1.0 Introduction

The Clinical Case Registries (CCR) software application collects data on the population of veterans with certain clinical conditions, namely Hepatitis C and Human Immunodeficiency Virus (HIV) infections at the local and national level as well as 34 local, generic registries.

Data from the registries is used for both clinical and administrative reporting on both a local and national level. Each facility can produce local reports (information related to patients seen in their system). Reports from the national database are used to monitor clinical and administrative trends, including issues related to patient safety, quality of care, and disease evolution across the national population of patients.

The software uses pre-defined selection rules that identify patients with possible Hepatitis C and/or HIV (such as a disease related *International Statistical Classification of Diseases and Related Health Problems*, ninth edition—commonly abbreviated as "ICD-9" or *International Statistical Classification of Diseases and Related Health Problems*, tenth edition—commonly abbreviated as "ICD-10"— code or a positive result on an antibody test) and adds them to the registry in a pending state. Pending patients are reviewed by the local registry coordinator and if the data confirm the diagnosis, the local registry coordinator confirms the patient in the registry.

Each night a background process transmits a set of predefined data via <u>Health Level 7 (HL7)</u> message to the national CCR database at the <u>Corporate Data Center Operations</u> (CDCO). Data from both the Hepatitis C and HIV registries, and the local registries, are aggregated in the same message. If there is more new data than is allowed by the registry parameter for a single CCR HL7 batch message (the current limit is 5 megabytes), the software will send several messages during a single night. The CCR software creates a limited set of database elements to be stored locally in the <u>Veterans Health Information Systems and Technology Architecture (VistA</u>) system, and focuses on assuring that the local listing is complete and accurate, that the desired data elements are extracted, and that data elements are appropriately transmitted to the national database.

The registries at each facility will store selected HIV and Hepatitis C data from 1985 to the present.

CCR provides these key features:

- Automates the development of a local list of patients with evidence of HIV or Hepatitis C infection.
- Automatically transmits patient data from the local registry lists to a national database.
- Provides robust reporting capabilities.

CCR also provides the following functions:

- Facilitates the tracking of patient outcomes relating to treatment.
- Identifies and tracks important trends in treatment response, adverse events, and time on therapy.
- Monitors quality of care using both process and patient outcome measures.

1.1 Purpose

These Release Notes cover the new features provided to CCR users in patch ROR*1.5*30.

1.2 Audience

This document targets users and administrators of the CCR product and applies primarily to the changes made between this newest release and previous release packages of the software.

2.0 What's New with ROR*1.5*30

Patch ROR*1.5*30 includes enhancement modifications to version 1.5 of the Clinical Case Registries (CCR) application that correct inherent shortcomings in the existing software and enhance other existing capabilities. ROR*1.5*30 contains the following enhancements (E), modifications (M) and fixes (F):

Table 1 - Changes for Patch 30

Table 1 - Changes for Fatch 30			
#	Description	Type	
1	Create two new Local Registries; Hypoparathyroidism and Idiopathic Pulmonary	E	
	Fibrosis. The new local registries will be defined using ICD-9 and ICD-10 codes.		
2	It was discovered that the Hepatitis A and Hepatitis B reports were not finding all	F	
	patients who have laboratory documented immunity. HCV and HIV labs have		
	always used case insensitive searches for positive LOINC results so results		
	entered in mixed case were missed. The code has been modified to ignore case		
	when searching for results.		
3	The caption on the Sex panel has been modified from Sex to Birth Sex. The	E	
	output for the report headers and report columns were modified appropriately.		
4	This patch adds the following new medication:	E	
	Hepatitis C registry: SOFOSBUVIR/VELPATASVIR		
	The new medication has been added to the ROR GENERIC DRUG (#799.51) file		
	and can now be selected on reports to provide information about the patients who		
	are taking the new medication.		
5	The warning on the Potential DAA Candidates report has been updated to remove	E	
	the reference to genotype 1, as the report no longer requires genotype 1.		
6	Additional CCR GUI updates were made to work towards becoming fully	Е	
	compliant with the Section 508 standards.		
7	The version of the CCR software is updated to 1.5.30	Е	

