Introduction

The encounter form is designed specifically for outpatient visits. It is used both to display relevant patient data for use during the visit, such as demographics, allergies, and problems; and to collect data about the visit, such as procedures and tests performed. Its primary focus is clinical and to collect data for the Ambulatory Care Reporting Project. It also has other purposes such as collecting data necessary for billing.

The AICS package contains all the software necessary to design, edit, and assign encounter forms to clinics. The software enables collection of outpatient clinical and administrative data; and provides a more organized, less obtrusive method of data collection to the clinician and supporting clerical staff.

Many of the lists that a user sees in Computerized Patient Record System (CPRS) for input of outpatient encounter data are based on lists created when designing encounter forms for clinics.

A form generator is included, which allows sites to design forms which meet local medical facility needs. There is enough flexibility in the software so sites can build forms that meet their individual clinical, billing, and resource requirements. The encounter form may be filed in the clinical record.

A print manager is included that allows sites to print blank encounter forms, but only on a contingency basis or for non-patient uses such as employee health, since VA policy prohibits the use of printed encounter forms as a rule. Reports and Utilities options are available to assist with maintenance of the encounter forms.

Features supporting the scanning of encounter forms are no longer available, with the onset of electronic means of entering data using the lists provided in the encounter forms, such as CPRS.

Code Set Versioning
With functionality put in place by the Code Set Versioning project, the options listed below have been deleted from AICS. The user will see the following message.

Sorry, your Primary Menu is out of order with the message: ** This option is OUT OF ORDER **

Clinic Based Data Entry
Conversion Utility for Scanning
Data Entry by Form
Form Component Inquiry
Group Clinic Data Entry
Pre-printed From Data Entry
Introduction

Scanned Forms w/Bill Gen
Validate Forms

**Functionality**
The AICS software provides:

- a "tool kit" of forms and components that allows sites to avoid the time consuming process of creating forms from scratch;
- a "form generator" to allow sites to design custom forms;
- a print manager that allows sites to define reports to print along with the encounter form;
- an import/export utility that enables sites to exchange forms and components;
- VISTA interfaces that allow patient demographic data, insurance data, allergies, and problems to be displayed. More interfaces can be added in the future, as requested.

**Integration**
AICS integrates with the following software for the purpose indicated.

Scheduling - clinic setup, patient information, and list creation.
International Classification of Diseases (ICD) - list creation.
Patient Care Encounter (PCE) - list creation.
Clinical Lexicon - list creation.
Problem List - list creation. Obsolete. Made Unavailable by IBD*3*63.
Allergy - patient information.
Integrated Billing (IB) - billing information for reports.
Health Summary - print health summaries for patient appointments.
Outpatient Pharmacy - print action profiles for patient appointments.
Accounts Receivable (AR) - billing information for reports.

**Related Manuals**
- AICS V. 3.0 Technical Manual - assists the site manager in maintenance of the software.
- AICS V. 3.0 Installation Guide - provides assistance in installation of the software.
- AICS V. 3.0 Release Notes - describe any modifications and enhancements to the software new to this version.
Orientation

Package Operation
The Package Operation section provides documentation of each option, including a brief introduction to the option, sample screens, and sample outputs, when applicable.

List Manager
AICS uses the List Manager utility; a tool designed to list items for selection and action. Available actions are displayed below the screen. A double question mark (??) entered at any "Select Action" prompt displays all available actions for that screen.

Screens that display forms are numbered at the left from 1 to 80 (rows or lines) and across the top from 1 to 160 (columns). It is strongly recommended that forms are limited to 80 lines and 132 columns because of printer constraints.

For more information on the use of the screens, please refer to the List Manager Appendix at the end of this manual.
Orientation
Package Management

There are no unique legal requirements, responsibilities, or necessary security measures specific to the Automated Information Collection System (AICS) software.

Edit Encounter Forms

Clinic Setup/Edit Forms

Introduction

The Clinic Setup/Edit Forms option is a form generator used to create and edit encounter forms, and to associate those forms with specific clinics.

When using Group Copy (under Fast Selection Edit) to add a group from one selection list to another, both selection lists must have the same format. If they do not, data will not be displayed properly. Blanks will display for those subcolumns that do not match. The Form Components option can be used to check the selection list format of the groups being copied.

A new action on the Selection List Display Screen, Resequence Group, now allows you to resequence one or more groups within the block, or to resequence the entire block.

You are now asked for Alternative Narrative and Clinical Lexicon. Both Data Entry and Scanning will now pass this data to PCE.

CPT type blocks give the Form Creator the ability to enter a quantity for a CPT code.

More than one Diagnosis code can be passed.

NOTES for IBD*3.0*63 Patch:
- If you are editing Encounter Forms with Lexicon User Filters in place, those filters will be honored with the exception of editing an ICD-9 block or editing an ICD-10 block within the encounter form. When editing ICD-9 blocks, you will be allowed to choose from any ICD-9 code; and when editing an ICD-10 block, you will be allowed to select any ICD-10 code, regardless of what Lexicon User Filters are in place. User will be prompted for whether they wish to enter Active or Inactive Diagnosis Codes for both Code Sets.
- Modifications allow you to add any ICD-10 code regardless of its current status (ACTIVE or INACTIVE), unless the last status of the code is INACTIVE and the effective date has been exceeded.

Copy CPT Check-off Sheet to Encounter Form

Introduction

This option allows you to copy a selected CPT Check-off Sheet's CPT codes to an encounter form.

You are prompted to select the form you are copying the Check-off Sheet to. (The form you select must contain a selection list with CPT codes.) You are then asked to enter the Ambulatory Check-off Sheet name. Once entered, the CPT codes from the selected sheet are ADDED to the form. Any codes already included on the form remain and are not replaced by the new codes.

Example

Select the encounter form you want to copy CPT codes to!

Select a FORM: GENERAL MED scannable form for primary care
Select AMBULATORY CHECK-OFF SHEET NAME: GEN MED

...OK? Yes// <RET> (Yes)...

Edit Encounter Forms

Most Commonly used Outpatient CPT Codes

Introduction

This option produces an output that lists the most common Ambulatory Procedures and Ambulatory Surgeries performed in a date range for a given set of clinics (limit 20). It is provided to assist in building CPT Check-off Sheets.

You are prompted to enter one of the following sorts for the selected date range and clinic(s).

CLINIC - provides a count of procedures used, by clinic.

PROCEDURE - provides a total count of all procedures used including the total count used in billing.

PROCEDURE WITH EXTENDED DESCRIPTION - provides the same report as PROCEDURE, and includes a full procedure description.

At multi-divisional sites, this report can also be printed for selected divisions.

Example

Select one of the following:

C        CLINIC
P        PROCEDURE
D        PROCEDURE WITH EXTENDED DESCRIPTION

Sort report by: D PROCEDURE WITH EXTENDED DESCRIPTION
Start with DATE: 1/1 (JAN 01, 1997)
Go to DATE: t (MAR 06, 1997)
Select division: ALL// TROY 500T
Select another division: <RET>
Select clinic: ALL// cardIOLOGY BABCOCK,LISA
Select another clinic: <RET>

This report requires 132 columns.

Print Encounter Forms for Appointments

Introduction

This option is used to print an encounter form for appointments either by patient or clinic.

When you choose appointments by clinic, there are three sort options: Division/Clinic/Patient, Division/Terminal Digits, or Division/Clinic/Terminal Digits. You also can print forms for one, many, or all clinics, (for one/many/all divisions - if your site is multi-divisional); and for all patients or add-ons only.

When appointments are selected by patient, you can enter any number of patients individually. Once a patient name is entered, you are prompted to select an appointment for that patient.

The report can also be printed for individual clinic groups or divisions. If you select a clinic group, you are prompted for additional clinic groups, but not for additional clinics or divisions.

When printing encounter forms, it is important to remember they require a page size of 80 lines and 132 columns.
Print Options

Print Encounter Forms for Appointments

Example

Do you want to print forms for a particular patient or for entire clinics?

Select one of the following:

P  Patient

Print Form w/Patient Data, No Appt

Introduction

This option allows you to print encounter form(s) with patient data. It does not require that an appointment is selected. On forms that show appointment times, the current time (time form is printed) is shown.

You can print a specific encounter form, or the form specified through the Clinic Setup/Edit Forms option for the selected clinic.

Please remember that encounter forms require a page size of 80 lines and 132 columns.

Print Manager
    Edit Division Reports

Introduction

This option is used to print selected reports for a specific division under specified conditions.

Only reports contained in the PACKAGE INTERFACE file can be printed. The following reports are included in the file: ACTION PROFILE - 45 DAYS and INFORMATION PROFILE - 45 DAYS (both from the Outpatient Pharmacy package); and ROUTING SLIP (from the Scheduling Package). Other reports can be added to the file; however, only health summary reports can be added by most users. Reports other than health summary can only be added by IRM personnel.

You can choose one of the following conditions for each selected report.

FOR EVERY APPOINTMENT - form will print for every appointment.

ONLY FOR EARLIEST APPOINTMENT - form will print once per patient, even if the patient has multiple appointments. It will print even if it is defined to be excluded through the Edit Clinic Reports option. One form will print for each division.

ONLY IF MULTIPLE APPOINTMENTS - form will print for the earliest appointment for patients with multiple appointments. It will print even if it is defined to be excluded through the Edit Clinic Reports option. One form will print for each division.
Print Manager

Edit Division Reports

Example

You can now select reports that should be printed for the entire division.

