Artifact Rationale

A Technical Manual is a required end user document for all Office of Information & Technology (OIT) software releases. The intended audience for this document is local IT support, management, and development personnel for nationally released software. It provides sufficient technical information about the software for developers and technical personnel to operate and maintain the software with only minimal assistance from Product Support staff.

CLIN Satisfaction Statement

This document is submitted in satisfaction of CLIN 8001AY and CLIN 8001CS.

1. Overview

This manual provides Department of Veterans Affairs (VA) site managers with a technical description of the Veterans Health Information System and Technology Architecture (VistA) Scheduling (VS) Graphical User Interface (GUI) routines, files, menus, cross references, globals, and other necessary information required to effectively manage the system.

The VistA Scheduling GUI module has the following features:

- Microsoft (MS) Windows user interface
- Graphical patient, clinic, provider, and resource scheduling
- Tight linkage to VistA patient and clinic data
- Graphical resource and clinic availability scheduling
- Printing and What You See Is What You Get (WYSIWYG) print preview of clinic schedules
- Graphical patient check-in links to VistA/Patient Care Components Plus (PCC+) check-in
- Reschedule and manipulate appointments using standard Windows cut/paste metaphors utilities procedures
- Schedule multiple appointments during a time block
- Store and retrieve clinic availability patterns
- Simultaneously view schedules for multiple clinics
- Resource Management Reporting for viewing metrics related clinic appointments and patient encounters in VistA

1.1. Security

The VistA Scheduling GUI uses VistA security keys to limit users’ ability to change system setup parameters and patient information. In other words, not all VistA Scheduling GUI options are available to all users. Contact the Site Administrator to determine or change security keys.

1.2. Rules of Behavior

All VistA users are required to observe VA rules of behavior regarding patient privacy and the security of both patient information, and VA computers and networks.

1.3. Orientation

The VistA Scheduling GUI module has no VistA server menu options. The only VistA server preparation specifically required to run VistA Scheduling GUI v1.6 is to install Patch SD*5.3*686 and use the Kernel Installation and Distribution System (KIDS) module to assign the appropriate security keys to users. The rest of the module runs on the PC client and can be managed from there. The executable runs on the PC client whether it is obtained from a local hard drive or downloaded from a central server.

Interaction of VistA Scheduling GUI with the VistA system is accomplished entirely via the use of Remote Procedure Calls (RPCs).
2. GUI Implementation and Maintenance

2.1. System Requirements

- **Client Operation**
  - Windows 7 or later
  - .NET version 4.0 or higher
  - Four (4) gigabyte (GB) random access memory (RAM)

- **Client Development/Maintenance**
  - Windows 7 or later
  - Visual Studio 2017
  - Rational Source Repository
  - Rational Source Control Plug-In
  - VistA instance with RPC Broker for unit testing
  - VistA Scheduling Patch SD*5.3*686

2.2. Overview

The main screen of the VistA Scheduling GUI is shown in Figure 1. After logon, the main screen is displayed. A call to SDECIDX GETREC with subsequent calls to SDEC ARGET, SDEC WLGET, SDEC RECGET and SDEC REQGET RPCs is made to populate the Request Management (RM) Grid.

![Figure 1: VistA Scheduling GUI Main Screen](image-url)
The principal sections of this screen are as follows (letters refer to the markings in the figure):

A. Ribbon Bar Patient Information

This part of the main GUI screen is used to search for and select a patient and to display information about the patient. The SEARCH button invokes the SDEC PTLOOKRS RPC to match patients in the VistA PATIENT File (#2) with the input entered into the associated search box. A list of matching names is displayed in a result list beneath the search box. Clicking on a listed patient displays demographic data (reused from the SDEC PTLOOKRS RPC call previously made) in the fields shown in the Ribbon Bar. Once a patient is selected, the New Req. link in the Ribbon Bar Actions Menu is also activated.

If a patient is selected from the results list, the Clear button removes them from the search box results, deselects the patient, and refreshes the Request Management (RM) Grid.

When selecting an Appointment Request in the RM Grid or an Appointment from a Calendar Schedule SDEC GETREGA is called to populate the Patient Information.

NOTE: Some data returned by RPC calls is cached by the GUI for a minimum of 5 minutes or until the Refresh button in the Ribbon Bar Tools Menu is clicked.

B. Ribbon Bar Actions Menu

This pane in the Ribbon Bar contains a link to begin appointment request creation (see Appointment Request Type Dialog below).

C. Ribbon Bar Arrangements Menu

This pane in the Ribbon Bar is now inoperative. Business Owners from Veterans Health Administration (VHA) advised that this pane can be removed from the Ribbon Bar.

D. Pending Appointments

This pane contains a sortable list of pending appointments for a patient. RPC SDEC FAPPTGET is called with a date range of 365 days in the past to 1000 days in the future to populate the list. The data is organized in three columns (date, clinic, appointment status), and can be sorted in ascending or descending order or filtered by the user (see Pending Appointments Column Filters below).

Clicking on an appointment calls a series of RPCs including but not limited to SDEC RESOURCE, SDEC CLINSET, SDEC APPSLOTS and SDEC CRSCHED to populate the Calendar Schedule. Right-clicking in this pane, except in the header, produces an appointment context menu (see Print Pending Appointments below) that can be used to display additional appointment information or that can be used to print pending appointments.

E. Patient Special Needs/Preferences Window

This pane displays a patient’s special needs or preferences. The data comes from the SDEC PTLOOKRS or SDEC GETREGA RPCs that are called when the patient is selected (see Ribbon Bar Patient Information). The special needs or preferences can be modified by right-clicking in the Ribbon Bar Patient Information and using the Patient Information Dialog.

F. Ribbon Bar Tools Menu
This pane has four selection options: Print, Export, Refresh, and Query. Print (Figure 2) and Export allow the user to output the pending request list (stored in the RM Grid) as either a printout or a spreadsheet. Refresh and Clear both remove the patient from context, and reloads the pending request list with all requests for the facility.

Query (Figure 3) allows the user to select specific data filters to use to repopulate the entries on the pending request list.
G. User Preferences

In this window, the user specifies the criteria applied to selecting appointment requests to be displayed in the pending request list (RM Grid). User settings are obtained from VistA by calling the SDECRMGP GETRMGUP RPC. If the user checks the save as default box, the changed criteria are stored back in VistA via the SDECRMGP PUTRMGUP RPC.

![Figure 4: User Preferences](image)

H. Request Management (RM) Grid

Upon initial logon, the RM Grid displays the facility’s pending request list or a pending request list based on the user’s previously saved user preferences. If a patient has been selected (Ribbon Bar Patient Information), the patient’s outstanding pending appointment requests are displayed. Data for either version of this list are obtained from VistA via a call to SDECIDX GETREC with subsequent calls to SDEC ARGET, SDEC WLGET, SDEC RECGET and SDEC REQGET RPCs. Right-clicking on an appointment request opens an option menu (Figure 5) which allows the user to open selected appointment request context windows (Figure 7) or to access Patient Contacts.
I. Calendar Navigation Pane

This pane allows the user to switch dates in the Calendar Schedule when a clinic, provider or clinic group has been selected in the Clinic/Provider Navigation Pane. Clicking on a date invokes the SDEC APPSLOTS, SDEC CRSCHED, and other RPCs to populate the calendar.

J. Clinic/Provider Navigation Pane

This pane allows the user to select a specific clinic, provider, or clinic group for display in the Calendar Schedule. The GUI calls a VistA RPC (SDEC RESOURCE with different input parameters for clinics and providers, or SDEC RESGPUSR for clinic groups) when the user pauses typing and at least 2 characters of the clinic, provider, or clinic group name has been entered.

K. Time Slot Viewer

This pane shows characteristics of the time slot selected in the Calendar Schedule. It displays the date and time of the slot, along with the number of appointments permitted to be scheduled in the slot. The data displayed comes from the same RPC calls used to populate the Calendar Schedule.

L. Calendar Schedule

This section of the main screen displays a calendar of appointments scheduled for the selected clinic, provider, or clinic group (see Clinic/Provider Navigation Pane). The data shown is obtained via calls to the VistA RPCs SDEC APPSLOTS and SDEC CRSCHED.

M. Title Bar

Right-clicking on the Title Bar at the top of the main screen opens the standard Windows option menu (e.g., minimize, close) that includes a link to the Trace Log.
N. Option Tabs

There are three option tabs near the top of the main screen. The Tasks tab encompasses what is described as the main screen. The other tabs are the System and Reports tabs.

In addition to the main screen, the GUI employs many popup windows to fulfill its scheduling duties. These additional windows are:

Appointment Request Type Dialog

The Appointment Request Type popup window (Figure 6) appears when a user clicks New Req. in the Ribbon Bar Actions Menu. The link is disabled unless a patient has been selected in the Ribbon Bar Patient Information.

![Figure 6: Appointment Request Type](image)

Appointment Request Dialog

The Appointment Request popup window (Figure 7) appears when the user clicks OK in the Appointment Request Type Dialog. The patient’s demographic information is displayed from the cached RPC data (SDEC PTLOOKRS). Clinic lookup is done by a call to the SDEC RESOURCE and SDEC CLINSET RPCs. If PROVIDER is selected in the Entered By dropdown box, the name entered in the Provider box is matched against VistA with a call to the SDEC RESOURCE RPC. Clicking OK files the appointment request in VistA through a call to the SDEC ARSET RPC. The user may also specify a Multiple Return to Clinic (MRTC) Request by checking the Multiple Request Required checkbox, then specifying the number of appointments and duration between appointments. Doing so will create a Parent MRTC Request.
Appointment Dialog

The Appointment popup window (Figure 8) appears when the user selects a calendar timeslot for an appointment request, and right-clicks and selects Add Appointment or Create Walk-in Appointment. The data to populate the window comes from cached SDEC PTLOOKRS RPC data (patient demographics) and from the appointment request (appointment date and clinic). Appointment conflicts are obtained by a call to the SDEC FAPPTGET RPC, targeting only the day of the new appointment. If the user clicks on the Start Time entry box (Figure 9), the popup is populated with timeslot start times calculated from clinic setup data obtained via the SDEC APPSLOTS RPC call. The “standard” start time for a clinic is 0800, but this can vary if a clinic schedule is set up in VistA using the SDBUILD option.
Figure 8: New Appointment Popup
Patient Contacts

The Patient Contacts window (Figure 10) appears through interaction on the RM Grid. The data displayed in this popup comes from a call to the SDEC CONTACT DISPLAY and SDEC CONTACT MULTI-DISPLAY RPCs. Data entered in the New Contact Attempt section is stored in VistA via a call to the SDEC CONTACT UPDATE RPC.
Disabilities Dialog/Patient’s Eligibility

This popup window (Figure 7) appears to the left of the Appointment Request Dialog or the Appointment Dialog. It displays data obtained from VistA via an SDECDIS DISABIL RPC call.

