## Revision History

Each time this manual is updated, the Title Page lists the new revised date and this page describes the changes. If the Revised Pages column lists “All,” replace the existing manual with the reissued manual. If the Revised Pages column lists individual entries (e.g., 25, 32), either update the existing manual with the Change Pages Document or print the entire new manual.

Using Screen Server

This section provides information about using the Screen Server utility with the Surgery software.

Introduction

Screen Server is a screen-based data entry utility. It allows the user to display and select data elements for entering, editing, and deleting information. The format is designed to display a number of data fields at one time on a menu. With Screen Server, a number of data elements are displayed at one time on a menu and the user is able to choose on which element to work.

This section contains a description of the Screen Server format and gives examples of how to respond to the unique Screen Server prompts. The screen facsimiles used in the examples are taken from the Surgery software; however, these screens may not display on the terminal monitor exactly as they display in this manual, because the Surgery package is subject to enhancements and local modifications. In this document, the different ways to respond to the Screen Server prompt, to perform a task, and to utilize shortcuts are explained. The shortcuts are listed below:

- Enter data
- Edit data
- Move between pages
- Enter/edit a range of data elements
- Multiples
- Multiple screen shortcuts
- Word processing

The user should be familiar with VistA conventions. In the examples, the user’s response is presented in bold face text.

Navigating

The user can press the Return key to move through a prompt and go to the next page or item. To return directly to the Surgery Menu options, the user can enter an up-arrow (^), unless he or she is in a multiple field. To exit a multiple field, enter two up-arrows (^^).
Basics of Screen Server

Each Screen Server arrangement consists of three basic parts: a header, data elements, and an action prompt. These items are defined in the following table.

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Header</td>
<td>The screen heading contains information specific to the record with which you are working. This can include the patient name or case number. The information in the heading is programmed and cannot be easily changed.</td>
</tr>
<tr>
<td>Data Elements</td>
<td>Each Screen Server display contains from 1 to 15 data elements (or fields). If information has been entered for any of the data elements defined, it will display to the right of the element. Some data elements are multiple fields, meaning they can contain more than one piece of information. These multiple fields are distinguished by the word &quot;Multiple&quot; next to the data element. If the multiple field contains information, the word &quot;Data&quot; will be next to the data element.</td>
</tr>
<tr>
<td>Prompt</td>
<td>The action prompt is at the bottom of each screen. From the prompt &quot;Enter Screen Server Functions:&quot; you can enter, edit, or delete information from the data elements. The possible responses to this prompt are explained in more detail on the following pages. Enter a question mark (?), for help text with possible prompt responses.</td>
</tr>
</tbody>
</table>

The following is an example of a Screen Server display with help text.

Example: Screen Server with On-line Help Text

```
** SHORT SCREEN **   CASE #16  SURPATIENT,ONE         PAGE 1 OF 3
1          DATE OF OPERATION:     AUG 01, 2006
2          IN/OUT-PATIENT STATUS: OUTPATIENT
3           SURGEON:               SURSURGEON,ONE
4         PRINCIPAL PRE-OP DIAGNOSIS: BENIGN LESIONS ON NOSE
5            PRIN PRE-OP ICD DIAGNOSIS CODE:
6            OTHER PREOP DIAGNOSIS: (MULTIPLE)
7            PRINCIPAL PROCEDURE: REMOVE FACIAL LESIONS
8            PLANNED PRIN PROCEDURE CODE:
9            OTHER PROCEDURES: (MULTIPLE)
10       HAIR REMOVAL BY:
11           HAIR REMOVAL METHOD:
12          HAIR REMOVAL COMMENTS: (WORD PROCESSING)
13       TIME PAT IN OR:
14           TIME OPERATION BEGAN:
15       TIME OPERATION ENDS:

Enter Screen Server Function: ?
To change entries, enter your choices (numbers) separated by a ';', or use a ':' for ranges. i.e. 2;3 or 1:3. Enter 'A' to enter/edit all.

If there is more than one page to this screen, entering a '+' or '-' followed by the number of pages or entering 'F' followed by the page number will take you to the desired page.

Enter '^' to quit, or '^^' to return to the menu option.
```
** Entering Data **

To enter or edit data, the user can type the item number corresponding with the data element for which he/she is entering information and press the <Enter> key. In the following example, we typed the number 10 at the prompt and pressed the <Enter> key. A new prompt appeared allowing us to enter the data. The software immediately processed this information and produced an updated menu screen and another action prompt.

```
** SHORT SCREEN **   CASE #16  SURPATIENT,ONE         PAGE 1 OF 3

**Editing Data**

Changing an existing entry is similar to entering. Once again, the user can type in the number for the data element he/she wants to change and press `<Enter>`. In the following example, the number 3 was entered to change the surgeon name. A new prompt appeared containing the existing value for the data element in a default format. We entered the new value, “SURSURGEON,TWO.” The software immediately processed this information and produced an updated screen.

The software processes the information and produces an update.

**Turning Pages**

No more than 15 data elements will fit on a single Screen Server formatted page, but there can be as many pages as needed. Because many screens contain more than one page of data elements, the screen server provides the ability to move between the pages. Pages are numbered in the heading. To go back one page, enter minus one (-1) at the action prompt. To go forward, enter plus one (+1) or press `<Enter>`. The user can move more than one page by combining the minus or plus sign with the number of pages needed to go backward or forward.
**Entering or Editing a Range of Data Elements**

Colons and semicolons are used as delineators for ranges of item numbers. This allows the user to respond to two or more data elements on the same page of a screen at one time. Typing a colon and/or semicolon between the item numbers at the prompt tells the software what elements to display for editing.

Colons are used when the user wants to respond to all numbers within a sequence (for example, 2:5 means items 2, 3, 4, and 5). Semicolons are used to separate the item numbers for non-sequential items (e.g., 2;5;9;11 means items 2, 5, 9 and 11). To respond to all the data elements on the page, enter “A” for all.

**Example 1: Colon**

Working with Multiples

The notation MULTIPLE indicates a data element that can have more than one answer. Some multiple fields have several layers of screens from which to respond. Navigating through the layers may seem tedious at first, but the user will soon develop speed. Remember, the user can press `<Enter>` at the prompt to go back to the main menu screen, or enter an up-arrow (↑) to go back to the previous screen.

In the following examples, there are other screens after the initial (also called top-level) screen. With the multiple screens, a new menu list is built with each entry.

Example: Multiples

