR key holders stating that a prescription was just discontinued and that the CMOP status for the discontinued prescription was either Transmitted or Retransmitted.

Subj: TROY - DC Alert on CMOP Rx ##### TRANSMITTED [#####]
 03/03/09@17:37 8 lines
 From: POSTMASTER In 'IN' basket. Page 1 *New*

 Rx #: ##### Fill: 0

```
Patient: OUTPATIENT,DCONE (###)
Drug: TAMOXIFEN CITRATE 10MG TABS
Rx Status: DISCONTINUED BY PROVIDER
Processing Status: TRANSMITTED to CMOP on 02/27/09
Provider: OPProvider, PROV

***** Please contact CMOP or take appropriate action *****

Enter message action (in IN basket): Ignore//
-----
```

Discontinued by a Foreground Pharmacy Process

When a CMOP prescription with a status of Transmitted or Retransmitted is discontinued by a foreground Pharmacy process due to a duplicate drug scenario that would trigger the duplicate to be discontinued, then the Processing Status field of the duplicate drug message is highlighted to alert the user.

```
-----
Duplicate Drug in Local Rx:

Rx #: #####
Drug: A AND Z OINTMENT
SIG: APPLY 1 TUBE TO AFFECTED AREA TWICE A DAY
QTY: 1 Refills remaining: 5
Provider: OPProvider, PROV Issued: 11/27/09
Status: Active Last filled on: 11/27/09
Processing Status: Transmitted to CMOP on 11/27/09
Days Supply: 5
-----
```

In the above example, the line “Processing Status: Transmitted to CMOP on 11/27/09” is bold.

List One Patient's Archived Rx's

[PSO ARCHIVE LIST RX'S]

This option shows the basic patient demographics and the prescription numbers and dates of archiving for archived prescriptions for this patient.

Manual Print of Multi-Rx Forms

[PSO LM MULTI-RX PRINT]

This option allows the user to reprint the Multi-Rx Refill Request form on laser label stock without having to reprint the entire prescription labels. The user will receive a system confirmation that this form has been queued to print.

Example: Manually Printing Multi-Rx Forms

```
Select Rx (Prescriptions) Option: MANual Print of Multi-Rx Forms

Enter patient to reprint Multi-Rx refill form for: OPPATIENT2,ONE

Select LABEL DEVICE: LEX2 LEX2$PRT Bay Pines

Multi-Rx form queued to print
```

OneVA Pharmacy Prescription Report

[PSO REMOTE RX REPORT]

Note: For additional information regarding OneVA Pharmacy processing go to the VA Software Document Library (VDL), please see Appendix A, OneVA Pharmacy User Manual.

Note: To account for copay billing, insurance billing, and subsequent refill capabilities all sites are asked to print to an OneVA Pharmacy Reports and manually release prescriptions filled by other stations. Recommended frequency of printing report is no less than weekly.

The OneVA Pharmacy OneVA Pharmacy patch PSO*7*454 – December 2016 introduces the new menu option for retrieving the OneVA Pharmacy Prescription Reports. The ‘ONEVA PHARMACY PRESCRIPTION REPORT [PSO REMOTE RX REPORT]’ menu is located on the ‘RX (PRESCRIPTIONS) [PSO RX]’ menu.

There are three new reports available on the menu with self-describing titles. They are:

1. Prescriptions dispensed for other Host Pharmacies
2. Our prescriptions, filled by other facilities as the Dispensing Pharmacy
3. All OneVA Pharmacy Prescription Activity

Example: OneVA Pharmacy Reports

```
FEE Patient Prescription Processing
Fee Patient Inquiry
Check Drug Interaction
Complete Orders from OERR
Discontinue Prescription(s)
Edit Prescriptions
ePharmacy Menu ...
List One Patient's Archived Rx's

Reprint an Outpatient Rx Label

[PSO RXRPT]

The label reprint function allows a single label or many copies of the same label to be reproduced. When the patient is enrolled in ScripTalk®, a message is displayed to the user indicating this and prompting the user to use the ScripTalk® label for the prescription bottle.

Example: Reprinting an Outpatient Rx Label

```
Select Rx (Prescriptions) Option: REPRINT AN OUTPATIENT RX LABEL

Reprint Prescription Label: ##### ADHESIVE TAPE WATERPROOF 1IN ROLL
Patient is a ScripTalk patient. Use ScripTalk label for prescription bottle.

Number of Copies? : (1-99): 1// <Enter>
Print adhesive portion of label only? N// <Enter> 0
Reprint the FDA Medication Guide? No// YES
Comments:

```

View Prescription

[PSO VIEW]

View the most complete information available for a specific prescription. The activity log lists the date, reason, prescription reference (Rx Ref), the initiator of the activity, and comments. The label log lists the date, prescription (Rx Ref), the person who printed it, and comments. Prescriptions with a deleted status cannot be viewed.

Patient demographics and Clinical Alerts display in the header area when using this option. Refer to [Patient Demographics and Clinical Alerts](#) for more information.

Restrictions to Providers on Controlled Substances Orders

As part of patch PSO*7*391, the Kernel patch XU*8*580 introduced new fields to the NEW PERSON file (#200). Apart from the DEA#/VA# requirement, DEA further classifies what CS schedule a provider is authorized to write. These new fields are:

- 55.1 SCHEDULE II NARCOTIC (S), [PS3;1]
- 55.2 SCHEDULE II NON-NARCOTIC (S), [PS3;2]
- 55.3 SCHEDULE III NARCOTIC (S), [PS3;3]
- 55.4 SCHEDULE III NON-NARCOTIC (S), [PS3;4]
- 55.5 SCHEDULE IV (S), [PS3;5]
- 55.6 SCHEDULE V (S), [PS3;6]

If one of the above fields is populated for a provider, then when placing a new order in backdoor pharmacy, the software will now check for the drug schedule with the provider privileges. If the provider does not have schedule II privileges, the software will display the following message:

"Provider not authorized to write Federal Schedule 2 prescriptions."

When placing an order for a CS Detoxification drug, the software will now check for a valid Detoxification number for the provider. If the provider does not have a Detoxification number, the software will display the following message:

"Provider must have a DETOX# to order this drug."

Prior to PSO*7*391, the default days supply for all drugs was based on Patient Rx Status. PSO*7*391 changes the default for CS schedule II drugs to be set to 30 (or to the current Patient Rx Status if lower than 30). The Integration Control Registration #3278 that returns day supply (DSUP^PSOSIGDS) is modified to return 30 for CS schedule II drugs.

Chapter 24: Updating a Patient's Record

This chapter describes the option used for updating a patient's record.

Update Patient Record

[PSO PAT]

Use this option to update the patient information currently in the computer. Patient records can also be updated while being viewed by using the *Patient Record Update* screen action. If implementing Other Language Modifications, use either to set a patient's other language preference.

In support of Registration patch DG*5.3*522, the Outpatient Pharmacy software provides for the automatic population of city, state, and county based on entry of a zip code.

Example: Updating a patient record

```
Select Outpatient Pharmacy Manager Option: UPDATE Patient Record

Select Patient:      OPPATIENT, ONE   REDACTED   REDACTED   YES   SC VETERAN

Chapter 25: Verifying Prescriptions

This chapter describes the option and methods used for verifying prescriptions.

Verification

[PSO VER]

The *Verification* menu is used by pharmacists to verify prescriptions with a non-verified status; obtain a listing of those remaining non-verified prescriptions; or calculate the number of non-verified prescriptions by entering the patient or the clerk.

The following options are available on the *Verification* menu:

- *List Non-Verified Scripts*
- *Non-Verified Counts*
- *Rx Verification by Clerk*

If the verification site parameter is set to yes, new prescriptions entered by a non-pharmacist (i.e., someone who does not hold the PSORPH key) will be put in a non-verified status, entered into the non-verified orders file, and will not be made active (nor will labels be printed) until they are reviewed and verified by a pharmacist. Once new and renewed prescriptions for a patient are verified, all labels for that patient will be printed together. If a patient has refills only, these labels will be printed as they are entered.

A pharmacist may choose to verify all entries made by a particular technician rather than all the prescriptions for an individual patient.

Prescriptions in a non-verified status cannot be canceled, edited, or deleted through the usual options. If a non-verified prescription is auto canceled on admission, it can be reinstated, but it returns to the non-verified status.

When the VERIFICATION outpatient site parameter is set to 'No', a user who does not hold the PSORPH key will not be allowed to finish a pending order.

The *Patient Prescription Processing* [PSO LM BACKDOOR ORDERS] and *Complete Orders from OERR* [PSO LMOE FINISH] options have been modified to incorporate the above functionality.

List Non-Verified Scripts

[PSO VRPT]

This option allows the user to obtain a list of all scripts remaining in a status of 'Non-Verified' by either patient or entering clerk.

Example: Non-verified prescriptions (sorted by patient)

```
Select Outpatient Pharmacy Manager Option: Verification

Select Verification Option: List Non-Verified Scripts
Sort By Patient or Clerk: P// <Enter> ATIENT
DEVICE: HOME// [Select Print Device]

                                NON-VERIFIED PRESCRIPTIONS
                                AS OF JUL 16,2007@14:49:54
                                SORTED BY PATIENT
                                (# indicates Critical Drug Interaction)

Patient name                                Page: 1
Rx #      Issued      Drug                                Entry By
-----
OPPATIENT,FIVE
##### 04/01/04 ACETAMINOPHEN 1000MG TABLET #####
OPPATIENT,FOUR

Select Verification Option:
```

Non-Verified Counts

[PSO NVCNT]

This option allows the user to obtain a count of the number of prescriptions remaining in a status of non-verified.

Example: Total of Non-verified prescriptions

```
Select Verification Option: NON-Verified Counts
DEVICE: HOME// [Select Print Device]

                                NON-VERIFIED PRESCRIPTION COUNTS
                                JUL 16,2007@14:57:34

TOTAL NUMBER OF NON-VERIFIED PRESCRIPTIONS : 12

NUMBER OF PATIENTS WITH ONE OR MORE NON-VERIFIED PRESCRIPTIONS : 9

(NOTE: Total number of patients listed here may not always equal the number at
the bottom, since some patients at the bottom may be counted more than once,
possibly having non-verified Rx's entered on different days.)

Date      # of      # of
-----  Non-verified Rx's  Different Patients

07-27-98      1          1
05-18-99      2          1
06-22-00      2          2
TOTAL          5          4

Enter RETURN to continue or '^' to exit:
```

Rx Verification by Clerk

[PSO VR]

This option verifies prescriptions in the non-verified status by entering the clerk.

