PREFACE
The Generic Code Sheet Menu is a set of Decentralized Hospital Computer Program options that help users create code sheets, group them into batches for transmitting to a central computer, and transmit the batches. The package also helps users, organize, copy, and delete code sheets.
This user's guide uses a simple, procedural format to explain how to perform the above tasks. The chapters and sections in this guide reflect the structure of the submenus and options, which will help users learn the structure of the Generic Code Sheet Menu as they follow the instructions in the guide.
CHAPTER 1 INTRODUCTION

1.1 The Generic Code Sheet Package

1.2 How to Use This Manual

1.3 Reference Numbering System

1.4 Package Management, Legal Requirements and Security Measures

1.5 Package Operation

CHAPTER 2 CREATE A CODE SHEET

2.1 Introduction

2.2 Menu Path

2.3 Four Code Sheet Examples: Nursing Social Work, Consulting/Attending, and Financial Management

   2.3.1 Nursing Code Sheet Prompts

      2.3.1.1 Select Batch Type and Segment Name

      2.3.1.2 AMIS, Suffix, and Segment Modifier

      2.3.1.3 Psychiatric Section Data

      2.3.1.4 Alcohol and Drug Treatment Section Data

      2.3.1.5 Surgical Section Data

      2.3.1.6 Medical Section Data

      2.3.1.7 Spinal Cord Injury Section Data

      2.3.1.7.1 Nursing Home Care Section Data

      2.3.1.8 Hemodialysis Data

      2.3.1.9 Intermediate Care Data

      2.3.1.10 Domiciliary Care Data

      2.3.1.11 Operating Room Data

      2.3.1.12 Recovery Room Data

      2.3.1.13 Ambulatory Care Data

      2.3.1.14 Ambulatory Surgery Data

      2.3.1.15 Ambulatory Surgery Recovery Data

1 chapter Introduction

1.1 The Generic Code Sheet Package

The Generic Code Sheet Package is a set of menus and options in the Decentralized Hospital Computer Program (DHCP). The Generic Code Sheet Package allows users to create, edit, and transmit code sheets from DHCP to a central computer system. Users can use the Generic Code Sheet Package to help them create a code sheet, or users can create code sheets manually.

1.2 How to Use This Manual

This manual explains how to use the Generic Code Sheet Package by explaining how to use the system to perform simple, manageable tasks. The authors of this manual have listed these tasks in successive order so that each instruction builds on the functionality and information from the previous instructions. This will allow new users to use this manual as a tutorial by following the instructions from beginning to end. Experienced users can use this manual as a reference tool by using the index and table of contents.

1.3 Reference Numbering System

This manual uses a special paragraph numbering system to allow users to understand how the sections of the manual relate to each other. For example, this paragraph is section 1.3. This means that this paragraph is the main paragraph for the third section of Chapter 1. If there were two subsections to this section, they would be numbered sections 1.3.1 and 1.3.2. A paragraph numbered 1.3.5.4.7 would be the seventh subsection of the fourth subsection of the fifth subsection of the third subsection of Chapter 1. All clear? Actually, all this means is that users that want to divide their reading into manageable lessons can concentrate on one section and all of its subsections, e.g., section 1.3.5.4 and all of its subsections would make a coherent lesson.

1.4 Package Management, Legal Requirements and Security Measures

In order to use the Generic Code Sheet Package, users are given access to the Generic Code Sheet Package options. Some of these menu options may be additionally controlled by the use of access “keys”. These access keys are administered to individual users by the Information Resources Management Service at their facility.
1.5 Package Operation

This document explains how to use the Generic Code Sheet Package to create and amend code sheets. Novice users will be unfamiliar with the information that some of the Generic Code Sheet Package prompts require. The Generic Code Sheet Package provides three levels of explanations for the prompts. Enter a question mark at the prompt to read a description of the prompt, two question marks to read a more complex explanation of the prompt, and three question marks to read a complete description of the prompt and read a list of acceptable responses to the prompt.
2 chapter Create a code sheet

2.1 Introduction

The principal use of the Generic Code Sheet Menu is to create code sheets. Code sheets are used to create data in a format that other computer systems can use. Prior to DHCP, users completed paper forms, which were transcribed onto punch cards. The punch cards would be mailed to a central computer for processing. Today, users create code sheets and transmit the data electronically to the central computer. This makes data entry faster, cheaper, and more accurate.