```
** OPERATION **   CASE #14  SURPATIENT,THREE            PAGE 1 OF 3
1    TIME PAT IN HOLD AREA: AUG 15, 2001 AT 740
2    TIME PAT IN OR:        AUG 15, 2001 AT 800
3    ANES CARE TIME BLOCK:  (MULTIPLE)(DATA)
4    TIME OPERATION BEGAN:  AUG 15, 2001 AT 900
5    SPECIMENS:            (WORD PROCESSING)
6    CULTURES:              (WORD PROCESSING)
7    THERMAL UNIT:          (MULTIPLE)
8    ELECTROCAUTERY UNIT:   
9    ESU COAG RANGE:        
10   ESU CUTTING RANGE:     
11   TIME Tourniquet Applied: (MULTIPLE)
12   PROSTHESIS INSTALLED:  (MULTIPLE)(DATA)
13   REPLACEMENT FLUID TYPE: (MULTIPLE)
14   IRRIGATION:            (MULTIPLE)
15   MEDICATIONS:           (MULTIPLE)
```

Enter Screen Server Function: 12

```
** OPERATION **   CASE #14  SURPATIENT,THREE            PAGE 1
PROSTHESIS INSTALLED
1    NEW ENTRY
```

Enter Screen Server Function: 1

Select PROSTHESIS INSTALLED PROSTHESIS ITEM: MANDIBULAR PLATES
PROSTHESIS INSTALLED ITEM: MANDIBULAR PLATES/// <Enter>

Notice the three user responses entered above. The first response, 12, told the software that we want to enter data in the PROSTHESIS INSTALLED field. Then, at the next screen, we entered "1" because we wanted to make a new prosthesis entry for this case. The third response, MANDIBULAR PLATES, told the software the kind of prosthesis being installed. The software echoed back the full prosthesis name "MANDIBULAR PLATES" and we accepted it by pressing <Enter>.  

10 Surgery V. 3.0 User Manual March 2012
SR*3*176
Because the PROSTHESIS INSTALLED field can contain multiple answers, a new screen immediately appeared as follows:

```
** OPERATION **   CASE #14  SURPATIENT,THREE            PAGE 1
PROSTHESIS INSTALLED  (MANDIBULAR PLATES)
1  PROSTHESIS ITEM:  MANDIBULAR PLATES
2  IMPLANT STERILITY CHECKED: YES
3  STERILITY EXPIRATION DATE: JAN 30, 2007
4  RN VERIFIER:  SURNURSE,ONE
5  VENDOR:  SYNTHES
6  MODEL:  MAXILLOFACIAL
7  LOT NUMBER:  #20-15
8  SERIAL NUMBER:  612A874
9  STERILE RESP:  SPD
10  SIZE:  10 HOLE
11  QUANTITY:  20
```

The first response, 2:10, corresponds to data elements 2 through 10. We entered data for these elements one-by-one and the software processed the information and produced this update:

```
** OPERATION **   CASE #14  SURPATIENT,THREE            PAGE 1 OF 1
PROSTHESIS INSTALLED  (MANDIBULAR PLATES)
1  PROSTHESIS ITEM:  MANDIBULAR PLATES
2  IMPLANT STERILITY CHECKED: YES
3  STERILITY EXPIRATION DATE: JAN 30, 2007
4  RN VERIFIER:  SURNURSE,ONE
5  VENDOR:  SYNTHES
6  MODEL:  MAXILLOFACIAL
7  LOT NUMBER:  #20-15
8  SERIAL NUMBER:  612A874
9  STERILE RESP:  SPD
10  SIZE:  10 HOLE
11  QUANTITY:  20
```

Pressing `<Enter>` will now bring back the top-level screen and allow us to make another entry. As many as 15 prostheses can be added to this list. If we were to add more prostheses, the N and R shortcuts discussed on the next two pages would come in handy, but it is a good idea to practice the steps just covered before attempting the shortcuts.
Multiple Screen Shortcuts

The help text for a multiple field mentions the N and R functions. The user can enter a question mark (?) to view the help text at the prompt, as displayed in the following example.

```
** OPERATION **   CASE #14  SURPATIENT,THREE            PAGE 1 OF 1  
PROSTHESIS INSTALLED
1    PROSTHESIS ITEM:    MANDIBULAR PLATES
2    NEW ENTRY

Enter Screen Server Function:  ?
Enter 2N to enter only the top level of this multiple, or the number of your choice followed by an 'R' to make a duplicate entry.

Press <RET> to continue
```

N Function

The N function allows the user to enter new entries without going beyond the top level screen, whereas the R function allows the user to repeat a previous top level response. In the following example we will build entries by entering the data element number and the letter N:

```
** OPERATION **   CASE #14  SURPATIENT,THREE            PAGE 1 OF 1  
PROSTHESIS INSTALLED
1    MANDIBULAR PLATES
2    NEW ENTRY

Enter Screen Server Function:  2N
Select PROSTHESIS INSTALLED PROSTHESIS ITEM: GLENOID COMPONENT
   PROSTHESIS INSTALLED ITEM: GLENOID COMPONENT// <Enter>
Select PROSTHESIS INSTALLED PROSTHESIS ITEM: HUMERAL COMPONENT
   PROSTHESIS INSTALLED ITEM: HUMERAL COMPONENT// <Enter>
Select PROSTHESIS INSTALLED PROSTHESIS ITEM: INTRAMEDULLARY PLUG
   PROSTHESIS INSTALLED ITEM: INTRAMEDULLARY PLUG// <Enter>
Select PROSTHESIS INSTALLED PROSTHESIS ITEM: <Enter>

The software processes the information and produces an update.

```
** OPERATION **   CASE #14  SURPATIENT,THREE            PAGE 1 OF 1  
PROSTHESIS INSTALLED
1    PROSTHESIS ITEM:    MANDIBULAR PLATES
2    PROSTHESIS ITEM:    GLENOID COMPONENT
3    PROSTHESIS ITEM:    HUMERAL COMPONENT
4    PROSTHESIS ITEM:    INTRAMEDULLARY PLUG
5    NEW ENTRY

Enter Screen Server Function: <Enter>
```

R Function

The R function saves the user from typing in the top-level information again. In this example, we have the same anesthesia technique but different anesthesia agents. By entering the element number we want to repeat, and the letter R, we avoid having to enter the top-level data again. This feature can also be useful in cases where the same medication is repeated at different times. After the user enters the item and the letter R, the software responds with a default prompt. The user can press <Enter> to accept the default.
Cancel Scheduled Operation
[SRSCAN]

When a scheduled operation is cancelled, the Cancel Scheduled Operation option will remove that case from the list of scheduled operations. A cancellation will remain in the system as a cancelled case and will be used in computing the facility’s cancellation rate.

Enter the patient name and select the operation to be deleted from the choices listed. The "Cancellation Reason:" prompt is a mandatory prompt. Enter a question mark for a list of cancellation reasons from which to select. If a mistake is made, or the user finds out later that the cancellation reason was not correct, the Update Cancellation Reason option allows the cancellation reason to be edited.

If there is a concurrent case associated with the operation being cancelled, the software will ask if the user wants to cancel it also.