Verifying ePharmacy Orders

Verifying an ePharmacy order is similar to finishing an order. After the user reviews the ePharmacy order and chooses to accept the order, the billing data is sent to ECME, which sends a message back to Outpatient Pharmacy displaying the status of the claim. The ECME section of the Activity Log is also updated.

```
RX: ##### PATIENT: OPPATIENT,FOUR (###-##-####)
STATUS: Non-Verified
      DRUG: ENTEX CAP
      QTY: 10      10 DAY SUPPLY

Chapter 26: Meds by Mail – Virtual Pharmacy Services

Because Virtual Pharmacy Services (VPS) users have to sign into multiple VistA systems across the nation to support the Meds by Mail (MBM) program, the creation of a Class I menu option was delivered with patch PSO*7*630 to improve and standardize the experience of processing outpatient pending prescription queues regardless of the facility assigned.

The MbM-VPS Pharmacy Users Menu [PSO MBM-VPS PHARMACY MENU] and the MbM-VPS Productivity Report [PSO MBM-VPS PRODUCTIVITY RPT] were delivered with patch PSO*7*630. With the exception of the MbM-VPS Productivity Report, the other 4 options listed under this menu are pre-existing options.

Example of new menu and options:

```
MbM-VPS Pharmacy Users Menu  PSO MBM-VPS PHARMACY MENU      M
bM-VPS Pharmacy Users Menu

C      Complete Orders from OERR
P      Patient Prescription Processing
V      View Prescriptions
L      Lookup into Dispense Drug File
R      MbM-VPS Productivity Report
```

Selecting R MbM-VPS Productivity Report allows the user to run the new report. The following are more details of the report implementation:

- User is prompted for beginning and ending FINISH DATE/TIME
- The resulting report is created per date range provided and includes columns for Finishing Person and Prescriptions Finished.
 - a. Selected date range is shown at the top of the report.
 - b. Result is sorted by Finishing Person.
 - c. Grand total of all Prescriptions Finished is provided at the bottom of the report.

Example of running the MbM-VPS Productivity Report:

```
Select MbM-VPS Pharmacy Users Menu <TEST ACCOUNT> Option: R MbM-VPS Productivit
y Report

This report prints a listing of people who finished the order in pharmacy
in the user-selected date range.

Starting with Date: 1/1 (JAN 01, 2021)
Ending with Date: TODAY (MAY 06, 2021)
DEVICE: HOME// ;;999 Linux Telnet /SSH

Chapter 27: CPRS Order Checks: How They Work

Introduction

In CPRS, Order Checks occur by evaluating a requested order against existing patient data. Most order checks are processed via the CPRS Expert System. A few are processed within the Pharmacy, Allergy Tracking System, and Order Entry packages. Order Checks are a real-time process that occurs during the ordering session and is driven by responses entered by the ordering provider. Order Check messages are displayed interactively in the ordering session.

Order Checks review existing data and current events to produce a relevant message, which is presented to patient caregivers. Order Checks use the CPRS Expert System (OCX namespace), to define logical expressions for this evaluation and message creation. In addition to the expert system Order Checks have some hard-coded algorithms. For example, the drug-drug interaction order check is made via an entry point in the pharmacy package whereas Renal Functions for Patients 65 and Over is defined as a rule in the CPRS Expert System.

Order Check Data Caching

Data caching was recently added to improve the speed of order checks. Before data caching, order checks could be slow because each order check retrieved data from the other VISTA packages—even if the order checks used the same data. With data caching, the first order check in an ordering session retrieves data from other VISTA packages, uses the data to evaluate whether it should display a warning, and then stores the retrieved data in the ^XTMP(“OCXCACHE” global for five minutes. The order checks that occur in the next five minutes can use the cached data, if it is the appropriate data, instead of retrieving data from the other packages. After five minutes, the cached data expires, and order checks must retrieve new data from the VISTA packages.

For example, before data caching was implemented, if an order check took 3 seconds to retrieve data from other VISTA packages, and there were 12 order checks, clinicians might wait 36 seconds to sign orders. With data caching, the first order check might take 3 seconds to retrieve the data, but subsequent order checks could use the cache and might take only .03 seconds each. That would be 3.33 seconds compared to 36 seconds. The numbers in this example are for illustration only and do not reflect real system speed. However, data caching should speed up order checks.

To avoid using all available disk space for storing data from order checks, there are several ways to clear the ^XTMP(“OCXCACHE” global. ORMTIME removes data from the global when it runs. The suggested frequency for running ORMTIME is every 30 minutes, but not every site runs it that frequently. Kernel clean up utilities also remove data from the cache when they run, which is usually every 24 hours. If needed, users that have access to the programmer’s prompt can manually clear the cache from that prompt by using PURGE^OCXCACHE.

Hash Counts and DEA Certification

When processing a digitally signed pending order, the integrity of the original order placed in CPRS is now being checked to ensure that the data fields listed below are not altered from the time the order is signed in CPRS and later selected for processing in backdoor pharmacy. This is done by passing the data elements listed below to a Kernel Application Programming Interface (API), Integration Control Registration (ICR) #3539 along with the CPRS hash count provided by ICR #5709. The Kernel API compares these two hash values and returns an "OK" if the pending order is unaltered; otherwise, a "-1^error code^error message" is returned.

Example: "-1^89802016^Mismatched digital signature hash values."

The following fields are used in the hash check:

- Date of Issuance
- Full Name and Address of the Patient
- Drug Name
- Quantity Prescribed
- Directions for Use
- Prescriber Name
- Prescriber Address (site address)
- Prescriber DEA / VA Registration Number
- Order Number (CPRS)

The Kernel API will also check for the validity of the PIV card certificate. If the certificate is expired, the API will return the appropriate error code.

If the error code is related to 'certificate expired', the pending order will be processed (will not be auto-discontinued), and a notification will be sent to the provider with the message, "Rx processed: PIV Card Cert Expired - NO ACTION REQ".

If the error code is related to hash mismatch, or the PIV card certificate is revoked, the following events will be triggered during pending order processing:

- The order will be auto discontinued.
- First line of the pending order screen will have the message "Digital Signature Failed: Corrupted (Hash mismatch)" or " Rx NOT processed: PIV Card Certificate Revoked", and the message will be highlighted.

- The status bar of the screen will have the message "Signature Failed: Corrupted (Hash mismatch)" or "PIV Certificate Revoked."

A mail message will be generated to the holders of the PSDMGR key notifying that the order has been auto-discontinued (similar to the example listed below). If the discontinuation is due to a hash mismatch as a result of altering one of the fields listed above, the mail message will show the altered fields with the discrepancies as shown in the following example.

Example: Mail Message of Discontinuation Due to Hash Mismatch

```

Differences in CPRS and Pharmacy Pending File

Data Name      CPRS File      Pharmacy Pending File
-----
QTY PRESCRIBED  ##                ##

```

The following changes have been made for finishing a CS order:

- When finishing a pending CS order, if the user does not hold the new PSDRPH security key, the order will be marked as 'Non-Verified'. To verify a 'Non-Verified' CS order, the PSDRPH security key is now required. To discontinue a pending CS order, the PSDRPH security key is now required.
- The pending order screen will now display the provider's DEA/VA #, the DETOX# (if available), and the site address.
- When finishing a new pending CS order, the dosage, provider name, or the number of refills will not be allowed editing; however, the user will be allowed to select other possible dosages for the same drug if available. If the changes to the dispense drug results in creating a new order, the user will be notified by the message " Digitally Signed Order - No such changes allowed." If pharmacy wants to make such changes, then they have to discontinue (DC) the pending order and start a new order. However, the user will be

allowed to select other possible dosages for the same drug that does not change the prescribed dosage.

- When finishing a new pending CS order, the day supply or the quantity will not be allowed to increase but can be decreased. If the day supply is decreased, the number of refills will also be adjusted accordingly depending on the drug setup (maximum refills, not refillable, etc). The quantity may be auto-calculated to a higher quantity by the system only when the dosage remains the same, but the dispense drug strength is changed – i.e. 2mg tablets #30 is changed to 1mg tablets, the Sig is updated, and the system changes the quantity to 60. A manual change to a higher quantity is not allowed.
- When finishing a pending CS order or verifying a CS order by the PSDRPH key holder, any edit to some of the key fields, such as dispense drug, dosage, dispense units, issue date, day's supply, quantity, or number of refills, will now be captured and stored in the activity log.

In patch PSO*7*99, a change was made for pending orders not to recalculate the quantity for CS drugs on selecting a different strength of the same drug and resulting in the same prescribed dosage. This change is removed in patch PSO*7*391.

Patch PSO*7*505 introduces enhancements to editing of Controlled Substance prescriptions. Fields that would create a new prescription such as Orderable Item, Dose, Provider, and Refills are no longer editable on CS prescriptions. Additionally, controlled substance prescription can no longer be finished if the prescription is for a patient that does not have a zip code in their patient profile.

Chapter 28: Error Messages

Error Information

The text in the error message and reason column will be displayed to the user. The type of error is displayed in column 1.

Three Levels of Error Messages

- **System** When such an error occurs, no Drug Interaction, Duplicate Therapy, or Dosing order checks will be performed. Other order checks that do not use the COTS database (FDB) will still be performed such as allergy/ADRs, duplicate drug (for outpatient only) and new CPRS order checks, etc.
- **Drug** The second error level is for the drug and no Drug Interaction/Duplicate Therapy or Dosing order checks will be performed for a specific drug. Drug level errors can occur for the prospective drug (drug being processed) or the profile drug. If a drug level error occurs on the prospective drug, no profile drug errors will be displayed. The only exception to this is when you are processing an IV order with multiple prospective drugs (i.e. multiple IV Additives). Profile drug level errors will only be shown once per patient session.

There are two reasons that a drug level error is generated; the drug is not matched to NDF or the drug is matched to NDF, but the VA Product to which it is matched does not have a GCNSEQNO assigned or the GCNSEQNO assigned does not match up to the GCNSEQNO in the COTS database. The latter (GCNSQENO mismatch) is rare.

- **Order** The third error level is for the order. Order level errors will only occur with dosing order checks. Please see the Dosing Order Check User Manual for more information.

Table 15: Error Level Messages

Error Level	Error Message	Reason	Why message is being displayed.
System	No Enhanced Order Checks can be performed.	Vendor Database cannot be reached.	The connectivity to the vendor database has gone down. A MailMan message is sent to the G. PSS ORDER CHECKS mail group when the link goes down and when it comes back up.
System	No Enhanced Order Checks can be performed.	The connection to the vendor database has been disabled.	A user has executed the Enable/Disable Vendor Database Link [PSS ENABLE/DISABLE DB LINK] option and disabled the interface.
System	No Enhanced Order Checks can be performed.	Vendor database updates are being processed.	The vendor database (custom and standard data) is being updated using the DATUP (Data Update) process.

Error Level	Error Message	Reason	Why message is being displayed.
System	"Signed Failed-Order Auto Discontinued".	Hash Mismatch	Original digitally signed CS order placed in CPRS is checked to ensure data fields are not altered from the time the order is signed in CPRS and later selected for processing in backdoor pharmacy.
System	"Rx processed: PIV Card Cert Expired - NO ACTION REQ"	Validity of the PIV card certificate.	Kernel API check for the validity of the PIV card certificate. If certificate is revoked or expired, the API will return the appropriate error code.
System	No Enhanced Order Checks can be performed.	An unexpected error has occurred.	There is a system network problem and the vendor database cannot be reached or a software interface issue.
System	No Dosing Order Checks can be performed	Dosing Order Checks are disabled	A user has executed the <i>Enable/Disable Dosing Order Checks</i> [PSS Dosing Order Checks] option.
Drug	Enhanced Order Checks cannot be performed for Local or Local Outpatient Drug: <DRUG NAME>	Drug not matched to NDF.	The local drug being ordered/ or on profile has not been matched to NDF. Matching the drug to a VA Product will eliminate this message.
Drug	Order Checks could not be done for Remote Drug: <DRUG NAME>, please complete a manual check for Drug Interactions and Duplicate Therapy. Remote order indicator		If this error message is displayed, it means that the VA product that the local or remote drug being ordered/or on the local or remote profile does not have a GCNSEQNO or in rare cases, the GCNSEQNO assigned to the VA Product does not match up with a GCNSEQNO in the vendor database.
Drug	Enhanced Order Checks cannot be performed for Orderable Item: <OI NAME>	No active Dispense Drug found.	Highly unlikely that this error would be seen. At the time the order check was being performed the orderable item did not have an active dispense drug associated.