EDIT REPORTS TO PRINT FOR WHICH DIVISION?: TROY  500T

DIVISION: TROY// <RET>

Select REPORT: ACTION PROFILE - 45 DAYS// ROUTING SLIP
ROUTING SLIP TYPE=REPORT

Are you adding 'ROUTING SLIP' as a new REPORT (the 3RD for this PRINT MANAGER DIVISION SETUP)? Y (Yes)

REPORT PRINT CONDITION: ??

Choose FOR EVERY APPOINTMENT if the form should print for every appointment.

Choose ONLY FOR EARLIEST APPOINTMENT if the form should print once per patient, even if he has multiple appointments.

Choose ONLY IF MULTIPLE APPOINTMENTS if the form should print only if the patient has multiple appointments. If so, it will print only for the earliest appointment.

The condition under which the report should print.

Choose from:
FOR EVERY APPOINTMENT
ONLY FOR EARLIEST APPOINTMENT
ONLY IF MULTIPLE APPOINTMENTS

REPORT PRINT CONDITION: FOR EVERY APPOINTMENT
PRINT CONDITION: FOR EVERY APPOINTMENT// <RET>
SIMPLEX/DUPLEX: DUPLEX,SHORT-EDGE BINDING// <RET> DUPLEX,SHORT-EDGE BINDING

Select REPORT:
Print Manager

Edit Clinic Reports

Introduction

This option is used to enter/edit the reports/forms printed for a specific clinic.

BASIC DEFAULT ENCOUNTER FORM - the encounter form that will be printed for every appointment.

SUPPLMNTL FORM - ALL PATIENTS - A supplemental form to be used by all patients of the clinic. A form in this category should not also be in one of the other categories for supplemental forms or it would print twice. You may have up to three supplemental forms for all patients.

SUPPLMNTL FORM - ESTBLSHED PT. - A supplemental form that will print only for patients who have previously been seen in the clinic.

SUPPLMNTL FORM - FIRST VISIT - A supplemental form that will print only for patients who have not previously been seen at the clinic.

FORM W/O PATIENT DATA - The encounter form that should be printed for unscheduled visits. It can have a space in the top left hand corner for imprinting the embossed patient card or writing in patient data.

RESERVED FOR FUTURE USE - This category was created to store new forms that have not yet been completed. Forms entered here are not printed.

DON'T USE PCMM PROVIDERS - AICS defaults to printing providers specified in PCMM, if defined; otherwise, providers from the clinic setup are used. If YES is entered, AICS prints the providers from clinic setup regardless of PCMM.

SELECT REPORT - Reports that should be printed for the clinic in addition to the encounter forms that have been selected. Only reports contained in the PACKAGE INTERFACE file can be selected at this prompt.

SELECT EXCLUDED REPORT - Reports that you do not want to print for this clinic. Entering a report as an excluded report will prevent it from printing even if it is defined to print for every appointment for the division through the Edit Division Reports option. Reports defined through the Edit Division Reports option as printing ONLY EARLIEST APPOINTMENT or ONLY IF MULTIPLE APPOINTMENTS will not be excluded from printing for the first clinic.
Example

EDIT REPORTS TO PRINT FOR WHICH CLINIC?: ORTHOPEDIC
CLINIC: ORTHOPEDIC// <RET>
BASIC DEFAULT ENCOUNTER FORM: ORTHO CLINIC// <RET>
SUPPLEMENTAL FORM #1 ALL PATIENTS: PRIMARY CARE scannable form for primary care
SUPPLEMENTAL FORM #2 ALL PATIENTS: <RET>
SUPPLEMENTAL FORM - ESTABLISHED PT.: <RET>
SUPPLEMENTAL FORM - FIRST VISIT: <RET>
FORM W/O PATIENT DATA: <RET>
RESERVED FOR FUTURE USE: <RET>
DON'T USE PCMM PROVIDERS: <RET>

You can now select reports that should be printed for the clinic IN ADDITION to the encounter forms that have been selected.

Select REPORT: ROUTING SLIP
ROUTING SLIP TYPE=REPORT

Are you adding 'ROUTING SLIP' as a new REPORT (the 1ST for this PRINT MANAGER CLINIC SETUP)? Y (Yes)

SIMPLEX/DUPLEX: DUPLEX, SHORT-EDGE BINDING// <RET> DUPLEX, SHORT-EDGE BINDING

Select REPORT:
Print Manager

Define Available Health Summary

Introduction

This option allows a Health Summary to be made available for use by the print manager. The Health Summary selected must have been created through the Health Summary package prior to defining it to the print manager.

You are prompted to enter the name of the health summary you wish to define. You may enter a list of words with which to index this interface. You will then be able to look up this interface by entering any word you have entered. Each word should be at least three characters in length and words must be separated by a space. The purpose of this field is to assist you in locating the package interface you need to display a particular item of data to a form.

You can also set the interface to YES if available, NO if it is not. Interfaces that are not available are not called.

Example

You can now edit the Health Summaries available through the print manager.

Select a Health Summary defined to the print manager: LAB RESULTS
Are you adding 'LAB RESULTS' as a new PACKAGE INTERFACE? Y (Yes)
PACKAGE INTERFACE ACTION TYPE: PRINT REP PRINT REPORT
NAME: LAB RESULTS// <RET>
DESCRIPTION:
  1> This health summary prints lab results for patients for the last
  2> three months.
  3>
EDIT Option: <RET>
USER LOOKUP: LAB 90 DAYS
TYPE OF HEALTH SUMMARY: SAMPLE 1
AVAILABLE? (Y/N): Y YES
Introduction

This option provides a report, by division that lists each clinic setup and the encounter forms and other reports defined for use by that clinic. For clinics with reports defined, the condition on which the report is printed is also provided.

Example

AICS Print Manager Clinic Setup Report   Mar 06, 1997@16:14:43   PAGE 1
For Division: ALBANY

-----------------------------------------------
Division: ALBANY

Clinic: DENTAL

Introduction

To help you to create customized forms, a tool kit is provided which contains template forms and blocks that can be copied and edited to create new forms/blocks. The Edit Tool Kit Blocks option is used to create, edit, or delete tool kit blocks. (Please refer to the Edit Tool Kit Forms option to edit, create, or delete forms.)

Five new tool kit blocks have been added: Practitioner, Hidden Classifications, Patient Immunizations, Eye Art I, and Eye Art II.
Edit Tool Kit

Edit Tool Kit Blocks

Screen Descriptions

Edit Tool Kit Blocks Screen
This screen lists the blocks available in the tool kit with a brief description. You can create, edit, copy, change the order of, and delete the blocks.

Editing a Form Block Screen
This screen is accessed through the Edit Block action on the Edit Tool Kit Block screen. The block is displayed as nearly as possible to how it will appear on paper. You can edit the block's contents, appearance, and description.

Edit Selection List Screen
This screen is accessed by choosing to edit a list's contents through the Selection List action on the Editing a Form Block screen. It displays the selection groups defined for the selection list, with the header text and the print orders, and allows you to edit the contents of the list. A selection group is a group of selections with a header and a defined print order. A selection list is made up of one or more selection groups. To edit individual selections, a group must be selected. A group is a named collection of items on the list.

Edit Group's Selections Screen
This screen is accessed through the Group's Contents action on the Edit Selection List screen. It displays the selections appearing under the group, showing the text appearing on the form and the print order of the selections within the group. It allows you to edit selections on the list. A selection is just one item on the list, usually selected from a table, such as the table of ICD-9 Diagnosis Codes or ICD-10 Diagnosis Codes.

Please refer to the Clinic Setup/Edit Forms option for additional documentation.

**Edit Tool Kit Forms**

**Edit Group's Selections Screen**
This screen is accessed through the *Group's Contents* action on the Edit Selection List screen. It displays the selections appearing under the group, showing the text appearing on the form and the print order of the selections within the group. It allows you to edit selections on the list. A selection is just one item on the list, usually selected from a table, such as the table of ICD-9 Diagnosis Codes or ICD-10 Diagnosis Codes.

Please refer to the Clinic Setup/Edit Forms option for additional documentation.
Encounter Form IRM Options

Edit Package Interface

Introduction

This option is locked with the IBDF IRM security key.

This option allows package interfaces to be created, edited, and deleted; however, package interfaces that are in use in any form should not be deleted. The option only allows selection routines and output routines, which are defined as follows:

OUTPUT  Routines that are used to obtain data from other packages that will be displayed to DATA FIELDS. Output routines fill in the data on an encounter form (e.g., name, DOB, etc.). The data is not stored with the form, but instead is obtained at the time the form is printed.

SELECTION  Routines that are used to obtain data from other packages that will be displayed to SELECTION LISTS. Selection routines select data from a table (e.g., CPT, DX, etc.) and fill in the form with codes. The data is stored with the form.

There is a new package interface, DG 1010F PRINT, which will print a 1010F with the encounter form if a new Means Test or Copay Test is due within the number of days specified in the AICS parameters (the default is 30).

The following documentation provides instructions to help you write your own package interfaces to obtain data not available through the Tool Kit.

Step 1 - Write a routine to obtain the data. Output routines must write the data to the ^TMP global in the following format:

Single Value (a string without pieces):

^TMP("IB",$J,"INTERFACES",+$G(DFN),<interface name>)=data

Record (a set of strings concatenated together with "^" separating the pieces):

^TMP("IB",$J,"INTERFACES",+$G(DFN),<interface name>)=piece1^piece2^...