Example 1: Cancel a Single Scheduled Operation

Select Schedule Operations Option: C Cancel Scheduled Operation

Cancel a Scheduled Procedure for which Patient: SURPATIENT,NINETEEN 01-01-40
000287354 YES SC VETERAN

Cancellation Reason: LAB TEST// EM EMERGENCY CASE SUPERSEDES EM

Cancellation Avoidable: NO// <Enter>

Press RETURN to continue <Enter>
Schedule Anesthesia Personnel
[SRSCHDA]

The Schedule Anesthesia Personnel option allows anesthesia staff to assign, or change, anesthesia personnel for surgery cases. The scheduling manager may have already assigned some personnel to a case using other menu selections. For the user’s convenience, the software will default to any previously entered data.

This option is locked with the SROANES key and will not appear on the menu if the user does not have this key.

This option is used to enter the names of the principal anesthetist, the supervisor, and anesthesia techniques for cases scheduled on a specific date. The user should first enter the date, and then select an operating room. The software will display all cases scheduled in that room. After scheduling personnel for any or all cases in one operating room, the user can do the same for other operating rooms without leaving this option.

This option also appears on the Anesthesia menu.

Example: Schedule Anesthesia Personnel

Select Schedule Operations Option: AN  Schedule Anesthesia Personnel

Schedule Anesthesia Personnel for which Date ?  8/16  (AUG 16, 1999)

Schedule Anesthesia Personnel for which Operating Room ?  OR2

Scheduled Operations for OR2

Nurse Intraoperative Report  
[SRONRPT]

The Nurse Intraoperative Report details case information relating to nursing care provided for the patient during the operative case selected. This option provides the capability to view and print the report, edit information contained in the report, and electronically sign the report.

With the Surgery Site Parameters option located on the Surgery Package Management Menu, the user can select one of two different formats for this report. One format includes all field names whether or not information has been entered. The other format only includes fields that have actual data.

Electronically signed reports may be viewed through CPRS for completed operations.

Nurse Intraoperative Report - Before Electronic Signature

Upon selecting the Nurse Intraoperative Report option, if the Nurse Intraoperative Report is not signed, the report will begin displaying on the screen. The Nurse Intraoperative Report displays key fields on the first page. Several of these fields are required before the software will allow the user to electronically sign the report. If any required fields are left blank, a warning will appear prompting the user to provide the missing information.

The following fields are required before electronic signature of the Nurse Intraoperative Report:

- TIME PAT IN OR
- HAIR REMOVAL METHOD
- CORRECT PATIENT IDENTITY
- SITE OF PROCEDURE
- CONFIRM PATIENT POSITION
- ANTIBIOTIC PROPHYLAXIS
- BLOOD AVAILABILITY
- CHECKLIST COMMENT
- MARKED SITE CONFIRMED
- PREOPERATIVE IMAGING CONFIRMED
- PROCEDURE TO BE PERFORMED
- VALID CONSENT FORM
- CORRECT MEDICAL IMPLANTS
- APPROPRIATE DVT PROPHYLAXIS
- AVAILABILITY OF SPECIAL EQUIP

If the COUNT VERIFIER field has been entered, the following fields are required:

- SPONGE COUNT CORRECT (Y/N)
- INSTRUMENT COUNT CORRECT (Y/N)
- SHARPS COUNT CORRECT (Y/N)
- SPONGE, SHARPS, & INST COUNTER

If the PROSTHESIS INSTALLED field has an item (or items) entered, the following fields are required for each item:

- IMPLANT STERILITY CHECKED
- RN VERIFIER
- SERIAL NUMBER
- STERILITY EXPIRATION DATE
- LOT NUMBER

Entering the TIME PAT OUT OR field triggers an alert that is sent to the nurse responsible for signing the report. By acting on the alert, the nurse accesses the Nurse Intraoperative Report option to electronically sign the report.

<tr>
<td>Select number: 2//3</td>
</tr>
</tbody>
</table>

The Nurse Intraoperative Report may only be signed by a circulating nurse on the case. At the time of electronic signature, the software checks for data in key fields. The nurse will not be able to sign the report if the following fields are not entered:

- TIME PATIENT IN OR
- MARKED SITE CONFIRMED
- PREOPERATIVE IMAGING CONFIRMED
- PROCEDURE TO BE PERFORMED
- VALID CONSENT FORM
- CORRECT MEDICAL IMPLANTS
- APPROPRIATE DVT PROPHYLAXIS
- AVAILABILITY OF SPECIAL EQUIP

- TIME PATIENT OUT OF OR
- CORRECT PATIENT IDENTITY
- HAIR REMOVAL METHOD
- SITE OF THE PROCEDURE
- PATIENT POSITION
- ANTIBIOTIC PROPHYLAXIS
- BLOOD AVAILABILITY
- CHECKLIST COMMENT

If the COUNT VERIFIER field is entered, the other counts related fields must be populated. These count fields include the following:

- SPONGE COUNT CORRECT
- SHARPS COUNT CORRECT (Y/N)
- INSTRUMENT COUNT CORRECT (Y/N)
- SPONGE, SHARPS, & INST COUNTER

If the PROSTHESIS INSTALLED field has an item (or items) entered, the following fields are required for each item:

- IMPLANT STERILITY CHECKED (Y/N)
- STERILITY EXPIRATION DATE
- RN VERIFIER
- LOT NUMBER

If any of the key fields are missing, the software will require them to be entered prior to signature. In the following example, the final sponge count must be entered before the nurse is allowed to electronically sign the report.

Example: Missing Field Warning

The following information is required before this report may be signed:

- ANTIBIOTIC PROPHYLAXIS
- CHECKLIST COMMENT

**Select Occurrence Information:**
Postoperative Occurrences (Enter/Edit)
[SRO POSTOP COMP]

The Postoperative Occurrences (Enter/Edit) option is used to add information about an occurrence that occurs after the procedure. The user can also utilize this option to change the information. Occurrence information will be reflected in the Chief of Surgery's Morbidity & Mortality Report.

First, the user selects an operation. The software will then list any occurrences already entered for that operation. The user can choose to edit a previously entered occurrence or type the word NEW and press the <Enter> key to enter a new occurrence.

At the prompt "Enter a New Postoperative Complication:" the user can enter two question marks (??) to get a list of categories. Be sure to enter a category for all occurrences in order to satisfy Surgery Central Office reporting needs.