2.2 Menu Path

Select Create a Code Sheet from the Generic Code Sheet Menu. Enter a Station Number. Enter the batch type at the Select Generic Code Sheet Batch Type Name: prompt for the type of code sheet you want to create. If you do not know the batch type, enter three question marks at the prompt and the system will list the available batch types.

Batch Code Sheets
Create a Code Sheet
Keypunch a Code Sheet
Maintenance Menu ...
Reports Menu ...
Stack Menu ...
Transmit Code Sheets

Select Generic Code Sheet Menu Option: Create a Code Sheet

Select STATION NUMBER (^ TO EXIT): WASHINGTON,DC// DISTRICT OF COLUMBIA 688
Station: WASHINGTON,DC (#688)

Select GENERIC CODE SHEET BATCH TYPE NAME: ???

CHOOSE FROM:
ACCOUNTS RECEivable
BUILDING MANAGEMENT
CONSULTING/ATTENDING
DENTAL
FEE BASIS
FEE BASIS - IFCAP
HOSPITAL BASED HOME CARE- GECO
LAB
MEDICINE
NURsING
PHARMACY
RADIOLOGY
SURGERY
VOLUNTARY
WAGE SURVEY - GECO

Select GENERIC CODE SHEET BATCH TYPE NAME:
2.3 Four Code Sheet Examples: Nursing Social Work, Consulting/Attending, and Financial Management

Each code sheet has different questions for you to answer as you create the code sheet. Due to the long list of code sheets, only four types are explained here. For detailed explanations of the prompts for a code sheet not listed here, contact your local IRM service.

2.3.1 Nursing Code Sheet Prompts

2.3.1.1 Select Batch Type and Segment Name

Enter Nursing at the Select Generic Code Sheet Batch Type Name: prompt. Choose a segment name at the Select Generic Code Sheet Transaction Type/Segment Name: prompt. A segment is a group of code sheet types that make up a batch type. For example, 'Nursing' is a group of segments or code sheet types. The batch type describes the destination computer system for transmissions. The segment name determines the type of code sheet.

The system will assign an identification number to the code sheet. WRITE THIS NUMBER DOWN! You will need it to edit the code sheet or assign it to a batch.

```
Select GENERIC CODE SHEET BATCH TYPE NAME: NURSING
Batch Type: NURSING
Select GENERIC CODE SHEET TRANSACTION TYPE/SEGMENT NAME: ???
CHOOSE FROM:
200      Nursing Manpower Utilization
201      Nursing Manhours Worked
202      FTEE Ceilings and Positions Filled
Select GENERIC CODE SHEET TRANSACTION TYPE/SEGMENT NAME: 200          Nursing Manpower Utilization
This code sheet has been assigned IDENTIFICATION NUMBER: 134-94
```

2.3.1.2 AMIS, Suffix, and Segment Modifier

Enter the AMIS (Automated Management Information System (AMIS) month and year. Enter the station suffix, or press the Enter key at the Suffix: prompt if there is no station suffix. Enter the segment modifier, or press the Enter key at the Segment Modifier: prompt if there is no segment modifier.

```
AMIS MONTH/YEAR: T (SEP 02, 1994)
SUFFIX: ??/??
   ANSWER MUST BE 1-2 CHARACTERS IN LENGTH
SUFFIX:
SEGMENT MODIFIER: ???
SEGMENT MODIFIER:
```
2.3.1.3 Psychiatric Section Data

At the Psychiatric I: prompt, enter the number of Intensive Care patients in the psychiatric bed section. At the Psychiatric II: prompt, enter the number of Acute I Care patients in the psychiatric bed section. At the Psychiatric III: prompt, enter the number of Acute II Care patients in the psychiatric bed section. At the Psychiatric IV: prompt, enter the number of Extended Hospice Care patients in the psychiatric bed section. Enter the number of wards in the psychiatric bed section.

