Documentation Conventions

This manual uses several methods to highlight different aspects of the material:

- Descriptive text is presented in a proportional font (as represented by this font).
- “Snapshots” of computer online displays (i.e., screen captures/dialogues) and computer source code, if any, are shown in a non-proportional font and enclosed within a box.
  - User’s responses to online prompts are bold typeface, underlined and highlighted in yellow (e.g., `<Enter>`).
  - Emphasis within a dialogue box is bold typeface, underlined and highlighted in blue (e.g., `STANDARD LISTENER: RUNNING`).
  - Some software code reserved/key words are **bold** typeface with alternate color font.
  - References to “<Enter>” within these snapshots indicate that the user should press the **Enter** key on the keyboard. Other special keys are represented within `< >` angle brackets. For example, pressing the **PF1** key can be represented as pressing `<PF1>`.
  - Author’s comments are displayed in italics or as “callout” boxes.

  **NOTE:** Callout boxes refer to labels or descriptions usually enclosed within a box, which point to specific areas of a displayed image.

- All uppercase is reserved for the representation of M code, variable names, or the formal name of options, field/file names, and security keys (e.g., DIEXTRACT).

  **NOTE:** Other software code (e.g., Delphi/Pascal and Java) variable names and file/folder names can be written in lower or mixed case (e.g., CamelCase).

Assumptions

This manual is written with the assumption that the reader is familiar with the following:

- VistA computing environment
- Radiology Information Manager functions
1 Radiology/Nuclear Medicine New Procedure Process Workflow

The process for adding a new procedure to the MRPF file is described below in the process flow diagram.

Figure 1: Radiology/Nuclear Medicine New Procedure Process Workflow

1.1 Master Radiology Procedure File (MRPF) Update Process – Adding new Radiology Procedures

Until all of the patches listed in the ‘Related Patches’ section are installed and the ‘Master Radiology Procedure file (MRPF) (#71.99)’ data content has been deployed to your facility, the ADPAC will not have the ability to interact with the MRPF and the following options should not be exercised.

The Master Radiology Procedure file (MRPF) (#71.99) will need to be populated by a terminology team under the direction of the VHA Radiology Program Office before deployment, and will be done independently of the development effort. It is recommended that the initial seeding include the most common procedures based on frequency of use as all undefined procedures will be pushed through the New Term Rapid Turnaround (NTRT) process.
1. Initial association of procedures in the RAD/NUC MED Procedure file (#71) to the Master Radiology Procedure file (MRPF) (#71.99) will need to be done by the Automated Data Processing Application Coordinator (ADPAC) managers at each facility.

2. Upon the entry of a new procedure an NTRT request will be automatically launched if an MRPF is not chosen for the given procedure CPT code. The ADPAC will be able to use the procedure in the interim while the NTRT team evaluates the new MRPF term that will be used for the procedure.

3. An NTRT Exception flag will be set and added to the given procedure in RAD/NUC MED Procedure File (#71) when a new procedure has been submitted to NTRT for processing.

4. The Creation Date of the new procedure shall be captured and added to the RAD/NUC MED Procedure File (#71) when a new procedure is added.

5. Upon completion of the NTRT evaluation for the given new procedure entered by ADPAC that requires an MRPF entry, this procedure will be added to the Master Radiology Procedure file (MRPF) (#71.99) and pushed out to the individual facilities.

6. If the search result identifies that an equivalent procedure already exists within the Master Radiology Procedure file (MRPF) (#71.99), the creation request will be rejected and a notification is displayed to the requesting ADPAC including the specific MRPF term and the procedure it is associated with.

7. On demand reports will be made available to VHA Radiology Program Office for providing beneficial views of procedures and MRPF associations.

8. The local site’s Read Mail (RML) mail group will be utilized for email notifications relating to NTRT and the creation of new procedures.

1.2 Related Patches

The related patches for this effort are as follows:

1.2.1 XU*8*666

The XU*8*666 patch is a required Kernel system patch. This patch is used by the STS group when deploying content for the MASTER RADIOLOGY PROCEDURE FILE (#71.99)

1.2.2 HDI*1.0*16

The HEALTH DATA & INFORMATICS (HDI) patch HDI*1.0*16 is a required HDI patch. This patch registers the MASTER RADIOLOGY PROCEDURE FILE (71.99) into the HDI system. The HDI system manages the VA Unique Identifier (VUID) numbering and is invoked during the STS content deployment.

1.2.3 RA*5*127

The RA*5*127 patch is a Radiology application patch. This patch contains Data Definition and routine updates needed for managing the association of in the RAD/NUC MED PROCEDURES file (# 71).
1.2.4 RA*5*134

The RA*5*134 is an INFORMATIONAL patch and contains information for after installing patch RA*5*127 and after the MASTER RADIOLOGY PROCEDURE file (#71.99) is deployed to your facility this associated follow on informational patch (RA*5.0*134) should be installed. The informational patch provides instructions for turning on the sending of NTRT messages to the NTRT group.