Example: Entering a Postoperative Occurrence

Select Perioperative Occurrences Menu Option: P Postoperative Occurrence (Enter/Edit)

Select Patient: SURPATIENT,SEVENTEEN 09-13-28 000455119

SURPATIENT,SEVENTEEN R. 000-45-5119
1. 04-18-07 CRANIOTOMY (COMPLETED)
2. 03-18-07 REPAIR INCARCERATED INGUINAL HERNIA (COMPLETED)

Select Operation: 2

SURPATIENT,SEVENTEEN (000-45-5119) Case #202
MAR 18,2007 REPAIR INCARCERATED INGUINAL HERNIA
------------------------------------------------------------------

There are no Postoperative Occurrences entered for this case.

Enter a New Postoperative Occurrence: ACUTE RENAL FAILURE
VASQIP Definition (2011): Indicate if the patient developed new renal failure requiring renal replacement therapy or experienced an exacerbation of preoperative renal failure requiring initiation of renal replacement therapy (not on renal replacement therapy preoperatively) within 30 days postoperatively. Renal replacement therapy is defined as venous to venous hemodialysis [CVVHD], continuous venous to arterial hemodialysis [CVAHD], peritoneal dialysis, hemofiltration, hemodiafiltration or ultrafiltration.

TIP: If the patient refuses dialysis report as an occurrence because he/she did require dialysis.

Press RETURN to continue: <Enter>
CPT/ICD Coding Menu

[SRCODING MENU]

The Surgery CPT/ICD Coding Menu option was developed to help assure access to the most accurate source documentation and to provide a means for efficient coding entry and validation. It provides coders with special, limited access to the VistA Surgery package.

From the menu, coders have ready access to the Operation Report, which is dictated by the surgeon postoperatively and contains the most comprehensive and accurate description of the procedure(s) actually performed. Coders can also view the Nurse Intraoperative Report, which is often an important supplementary source of data.

Using the same menu, coders can add and edit procedures, CPT codes, diagnoses, and International Classification of Diseases (ICD) codes, without having to rely on a paper-based system. Options are available to assist surgery staff and others who perform coding validation, as are several commonly used reports.

The Surgery CPT/ICD Coding Menu contains the following options. To the left is the shortcut synonym the user can enter to select the option:

<table>
<thead>
<tr>
<th>Shortcut</th>
<th>Option Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>EDIT CPT/ICD</td>
<td>Update/Verify Menu ...</td>
</tr>
<tr>
<td>C</td>
<td>Cumulative Report of CPT Codes</td>
</tr>
<tr>

<td>List of Operations</td>
</tr>
<tr>
<td>LS</td>
<td>List of Operations (by Surgical Specialty)</td>
</tr>
<tr>
<td>U</td>
<td>List of Undictated Operations</td>
</tr>
<tr>
<td>D</td>
<td>Report of Daily Operating Room Activity</td>
</tr>
<tr>
<td>PS</td>
<td>PCE Filing Status Report</td>
</tr>
<tr>
<td>R</td>
<td>Report of Non-O.R. Procedures</td>
</tr>
</tbody>
</table>
CPT/ICD Update/Verify Menu
[SRCODING UPDATE/VERIFY MENU]

The CPT/ICD Update/Verify Menu is locked with the SR CODER security key.

This option provides coding personnel with access to review and edit procedure and diagnosis information. It also provides access to the Operation Report and Nurse Intraoperative Report for operations and to the Procedure Report (Non-O.R.) for non-O.R. procedures.

The CPT/ICD Update/Verify Menu contains the following options. To the left is the shortcut synonym the user can enter to select the option.

<table>
<thead>
<tr>
<th>Shortcut</th>
<th>Option Name</th>
</tr>
</thead>
<tbody>
<tr>
<td>UV</td>
<td>Update/Verify Procedure/Diagnosis Codes</td>
</tr>
<tr>
<td>OR</td>
<td>Operation/Procedure Report</td>
</tr>
<tr>
<td>NR</td>
<td>Nurse Intraoperative Report</td>
</tr>
<tr>
<td>PI</td>
<td>Non-OR Procedure Information</td>
</tr>
</tbody>
</table>

To access the CPT/ICD Update/Verify Menu, the user must first identify the patient and case. When the user selects EDIT for the CPT/ICD Update/Verify Menu from the CPT/ICD Coding Menu, the user will be prompted to enter a patient name. The software will then list all the cases on record for the patient, including any operations that are completed or are in progress and any non-O.R. procedures.

Select CPT/ICD Coding Menu Option: EDIT CPT/ICD Update/Verify Menu

Select Patient: SURPATIENT,TWELVE

SURPATIENT,TWELVE 000-41-8719
1. 08-07-99 REPAIR DIAPHRAGMATIC HERNIA (COMPLETED)
2. 02-24-99 CYSTOSCOPY (NON-OR PROCEDURE)

5. 09-28-95 INGUINAL HERNIA (COMPLETED)
6. 08-31-95 HIP REPLACEMENT (COMPLETED)

Select Case: 3

SURPATIENT,TWELVE (000-41-8719) Case #124 - FEB 18,2003

From this point, the user can select any of the CPT/ICD Update/Verify Menu options.
Update/Verify Procedure/Diagnosis Codes
[SR CODING EDIT]

The Update/Verify Procedure/Diagnosis Codes option allows the user to enter the final codes and associated information required for PCE upon completion of a Surgery case.

The procedure and diagnoses codes entered/edited through this option will be the coded information that is sent to the Patient Care Encounter (PCE) package. After the case is coded, the user will select to send the information to PCE.

When the user first edits a case through this option, the values will be pre-populated, using the values for planned codes entered by the nurse or surgeon. If there is no Planned Principal Procedure Code or no Principal Pre-op Diagnosis Code, then the Surgery software will prompt for the final CPT and ICD codes.

Because a case can have more than one procedure and/or diagnosis, the user can associate one or more diagnosis with each procedure. The Surgery software displays the diagnoses in the order in which the user entered them in the case. The user can then associate and reorder the relevant diagnoses to each procedure.

The user can also edit the service classifications for the Postoperative Diagnoses.

The following examples depict using the Update/Verify Procedure/Diagnosis Codes option to edit a Bronchoscopy, with no planned CPT or ICD codes entered by a clinician.

Example: Entering Required Information

Select CPT/ICD Update/Verify Menu Option: UV Update/Verify Procedure/Diagnosis Codes

SURPATIENT,TWELVE (000-41-8719)                                      Case #10062

SURPATIENT, SEVENTEEN (000-45-5119)  Case #314 - JUL 15, 2005

UV  Update/Verify Procedure/Diagnosis Codes
OR  Operation/Procedure Report
NR  Nurse Intraoperative Report
PI  Non-OR Procedure Information

Select CPT/ICD Update/Verify Menu Option: UV  Update/Verify Procedure/Diagnosis Codes

Because the nurse or surgeon entered a Planned Principal CPT Code and a Preoperative Diagnosis Code, the corresponding fields pre-fill with those clinician-entered values when the user accesses the case through the *Update/Verify Procedure/Diagnosis Codes* option.