Table 2 – Global Updates for Patch ROR*1.5*30

File Name and Number	Update
DIALOG (#.84)	Entries modified:
	7981003.001 General Util. and Demographics (HTML) 7981003.002 General Util. and Demographics (CSV)

File Name and Number	Update
	7981997.001 Patient data templates (HTML) 7981997.002 Patient data templates (CSV) 7981999.001 Common XSL templates (HTML)
ROR REGISTRY PARAMETERS (#798.1)	New Entries VA IPF VA HYPOPARA
ROR SELECTION RULE (#798.2)	Entries New: VA IPF VA HYPOPARA
ROR ICD SEARCH (#798.5)	Entries New: VA IPF VA HYPOPARA
ROR XML ITEM(#799.31)	Entries new: BIRTHSEX BIRTHSEX_SUMMARY
ROR GENERIC DRUG (#799.51)	Entries new: Hepatitis C registry: SOFOSBUVIR/VELPATASVIR

3.0 Obtaining Software and Documentation

The CCR 1.5 software distributives and documentation files are available for downloading from the following Office of Information Field Offices (OIFO) [ANONYMOUS SOFTWARE] directories.

Table 3 - Software and Documentation Sources

140.00			
OIFO	FTP Address	Directory	
Albany	REDACTED	ANONYMOUS.SOFTWARE	
Hines	REDACTED	ANONYMOUS.SOFTWARE

Table 4 - Files Included in Distribution

File Name	Contents	Retrieval Format
ROR1_5P30GUI.ZIP	Zipped GUI distributive	BINARY
ROR1_5P30DOC1.ZIP	Zipped DOC distributive, which includes both .PDF and .DOCX formats:	BINARY
	► User Manual (ROR1_5_30UM)	
ROR1_5P30DOC2.ZIP	 ▶ Installation and Implementation Guide (ROR1_5_30IG) ▶ Technical Manual / Security Guide 	BINARY
	(ROR1_5_30TM)	
	► Release Notes (ROR1_5_30RN)	

Patch ROR*1.5*30 is available in the National Patch Module on FORUM¹ as a PackMan message.

¹ FORUM is the VA's national-scale email system. FORUM uses the VistA mail software and provides an excellent interface for threaded messages that can take the form on ongoing discussions. The national patch module is a VistA application that helps developers to manage the numbering, inventory, and release of patches. Patches are developed in response to request submissions and an error reporting request system known as National Online Information Sharing. A process called the Kernel Installation Distribution System (KIDS) is used to roll up patches into text messages that can be sent to sites a long with installation instructions. The patch builds are sent as text messages via email, and the recipient (*e.g.*, a site a dministrator) can run a PackMan function to unpack the KIDS build and install the selected routines.

See http://citeseerx.ist.psu.edu/viewdoc/download?doi=10.1.1.100.5551&rep=rep1&type=pdf

4.0 VistA Documentation on the Intranet

Documentation for this product, including all of the software manuals, is available in the VistA Document Library (VDL). The Clinical Case Registries documentation may be found at http://www.va.gov/vdl/application.asp?appid=126.

For additional information about the CCR, access the CCR Home Page at the following address: REDACTED.

Training links and information are also available at **REDACTED**.

5.0 Specific Instructions

See the CCR Installation and Implementation Guide for installation instructions.

6.0 Matching GUI Version to Patch

warning If the **GUI** and **VistA** software versions do not match, users may encounter problems with the application. For example, if the site has installed Patch ROR*1.5*30, users' **GUI** installations should also be at Patch level 30. Users can determine the **GUI** version by using the Help | About CCR menu option.

Figure 1 - Help | About Pane

This menu option displays the About Clinical Case Registries screen. It shows basic information about the current file version including the release date, patch number, similar to the screen shown here where the Clinical Case Registries software was developed and the software compile date. Click [OK] or press the **Esc** > key to close the pane.

Since CCR*1.5*10, this window meets current VA GUI Standards and Conventions requirements.

Users may download the latest GUI software as outlined in 3.0 above.