1.2.5 RA*5.0*140

The RA*5.0*140 is an INFORMATIONAL Patch and contains work around information for defects identified with the release of RA*5*127. If you are using RA*5*127 please review the patch description for RA*5.0*140. Once patch RA*5.0*138 is installed the defects will be resolved.

1.2.6 RA*5.0*138

The RA*5.0*138 patch resolves the deficiencies identified from patch RA*5*127. Please review the patch description for RA*5.0*138.

1.3 NTRT Process

The items below describe the NTRT process for newly added local facility procedures that were not associated with the MRPF when a procedure is created.

This process will be activated after the MASTER RADIOLOGY PROCEDURE FILE (#71.99) content has been deployed, and the sending of NTRT messages is activated.

NTRT messages will not be sent for procedures that were created prior to the MRPF content deployment and the sending of NTRT messages being activated.

An NTRT message will be sent if a procedure is not associated to the MRPF during the Enter / Edit of a RAD/NUC MED Procedure file (#71).

A mailman message is sent to the Radiology NTRT mail group.

- An STS analyst passes this information on to the Radiology SME group who will decide whether to:
  1. Add a new PROCEDURE NAME entry to the MRPF to the national radiology standard; or
  2. Suggest a mapping to an existing radiology procedure name entry in the MRPF.

- Once the SMEs have made a decision, an STS analyst will reply to the email address that was included in the auto email. The email address is the facilities RADNTRT mailman address. The email will describe the Radiology SME decision.

- If the SME’s decision was to suggest a mapping to an existing procedure, already part of the national standard, this is the end of the process. Otherwise

- If the SMEs authorize a new procedure, that work goes to an STS analyst to create the procedure in the STS database. The new procedure goes through several layers of validation, acquires SQA approval, and is deployed to all national production sites. This process takes between 1-2 weeks.
When a deployment is complete, STS sends a message to the NTRT_NOTIFICATION-L listserv.

The ADPAC for the facility shall subscribe to this list using the following web site: http://vaww.listserv.va.gov/scripts/wa.exe. (STS does not own this application; it's a VA service. The ADPAC will need to create an account using a username and password that does NOT synchronize with the ADPAC's VA network account.)

1.4 Radiology Menu Options and Descriptions

The Table 1. Radiology Supervisor Menu Options contain the Radiology Supervisor MENU option name, option letter, and a brief description of the option functions.

<table>
<thead>
<tr>
<th>Menu Option Name</th>
<th>Option Synonym</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Edit MRPF Association on One Procedure</td>
<td>AON</td>
<td>Edit MRPF Association on One Procedure.</td>
</tr>
<tr>
<td>Associate Local Procedures to MRPF</td>
<td>ASC</td>
<td>This option allows you to associate the local procedures to the Master Radiology Procedure File.</td>
</tr>
<tr>
<td>Enter/Edit LOINC for one procedure</td>
<td>LNC</td>
<td>Enter/Edit LOINC for one procedure</td>
</tr>
<tr>
<td>Print Active Procedures with Inactive CPT/LOINC</td>
<td>PIN</td>
<td>Report. This report option prints the active procedures with inactive CPT/LOINC codes</td>
</tr>
<tr>
<td>Master Procedure file seeding Complete</td>
<td>SEED</td>
<td>The populating of the Master Radiology Procedure (MRPF) file is called seeding. This option indicates if the seeding is complete. Note: Seeding pertains to the STS effort to send the MRPF to a facility. This is not associated to the matching process</td>
</tr>
</tbody>
</table>

IMPORTANT NOTE (1): The MASTER RADIOLOGY PROCEDURE FILE (#71.99), will not be populated prior to the application patch installation. Therefore, the functions related to menu option ‘ACS’ Associate Local Procedures to MRPF will not be functional until content of the MRPF is provided. In the future, the NTRT team will populate and deploy the MRPF file for all sites.

Prior to the population of the MRPF, creation of a new procedure in file (# 71) will generate a Read Mail (RML) mailman message to the Radiology ADPAC entering a new procedure. Because the functionality to forward that message on to the NTRT team has not yet been turned on, sites should ignore these messages.

IMPORTANT NOTE (2):

Upon Enter/Edit of a procedure, the lookup of a procedure with the capability of utilizing the CPT Code is no longer applicable. The ADPAC is required to enter the Procedure or partial Procedure name for this function.
2 ADPAC Procedures

- **AON** – Edit MRPF Association on One Procedure
- **ASC** – Associating a Local Procedures to MRPF File
- **LNC** – Enter/Edit LOINC for One Procedure
- **PIN** – Print Active Procedures with inactive CPT/LOINC
- **SEED** – Master Procedure File Seeding Complete

2.1 AON - Edit MRPF Association on One Procedure

1. Type **AON** – to select the Edit MRPF Association on One Procedure option; press <Enter>, as shown in Figure 2. Radiology Supervisor Menu – AON Option.