Similar Patient Dialog

The Similar Names dialog displays when the system finds patients with a similar name and the same last 4 digits of the Social Security Number. The user is able to select a patient from the list and continue, or cancel and return to searching for patients. In addition to the RPC calls used in Ribbon Bar Patient Information, this dialog also calls DG CHK BS5 XREF ARRAY.

Patient Information Dialog

This popup (Figure 11) appears when the user right-clicks in the Ribbon Bar Patient Information pane or presses CTRL+P. The data displayed comes from cached data obtained from the SDEC PTLOOKRS RPC.
Figure 11: Patient Information

Patient Inquiry Detail

The Patient Inquiry Detail popup (Figure 12) appears if the user clicks anywhere in the Ribbon Bar Patient Information. The data displayed comes from a call to the SDEC PTINQ RPC.
Patient Flags Dialog

The Patient Flags dialog (Figure 13) displays important Patient Flags and Prompts. The information displayed in the Patient Flags dialog is retrieved by a call to the ORPRF GETFLF RPC call.

Sensitive Patient Dialog
The purpose of the Sensitive Patient Dialog (Figure 14) is to notify the user that the patient he/she is about to access has characteristics different from the norm. When search results include a sensitive patient, their date of birth and Social Security Number are masked, and the *SENSITIVE* designation can be seen in the results list. The user can choose to continue to see the patient’s information or not select the patient.

There are three different types of sensitive patient dialogs that vary by background color and the effect on the user. The GUI obtains sensitive patient data and its severity from the DG SENSITIVE RECORD ACCESS RPC.

A white background is the lowest level of sensitivity. A user who clicks through (continue button) a sensitive patient warning with a white background is not otherwise encumbered. A window with a yellow background notifies the user that if they access the patient, the Information Security Officer (ISO) will be notified (via the DG SENSITIVE RECORD BULLETIN RPC), and they must justify access. A window with a red background prevents the user from accessing the patient’s record. The programmed STOP prevents the user from, for example, accessing their own record.

![Figure 14: Sensitive Patient Dialog](image)

**Check-in Dialog**

This popup window (Figure 15) appears when the user right-clicks on a current or past appointment on the Calendar Schedule and selects Check In Patient. The data entered in the window is passed back to VistA via a call to the SDEC CHECKIN RPC.
Check-Out Dialog

The Appointment Check-Out Dialog (Figure 16) appears when the user right-clicks on a current or past appointment on the Calendar Schedule, Pending Appointment List, or the Timeslot Viewer and selects Check Out Patient. The data entered in the window is passed back to VistA via a call to the SDEC CHECKOUT RPC.
Cancel Appointment Dialog

The Cancel Appointment Dialog (Figure 17) appears when the user right-clicks on an appointment on the Calendar Schedule and selects Cancel Appointment, or right-clicks on an appointment in Pending Appointments. The data entered in the window is passed back to VistA via a call to the SDECCAP CANRPC.

⚠️ **NOTE:** The same functionality accessible via the Pending Appointments list is now available in the Timeslot Viewer.
MRTC Cancel Appointment Dialog

The MRTC (Multiple Return to Clinic, or Multi-Book) Cancel dialog (Figure 18) is used to cancel MRTC appointments, and is populated when right-clicking an appointment in the Calendar section, Pending Appointments list, or Timeslot Viewer. The user has options to cancel the single selected appointment or all appointments associated with the MRTC Parent Request, as long as the appointment has not been completed. The user may also close the Appointment Request associated with the current appointment or close all child appointment requests, as well as the Parent MRTC Appointment Request.
No-Show Dialog

The popup window in Figure 19 appears when the user right-clicks on a current or past appointment in the Calendar Schedule, Pending Appointments List, or Timeslot Viewer and selects **Mark as No Show**. The data entered in the popup is passed back to VistA via a call to the SDEC NOSHOW RPC.

**NOTE:** The Mark as No Show popup includes an outdated instruction, “To print a no show letter click the Print Letter button below.” This instruction will be removed in an upcoming release.
MRTC Find Appointment Dialog

The MRTC Find Appointment dialog (Figure 20) opens after a user selects a Parent MRTC Request from the RM Grid, or immediately after completing an appointment request that selected *Multiple Appointments Required*. This dialog manages the creation of the Child MRTC Appointment Requests and the booking of the associated Child MRTC appointments. Additionally, during the booking process the MRTC Booking Status dialog will open to display the status of the child MRTC Requests and Appointments. The whole MRTC process uses various RPC calls that are referenced in the FindAppt module.
Expanded Entry Dialog

The Expanded Entry popup (Figure 21) appears when the user right-clicks on an appointment in the Calendar Schedule and selects Expand Entry, or right-clicks on an appointment in either the Pending Appointment List or Timeslot Viewer and selects Expand Entry. The data displayed in the window is obtained from VistA via calls to SDEC EP CLASSIFICATION, SDEC EP CPT, SDEC EP DEMOGRAPHICS, SDEC EP DIAGNOSIS, SDEC EP EVENT LOG, SDEC EP PROVIDER, SDEC EP PT INFO, SDEC EP STOP CODE, and SDEC EP WAIT TIME RPCs.
Print Pending Appointments

A user can print a patient’s pending appointments by right-clicking anywhere (except the header row) in the Pending Appointments pane and selecting Print Pending (Figure 22). A standard Windows print dialog then appears, and the list is printed (Figure 23).
Pending Appointments Column Filters

Users can filter pending appointments (Figure 24) by clicking on any column in Pending Appointments. Filtering is native to the Telerik control where pending appointments are displayed.

Figure 23: Pending Appointments Printout

Figure 24: Pending Appointments Date Filter
System Tab

Availability Dialog

The Availability window (Figure 25 and Figure 26) shows data for a clinic that is obtained via a call to the SDEC RESOURCE and SDEC APPSLOTS RPC.

Figure 25: Clinic Availability Selection Dialog
Scheduling Management Dialog

Scheduling Management is used to control access to Prohibited Clinics (Figure 27) and to Clinic Groups (Figure 28).

The RPCs used to maintain prohibited clinics are:

- SDEC SCHUSR: User list
- SDEC RESOURCE: Prohibited clinic search
- SDEC RESUSER: Privileged users list
- SDECLOC UPDPRIV: Add or remove user

The RPCs used to maintain clinic groups are:

- SDEC RESOURCE: List of resource selections
- SDEC RESGRPUS: Clinic group list, resource list, resources in clinic group list
- SDEC ADDRIG: Add/edit clinic group
- SDEC DELRESGP: Delete clinic group
- SDEC ADDRGI: Add resource to clinic group
- SDEC DELRGI: Remove resource from clinic group

**NOTE:** The Manage Clinic Groups feature is not visible unless the user is configured as a Manager.
Reports Tab

There are two reports available under the Reports tab. The first shows activity by schedulers (Figure 29). It is produced via calls to the SDEC SUMMGET2 RPC. The second displays information about clinics (Figure 30). It is produced via calls to the SDEC REP1GET RPC.
Trace Log

The trace log (Figure 31) stores RPC calls and the data returned, error information, and other logged information. See additional information in VistA Scheduling GUI Trace Log. Right-
clicking the Title Bar at the top of the main screen opens the standard Windows option menu (e.g., minimize, close) that includes a link to the Trace Log.

**Figure 31: Trace Log**

---

**Logon Screen**

The logon screen appears when the GUI is first opened (Figure 32). Users can log on using their Personal Identification Verification (PIV) card and Personal Identification Number (PIN), or with their VistA Access and Verify codes. PIV and PIN are authenticated via a call to the XUS.
ESSO VALIDATE RPC, while Access and Verify codes are authenticated via a call to the XUS SIGNON SETUP and XUS AV CODE RPCs.

Figure 32: VSE GUI Logon

Veteran Appointment Request (VAR)/VA Online Scheduling (VAOS) Button
The code for this option is under development.

2.3. List of GUI Modules and Components Affected
The following subsections describe the primary groupings of the VS GUI source code in Visual Studio Solution Explorer.

2.3.1. Common
The Common section contains infrastructure related code and structures. Global variables associated with the Keys class and global methods are defined here. Additional items in the Common section include controls, extension methods, event aggregators, and data models/structures. Keys contains references to almost all VistA RPCs called to extract and update data in the database. The Trace Log class is common to the application and stores all RPC calls, request data, and responses. PIV authentication uses the code stored under Single Sign-on (SSOi). The Factories subsection is not widely used by the VS GUI.

A new RPC used by the application must be defined in the RpcCalls sub-class of the Keys static class. A new method would be added to Modules.DataAccess\Services\DataAccessService.cs as well as to the IDataAccessService interface in the Interfaces subsection. CLaunchWindow is a static class with a Launch method that can be called to display a UserControl as a popup or dialog window.
The ExtensionMethods subsection is where a new method is added if the method is used by more than one module, and if it extends a specific class.

2.3.1.1. User Controls

2.3.1.1.1. IncrementalSearchComboBox

The “IncrementalSearchComboBox” (IncrementalSearchComboBox.xaml), as with other custom WPF user controls, have their source code files organized under the \Scheduling - VistA Scheduling GUI\ClinSchd\Desktop\ClinSchd.Infrastructure\Controls\ folder and compile under the ClinSchd.Infrastructure.Controls namespace into the ClinSchd.Infrastructure.dll assembly.

The IncrementalSearchComboBox user control wraps a Telerik RadComboBox setting a certain number of default properties, giving it a default behavior and exposing other important properties required by consumers as Dependency Properties, events, and delegates. Internally, the user control has a timer that is used to delay the delegate call to handle searching via a DataAccessService RPC call method that provides a brief pause to capture changing user input search text that minimizes the RPC call frequency to optimize performance and enhance user experience. The user control can be used in an MVVM manner (recommended) or manipulating data directly via the Items property (not recommended, except in backward compatibility code refactoring areas).