| PSYCHIATIC I: | 4 |
| PSYCHIATIC II: | 3 |
| PSYCHIATIC III: | 5 |
| PSYCHIATIC IV: | 9 |
| NO. OF PSYCHIATRIC WARDS: | 2 |

2.3.1.4 Alcohol and Drug Treatment Section Data

At the Alcohol & Drug Dep Trmt I: prompt, enter the number of Intensive Care patients in the alcohol and drug dependence treatment bed section. At the Alcohol & Drug Dep Trmt II: prompt, enter the number of Acute I Care patients in the alcohol and drug dependence treatment bed section. At the Alcohol & Drug Dep Trmt III: prompt, enter the number of Acute II Care patients in the alcohol and drug dependence treatment bed section. At the Alcohol & Drug Dep Trmt IV: prompt, enter the number of Extended Hospice Care patients in the alcohol and drug dependence treatment bed section. Enter the number of wards in the alcohol and drug dependence treatment bed section.

| ALCOHOL & DRUG DEP TRMT I: | 3 |
| ALCOHOL & DRUG DEP TRMT II: | 2 |
| ALCOHOL & DRUG DEP TRMT III: | 4 |
| ALCOHOL & DRUG DEP TRMT IV: | 1 |
| NO. OF ALCOHOL/DRUG TRMT WARDS: | 1 |

2.3.1.5 Surgical Section Data

At the Surgical I: prompt, enter the number of Intensive Care patients in the surgical bed section. At the Surgical II: prompt, enter the number of Acute I Care patients in the surgical bed section. At the Surgical III: prompt, enter the number of Acute II Care patients in the surgical bed section. At the Surgical IV: prompt, enter the number of Extended Hospice Care patients in the surgical bed section. Enter the number of wards in the surgical bed section.

| SURGICAL I: | 3 |
| SURGICAL II: | 2 |
| SURGICAL III: | 4 |
| SURGICAL IV: | 1 |
| NO. OF SURGICAL WARDS: | 1 |
2.3.1.6 Medical Section Data
At the Medical I: prompt, enter the number of Intensive Care patients in the medical bed section. At the Medical II: prompt, enter the number of Acute I Care patients in the medical bed section. At the Medical III: prompt, enter the number of Acute II Care patients in the medical bed section. At the Medical IV: prompt, enter the number of Extended Hospice Care patients in the medical bed section. Enter the number of wards in the medical bed section.

<table>
<thead>

2.3.1.7 Spinal Cord Injury Section Data
At the Spinal Cord Injury I: prompt, enter the number of Intensive Care patients in the spinal cord injury bed section. At the Spinal Cord Injury II: prompt, enter the number of Acute I Care patients in the spinal cord injury bed section. At the Spinal Cord Injury III: prompt, enter the number of Acute II Care patients in the spinal cord injury bed section. At the Spinal Cord Injury IV: prompt, enter the number of Extended Hospice Care patients in the spinal cord injury bed section. At the Spinal Cord Injury V: prompt, enter the number of Minimal Care patients in the spinal cord injury bed section. Enter the number of wards in the spinal cord injury bed section.

2.3.1.9 Hemodialysis Data
At the No. Of Hemodialysis Treatments: prompt, enter the cumulative number of hemodialysis treatments during the quarter. At the No. Of Hemodialysis Units: prompt, enter the average number of hemodialysis units per treatment. To obtain this number, divide the number of hemodialysis units used in the quarter for treatments divided by the number of treatments. At the Hemodialysis Days Of Operation: prompt, enter the total number of days that hemodialysis units were in operation during the quarter.

| NO. OF HEMODIALYSIS TREATMENTS: 16 |
| NO. OF HEMODIALYSIS UNITS: 1.6 |
| HEMODIALYSIS DAYS OF OPERATION: 62 |

2.3.1.10 Intermediate Care Data
At the Intermediate Care I: section, enter the number of Intensive Care patients who are in a bed section officially designated as an intermediate bed section. At the Intermediate Care II: prompt, enter the number of Acute I Care patients who are in a bed section officially designated as an intermediate bed section. At the Intermediate Care III: prompt, enter the number of Acute II Care patients who are in a bed section officially designated as an intermediate bed section. Enter the number of Intermediate wards.