![Figure 2. Radiology Supervisor Menu – AON Option](image)

2. Enter the procedure to be edited, press <Enter>, as shown in Figure 3. OAN – Edit MRPF Association on One Procedure.

![Figure 3. AON - Edit MRPF Association on One Procedure](image)

3. Procedure CLT TEST4 is now associated to MRPF KNEE 3 VIEWS. If additional local procedures are to be mapped to MRPF, the User can continue to with the entry of procedures. If there are no more procedures to be mapped, User will PRESS ENTER.

2.2 ASC - Associating a Local Procedures to MRPF File

1. Type **ASC** to select the Supervisor Menu Option: ASC - Associate Local Procedures to MRPF, press <Enter>, as shown in Figure 4. Radiology Supervisor Menu – ASC Option.
Figure 4. Radiology Supervisor Menu – ASC Option

<p>| | |</p>
<table>

</tbody>
</table>

CTT&DM NDS VA Radiology ADPAC Addendum 7 May 2017
7. Select the number of the Master Procedure that best matches or enter a number followed by 'C' for the long name. e.g. 1C: 2 US SPLEEN/ECHO EXAM OF ABDOMEN, as shown in Figure 8. ASC - Associate Local Procedures to MRPF File – Step 4.

**Figure 8. ASC - Associate Local Procedures to MRPF File – Step 4**

The MRPF procedure US SPLEEN/ECHO EXAM OF ABDOMEN is already mapped to your procedure TRANS CATH PLACEMENT OF INTRAVASCULAR STENT, OPEN, INITIA

8. L. Press <RETURN> to continue or ^C to quit.: Continue/

9. The user should write down the procedure that was rejected (US SPLEEN/ECHO EXAM OF ABDOMEN) so they can use AON to match it.

A successful selection should be shown and also the display when the ‘C’ is in the selection (i.e. 2C)

### 2.3 LNC - Enter/Edit LOINC for One Procedure

1. Type LNC to select the Supervisor Menu Option: LNC Enter/Edit LOINC for one procedure, press <Enter>, as shown in Figure 9. Radiology Supervisor Menu – LNC Option.

**Figure 9. Radiology Supervisor Menu – LNC Option**

<table>
<thead>

</tr>
<tr>
<td>PIN</td>
<td>Print Active Procedures with inactive CPT/LOINC</td>
</tr>
<tr>
<td>SEED</td>
<td>Master Procedure file seeding Complete</td>
</tr>
</tbody>
</table>

2. Select the RAD/NUC Procedure Name, press <Enter>, as shown in **Figure 10. LNC - Enter/Edit LOINC for One Procedure**

**Note:** The entry of a LOINC code in file 71 will not update the associated MRPF entry. Only STS makes changes to the MRPF. Quality control is a local facility function.

**Figure 10. LNC - Enter/Edit LOINC for One Procedure**

Select RAD/NUC MED PROCEDURES NAME: CLT TEST4 (RAD Detailed) CPT:74000
LOINC: 123456-7
2.4 PIN - Print Active Procedures with inactive CPT/LOINC

1. Type PIN to select the Supervisor Menu Option: PIN Print Active Procedures with inactive CPT/LOINC, as shown in Figure 11. Radiology Supervisor Menu – PIN Option.

Figure 11. Radiology Supervisor Menu – PIN Option

</tbody>
</table>

3. Type <No> or <Yes> to indicate if seeding is complete, as shown in Figure 14. Radiology Seeding.

Figure 14. Radiology Seeding

The populating of the MASTER RADIOLOGY PROCEDURE file is called seeding.

SEEDING COMPLETE: NO// YES

4. When the seeding is complete the system will now begin to notify NTRT when a new procedure is entered.

3 On Demand Report

This report is intended for use by the program office. This on demand report allows for monitoring the individual site changes within file RAD/NUC MED PROCEDURE file (#71) per usable selectable date range. When inputting the date range, provide a date range that will included relevant new procedures made while testing this patch.

The report is requested by sending a Mailman message using the following menu path:

**Menu Path:** Mailman Menu → SML Send Mailman message

Include Subject: RADIOLOGY ON DEMAND
Include Line 1: BEGIN DATE:1/1/2016
Include Line 2: END DATE:1/18/2016 “(Use Current Date)”
Include Line 3: RESPOND TO:YOUR EMAIL ADDRESS (FORUM or VA OUTLOOK)

For Example:

RESPOND TO:Recipient@STLVETSDEV.FO-BAYPINES.MED.VA.GOV or Recipient@VA.GOV

SEND MAIL TO:@RADIOLOGY ON DEMAND@(Site location)
For Example:

For Example:

S.RADIOLOGY ON DEMAND@STLVETSDEV.FO-BAYPINES.MED.VA.GOV

View the requested report in your VA Outlook or in Mailman using the following path:

**Menu Path:** Mailman Menu → RML Read/Manage Messages → Input the number of the last message received in your inbox (The message may take some time to compile and populate into your Mailman inbox)

4 APPENDIX A – PATCH DESCRIPTIONS

4.1 Patch RA*5*138

VistA Patch Display

Run Date: APR 12, 2017
Designation: RA*5*138 TEST v1
Package: RADIOLOGY/NUCLEAR MEDICINE
Priority: MANDATORY
Version: 5
Status: UNDER DEVELOPMENT

Associated patches: (v)RA*5*127 <= must be installed BEFORE `RA*5*138'
Subject: NDS FOLLOWUP TO RA*5.0*127
Category: DATA DICTIONARY
ROUTINE
INPUT TEMPLATE

Description:

***********************************
NOTE ***********************************
** Please install/re-install released patch RA*5.0*127  **
** immediately prior to installing this patch to ensure  **
** all routine and data dictionary dependencies exist, and  **
** have not been backed out or modified.                **
********************************************************************

Patch RA*5.0*138 corrects defects introduced by patch RA*5.0*127 that adversely affect the Procedure Enter/Edit [RA PROCEDURE] option.

Issues with the Procedure Enter/Edit [RA PROCEDURE] option that are addressed by this patch:

* An undefined error, 
  `<UNDEFINED>DIRB+3^DIR *X`, may occur if a user attempts to add a duplicate procedure name surrounded by double quotes at the `RAD/NUC MED PROCEDURE NAME:` prompt.

* Missing question mark (`"?"` and `"??"`) lookup/help functionality at the `RAD/NUC MED PROCEDURE NAME:` prompt.
* Procedures can no longer be looked up by CPT code at the 'RAD/NUC MED PROCEDURE:' prompt.

* An undefined error, "<UNDEFINED>BR+1^DIE0 *RANEW", may occur when editing a procedure with a forward slash (/) in its name.

* When performing a procedure lookup at the 'RAD/NUC MED PROCEDURE NAME:' prompt, the TYPE OF IMAGING value no longer displays next to each entry.

* An undefined error, "<UNDEFINED>21+12^RAMAIN2 ^RAMIS(71,-1,0)"
may occur when a procedure lookup is done at the 'RAD/NUC MED PROCEDURE NAME:' prompt and two or more matching entries with the same name exist in the RAD/NUC MED PROCEDURE (#71) file.

* Incorrect entries are returned at the 'DESCENDENTS:' prompt when a user performs a lookup by entering a partial procedure name or question mark.

Defect Tracking & Overview:
========================================

Associated Defect(s):
---------------------
Defect #492278 - When trying to enter an additional duplicate procedure name to the RAD/NUC MED PROCEDURES (#71) file using quotes, an M error occurs.

Defect #492546 - An M error occurs during procedure lookup when procedure has two or more exact matches in the RAD/NUC MED PROCEDURES (#71) file.

Defects #492274, #492272, #492270 - When doing a partial name lookup at the DESCENDENTS prompt, entries matching the wrong Imaging Type are returned, resulting in an inability to add the correct Descendent to Parent procedure, and an Inactivation Date to incorrectly default into new Parent procedures.

Defect #486891 - As a result of Patch RA*5.0*127 Native Domain Standardization Radiology Reporting imaging locations no longer show next to procedures in procedure entry/edit.

Defect #493698 - An M error occurs when running the Invalid Procedure List.

Defect #492268 - When using the Procedures Enter/Edit [RA PROCEDURE] option, procedures lookup by CPT code is no longer available.

Defect 487927 - At the RAD/NUC MED PROCEDURES NAME prompt, entering question marks returns "?? Anwer must be 1-60 characters in length." In the past, entering question marks returned an alphabetical list of procedures.

Test Sites:
----------
TBD
Overview:
==================

Issue 1
==================

Defect #492278 - When trying to enter an additional duplicate procedure name to the RAD/NUC MED PROCEDURES (#71) file using quotes, an M error occurs.

Problem:
----------------

At the "RAD/NUC MED PROCEDURE NAME:" prompt in the Procedure Enter/Edit [RA PROCEDURE] option, entry of a procedure name that exactly or partially matches an existing entry in the RAD/NUC MED PROCEDURES (#71) file may no longer be added by surrounding the procedure name with double quotes. Instead of a prompt to add the new entry, the following M error occurs: "<UNDEFINED>DIRB+3^DIR "X".

Example:

Select Procedure Edit Menu Option: Procedure Enter/Edit

RAD/NUC MED PROCEDURES NAME: "MANDIBLE"

K:X[=][**(1($A(X)=45) X S:$D(X) X=+$UP^XLFSTR(X) Q:(X="^")!$D(DTOUT)
K:$L(X)>60!( $L(X)<3) X I $D(X) K:+$UNI30^RAUTL14(+$G(DA),X) X
<UNDEFINED>DIRB+3^DIR "X"

Resolution:
----------------

When entering a procedure name surrounded by quotes at the RAD/NUC MED PROCEDURE Procedure Enter/Edit [RA PROCEDURE] option, display a prompt asking the user if they wish the procedure name (inside the quotes) to be added as a new procedure.