Internal private event handlers not to be implemented by end users are:

- LostFocus
- SelectionChanged
- KeyUp
- TextBoxBase.TextChanged

Dependency properties publicly exposed for end-users to set are:

- EmptyText
- TabIndex
- IsDropDownOpen (as required)
- Text (as required)
- SelectedText (as required)
- ItemTemplate (optional)
- ItemSource (MVVM only)
- SelectedItem (MVVM only)
- Text.SearchTextPath (MVVM only)
- DisplayMemberPath

Delegate Public Event Handers:

The following public delegates are implemented by the end user and are wired up in the constructor of the view code-behind so that the calls will execute the required custom logic to handle searching and population of returned data (search results).
• DoSearchProcess (handles RPC DataAccessService call)
• DoEnterKeyUpProcess  (handles any additional special logic for Key Up)
• DoLostFocusProcess (handles any additional special logic for Lost Focus)
• DoSelectionChangedProcess (handles any additional special logic for SelectionChanged)

Example Locations of IncrementalSearchComboBox usage:

To get an understanding of how the user control is implemented in the application look at the following locations:

MVVM examples:
• GroupView.xaml (Desktop\ClinSchd.Modules.Navigation\Group\)
• FindApptView.xaml (Desktop\ClinSchd.Modules.FindAppt\FindAppt\)

Items Manual example:
• RequestManagement.xaml (Desktop\ClinSchd.Modules.Ribbon\Schedule\)

2.3.1.1.2. DateTimePicker Control

The “DateTimePicker” (DateTimePicker.xaml), as with other custom WPF user controls, has its source code files organized under the \Scheduling - VistA Scheduling GUI\ClinSchd\Desktop\ClinSchd.Infrastructure\Controls\ folder, and compile under the ClinSchd.Infrastructure.Controls namespace into the ClinSchd.Infrastructure.dll assembly.

The DateTimePicker user control wraps single instances of Telerik RadDatePicker and RadTimePicker, setting a certain number of default properties, giving it a default behavior, and exposing other important properties required by consumers as Dependency Properties, events, and delegates. The user control can be configured to display a combination of date and time, date only, or time only controls. The user control can be used in an MVVM manner (recommended), or by manipulating data directly via the various properties (not recommended, except in backward compatibility code refactoring areas).

In addition to entry of standard date\time strings, the DateTimePicker user control also wraps entering relative date strings. This allows a user to enter date strings similar to “t”, “t+1”, “t-2w”, which are converted to valid date values by interpreting t as today and adding or subtracting the number of days, weeks, or months. Time strings can be entered into the time control as “now”, “now+1”, or “now-2h”, where now is interpreted as the current time with the number of seconds, minutes, or hours added or subtracted.

Table 1 details the custom methods, properties, and events implemented for the DateTimePicker control.

<table>

</tr>
<tr>
<td>Time Picker</td>
<td>TimeWatermarkContent</td>
<td>String</td>
<td>TimePicker watermark content.</td>
</tr>
</tbody>
</table>

In all of these, remember the user control view will need to include references to the controls assembly and the user control will need to be contained within an appropriate container control such as a Grid and the row and column set for the control and other display properties overridden such as margins, and width, height, and so forth to control its styling, as required.

**Figure 33: Code Extract 1**

```xml
    <x:StaticResource打交道="ClinSch.Infраstructure.Controls;assembly=ClinSch.Infраstructure"/>
    <TextBlock Margin="0,3,12,6" Text="TimePicker watermark content."/>
</UserControl>
```

**Figure 34: Code Extract 2**

```xml

```
2.3.2. Modules

2.3.2.1. CancelAppt
Code in this section processes an appointment cancellation.

2.3.2.2. ChangeDivision
Code in this section is not enabled in the GUI. It was originally accessible via a currently hidden menu item in the System Menu. Its purpose was to allow users to switch facilities but was never fully functional.

2.3.2.3. CheckIn
Code in this section processes an appointment check in.

2.3.2.4. CheckOut
Code in this section processes an appointment check out.

2.3.2.5. ContactAttempt
Code in this section is used to record attempts to contact patients by phone or letter. It applies to the patient recall (PtCSch) request type.

2.3.2.6. DataAccess
Code in this section connects to VistA to get or set data via RPC calls.

2.3.2.7. ExpandedEntry
Code in this section displays an appointment expanded entry.

2.3.2.8. FindAppt
MRTC processes.

2.3.2.9. Management
Code in this section supports the functions associated with System Tab.

2.3.2.10. MarkAsNoShow
Code in this section processes an appointment as a no show.

2.3.2.11. Navigation
Code in this section handles processing for Calendar Navigation Pane and Clinic/Provider Navigation Pane.

2.3.2.12. PatientAppt
Code in this section processes Appointment Dialog for new appointments, walk-in appointments, and the Disabilities Dialog/Patient’s Eligibility.
2.3.2.13. **PatientSelection**
Code in this section supports Patient Information Dialog.

2.3.2.14. **Prerequisites**
VA developer code. Launched when selecting an appointment request.

2.3.2.15. **Reports**
Code in this section supports the functions associated with Reports Tab. It also prints patient letters.

2.3.2.16. **ResourceSelection**
The code in this section is not utilized.

2.3.2.17. **Ribbon**
Code in this section supports the functions associated with:
1. Ribbon Bar Patient Information
2. Ribbon Bar Actions Menu
3. Ribbon Bar Arrangements Menu
4. Pending Appointments
5. Patient Special Needs/Preferences Window
6. Ribbon Bar Tools Menu
7. User Preferences
8. Appointment Request Dialog

2.3.2.18. **Task**
Code in this section supports the Calendar Schedule.

2.3.2.19. **UserLogin**
Code in this section processes the Logon Screen.

2.3.2.20. **VAR**
Code in this section implements the VAR/VAOS button and the interface with the VAR system.

2.3.3. **Unit Tests**
The code in this section is obsolete.

2.3.4. **ClinSchd**
This section hosts the application, and contains the config file. It will only be modified if a new module is added.
2.3.5.  CreateWebServices
The code in this section is obsolete.

2.3.6.  InstallerCustomActions
The code in this section is used by the installer.

2.3.7.  ClinSchedInstaller
The code in this section supports creation of a build package.

2.3.8.  VARMobileAppMockup
The code in this section is a testing app to simulate a Veteran entering a mobile request.

2.3.9.  Web Services

2.3.9.1.  VSE_VAR_Client
The code in this section is an app to test web service connectivity.

2.3.9.2.  VSE_VAR_DataAccessService
The code in this section provides the WCF VSE_VAR_Service web services to access the VAOS\VAR Oracle database.

2.3.9.3.  VSE_VAR_Service
The code in this section encompasses the WCF VSE_VAR_Service.

2.3.9.4.  VSE_VAR_Service_Interfaces
Web service interface/contracts (description of data to be transmitted between server and client). The .dll created in this project MUST be included in any client that will communicate with the VSE_VAR_Service web service.

2.3.9.5.  VSE_VAR_ServiceConsoleHost
Used in testing to run the WCF service in a console.

2.3.9.6.  VSE_VAR_TestClient
Test app to simulate VSE activities for VAR.

2.4.  Structure of Code Modules
A module project contains a VSE .dll assembly and should contain a specific set of functionalities. Apart from some core modules, properly executed modules should be able to be removed from VSE without affecting the ability to run the application.

A module contains code to register classes with the Unity Dependency Injection (DI) engine, event subscriptions for the Event Aggregator, and the code to execute specific functionalities.
2.4.1. Module Project

A module contains a module class, one or more controllers, one or more services and views, view models, and possibly models to implement the module functionality. A typical module project might look like Table 2.

<table>
<thead>
<tr>
<th>Table 2: Module Project</th>
</tr>
</thead>
<tbody>
<tr>
<td>ClinSchd.Modules. &lt;%Module Name%&gt;</td>
</tr>
<tr>
<td>Properties</td>
</tr>
<tr>
<td>References</td>
</tr>
<tr>
<td>&lt;%Module Name%&gt;</td>
</tr>
<tr>
<td>&lt;%Module Name%&gt;PresentationModel.cs</td>
</tr>
<tr>
<td>&lt;%Module Name%&gt;View.cs</td>
</tr>
<tr>
<td>&lt;%Module Name%&gt;View.xaml</td>
</tr>
<tr>
<td>&lt;%Module Name%&gt;View.xaml.cs</td>
</tr>
<tr>
<td>&lt;%Module Name%&gt;PresentationModel.cs</td>
</tr>
<tr>
<td>Controllers</td>
</tr>
<tr>
<td>&lt;%Module Name%&gt;Controller.cs</td>
</tr>
<tr>
<td>&lt;%Module Name%&gt;Controller.cs</td>
</tr>
<tr>
<td>Services</td>
</tr>
<tr>
<td>&lt;%Module Name%&gt;Service.cs</td>
</tr>
<tr>
<td>&lt;%Module Name%&gt;Service.cs</td>
</tr>
<tr>
<td>&lt;%Module Name%&gt;Module.cs</td>
</tr>
</tbody>
</table>

2.4.2. Module Class

The module class must implement IModule and contains code to register module classes and interfaces with the Unity DI engine. The class instantiates all controllers and performs any other initialization functions required for the module to execute. The module class is typically named <%Module Name%>Module.cs and is in the root folder of the module project. The class should also implement a constructor that includes parameters for IUnityContainer and IEventAggregator. A typical module class can be seen in Table 3.

<table>
<thead>
<tr>
<th>Table 3: Module Class</th>
</tr>
</thead>
<tbody>
<tr>
<td>using Microsoft.Practices.Unity;</td>
</tr>
<tr>
<td>using ClinSchd.Infrastructure;</td>
</tr>
<tr>
<td>using ClinSchd.Infrastructure.Models;</td>
</tr>
<tr>
<td>using ClinSchd.Infrastructure.Interfaces;</td>
</tr>
<tr>
<td>using ClinSchd.Modules.&lt;%Module Name%&gt;;</td>
</tr>
<tr>
<td>using ClinSchd.Modules.&lt;%Module Name%&gt;.Controllers;</td>
</tr>
<tr>
<td>namespace ClinSchd.Modules.&lt;%Module Name%&gt;</td>
</tr>
<tr>
<td>{</td>
</tr>
</tbody>
</table>
public class <%Module Name%> : IModule
{
    private readonly IUnityContainer _container;
    private readonly IEventAggregator _eventAggregator;
    private I<%Module Name%>Controller _controller;

    public <%Module Name%>Module (IUnityContainer container, IEventAggregator eventAggregator)
    {
        _container = container;
        _eventAggregator = eventAggregator;
    }

    public void Initialize()
    {
        RegisterViewsAndServices();
        /* Create any controllers */
        _controller = _container.Resolve<I<%Module Name%>Controller>();
        /* Start all created controllers */
        _controller.Run();
    }

    protected void RegisterViewsAndServices()
    {
        _container.RegisterType<I<%Module Name%>Controller, <%Module Name%>Controller>();
        _container.RegisterType<I<%Module Name%>Service, <%Module Name%>Service>();
        /* Register other types as required */
    }
}

2.4.3. Controller Class

Normally the controller class contains the EventAggregator subscriptions for the module and controls access to the module functionalities. One can also expose module functionalities by registering module classes in the Unity DI engine in the module class, allowing the module classes to be instantiated from anywhere in the application that can access the module interfaces. A typical controller looks like Table 4.