NOTE: You can enter a maximum of seven pieces of data. The string must be less than 256 characters long.
**Encounter Form IRM Options**

**Edit Package Interface**

**LIST of Single Values** (an indefinite number of values, each numbered, each containing the same type of information):

\[ \text{^TMP("IB","J","INTERFACES",+$G(DFN),<interface name>,1)=value 1} \]
\[ \text{^TMP("IB","J","INTERFACES",+$G(DFN),<interface name>,2)=value 2} \]

etc.

**List of Records** (an indefinite number of values, each numbered, each containing the same type of information):

\[ \text{^TMP("IB","J","INTERFACES",+$G(DFN),<interface name>,1)=piece1^piece2^...} \]
\[ \text{^TMP("IB","J","INTERFACES",+$G(DFN),<interface name>,2)=piece1^piece2^...} \]

etc.

**NOTE:** You can enter a maximum of seven pieces of data.

**Word Processing** (data in VA FileMan format):

\[ \text{^TMP("IB","J","INTERFACES",+$G(DFN),<interface name>,1,0)=line 1} \]
\[ \text{^TMP("IB","J","INTERFACES",+$G(DFN),<interface name>,2,0)=line 2} \]

etc.

Where piece 1 must be an identifier for the selection and the other pieces are other fields returned for the selection. A SELECTION routine must write the data returned to the ^TMP global in the following format.

\[ \text{^TMP ("IB","J","INTERFACES",<interface name>^piece1^piece2^piece3...} \]

For the DG SELECT CPT PROCEDURE CODES interface, the returned data is in the following format.

\[ \text{^TMP("IB","J","INTERFACES"="/DG SELECT PROCEDURE CODES")=<CPT CODE>^<short name>^<Description>}. \]

**Step 2** - Add an entry to the PACKAGE INTERFACE file (#357.6). At the "Select a PACKAGE INTERFACE:" and "NAME:" prompts, enter the name of the package interface you are creating. For output type interfaces, i.e., interfaces returning data for data fields, the name must be preceded with the namespace of the package providing the data.
Encounter Form IRM Options

Edit Package Interface

The subsequent prompts you encounter while using this option will vary depending on whether your response to the "SELECT THE TYPE OF PACKAGE INTERFACE TO EDIT:" prompt is "OUTPUT" or "SELECTION". (Please refer to the definitions on the previous page.) Table 1, which follows this introduction, provides a brief overview of the prompts used with this option and possible responses. Also provided is a column which indicates whether the prompt will appear for output routines, selection routines, or both.

When responding to the "Select PROTECTED LOCAL VARIABLES:" and "Select REQUIRED LOCAL VARIABLE:" prompts, it is very important that you consider the following:

- The interface routine will not be called unless all of the required variables are defined.
- It is safe to assume that the following variables are defined. Calling a package interface must leave them defined. They should be left unchanged after leaving the exit action from the package interface.
- DFN = IEN of the patient in the PATIENT file (#2)
- IBCLINIC = IEN of the clinic in the HOSPITAL LOCATION file (#44)
- IBAPPT = Appointment date/time in VA FileMan format

Use of the Edit Package Interface option performs the following actions:

- Checks for required variables
- "News" protected variables
- Does entry action
- Calls the specified entry point
- Does exit action
## Table 1 - Prompts used with the Edit Package Interface option

<table>
<thead>
<tr>

Edit Package Interface

Example

You can write your own Package Interfaces to obtain data not available through the Toolkit. Before you do so, however, please consult the technical documentation for the guidelines that must be followed. In particular, you must know where the data should be placed and what format must be used.

Press RETURN to continue...

OUTPUT interfaces are used to obtain data from other packages that will be displayed to DATA FIELDS.

SELECTION interfaces are used to obtain data from other packages that will be displayed to SELECTION LISTS.

Select one of the following:

1         OUTPUT
2         SELECTION

SELECT THE TYPE OF PACKAGE INTERFACE TO EDIT: 1// OUTPUT

Select a PACKAGE INTERFACE: DPT NUMBER OF CHILDREN

Are you adding 'DPT NUMBER OF CHILDREN' as a new PACKAGE INTERFACE? Y (Yes)

You must prefix the name with the name space of the package that is providing the data.

NAME: DPT NUMBER OF CHILDREN  Replace <RET>

DESCRIPTION:
1> For displaying the number of children dependent on the patient.
2>

EDIT Option: <RET>

WHAT FORMAT WILL THE DATA BE IN?: ?
What format will the data be in?
Choose from:
1   SINGLE VALUE
2   RECORD
3   LIST OF SINGLE VALUES
4   LIST OF RECORDS
5   WORD PROCESSING

WHAT FORMAT WILL THE DATA BE IN?: 1  SINGLE VALUE

You can enter a list of words with which to index this interface. You will then be able to look up this interface by entering any word on the list. Each word should be at least 3 characters long, and words must be separated by a space.
LIST OF WORDS TO MAKE LOOK-UPS EASIER: CHILDREN DEPENDENTS NUMBER
CUSTODIAL PACKAGE: PATIENT FILE
ROUTINE: IBDFN11
ENTRY POINT: CHILDREN

Select PROTECTED LOCAL VARIABLES: DFN
  Are you adding 'DFN' as a new PROTECTED LOCAL VARIABLES (the 1ST for this
  PACKAGE INTERFACE)? Y (Yes)
Select PROTECTED LOCAL VARIABLES: <RET>

Select REQUIRED LOCAL VARIABLE: IBCLINIC
  Are you adding 'IBCLINIC' as a new REQUIRED LOCAL VARIABLE (the 1ST for this
  PACKAGE INTERFACE)? Y (Yes)
Select REQUIRED LOCAL VARIABLE: <RET>
AVAILABLE? (Y/N): Y YES
WHAT IS THE FIRST PIECE OF DATA RETURNED BY THE INTERFACE?: NUMBER OF
DEPENDENT CHILDREN
WHAT IS ITS MAXIMUM LENGTH?: 2
Encounter Form IRM Options

Edit Marking Area (for selection lists)

Introduction

This option is locked with the IBDF IRM security key.

This option allows the local sites to add, edit, or delete their own Marking Areas (the areas on a selection list that the user marks to indicate selections from the list, e.g., ( ), [ ], { }) to change the look of the form. The option is screened by the TOOL KIT field so users can only add or edit their own Marking Areas.

The following three prompts are used with this option:

"Select MARKING AREA TYPE NAME:"
Your response should describe the Marking Area as it will appear on the form (e.g., "brackets" if { } will appear on the form).

"NAME:"
This prompt allows you to accept, edit, or delete a Marking Area. Your response to the "Select MARKING AREA TYPE NAME:" prompt will appear as a default value. Press <RET> to accept the default. To edit the name of a Marking Area, enter the correct name at this prompt. Enter an at-sign <@> to delete the default value. You will be asked if you are sure you want to delete the Marking Area. A "YES" response will delete the Marking Area and return you to the menu. A "NO" response will cause the prompt to repeat. An up-arrow <^> entered at this prompt will return you to the menu.

"DISPLAY STRING:"
Enter the characters that should be printed on the form, including spaces, up to a maximum of twenty characters. The message, "New marking area created!" will appear on the screen, and you will be returned to the menu. This prompt will not appear if you deleted the Marking Area at the "NAME:" prompt. This prompt requires a response. Pressing <RET> will repeat the prompt until you enter a response. Entering an up-arrow <^> at this prompt will return you to the menu, and will cancel your attempt to create a new Marking Area.
Package Operation

**Encounter Form IRM Options**

**Edit Marking Area (for selection lists)**

**Example**

You can create your own MARKING AREAS to supplement those that come with the toolkit. Marking areas are the areas on a selection list that the user marks to indicate selections from the list.

Press RETURN to continue...<RET>

Select MARKING AREA TYPE NAME: **SLASHES**

Are you adding 'SLASHES' as a new MARKING AREA TYPE? **Y** (Yes)

NAME: **SLASHES/** <RET>

Enter the characters that should be printed on the form, including spaces.

DISPLAY STRING: **/ /**

New marking area created!
Encounter Form IRM Options

Define Available Report (not Health Summaries)

Introduction

This option is locked with the IBDF IRM security key.

This option allows you to define the reports available through the Print Manager. Reports do not have to be namespaced. Care must be taken when defining reports to the Print Manager. Please follow these rules:

1. Entry points must involve no user interaction.
2. The device must not be changed or closed.
3. Local variables should be the same on exit as on entry.
4. Assume that the device is already at the top of the form, so there are no form feeds at the beginning.
5. There should be a form feed after the report prints.

The following variables are available, and should not be changed after exit action from the package interface:

- DFN = IEN of the patient in the PATIENT file (#2)
- IBCLINIC = IEN of the clinic in the HOSPITAL LOCATION file (#44)
- IBAPPT = Appointment date/time in VA FileMan format

The following prompts are used with this option:

"Select a report defined to the print manager:"
"NAME:"
Your response to both of these prompts should be the name of the package interface. Your response to "Select a report defined to the print manager:" will appear as the default value at the "NAME:" prompt, where you will be able to edit or delete the entry.

"DESCRIPTION:"
This prompt allows you to enter a free text description of the report.
Encounter Form IRM Options
Define Available Report (not Health Summaries)

"USER LOOKUP:"
This is the same as the "LIST OF WORDS TO MAKE LOOK-UPS EASIER:" prompt in the Edit Package Interface option. Enter a word or list of words with which you wish to index the package interface to facilitate lookup. Each word should be at least three characters long, and multiple words must be separated by a space. This field is used to create a KWIC index for this file in order to assist the user in locating the package interface that will display a particular item of data to a form.

"CUSTODIAL PACKAGE:"
This is a free text pointer to the PACKAGE file (#9.4).

