Patch RA*5.0*56
July 2008

Department of Veterans Affairs
Health Systems Design & Development
Provider Systems
Release Notes for Patch RA*5.0*56

Patch RA*5.0*56 is the first of three phases of the Radiology Outside Reporting project. This patch addresses the New Service Request (NSR) 20040201. Dr. Steve Kastin requested the ability to integrate contracted outside radiology studies into VistA radiology workload, clinical reporting, ordering, and tracking.

Overview

Patch RA*5.0*56 allows an outside exam with an outside report to be completed without the need to verify the outside report. The outside report has a new report status of *Electronically Filed* and can be edited later with regard to diagnostic codes.

A deleted report is no longer deleted from the database. Patch RA*5.0*56 allows a deleted report to be marked *deleted*, but remain in the database. The deleted report can be retrieved and re-linked to its associated case, as long as the case does not have another report added in the interim (between report deletion and restoration).

Patch RA*5.0*56 Features

Patch RA*5.0*56 provides two new report statuses, *Electronically Filed* and *Deleted*, and two new options: ‘Outside Report Entry/Edit’ [RA OUTSIDE RPTENTRY] and ‘Restore a Deleted Report’ [RA RESTORE REPORT]. Also, the ‘Delete a Report’ [RA DELETERPT] option is modified.

'Outside Report Entry/Edit' [RA OUTSIDE RPTENTRY]

In the Films Reporting Menu, the ‘Outside Report Entry/Edit’ option allows you to enter a canned report to record the receipt of a report that was interpreted outside your facility without the need to verify the report in order for the exam status of the case to reach ‘COMPLETE.’ This option prompts for ‘Standard’ Report to Copy, Reported Date, Report Text, Impression Text, and Diagnostic Codes. It automatically assigns an Electronically Filed (EF) report status to the report, if a canned report was selected, and/or report text and/or impression text was entered via this option. Except for the Diagnostic Code, this option ignores all other site-required items for the exam status of ‘COMPLETE,’ including verifying physician and verified date.

If diagnostic codes are not required for the exam status of ‘COMPLETE,’ this option automatically sets the exam status to ‘COMPLETE’; otherwise, it automatically sets the exam status to ‘COMPLETE’ when a diagnostic code is entered later via this option. The requirement for diagnostic code is set via the ‘Examination Status Entry/Edit’ [RA EXAMSTATUS] option.

This option also allows you to enter diagnostic codes even after the case has reached the ‘COMPLETE’ exam status. Each time this option is used to change or add new diagnostic codes, the added or changed codes are rechecked to see if alerts should be generated. Alerts are not
generated again for existing, unchanged diagnostic codes that previously triggered the generation of alerts. The generation of alerts is based upon the value of “GENERATE ABNORMAL ALERT?” in the DIAGNOSTIC CODES file (#78.3), which is updated via the ‘Diagnostic Code Enter/Edit’ [RA DIAGEDIT] option. If an alert is generated, its notification appears as follows on the VistA roll-n-scroll screen:

RADPATIENT,ONE (R4558): Abnormal Imaging Results: CHEST 2 VIEWS PA&LAT
Enter “VA to jump to VIEW ALERTS option

A study performed and interpreted outside must be registered under a “No Credit” imaging location. If it is not, when you use this option, a warning message displays, but you can continue to enter data, provided it is an acceptable business rule in your department. (The following example shows the warning message.)

Example 1
Enter a new outside report for a case that is registered from a credit location. A warning message displays regarding the credit method.

...will now designate exam status as 'COMPLETE'... for case no. 2794
...exam status successfully updated.

...will now designate request status as 'COMPLETE'...
Visit credited.
...request status successfully updated.