Chapter 29: FDA Medication Guides

Medication Guides are paper handouts that come with many prescription medicines. These guides address issues that are specific to particular drugs and drug classes, and they contain FDA approved information that can help patients avoid serious adverse events. The FDA requires that medication guides be issued with certain prescribed drugs and biological products when the agency determines that: certain information is necessary to prevent serious adverse effect; patient decision-making should be informed by information about a known serious side effect with a product; or patient adherence to directions for the use of a product are essential to its effectiveness. The VA maintains a web-enabled repository of all approved FDA Medication Guides, both current and archived versions of the documents. See the repository:

REDACTED/VistA_MedGuides/

Displaying an FDA Medication Guide

The system provides users with the location of the FDA Medication Guide for a specific prescription when one is available.

Outpatient Pharmacy provides an option under the OTH hidden action within the Patient Prescription Processing [PSO LM BACKDOOR] option, aka ‘Backdoor Pharmacy’, allowing users to retrieve the Medication Guide associated with a prescription similar to the reprint of the PMI. Users may retrieve an FDA Mediation Guide for a specific prescription by invoking the OTH (Other OP Actions) hidden action and selecting the action, MG Display FDA Medication Guide.

When a VA Product has a Medication Guide Associated:

Printing an FDA Medication Guide

The Outpatient Pharmacy application automatically prints an FDA Medication Guide on a separate, designated printer after printing the prescription label and PMI sheet, if one is available, for the medication being dispensed. Anytime a label is printed, the system ensures that if the specific drug has an associated medication guide, it will be printed whether the script is a normal fill, a partial fill, or a refill.

When an FDA medication guide is sent to the printer, information is included in the footer of the document to identify the Patient, the Rx# and the date it was printed.

The system indicates when an associated medication guide exists on the prescription label printout. The printout contains the following statement on the same line where Additional Warnings appear: "Read FDA MED Guide."

Site Parameters

[PSO SITE PARAMETERS]

There are new site parameters related to the automatic printing of FDA Medication Guides.

Reprinting an FDA Medication Guide

[PSO LM BACKDOOR ORDERS]

The system allows the user to reprint the associated FDA Medication Guide for a given prescription fill (or the latest FDA Medication Guide available for the medication on the

prescription when reprinting a prescription label) and for prescription fills sent to CMOP by invoking the RM action under the OTH (Other OP Actions) after selecting a specific prescription in Backdoor Pharmacy, as seen below. The system prompts the user whether to reprint a medication guide, if an FDA Medication Guide is associated with a Prescription, when reprinting a label. The Default is set to 'NO'.

Example 4: Drug Not matched to National Drug File

If a user tries to use this option for a medication that is not matched to the National Drug File, the following message will display:

Audit Trail for FDA Medication Guide Printing

The system stores the unique FDA Medication Guide document name for each fill being transmitted to CMOP in the PRESCRIPTION file (#52).

Automatically Printing FDA Medication Guides is Optional

The FDA Medication Guide automatic printing functionality is an **optional** functionality. Each pharmacy division may choose to turn this functionality ON or OFF. Reasons a pharmacy division might choose to turn the FDA Medication Guide automatic printing functionality OFF are:

FDA Medication Guides print on a different printer than the prescription labels. High-volume window prescription dispensing sites may not have the necessary resources for collating FDA Medication Guides with their corresponding prescription labels.

Automated-dispensing systems such as Optfill also perform the prescription label printing, which usually happens at a later time than when the labels are printed in VistA. Since FDA Medication

Guides automatically print at the same time labels print from VistA, medication guides may print too early in the dispensing process, causing confusion.

To turn the FDA Medication Guide automatic printing functionality OFF or to not turn it ON for a specific pharmacy division, make sure the FDA MED GUIDE PRINT SERVER URL field has no value. This field can be edited via the Site Parameter Enter/Edit [PSO SITE PARAMETERS] option, as shown below.

Whether the functionality is being turned ON or OFF, the prescription label printed from VistA will still include the note “Read FDA Med Guide” when one is associated with the medication being dispensed.

Chapter 30: Security Keys

A security key is a unique entry in the Security Key file (^DIC(19.1,)) which may prevent access to a specific option or action by including the key as part of the option's entry in the Option file (^DIC(19,)). Only users entered in the Holder field of the Security Key file may access the option or action.

Security Keys

PSO TRICARE/CHAMPVA

PSO*7*385 renamed the PSO TRICARE security key to PSO TRICARE/CHAMPVA. Please see [TRICARE/CHAMPVA Eligible Outpatient Override Function](#) for further information on this security key.

PSO TRICARE/CHAMPVA MGR

PSO*7*385 renamed the PSO TRICARE MGR security key to PSO TRICARE/CHAMPVA MGR. Please see [TRICARE CHAMPVA Override Report](#) for further information on this security key.

PSO TECH ADV

PSO*7*386 added the PSO TECH ADV security key for use of holding and unholding prescriptions. Please see [Holding and Unholding a Prescription](#) for further information on this security key.

PSO EPHARMACY SITE MANAGER

PSO*7*421 added the PSO EPHARMACY SITE MANAGER security key for use of changing ePharmacy Site Parameters. Please see [ePharmacy Site Parameters](#) for further information on this security key.

Appendix A: OneVA Pharmacy User Manual

PSO*7*479

Revision History

Each time this manual is updated, the Title Page lists the new revised date and this page describes the changes. If the Revised Pages column lists “All,” replace the existing manual with the reissued manual. If the Revised Pages column lists individual entries (e.g., 25, 32), either update the existing manual with the Change Pages Document or print the entire new manual.

Date	Revised Pages	Patch Number	Description
05/2017	ii, 14 , 26 , 27 , and 30	PSO*7*479	Modifies the prompt to the user when printing a OneVA Pharmacy label. (REDACTED, TW)
11/2016	All	PSO*7*454	Initial Issue

Introduction

Purpose

The purpose of the OneVA Pharmacy User Manual is to describe the new capability that will allow a Pharmacist from any VA Pharmacy location to refill or partial a patient’s prescription that originated from another VA Pharmacy location, contingent on the host site status where the prescription originated.

In addition, this User Manual will provide instructions on how to obtain the details of the prescriptions dispensed by another VA Pharmacy location by introducing the new OneVA Pharmacy report menu.

Lastly, Frequently Asked Questions (FAQs) are addressed regarding the new OneVA Pharmacy capabilities and limitations.

Document Orientation

Organization of the Manual

The OneVA Pharmacy User Manual contains the following sections:

- ‘Introduction’ section that includes the assumed experience and skill level a user will have in order to use the software patch and provides the specifics related to the support of the software. This section also lists the references, resources, documentation conventions, disclaimers, and the organization of the manual.

- ‘System Summary’ section that includes the system configuration steps necessary to turn on the OneVA Pharmacy software and the data flow diagrams for the View Orders, Dispense Order from another VA Pharmacy Location, and OneVA Pharmacy Prescription Report Use Cases. This section also lists specific messages for the user regarding continuity of operation.
- ‘Getting Started’ section provides the overview of logging into the system, introduces the system menu, and lists the caveats and exceptions for this software patch.
- ‘Using the Software’ section provides the detailed steps for using the OneVA Pharmacy capability within both the ‘PATIENT PRESCRIPTION PROCESSING [PSO LM BACKDOOR ORDERS]’ and the ‘ONEVA PHARMACY PRESCRIPTION REPORT [PSO REMOTE RX REPORT]’ menus.
- ‘Troubleshooting’ section includes common system messages and actions to take if a significant error occurs.
- ‘Acronyms and Abbreviation’ section lists all acronyms and abbreviations used throughout this document.
- ‘Appendix’ details the Frequently Asked Questions (FAQs) associated with the new capabilities and provides the programs limitations.

Assumptions

The OneVA Pharmacy User Manual assumes the user has the following experience/skills:

- User has basic knowledge of the Veterans Health Information Systems and Technology Architecture (VistA) system (such as the use of commands, menu options, and navigation tools).
- User has access to the ‘Rx (PRESCRIPTIONS) [PSO RX]’ menu within VistA and holds appropriate security keys for their user role, such as PSORPH, to identify the user as a Pharmacist.
- User has completed any prerequisite training.

Coordination

The Veterans Affairs Medical Center (VAMC) VistA Coordinator responsible for the implementation of OneVA Pharmacy patch will address the ability of Pharmacists to fulfill non-controlled substance prescriptions from any VA Pharmacy location where a prescription originated at another VA Pharmacy site.

The Audience for this User Manual is the Pharmacist and anyone else eligible to fulfill prescriptions (non-controlled).

The OneVA Pharmacy Implementation Manager and the Implementation team will coordinate with the Regional VistA Services teams for a National Rollout using a phased approach. As part of the distribution and installation of the OneVA Pharmacy patch, the deployment will include a checklist to confirm that the site connects to VAs Enterprise Messaging Infrastructure (eMI) Enterprise Service Bus (ESB) located in the Austin Information Technology Center (AITC).

National Service Desk and Organization Contacts

The following table lists the Operational Tier 1 through Tier 5 Support resources for the OneVA Pharmacy VistA patch including the National Service Desk (NSD), Regional Application Service Line, Clinical Product Support team, OneVA Pharmacy Development team, and VistA maintenance support team.

The support entities listed in the following table does not include support for the integration areas that are part of the OneVA Pharmacy software but not part of the OneVA Pharmacy patch. Not included is support for eMI ESB, HL7, nor for the HDR/CDS Repository.

Table 17: OneVA Pharmacy Support Entities

Name	Role	Gov or non-Gov	FTE	Org	Contact Info
Tier 1: National Service Desk	NSD Tier 1 Support	Gov	No change to existing VistA support FTE	NSD	REDACTED
Tier 2: National Service Desk	NSD Tier 1 Support	Gov	No change to existing VistA support FTE	NSD	REDACTED
Tier 3: Regional Application Service Line	Install Patch – Tier 3	Gov	No change to existing VistA support FTE	OI&T Field Operations	REDACTED
Tier 4: EPMO – Clinical Product Support Team – Clin 1	Clin 1 Support/Provider Systems	Gov	No change to existing VistA support FTE	EPMO, OI&T	SDM trouble tickets
Tier 5: Development Team for first 30-days after National Release	Support defect fixing if identified after National Release. The development team is responsible for development and release of all fix patches for defects occurring with the first 30-days of release.	Non-Gov	No change to existing VistA support FTE	VHA Innovations Program	REDACTED
Tier 5: VistA Maintenance Team subsequent to first 30-days	Support defect fixing if identified 30-days after National Release. The VistA Maintenance team is an existing long-term team that works closely with application services line representatives to implement patches beyond the 30-day warranty period.	Non-Gov	No change to existing VistA support FTE	EPMO, OI&T	REDACTED

System Summary

OneVA Pharmacy software provides the Department of Veterans Health Administration (VHA) the capability to allow Veterans traveling across the United States to refill or partial their active VA non-controlled substance prescriptions at any VA Pharmacy location regardless of where the prescription originated. The patch expands available pharmacy information in VistA to Pharmacists, providing direct access to any active and refillable prescription from any VA Pharmacy location.

OneVA Pharmacy software provides a foundation to build and extend new capabilities to the Veteran.

Patch PSO*7.0*454 is being released to enhance VistA's "Patient Prescription Processing [PSO LM BACKDOOR ORDERS]" menu (found within the VistA Pharmacy Outpatient Pharmacy package). The OneVA Pharmacy patch will allow the Pharmacist to query for and refill patient's active and refillable prescriptions from other VA Pharmacy VistA instances.