"ENTRY POINT:"
Your response should be the entry point in the routine that should be called.

"ROUTINE:"
Your response should be the routine that should be called.

"Select PROTECTED LOCAL VARIABLES:"
You can define a list of variables (without subscripts) that should be "newed" before the entry action or calling the interface.

"Select REQUIRED LOCAL VARIABLE:"
You can define a list of variables which are required input to the interface routine. The Print Manager will not call the entry point in the interface routine unless all of the required variables are defined.

"AVAILABLE? (Y/N):"
This field should be set to YES if the interface is available, NO if it is not available. Interfaces that are not available are not called. The Print Manager will not print the report unless this is set to YES.
Encounter Form IRM Options
Define Available Report (not Health Summaries)

Example

You can now edit the reports available through the print manager.

Care must be taken when defining reports to the Print Manager. Please
Enter RETURN to continue or '^
' to exit: <RET>

follow these rules:

1) Entry points must involve no user interaction.
2) The device must not be changed or closed.
3) Local variables should be the same on exit as on entry.

THESE VARIABLES ARE AVAILABLE:

DFN = ien of patient in the PATIENT file
IBCLINIC = ien of clinic in the HOSPITAL LOCATION file
IBAPPT = appointment date/time in FM format

FEATURES OF INTEREST, IN THE ORDER PERFORMED BY THE PRINT MANAGER:

AVAILABLE?: The Print Manager will not print the report unless this is set to YES.

REQUIRED VARIABLES: You can define a list of variables that should be defined. The Print Manager won't call the entry point unless they are defined.

Enter RETURN to continue or '^
' to exit: <RET>

PROTECTED VARIABLES: You can define a list of variables (without subscripts) that should be NEWed.

ENTRY ACTION: Mumps code that should be Xecuted before calling the entry point.

EXIT ACTION: Mumps code that should be Xecuted after calling the entry point.

EXAMPLE: Supposing the entry point kills DFN. You could do this:

REQUIRED VARIABLE: DFN
PROTECTED VARIABLE: IBDFN
ENTRY ACTION: S IBDFN=DFN
EXIT ACTION: S DFN=IBDFN

AVAILABLE? (Y/N): YES/<RET>
Encounter Form IRM Options

Import/Export Utility

Introduction

This option is locked with the IBDF IRM security key.

This option allows forms and Tool Kit blocks to be transferred between sites. The initial install of the Encounter Form Utilities at your site included a Tool Kit of forms and blocks that must be imported using this utility. The only safe method for transferring additional forms and blocks between sites is through this option.

The Import/Export Utility includes a set of files (#358 through #358.98) that are nearly identical to the files used by AICS (#357 through #357.94) to store form descriptions. These import/export files are a workspace in which forms and blocks can be safely exported to other sites, and imported from other sites to your own.

You should have a package entry for the Import/Export Utility already set up. The files listed should be in the #358 to #358.98 range. The package entry is named IB ENCOUNTER FORM IMP/EXP, and the prefix is IBDE. The package entry is necessary to export.

You should follow these steps when IMPORTING:

1. Make sure the other site has prepared a set of inits, using this utility, that contain the forms and Tool Kit blocks they want to transfer.

2. Make sure your workspace does not contain any forms or blocks that you want to keep, then clear the workspace using the Clear Work Space action. NOTE: Anything remaining in the workspace will be lost when you use the Clear Work Space action.

3. Execute the inits using the Run Inits action. The init should normally be named IBDEINIT.

4. The workspace should now contain forms and tool kit blocks from which you can choose which ones you want. Use the IMPORT ENTRY action to actually make the form or block available for use. The forms cannot be viewed while in the workspace, but you can view the IMPORT/EXP NOTES.
Encounter Form IRM Options
Import/Export Utility

(Using the IMPORT ENTRY action copies the form from the 358 series of files at
the remote site to the 357 series of files at your site.) You must import each item
separately.

5. Change the name of the form or tool kit block if that block already exists at your
site.

You should follow these steps when EXPORTING:

NOTE: Only users with PROGRAMMER ACCESS can export.

1. Clear the workspace of anything you do not want to export.

2. Add any forms or blocks to the workspace that you do want to export.

3. Add Import/Export Notes for each entry you add to the workspace, accurately
describing the form or block for the site to which you are exporting. (The
receiving site will be able to view the notes, but they will not be able to view the
form itself until they import it.)

4. Create the inits that will be sent to the other site using the DIFROM action.

5. Send the inits to the other site.

This version (#2.1V1) of 'IBDEINIT' was created on 07-MAR-1997
(at ISC-ALBANY DEMO TEXT RET V.1, by VA FileMan V.21.0)

I HAVE TO RUN AN ENVIRONMENT CHECK ROUTINE.

Initialization Started: MAR 07, 1997@11:07:33

I AM GOING TO SET UP THE FOLLOWING FILES:

358  IMP/EXP ENCOUNTER FORM (Partial Definition)  (including data)
Note: You already have the 'IMP/EXP ENCOUNTER FORM' File.
I will OVERWRITE your data with mine.

358.1 IMP/EXP ENCOUNTER FORM BLOCK (Partial Definition) (including data)
Note: You already have the 'IMP/EXP ENCOUNTER FORM BLOCK' File.
I will OVERWRITE your data with mine.

358.2 IMP/EXP SELECTION LIST (Partial Definition) (including data)
Note: You already have the 'IMP/EXP SELECTION LIST' File.
I will OVERWRITE your data with mine.

358.3 IMP/EXP SELECTION (Partial Definition) (including data)
Note: You already have the 'IMP/EXP SELECTION' File.
I will OVERWRITE your data with mine.

358.4 IMP/EXP SELECTION GROUP (Partial Definition) (including data)
Note: You already have the 'IMP/EXP SELECTION GROUP' File.
I will OVERWRITE your data with mine.

358.5 IMP/EXP DATA FIELD (Partial Definition) (including data)
Note: You already have the 'IMP/EXP DATA FIELD' File.
I will OVERWRITE your data with mine.

358.6 IMP/EXP PACKAGE INTERFACE (Partial Definition) (including data)
Note: You already have the 'IMP/EXP PACKAGE INTERFACE' File.
I will OVERWRITE your data with mine.
Package Operation

**Encounter Form IRM Options**

**Import/Export Utility**

358.7 IMP/EXP FORM LINE (Partial Definition) (including data)
Note: You already have the 'IMP/EXP FORM LINE' File.
I will OVERWRITE your data with mine.

358.8 IMP/EXP TEXT AREA (Partial Definition) (including data)
Note: You already have the 'IMP/EXP TEXT AREA' File.
I will OVERWRITE your data with mine.

358.9 IMP/EXP MARKING AREA (Partial Definition) (including data)
Note: You already have the 'IMP/EXP MARKING AREA' File.
I will OVERWRITE your data with mine.

358.91 IMP/EXP MULTIPLE CHOICE FIELD (Partial Definition) (including data)
Note: You already have the 'IMP/EXP MULTIPLE CHOICE FIELD' File.
I will OVERWRITE your data with mine.

358.93 IMP/EXP HAND PRINT FIELD (Partial Definition) (including data)
Note: You already have the 'IMP/EXP HAND PRINT FIELD' File.
I will OVERWRITE your data with mine.

358.98 IMP/EXP AICS DATA QUALIFIERS (Partial Definition) (including data)
Note: You already have the 'IMP/EXP AICS DATA QUALIFIERS' File.
I will OVERWRITE your data with mine.

358.99 IMP/EXP AICS DATA ELEMENTS (Partial Definition) (including data)
Note: You already have the 'IMP/EXP AICS DATA ELEMENTS' File.

**Encounter Form IRM Options**

**Recompile All Forms**

**Introduction**

This option is locked with the IBDF IRM security key.

This option is used to recompile all forms. The compiled version of every form and block is deleted. Each form is recompiled the first time it is printed.

**Example**

Do you really want to Recompile all Forms? **YES**

Uncompiling all forms.........................

Okay, forms will be recompiled as they are printed.
Encounter Form IRM Options

Miscellaneous Cleanup

Introduction

This option is locked with the IBDF IRM security key.

This option deletes various data structures that are no longer in use. Because AICS was designed to automatically delete all data structures when no longer needed, this option is a backup that should rarely be needed. Currently, the option deletes the compiled version of forms where the form itself no longer exists. It also deletes blocks that do not belong to any form.

When you use this option, the cleanup is performed, a message similar to the following appears on the screen, and you automatically return to the menu.

Blocks not belonging to any form have been deleted Extraneous cross-references on non-existent forms have been deleted
Introduction

This option is locked with the IBDF IRM security key.

This option allows editing of the Encounter Form Printers file. You can specify whether or not a terminal type is PCL5 compatible and the proper escape sequences for simplex and duplex. Only PCL5 compatible printers can print scannable encounter forms, and must be so indicated. Most HP laser printers are PCL5 compatible.

Example

Add/Edit Encounter Form Printers Terminal Type

Select ENCOUNTER FORM PRINTERS TERMINAL TYPE: P-HPLASER/16/8/UP/DUPELEX
   Laser Jet with 16.66 pitch and 8 lines per inch (Upright)
   ...OK? Yes// <RET> (Yes)

DUPELEX, LONG-EDGE BINDING: $C(27) "&l1S"// <RET>
DUPELEX, SHORT-EDGE BINDING: $C(27) "&l2S"// <RET>

Select ENCOUNTER FORM PRINTERS TERMINAL TYPE:
Encounter Form IRM Options

Purge Form Tracking files

Introduction

This option is locked with the IBDF IRM security key.