Example:

Select Procedure Edit Menu Option: Procedure Enter/Edit
**RAD/NUC MED PROCEDURE NAME: "MANDIBLE"**

Are you adding MANDIBLE as a new Radiology Procedure? YES/

---

**Issue 2**

Defect #492546 - An M error occurs during procedure lookup when procedure has two or more exact matches in the RAD/NUC MED PROCEDURES (#71) file.

**Problem:**

At the "RAD/NUC MED PROCEDURE NAME:" prompt in the Procedure Enter/Edit [RA PROCEDURE] option, entry of a procedure name that exactly matches two or more existing entries in the RAD/NUC MED PROCEDURES (#71) file results in the following M error: "<UNDEFINED>21+12^RAMAIN2 ^RAMIS(71,-1,0)".

**Example:**

Select Procedure Edit Menu Option: Procedure Enter/Edit

**RAD/NUC MED PROCEDURES NAME: MRI**

. S RACPT=$P(^RAMIS(71,RADA,0),U,9)

^<UNDEFINED>21+12^RAMAIN2 ^RAMIS(71,-1,0)

**Resolution:**

At the "RAD/NUC MED PROCEDURE NAME:" prompt in the Procedure Enter/Edit [RA PROCEDURE] option, entry of a procedure name that exactly matches two or more existing entries in the RAD/NUC MED PROCEDURES (#71) file results in the display of a numbered, selectable list containing all exact and partial matches to the user input.

**Example:**

RAD/NUC MED PROCEDURE NAME: MRI
Issue 3

Defects #492274, #492272, #492270 - The "DESCENDENTS:" prompt does not allow eligible procedures to be entered, resulting in a Parent procedure with no Descendent.

Problem:

During the process of adding a new Parent procedure in the Procedure Enter/Edit [RA PROCEDURE] option, the "DESCENDENTS:" prompt searches for and returns descendents with an Imaging Type different than the Parent procedure, resulting in an inability to add the correct Descendent to the Parent procedure. An incorrect Inactivation Date is then automatically stored into the new Parent procedure, because the Parent has no descendent.

Example:

Select Procedure Edit Menu Option: Procedure Enter/Edit

RAD/NUC MED PROCEDURES NAME: NEWPAR1

Select one of the following:

1 New Procedure
2 None of the above

Enter a number from the list above: 1 New Procedure

TYPE OF PROCEDURE: P PARENT
NAME: NEWPARENT1//
TYPE OF IMAGING: MRI MAGNETIC RESONANCE IMAGING
TYPE OF PROCEDURE: PARENT/
SINGLE REPORT: ^DESCENDENTS
Select DESCENDENTS: MA
  1 MANDIBLE 4/OR/MORE VIEWS (RAD Detailed) CPT:70110
  2 MANDIBLE LESS THAN 4 VIEWS (RAD Detailed) CPT:70100
  3 MASTOIDS 3 OR MORE VIEWS/SIDE (RAD Detailed) CPT:70130
  4 MASTOIDS LESS THAN 3 VIEWS/SIDE (RAD Detailed) CPT:70120
CHOOSE 1-4:

Resolution:

During the process of adding a new Parent procedure in the Procedure Enter/Edit [RA PROCEDURE] option, the "DESCENDENTS:" prompt searches for and returns descendents with the same Imaging Type as the Parent procedure, resulting in the ability to add the correct Descendent to the Parent procedure, and no Inactivation Date automatically stored into the new Parent procedure, because the Parent has an appropriate descendent.

Example:
Select Procedure Edit Menu Option: Procedure Enter/Edit

RAD/NUC MED PROCEDURE NAME: NEWPAR1

Are you adding NEWPAR1 as a new Radiology Procedure? YES// YES
TYPE OF PROCEDURE: P PARENT
NAME: NEWPAR1/
TYPE OF IMAGING: MRI MAGNETIC RESONANCE IMAGING
TYPE OF PROCEDURE: PARENT/
SINGLE REPORT: ^DESCENDENTS
Select DESCENDENTS: MAG
  1 MAGNETIC IMAGE, LUMBAR SPINE (MRI Detailed) CPT:72148
  2 MAGNETIC IMAGE, ABDOMEN (MRI Detailed) CPT:74181
  3 MAGNETIC IMAGE, BRAIN (MRI Detailed) CPT:70551
  4 MAGNETIC IMAGE, BRAIN STEM (MRI Detailed) CPT:70551
  5 MAGNETIC IMAGE, LOWER EXTREMITY (MRI Detailed) CPT:73720
Press <Enter> to see more, "w" to exit this list, OR
Defect #486891 - As a result of Patch RA*5.0*127 Native Domain Standardization Radiology Reporting imaging locations no longer show next to procedures in procedure entry/edit.