Table 4: Controller Class

using System;
using System.Collections.Generic;
using ClinSchd.Infrastructure.Interfaces;
using ClinSchd.Infrastructure.Models;
using ClinSchd.Modules.<%Module Name%>.Services;
using Microsoft.Practices.Unity;

namespace ClinSchd.Modules. <%Module Name%>.Controllers
{
    public class <%Module Name%>Controller : I<%Module Name%>Controller
    {
        private readonly IUnityContainer _container;
        private readonly I<%Module Name%>Service _service;
        private readonly IEventAggregator _eventAggregator;
        private readonly IDataAccessService _dataAccessService;
        public <%Module Name%>Controller (IUnityContainer container, I<%Module Name%>Service service, IEventAggregator eventAggregator, IDataAccessService dataAccessService)
        {
            _container = container;
            _service = service;
            _eventAggregator = eventAggregator;
            _dataAccessService = dataAccessService;
        }
        public void Run()
        {
            _eventAggregator.GetEvent<%Module Name%>Event>.Subscribe (%Module Name%>EventHandler, ThreadOption.UIThread, true);
        }
        public void <%Module Name%>EventHandler (%Module Name%>EventPayload payload)
        {
            _service.DoEventHandler(payload);
        }
    }
}

2.4.4. Service Class

The service class typically implements the module functionality code, like running a process, displaying windows, or creating a user control to be docked elsewhere in the application. A typical service class is displayed in Table 5.

Table 5: Service Class

```csharp
using System;
using ClinSchd.Modules. <%Module Name%>.%;
namespace ClinSchd.Modules. <%Module Name%>.Services
```
2.5. **Organization of Rational Streams**

There are seven Rational streams associated with the project (Table 6). Five are code streams, one is for delivering install packages, and one is for documentation.

<table>
<thead>
<tr>
<th>Rational Stream</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ConDEV</td>
<td>ConDEV is used for current development.</td>
</tr>
<tr>
<td>ConTEST</td>
<td>Once current development has passed unit testing and is ready for Component Integration Testing (CIT), the development is promoted to ConTEST. Builds for CIT are created from this stream.</td>
</tr>
<tr>
<td>ConSQA</td>
<td>Once a build is ready to move to Software Quality Assurance (SQA) testing, the changes are promoted to ConSQA. Builds for SQA are made from this stream. If SQA testing returns defects, they are fixed and tested here, then merged into current development. <strong>NOTE:</strong> Work on the next iteration may be in progress.</td>
</tr>
<tr>
<td>ConIOC</td>
<td>Once a build has cleared SQA and is ready for Initial Operating Capacity (IOC) testing, the code is promoted to ConIOC. Builds for IOC are made from this stream. If IOC testing returns defects, they are fixed and tested here, then merged into current development (and possibly also SQA). <strong>NOTE:</strong> Streams may contain different iterations.</td>
</tr>
</tbody>
</table>
Once a build has cleared IOC testing and is installed at field sites, the code is promoted to ConPROD. This stream serves as a reference copy of Production to research reported defects, as the Dev streams will be on different iterations. The only active development that takes place in ConPROD is for emergency fixes that are disconnected from the current versions in SQA or IOC.

This stream serves as the repository for project documentation (CLIN deliverables and reference documents).

This stream holds the install packages for each build of the software, serving as both a distribution point and repository, to allow installing previous versions for research.

### 2.6. Troubleshooting Using the Trace Log

The Trace Log is a tool used to troubleshoot problems within the VS GUI. The GUI must be executed with the /trace command line parameter for the Trace Log to be available (See Command Line Parameters). Access the Trace Log by right-clicking the GUI title bar and selecting Trace Log from the resulting menu.

The Trace log contains a log of all RPC calls made by the VS GUI. Information in the log includes the RPC Name, Inputs (Parameters), and returns. Returns can be various results, including error information reported by the called RPC, and in many cases includes error information reported from the GUI application. Sometimes a user-friendly error message is displayed, and the Trace Log must be accessed to view the error details. Exceptions/errors caught within the GUI and logged using the TraceLog.LogError method will include the full error stack, when present.

The Trace Log can be exported to an XML file for analysis. When the /AutoDumpTrace command line parameter is added, the GUI will attempt to save the current Trace Log to the C:\Program Data\Vista Scheduling GUI\TraceLog.xml file. Each successive save of the current log overwrites the previously saved log.

A developer can write to the Trace Log by including the ClinSchd.Infrastructure namespace, then calling one of the TraceLog.Log . . . methods.

RPC Data returned in the Trace Log may be a single string, an array of strings, a list of strings (possibly including an array item), or a record set.

Returned arrays are generally formatted as:

```
Array[n]
  #0: value
  #1: value
  ...
  #n: value
```
Record sets generally appear as:

T00020HEADER_1^T00020HEADER_2^...^T00030HEADER_N
Record1_Value1^Record1_Value2^...^Record1_ValueN
Record2_Value1^Record2_Value2^...^Record2_ValueN
...
RecordN_Value1^RecordN_Value2^...^RecordN_ValueN

Record sets can be copied and saved to a text file and imported into Excel as a ^ delimited file for easier review.

2.7. Configuring the GUI

The VistaSchedulingGUI.exe.config file is found in the application folder location, C:\Program Files (x86)\VistA Scheduling GUI_x, where _x is not present in the Visual Studio development environment, but may be _P (Production Release), _T (Test Release), or _RC (Release Candidate) when VSE is installed using one of the .msi files.

The config file is initialized during the installation process or by modifying the app.config file within the ClinSchd project in Visual Studio.

The config file can also be modified using a text editor such as Notepad or Notepad++.

There are two sections in the config file that may need to be configured. It is highly recommended that other sections of this file be modified.

2.7.1. The <appSettings> Section

The <appSettings> section contains several <add key . . . > options that can be modified.

- <add key=”host” value=“” />: This key value holds the address or URL of the host VistA instance.
- <add key=”port” .value=“” />: This key value holds the port number assigned to the VistA instance on the host machine.
- <add key=”nspace” value=“” />: This key value holds the Name Space assigned the VistA instance on the host machine.
- <add key=”MaxPatientsToReturn” value=”50” />: This key value adjusts the maximum number of patients returned by the Patient Search on the ribbon bar. The default recommended value is 50.
- <add key=”var_service_url” value=“” />: This key value is used to determine if the VSE\VAOS (VAR) interface is available to those users holding the SDEZ REQUEST key. The value SHOULD match the <endpoint address=“” /> value indicated in the <system.ServiceModel><client> section as discussed below, however, VSE is only looking for a value containing the “VSE_VAR_Service” string. If the value is empty or does not contain that string VSE will not activate the VSE\VAOS (VAR) functionality.

At this time any other <appSettings> key value pairs are ignored.
2.7.2. The <system.ServiceModel><client><endpoint> Section

The VSE\VAOS (VAR) interface talks to a WCF web service. The <system.ServiceModel> section describes connection properties used by VSE for this purpose. The <endpoint> subsection is found within the <client> subsection.

Modify the <endpoint address="" /> value to change the location URL of the VSE_VAR_Service web service. If this value is not exactly correct, VSE will be unable to communicate with the VSE_VAR_Service web service, and communication errors will be reported in the VSE Trace Log.

It is highly recommended that the <endpoint> address and the <appSettings><add key="var_service_url" are set to the same value.

2.7.3. Command Line Parameters

The VSE application allows for two command line parameters. These parameters can be added to the application shortcut as needed.

2.7.3.1. The /trace Command Line Parameter

When the /trace command line parameter is present, VSE turns on and initializes Trace Log functionality.

2.7.3.2. The /AutoDump Trace Command Line Parameter

When the /AutoDumpTrace command line parameter is present, VSE attempts to save the current Trace Log to a file when exiting the application, or when the application terminates due to an error. The saved Trace Log file is located in the C:\ProgramData\VA VistA Scheduler\VSETraceLog.xml file.

Each successive Trace Log dump overwrites previous Trace Log dumps.

The /trace command line parameter is required for the /AutoDumpTrace functionality to work.

2.7.4. The Application Trace File

The application Trace file is generated by the VSE application. Successive VSE executions will be recorded in the same Trace file. Some error information may be present in the Trace file if VSE crashes. The Trace file is always located at C:\ProgramData\VA VistA Scheduler\trace.log.

2.8. Client Application Dependencies and Files

Table 7, Table 8, and Table 9 list client application dependency files and their descriptions.

<table>
<thead>
<tr>

- Microsoft.Practices.ObjectBuilder2.xml
- Microsoft.Practices.ServiceLocation.xml
- Microsoft.Practices.Unity.xml

### 2.9. VS GUI Trace Log

The VS GUI Trace Log is a custom GUI designed to inspect and debug server-side VistA RPCs. The UI for this application displays the input and results for RPC calls. To launch the GUI with access to the trace log, the executable must be launched with the following command “/trace” (Figure 35).

**Figure 35: Trace Log Capability Shortcut**
Launch the Trace Log by right-clicking in the title bar of the window and selecting the *Show Trace Log* option from the resulting menu (Figure 36).

**Figure 36: Show Trace Log Menu Option**

The Trace Log will appear (Figure 37). Click the Export button to open Windows Explorer.

**Figure 37: Trace Log**

Name the Trace Log, select the desktop as the save location, and click the Save button save the Trace Log (Figure 38).

**Figure 38: Save Trace Log**
If an error causes VS GUI to close unexpectedly, follow the instructions below to access the Trace Log.

The VS GUI has error trapping in place for when errors occur inside the VS GUI that cause unhandled exceptions or unknown issues cause the GUI to abruptly close out. This error trapping occurs on the desktop for the user who encountered the error. The data is written back to a file called VSETraceLog.xml and is stored in the C:\ProgramData\VA VistA Scheduler file on the specific user’s work station.

On the same workstation, just after being kicked off the VS GUI application, navigate to the C:\ drive, look for ProgramData folder. If you do not see the ProgramData folder, it is probably hidden from view. Perform the following steps to unhide the folder:

1. Open the Windows Control Panel
2. Search for Folder Options
3. Select Folder Options
4. Click the View tab
5. Click the 'Show Hidden files, folders, and drives' radio button

Once the ProgramData folder is unhidden, open the C:\ProgramData\VA VistA Scheduler folder and send a copy of VSETraceLog.xml found in that folder. This file can be opened in any text editor/viewer for inspection.
2.10. Request Management

Schedulers create and manage several different types of appointment requests: appointments (APPT), electronic wait list (EWL) entries, PtCSch, and consults. These requests are retrieved and stored in different VistA files.