| INTERMEDIATE CARE I: 4 |
| INTERMEDIATE CARE II: 2 |
| INTERMEDIATE CARE III: 5 |
| NO. OF INTERMEDIATE WARDS: 1 |

2.3.1.11 Domiciliary Care Data
At the Domiciliary (Members): prompt, enter the number of members who are in a domiciliary care unit. At the Domiciliary (Units): prompt, enter the average number of domiciliary units. At the Critical Care I: prompt, enter the number of Intensive Care patients in the critical care section. At the Critical Care II: prompt, enter the number of Acute I Care patients in the critical care section. At the Critical Care III: prompt, enter the number of Acute II Care patients in the critical care section. Enter the number of critical care units.

| DOMICILIARY (MEMBERS): 20 |
| DOMICILIARY (UNITS): 10 |
| CRITICAL CARE I: 5 |
| CRITICAL CARE II: 2 |

#### 2.3.1.17 Batch/Edit/Delete/Retain/Print Code Sheet

The system will display the code sheet identification number and code sheet data. If you haven't recorded the identification number, DO SO NOW! You will need this number to retrieve the code sheet in future sessions. You may assign the code sheet to a batch, edit the code sheet, delete the code sheet, retain the code sheet in the file for editing later, or print the code sheet. If you assign the code sheet to a batch, the system will ask you to enter a scheduled transmission date for the batch (enter T for today), and a transmission priority for the batch (2 is high priority, 6 is low priority). Enter Nursing at the Select Generic Code Sheet Transaction Type/Segment Name: prompt to create another nursing code sheet, or press the Enter key to return to the Generic Code Sheet Menu.