Problem:

At the "RAD/NUC MED PROCEDURE NAME:" prompt in the Procedure Enter/Edit [RA PROCEDURE] option, entry of a procedure name partially matching more than one entry results in a numbered, selectable list that is missing the TYPE OF IMAGING value next to the procedure name.

Example:
Select Procedure Edit Menu Option: Procedure Enter/Edit

RAD/NUC MED PROCEDURES NAME: VENOGRAM REN

Select one of the following:

1. VENOGRAM RENAL BILAT SELECT /369
2. VENOGRAM RENAL BILAT SELECT CP/370
3. VENOGRAM RENAL BILAT SELECT S&I/1244
4. VENOGRAM RENAL UNILAT SELECT CP/368
5. VENOGRAM RENAL UNILAT SELECT S&I/1243
6. New Procedure
7. None of the above

Enter a number from the list above:

Resolution:

At the "RAD/NUC MED PROCEDURE NAME:" prompt in the Procedure Enter/Edit [RA PROCEDURE] option, entry of a procedure name partially matching more
than one entry results in a numbered, selectable list that displays the
TYPE OF IMAGING value next to the procedure name.

Example:
Select Procedure Edit Menu Option: Procedure Enter/Edit

RAD/NUC MED PROCEDURE NAME: VENOGRAM REN

1  VENOGRAM RENAL BILAT SELECT CP  (RAD  Inactive) CPT:75834
2  VENOGRAM RENAL BILAT SELECT S&I  (RAD  Inactive) CPT:75833
3  VENOGRAM RENAL UNILAT SELECT CP  (RAD  Inactive) CPT:75832
4  VENOGRAM RENAL UNILAT SELECT S&I  (RAD  Inactive) CPT:75831

CHOOSE 1-4:

Issue 5
==========================================================================
Defect #493698 - An M error occurs when running the Invalid Procedure
List.

Problem:
----------
Selection of a procedure name containing a forward slash ("/") at the
"RAD/NUC MED PROCEDURE NAME:" prompt in the Procedure Enter/Edit [RA
PROCEDURE] option later results in the undefined M error
"<UNDEFINED>BR+1^DIE0 "RANEW" after the "AMIS CODE:" prompt, before the
"CPT:" prompt.

Example:
Select Procedure Edit Menu Option: Procedure Enter/Edit

RAD/NUC MED PROCEDURES NAME: NEW W

Select one of the following:

1  NEW W/2+/VIEWS/2132
2  New Procedure
3  None of the above
Enter a number from the list above: 1 NEW W/2+/VIEWS/2132

TYPE OF PROCEDURE: D  DETAILED

Issue 6
==========================================================================
Defect #492268 - Procedure lookup by CPT code is no longer available.

Problem:
-----------
At the "RAD/NUC MED PROCEDURE NAME:" prompt in the Procedure Enter/Edit
[RA PROCEDURE] option, entry of a CPT code no longer returns any
results, even if there are procedures with matching CPT codes in the
RAD/NUC MED PROCEDURES (#71) file.
Example, lookup CPT 72159 in the Procedure Enter/Edit [RA PROCEDURE] option:

Select Procedure Edit Menu Option: Procedure Enter/Edit

RAD/NUC MED PROCEDURES NAME: 72159

Select one of the following:

1  New Procedure
2  None of the above

Enter a number from the list above: ^

Want to run a validity check on CPT and stop codes? NO// ^

Example, FileMan lookup of CPT code 72159:

VA FileMan 22.2

Select OPTION: INQUIRE TO FILE ENTRIES

Output from what File: RAD/NUC MED PROCEDURES// (2010 entries)
Select RAD/NUC MED PROCEDURES NAME: 72159  MR ANGIO SPINE
W/O&W/DYE

1 72159  MAGNETIC ANGIOGRAPHY, SPINAL CANAL (MRI Inactive) CPT:72159
2 72159  CERVICAL CANAL, W & W/O CONTRAST   (MRI Inactive) CPT:72159
3 72159  THORACIC CANAL, W & W/O CONTRAST   (MRI Inactive) CPT:72159
4 72159  LUMBAR CANAL, W & W/O CONTRAST     (MRI Inactive) CPT:72159
5 72159  MRA CERVICAL CANAL W/CONTENTS      (MRI Inactive) CPT:72159

Press <Enter> to see more, "^" to exit this list,  OR
CHOOSE 1-5:

Resolution:

-------------

At the "RAD/NUC MED PROCEDURE NAME:" prompt in the Procedure Enter/Edit
[RA PROCEDURE] option, entry of a CPT code returns all eligible procedures with matching CPT codes in the RAD/NUC MED PROCEDURES (#71) file.