This option purges old data from the ENCOUNTER FORM TRACKING file (357.96), the ENCOUNTER FORM DEFINITION file (357.95), and the FORM SPECIFICATION file (359.2). It should be queued to run at the site’s convenience. The IBDF AUTO PURGE FORM TRACKING option should be used to automatically queue this option to run on a recurring basis.

The option needs no device and has no output.

Example

Do you want to purge Form Tracking?
Enter Yes or No: YES

This is a required response. Enter ‘^’ to exit
Enter Yes or No: NO
Number of Days to Retain: (60-999): 60// 100

Select one of the following:

0     None
1     Purge Completed Entries
2     Purge All Entries

Purge what Entries: 1// 2   Purge All Entries
Requested Start Time: NOW// <RET>   (MAR 06, 1997@08:50:19)
Requested Queued Task+236109

Reports and Utilities
   Edit Site Parameters

Introduction

This option is locked with the IBDF IRM security key.

The FILL % FOR BUBBLES and BACKGROUND % FOR BUBBLES fields are asked only if you hold the IBD MANAGER key.

This option allows editing of AICS site parameters that affect the printing of forms, manual data entry, the purge utility and scanning.

Following are the parameters with a brief description. A double question mark (??) entered at any prompt provides a complete description of that parameter.

Form Tracking Purge Parameters
RECORDS TO PURGE - whether you want the background purge option to purge all records, completed records, or no records older than the number of days specified in the FORM TRACKING RETENTION DAYS field.

FORM TRACKING RETENTION DAYS - the number of days to retain form tracking information after it is no longer used.

PURGE NOTIFICATION MAIL GROUP - the mail group automatically notified of purge results. Results are also stored in the AICS PURGE LOG file and may be reviewed. Mail notification is not required.

Data Entry Parameters
DEFAULT DATA ENTRY FORM - the form to be used as the default form for doing data entry when no form exists for a clinic. If no form is defined, the Primary Care Sample form exported with AICS 2.1 will be used as the default form.
Package Operation

Reports and Utilities
   Edit Site Parameters

MAKE APPOINTMENT IN DATA ENTRY - whether you want users at your site to be prompted to make a follow up appointment during data entry of an encounter form.

PASS DATA TO PCE - how data captured in the AICS EF Data Entry Options should be passed to PCE. (Enter a double question mark at the prompt for a list of choices with complete descriptions.)

Print Parameters
PRINT FORMS FOR INPATIENTS - whether you would like to suppress printing of encounter forms for inpatients. If left blank, Encounter Forms for inpatients will print.

DAYS TO PRINT 1010F - the number of days between the expiration of a Means Test and the appointment date before that you want to print 1010Fs for. For example, if this field is set to 30, then 1010Fs will print for Means Tests that are due to expire within 30 days of the appointment.

Scanning Parameters
FILL % FOR BUBBLES - a number between 0 and 99 that represents the percentage of fill required for a bubble to be considered as checked. Entering a zero will leave the determination up to Paper Keyboard. If this field is left blank, AICS will use 20% as the amount of fill required.

This field corresponds to the Threshold % field in the Metric dialog box in Paper Keyboard. The value of this field should always be more than the value for the BACKGROUND % FOR BUBBLES field.

Modifying this field will affect only new files, and will not affect any existing form specification files. To modify an existing form specification file, it must be deleted from the workstation and the corresponding entry in file 359.2 must be deleted. This field is asked only if you hold the IBD MANAGER key.

BACKGROUND % FOR BUBBLES - a number between 0 and 99 that represents the percentage of background fill in a bubble that can exist before Paper Keyboard will consider any markings in the bubble. If this field is left blank then AICS will use 5%. Entering a zero leaves the determination up to Paper Keyboard.
Reports and Utilities
   Edit Site Parameters

This field corresponds to the Background % field in the Metric dialog box. Entering a small value prevents small dots on the page from appearing as check marks. The value of this field should always be less than the value for the FILL % FOR BUBBLES field.

Modifying this field will affect only new files, and will not affect any existing form specification files. To modify an existing form specification file, it must be deleted from the workstation and the corresponding entry in file 359.2 must be deleted. This field is asked only if you hold the IBD MANAGER key.

STOP DEFAULTING C/O DATE/TIME - if there is no checkout date/time on the encounter form, the scan date/time is automatically entered by default as the checkout date/time. YES must be entered in this field to stop the automatic default.

Example

Edit AICS Site Parameters

Form Tracking Purge Parameters
   RECORDS TO PURGE: COMPLETED // <RET>
   FORM TRACKING RETENTION DAYS: 60 // <RET>
   PURGE NOTIFICATION MAIL GROUP: <RET>

Data Entry Parameters

   MAKE APPOINTMENT IN DATA ENTRY: YES // <RET>
   PASS DATA TO PCE: FOREGROUND/WITH DISPLAY // <RET>

Print Parameters
   PRINT FORMS FOR INPATIENTS: YES // <RET>
   DAYS TO PRINT 1010F: 30 // <RET>

Scanning Parameters
   FILL % FOR BUBBLES: 20
   BACKGROUND % FOR BUBBLES: 5
   STOP DEFAULTING C/O DATE/TIME: YES // <RET>
Reports and Utilities

Scanning Error Listing

Introduction

During scanning, errors reported by AICS or PCE are stored in the AICS ERROR & WARNING LOG file. This report allows you to print a list of the errors so that the encounter forms can be retrieved and the data validated.

This report prints at 132 columns.

Example

<table>
<thead>
<tr>
<th>PATIENT</th>
<th>ID</th>
<th>APPOINTMENT DATE</th>
<th>ID</th>
<th>SOURCE</th>
<th>USER</th>
<th>ERROR MESSAGE</th>
</tr>
</thead>
<tbody>
<tr>
<td>841, AICS</td>

</table>
Reports and Utilities
Forms Tracking

Introduction

Two new actions have been added. Delete Entry allows a forms tracking entry to be deleted. Rel Forms w/Lost Pages allows you to pass a Forms Tracking entry to PCE when the remainder of the pages have been lost.

The IBD MANAGER key is required to use the new action, RF Rel Forms w/Lost Pages.

This option now also sorts by clinic group.

The Status Report now lists by date order within clinics.

The Statistics Report now includes the number and percentage of forms entered through manual data entry (DE); and number and percentage sent to PCE.

New statuses have been added (see below).

This report is now queuable to a printer.

This option allows you to display encounter forms sorted by clinic, patient, or clinic group for a specified division(s), clinic group(s) and date range. The Change List action, found on the Form Tracking Status Report screen, allows you to re-enter this information without exiting the option.

The Form Tracking Status Report, shows the date the form was printed and scanned (if applicable), and the status.

The Statistics Report shows statistical information such as the number and percentage of forms printed, entered through manual data entry, and scanned for each clinic.

The Status Select Report allows you to display forms with a specific status(es).

Reports and Utilities
Maintenance Utility for Active/Inactive Codes

Introduction

Note: With functionality put in place by the Code Set Versioning project, the date and time that this report is run will determine whether codes are considered active or inactive.

Note 2: Patch IBD*3*63 adds ICD-10 code information. You can now select either ICD-9 or ICD-10 Diagnosis Codes, depending on whether the date is before the ICD-10 Activation Date (ICD-9) or on or after the ICD-10 Activation Date (ICD-10).

Now allows you to list active CPT, ICD-9 or ICD-10, and Visit codes that appear on encounter forms.

This option allows you to display a list of invalid ICD-9 or ICD-10, CPT and VISIT codes that appear on encounter forms. You can display a selected type of code by individual clinic(s), clinic group(s), or encounter form(s). The Change List action allows you to re-enter this information without exiting the option.

Other actions allow you to display a complete list of all invalid ICD-9 or ICD-10, CPT, and VISIT codes; and replace or delete invalid codes from the forms.

The Jump action allows you to jump to any clinic/group/form on the Maintenance Utility screen.

Example
Select Clinic: ALL// <RET>
Select Type of Code to Display: DG
  1   DG SELECT CPT PROCEDURE CODES             TYPE=SELECTION
  2   DG SELECT ICD-10 DIAGNOSIS CODES           TYPE=SELECTION
  3   DG SELECT ICD-9 DIAGNOSIS CODES            TYPE=SELECTION
  4   DG SELECT VISIT TYPE CPT PROCEDURES        TYPE=SELECTION
CHOOSE 1-4: 3 DG SELECT ICD-9 DIAGNOSIS CODES         TYPE=SELECTION
Display codes [A]ctive, [I]nactive: ACTIVE// <RET>
Select ICD-9 code:
**Package Operation**

**Reports and Utilities**

*Maintenance Utility for Active/Inactive Codes*

The Replace Code action in the Maintenance Utility Report prompt has changed depending upon which Type of Code you selected (ICD-9 or ICD-10).

**Replace Code for ICD-9 Codes**

Select Action: Next Screen

RC=3 Replace Code

Select ICD 9 DIAGNOSIS CODE NUMBER: 278.01 278.01 MORBID OBESITY

...OK? Yes// <RET> (Yes)

Subcolumn Header:

Edit Subcolumn 3: MORBID OBESITY// <RET>

NARRATIVE TO SEND TO PCE: ??

Enter the narrative that should be sent to PCE when this selection is scanned. This will be the provider narrative that is shown in PCE. If there is no entry in this field the text as it appears on the form will be sent as the narrative.

This field can only be entered for the type of interfaces that allow adding this narrative, and then send the narrative to PCE.