TRANSMITTED CODE SHEET FOR ID# 134-94 WILL BE AS FOLLOWS:

```
.....+....1....+....2....+....3....+....4....+....5....+....6....+....7....+....
AMS(28688  200 -0000400003-0000500009-0200000300-0020000040-0010100000-40000500

SCHEDULED TRANSMISSION DATE: TODAY//  (SEP 02, 1994)
BATCH PRIORITY: 3//
Status: << READY FOR BATCHING [Priority: 3, Trans Date: 09-02-94] >>

Select GENERIC CODE SHEET TRANSACTION TYPE/SEGMENT NAME:

- Batch Code Sheets
- Create a Code Sheet
- Keypunch a Code Sheet
- Maintenance Menu ...
- Reports Menu ...
- Stack Menu ...
- Transmit Code Sheets

Select Generic Code Sheet Menu Option:

2.3.2 Social Work Code Sheet Prompts
Enter Social Work at the Select Generic Code Sheet Batch Type Name: prompt. Choose a segment name at the Select Generic Code Sheet Transaction Type/Segment Name: prompt. If you do not know the segment name or number, enter three question marks and the system will list the available segment names and numbers. A segment is a group of code sheet types that make up a batch type. For example, 'Nursing' is a group of segments or code sheet types. The batch type describes the destination computer system for transmissions. The segment name determines the type of code sheet.

Select STATION NUMBER (^ TO EXIT): WASHINGTON,DC//       DISTRICT OF COLUMBIA
688
Station: WASHINGTON,DC  (#688)
Select GENERIC CODE SHEET BATCH TYPE NAME: Social WORK
Batch Type: SOCIAL WORK
Select GENERIC CODE SHEET TRANSACTION TYPE/SEGMENT NAME: ??

CHOOSE FROM:
255 Social Work Cases Treated and Manhours
256 Social Work Patient Status
257 AMIS 257 SOCIAL WORK
258 AMIS 258 SOCIAL WORK
361 AMIS 361 SOCIAL WORK

Select GENERIC CODE SHEET TRANSACTION TYPE/SEGMENT NAME:
2.3.2.1 Segments 255 and 256

The system will assign an identification number to the code sheet. WRITE THIS NUMBER DOWN! You will need it to edit the code sheet or assign it to a batch. Enter the AMIS (Automated Management Information System) month and year.

This code sheet has been assigned IDENTIFICATION NUMBER: 154-94
AMIS MONTH/YEAR: t  (SEP 02, 1994)

Segments 255 and 256 are keypunch segments, meaning that you have to enter the code sheet data as a single string of numbers. Here is an example:

....+....1....+....2....+....3....+....4....+....5....+....6....+....7....+
KEYPUNCH CODE SHEET:
1>1234-123-41-234-1234-123-412-341-234-1234

You may mark the code sheet for batching, edit or delete the code sheet, retain it in the file for editing later, or print the code sheet. To transmit the code sheet, select "Mark the Code Sheet for Batching". The system will display the code sheet identification number and prompt you for a transmission date. Assign a transmission priority to the batch (2 is high priority, 6 is low priority). Enter another batch type at the Select Generic Code Sheet Transaction Type/Segment Name: prompt, or press the Enter key to return to the Generic Code Sheet Menu.

TRANSMITTED CODE SHEET FOR ID# 154-94 WILL BE AS FOLLOWS:
....+....1....+....2....+....3....+....4....+....5....+....6....+....7....+
1234-123-41-234-1234-123-412-341-234-1234

Select Generic Code Sheet Menu Option:

2.3.3 Consulting/Attending Code Sheets

2.3.3.1 Segment 2418A, "C & A Time Card"

2.3.3.1.1 Step 1
Enter 2418A at the Select Generic Code Sheet Transaction Type/Segment Name: prompt. The system will assign an identification number to the code sheet. Enter a station number. Enter the Social Security Number or Employee Identification number without hyphens at the Identification Number: prompt. Enter the name code of the participant. The name code is the first initial of the first name, a space, and the first initial of the middle name. For example, if the participant was Firstname Middlename Lastname, the name code would be F M. Enter the three-digit julian day number at the Day Number: prompt. For example, since February 11 is the 42nd day of the year, enter 042 for February 11. Enter the transaction type. Transaction types are defined in MP-4 Part V, Section 12-D. At the Decimal Suffix: prompt, enter the 3-digit suffix assigned by the Austin Data Processing Center to the transaction.

Select GENERIC CODE SHEET TRANSACTION TYPE/SEGMENT NAME: 2418A  C & A TIME CARD
This code sheet has been assigned IDENTIFICATION NUMBER: 1-95
STATION NUMBER: 688
IDENTIFICATION NUMBER: 000000001
NAME CODE: F M
DAY NUMBER: 213
TRANS TYPE: D1
DECIMAL SUFFIX: 141

2.3.3.1.2 Step 2
At the Day 1: prompt, enter X if the visit was a paid visit or W if the visit was without pay. Continue entering Xs and Ws through Day 31. Enter the number of paid visits for the reporting period at the Pay Visits: prompt. Enter the number of no pay visits for the reporting period at the No Pay Visits: prompt.
2.3.3.1.3 Step 3

The system will display the code sheet you just created. You may mark the code sheet for batching, edit or delete the code sheet, retain it in the file for editing later, or print the code sheet. To transmit the code sheet, select "Mark the Code Sheet for Batching". The system will display the code sheet identification number and prompt you for a transmission date. Assign a transmission priority to the batch (2 is high priority, 6 is low priority). Enter another batch type at the Select Generic Code Sheet Transaction Type/Segment Name: prompt, or press the Enter key to return to the Generic Code Sheet Menu.