The overall OneVA Pharmacy software design has several components. They are:

1. Veterans Health Information Systems and Technology Architecture (VistA) (Patch PSO*7.0*454)
2. Health Level 7 (HL7) Messaging
3. Enterprise Messaging Infrastructure (eMI) Enterprise Service Bus (ESB)
4. Health Data Repository/Clinical Data Service (HDR/CDS) Repository

VistA is the user interface where a pharmacist uses the "Patient Prescription Processing [PSO LM BACKDOOR ORDERS]" menu (found within the VistA Pharmacy Outpatient Pharmacy package) to query for and refill patient's active and refillable prescriptions from other VA Pharmacy VistA instances. Patch PSO*7.0*454 uses Health Level 7 (HL7) messaging to query and receive remote prescription details to and from the Health Data Repository/Clinical Data Services (HDR/CDS) Oracle Repository.

The VistA instance where the Veteran is requesting the refill or partial is considered the 'dispensing' VistA instance. This patch allows a Pharmacist, using a 'dispensing' VistA instance, to refill or partial prescription that originated from another VA Pharmacy VistA instance and print a prescription label. The VA Pharmacy VistA instance where the prescription originated and currently exists is the 'host' VistA instance. The host VistA instance is where the update to the prescription record is made once the fill is processed. The label data elements are extracted from the host VistA instance and returned to the dispensing site via HL7 creating the OneVA Pharmacy label. The bar code on the label will be valid at the host site but not at the dispensing site.

The OneVA Pharmacy patch sends the HL7 query message through the Enterprise Service Bus (ESB) Enterprise Messaging Services (eMI). eMI executes a Web Service call to query the HDR/CDS Repository for specific medication information obtained from all VA Pharmacy's VistA sites. The eMI configuration contains filtering processes that applies specific business rules against the HDR/CDS Web Service call to return the appropriate prescriptions to the dispensing VistA. VistA and eMI communicate using HL7 v2.5.1 over Minimal Layer Protocol (MLLP). Communication to the HDR/CDS Repository takes place via Simple Object Access Protocol (SOAP) Web Services.

The medication data elements return to the dispensing site via HL7 messaging. Once the prescriptions arrive at the dispensing site, they display below any 'local' prescriptions on the Medication Profile view. The prescriptions displayed to the Pharmacist sort by VA Pharmacy site and status. The dispensing Pharmacist can view the remote prescriptions and select one to refill or partially fill. For label printing, VistA triggers the HL7 message stream that executes during the refill or partial fill prescription processes. The host label data elements are returned to the dispensing site within the HL7 segment. The event triggers the Pharmacist to select the dispensing sites printing device to print a host label.

System Configuration

To use OneVA Pharmacy, the user turns on the 'ONEVA PHARMACY FLAG (#101)'. The 'ONEVA PHARMACY FLAG (#101)' is located on the 'PHARMACY SYSTEM File (#59.7)' file. This field will allow each division to toggle the OneVA Pharmacy logic 'on' or 'off' depending on current needs. The user changes the field by using 'FILEMAN [FM]' and editing the 'ONEVA PHARMACY FLAG (#101)' field. The software patch delivers the 'ONEVA PHARMACY FLAG (#101)' in the 'off' state. When this flag is in the 'off' state, the HDR/CDS Repository is not queried for external prescriptions and other VistA instances will not be able to refill prescriptions that belong to the VistA instance with the flag set to the 'off' state. When in the 'on' state, all prescription queries and actions may be taken for remote queries, refills, and partial fills. In order to process prescriptions from another VistA instance, that instance will also need to have its 'ONEVA PHARMACY FLAG (#101)' set to the 'on' state.

Host Site OneVA Pharmacy Flag Not Set On Message

If the 'ONEVA PHARMACY FLAG (#101)' is not set to the 'on' state at the host site, the dispensing site will receive the following message:

The OneVA Pharmacy flag is turned 'OFF' at this facility. Unable to process refill/partial fill requests. Queries will NOT be made to other VA Pharmacy locations.

Pharmacy System Parameters Edit

DO NOT turn on the OneVA Pharmacy Flag until directed to do so. The software will be released, deployed, and installed with the activation flag set to the "off" position. The Existing Product Intake Program (EPIP) Implementation Team will coordinate with the sites Pharmacy Automatic Data Processing Application Coordinator (ADPAC) on the specific date in which to activate the software.

To turn on the 'ONEVA PHARMACY FLAG (#101)' for all the divisions, use the 'VA FILEMAN [DIUSER]' utility and perform the following steps.

To turn on the 'ONEVA PHARMACY FLAG (#101)' for all the divisions, use the 'VA FILEMAN [DIUSER]' utility and perform the following steps.

1. Sign-in to the VistA system and select the menu option: VA FILEMAN [DIUSER].

Data Flows

Use Case: View Orders

When the Pharmacist enters a request to display the Medication Profile view from a dispensing VistA instance, a query message is sent to eMI. eMI will harvest the necessary information to send a request to the HDR/CDS Repository for the patient's prescriptions. The response is transformed into another message that contains the patient's prescription data. The patient's prescription data is returned to the dispensing VistA instance and displayed on the Medication Profile screen on VistA. This process is referred to as the OneVA Pharmacy View Orders Use Case.

The 'View Orders' Use Case describes the process for users to view all of a patient's active, suspended, on hold, discontinued, or expired prescription orders. This process allows a user to view prescription order information in one place whether the order originated from a dispensing or host VistA instance.

The OneVA Pharmacy's feature to query the HDR/CDS Repository (step 2 in the flow of events) will not execute if the patient has not been treated at more than one VA Medical Center.

Actors

- User (e.g. Pharmacist)
- Dispensing VistA Instance
- HDR/CDS Repository
- eMI ESB (proxy to host VistAs)

Pre-Conditions

- Patient must have an Integration Control Number (ICN)
- Patient must have information populated in the system
- User must have accessed the ‘RX (PRESCRIPTIONS) [PSO RX]’ menu within VistA and hold the appropriate security keys for their user role, such as PSORPH to identify the user as a Pharmacist. (No separate Security Key required.).

Flow of Events

1. User enters the Medication Profile view.
2. The dispensing VistA instance will retrieve the prescriptions from HDR/CDS Repository.
3. The dispensing VistA instance will send a request via the eMI ESB to the HDR/CDS Repository with the patient identifiers to retrieve the prescriptions with a status of ‘**Suspended**’, ‘**Active**’, ‘**Hold**’, “**Discontinued** (within the past 120 days)” or “**Expired** (within the past 120 days)” from all previous treatment facilities **excluding** local facility.
4. The eMI ESB will exclude the Clinical Data Health Care Repository/Department of Defense (CHDR/DoD) prescriptions that are available in the HDR/CDS Repository for active dual patients.

Exceptions

- 2a. Patient Not Found
- 2b. Patient Found, No Prescription Records
- 2c. eMI ESB is not accessible.
- 2d. HDR/CDS Repository is not accessible.
- 2e. Multiple Patients Found
- 3a. Patient Found, No Prescription Records Matching Filter

System Message

- 1a. Please wait. Checking for prescriptions at other VA Pharmacy locations. This may take a moment...
- 1b. Eligibility: RX PATIENT STATUS: OPT NSC
- 2a. Patient Identifier Not Found
- 2b. Patient Found with no Prescription Records
- 2c. The system is down or not responding. Press RETURN to continue.
- 2d. The RX Database is not Responding to the Request
- 2d. The RX Database responded with an error
- 2e. Multiple Patient Matches Found – Correct MVI (note: MVI is the Master Veteran Index. Please know the acronym is not spelled out in the error message.)
- 3a. Patient Found with no Prescription Records Matching Search Criteria

Use Case: Dispense Order from another VA Pharmacy Location

When a Pharmacist selects a prescription from the Medication Profile screen on a dispensing VistA instance (to refill a prescription for a Veteran visiting this location), an HL7 'Pharmacy Treatment Dispense' message transmits via eMI. eMI will receive the request, determine the destination facility, and forward the message to the host VistA instance. The host VistA instance will process the message, decrement the number of refills remaining, update the last fill date, and if a partial request, update the partial information. The host VistA will create an HL7 message (Prescription Refill/Partial Services Response) which contains the prescription label information. eMI will route the HL7 message back to the dispensing VistA instance, displaying the completion of the transaction to the Pharmacist on the screen. The Medication Profile view refreshes by executing the View Order Use Case again. The refilling or partial filling of a prescription order is referred to as the OneVA Pharmacy Dispense Order from another VA Pharmacy Location Use Case.

The 'Dispense another VA Pharmacy Order' Use Case describes the process for users to dispense an order that originated from another VA Pharmacy location. Once the user executes the View Order Use Case, the user can select an active prescription from the Medication Profile view that originated in another VA Pharmacy VistA instance to dispense. After selecting the prescription and executing the fill order request, the system will send a message to the originating host VistA instance. This request will decrement the prescription count, but will not affect the inventory of the host facility. When the decrement is successful, communication is made back to the dispensing VistA instance to complete the process and to print a prescription label.

Actors

- User (e.g. Pharmacist)
- Dispensing VistA Instance
- eMI ESB
- Host VistA Instance

Pre-Conditions

- Patient must have an ICN.
- Patient must have information populated in the system
- Dispensing VistA instance has the required amount of prescribed medication inventory on-hand.
- User must have accessed the 'RX (PRESCRIPTIONS) [PSO RX]' menu within VistA and hold the appropriate security keys for their user role, such as PSORPH to identify the user as a Pharmacist. (No separate Security Key required.)

Flow of Events

1. User selects a prescription that originated from another VA Pharmacy VistA instance and RF (Refill) from the Medication Profile view.
2. The prescription must be in 'Active' status.
3. The dispensing VistA instance will send a refill order request to the eMI ESB.
4. The eMI ESB will route the refill order request to the host VistA instance.
5. The host VistA will conduct order checks.
6. The host VistA will update the prescription order and decrement refills.
7. The host VistA will create a prescription label.
8. The dispensing VistA instance will dispense medication.

The dispensing VistA instance will print the label to the dispensing location printer.

Alternate Flow

1. User selects a prescription that originated from another VA Pharmacy VistA instance and PF (Partial fill) from the Medication Profile view.
2. The prescription must be in 'Active' status.
3. The dispensing VistA instance will send a partial fill order request to the eMI ESB.

4. The eMI ESB will send a partial fill order request to the host VistA instance.
5. The host VistA will conduct order checks.
 - a. The host VistA will update the prescription order and update partial fill date.
 - b. The host VistA will create a prescription label.
6. The dispensing VistA instance will dispense medication.
7. The dispensing VistA instance will print the label to the dispensing location printer.

Exceptions

- Status is not 'Active'
- 3a. eMI ESB is not accessible.
- 4a. The host VistA is not accessible
- 4b. The prescription is a controlled substance
- 5a. The host VistA instance fails the order.

System Message

- 1a. Please wait. Checking for remote prescriptions. This may take a moment...
- 1b. Eligibility: RX PATIENT STATUS: OPT NSC//
- Only 'ACTIVE' remote prescriptions may be actioned at this time.
- 3a. The system is down or not responding. Press RETURN to continue.
- 3b. Invalid HL7 Data Format
- 4a. The system is down or not responding. Could not query other VA Pharmacy locations. Press RETURN to continue.
- 4b. Cannot refill Rx# xxxxxxx. This is a controlled substance.
- 5a. The following are the various standard system messages that could display
 - *** Drug is inactive for Rx # xxxxxxx cannot be refilled ***" (refill prescription not allowed on inactive drugs)
 - Can't refill Rx # xxxxxxx it is not for this patient.
 - Cannot refill, Rx is discontinued or expired. Later Rx may exist.
 - Can't refill, no refills remaining.
 - This drug has been changed, No refills allowed.