Example, lookup CPT 71015 in the Procedure Enter/Edit [RA PROCEDURE] option:
Select Procedure Edit Menu Option: Procedure Enter/Edit
RAD/NUC MED PROCEDURE NAME: 71015 CHEST X-RAY STEREO FRONTAL
1  71015 CHEST STEREO PA (RAD Detailed) CPT:71015
2  71015 CHEST TUBE PLACEMENT (RAD Detailed) CPT:71015
CHOOSE 1-2:

Example, FileMan lookup of CPT 71015:
Select RAD/NUC MED PROCEDURES NAME: 71015 CHEST X-RAY STEREO FRONTAL
1  71015 CHEST STEREO PA (RAD Detailed) CPT:71015
2  71015 CHEST TUBE PLACEMENT (RAD Detailed) CPT:71015
CHOOSE 1-2:

Issue 7
=================================================================

Defect #487927 - Question mark lookup of procedures no longer works at Procedure Enter/Edit.

Problem:
-----------
At the "RAD/NUC MED PROCEDURE NAME:" prompt in the Procedure Enter/Edit [RA PROCEDURE] option, the entry of question marks returns the error message "?? Anwer must be 1-60 characters in length." In the past, entering question marks returned an alphabetical list of procedures.

Example:
Select Procedure Edit Menu Option: Procedure Enter/Edit

RAD/NUC MED PROCEDURES NAME: ?

Answer must be 1-60 characters in length. First 30 must be unique.
RAD/NUC MED PROCEDURES NAME: ??
Answer must be 1-60 characters in length. First 30 must be unique.

Resolution:
---------------
At the "RAD/NUC MED PROCEDURE NAME:" prompt in the Procedure Enter/Edit [RA PROCEDURE] option, the entry of question marks returns an alphabetical list of procedures in the RAD/NUC MED PROCEDURES (#71) file.

Example:
Select Procedure Edit Menu Option: Procedure Enter/Edit

RAD/NUC MED PROCEDURE NAME: ??

Answer with RAD/NUC MED PROCEDURES NAME, or CPT CODE, or CONTRAST MEDIA USED, or MRPF NAME, or ENTRY CREATION DATE, or SYNONYM
Do you want the entire 901-Entry RAD/NUC MED PROCEDURES List? Y (Yes)

Software and Documentation Retrieval Instructions:
----------------------------------------------------

Software being released as a host file and/or documentation describing the new functionality introduced by this patch are available.

The preferred method is to retrieve files from download.vista.med.va.gov. This transmits the files from the first available server. Sites may also elect to retrieve files directly from a specific server.

Sites may retrieve the software and/or documentation directly using Secure File Transfer Protocol (SFTP) from the ANONYMOUS.SOFTWARE directory at the following OI Field Offices:

Albany: fo-albany.med.va.gov
Hines: fo-hines.med.va.gov
Salt Lake City: fo-slc.med.va.gov

Documentation can also be found on the VA Software Documentation Library at: http://www4.va.gov/vdl/

Patch Installation:

Pre/Post Installation Overview:

There are no pre-installation actions.

Pre-Installation Instructions:

********************************************************************************
** Please install/re-install released patch RA*5.0*127 immediately prior to installing this patch to ensure all routine and data dictionary dependencies exist, and have not been backed out or modified. **
********************************************************************************
Prior to installing this patch, create a backup of both the routines and the updated Data Definition by creating a 'backup' patch containing all the routines and data definitions exported with this patch.

From the Kernel Installation and Distribution System Menu, select the Edit a Build option. When prompted for the BUILD NAME, enter backup patch name ZRA*5.0*138.

a. Add the following Data Definitions to the patch:
   1. At the File List page, enter the NEW RAD PROCEDURE WORKUP (#71.11) file, with the following settings:
      A. Send Full or Partial DD: PARTIAL
      B. Update the Data Dictionary: YES
      C. Send Security Code: YES
      D. Data Comes With File: NO
   2. At the Data Dictionary Number page, enter the following:
      A. The DESCENDENTS sub-file (#71.1105).

b. Add the following 7 routines to the patch:
   - RAMAIN2
   - RAMAIN4
   - RAMAIN5
   - RANPRO
   - RANPRO1
   - RANPRO4
   - RANPRO5

b. Add the following Input Templates to the Build Components section of the patch:
   1. NEW RAD PROCEDURE (#71.11)
   2. RA PROCEDURE EDIT (#71)

After creating the backup patch, printing the build using the Build File Print [XPD PRINT BUILD] in the Utilities [XPD UTILITY] menu should produce output similar to the following:
PACKAGE: ZRA*5.0*138     Apr 11, 2017 12:22 pm                PAGE 1
-------------------------------------------------------------------------------------------------------------------------------------
TYPE: SINGLE PACKAGE                      TRACK NATIONALLY: YES
NATIONAL PACKAGE:                        ALPHA/BETA TESTING: NO

DESCRIPTION:

After creating the backup patch build, transport the backup to all

This patch may be installed with users on the system although it is recommended that it be installed during non-peak hours to minimize potential disruption to users. This patch should take less than 5 minutes to install. It is not necessary to disable any options.