Users must submit queries to the VistA server to retrieve individual requests (Figure 39). Users can search by patient name, request type, clinic or service/specialty clinic, priority group, wait time, service, connection, desired date, and origination date. Once the query is submitted to the server, the records are filtered based on the query type.

Users can specify the sort order for the records based on patient name, request type, clinic, wait time, priority group, origination date, desired date of appointment, and service connection. The default sort order is first by priority group, then by desired date, and by origination date.

Records meeting the query criteria are filtered and sorted on the server and returned to the GUI, and displayed 25 at a time. The RM Grid contains paging functionality to display results beyond the initial 25 records.

**NOTE:** The system retrieves a maximum of 200 records per query. The pagination and page navigation functionality will be improved in an upcoming release.
2.11. Internal Relations
There are no documented internal relations in the VS GUI.

2.12. External Relations
No special integration agreements exist between the VS GUI and any other package.

2.13. Published Entry Points
No published entry points exist in VS GUI.

The development team produces three builds of the product each time code is ready to release for testing. Two are expected as part of deployment operations, and the third is useful for running multiple copies of the software side-by-side. The upgrade and product codes of the three builds are different, allowing Windows to treat them as completely separate applications, meaning they can have separate configurations and multiple versions of the application can be run simultaneously to compare behavior between different versions.

The upgrade and product codes must be specified in Visual Studio before (re)building the solution, and a few properties must be changed (using SuperOrca) in order to differentiate the three builds.

NOTE: At the time of this writing, the Development team is looking into using three copies of the installer project to simplify this process.

2.14.1. Before Making the Builds
The first step is to update the build number in Visual Studio. First, you’ll need to know the build number that you will be using. The first three pieces of the build number are fixed, the fourth iterates once per major release, or once every three sprints. The fifth piece iterates each time builds are produced for testing, as many times as necessary, possibly several times a week.

While still working in the Dev stream, the version number should be updated in the code itself. This involves editing two or three files.

1. /MSC/SolutionInfoInfo.cs
   a. This file needs only be updated once for each release, before the first build for that release.
b. Update the following two lines at the bottom of the file to the current release number (only the first four pieces).

```csharp
[assembly: AssemblyVersion("2.0.0.16")]
[assembly: AssemblyFileVersion("2.0.0.16")]
```

2. */ClinSchd/Desktop/ClinSchd/App.xaml.cs*

a. This file should be updated with each set of builds, but only needs to be done once before beginning work on each of the three individual builds.

b. The line to change here is the second line of the App class, and this contains the fifth piece of the build number (start over from 1 for the first build of each release).

```csharp
private static string BUILD_SUFFIX = ".14";
```

3. */ClinSchedInstaller/ClinSchedInstaller.vdproj*

a. This file should be updated with each set of builds. It should be edited once before committing the code to Test, and then again between creating the three builds working from the Test stream.

b. This editing occurs in the Properties pane that appears below the Solution Explorer in Visual Studio. In Solution Explorer, navigate to the ClinSchedInstaller project (which should be the last project listed in the solution).

c. Change the Version property. This only allows three pieces, so flatten the first four pieces into two for this field – 2.0.0.16.14 becomes 20.016.14.
d. Upon exiting the field, a popup appears that says “It is recommended that the ProductCode be changed if you change the version. Do you want to do this?” Choose Yes.

Figure 42: ProductCode Update Dialog

e. Save all your changes, commit them to Dev, and proceed to the next step.
2.14.2. Create the Builds

The Test stream is used to create the three builds for testing. The essence of this step is building the solution three times and updating the ProductCode and UpgradeCode between each one.

1. Switch sandboxes in Visual Studio to the sandbox tied to your Test stream
2. Open the build project properties pane by selecting the build project and hitting the F4 key
3. Find the UpgradeCode on the ClinSchedInstaller properties page and confirm that it is correct
   a. Upon clicking in the field, an ellipsis (…) button appears
   b. Click the ellipsis button to open a dialog box that will make it easier to see and edit the full value

![Figure 43: ClinSchedInstaller Properties Page and Upgrade Code Dialog]

4. By default, this is saved to the repository with the UpgradeCode for the Test version, but copy the value from Table 10 for the build you are creating

<table>
<thead>
<tr>
<th>Build</th>
<th>Upgrade Code</th>
</tr>
</thead>
<tbody>
<tr>
<td>Release Candidate (RC)</td>
<td>{5F2AD4CA-24A2-427C-BB46-9B61E6BF9743}</td>
</tr>
<tr>
<td>Test</td>
<td>{27C7584C-55ED-40DE-892C-B4349CD600BB}</td>
</tr>
<tr>
<td>Production (Prod)</td>
<td>{F573836B-D355-4712-94B1-60F61CD8319E}</td>
</tr>
</tbody>
</table>

If the UpgradeCode is changed, the ProductCode must be changed:

5. Open the ClinSchedInstaller properties page
6. Click within the ProductCode field
7. Click the ellipsis button to open the Product Code dialog
8. Click the New Code button to generate a new GUID

**Figure 44: ClinSchedInstaller Properties Page and Product Code Dialog**

![Image of ClinSchedInstaller Properties Page and Product Code Dialog]

The build can now be created.

9. In the top-level menu, click Build > Rebuild Solution
   **NOTE:** The rebuild of the solution may take a while
10. Open two File Explorer windows:
   a. One to ConTEST\ClinSchedInstaller\Release (in the Test stream sandbox)
   b. One to Installers\Scheduling Releases (in the Installers sandbox)

Once the build is finished, it will appear in the Release folder as VistASchedulingGUIInstaller.msi

11. Rename the build to something like VistASchedulingGUIInstaller-2.0.0.16.14-T.msi, replacing the build number with the correct one, and the letter(s) at the end with RC for Release Candidate, T for Test, or P for Production
12. Move the renamed installer to the Scheduling Releases folder

2.14.3. Editing and Committing the Builds

After the three builds are in the Scheduling Releases folder, edit each one using SuperOrca. Either File > Open or just dragging and dropping an installer onto the SuperOrca window will open it for editing. Changes are saved as they are made, so there is no need to manually save changes. This should be done for each of the three builds.

1. In the pane on the left, select Property
   a. There are two values to change on the right-hand side: ProductName and ProductVersion
   b. Upon double-clicking on the value column (not the one that shows the name of each specific property), the system will open a popup where the value can be edited

   Figure 45: Editing the ProductVersion Field Under Property

2. For the ProductName field, append either “_RC” for the Release Candidate build, “_T” for the Test build, or “_P” for the Prod build

3. For the ProductVersion field, enter the first four pieces of the build number followed by the letters representing the build (for example, 2.0.0.16P for any Prod build of the 2.0.0.16 release)

4. Select Shortcut in the left-hand pane. There are two values to edit here, also
5. Double-click on the value in the Name column for each of the two rows
6. After the pipe ("\|"), add “RC”, “Test”, or “PROD”, then a space, before the “VistA Scheduling GUI” in the value for that cell, depending on the build being edited

After performing these steps for all three builds, and installing at least one of them to verify, the installers can be committed to the Installers stream.

3. Legacy VistA Scheduling Implementation and Maintenance

The VS GUI provides a Windows interface for the Patient Information Management System (PIMS) scheduling software and is designed to interoperate with existing PIMS schedules.

3.1. System Requirements

The system requirements are:

- Server
  - Cache version 5.0
  - Kernel version 8
  - PIMS version 5.3 patch 1012
  - VistA Scheduling Patch SD*5.3*686

3.2. Package-wide Variables

There are no package-wide variables associated with the PIMS package.
### 3.3. Routines

Table 11 lists routines and their descriptions.

### 3.5. VistA Scheduling GUI Cross References

#### 3.5.1. #44 HOSPITAL LOCATION

**TRADITIONAL CROSS-REFERENCE LIST -- FILE #44**

File #44

Subfile #44.1

Traditional Cross-references:

**ADPR MUMPS WHOLE FILE (#44)**

Field: DEFAULT PROVIDER (44.1,.02)

1) = S:X ^SC("ADPR",DA(1),DA)="

2) = K ^SC("ADPR",DA(1),DA)

**AVADPR MUMPS WHOLE FILE (#44)**
Field: PROVIDER (44.1,.01)
Description: FINDS A PROVIDER'S CLINICS Cross-reference to easily find all clinics for a particular provider and if that provider is listed as default.
1) = S ^SC("AVADPR",X,DA(1),DA)=$P(^SC(DA(1),"PR",DA,0),U,2)
2) = K ^SC("AVADPR",X,DA(1),DA)
B REGULAR
Field:  PROVIDER  (44.1,.01)
1) = S ^SC(DA(1),"PR","B",SE(X,1,30),DA)=""
2) = K ^SC(DA(1),"PR","B",$E(X,1,30),DA)

INDEX AND CROSS-REFERENCE LIST -- FILE #44, FIELD #2

New-Style Indexes:
AG (#1345) RECORD REGULAR IR SORTING ONLY
Short Descr:  Index by TYPE and NAME.
Description:  This cross reference is used to sort by TYPE and NAME.
Set Logic:  S ^SC("AG",X(1),X(2),DA)=""
Kill Logic:  K ^SC("AG",X(1),X(2),DA)
Whole Kill:  K ^SC("AG")
X(1):  TYPE  (44,2)  (Subscr 1)  (forwards)
X(2):  NAME  (44,.01)  (Subscr 2)  (forwards)

3.5.2.  #403.5 RECALL REMINDERS
INDEX AND CROSS-REFERENCE LIST -- FILE #403.5, FIELD #7.5

New-Style Indexes:
AC (#1346) RECORD REGULAR IR SORTING ONLY
Short Descr:  Index by DATE/TIME RECALL ADDED and USER WHO ENTERED RECALL
Description:  This cross reference is used to sort by DATE/TIME RECALL ADDED and USER WHO ENTERED RECALL.
Set Logic:  S ^SD(403.5,"AC",X(1),X(2),DA)=""
Kill Logic:  K ^SD(403.5,"AC",X(1),X(2),DA)
Whole Kill:  K ^SD(403.5,"AC")
X(1):  DATE/TIME RECALL ADDED  (403.5,7.5)  (Subscr 1)  (forwards)
X(2):  USER WHO ENTERED RECALL  (403.5,7)  (Subscr 2)  (forwards)
3.5.3. #403.56 – RECALL REMINDERS REMOVED

INDEX AND CROSS-REFERENCE LIST -- FILE #403.56, FIELD #7.5

New-Style Indexes:
AC (#1347) RECORD REGULAR IR SORTING ONLY

Short Descr: Index by DATE/TIME RECALL ADDED and USER WHO ENTERED RECALL

Description: This cross reference is used to sort by DATE/TIME RECALL ADDED and USER WHO ENTERED RECALL.