- The system is down or not responding (Connection Failed). Could not query prescriptions at other VA Pharmacy locations. Press RETURN to continue:
- The system is down or not responding. The other VA Pharmacy location has not installed the OneVA Pharmacy functionality.
- The system is down or not responding. The other VA Pharmacy location has installed the OneVA Pharmacy software, but is currently not accepting refill or partial fill request.

Use Case: OneVA Pharmacy Prescription Report

The ‘OneVA Pharmacy Prescription Report’ Use Case allows the user to access reports related to the orders created from the OneVA Pharmacy process. Once the user executes the OneVA Pharmacy Prescription Report Use Case, the user can generate three different reports. The reports allow the user to view prescriptions filled by another VA Pharmacy location or what other VA Pharmacy locations filled prescriptions for a targeted facility.

Actors

- User (e.g., Pharmacist)
- Dispensing VistA Instance

Pre-Conditions

- User has accessed the OneVA Pharmacy Prescription Report [PSO REMOTE RX REPORT] menu
- User must have accessed the ‘RX (PRESCRIPTIONS) [PSO RX]’ menu within VistA and hold the appropriate security keys for their user role, such as PSORPH to identify the user as a Pharmacist. (No separate Security Key required.)

Flow of Events

1. User selects a report option from the ‘OneVA Pharmacy Prescription Report’ menu.
 - a. User selects ‘Prescriptions we have filled for other facilities’ report.
 - b. User selects ‘Our prescriptions, filled by other facilities’ report.
 - c. User selects ‘All activity for Other VA Pharmacy locations’ report
2. User selects ‘D’ – ‘Date Range’ or go to step 3 or step 4
 - a. User enters start date.
 - b. User enters end date.
3. User selects ‘P’ - ‘Patient’ or go to step 4.
 - a. User enters Patient Name
4. User selects ‘S’ - ‘Site’.
 - a. User enters Institution Name.

Alternate Flow

System Message

N/A

User Access Levels

To access the OneVA Pharmacy software the user must have access to the ‘RX (PRESCRIPTIONS) [PSO RX]’ menu within VistA and hold the appropriate security keys for their user role, such as PSORPH to identify the user as a Pharmacist. (No separate Security Key required.).

Continuity of Operation

New OneVA Pharmacy Checking for Prescriptions Message

The OneVA Pharmacy software uses a new service call to the HDR/CDS Repository each time the Medication Profile view activates via the ‘PATIENT PRESCRIPTION PROCESSING [PSO LM BACKDOOR ORDERS]’ menu. This new service call activates if the patient has been treated at more than one VA Medical Center. This additional service call retrieves all prescriptions associated with the patient from the repository, which requires additional time. In order to execute the query to the HDR/CDS Repository, the user must answer ‘YES’ to the ‘Would you like to query prescriptions from other OneVA Pharmacy locations?’ prompt and displayed in the following image.

Query Prescription from other OneVA Pharmacy Locations Prompt

```
Would you like to query prescriptions from other OneVA Pharmacy
locations? NO//
```

The user will receive the following message while the query processes:

OneVA Pharmacy Checking for Prescriptions Message

```
Please wait. Checking for prescriptions at other VA Pharmacy locations. This may take a
moment...
```

The OneVA Pharmacy’s feature to query the HDR/CDS Repository will not execute if the patient has only one entry in the ‘TREATING FACILITY LIST (#391.91)’. Prior to validating the ‘TREATING FACILITY LIST’ entries, the process filters on the following list of valid facility types: VAMC, M&ROC, M&ROC(M&RO), OC, OPC, CBOC, PR RTP, DOM, HCS, MC(M), MC(M&D), MORC, NHC, VANPH, SOC, SAR RTP.

If there are not two or more valid entries, the system will not display the ‘Executing OneVA Pharmacy Query Message’ listed in the figure above nor will medications that originated from another VA Pharmacy location display on the Medication Profile view.

New OneVA Pharmacy System Down or Not Responding Message

The system identifies and queries the HDR/CDS Repository for all the prescriptions that are active, suspended, on hold, expired (within 120 days), or discontinued (within 120 days). If the connection fails, the system is down message will display as shown in the following image.

OneVA Pharmacy System Not Responding Message

```
The system is down or not responding (Connection Failed).  
Could not query prescriptions at other VA Pharmacy locations.  
Press RETURN to continue:
```

Contact local support if this problem persists.

When the system is down message displays, the VistA session will continue to display the local/dispensing sites prescriptions on the Medication Profile view. There will be no indication if a patient is registered or has prescriptions on other sites (i.e., remote site prescriptions will not display on the Medication Profile view.)

OneVA Pharmacy Patient Found No Rxs Informational Message

The system identifies and queries the HDR/CDS Repository but if the patient does not have any prescription records from other VA Pharmacy locations, matching the search criteria, the following informational message displays:

Figure 19: Informational Message Patient Exists but Has No Remote Prescriptions

```
When trying to query prescriptions at other VA Pharmacy  
Locations the following message was encountered:  
***  
PATIENT FOUND WITH NO PRESCRIPTION RECORDS MATCHING SEARCH CRITERIA  
***  
Press RETURN to continue:
```

Getting Started

Logging On

The OneVA Pharmacy patch is an enhancement to the VistA ‘PHARMACY [PS MENU]’ > ‘OUTPATIENT PHARMACY’ package. To access the application, the user must enter access and verify codes to login.

System Menu

The OneVA Pharmacy patch is an enhancement to the VistA 'PHARMACY [PSO MENU]' > 'OUTPATIENT PHARMACY MANAGER [PSO MANAGER]' > 'RX (PRESCRIPTION) [PSO RX]' menu. The user must have access to these menus in order to execute the OneVA Pharmacy software.

Changing User ID and Password

The OneVA Pharmacy feature occurs fully within the context of VistA and as such relies on the pre-existing procedures to log in and change the user password.

Exit System

The OneVA Pharmacy feature occurs fully within the context of VistA and as such relies on the pre-existing functionality to exit the system. The VistA application will also close if the user is inactive.

Caveats and Exceptions

Label Reprinting

The OneVA Pharmacy patch retrieves the prescription information for the label from the host site and transmits the data back to the dispensing site for printing. As of this writing, there is no 'REMOTE REPRINT' option available for OneVA Pharmacy orders. The 'REPRINT' action is not operational for the OneVA Pharmacy refills or partials, however, plans are being made to release a new action option as part of the OneVA Pharmacy Phase II initiative.

In order to reprint a label due to a paper jam, a malfunction of the printer, or the need to label multiple packages like inhalers, it is suggested to use the OneVA Pharmacy '[Partial Fill Prescription Order](#)' process and perform the transaction again.

Target VistA Time Out Awaiting Reply Message

OneVA Pharmacy remote refill and remote partial fill actions at times receives the following exception message:

MESSAGE SENT TO TARGET VISTA; TIME OUT AWAITING REPLY

Press RETURN to continue:

The user pressed RETURN and must execute the transaction steps for a second time. If the user repeats the transaction, the process successfully executes.

Host Site OneVA Pharmacy Flag Not Set On

As stated in the '[Systems Configuration](#)' section of this document, if the 'ONEVA PHARMACY FLAG (#101)' is not set to the 'on' state at the host site, the dispensing site will receive the following message:

The OneVA Pharmacy flag is turned ‘OFF’ at this facility. Unable to process refill/partial fill requests. Queries will NOT be made to other VA Pharmacy locations.

Using the Software

Patient Prescription Processing [PSO LM BACKDOOR ORDERS]

Selecting a Patient

Sign-in to the VistA system and select the menu option:

PATIENT PRESCRIPTION PROCESSING [PSO LM BACKDOOR ORDERS]

1. **Enter** a patient identifying information at the ‘Select PATIENT NAME:’ prompt.

Figure 20: Select PATIENT NAME Prompt

```
Select PATIENT NAME: PSOPATIENT,SIX
```

The process for selection a patient is unchanged. The system responds with the patient name, date of birth, and other patient information.

2. Press <ENTER> if this is the correct patient.

Figure 21: Patient Found Press RETURN to Continue Prompt

```
Select PATIENT NAME:   PSOPATIENT,SIX           2-13-61   666012136   NO
NSC VETERAN

No Patient Warnings on file for PSOPATIENT,SIX.

Press RETURN to continue...
```

View Order Rxs from Other VA Pharmacy Locations

The system begins to execute the OneVA Pharmacy query for prescriptions from all other VA Pharmacy locations if it meets the conditions documented in the ‘[Continuity of Operation](#)’ section of this document.

Press <ENTER> and accept the default of ‘Yes’ at the ‘Query Prescription from other OneVA Pharmacy locations’ prompt.

Figure 23: Query Prescription from other OneVA Pharmacy Locations Prompt

```
Would you like to query prescriptions from other OneVA Pharmacy
locations? YES//
```

1. After entering yes, the 'OneVA Pharmacy Checking for Prescriptions' information message displays.

The system will display the checking for prescriptions message as shown in the following image.

Figure 24: Executing OneVA Pharmacy Query Message

```
Please wait. Checking for prescriptions at other VA Pharmacy locations. This may
take a moment...
```

 The OneVA Pharmacy's feature to query the HDR/CDS Repository will not execute if the patient has only one entry in the 'TREATING FACILITY LIST (#391.91)'. Prior to validating the 'TREATING FACILITY LIST' entries, the process filters on the following list of valid facility types: VAMC, M&ROC, M&ROC(M&RO), OC, OPC, CBOC, PR RTP, DOM, HCS, MC(M), MC(M&D), MORC, NHC, VANPH, SOC, SARRTP.

If there are not two or more valid entries, the system will not display the 'Executing OneVA Pharmacy Query Message' listed in the figure above nor will medications that originated from another VA Pharmacy location display on the Medication Profile view.

 The system identifies and queries the HDR/CDS Repository for all the prescriptions that are active, suspended, on hold, expired (within 120 days), or discontinued (within 120 days). If the connection fails, the system is down message will display as shown in the following image.

Figure 25: System is Down or Not Responding Exception Message

```
The system is down or not responding. Could not query prescriptions at other VA
Pharmacy locaitons.
Press RETURN to continue:
```

Contact local support if this problem persists.

 When the system is down message displays, the VistA session will continue to display the local/dispensing sites prescriptions on the Medication Profile view. There will be no indication if a patient is registered or has prescriptions on other sites (i.e., remote site prescriptions will not display on the Medication Profile view.)

Press <ENTER> if the 'system is down' message displays.

As mentioned in the [‘Systems Summary’](#) section, the OneVA Pharmacy program was an initiative from the grassroots Innovation Program. As such, development requirements were limited, and specific software areas were to remain untouched; kept ‘as-is’.

An example can be found in the following figure where the original ‘REMOTE PRESCRIPTION AVAILABLE – DISPLAY REMOTE DATA’ prompt still remains. The user bypasses the display of remote data once the OneVA Pharmacy patch is available by entering ‘No’.

Enter <N> to accept the ‘Display Remote Data? N//’ prompt.

Press <ENTER> to accept the default or enter a valid status code change to the status.

Figure 26: Patient Status Message: Update or Press RETURN to Continue Prompt

```
REMOTE PRESCRIPTIONS AVAILABLE!  
Display Remote Data? N// N  
  
Eligibility:  
RX PATIENT STATUS: OUTPT NON-SC//
```

Patient Information View

After selecting a patient, the system displays the first page of the ‘Patient Information’ view.

Press <ENTER> to continue to the second page of the ‘Patient Information’ view.

Medication Profile View

Press <ENTER> to continue to the ‘Medication Profile’ view.