Installation Instructions:
--------------------------
1. Choose the PackMan message containing this patch.
2. Choose the INSTALL/CHECK MESSAGE PackMan option.
3. From the Kernel Installation and Distribution System Menu, select the Installation Menu. From this menu, you may elect to use the following options. When prompted for the INSTALL NAME enter the patch RA*5.0*138.
   a. Backup a Transport Global - This option will create a backup message of any routines exported with this patch. It will not backup any other changes such as DDs or templates.
   b. Compare Transport Global to Current System - This option will (allow you to view all changes that will be made when this patch is installed. It compares all components of this patch routines, DDs, templates, etc.).
   c. Verify Checksums in Transport Global - This option will allow you to ensure the integrity of the routines that are in the transport global.
4. From the Installation Menu, select the Install Package(s) option and choose the patch to install.
5. When prompted "Want KIDS to Rebuild Menu Trees Upon Completion of Install? YES/", respond NO.

6. When prompted "Want KIDS to INHIBIT LOGONs during the install? NO/", respond NO.

7. When prompted "Want to DISABLE Scheduled Options, Menu Options, and Protocols? NO/", respond NO.

8. If prompted 'Delay Install (Minutes): (0 - 60): 0/' respond 0.

Post-Installation Instructions:
=================================
N/A

Patch Backout Plan
==================

If patch RA*5.0*138 needs to backed out, please contact Health Product Support to back the patch out by re-installing the patch backup created prior to installation.

The rollback/back-out procedure for this patch requires installation of the backup patch ZRA*5.0*138 created during the pre-installation process.

Please contact Health Product Support for assistance if a determination is made that the patch should be backed out.

4.2 Patch RA*5*140

Subject: INFORMATIONAL PATCH FOR RA*5.0*127 SUPPLEMENT
Category: INFORMATIONAL
Description:

**** This Patch Only Applies to Facilities that have ****
**** Installed Patch RA*5.0*127. *****

This patch describes supplemental actions that the Radiology ADPAC's may take while using the Radiology Procedure Enter/Edit option post the RA*5.0*127 install.

With the release of RA*5.0*127 certain functionality in the selection and creation of Procedures was changed. This Informational Patch is noting the changes that have been reported and work arounds for those changes where appropriate.

These items are also addressed in the 'ADPAC Supplement RA 5.0' file name: ra_5_aa_s_1.PDF.

1. Use of double question marks ('??').
   The ADPAC will not have the ability to use ‘??’ for a Procedure List.
   The work around is: The ADPAC will need to enter at least the first 3 characters of the Procedure Name. This will list those Procedures whose name starts with the characters entered.

2. VistA error when selecting a direct match on a Procedure Name.
   This error is generated as the result of multiple procedures having the same name.
The work around is: If the ADPAC encounters this error when entering an exact match on the Procedure Name the ADPAC should re-enter the Procedure Name omitting the last few characters.

Example:
RAD NUC/MED PROCEDURES NAME: "WRIST 2 VIEWS"
    Enter as: "WRIST 2 VIEW"

3. Procedure Names that contain forward slashes ('/').
The ADPAC should refrain from creating Procedures with forward slashes ('/') in the Procedure name.
******************************************************
The ADPAC may not edit Procedures with a forward slash ('/') in the Procedure Name.
******************************************************

4. Radiology/Nuclear Medicine Code Change Process
******************************************************
Detailed instructions are in section 2 of the:
ADPAC Supplement RA 5.0 (ra_5_aa_s_1.pdf)
******************************************************
When the annual VAMC code changes are distributed to the VA facilities, the ADPAC will need to update each individual procedure impacted by the new CPT codes provided to the medical centers. After the NDS Radiology Patch RA*5*127 is installed the ADPAC will not have visibility to the Type of Imaging, Detailed nor the CPT Code. As a result of the new patch, the Radiology Procedure List display will have a different appearance. The ADPAC will only be able to look up Procedures based on a partial match To the Procedure Name. When working with the Procedure the ADPAC would include the Imaging Type in the Procedure Name.

Software and Documentation Retrieval Instructions:
-------------------------------------------------
Software being released as a host file and/or documentation describing the new functionality introduced by this patch are available.
The preferred method is to retrieve files from download.vista.med.va.gov. This transmits the files from the first available server. Sites may also elect to retrieve files directly from a specific server.

Sites may retrieve the software and/or documentation directly using Secure File Transfer Protocol (SFTP) from the ANONYMOUS.SOFTWARE directory at the following OI Field Offices:

Albany:     fo-albany.med.va.gov
Hines:      fo-hines.med.va.gov
Salt Lake City:     fo-slc.med.va.gov

Documentation can also be found on the VA Software Documentation Library at: http://www4.va.gov/vdl/

Title                            File Name                   FTP Mode