The user can either accept the codes that have been pre-operatively entered, or the user can edit the codes as necessary. In this example, the codes will be adjusted to accurately reflect the procedures by adding Other Postop Diagnosis Codes and Other CPT Codes.

SURPATIENT, SEVENTEEN (000-45-5119)  Case #314

Because the coding for the case is completed, the user can select to stop editing the case and send the case to PCE.

Is the coding of this case complete and ready to send to PCE? NO// YES
Coding completed and sent to PCE.
Press Enter/Return key to continue
Prior to sending the case to PCE, the Surgery software checks to see if a specific code, 065.0 CRIMEAN HEMORRHAGIC FEV, is entered as a diagnosis code. If it is entered, the software prompts the user to make sure that the code is correct for the specified case. This check is added to prevent the inadvertent assignment of code 065.0 when "CHF" is entered for the Principal or Other ICD Diagnosis codes.

After the case has been sent to PCE, any changes made to the case through the Update/Verify Procedure/Diagnosis Codes option will be automatically sent to PCE.

Example: Editing a Case After Sending to PCE

Select CPT/ICD Update/Verify Menu Option: **UV** Update/Verify Procedure/Diagnosis Codes

Operation/Procedure Report
[SRCODING OP REPORT]

The *Operation/Procedure Report* option is used by the coders to print the Operation Report for an operation or the Procedure Report (Non-O.R.) for a non-O.R. procedure.

Any user may print this report, which prints in an 80-column format and can be viewed on the screen or copied to a printer.

Example 1: Operation Report

Select CPT/ICD Update/Verify Menu Option: OR Operation/Procedure Report
DEVICE: [Select Print Device]

-----------------------------------------------printout follows-----------------------------------------------
PREOPERATIVE DIAGNOSIS: Visually significant cataract, right eye

POSTOPERATIVE DIAGNOSIS: Visually significant cataract, right eye

PROCEDURE: Phacoemulsification with intraocular lens placement, right eye

CLINICAL INDICATIONS: This 64-year-old gentleman complains of decreased vision in the right eye affecting his activities of daily living. Best corrected visual acuity is counting fingers at 6 feet, associated with a 2-3+ nuclear sclerotic and 4+ posterior subcapsular cataract in that eye.

ANESTHESIA: Local monitoring with topical Tetracaine and 1% preservative free Lidocaine.

DESCRIPTION OF THE PROCEDURE: After the risks, benefits and alternatives of the procedure were explained to the patient, informed consent was obtained. The patient's right eye was dilated with Phenylephrine, Mydriacyl and Ocufen. He was brought to the Operating Room and placed on anesthetic monitors. Topical Tetracaine was given. He was prepped and draped in the usual sterile fashion for eye surgery. A Lieberman lid speculum was placed.

A Supersharp was used to create a superior paracentesis port. The anterior chamber was irrigated with 1% preservative free Lidocaine. The anterior chamber was filled with Viscoelastic. The diamond groove maker and diamond keratome were used to create a clear corneal tunnelled incision at the temporal limbus. The cystotome was used to initiate a continuous capsulorrhexis, which was then completed using Utrata forceps. Balanced salt solution was used to hyrodissect and hyrodelineate the lens.

Phacoemulsification was used to remove the lens nucleus and epinucleus in a non-stop horizontal chop fashion. Cortex was removed using irrigation and aspiration. The capsular bag was filled with Viscoelastic. The wound was enlarged with a 69 blade. An Alcon model MA60BM posterior chamber intraocular lens with a power of 24.0 diopters, serial #588502.064, was folded and inserted with the leading haptic placed into the bag. The trailing haptic was dialed into the bag with the Lester hook. The wound was hydrated. The anterior chamber was filled with balanced salt solution. The wound was tested and found to be self-sealing. Subconjunctival antibiotics were given, and an eye shield was placed. The patient was taken in good condition to the Recovery Room. There were no complications.

Select CPT/ICD Update/Verify Menu Option: OR Operation/Procedure Report
DEVICE: [Select Print Device]

 pretended text follow---------------------------------------printout follow---------------------------------------
NOTE DATED: 02/13/2002 00:00  PROCEDURE REPORT

SUBJECT: Case #: 267236

PREOPERATIVE DIAGNOSIS: RESPIRATORY FAILURE, PROLONGED TRACHEAL INTUBATION AND FAILURE TO WEAN

POSTOPERATIVE DIAGNOSIS: SAME

PROCEDURE PERFORMED: OPEN TRACHEOSTOMY

SURGEON: DR. SURSURGEON

ASSISTANT SURGEON:

ANESTHESIA: GENERAL ENDOTRACHEAL ANESTHESIA

ESTIMATED BLOOD LOSS: MINIMAL

COMPLICATIONS: NONE

INDICATIONS FOR PROCEDURE: The patient is a forty-nine-year-old gentleman with a rather extensive past surgical history, mostly significant for status post esophagogastrectomy and presented to the hospital approximately three weeks ago with abdominal pain. Diagnostic evaluation consisted of an abdominal CT scan, liver function tests and right upper quadrant ultrasound, all of which were consistent with a diagnosis of acalculus cholecystitis. Because of these findings, the patient was brought to the operating room approximately three weeks ago where an open cholecystectomy was performed. The patient subsequent to that has had a very rocky postoperative course, most significantly focusing around persistently spiking fevers with sources significant for an E-coli sinusitis as well as a Staphylococcus E-coli pneumonia with no evidence of bacteremia. As a result of all of this sepsis and persistent spiking fevers, the patient has had a pneumonia, the patient has had a rather difficult time weaning from the ventilator and because of the almost three week period since his last operation with persistent endotracheal tube in place, the patient was brought to the operating room for an open tracheostomy procedure.

DESCRIPTION OF PROCEDURE: After appropriate consent was obtained from the patient’s next of kin and the risks and benefits were explained to her, the patient was then brought to the operating room where general endotracheal anesthesia was induced. The area was prepped and draped in the usual fashion with a towel roll under the patient’s scapula and the neck extended.

A longitudinal incision of approximately 2 cm was made just below the cricoid cartilage. The strap muscles were taken down using Bovee electrocautery. The isthmus of the thyroid was clamped and tied off using 2-0 silk x two. Hemostasis was assured. The thyroid cartilage was carefully dissected directly onto it. The window in the third ring of the trachea was opened after placement of retraction sutures of 0 silk, The hatch was cut open using a hatch box shape. This opening was then dilated using the tracheal dilator. The endotracheal tube was pulled back. A #7 Tracheostomy tube was placed with ease. Breath sounds were assured. The patient was oxygenating well and the stay sutures were placed. The patient tolerated the procedure well. The skin was closed with 0 silk and trachea tip was applied. The patient tolerated the procedure well. The endotracheal tube was finally removed. He was brought to the Surgical Intensive Care Unit in stable, but critical condition.