**Replace Code for ICD-10 Codes**

Select Action: Next Screen

RC=3 Replace Code

Enter Diagnosis, a Code or a Code Fragment:

This prompt allows you to use the partial code search.

**Invalid Code List**

This screen displays the most current invalid codes for the CPT file.

Print Sample of all Forms

Introduction

This option prints one copy of each form currently in use. It could be used to prepare a package of materials for review, or to share with other facilities.

This could be lengthy depending on the number of forms. It is also important to remember encounter forms require a page size of 80 lines and 132 columns.

Instead of printing the patient name and SSN at the bottom of the form, this option will print the form name and clinic. Care needs to be exercised in distributing forms with patient identifiers that appear on other areas of the form.

Report Clinic Setups

Introduction

This option provides a report that lists each clinic setup, and the encounter forms and other reports defined for use by that clinic. For clinics with reports defined, the condition on which the report is printed is also provided.

Example

AICS Print Manager Clinic Setup Report            Mar 12, 1997@09:59:59  PAGE 1

Encounter Forms ICD-10 Update

Introduction

This option allows you to display a list of Encounter Forms and Clinics after making selections from several input options. When the report has been displayed, you may then update the ICD-10 Status field. Two date fields show the latest dates that the form was changed. The history fields contain the user ID (DUZ) of the person who last changed the files.

Example 1 Prompts for ICD-10 Status Update Summary Report

Select Reports and Utilities Option: UP Encounter Forms ICD-10 Update

Select one of the following:
   AC   ALL CLINICS
   SC   SELECTED CLINICS
   RC   RANGE OF CLINICS

Selection type: ALL CLINICS/<RET>

Select one of the following:
   9    ICD-9
   10   ICD-10
   B    Both
   N    Neither
   A    All

Contains ICD-9 and/or ICD-10 diagnosis codes:
   ICD-[9], ICD-[10], [B]oth, [N]either, [A]ll: ALL//All

Select one of the following:
   I    Incomplete
   C    Complete
   R    Review
   A    All

ICD-10 Update Status:

Select one of the following:
   S    Summary Report
   D    Detail Report

Report Type:

Sort Selections

If you sort the report by Clinics, the report output is sorted first by Clinic name, in alphabetic order, then by Encounter Form name, in alphabetic order.
Package Operation

If you sort the report by Groups, the report output is sorted first by Clinic Group, in alphabetic order, then by Clinic name, in alphabetic order, then by Encounter Form name, in alphabetic order.

If you sort the report by Forms, the report output is sorted by Encounter Form name, in alphabetic order.

+ Enter ?? for more actions

CL  Change List  PL  Print List
JP  Jump List    IS  Status Update
Select Action: Next Screen/ IS

Status Update Action
Initially, the IS action is blank (i.e., incomplete) for all Encounter Forms. You can select a single entry or a range of entries, and you are then prompted to change the update status to “REV” (Review) or “COMP” (Complete).

Note: During the period of time when Encounter Forms are being updated for the initial activation of ICD-10, the ICD-10 Update Status “Incomplete” could be used to manage Encounter Forms that may have had none or only some ICD-10 diagnosis codes added; the Status “Review” could be used if ICD-10 diagnosis codes that have been added are impacted by an update to the ICD-10-CM code set; the Status “Complete” could be used if the Encounter Form’s ICD-10 update has been completed. For future updates to the ICD-10-CM code set (i.e., subsequent to the initial ICD-10 activation), the “Review” status could be used to indicate which Encounter Forms may require updates based on ICD-10-CM codes that have been added, deleted, or updated in the ICD-10-CM code set; the Status “Complete” could be used when those Encounter Form updates have been completed.

Note: If you are editing Encounter Forms with Lexicon User Filters in place, those filters will be honored with the exception of editing an ICD-9 block or editing an ICD-10 block within the encounter form. When editing ICD-9 blocks, you will be allowed
to choose from any ICD-9 code; and when editing an ICD-10 block, you will be allowed to select any ICD-10 code, regardless of what Lexicon User Filters are in place. Users will be prompted for whether they wish to enter Active or Inactive Diagnosis Codes for both code sets.
ICD-10 Search Functionality

The IBD*3*63 patch provides the ability to search on ICD-10-CM diagnosis codes when creating or editing Encounter Forms/blocks. Also, a wildcard search allows you to enter an “*” (asterisk) to select multiple, valid ICD-10 diagnosis codes for Encounter Forms. Whether the current date is prior to or on or after the ICD-10 Activation Date, you can access the ICD-10-CM code set.

Note: Existing ICD-9 search functionality has not changed.

ICD-10 Diagnosis Code Search

The AICS ICD-10 diagnosis code search functionality allows you to select a single, valid ICD-10 diagnosis code and display its description. The user interface prompts you for input, invokes the Lexicon utility to get data, and then presents that data.

This search method provides a “decision tree” type search that uses the hierarchical structure existing within the ICD-10-CM code set, as defined in the ICD-10-CM Tabular List of Diseases and Injuries, comprising categories, sub-categories, and valid ICD-10-CM codes. A dash after a number indicates that it contains a sub-category.

ICD-10-CM diagnosis code search highlights include:

- The more refined the search criteria used (i.e., the more descriptive the search terms), the more streamlined the process of selecting the correct valid ICD-10 diagnosis code will be.
- You are presented with a manageable list of matching codes with descriptions, consisting of any combination of categories, sub-categories, and valid codes. The length of the list of items that is presented is set to a default of 20,000. If the list is longer, you are prompted to refine the search.
- You can “drill down” through the categories and sub-categories to identify the single, valid ICD-10-CM code that best matches the patient diagnosis.
- Short descriptions for the valid ICD-10-CM codes display.
- Partial code searches are also possible, as is full ICD-10-CM code entry, for situations where all or part of the code is known.

The AICS package provides the ability to search on ICD-10-CM diagnosis codes at the following prompts when editing Encounter Forms/blocks:

- Select ICD-10 DIAGNOSIS CODE NUMBER:
- Select a SECOND ICD-10 code to associate with the original:
- Select a THIRD ICD-10 code to associate with the original:

Example
Select Action: Next Screen// RC Replace Code
Select Entry:  (1-7): 1
Enter Diagnosis, a Code or a Code Fragment: S62

Press <RETURN> for more, "^" to exit, or Select 1-8: 1
ICD-10 Wildcard Search

The purpose of the ICD-10 wildcard search functionality for diagnosis code retrieval is to serve a specific user end goal, which is the selection of multiple, valid ICD-10 diagnosis codes (often related) to associate with specific functional elements, such as Encounter Forms. Use the wildcard search when you are defining Encounter Forms and have previously identified the ICD-10 codes that you want to quickly and efficiently select.

ICD-10 wildcard search highlights include:

- This is a completely code-based search (i.e., not text-based). Two wildcard characters (* and ?) are used to assist with searches.
- If the search terms provided by the application consist of a string of characters (i.e., the search string) containing an * (asterisk) as the wildcard character (e.g., E08*, 005*), the system finds all ICD-10 codes that match the search terms, where zero or more alphanumeric characters (including the “X” placeholder character for ICD-10-CM diagnosis codes) exist at the position where the * exists in the search string.
- The * (asterisk) wildcard character can only appear in the last position of the search string.
- If the search terms provided by the application consist of a string of characters containing one or more ? (question mark) as the wildcard character (e.g. E1?.?0, 005??ZZ), the system finds all ICD-10 codes that match the search terms, where a single alphanumeric character (including the “X” placeholder character for ICD-10-CM diagnosis codes) exists at the position where a ? exists in the search string.
- The ? (question mark) wildcard character can appear anywhere in the search string, and can appear more than once. The system does not match a null (blank) value where a ? exists at the end of the search string.
- If the search terms provided by the application consist of a string of characters containing both an * and one or more ? as wildcard characters (e.g., E2?.1*, 0SU?3*), the system finds all ICD-10 codes that match the search terms, where zero or more alphanumeric characters exist at the position where the * exists in the search terms and a single alphanumeric character exists at the position where a ? exists in the search string.
- The first 2 characters in the search string cannot consist of a wildcard character (* or ?).
- The system provides the code and long description for each ICD-10 diagnosis or procedure matching the search terms.
- You can select one or more ICD-10 codes from the list of matching codes, using a list, range, or combination.
- When editing an Encounter Form, you can enter a partial code without using any wildcard characters (e.g., E08, 005), in order to select a group of ICD-10
codes all at once, with the individual ICD-10 codes and descriptions not displayed.

- Entering ^ saves your selection and exits the search.

A wildcard search entry works differently from a selection list. If you answer “Yes” to automatically select ICD-10 codes, then a selection list does NOT display. The selection automatically prompts you for the NEXT available ICD-10 code based on the wildcard entry that you entered.

**Example**
There are 7 ICD-10-CM diagnosis codes that begin with E16*. Do you wish to automatically add all of these diagnosis codes to this block? No// Y (Yes)

E16.0 Drug-induced hypoglycemia without coma

Glossary

anchor marks  Cross-hair or angle marks appearing on a scannable form. They are used by the commercial scanning engine to align the form.

block  A form is composed of blocks. Blocks are a rectangular region on the form. Attributes include position, size, outline type, and header. All other form components are contained within a particular block, and their position is relative to the block's position.

bubbles  Marking areas on a form. They are filled in to indicate a selection, and will be read by the scanner.

column  A selection list contains one or more columns, a column being a rectangular area that contains a portion of the entries on a selection list. Attributes include position and height.

comb  Marking areas on a form to guide a user into entering one character per box.

conversion  Refers to the conversion of forms designed using IB V. 2.0 to forms that can be scanned.