Set Logic:  S ^SD(403.56,"AC",X(1),X(2),DA)=""
Kill Logic:  K ^SD(403.56,"AC",X(1),X(2),DA)
Whole Kill:  K ^SD(403.56,"AC")

X(1): DATE/TIME RECALL ADDED (403.56,7.5) (Subscr 1) (forwards)
X(2): USER WHO ENTERED RECALL (403.56,7) (Subscr 2) (forwards)

3.5.4. #409.3 – SD WAIT LIST

INDEX AND CROSS-REFERENCE LIST -- FILE #409.3, FIELD #8.5

Traditional Cross-References:

AE REGULAR

Field: WL SPECIFIC HOSPITAL LOCATION (409.3,8.5)

Description: This xref is used to find entries associated with a particular HOSPITAL LOCATION.

1) S ^SDWL(409.3,"AE",SE(X,1,30),DA)=""
2) K ^SDWL(409.3,"AE",SE(X,1,30),DA)

INDEX AND CROSS-REFERENCE LIST -- FILE #409.3, FIELD #23

E MUMPS

Field: CURRENT STATUS (409.3,23)

Description: This xref is used to speed up the lookup of open or closed wait list entries for a given time range.

1) S:$P(^SDWL(409.3,DA,0),U,2)'="" ^SDWL(409.3,"E",X,$P(^SDWL(409.3,DA,0),U,2),DA)=""
2) K:$P(^SDWL(409.3,DA,0),U,2)'="" ^SDWL(409.3,"E",X,$P(^SDWL(409.3,DA,0),U,2),DA)

INDEX AND CROSS-REFERENCE LIST -- FILE #409.3, FIELD #1

ETOO MUMPS

Field: ORIGINATING DATE (409.3,1)
Description: This xref actually updates the "E" xref for CURRENT STATUS in the event that the ORIGINATING DATE is changed. This xref is used to speed up the lookup of open or closed wait list entries for a given time range.

   1)= $P(^SDWL(409.3,DA,0),U,17)'="" ^SDWL(409.3,"E",$P(^SDWL(409.3,DA,0),U,17),X,DA)"
   2)= $P(^SDWL(409.3,DA,0),U,17)'="" ^SDWL(409.3,"E",$P(^SDWL(409.3,DA,0),U,17),X,DA)

INDEX AND CROSS-REFERENCE LIST -- FILE #409.3, FIELD #.01

New-Style Indexes:

AD (#1349) RECORD REGULAR IR SORTING ONLY

Short Descr: Index by PATIENT and WL SPECIFIC HOSPITAL LOCATION

Description: This cross reference is used to sort by PATIENT and WL SPECIFIC HOSPITAL LOCATION.

Set Logic: S ^SDWL(409.3,",AD",X(1),X(2),DA)"
Kill Logic: K ^SDWL(409.3,",AD",X(1),X(2),DA)
Whole Kill: K ^SDWL(409.3,"AD")

X(1): PATIENT (409.3,.01) (Subscr 1) (forwards)
X(2): WL SPECIFIC HOSPITAL LOCATION (409.3,8.5) (Subscr 2) (forwards)

Subfile #409.345

Traditional Cross-References:

B REGULAR

Field: DATE EDITED (409.345,.01)

1)= S ^SDWL(409.3,"B",SE(X,1,30),DA)"
2)= K ^SDWL(409.3,"B",SE(X,1,30),DA)

New-Style Indexes:

GS (#1387) RECORD REGULAR IR LOOKUP & SORTING

Short Descr: SORT BY CLINIC STOP (SERVICES) ID AND ORIGINATING DATE

Description: This xref is used to sort/filter Wait List entries by the CLINIC STOP id and the ORIGINATING DATE field (#1). The CLINIC STOP id comes from the SD WL SERVICE/SPECIALTY file (#409.31). The WL SERVICE/SPECIALTY field (#7) in the SD WAIT LIST file (#409.3) contains the pointer to the SD WL SERVICE/SPECIALTY file.

Set Logic: S ^SDWL(409.3,"GS",X(1),X(2),DA)"
Kill Logic: K ^SDWL(409.3,"GS",X(1),X(2),DA)

Used for checking to see if the patient is in the Recall file and display recall information before a new entry is made.

**FIELD INDEX:**  A66201 (#838) MUMPS IR ACTION

**Short Descr:**  Save copy of record before deletion.

**Description:**  Before deleting a record from this file, save a copy of it in file 403.56. Deletion can be either because a clerk deletes a patient from the recall list, or because a patient has been given an appointment in a clinic requested by the recall list and therefore is deleted by the nightly job. We save this information so that we can look back at appointments given to patients and see how timely the appointments were.

HELP-PROMPT: Select a reason for removing the patient the wait list.
DESCRIPTION: Reason patient has been dispositioned from Wait List(Sch/PCMM)

409.3,22 DESIRED DATE OF APPOINTMENT 0;16 DATE (Required) CID/PREFERRED DATE
INPUT TRANSFORM: S %DT="E" D ^%DT S X=Y K:Y<1 X
LAST EDITED: NOV 16, 2015
HELP-PROMPT: Enter the desired date for the appointment. The date can be imprecise.
DESCRIPTION: If a patient is placed on a Service/Specialty or Clinic Specific Wait List type, the date the appointment is needed/desired. If the priority is ASAP, this is the date the patient is
placed on the Wait List(Sch/PCMM). If the priority is Future, the user enters the date that the patient/provider needs an appointment scheduled. The field title contains CID/PREFERRED DATE', where 'CID' stands for Clinically Indicated Date. This is an alternate name for the field name used for reports and to present to users when adding and displaying appointment information in the Scheduling package.

FIELD INDEX: GCC (#1946) REGULAR IR LOOKUP & SORTING

Short Descr: SORT BY CLINIC ID AND CID/PREFERRED DATE

Description: This xref is used to sort Wait List entries by the Clinic ID and the CID/PREFERRED DATE field (#22). The Clinic ID comes from the CLINIC field (#.01) of the SD WL CLINIC LOCATION file (#409.32). The SD WL CLINIC LOCATION pointer is in the WL SPECIFIC CLINIC field (#8) of the SD WAIT LIST file (#409.3).

Used for checking to see if the patient is in the Recall file and display recall information before a new entry is made.

FIELD INDEX: A66201 (#838) MUMPS IR ACTION

Short Descr: Save copy of record before deletion.

Description: Before deleting a record from this file, save a copy of it in file 403.56. Deletion can be either because a clerk deletes a patient from the recall list, or because a patient has been given an appointment in a clinic requested by the recall list and therefore is deleted by the nightly job. We save this information so that we can look back at appointments given to patients and see how timely the appointments were.

HELP-PROMPT: Select an enrollment priority.
DESCRIPTION: The ENROLLMENT PRIORITY field represents the appointment Enrollment Priority.
HELP-PROMPT: Enter 1 or PROVIDER if the requestor was a provider. Enter 2 or PATIENT if the requestor was the patient.

DESCRIPTION: This field identifies who requested the appointment - the patient or a provider.

AUDIT: YES, ALWAYS

409.85,12 PROVIDER 0;13 POINTER TO NEW PERSON FILE (#200) (audited)

LAST EDITED: NOV 02, 2016

HELP-PROMPT: Select the provider that requested the patient's appointment.

DESCRIPTION: This field represents the provider that requested the appointment if the appointment was requested by a provider.

AUDIT: YES, ALWAYS

409.85,13 SCHEDULED DATE OF APPT 0;23 DATE

INPUT TRANSFORM:  S %DT="ETX" D ^%DT S X=Y K:Y<1 X

LAST EDITED: APR 18, 2015

HELP-PROMPT: Enter the date and optional time of the scheduled appointment for this request.

DESCRIPTION: This is the appointment date and optional time scheduled for the patient. This appointment may be used as a reason for closing 'this' appointment request.

TECHNICAL DESC: This is a date/time of the scheduled appointment related to this entry.

409.85,13.1 DATE APPT. MADE SDAPT;1 DATE

INPUT TRANSFORM:  S %DT="EX" D ^%DT S X=Y K:Y<1 X

LAST EDITED: APR 18, 2015

HELP-PROMPT: Enter the date that the appointment was made.

DESCRIPTION: This is the date the appointment was created.

TECHNICAL DESC: The Appointment Creation Date. It corresponds to the DATE APPT. MADE field (#20) of the APPOINTMENT multiple (#1900) in the PATIENT file (#2).

409.85,13.2 APPT CLINIC SDAPT;2 POINTER TO HOSPITAL LOCATION FILE (#44)

LAST EDITED: APR 18, 2015

HELP-PROMPT: Select the clinic that this appointment is scheduled for.

DESCRIPTION: This is the clinic this appointment was created for.

TECHNICAL DESC: Pointer to the HOSPITAL LOCATION file (#44) of the related appointment.

409.85,13.3 APPT INSTITUTION SDAPT;3 POINTER TO INSTITUTION FILE (#4)

LAST EDITED: APR 18, 2015

HELP-PROMPT: Select an Institution.

DESCRIPTION: This is the institution the clinic appointment belongs to.
TECHNICAL DESCR: A pointer from the HOSPITAL LOCATION file of the scheduled appointment to the INSTITUTION file (#4).

409.85,13.4 APPT STOP CODE SDAPT;4 POINTER TO CLINIC STOP FILE (#40.7)
LAST EDITED: APR 18, 2015
HELP-PROMPT: Select a CLINIC STOP code.
DESCRIPTION: This is the stop code/specialty of a clinic associated with the patient appointment. This may be different that the STOP CODE defined in the REQ SERVICE/SPECIALTY field.

TECHNICAL DESCR: This is the primary STOP CODE Number pointer to the CLINIC STOP file (#40.7).

409.85,13.5 APPT CREDIT STOP CODE SDAPT;5 POINTER TO CLINIC STOP FILE (#40.7)
LAST EDITED: APR 18, 2015
HELP-PROMPT: Select a CLINIC STOP code.
DESCRIPTION: This is the credit stop code optionally assigned to the HOSPITAL LOCATION file associated with the scheduled appointment.