**Cumulative Report of CPT Codes**

[SROACCT]

The *Cumulative Report of CPT Codes* option counts and reports the number of times a procedure was performed (based on CPT codes) during a specified date range. There is also a column showing how many times it was in the Other Operative Procedure category.

After the user enters the date range, the software will ask if the user wants the Cumulative Report of CPT Codes to include only operating room surgical procedures, non-O.R. procedures, or both.

These reports have a 132-column format and are designed to be copied to a printer.

Report of CPT Coding Accuracy

The Report of CPT Coding Accuracy lists cases sorted by the CPT code used in the PRINCIPAL PROCEDURES field and OTHER OPERATIVE PROCEDURES field entered by the coder. This option is designed to help check the accuracy of the coding procedures.

About the prompts

"Do you want to print the Report of CPT Coding Accuracy for all CPT Codes ?" The user should reply NO to this prompt to produce the report for only one CPT code. The user will then be prompted to enter the CPT code or category.

"Do you want to sort the Report of CPT Coding Accuracy by Surgical Specialty ?" The user should press the <Enter> key if he or she wants to sort the report by specialty. Enter NO to sort the report by date only.

"Do you want to print the Report to Check Coding Accuracy for all Surgical Specialties ?" The user can enter the code or name of the surgical service he or she wants the report to be based on. Or, the user can press the <Enter> key to print the report for all surgical specialties.

Example 1: Print the Report of CPT Coding Accuracy for OR Surgical Procedures, sorted by Surgical Specialty

List Completed Cases Missing CPT Codes
[SRSCPT]

The List Completed Cases Missing CPT Codes option generates a report of completed cases that are missing the Principal CPT code for a specified date range. Only procedures that have CPT codes will be counted on the Annual Report of Surgical Procedures.

After the user enters the date range, the software will ask whether the user wants the Cumulative Report of CPT Codes to include: 1) only operating room surgical procedures, 2) non-O.R. procedures, or 3) both.

This report is in an 80-column format and can be viewed on the screen.

Example: List Completed Cases Missing CPT Codes

Select Number: (1-3): **3**

Start with Date: **7/1** (JUL 01, 2006)
End with Date: **7/31** (JUL 31, 2006)

Do you want to print all divisions? **YES// <Enter>**

Print report by
1. Surgical Specialty
2. Attending Surgeon
3. Occurrence Category

Select 1, 2 or 3: (1-3): **1//3**

Do you want to print this report for all occurrence categories? **YES// NO**

Print the report for which Occurrence Category? **ACUTE RENAL FAILURE**

**VASQIP Definition (2011):**
Indicate if the patient developed new renal failure requiring renal replacement therapy or experienced an exacerbation of preoperative renal failure requiring initiation of renal replacement therapy (not on renal replacement therapy preoperatively) within 30 days postoperatively. Renal replacement therapy is defined as venous to venous hemodialysis [CVVHD], continuous venous to arterial hemodialysis [CVAHD], peritoneal dialysis, hemofiltration, hemodiafiltration or ultrafiltration.

**TIP:** If the patient refuses dialysis report as an occurrence because he/she did require dialysis.

Select an Additional Occurrence Category: **<Enter>**

This report is designed to use a 132 column format.

TOTAL CASES: 5
Deaths Within 30 Days of Surgery
[SROQD]

The Deaths Within 30 Days of Surgery option lists patients who had surgery within the selected date range, died within 30 days of surgery. Two separate reports are available through this option.

1. Total Cases Summary: This report may be printed in one of three ways.

   A. All Cases

      The report will list all patients who had surgery within the selected date range and who died within 30 days of surgery, along with all of the patients' operations that were performed during the selected date range.

   B. Outpatient Cases Only

      The report will list only the surgical cases that are associated with deaths that are counted as outpatient (ambulatory) deaths.

   C. Inpatient Cases Only

      The report will list only the surgical cases that are associated with deaths that are counted as inpatient deaths.

2. Specialty Procedures: This report will list the surgical cases that are associated with deaths that are counted for the national surgical specialty linked to the local surgical specialty. Cases are listed by national surgical specialty.

These reports have a 132-column format and are designed to be copied to a printer.
Example 1: Deaths Within 30 Days of Surgery - Total Cases Summary

Select Management Reports Option: DS  Deaths Within 30 Days of Surgery

Deaths Within 30 Days of Surgery

This report lists patients who had surgery within the selected date range and who died within 30 days of surgery.

Start with Date: 4/1  (APR 01, 2005)
End with Date: 4/30  (APR 30, 2005)

Unlock a Case for Editing
[SRO-UNLOCK]

The Chief of Surgery, or a designee, uses the Unlock a Case for Editing option to unlock a case so that it can be edited. A case that has been completed will automatically lock within a specified time after the date of operation. When a case is locked, the data cannot be edited.

With this option, the selected case will be unlocked so that the user can use another option (such as in the Operation Menu option or Anesthesia Menu option) to make changes. The case will automatically re-lock in the evening. The package coordinator has the ability to set the automatic lock times.

Although the case may be unlocked to allow editing, any field that is included in an electronically signed report, for example in the Nurse Intraoperative Report, will require the creation of an addendum to the report before the edit can be completed.

Example: Unlock a Case for Editing

Select Chief of Surgery Menu Option: Unlock a Case for Editing

Select PATIENT NAME: SURPATIENT,THREE 08-15-91 000212453

1. 05-15-91 CAROTID ARTERY ENDARTERECTOMY

Flag Drugs for Use as Anesthesia Agents
[SROCODE]

Surgery Service managers use the Flag Drugs for Use as Anesthesia Agents option to mark drugs for use as anesthesia agents. If the drug is not flagged, the user will not be able to select it as an entry for the ANESTHESIA AGENT data field.

To flag a drug, it must already be listed in the Pharmacy DRUG file. To add a drug to this file, the user should contact the facility’s Pharmacy Package Coordinator.

Example: Flag Drugs Used as Anesthesia Agents

Select Surgery Package Management Menu Option: D Flag Drugs for use as Anesthesia Agents

Enter the name of the drug you wish to flag: HALOTHANE

Do you want to flag this drug for SURGERY (Y/N)? YES

Enter the name of the drug you wish to flag:
**Update Site Configurable Files**  
**[SR UPDATE FILES]**

The *Update Site Configurable Files* option is designed for the package coordinator to add, edit, or inactivate file entries for the site-configurable files.

The software provides a numbered list of site-configurable files. The user should enter the number corresponding to the file that he or she wishes to update. The software will default to any previously entered information on the entry and provide a chance to edit it. The last prompt asks whether the user wants to inactivate the entry; answering Yes or 1 will inactivate the entry.