The ‘Medication Profile’ view lists all prescriptions that originated at the dispensing Pharmacy first, followed by [‘Non-VA MEDS \(Not Dispensed by VA\)’](#), then by the prescriptions retrieved from the HDR/CDS Repository that originated at other VA Pharmacy locations. The prescriptions originating from other VA Pharmacy locations display under a divider header line showing the site name, site number, and status.

The first page of the Medication Profile view, in the example displayed in the following image, displays the ‘dispensing site’ (aka ‘local’) prescription orders. The divider heading displays ‘ACTIVE’ and includes the ‘Active’, ‘Suspended’, and ‘Expired’ medications (no changes were made to this format), followed by the orders listed as ‘Discontinued’ medications, then prescriptions in the ‘Hold’ status.

The following image also shows the divider heading for the first ‘other’ VA Pharmacy location site and displays: ‘DAYTON (552) ACTIVE’.

Dispense (Local) Order Originating from Dispensing (Local) Site

The dispensing process for filling a prescription order that originated locally from the dispensing site was unaffected by the OneVA Pharmacy patch.

The software still provides access to all previously available actions – no changes were made to the action options related to the dispensing/local prescription refill process. To refill a

prescription, the action id is 'RF'. The action option to execute a partial fill for a prescription order is 'PR'.

The following lists all action options available from the 'OP Medication Profile' view.

Figure 32: Action Options for Local/Dispensing Orders

Dispense Rx Order from another VA Pharmacy Location

The 'Medication Profile' view displays both the dispensing Pharmacy's medications that originated on the local VistA instance followed by the prescriptions originating from other VA Pharmacy locations.

In the example that follows, there are no prescriptions for the patient at the dispensing site. The message '<No local prescriptions found>' displays before the first divider header.

Figure 33: Medication Profile view with no 'local' Prescriptions (Remote Rxs Only)

PU	Patient Record Update	NO	New Order
PI	Patient Information	SO	Select Order
Select Action: Quit//			

To access prescriptions originating on other sites, the same process is used.

The user can either enter <SO> and press <ENTER> at the ‘Select Action’ prompt or use the short cut feature to enter <3> and press <ENTER> as displayed in the following image.

Figure 34: Select Action ‘SO’ and Select Order by number Prompts Example

```
Select Action: Quit// SO   Select Order
Select Orders by number: (1-3): 3
```

The system displays the REMOTE OP Medications view.

For the following example, note the two data fields:

- Refills
- Last Fill Date

Press <ENTER> to continue.

During the remote refill or partial fill of a prescription order that originated from another VA Pharmacy location, the number of refills remaining is decremented by one and the last refill date is updated with the current date on the host VistA. In the example displayed in the following image, the patient has ‘11’ refills remaining and the last refill date was ‘05/31/16’.

Figure 35: Remote OP Medications view for a prescription

RF Refill Rx from Another VA Pharmacy PR Partial
Select Action:Quit//
```

For prescription orders that originated from other VA Pharmacy locations, the dispensing Pharmacy only has two actions available. They are:

- [RF Refill Remote Order](#)
- [PR Partial](#)

Refill Prescription Order

1. Enter <RF> and press <ENTER> at the Select Action prompt as shown in the following image.

Figure 36: Remote OP Medication RF Refill Action Item Example

```
Select Action:Quit// RF
```

The system confirms the action selected by showing Refill Remote Order on the prompt line as displayed in the following image.

Figure 37: Remote OP Medication RF Refill Action Item Results Example

```
Select Action:Quit// RF   Refill Rx from Another VA Pharmacy
```

The system then checks for a local drug that matches the remote drug description and if found, displays a question asking the user if the matched drug is acceptable. The prompt is expecting a 'Yes' or 'No' response. The system provides 'No' as the default, as displayed in the following image. In order to process the refill, the user enters 'Yes'.

For various reasons, there may not be a one to one match of the drug matching between the host and the dispensing sites therefore the message displayed in the following image may change. See the ['Drug Matching Process'](#) section for drug matching messages, prompts, and instructions.

Figure 38: Remote Drug Match Response Example

```
Remote site drug name: IBUPROFEN 800MG TAB  
Matching Drug Found for Dispensing: IBUPROFEN 800MG TAB  
Would you like to use the system matched drug for this  
refill/partial fill? NO//
```

Press <ENTER> to continue.

The system displays the processing refill request message as shown in the following image.

Figure 39: Remote Refill Processing Message

```
Processing refill request. Please be patient as it may take a moment  
for the host site to respond and generate your label data...
```

The system completes the remote refill process and generates the label data for printing. The 'LABEL DEVICE' message displays as shown in the following image.

Label Device Prompt

```
TRANSACTION SUCCESSFUL... The refill for RX ##### has been recorded on
the prescription at the host system.

Select a printer to generate the label or '^' to bypass printing.

QUEUE TO PRINT ON
DEVICE:
```

The user enters the dispensing site printer information to print the label.

IMPORTANT: The OneVA Pharmacy requires stock prescription labels and a laser printer that is accessible at the Select LABEL DEVICE: prompt. If either one of the requirements are lacking, then the label will not print as programmed.

IMPORTANT: If the user enters an “^” at the Select LABEL DEVICE: prompt, the prescription label will not be printed and at this time. There is no way to do a reprint of the refill or partial fill label.

The label prints and the system displays a message to indicate the prescription order process completed as shown in the following image.

Figure 40: Successful Refill Status Message

```
Rx # [redacted] refilled.
Press RETURN to continue:
```

Press <ENTER> to continue.

The system displays a message informing that the prescription list is updating. The background process is executing the ‘[View Order Use Case](#)’ and retrieving the updated information about the patient’s prescription orders from the HDR/CDS Repository.

The system displays the following message while the query to the HDR/CDS Repository is executing.

Figure 41: System Message: Updating Prescription Order List

```
Updating prescription order list...
```

The system will retrieve all prescriptions from the HDR/CDS repository and redisplay the Medication Profile view showing the updated prescription information.

In the following image the example shows the last refill date has been updated to be ‘07/27’ and the refills remaining is now set to ‘10’.

```

The system displays the processing refill request message as shown in the following image.

Figure 50: Remote Refill Processing Message

```
Processing refill request. Please be patient as it may take a moment
for the host site to respond and generate your label data...
```

The system completes the remote partial fill process and generates the label data for printing. The 'LABEL DEVICE' message displays as shown in the following image.

Label Device Prompt

```
TRANSACTION SUCCESSFUL... The refill for RX ##### has been recorded on
the prescription at the host system.

Select a printer to generate the label or '^' to bypass printing.

QUEUE TO PRINT ON
DEVICE:
```

The user enters the dispensing site printer information to print the label.

The label prints and the system displays a message to indicate the prescription order process completed as shown in the following image.

Figure 51: Successful Partial Fill Status Message

```
Partial complete for RX [REDACTED]  
Press RETURN to continue:
```

Press <ENTER> to continue.

The system displays a message informing that the prescription list is updating. The background process is executing the '[View Order Use Case](#)' and retrieving the updated information about the patient's prescription orders from the HDR/CDS Repository.

The system displays the following message while the query to the HDR/CDS Repository is executing.

Figure 52: System Message: Updating Prescription Order List

```
Updating prescription order list...
```

The system will retrieve all prescriptions from the HDR/CDS repository and redisplay the Medication Profile view showing the updated prescription information.

Use the OneVA Pharmacy Prescription Reports capability to review the partial fill activity for both the dispensing and host sites transactions. See the [OneVA Pharmacy Report](#) section for details.

Drug Matching Process

Overall, three outcomes occur during the OneVA Pharmacy Drug Matching function. They are:

1. One-to-One Match
2. One-to-Many Match
3. No Drug Match

Drug Matching: One-to-Many

When the drug matching logic identifies a one-to-one match at the dispensing site for the selected host prescription, the systems displays the 'Remote site drug name:' and the 'Matching Drug Found for Dispensing:' and prompts the user to respond 'YES' or 'NO' as displayed in the following image.

Figure 53: Drug Matching: One-to-One Match

```
Remote site drug name: CETIRIZINE HCL 10MG TAB and  
Matching Drug Found for Dispensing: CETIRIZINE HCL 10MG TAB messages display  
Would you like to use the system matched drug for this  
refill/partial fill? NO//
```

Drug Matching: One-to-Many

When the drug matching logic identifies a one-to-many match at the dispensing site for the selected host prescription, the system the ‘Remote site drug name:’ and the ‘Select matching local drug:’ prompt as displayed in the following image.

Figure 54: Drug Matching: One-to-Many - Select matching local drug Prompt

```
Remote site drug name: TRAZODONE HCL 50MG TAB message displays

The OneVA Pharmacy patch contains specific business rules to prevent refill and/or partial orders that originated at other VA Pharmacy locations from being processed. They include the following list:

The OneVA Pharmacy patch contains specific business rules to prevent refill and/or partial orders that originated at other VA Pharmacy locations from being processed. They include the following list:

- Patient's prescription that originated from another VA Pharmacy location cannot be refilled before the next refill date.
Unable to complete transaction.
Cannot refill Rx# xxxxxxx. Next possible fill date is MM/DD/YYYY
- Patient's prescription that originated from another VA Pharmacy location is not fully or partially dispensed when the prescription status is 'discontinued', 'expired', is on 'hold', or 'suspended'.
Only 'ACTIVE' remote prescriptions may be refilled at this time.
- Patient's prescription that originated from another VA Pharmacy location and cannot be dispensed (refilled) when there are zero remaining refills. Note: Partial fills are allowed.
- Unable to complete transaction. Cannot refill Rx # xxxxxxx. No refills left.
- Patient's prescription that originated from another VA Pharmacy location and cannot be dispensed (refill or partial fill) when the drug is classified as a controlled substance on the dispensing site.
- This is a controlled substance. Cannot refill Rx # xxxxxxx.
- Patient's prescription that originated from another VA Pharmacy location and cannot be dispensed (refill or partial fill) when the drug is classified as a controlled substance on the host site.

Unable to complete transaction. Rx #xxxxxxx cannot be refilled.

The associated drug is considered a controlled substance at the host facility.

- Patient's prescription that originated from another VA Pharmacy location and cannot be dispensed (refill or partial fill) when the drug is inactive on the dispensing site.
- Matched Drug <DRUG NAME> is inactive. Cannot refill.
- Patient's prescription that originated from another VA Pharmacy location and cannot be dispensed (refill or partial fill) when the drug has no dispensing site match.
- No local match could be found for <DRUG NAME>
- Patient's prescription that originated from another VA Pharmacy location and cannot be dispensed (refill or partial fill) when no drug on the dispensing site has a matching VA Product ID.

Missing VA Product ID. Rx #xxxxxxx cannot be refilled.

OneVA Pharmacy Prescription Report [PSO REMOTE RX REPORT]

OneVA Pharmacy Report Menu

The OneVA Pharmacy patch comes with a new menu option for retrieving the OneVA Pharmacy Prescription Reports. The 'ONEVA PHARMACY PRESCRIPTION REPORT [PSO REMOTE RX REPORT]' menu is located on the 'RX (PRESCRIPTIONS) [PSO RX]' menu as highlighted in the following image.

Figure 59: OneVA Pharmacy Prescription Report [PSO REMOTE RX REPORT] Menu

```
Select Rx (Prescriptions) <TEST ACCOUNT> Option: ??  
  
