# 1.0 Introduction

The Clinical Case Registries (CCR) software application collects data on the population of veterans with certain clinical conditions, namely Hepatitis C and Human Immunodeficiency Virus (HIV) infections at the local and national level as well as 51 local, generic registries.

Data from the registries is used for both clinical and administrative reporting on both a local and national level. Each facility can produce local reports (information related to patients seen in their system). Reports from the national database are used to monitor clinical and administrative trends, including issues related to patient safety, quality of care, and disease evolution across the national population of patients.

The software uses pre-defined selection rules that identify patients with possible Hepatitis C and/or HIV (such as a disease related *International Statistical Classification of Diseases and Related Health Problems*, ninth edition—commonly abbreviated as “ICD-9” or *International Statistical Classification of Diseases and Related Health Problems*, tenth edition—commonly abbreviated as “ICD-10”—code or a positive result on an antibody test).

Each night a background process transmits a set of predefined data via [Health Level 7 \(HL7\)](#) message to the national CCR database at the [Corporate Data Center Operations](#) (CDCO). Data from both the Hepatitis C and HIV registries, and the local registries, are aggregated in the same message. If there is more new data than is allowed by the registry parameter for a single CCRHL7 batch message (the current limit is 5 megabytes), the software will send several messages during a single night. The CCR software creates a limited set of database elements to be stored locally in the [Veterans Health Information Systems and Technology Architecture \(VistA\)](#) system, and focuses on assuring that the local listing is complete and accurate, that the desired data elements are extracted, and that data elements are appropriately transmitted to the national database.

The registries at each facility will store selected HIV and Hepatitis C data from 1985 to the present.

CCR provides these key features:

- Automates the development of a local list of patients with evidence of HIV or Hepatitis C infection.
- Automatically transmits patient data from the local registry lists to a national database.
- Provides robust reporting capabilities.

CCR also provides the following functions:

- Facilitates the tracking of patient outcomes relating to treatment.
- Identifies and tracks important trends in treatment response, adverse events, and time on therapy.
- Monitors quality of care using both process and patient outcome measures.

## 1.1 Purpose

These Release Notes cover the new features provided to Clinical Case Registries (CCR) users in patch ROR\*1.5\*38.

## 1.2 Audience

This document targets users and administrators of the Clinical Case Registries (CCR) product and applies primarily to the changes made between this newest release and previous release packages of the software.

## 2.0 What's New with ROR\*1.5\*38

Patch ROR\*1.5\*38 includes enhancement modifications to version 1.5 of the Clinical Case Registries (CCR) application that correct inherent shortcomings in the existing software and enhance other existing capabilities. ROR\*1.5\*38 contains the following enhancements (E), modifications (M) and fixes (F):

**Table 1 – Changes for Patch 38**

#	Description	Type
1	The Clinical Case Registries (CCR) identifies patients with positive antibody results for inclusion in the HIV and HCV registries. This patch fixes an error where patients with laboratory results that are not positive are incorrectly categorized as positive and are incorrectly included in the HIV and HCV registries. Code changes have been made to the RORUPD04 and RORX024A routines to rectify this issue.	F
2	The version of the CCR software is updated to 1.5.38	E

**Table 2 – Global Updates for Patch ROR\*1.5\*38**

File Name and Number	Update
	No global updates in this release.

## 3.0 Obtaining Software and Documentation

The CCR 1.5 software distributives and documentation files are available for downloading from the following locations.

**Table 3 – Software and Documentation Sources**

Name	Address	Directory
VistA downloads	REDACTED	SOFTWARE

**Table 4 – Files Included in Distribution**

File Name	Contents	Retrieval Format
ROR1_5P38GUI.ZIP	Zipped GUI distributive	BINARY
ROR1_5P38DOC1.ZIP	Zipped DOC distributive, which includes both .PDF and .DOCX formats: <ul style="list-style-type: none"><li>▶ User Manual (ROR1_5_38UM)</li></ul>	BINARY
ROR1_5P38DOC2.ZIP	<ul style="list-style-type: none"><li>▶ Installation and Implementation Guide (ROR1_5_38IG)</li><li>▶ Technical Manual / Security Guide (ROR1_5_38TM)</li><li>▶ Release Notes (ROR1_5_38RN)</li></ul>	BINARY

Patch ROR\*1.5\*38 is available in the National Patch Module on FORUM<sup>1</sup> as a PackMan message.

## 4.0 VistA Documentation on the Intranet

Documentation for this product, including all of the software manuals, is available in the VistA Document Library (VDL). The Clinical Case Registries documentation may be found at <http://www.va.gov/vdl/application.asp?appid=126>.

For additional information about the CCR, access the CCR Home Page at the following address: [REDACTED](#).

## 5.0 Specific Instructions

(See the *CCR Installation and Implementation Guide* for installation instructions.)

---

<sup>1</sup> FORUM is the VA's national-scale email system. FORUM uses the VistA mail software and provides an excellent interface for threaded messages that can take the form on ongoing discussions. The national patch module is a VistA application that helps developers to manage the numbering, inventory, and release of patches. Patches are developed in response to request submissions and an error reporting request system known as National Online Information Sharing. A process called the Kernel Installation Distribution System (KIDS) is used to roll up patches into text messages that can be sent to sites along with installation instructions. The patch builds are sent as text messages via email, and the recipient (*e.g.*, a site administrator) can run a PackMan function to unpack the KIDS build and install the selected routines.

See <http://citeseerx.ist.psu.edu/viewdoc/download?doi=10.1.1.100.5551&rep=rep1&type=pdf>

## 6.0 Matching GUI Version to Patch

**WARNING** If the **GUI** and **Vista** software versions do not match, users may encounter problems with the application. For example, if the site has installed Patch ROR\*1.5\*38, users' **GUI** installations should also be at Patch level 38. Users can determine the **GUI** version by using the Help | About CCR menu option.

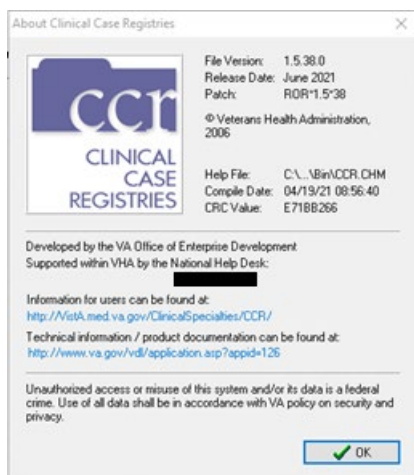

Figure 1 – Help | About Pane

This menu option displays the **About Clinical Case Registries** screen. It shows basic information about the current file version including the release date, patch number, similar to the screen shown here where the Clinical Case Registries software was developed and the software compile date. Click **[OK]** or press the **< Esc >** key to close the pane.

Since CCR\*1.5\*10, this window meets current VA GUI Standards and Conventions requirements.

Users may download the latest GUI software as outlined in [3.0](#) above.