CSV  Code Set Versioning. This package is mandated under the Health Information Portability and Accountability Act (HIPAA). It contains routines, globals and data dictionary changes to recognize code sets for the International Classification of Diseases, Clinical Modification (ICD-9-CM), Current Procedural Terminology (CPT) and Health Care Financing Administration (HCFA) Common Procedure Coding System (HCPCS). When implemented, certain applications will allow users of these three code systems to select codes based upon a date that an event occurred with the Standards Development Organization (SDO)-established specific code that existed on that event date.

data field  A block component that is the means by which data from VISTA is printed to the form, such as the
patient's name. The data is obtained at the time the form is printed (i.e., it is not stored with the form) and can be particular to the patient. A data field can have subfields, which are conceptually a collection of related data fields. Attributes include label, label type (underline, bold, invisible), position, data area, data length and position (area on the form allocated to the data), item number, and package interface (the routine used to get the data).

**data qualifiers**
A selection list component. Example: with data qualifiers, a diagnosis can be designated as either primary or secondary.

**dynamic selection lists**
Lists used to print the patient's active problems, insurance policies, providers assigned to the clinic, etc. Dynamic lists provide the capability of scanning data such as patient's active problems. They also provide an easier method of printing lists of data such as SC disabilities, as compared to using data fields.

**encounter form**
A paper form used to display data pertaining to an outpatient visit and to collect additional data pertaining to that visit.

**entry action**
An attribute of a package interface. It is MUMPS code that is executed before the interface's entry point is executed.

**exit action**
An attribute of a package interface. It is MUMPS code that is executed after the interface's entry point is executed.

**form line**
A block component. A straight line that will be printed to the form. Attributes include orientation (horizontal, vertical), position, and length.

**form tracking**
Tracks the processing status of forms. Each printed form will be assigned an ID, allowing it to be tracked while it's being processed. The lists of forms printed, their status, and statistics can be obtained from the Form Tracking option.

**hand print field**
Allow input of hand printing.
ICD-10 codes  Replace the ICD-9-CM code set with ICD-10-CM with dates of service or dates of discharge for inpatients that occur on or after the ICD-10 Activation Date.

intelligent character recognition  (ICR) The ability to read hand written characters (usually printed) in combs or boxes.

item number  An attribute that must be specified when defining a data field if the data field's package interface returns a list. The item number is used to specify which item on the list should be printed to the data field. For example, there is a package interface for returning service connected conditions. The first data field created for a form for displaying a service connected condition would specify item number one.

operator fill field  A field that is completed by an operator once it's scanned.

optical character recognition  (OCR) The ability for scanning software to read characters printed by a printer on a form.

package interface  A table that is the method by which AICS interfaces with other packages. Presently there are three types of package interfaces: for printing reports via the print manager, printing data to data fields, and for entering data to selection lists. Attributes include entry point, routine, entry action, exit action, protected variables, required variables, data type, data description, and custodial package.

Paper Keyboard  A commercial scanning application, by Datacap, Inc., used to perform the scanning, recognition, and validation portions of the scanning process.

place holders  A component of a selection list. They can contain text and serve as subheaders for the selections that follow within a group.

print manager  The print manager is a utility used to define the reports and encounter forms that should be printed for clinics. It will then print the reports and forms in packets for each appointment specified.

scannable  A form or marking area that is designed to be scanned...
and formatted; and defined to the scanning software.

**selection**  
A component of a selection list. It is a single entry on the list. It is stored with the form and usually consists of data taken from a file in VISTA such as a CPT code with its description.

**selection group**  
A component of a selection list. It is a named group of selections on the list. Attributes include a header and the print order.

**selection list**  
A block component whose purpose is to contain a list; for example, a list of CPT codes. The list contains subcolumns for marking areas, which are areas meant to be marked to indicate selections being made from the list. Attributes include headers, subcolumns, subcolumn width, subcolumn type, package interface (the routine used to fill the list), and many attributes for the appearance of the list.

**selection rule**  
There are a set of rules on the number of items that can be accepted for each list. For example, exactly one primary diagnosis and any number of secondary diagnoses can be specified.

**subcolumn**  
A component of a selection list. It can contain either text, such as a CPT code, or a marking area.

**subfield**  
A component of a data field. It can display a single value, whereas a data field can be used to display a collection of related values. Attributes include those for the label and the area on the form to print the data. Also, for package interfaces that return records that have multiple values, the particular data must be specified.

**text area**  
A rectangular area in a block that is used to display a word-processing field. The text is automatically formatted to fit within the block. Attributes include the word-processing field, the position and size of the text area. The text is stored with the form.

Setup Automatic Print Queues ................................................................................... 31
Appendix A - Background EF Print with Special Instructions

The release of AICS V. 2.1 enabled you to print encounter forms through the use of several options, one of which is the Background EF Print option. In order for this option to work, you must set parameters to run the job. Some of the main parameters that run this job are listed below. You can set up multiple jobs, each with its own set of parameters.

Last Date Printed

This parameter contains the date of the last day for which encounter forms were printed.

Days To Print Ahead

This parameter stores the number of days ahead (from the date the job is queued) for which the encounter forms should be printed.

Special Instructions

This parameter is required when setting up individual encounter form print jobs for a facility using the Background EF Print option. Use the Setup Automatic Queues option on the Print Managers menu to set this parameter from the following choices. Brief scenarios are provided for those involving weekends and holidays.

Note: This parameter is a very important one and should be well understood in order for the printing to be done correctly and encounter forms to be printed when they are supposed to.

R - Run Regardless When the parameter is set to this value, the print job will run daily at the scheduled time, regardless of what day of the week it is or whether it is a holiday when no clinics meet.

N - Not Active When the parameter is set to this value, the job is considered inactive and no encounter forms will print.
T - Today   When the parameter is set to this value, encounter forms will print for
today only. The DAYS TO PRINT AHEAD parameter should be set to zero.

I - Ignore Both Weekends and Holidays
When the parameter is set to this, if the day the
job is queued to run is a weekend day or a holiday,
the job will abort. It also checks the day for which the
encounter forms are to be printed. If it is a weekend day
or a holiday, the job will keep going until it finds a
regular work day. It will then print the encounter forms
for the regular work day and quits.

**Include weekends and holidays in counting the number of days ahead!**

Scenario 1
The facility will be printing encounter forms three days in advance with the Special
Instructions parameter set to Ignore Both Weekends and Holidays.

<table>
<thead>
<tr>
<th>Day queued</th>
<th>Day to be printed (+3)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Monday</td>
<td>Thursday</td>
</tr>
<tr>
<td>Tuesday</td>
<td>Friday</td>
</tr>
<tr>
<td>Wednesday</td>
<td>Saturday, Sunday, Monday (holiday), Tuesday</td>
</tr>
</tbody>
</table>

Since the forms print three days in advance, on Wednesday the forms for Saturday
should be printed. This is a weekend day, and according to the special instructions,
should be ignored. The job checks the LAST DATE PRINTED parameter and will
try to print this day if the day to be printed is after the last date that encounter
forms were printed. No encounter forms will be printed since no appointments are
scheduled for this day. The queue will then check the next day and see if it is a
weekend day or a holiday. Sunday is a weekend day and a day after the Last Date
Printed; therefore, the job queues off but no encounter forms are printed because
nothing is scheduled for this day. The job will then check the next day to see if it is a
regular work day and not a weekend day or holiday and print forms if there are
any for that day. The Monday, for our example, will be a holiday and a day after
the Last Date Printed so the job is queued but nothing prints for this day either.
The queue will then check the next day for a regular workday...Tuesday, and print
encounter forms for that day.
The system will then update the Last Date Printed and quit the job. The job will run until it finds the first regular work day and prints the encounter forms for that day.

Thursday               Wednesday

On Thursday, the forms for Sunday should normally print. It is a weekend day and a date before the Last Date Printed; therefore, the job prints nothing for this day. It looks for the next day...Monday...it’s a holiday and before the Last Date Printed...nothing prints. It then looks to the next day...Tuesday...the day of the Last Date Printed...nothing prints for this day since the encounter forms have already been printed for this day. It then looks to the next day...Wednesday, and prints that day’s encounter forms and updates the Last Date Printed parameter. It then quits the job.

Friday               Thursday

It is supposed to print Monday the holiday, but Monday has already been taken care of and it’s before the Last Date Printed so it ignores that and also ignores Tuesday and Wednesday because encounter forms have already been printed for those days because the Last Date Printed is Wednesday; therefore, Thursday is the next day to print encounter forms for.

Saturday               Nothing prints. The job stops immediately because it is a weekend day.

Sunday               Nothing prints. The job stops immediately because it is a weekend day.

Monday (holiday)     Nothing prints. The job stops immediately because it is a holiday.

Tuesday               Friday

Wednesday     Sat, Sun, Mon.

Thursday               Tuesday

Friday               Wednesday

Saturday               Nothing prints.

Sunday               Nothing prints.
Monday    Thursday

At this point, you are back on a schedule.

W - Ignore Weekends    When the parameter is set to this, if the day the job is queued for a weekend day, the job will abort. It also checks the day that the encounter forms are to be printed for. If it is a weekend day the job will keep going until it finds a regular work day and prints forms for it. The job then quits.

**Include weekends in counting the number of days ahead!**

**Scenario 2**
The facility will be printing encounter forms three days in advance with the Special Instructions parameter set to Ignore Weekends.