Patient Prescription Processing [PSO LM BACKDOOR ORDERS]  
FEE Fee Patient Inquiry [FBAA PATIENT INQUIRY]  
Check Drug Interaction [PSO CHECK DRUG INTERACTION]  
Complete Orders from OERR [PSO LMOE FINISH]  
Discontinue Prescription(s) [PSO C]  
Edit Prescriptions [PSO RXEDIT]  
ePharmacy Menu ... [PSO EPHARMACY MENU]  
List One Patient's Archived Rx's [PSO ARCHIVE LIST RX'S]

SI Select Item						
Select Action:Next Screen//						

The type of report selected determines the refills shown on a report and the search option specified as described within this document. A row number identifies each refill/partial fill. For each row the date processed, patient name, drug name, quantity dispensed, and the quantity supplied displays. There are four refill type values. They are:

- RF – refills
- PR - partial refills
- OR – refills performed by other sites
- OP – partial fills performed by other sites

The total cost is the sum of the costs of all items included in this report and is available on the report ‘Prescriptions we have dispensed for other Host Pharmacies’. The cost is calculated by using the dispensing sites ‘Price Per Dispense Unit’ and multiplying that by the quantity being dispensed.

To review more information about the orders, perform the following steps:

Enter <SI> at the ‘Select Action’ prompt and press <ENTER>.

The system displays the action name and prompts for the item to display:

Enter <11> at the ‘Enter a number’ prompt and press <ENTER>.

The following image displays the ‘Select Action’ and ‘Enter a number’ prompts.