TECHNICAL DESCR: This is the secondary (optional) Stop Code Number pointer to the CLINIC STOP file (#40.7). This stop code is assigned to the HOSPITAL LOCATION file associated with the scheduled appointment.

409.85,13.6 APPT STATION NUMBER SDAPT;6 FREE TEXT
INPUT TRANSFORM: K:SL(X)>6!(SL(X)<3) X
LAST EDITED: APR 18, 2015
HELP-PROMPT: Answer must be 3-6 characters in length.
DESCRIPTION: This is the 3-digit station number assigned to the facility plus up to 3 optional modifiers.

TECHNICAL DESCR: This is the STATION NUMBER field (#99) of the INSTITUTION file (#4) associated with the scheduled appointment.

409.85,13.7 APPT CLERK SDAPT;7 POINTER TO NEW PERSON FILE (#200)
LAST EDITED: APR 18, 2015
HELP-PROMPT: Select an Appt Clerk
DESCRIPTION: This is the person who assigned the appointment to the REQUEST entry.

TECHNICAL DESCR: This is a pointer to the NEW PERSON file, and it represents a person who entered the scheduled appointment into the Appointment Request.

409.85,13.8 APPT STATUS SDAPT;8 SET 'R' FOR Scheduled/Kept; 'I' FOR Inpatient; 'NS' FOR No-Show; 'NSR' FOR No_Show, Rescheduled; 'CP' FOR Canceled by Patient; 'CPR' FOR Canceled by Patient, Rescheduled; 'CC' FOR Canceled by Clinic; 'CCR' FOR Canceled by Clinic, Rescheduled; 'NT' FOR No Action Taken;
HELP-PROMPT: Select an Appt Status
DESCRIPTION: This field identifies the status of the appointment that is associated with this appointment request.

409.85.14 SERVICE CONNECTED PERCENTAGE SC;1 NUMBER
INPUT TRANSFORM: K:+X'=X!(X>100)!(X<0)!(X?.E1"."1N.N) X
LAST EDITED: APR 18, 2015
HELP-PROMPT: Type a number between 0 and 100, 0 decimal digits.
DESCRIPTION: The SERVICE CONNECTED PERCENTAGE is used to determine the service-connected priority.

409.85.15 SERVICE CONNECTED PRIORITY SC;2 SET '0' FOR NO; '1' FOR YES;
LAST EDITED: APR 18, 2015
HELP-PROMPT: Enter 0 or NO if the appointment does not get a Service-Connected Priority. Enter 1 or YES if the appointment DOES get a Service-Connected Priority.
DESCRIPTION: This field represents whether the appointment has a Service-Connected Priority.

RECORD INDEXES: GSB (#1951)

409.85.19 DATE DISPOSITIONED DIS;1 DATE
INPUT TRANSFORM: S %DT="EX" D ^%DT S X=Y K:Y<1 X
LAST EDITED: APR 23, 2015
HELP-PROMPT: Enter a date.
DESCRIPTION: This represents the date that the patient is dispositioned from the Appointment Request list.

409.85.20 DISPOSITIONED BY DIS;2 POINTER TO NEW PERSON FILE (#200)
LAST EDITED: APR 18, 2015
HELP-PROMPT: Select a user/provider
DESCRIPTION: This represents the user who dispositioned the patient from the appointment request list.

409.85.21 DISPOSITION DIS;3 SET 'D' FOR DEATH; 'NC' FOR REMOVED/NON-VA CARE; 'SA' FOR REMOVED/SCHEDULED-ASSIGNED; 'CC' FOR REMOVED/VA CONTRACT CARE; 'NN' FOR REMOVED/NO LONGER NECESSARY; 'ER' FOR ENTERED IN ERROR; 'TR' FOR TRANSFERRED TO EWL; 'CL' FOR CHANGED CLINIC; 'MC' FOR MRTC PARENT CLOSED;
LAST EDITED: JAN 05, 2016
HELP-PROMPT: Select a disposition
DESCRIPTION: This field represents the reason this patient has been dispositioned from this appointment Request.

409.85.21.1 DISPOSITION CLOSED BY CLEANUP DIS:4 SET 'Y' FOR YES; 'N' FOR NO;
LAST EDITED: DEC 07, 2016
HELP-PROMPT: Enter Yes if Disposition was due to Open Request being Closed with Cleanup Utility. Otherwise enter No.

DESCRIPTION: Enter Yes if Disposition is related to Open Request becoming Closed due to the running of Cleanup Utility. Otherwise enter No.

409.85.22 CID/PREFERRED DATE OF APPT 0;16 DATE (Required) (audited)
INPUT TRANSFORM:  S %DT="EX" D ^%DT S X=Y K:Y<1 X
LAST EDITED: APR 23, 2015
HELP-PROMPT: Enter the CID/Preferred Date of this appointment.
DESCRIPTION: This CID/PREFERRED DATE OF APPT field represents the date that the patient or provider has requested for the appointment. If the priority is ASAP, this is the date the patient is placed on the REQUEST List (SCHEDULING). If the priority is FUTURE, the user enters the date that the patient/provider is requesting that the appointment is to be scheduled.
AUDIT: YES, ALWAYS
RECORD INDEXES: GCC (#1953), GSC (#1948)

409.85.23 CURRENT STATUS 0;17 SET (audited) 'O' FOR OPEN; 'C' FOR CLOSED;
LAST EDITED: DEC 08, 2016
HELP-PROMPT: Enter O or OPEN if the APPT Request entry is open. Enter C or CLOSED if the APPT Request entry is closed.
DESCRIPTION: This field represents the current status of this appointment request. If the APPT Request entry is dispositioned, the status = CLOSED, otherwise, the APPT Request entry status = OPEN.
AUDIT: YES, ALWAYS
RECORD INDEXES: E (#1662)

409.85.25 COMMENTS 0;18 FREE TEXT (audited)
INPUT TRANSFORM:  K:$L(X)>80!($L(X)<1) X
LAST EDITED: NOV 02, 2016
HELP-PROMPT: Answer must be 1-80 characters in length.
DESCRIPTION: This Free Text field represents information related to the appointment request. Example: see progress note date 5/01/02 this would direct the scheduling clerk to a note that may contain lab, x-ray orders that need to be completed prior to the appointment.
AUDIT: YES, ALWAYS

409.85.41 MULTIPLE APPOINTMENT RTC 3;1 SET '0' FOR NO; '1' FOR YES;
HELP-PROMPT: Select 1 or YES if multiple appointments are needed. Select 0 or NO if multiple appointments are not needed.

DESCRIPTION: This field represents that Multiple Appointments need to be made. If set to NO (0 zero), Multiple Appointment (Return to Clinic) are not scheduled. If set to YES (1), Multiple Appointment (Return to Clinic) could be scheduled.

409.85,42 MULT APPT RTC INTERVAL 3;2 NUMBER

HELP-PROMPT: Type a number between 0 and 365, 0 decimal digits.

DESCRIPTION: The MULT APPT RTC INTERVAL represents the number of Days between appointments.

409.85,43 MULT APPT NUMBER 3;3 NUMBER

HELP-PROMPT: Type a number between 0 and 100, 0 decimal digits.

DESCRIPTION: This field represents the number of appointments that may be needed.

409.85,43.3 MULT APPTS MADE 2;0 POINTER Multiple #409.852

DESCRIPTION: These are the MRTC Appointments that have been made for this appointment request.

TECHNICAL DESCR: These appointments are pointers to the SDEC APPOINTMENT file 409.84.

409.852,.01 CHILD REQUEST 0;1 POINTER TO SDEC APPT REQUEST FILE (#409.85) (Multiply asked)

HELP-PROMPT: Select an appointment request.

DESCRIPTION: This field represents a 'Child' appointment request.

TECHNICAL DESCR: Pointer to the SDEC APPT REQUEST file 409.85.

CROSS-REFERENCE: 409.852^B

1)= S ^SDEC(409.85,DA(1),2,"B",$E(X,1,30),DA)="

3.7. Exported Options

Table 14 lists exported options and their descriptions.

<table>
<thead>
<tr>
<th>Option Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>CS Dashboard Data Compile [SDEC REPORT DATA]</td>
<td>This option allows scheduling administrators to initiate the Clinical Scheduling (CS) Resource Management Report data compilation. This option is scheduled to run every 24 hours at 1:00am to ensure data is collected daily.</td>
</tr>
<tr>
<td>Add/Edit CS Resource Management Stop Codes [SDEC ADD CLINIC STOP CODES]</td>
<td>This option allows CS administrators to activate or deactivate Clinic Stop Codes related to the report types displayed in the CS Resource Management Report.</td>
</tr>
<tr>
<td>View CS Resource Management Clinics [SDEC VIEW CS CLINICS]</td>
<td>This option displays a list of clinic hospital locations that have a Primary Stop code that matches a CS Resource Management Stop Code.</td>
</tr>
<tr>
<td>View CS Clinic Stop Codes [SDEC VIEW CS STOP CODES]</td>
<td>This option displays the Clinic Stop Codes configured for the CS Resource Management Report.</td>
</tr>
<tr>
<td>CLINICAL SCHEDULING PROCEDURE CALLS [SDECRPC]</td>
<td>This option hosts RPCs in the SDEC namespace. Access to this option is required for use.</td>
</tr>
<tr>
<td>Option Name</td>
<td>Description</td>
</tr>
<tr>
<td>------------------------------------------------</td>
<td>---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Refresh SDEC Index Global</td>
<td>This option prepares the ^XTMP(&quot;SDEC&quot;,&quot;IDX&quot; global and should be scheduled to run at 2:00am daily.</td>
</tr>
<tr>
<td>SDEC INITIAL CLEANUP UTILITY</td>
<td>This utility will allow the VistA user to run a cleanup of erroneous SDEC APPT REQUEST entries currently in an open status and associated with a cancellation in the corresponding SDEC APPOINTMENT entry. These entries can be committed to a closed status.</td>
</tr>
<tr>
<td>SDEC REQ REOPENED BY SDCANCEL</td>
<td>This option provides a report of requests reopened by SDCANCEL. The patient name, patient social security number (SSN), patient telephone number, and APPT Clinically Indicated Date (CID)/preferred date are listed on the report, by clinic.</td>
</tr>
</tbody>
</table>

3.8. **Parameter Definitions**

*Table 15* lists parameters and their descriptions.