<table>
<thead>
<tr>

</tr>
<tr>
<td>Sunday</td>
<td>Nothing prints. The job stops immediately because it is a weekend day.</td>
</tr>
<tr>
<td>Monday</td>
<td>Thursday</td>
</tr>
</tbody>
</table>

*Same explanation as Scenario 1.*
H - Ignore Holidays

When the parameter is set to this, if the day the job is queued for is a holiday, the job will abort. It also checks the day that the encounter forms are to be printed for. If it is a holiday, the job will keep going until it finds a regular work day and prints forms for it. The job then quits.

*Scenario 3*

*The facility will be printing encounter forms three days in advance with the Special Instructions parameter set to Ignore Holidays.*

Appendix B - List Manager

The List Manager is a tool that displays a list of items in a screen format and provides you the following functionality.

- browse through the list
- select items that need action
- take action against those items
- select other List Manager actions without leaving the option

A plus sign (+) at the bottom of the screen indicates there are additional screens. Left or right arrows (<<<   >>>) might be displayed to indicate there is additional information to the left or right on the screen. Actions(s) are entered by typing the name(s), or abbreviation(s) at the "Select Action" prompt. Actions can be preselected by separating them with a semicolon (;). For example, "AL;CI" (Appointment Lists; Checked In) will advance through the two actions automatically.

Entries can be preselected in the following manner.

CI=1 will process entry 1 for check in
CI=3 4 5 will process entries 3, 4, 5 for check in
CI=1-3 will process entries 1, 2, 3 for check in

In addition to the various actions that can be available specific to the option you are working in, List Manager provides generic actions applicable to any List Manager screen. You can enter a double question mark <??> at the "Select Action" prompt for a list of all actions available. On the following page is a list of generic List Manager actions with a brief description. The abbreviation for each action is shown in brackets [] following the action name. Entering the abbreviation is the quickest way to select an action.
<table>

</tr>
</tbody>
</table>
Appendix C - Scanning

With functionality put in place by the Code Set Versioning project, Scanning and Manual Data Entry (MDE) functionality in AICS is terminated. This shutdown is for the following reasons.

1. Because this functionality is no longer being enhanced, it is not compatible with the new diagnostic and procedure codes as defined by HIPAA. If Scanning & MDE are allowed to continue, encounter data may be rejected which would result in the generation of application errors.

2. VHA DIRECTIVE 2003-012.
   
   a. All facilities should only be using "electronic encounter forms" by October 1, 2003.
   b. All providers should enter their own encounter data using CPRS by October 1, 2003.

3. CPRS is now the method of choice for entering outpatient encounter data.
Appendix C - Scanning
Appendix D - HP LaserJet 5Si Printer

With the addition of scanning to the AICS package, a need for duplex printing, and the need for a printer that could handle high volume printing as well as print pages that would be scannable and compatible with the AICS workstation software, the HP LaserJet 5Si printer was purchased. This printer prints 24 ppm (pages per minute), handling a wide variety of paper weights and sizes. Three input paper trays and two output bins handle a variety of print media. The HP LaserJet 5Si comes with 4 Mbytes of memory with the potential to expand memory to 132 Mbytes, and the potential to add additional printer features with four single inline memory module (SIMM) slots. Thirty five scaleable fonts as well as 10 True Type fonts are included in this printer. Some additional options have been purchased with the HP LaserJet 5Si that add to the capability and efficiency of this printer. They are an envelope feeder, duplex unit for printing 2 sided documents, 2000 sheet input tray (tray 4) and a multi-bin mailbox (works in mailbox, job separation and stacking mode).

Software is included with the HP LaserJet 5Si and must be installed on each individual PC that will be using the printer. If running windows, a new printer will need to be set up in order to use the device. There are additional parameters and definitions that must be setup in order for the printer to be workable and usable to print AICS encounter forms and duplex printing. Due to many differing factors and variables at each site (wiring/connector schemes, terminal server configurations, sysgen definitions, physical device set ups, VMS print queues, etc.) it is hard to standardize one combination of successful printer setups, device and terminal type definitions for printing Encounter Forms and subsequent output reports (action profile, health summary, etc.). It is very important to remember that each unique Terminal Type, (Device Subtype) must be defined in the ENCOUNTER FORM PRINTERS file (357.94) with Printer Language Type equal to PCL5.

The following definitions and parameters need to be set up before using the printer:

1) Physical Device Information/Set-up,
2) Terminal Type File,
3) Device File,
4) Encounter Form Printers File.
1) PHYSICAL DEVICE INFORMATION/SET-UP - Control Panel Menu

The following information is included in the printer and can be obtained by printing from the printer itself. These are the default settings for the printer. They may be changed to accommodate your site. This information is contained on the Configuration page which can be printed out by doing the following.

Press Menu - Select Test Menu
Press Item - PCL Configuration Page
Press Select - this will print the configuration Page

The following information is included on this printout.

2) TERMINAL TYPE FILE (# 3.2)

With each new printer (device), there should be an associated entry in the TERMINAL TYPE file. This file is pointed to by the SUBTYPE field of the DEVICE file. The fields that need to be populated in this file will vary depending on what the printer is being used for. This file may hold vendor-specific code to characterize a terminal type. For example, escape sequences may be entered in the Open and Close Execute fields to set pitch or font. The following are some of the more standard fields that will be set up.

<<<If the printer is being used for graphics, the graphics fields need to be set up.>>>

<<<The EXAMPLES section will show some successful working configurations of Terminal Types and Devices being used at some sites.>>>
3) DEVICE FILE (# 3.5)

With each new printer, an entry must be made in the DEVICE file (# 3.5). This file defines all input/output devices that can be accessed from a CPU (definitions are not account-specific). Each device is identified with a unique name. Each is associated with a $I$ value which may correspond with a hardware port or, on layered systems, a host file or directory. If there are several devices for the same volume set and $I$, one may be given sign-on system status. Devices may also be assigned to hunt groups to share work. The following are some of the more standard fields that will be set up.

NUMBER: site specific*
$I$: XXX
ASK PARAMETERS: YES
ASK DEVICE: YES
VOLUME SET(CPU): PSA
LOCATION OF TERMINAL: SCHEDULING CLERK
SUPPRESS FORM FEED AT CLOSE: YES
*FORM FEED: #
*BACK SPACE: $C(8)$
MARGIN WIDTH: 132
PAGE LENGTH: 80
SUBTYPE: P-HPLASERJ5-16/8/UP/DUPLEX
TYPE: TERMINAL
EQUINOX BOX: site specific*
EQUINOX PORT: site specific*
EQUINOX BOX-PORT: site specific*

<<<The EXAMPLES section shows some successful working configurations of Terminal Types being used at some sites.>>>
ENCOUNTER FORM PRINTERS FILE  (# 357.94)

With each unique printer (Terminal Type), an entry must be made in the ENCODER FORM PRINTERS file to allow the site to print encounter forms and duplex print. The printer’s Terminal Type name will be the entry name for this file. This file contains a list of terminal types that can support either duplex printing or the printer control language PCL5. Entering the correct information in this file will allow encounter forms printed to these terminal types to utilize these features. There is a standard setup that the site must enter into this file. The following parameters should be set up exactly as follows.

TERMINAL TYPE: Should be the Terminal Type name.
PRINTER LANGUAGE TYPE: PCL5// - This must be set to PCL5 in order to print Encounter Forms
SIMPLEX: $C(27)"&l0S"// - 1 is lower case “L”, 0 is zero.
DUPLEX, LONG EDGE BINDING: $C(27)"&l1S"// - first 1 is lower case “L”, second 1 is #1.
DUPLEX, SHORT EDGE BINDING: $C(27)"&l2S"// - 1 is lower case “L”.

General information:

W *27,"E" resets the printer to the user defaults, not the factory defaults; so if a user makes any changes on the menu front control panel, the printer resets to these selected parameters.

In composing an escape code sequence, a W *27,"&l" needs to be issued once followed by the parameter string.

The 4Si and 5Si escape codes work the same, with the 5Si having more features.
EXAMPLES

This section lists some of the configurations that have shown to be successful for printer setups in the TERMINAL TYPE file and DEVICE file for the HP5Si. Each site may need to modify the configurations to get the most successful printer/device/terminal type definitions to print Encounter Forms and duplex print. The ENCLOSE FORM PRINTERS file for each of these, is set up with the standard configuration listed under the ENCLOSE FORM PRINTERS FILE (#357.94) section.

Selecting different bins for a multi-bin mailbox:

The OPEN EXECUTE for the Terminal Type file should be set to the following.

Top output bin:
OPEN EXECUTE: W *27,”&l1G” - First l - lower case L, second 1 - number 1

Left output bin:
OPEN EXECUTE: W *27,”&l2G” - First l - lower case L

Printer has a mail box:
OPEN EXECUTE: W *27,”&l3G” - First l - lower case L

<<The user must manually set the stacker to stacker mode on the printer control panel and turn the printer off, then on again. This sets the stacker to on. The OPEN EXECUTE codes can redirect the output.>>>

The only other way the stacker can be set without turning the printer off then on again is if the printer is set up as a network printer, and from Windows the JetAdministrator software is used to switch the modes.

<<Once the stacker mode is enabled, you can check this by printing the configuration page for the printer. Under Paper Handling, you should see the configuration for the bins.>>>

*********************************************************************
*********************************************************************

Following is a general sample for setting up a network printer to print Encounter Forms.
Appendix D - HP LaserJet 5Si Printer

This is a sample configuration listing for a network printer to be used to print Encounter Forms on an AXP system. The printer in this example is a HP 5Si with JetDirect card installed. For VMS and UCX setups, please refer to the published documentation on configuring client services, VMS queues, etc.