Figure 73: OneVA Pharmacy Report Example: Select Item

```

REDACTED

Press <ENTER> to return to the summary report view.

Continue to press <ENTER> to return to the report menu prompt.

1. Select a report and search options section to view another report.

Sending Drug File (#50) Data

The Send Drug File Entries to External Interface [PSS MASTER FILE ALL] option allows transmission of the entries in the DRUG file (#50) to an Outpatient Pharmacy Automated Interface (OPAI). Details on this option are in the Pharmacy Data Management User Manual.

Note: At the time of the OPAI release, none of the dispensing systems were using the Master File Updates. Sites should not use this option unless they ensure that the commercial dispensing system is ready to receive and acknowledge updates to the DRUG file (#50).

Troubleshooting

OneVA Pharmacy introduces new functionality that allows a Pharmacist to refill or partial fill a prescription from another VA Pharmacy location. This software patch uses HL7 messaging to send and receive remote prescription details from another VA Pharmacy location. This allows a ‘dispensing’ (‘non-custodial’ or ‘local’ pharmacy) to refill a prescription that originated from another VA Pharmacy location. The VA Pharmacy location where the prescription originated is the ‘host’ (‘remote’) facility.

VistA utilizes HL7 to send a query message to the eMI ESB. eMI sends the HL7 message to the HDR/CDS Repository and medications return to the querying site. The prescriptions display below any ‘local’ prescriptions on the Medication Profile view. The Pharmacist can then view and choose a ‘host’ prescription and will be able to refill or partially fill any active non-controlled substance prescription at either facility.

Entries log for all ‘host’ and ‘dispensing’ refills and partial fills into a new file called ‘REMOTE PRESCRIPTION LOG (#52.09)’. The entries are viewable using the OneVA Pharmacy Prescription Report functionality.

With this integrated VistA patch, several points of failure could occur. The systems design will allow the process to continue if any of the various integration points fail, however, remote prescriptions will not display to the Pharmacist on the Medication Profile view.

There are application error messages that will display during the search for the patient and the patient’s prescriptions. They are:

- No patient error message:
PATIENT IDENTIFIER NOT FOUND
- Multiple patients returned error messages:
MORE THAN ONE PATIENT RETURNED IN CALL TO HDR-CDS
MORE THAN ONE PATIENT FOUND ON RX DATABASE, CHECK ICN

- Patient returned, no prescription data returned error message:
PATIENT FOUND WITH NO PRESCRIPTION RECORDS
- Patient returned, no prescription data matching filters returned error message:
PATIENT FOUND WITH NO PRESCRIPTION RECORDS MATCHING SEARCH
CRITERIA

Special Instructions for Error Correction

Significant errors are errors or conditions that affect the system stability, availability, performance, or otherwise make the system unavailable to its user base. For any significant error, please contact your local support.

Appendix B: Frequently Asked Questions (FAQ)

- 1) What is the Value to me as the Veteran?

The previous ‘Coordinated Care for Traveling Veterans’ handbook required either a visit to the Emergency Room/Urgent Care Center or a pharmacy clinic visit to obtain a new prescription. OneVA Pharmacy makes the best use of the prescription already on file at another VA medical center.

Audience: Veteran

- 2) What if I have never been registered at the VA where I’m trying to pick up my prescription?

Veterans must register/enroll at the VA medical center in order for the pharmacy to see their records.

Audience: Veteran

- 3) Does OneVA pharmacy benefit me if I’m not traveling?

Use existing processes to contact the VA where your prescription is on file to request a refill.

Audience: Veteran

- 4) Do you still need to enter Allergies in to the Pharmacy profile?

VistA pharmacy will display allergies and adverse reactions from all remote facilities.

Audience: Pharmacy

- 5) Can we send the prescription to CMOP?

OneVA Pharmacy is designed to provide an immediate fill at the Pharmacy window.

Audience: Pharmacy

- 6) Can any prescription be filled by OneVA pharmacy?

Controlled substances (CS at one or both facilities) cannot be filled via OneVA pharmacy. Drugs not matched to the National Drug file cannot be filled via OneVA Pharmacy. Prescriptions with no remaining refills, on suspense or on hold cannot be filled.

Audience: Pharmacy, Veteran

- 7) What should I do if I do not have the medication in stock?

Order the medication if the Veteran can return the next day, mail from CMOP to a temporary address, utilize the Coordinated Care for Traveling Veteran Handbook. “What would a prudent pharmacist do?”

Audience: Pharmacy

- 8) What information is kept in my VistA system and what information is kept at the host VistA system?

The dispensing VistA system tracks the information in a new OneVA Pharmacy file (not the prescription file) for reporting purposes. The refill or partial fill is tracked in the host system's prescription file and activity log.

Audience: Pharmacy

- 9) What if it is too soon to fill?

Prescription will not be available to refill. Partial fills will be an available option. Sites can use Remote Data Views to see the fill history from the host station, especially if there are concerns for frequent partial fill requests of the same Rx.

Audience: Pharmacy

- 10) What is the dispensing name and address on the label?

The host pharmacy will be the name and address printed on the label which is consistent with how CMOP processes prescriptions.

Audience: Pharmacy

- 11) Are there any responsibilities for the host pharmacy in OneVA pharmacy?

To account for copay billing, insurance billing and subsequent refill capabilities all sites are asked to print to an OneVA Report and manually release prescriptions filled by other stations. Recommended frequency of printing report is no less than weekly.

Audience: Pharmacy

- 12) Does this affect the routine process of finishing prescriptions from the Pending file (ordering from OERR)?

Yes, OneVA pharmacy will bring in prescriptions from other VA treating facilities to create the first enterprise-wide patient-centric actionable medication profile.

Audience: Pharmacy

- 13) How does OneVA pharmacy select the drug from my drug file?

The original prescription resides in the Health Data Repository (HDR). OneVA pharmacy identifies the national drug file (NDF) "VA Product" for the prescription. Matching drugs in your local drug file are identified based on that NDF product. If there is a 1:1 match found, OneVA pharmacy will recommend that drug. If there are multiple possible matches found, OneVA pharmacy will present a pick list to select from.

Audience: Pharmacy

14) How much information can you see from the Host prescription file?

OneVA pharmacy displays a limited subset of the prescription. Once the patient is registered, VistA Web can be utilized to see details of the prescription.

Audience: Pharmacy

15) What if the original prescription uses an abbreviation that is not in our instruction file?

The prescription label is generated from the host prescription file. This is consistent with how CMOP processes prescriptions.

Audience: Pharmacy

16) OneVA pharmacy reports show cost information, which system is used to calculate medication cost?

The dispensing system's cost is used in the report.

Audience: Pharmacy

17) Can I send an OneVA Pharmacy prescription to automation via the Outpatient Pharmacy Automation Interfaces (OPAI)?

No, this is being evaluated for future functionality. Consider window processing workflows to dispense OneVA Pharmacy fills.

Audience: Pharmacy

18) If a patient is requesting a medication that requires in-clinic administration, could I use OneVA pharmacy?

OneVA pharmacy functionality is intended for outpatient prescriptions to be dispensed at the Pharmacy window.

Audience: Pharmacy

19) How will a patient be notified that their OneVA prescription is ready for pick up?

OneVA Pharmacy does not interface with prescription ready notification boards. Consider alternative processes and workflow.

Audience: Pharmacy

Appendix C: Acronyms and Glossary

Acronyms and Abbreviations

The following table provides the list of acronyms used throughout the document along with their descriptions.

Table 18: Terms

Acronym/Abbreviation	Description
[DIUSER]	FileMan Menu
[PSO LM BACKDOOR ORDERS]	Patient Prescription Processing Menu
[PSO MANAGER]	Outpatient Pharmacy Manager Menu
[PSO MENU]	Pharmacy Menu
[PSO REMOTE RX REPORT]	OneVA Pharmacy Prescription Report Menu
[PSO RX]	Rx (Prescriptions) Menu
AITC	Austin Information Technology Center
C/HDR	Clinical/Health Data Repository
CDS	Clinical Data Services
Clin1	Clinical Product Support Team 1
DAYTSHR	Dayton Test Laboratory VistA instance
DoD	Department of Defense
eMI	Enterprise Messaging Infrastructure
EPMO	Office of Information and Technology Enterprise Program Management Office
ESB	Enterprise Service Bus
GOV	Government
HDR	Health Data Repository
HL7	Health Level 7
ICN	Integrated Control Number
IOC	Initial Operating Capability
IT	Information Technology
MVI	Master Veteran Index
NPI	National Provider Identifier
NSD	National Service Desk
OI&T	Office of Information and Technology
OMB	Office of Management and Budget
OP	Outpatient Pharmacy
OP	OneVA Pharmacy Partial Fill
OR	OneVA Pharmacy Refill
PII	Personally Identifiable Information

Acronym/Abbreviation	Description
PR	Partial Refill (Local)
PSO	Outpatient Prescription Pharmacy
RF	Refill (Local)
Rx	Prescription
SDM	Service Desk Manager
VA	Department of Veterans Affairs
VAMC	Veterans Affairs Medical Center
VDL	VA Software Document Library
VHA	Department of Veterans Health Administration
VistA	Veterans Health Information Systems and Technology Architecture

Glossary

The following table provides definitions for common acronyms and terms used in this manual.

Table 19: Glossary

Acronym/Term	Definition
Action Profile	A list of all active and recently canceled or expired prescriptions for a patient sorted by classification. This profile also includes a signature line for each prescription to allow the physician to cancel or renew it.
Activity Log	A log, by date, of changes made to or actions taken on a prescription. An entry is made in this log each time the prescription is edited, canceled, reinstated after being canceled, or renewed. An entry will be made into this log each time a label is reprinted. A CMOP activity log will contain information related to CMOP dispensing activities.
ADD	Automated Dispensing Device.
Allergy/ADR Information	Includes non-verified and verified allergy and/or adverse reaction information as defined in the Adverse Reaction Tracking (ART) package. The allergy data is sorted by type (DRUG, OTHER, FOOD). If no data is found for a category, the heading for that category is not displayed.
Allergy Order Checks	The process that compares the drugs prescribed for a patient against that patient's recorded allergies
AMIS	Automated Management Information System.
Answer Sheet	An entry in the DUE ANSWER SHEET file. It contains the questions and answers of a DUE questionnaire. This term is also used to refer to the hard copy representation of a DUE ANSWER SHEET entry.
API	Application Programming Interfaces.
APSP	Originally Indian Health Service Pharmacy's name space now owned by the Outpatient Pharmacy software.

Acronym/Term	Definition
BSA	<p>Body Surface Area. The Dubois formula is used to calculate the Body Surface Area using the following formula:</p> $\text{BSA (m}^2\text{)} = 0.20247 \times \text{Height (m)}^{0.725} \times \text{Weight (kg)}^{0.425}$ <p>The equation is performed using the most recent patient height and weight values that are entered into the vitals package.</p> <p>The calculation is not intended to be a replacement for independent clinical judgment.</p>
Bypass	Take no action on a medication order.
CHAMPVA	CHAMPVA (Civilian Health and Medical Program of the Department of Veterans Affairs) is a cost-shared health benefits program established for the dependents and survivors of certain severely disabled and/or deceased veterans.
Clinical Reminder Order Checks (CROC)	CPRS Order Checks that use Clinical Reminder functionality, both reminder terms and reminder definitions, to perform checks for groups of orderable items.
CMOP	Consolidated Mail Outpatient Pharmacy.
CPRS	Computerized Patient Record System. CPRS is an entry point in VistA that allows the user to enter all necessary orders for a patient in different packages (e.g., Outpatient Pharmacy, Inpatient Pharmacy, etc.) from a single entry point.
CrCL	<p>Creatinine Clearance. The CrCl value which displays in the pharmacy header is identical to the CrCl value calculated in CPRS. The formula approved by the CPRS Clinical Workgroup is the following:</p> <p>Modified Cockcroft-Gault equation using Adjusted Body Weight in kg (if ht > 60in)</p> <p>This calculation is not intended to be a replacement for independent clinical judgment.</p>
Critical	Interactions with severe consequences that require some type of action (finding facts, contacting prescribers) to prevent potential serious harm.
DATUP	Data Update (DATUP). Functionality that allows the Pharmacy Enterprise Customization System (PECS) to send out custom and standard commercial-off-the-shelf (COTS) vendor database changes to update the two centralized databases at Austin and Martinsburg.
DEA	Drug Enforcement Agency.
DEA Special Handling	The Drug Enforcement Agency special Handling code used for drugs to designate if they are over-the counter, narcotics, bulk compounds, supply items, etc.
DHCP	See VistA.
DIF	Drug Information Framework.
Dispense Drug	The Dispense Drug name has the strength attached to it (e.g., Acetaminophen 325 mg). The name alone without a strength attached is the Orderable Item name.
DNS	Domain Name Server.
DoD	Department of Defense.

Acronym/Term	Definition
Dosage Ordered	After the user has selected the drug during order entry, the dosage ordered prompt is displayed.
Drug/Drug Interaction	The pharmacological or clinical response to the administration of a drug combination different from that anticipated from the known effects of the two agents when given alone.
DUE	Drug Usage Evaluation.
Enhanced Order Check	Drug – Drug Interaction, Duplicate Therapy, and Dosing order checks that are executed utilizing FDB's MedKnowledge Framework APIs and database.
ETC	Enhanced Therapeutic Classification.
Expiration/Stop	The date on which a prescription is no longer active. Typically, this date is 30 days after the issue date for narcotics, 365 days after the issue date for other medications and 365 days after the issue date for supplies.
FDB	First DataBank
Finish	Term used for completing orders from Order Entry/Results Reporting.
GUI	Acronym for Graphical User Interface.
HDR/CDS	Health Data Repository/Clinical Data Services Repository
HDR-Hx	Health Data Repository Historical.
HDR-IMS	Health Data Repository- Interim Messaging Solution.
Issue Date	The date on which the prescription was written. This date is usually, but not always, the same as the first fill date. This date cannot be later than the first fill date.
HFS	Host File Server.
Health Insurance Portability and Accountability Act of 1996 (HIPAA)	A Federal law that makes a number of changes that have the goal of allowing persons to qualify immediately for comparable health insurance coverage when they change their employment relationships. Title II, Subtitle F, of HIPAA gives HHS the authority to mandate the use of standards for the electronic exchange of health care data; to specify what medical and administrative code sets should be used within those standards; to require the use of national identification systems for health care patients, providers, payers (or plans), and employers (or sponsors); and to specify the types of measures required to protect the security and privacy of personally identifiable health care information. Also known as the Kennedy-Kassebaum Bill, the Kassebaum-Kennedy Bill, K2, or Public Law 104-191.
JCAHO	Acronym for Joint Commission on Accreditation of Healthcare Organizations.
Label/Profile Monitor	A file for each printer which records, in the order in which they were printed, the last 1000 labels or profiles printed on that printer. This allows a rapid reprint of a series of labels or profiles that were damaged by a printer malfunction or other event.
Local Possible Dosages	Free text dosages that are associated with drugs that do not meet all of the criteria for Possible Dosages.
Medication Instruction File	The MEDICATION INSTRUCTION file is used by Unit Dose and Outpatient Pharmacy. It contains the medication instruction name, expansion and intended use.

Acronym/Term	Definition
Medication Order	A prescription.
Medication Profile	A list of all active or recently canceled or expired prescriptions for a patient sorted either by date, drug, or classification. Unlike the action profile, this profile is for information only and does not provide a signature line for a physician to indicate action to be taken on the prescription.
Medication Routes File	The MEDICATION ROUTES file contains medication route names. The user can enter an abbreviation for each route to be used at the local site. The abbreviation will most likely be the Latin abbreviation for the term.
Med Route	The method in which the prescription is to be administered (e.g., oral, injection).
NCCC	Acronym for National Clozapine Coordinating Center.
Non-Formulary Drugs	The medications, which are defined as commercially available drug products not included in the VA National Formulary.
Non-VA Meds	Term that encompasses any Over-the-Counter (OTC) medications, Herbal supplements, Veterans Health Administration (VHA) prescribed medications but purchased by the patient at an outside pharmacy, and medications prescribed by providers outside VHA. All Non-VA Meds must be documented in patients' medical records.
OneVA Pharmacy	Prescriptions that originated from another VistA instance other than the site dispensing the prescription.
OPAI	Outpatient Pharmacy Automated Interface.
Order	Request for medication.
Order Check	Order checks (drug-allergy/ADR interactions, drug-drug, duplicate drug, duplicate therapy, and dosing) are performed when a new medication order is placed through either the CPRS or Outpatient Pharmacy applications. They are also performed when medication orders are renewed, when Orderable Items are edited, or during the finishing process in Outpatient Pharmacy. This functionality will ensure the user is alerted to possible adverse drug reactions and will reduce the possibility of a medication error.
Orderable Item	An Orderable Item name has no strength attached to it (e.g., Acetaminophen). The name with a strength attached to it is the Dispense drug name (e.g., Acetaminophen 325mg).
Partial Prescription	A prescription that has been filled for a quantity smaller than requested. A possible reason for a partial fill is that a patient is to return to the clinic in ten days but the prescription calls for a thirty-day supply. Partials do count as workload but do not count against the total number of refills for a prescription.
Payer	In health care, an entity that assumes the risk of paying for medical treatments. This can be an uninsured patient, a self-insured employer, or a health care plan or Health Maintenance Organization (HMO).
Pending Order	A pending order is one that has been entered by a provider through CPRS without Pharmacy finishing the order. Once Pharmacy has finished the order, it will become active.
Pharmacy Narrative	OUTPATIENT NARRATIVE field that may be used by pharmacy staff to display information specific to the patient.
Polypharmacy	The administration of many drugs together.

Acronym/Term	Definition
POE	Acronym for Pharmacy Ordering Enhancements (POE) project. Patch PSO*7*46 contains all the related changes for Outpatient Pharmacy.
Possible Dosages	Dosages that have a numeric dosage and numeric dispense units per dose appropriate for administration. For a drug to have possible dosages, it must be a single ingredient product that is matched to the DRUG file. The DRUG file entry must have a numeric strength and the dosage form/unit combination must be such that a numeric strength combined with the unit can be an appropriate dosage selection.
Prescription	This term is now referred to throughout the software as medication orders.
Prescription Status	<p>A prescription can have one of the following statuses.</p> <p>Active - A prescription with this status can be filled or refilled.</p> <p>Canceled - This term is now referred to throughout the software as Discontinued. (See Discontinued.)</p> <p>Discontinued - This status is used when a prescription was made inactive either by a new prescription or by the request of a physician.</p> <p>Discontinued (Edit) - Discontinued (Edit) is the status used when a medication order has been edited and causes a new order to be created due to the editing of certain data elements.</p> <p>Deleted - This status is used when a prescription is deleted. Prescriptions are no longer physically deleted from the system, but marked as deleted. Once a prescription is marked deleted no access is allowed other than view.</p> <p>Expired - This status indicates the expiration date has passed.</p> <p>*Note: A prescription that was canceled or has expired more recently than the date specified by the cutoff date, typically 120 days in the past, can still be acted upon.</p> <p>Hold - A prescription that was placed on hold due to reasons determined by the pharmacist.</p> <p>Non-verified - There are two types of non-verified statuses. Depending on a site parameter, prescriptions entered by a technician do not become active until a pharmacist reviews them. Until such review, they remain non-verified and cannot be printed, canceled, or edited except through the Verification menu.</p> <p>The second non-verified status is given to prescriptions when a drug/drug interaction is encountered during the new order entry or editing of a prescription.</p> <p>Pending - A prescription that has been entered through OERR.</p> <p>Refill - A second or subsequent filling authorized by the provider.</p> <p>Suspended - A prescription that will be filled at some future date.</p>
Progress Notes	A component of Text Integration Utilities (TIU) that can function as part of CPRS.
Provider	The person who authorized an order. Only users identified as providers who are authorized to write medication orders may be selected.
Reprinted Label	Unlike a partial prescription, a reprint does not count as workload.
Questionnaire	An entry in the DUE QUESTIONNAIRE file. This file entry contains the set of questions related to a DUE as well as the drugs being evaluated.
Schedule	The frequency by which the doses are to be administered, such as Q8H, BID, NOW, etc.
Sig	The instructions printed on the label.

Acronym/Term	Definition
Significant	The potential for harm is either rare or generally known so that it is reasonable to expect that all prescribers have taken this information into account.
Speed Actions	See Actions.
Suspense	A prescription may not be able to be filled on the day it was requested. When the prescription is entered, a label is not printed. Rather, the prescription is put in the RX SUSPENSE file to be printed at a later date.
Third (3rd) Party Claims	Health care insurance claims submitted to an entity for reimbursement of health care bills.
Time In	This is the time that the patient's name was entered in the computer.
Time Out	This is the time that the patient's name was entered on the bingo board monitor.
TIU	Text Integration Utilities; a package for document handling, that includes Consults, Discharge summary, and Progress Notes, and will later add other document types such as surgical pathology reports. TIU components can be accessed for individual patients through the CPRS, or for multiple patients through the TIU interface.
Titration	Titration is the process of gradually adjusting the dose of a medication until optimal results are reached.
TRICARE	TRICARE is the uniformed service health care program for: active duty service members and their families retired service members and their families members of the National Guard and Reserves and their families survivors, and others who are eligible. There are differences in how prescriptions for TRICARE beneficiaries are processed versus how prescriptions are processed for veterans.
Units per Dose	The number of Units (tablets, capsules, etc.) to be dispensed as a Dose for an order. Fractional numbers will be accepted for medications that can be split.
VistA	Acronym for Veterans Health Information Systems and Technology Architecture, the new name for Decentralized Hospital Computer Program (DHCP).
Wait Time	This is the amount of time it took to fill the prescription. It is the difference between Time In and Time Out. For orders with more than one prescription, the wait time is the same for each.