**Example 1: Add a New Entry to a Site-Configurable File**

Select Surgery Package Management Menu Option:  **F Update Site Configurable Files**

Select Preoperative Information to Edit: **3E**
Postoperative Occurrences (Enter/Edit) [SRO POSTOP COMP]

The nurse reviewer uses the Postoperative Occurrences (Enter/Edit) option to enter or change information related to postoperative occurrences (called complications in earlier versions). Every occurrence entered must have a corresponding occurrence category. For a list of occurrence categories, the user should enter a question mark (?) at the "Enter a New Postoperative Occurrence:" prompt.

After an occurrence category has been entered or edited, the screen will clear and present a summary. The summary organizes the information entered and provides another chance to enter or edit data.

Example: Enter a Postoperative Occurrence

Select Non-Cardiac Assessment Information (Enter/Edit) Option: PO Postoperative Occurrences (Enter/Edit)

SURPATIENT,EIGHT (000-37-0555) Case #264
JUN 7,2005 ARTHROSCOPY, LEFT KNEE

There are no Postoperative Occurrences entered for this case.

Enter a New Postoperative Occurrence: ACUTE RENAL FAILURE

Vasqip Definition (2011):
Indicate if the patient developed new renal failure requiring renal replacement therapy or experienced an exacerbation of preoperative renal failure requiring initiation of renal replacement therapy (not on renal replacement therapy preoperatively) within 30 days postoperatively. Renal replacement therapy is defined as venous to venous hemodialysis [Cvvhd], continuous venous to arterial hemodialysis [CvaHD], peritoneal dialysis, hemofiltration, hemodiafiltration or ultrafiltration.

TIP: If the patient refuses dialysis report as an occurrence because he/she did require dialysis.

Press RETURN to continue: <Enter>

Update Assessment Status to ‘Complete’
[SROA COMPLETE ASSESSMENT]

Use the Update Assessment Status to ‘Complete’ option to upgrade the status of an assessment to Complete. A complete assessment has enough information for it to be transmitted to the centers where data are analyzed. Only complete assessments are transmitted. After updating the status, the patient’s entire Surgery Risk Assessment Report can be printed. This report can be copied to a screen or to a printer.

Example: Update Assessment Status to COMPLETE

Select Non-Cardiac Assessment Information (Enter/Edit) Option: U  Update Assessment Status to 'COMPLETE'

This assessment is missing the following items:

1. Rest Pain/Gangrene (Y/N)

Do you want to enter the missing items at this time? NO//YES
FOREIGN BODY REMOVAL (Y/N): N  NO

Are you sure you want to complete this assessment? NO//YES

Updating the current status to 'COMPLETE'...

Do you want to print the completed assessment? YES//NO
Clinical Information (Enter/Edit)  
[SROA CLINICAL INFORMATION]

The Clinical Information (Enter/Edit) option is used to enter the clinical information required for a cardiac risk assessment. The software will present one page; at the bottom of the page is a prompt to select one or more items to edit. If the user does not want to edit any items on the page, pressing the <Enter> key will advance the user to another option.

About the "Select Clinical Information to Edit:" Prompt
At the "Select Clinical Information to Edit:" prompt, the user should enter the item number to edit. The user can then enter an A for ALL to respond to every item on the page, or enter a range of numbers separated by a colon (:) to respond to a range of items.

After the information has been entered or edited, the terminal display screen will clear and present a summary. The summary organizes the information entered and provides another chance to enter or edit data. If assistance is needed while interacting with the software, the user can enter one or two question marks (??) to receive on-line help.

Example: Enter Clinical Information

Select Cardiac Risk Assessment Information (Enter/Edit) Option: CLIN  Clinical Information (Enter/Edit)

Print a Surgery Risk Assessment
[SROA PRINT ASSESSMENT]

The Print a Surgery Risk Assessment option prints an entire Surgery Risk Assessment Report for an individual patient. This report can be displayed temporarily on a screen. As the report fills the screen, the user will be prompted to press the <Enter> key to go to the next page. A permanent record can be made by copying the report to a printer. When using a printer, the report is formatted slightly differently from the way it displays on the terminal.

*** End of report for SURPATIENT,NINE  000-34-5555 assessment #238 ***
Page 523 has been deleted. Chapter Seven: CoreFLS/Surgery Interface has been removed.
Chapter Seven: Code Set Versioning

The Code Set Versioning enhancement to the Surgery package ensures that only CPT codes, CPT modifiers, and ICD-9 codes that are active for the operation or procedure date will be available for selection by the user, regardless of when the CPT entry or edit is made. Also, when a future operation or procedure date is entered, only active codes will be available.

It is possible that a new code set will be loaded between the time that an operation or procedure is scheduled and the time the operation or procedure occurs. Re-validation of the codes and modifiers occurs when the date and time that a patient enters the operating room is entered in the Surgery package. If the code (CPT or ICD-9) or CPT modifier is invalid — inactive for the date of operation or procedure — the inactive codes or modifiers will be deleted. Then, these two actions transpire:

1. A warning message displays on the screen, corresponding to the specific code or modifier that is inactive.
2. A MailMan message is sent to the surgeon (or provider), attending surgeon of record, and to the user who edited the record. The MailMan message contains the patient’s name, date of operation, case number, free-text operation or procedure name, CPT or ICD-9 codes, CPT modifiers deleted (if any), and the reason for deletion.

The first sample warning message shows an inactive CPT code, its modifiers, and ICD-9 codes, and the second warning message is for a Non-O.R. procedure.

Example: Warning Message to Surgeon

The following codes are no longer active and will be deleted for case # 12426.

| OTHER PROCEDURE CPT CODE: 99900 |
| CPT MODIFIER: 08 - SAMPLE MODIFIER |
| PRINCIPAL DIAGNOSIS CODE: 600.0 |

New active codes must be re-entered. A MailMan message will be sent to the surgeon and attending surgeon of record and to the user who edited the record with case details for follow-up.

Example: Warning Message to Provider

The following codes are no longer active and will be deleted for case #:242

| PRINCIPAL CPT CODE: 00869 |
| CPT MODIFIER: 23 UNUSUAL ANESTHESIA |

New active codes must be re-entered. A MailMan message will be sent to the provider and attending provider of record and to the user who edited the record with case details for follow-up.

The following sample MailMan message is sent to the surgeon, attending surgeon of record, and to the user who edited the record. The sample shows ICD-9 codes, CPT codes, and CPT modifiers that are inactive.
Example: MailMan Message to Surgeon

Subj: ICD-9 OR CPT CODE DELETION [#43805] 01/15/03@09:00
1 line
From: SURGERY PACKAGE In 'IN' basket. Page 1
-------------------------------------------------------------------
Patient: SURPATIENT,TWELVE CASE #: 12426
OPERATION DATE: 1/15/03 HERNIA REPAIR

The following codes are no longer active and were deleted for this case when the TIME PAT IN OR field was entered.