Results

- Both exam status and request status are updated to ‘COMPLETE.’
- Normally, if an outside report is entered for an exam that was registered from a “No Credit” imaging location, the “Visit credited” would not appear.
- There is no alert for “Imaging Results,” as would be automatically generated for Verified Reports.
- There is no Abnormal alert because the diagnostic codes here do not require alerts.
- The ‘Outside Report Entry/Edit’ option does not recognize the case number once the case reaches ‘COMPLETE,’ because the case is no longer active. You must enter the patient name or Last initial and Last 4 SSN at the Enter Case Number prompt to display a list of patient cases from which to select. This general feature is also seen from the ‘View Exam by Case No.’ option.

RADPATIENT, ONE (R4558): Abnormal Imaging Results: CHEST 2 VIEWS PA&LAT
Enter "VA to jump to VIEW ALERTS option

Result

An Abnormal alert is generated because the primary diagnostic code was changed to one that requires the generation of an alert notification.

'Restore a Deleted Report' [RA RESTORE REPORT]

In the Supervisor Menu, the ‘Restore a Deleted Report’ option allows you to relink a previously deleted report to its associated case, only if another report was not linked to the case in the interim (time between deletion and restoration). The restored report is re-assigned the report status it had prior to being deleted; however, the status of the exam is not updated.

If a case had a report entered and deleted, then had a second report entered and deleted for it, the case would have two deleted reports in the database. This option allows you to choose any previously deleted report for a case, not just the most recently deleted report for that case. The other deleted report that was not selected for restoration remains as a deleted report in the database.

To view a list of deleted reports to select from this option, enter "??" at the "Select Deleted Report to restore:" prompt. After you select a deleted report, the first prompt displayed is:

Do you want to restore this deleted report? NO//
Before allowing you to restore a report, this option checks whether the case associated with this report has another report linked to it and whether the case has data for diagnostic codes, staff, and resident. If any such data are found, the option does not continue, but displays a warning message. For example:

```
Case #123 is already associated with a report!
Restoration was not done.
```

This message indicates that either another previously deleted report was restored to its associated case or a new report was entered for the case during the time between report deletion and attempted restoration.

```
Case #461 already has SECONDARY DIAGNOSTIC CODE
Restoration was not done.
```

This message indicates that the case associated with this report already has secondary diagnostic code data, which may or may not be associated with this report. The supervisor must determine if the correct deleted report was selected for restoration; and if so, must remove the secondary diagnostic code from the case before the deleted report can be restored. The 'Diagnostic Code and Interpreter Edit by Case No.' [RA DIAGCN] option can be used to remove the diagnostic code data.

If no problems are found, then the patient name and some case data are displayed. If the patient name and case data match the case for the deleted report you want to restore, then enter “YES” to the second prompt:

```
Are you sure you want to link this report back to the case? NO/
```

After a report is restored to its associated case, you can view statuses for previously deleted and restored activities from the Report Activity Log section of the 'View Exam by Case No.' option.

**Example of restoring a report to one case**

Restore a deleted report back to its case. This option relinks the report back to its associated case and repopulates the diagnostic code(s), staff, and resident data to the case.

```
Select Supervisor Menu Option: RESTORE a Deleted Report

This option is for restoring a deleted report.

Select Deleted Report to restore: ??

+ABDOMEN 2 VIEWS

Do you want to restore this deleted report? NO// YES
Modified 'Delete a Report' [RA DELETERPT] option

Prior to Patch RA*5*56, a deleted report is erased from the database. Patch RA*5*56 keeps the deleted report in the RAD/NUC MED REPORTS file (#74), but removes its association to an exam, so that it is no longer accessible via the Radiology application. The only way to view a deleted report is via VA Fileman.

Example
Delete a report shared by three cases (printset). The deletion session outwardly appears the same as before patch RA*5*56:

Select Supervisor Menu Option: DELETE A REPORT
Select Report Day-Case#: RADPATIENT,ONE RADPATIENT,ONE 6-1-27 00000000
1 RADPATIENT,ONE 090806-2152 RADPATIENT,ONE FOOT 2 VIEWS