<table>
<thead>
<tr>
<th>Parameter Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SDEC DEFAULT FONT SIZE</td>
<td>Font size for VistA Scheduling letters.</td>
</tr>
<tr>
<td>SDEC REQ MGR GRID FILTER</td>
<td>Scheduling Request Manager Grid Filter.</td>
</tr>
<tr>
<td>SDEC MENTAL HEALTH STOP CODES</td>
<td>Identifies stop codes related to the Mental Health report type for Resource Management Reporting.</td>
</tr>
<tr>
<td>SDEC PRIMARY CARE STOP CODES</td>
<td>Identifies stop codes related to the Primary Care report type for Resource Management Reporting.</td>
</tr>
<tr>
<td>SDEC SPECIALTY CARE STOP CODES</td>
<td>Identifies stop codes related to the Specialty Care report type for Resource Management Reporting.</td>
</tr>
<tr>
<td>SDEC DEFAULT FONT SIZE</td>
<td>Saves the preferred default font size for VistA Scheduling letters.</td>
</tr>
<tr>
<td>SDEC REQ MGR GRID FILTER</td>
<td>Holds the filter preference set for the Request Manager Grid.</td>
</tr>
</tbody>
</table>

3.9. **Security Keys**

*Table 16* details exported security keys with their descriptions.

<table>
<thead>
<tr>
<th>Key Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>SDECVIEW</td>
<td>VistA Scheduling GUI users with this key will have view-only access.</td>
</tr>
<tr>
<td>SDECZMENUS</td>
<td>All Windows Scheduling users must have this key to access the application.</td>
</tr>
</tbody>
</table>
### Key Name | Description
--- | ---
SDECMGR | This key should be assigned to users who manage the overall scheduling application. This key gives access to the Scheduling Management menu option on the VS GUI’s System tab.
SDOB | This key authorizes the ability to overbook the clinic to the maximum allowed, as defined in clinic setup.
SDMOB | This key authorizes the ability to overbook in the clinic over the maximum allowed, as defined in clinic setup.
SDWL MENU | If the user does not have this key assigned, they cannot enter a new wait list request (right-click option Transfer to EWL from an open APPT request) or perform a disposition (right-click option for EWL Disposition) of an EWL request.

#### 3.10. Archiving and Purging
There is neither archiving nor purging in this module.

#### 4. Generating Online Documentation
This section describes the methods to generate VS GUI system technical documentation. VS GUI technical documentation can be generated through the use of several Kernel options, in addition to that which may be accessed via the Help prompts throughout the VS GUI module. Such Kernel options include, but are not limited to, the following:

- %INDEX
- VA FileMan
- Data Dictionary Utilities
- List File Attributes

For further information about the other utilities that supply online technical information, consult the VistA Kernel reference manual.

##### 4.1. %Index
This option analyzes the structure of a routine to determine, in part, if the routine adheres to VistA programming standards. The %INDEX output can include the following components:

Compiled list of errors and warnings

- Routine listing
- Local variables
- Global variables
- Naked globals
- Label references
- External references
Running \%INDEX for a specified set of routines allows users to discover any deviations from VistA programming standards that exist in the selected routines, and to see how routines interact with one another, for example, which routines call, or are called by, other routines.

4.2. List File Attributes

The VA FileMan option allows users to generate documentation pertaining to files and file structure. Using the standard format of this option yields the following Data Dictionary (DD) information for a specified file:

- File name and description
- Identifiers
- Cross-references
- Files pointed to by the file specified
- Files that point to the file specified
- Input, print, and sort templates

In addition, the following data is supplied for each field in the file:

- Field name, number, title, and description
- Global location
- Help prompt
- Cross-references
- Input transform
- Date last edited
- Notes

Using the global map format of this option generates an output that lists:

- All cross-references for the file selected
- Global location of each field in the file
- Input, print, and sort templates

4.3. Standards and Conventions, Requirements and Exemptions

There are no exemptions to the Standards and Conventions (SAC) standards for this version.

4.4. Callable Routines

There are no callable routines applicable to this version.
A. Appendix 1: Acronyms and Abbreviations

Table 17 lists the acronyms and abbreviations used throughout this document, with their definitions.

<table>
<thead>
<tr>
<th>Acronym/Term</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANSI</td>
<td>American National Standards Institute</td>
</tr>
<tr>
<td>APPT</td>
<td>Appointment</td>
</tr>
<tr>
<td>Archiving</td>
<td>The storing of historical or little used data off-line (often on tape)</td>
</tr>
<tr>
<td>ASCII</td>
<td>American Standard Code for Information Interchange</td>
</tr>
<tr>
<td>Banner</td>
<td>A line of text with a user’s name and domain</td>
</tr>
<tr>
<td>Browser</td>
<td>An interactive application that displays ASCII text on a terminal that supports a scroll region; text can be in the form of a word-processing field or sequential local or global array and the user is allowed to navigate freely within the document</td>
</tr>
<tr>
<td>Callable Entry Points</td>
<td>Places in a routine that can be called from an application program</td>
</tr>
<tr>
<td>CID</td>
<td>Clinically Indicated Date</td>
</tr>
<tr>
<td>CIT</td>
<td>Component Integration Testing</td>
</tr>
<tr>
<td>Cross-reference</td>
<td>An indexing method whereby files can include pre-sorted lists of entries as part of the stored database; cross-references (x-refs) facilitate look-up and reporting</td>
</tr>
<tr>
<td>CS</td>
<td>Clinical Scheduling</td>
</tr>
<tr>
<td>Default Facility</td>
<td>A user selects a facility identification to work with patients registered to that facility</td>
</tr>
<tr>
<td>Dev</td>
<td>Developer</td>
</tr>
<tr>
<td>Entry Point</td>
<td>Entry point within a routine that is referenced by a “DO” or “GOTO” command from a routine internal to a package</td>
</tr>
<tr>
<td>EWL</td>
<td>Electronic Wait List</td>
</tr>
<tr>
<td>File</td>
<td>A set of related records or entries treated as a single unit</td>
</tr>
<tr>
<td>FileMan</td>
<td>The database management system for VistA</td>
</tr>
<tr>
<td>GB</td>
<td>Gigabyte</td>
</tr>
<tr>
<td>Global</td>
<td>In Massachusetts General Hospital Utility Multi-Programming System (MUMPS), global refers to a variable stored on disk (global variable) or the array to which the global variable may belong (global array)</td>
</tr>
<tr>
<td>GUI</td>
<td>Graphical User Interface</td>
</tr>
<tr>
<td>INDEX (%)INDEX</td>
<td>A Kernel utility used to verify routines and other MUMPS code associated with a package; checking is done according to current American National Standards Institute (ANSI) MUMPS standards and VistA programming standards – this tool can be invoked through an option or from direct mode (&gt;D^%INDEX)</td>
</tr>
<tr>
<td>Init</td>
<td>Initialization of an application package; the initialization step in the installation process builds files from a set of routines (the init routines)</td>
</tr>
<tr>
<td>Acronym/Term</td>
<td>Description</td>
</tr>
<tr>
<td>-------------</td>
<td>-------------</td>
</tr>
<tr>
<td>IEN</td>
<td>Internal Entry Number: The number used to identify an entry within a file; every record has a unique IEN</td>
</tr>
<tr>
<td>IOC</td>
<td>Initial Operating Capability</td>
</tr>
<tr>
<td>IP</td>
<td>Internet Protocol</td>
</tr>
<tr>
<td>Kernel</td>
<td>The set of MUMPS software utilities that function as an intermediary between the host operating system and application packages, such as Laboratory and Pharmacy; Kernel provides a standard and consistent user and programmer interface between application packages and the underlying MUMPS implementation – these utilities provide the foundation for VistA</td>
</tr>
<tr>
<td>KIDS</td>
<td>Kernel Installation and Distribution System</td>
</tr>
<tr>
<td>Menu</td>
<td>A list of choices for computing activity; a menu is a type of option designed to identify a series of items (other options) for presentation to the user for selection – when displayed, menu options are preceded by the word “select” and followed by the word “option” (as in: select Menu Management option, the menu’s select prompt)</td>
</tr>
<tr>
<td>MS</td>
<td>Microsoft</td>
</tr>
<tr>
<td>MUMPS</td>
<td>Massachusetts General Hospital Utility Multi-Programming System</td>
</tr>
<tr>
<td>Namespace</td>
<td>A unique set of two to four alpha characters that are assigned by the database administrator to a software application</td>
</tr>
<tr>
<td>Option</td>
<td>An entry in the Option file; as an item on a menu, an option provides an opportunity for users to select it, thereby invoking the associated computing activity – options may also be scheduled to run in the background, non-interactively, by TaskMan</td>
</tr>
<tr>
<td>PIMS</td>
<td>Patient Information Management System</td>
</tr>
<tr>
<td>Queuing</td>
<td>Requesting that a job be processed at a later time within the current session</td>
</tr>
<tr>
<td>RAM</td>
<td>random access memory</td>
</tr>
<tr>
<td>RPC</td>
<td>Remote Procedure Call: An entry in the REMOTE PROCEDURE file that points to specific M code to execute when called by an external Windows application</td>
</tr>
<tr>
<td>Routine</td>
<td>A program or sequence of instructions called by a program that may have some general or frequent use; MUMPS routines are groups of program lines that are saved, loaded, and called as a single unit via a specific name</td>
</tr>
<tr>
<td>SAC</td>
<td>Standards and Conventions</td>
</tr>
<tr>
<td>SQA</td>
<td>Software Quality Assurance</td>
</tr>
<tr>
<td>SSN</td>
<td>Social Security Number</td>
</tr>
<tr>
<td>TW</td>
<td>Technical Writer</td>
</tr>
<tr>
<td>UCI</td>
<td>User Class Identification: A computing area</td>
</tr>
<tr>
<td>Up-Hat (^)</td>
<td>A circumflex, also known as a “hat” (or “caret”) that is used as a piece delimiter in a global; the up-hat is denoted as “^” and is typed by pressing Shift + 6 on the keyboard</td>
</tr>
<tr>
<td>Utility</td>
<td>A callable routine line tag or function; a universal routine usable by anyone</td>
</tr>
<tr>
<td>VA</td>
<td>Department of Veterans Affairs</td>
</tr>
<tr>
<td>Acronym/Term</td>
<td>Description</td>
</tr>
<tr>
<td>--------------</td>
<td>-------------</td>
</tr>
<tr>
<td>Variable</td>
<td>A character or group of characters that refers to a value. MUMPS recognizes three types of variables: local variables, global variables and special variables. Local variables exist in a partition of the main memory and disappear at sign off. A global variable is stored on disk, potentially available to any user, and usually exist as parts of global arrays. Special variables are defined by MUMPS and are used within the symbol table.</td>
</tr>
<tr>
<td>VistA</td>