PRINCIPAL CPT CODE: 99900
CPT MODIFIER: 08
PRINCIPAL DIAGNOSIS CODE: 600.0

New active codes must be re-entered.
Enter message action (in IN basket): Ignore//

For Non-O.R. procedures, the MailMan message is sent to the provider and attending provider.

Example: MailMan Message to Provider

Subj: ICD-9 OR CPT CODE DELETION [#88073] 06/26/03@12:32 12 lines
From: SURGERY PACKAGE In 'IN' basket. Page 1 "New"
-------------------------------------------------------------------
Patient: SURPATIENT,ONE CASE #: 242
OPERATION DATE: JUN 26, 2003 STELLATE NERVE BLOCK

The following codes are no longer active and were deleted for this case when the Time Procedure Began was entered.

PRINCIPAL CPT CODE: 00869
CPT MODIFIER: 23 UNUSUAL ANESTHESIA

New active codes must be re-entered.
Enter message action (in IN basket): Ignore//

The following options allow for re-validation of the ICD-9 and CPT codes and modifiers when the TIME PAT IN OR field or TIME PROCEDURE BEGAN field is entered.

- Operation
- Operation (Short Screen)
- Edit Non-O.R. Procedure
- Operation Information (Enter/Edit)
- Resource Data
Chapter Eight: Assessing Transplants

Introduction

The Transplant Assessment module allows qualified personnel to create and manage transplant assessments. Menu options provide the ability to enter transplant assessment information for a patient and transmit the assessment to the Veterans Affairs Surgery Quality Improvement Program (VASQIP) national databases. Options are also provided to print and list transplant assessments.
## Chapter Nine: Glossary

The following table contains terms that are used throughout the Surgery V.3.0 User Manual, and will aid the user in understanding the use of the Surgery package.

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Aborted</td>
<td>Case status indicating the case was cancelled after the patient entered the operating room. Cases with ABORTED status must contain entries in TIME PAT OUT OR field (#.205) and/or TIME PAT IN OR field (#.232), plus CANCEL DATE field (#17) and/or CANCEL REASON field (#18).</td>
</tr>
<tr>
<td>ASA Class</td>
<td>This is the American Society of Anesthesiologists classification relating to the patient’s physiologic status. Numbers followed by an ‘E’ indicate an emergency.</td>
</tr>
<tr>
<td>Attending Code</td>
<td>Code that corresponds to the highest level of supervision provided by the attending staff surgeon during the procedure.</td>
</tr>
<tr>
<td>Blockout Graph</td>
<td>Graph showing the availability of operating rooms.</td>
</tr>
<tr>
<td>Cancelled Case</td>
<td>Case status indicating that an entry has been made in the CANCEL DATE field and/or the CANCEL REASON field without the patient entering the operating room.</td>
</tr>
<tr>
<td>CCSHS</td>
<td>VA Center for Cooperative Studies in Health Services located at Hines, Illinois.</td>
</tr>
<tr>
<td>CICSP</td>
<td>Continuous Improvement in Cardiac Surgery Program.</td>
</tr>
<tr>
<td>Completed Case</td>
<td>Case status indicating that an entry has been made in the TIME PAT OUT OR field.</td>
</tr>
<tr>
<td>Concurrent Case</td>
<td>A patient undergoing two operations by different surgical specialties at the same time, or back to back, in the same operating room.</td>
</tr>
<tr>
<td>CRT</td>
<td>Cathode ray tube display. A display device that uses a cathode ray tube.</td>
</tr>
<tr>
<td>Intraoperative Occurrence</td>
<td>Perioperative occurrence during the procedure.</td>
</tr>
<tr>
<td>Major</td>
<td>Any operation performed under general, spinal, or epidural anesthesia plus all inguinal herniorrhaphies and carotid endarterectomies regardless of anesthesia administered.</td>
</tr>
<tr>
<td>Minor</td>
<td>All operations not designated as Major.</td>
</tr>
<tr>
<td>New Surgical Case</td>
<td>A surgical case that has not been previously requested or scheduled such as an emergency case. A surgical case entered in the records without being booked through scheduling will not appear on the Schedule of Operations or as an operative request.</td>
</tr>
<tr>
<td>Non-Operative Occurrence</td>
<td>Occurrence that develops before a surgical procedure is performed.</td>
</tr>
<tr>
<td>Not Complete</td>
<td>Case status indicating one of the following two situations with no entry in the TIME PAT OUT OR field (#.232).</td>
</tr>
<tr>
<td></td>
<td>1) Case has entry in TIME PAT IN OR field (#.205).</td>
</tr>
<tr>
<td></td>
<td>2) Case has not been requested or scheduled.</td>
</tr>
<tr>
<td>NSQIP</td>
<td>National Surgical Quality Improvement Program.</td>
</tr>
<tr>
<td>Operation Code</td>
<td>Identifying code for reporting medical services and procedures performed by physicians. See CPT Code.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>---------------------</td>
<td>---------------------------------------------------------------------------</td>
</tr>
<tr>
<td>PACU</td>
<td>Post Anesthesia Care Unit.</td>
</tr>
<tr>
<td>Postoperative Occurrence</td>
<td>Perioperative occurrence following the procedure.</td>
</tr>
<tr>
<td>Procedure Occurrence</td>
<td>Occurrence related to a non-O.R. procedure.</td>
</tr>
<tr>
<td>Requested</td>
<td>Operation has been slotted for a particular day but the time and operating room are not yet firm.</td>
</tr>
<tr>
<td>Risk Assessment</td>
<td>Part of the Surgery software that provides medical centers a mechanism to track information related to surgical risk and operative mortality. Completed assessments are transmitted to the VASQIP national database for statistical analysis.</td>
</tr>
<tr>
<td>Scheduled</td>
<td>Operation has both an operating room and a scheduled starting time, but the operation has not yet begun.</td>
</tr>
<tr>
<td>Screen Server</td>
<td>A format for displaying data on a cathode ray tube display. Screen Server is designed specifically for the Surgery Package.</td>
</tr>
<tr>
<td>Screen Server Function</td>
<td>The Screen Server prompt for data entry.</td>
</tr>
<tr>
<td>Service Blockouts</td>
<td>The reservation of an operating room for a particular service on a recurring basis. The reservation is charted on a blockout graph.</td>
</tr>
<tr>
<td>Transplant Assessments</td>
<td>Part of the Surgery software that provides medical centers a mechanism to track information related to transplant risk and operative mortality. Completed assessments are transmitted to the VASQIP national database for statistical analysis.</td>
</tr>
<tr>
<td>VASQIP</td>
<td>Veterans Affairs Surgery Quality Improvement Program.</td>
</tr>