TRANSMITTED CODE SHEET FOR ID# 1-95 WILL BE AS FOLLOWS:
....+....1....+....2....+....3....+....4....+....5....+....6....+....7....+....
68800000000001B J213D1141WWX                            0102$

Select one of the following:
1  Mark the Code Sheet For Batching
2  Edit the Code Sheet
3  Delete the Code Sheet
4  Retain the Code Sheet in the File for Editing Later
5  Print the Code Sheet

Select Generic Code Sheet Menu Option:
2.3.3.2 Segment 2418C, "C&A Renewal"

2.3.3.2.1 Step 1
Enter 2418C at the Select Generic Code Sheet Transaction Type/Segment Name: prompt. The system will assign an identification number to the code sheet. Enter a station number. Enter the Social Security Number or Employee Identification number without hyphens at the Identification Number: prompt. Enter the name code of the participant. The name code is the first initial of the first name, a space, and the first initial of the middle name. For example, if the participant was Firstname Middlename Lastname, the name code would be F M. Enter the three-digit julian day number at the Day Number: prompt. For example, since February 11 is the 42nd day of the year, enter 042 for February 11. Enter the action code for the code sheet at the Action: prompt. Enter a question mark at the prompt to see the available action codes. At the Decimal Suffix: prompt, enter the 3-digit suffix assigned by the Austin Data Processing Center to the transaction. Enter the cost center at the Cost Center: prompt if this purchase is assigned to a section or service that has a cost center defined for their expenses. Cost centers allow Fiscal staff to create total expense records for a section or service.

Select GENERIC CODE SHEET TRANSACTION TYPE/SEGMENT NAME: 2418C          C&A RENEWAL

This code sheet has been assigned IDENTIFICATION NUMBER: 167-94
STATION NUMBER: 688
IDENTIFICATION NUMBER: 000000001
NAME CODE: F M
DAY NUMBER: 113
ACTION: T
DECIMAL SUFFIX: 404
COST CENTER: 400100

2.3.3.2.2 Step 2
Enter the number of visits for the participant at the Number of Visits: prompt. Enter the dollar amount without a dollar sign or decimal at the Amount-Dollars/Cents: prompt. For example, enter 4520 for $45.20. Enter the per diem dollar amount without a dollar sign or decimal at the Per Diem-Dollars/Cents: prompt. At the ID Number Identifier: prompt, enter 1 if the identification number you entered for the participant is the participant's Social Security number. Enter 2 if the number is an employee identification number. You may enter a new identification number for the participant at the ID Number Change: prompt. At the No Pay: prompt, enter 0 (zero) if you want to prohibit the participant from making no pay visits. Enter Y if you want to authorize no pay visits. Otherwise, press the Enter key.

NUMBER OF VISITS: 5
AMOUNT-DOLLARS/CENTS: 92020
PER DIEM-DOLLARS/CENTS: 12000
ID NUMBER IDENTIFIER: 1 SOCIAL SECURITY NUMBER
2.3.3.2.3 Step 3

The system will display the code sheet you just created. You may mark the code sheet for batching, edit or delete the code sheet, retain it in the file for editing later, or print the code sheet. To transmit the code sheet, select "Mark the Code Sheet for Batching". The system will display the code sheet identification number and prompt you for a transmission date. Assign a transmission priority to the batch (2 is high priority, 6 is low priority). Enter another batch type at the Select Generic Code Sheet Transaction Type/Segment Name: prompt, or press the Enter key to return to the Generic Code Sheet Menu.

TRANSMITTED CODE SHEET FOR ID# 3-95 WILL BE AS FOLLOWS:

ACCOUNTING PERIOD MONTH (optional):
ACCOUNTING PERIOD YEAR (optional):
DOCUMENT ACTION: E// ???
This field is optional. If blank, defaults to 'E'.

Enter 'E' if the document is new entry.

Enter 'M' if the document is modifying a previous document. This allows you to add lines to a previous document, change the amounts of existing lines and certain codes, or cancel a line (decrease a line amount to zero).

Enter 'X' if the document is to cancel a previous document. The document to be canceled may not have been closed by any disbursements processing.

CHOOSE FROM:
E        NEW ENTRY
M        MODIFY
X        CANCEL

DOCUMENT ACTION: E//   NEW ENTRY

2.3.4.4 Step 4
Enter a document description if you like. Enter the total dollar amount of the transactions on the document. Remember, all of the transactions must equal this amount. Enter 1 at the Select Line: prompt to add the first transaction to the document. Press the Enter key at the Line: 1//: prompt to confirm the line number or the @ symbol to delete it. Enter the dollar amount of the first transaction. Enter I at the Increase or Decrease Indicator: prompt. Enter the quantity.

DOCUMENT DESCRIPTION (optional):
DOCUMENT TOTAL DOLLARS: 100

-- Enter ACCOUNTING LINE information --
Select LINE: 1
ARE YOU ADDING '1' AS A NEW LINE (THE 1ST FOR THIS GENERIC CODE SHEET)? y
(YES)
LINE: 1://
LINE DOLLAR AMOUNT: 35
2.3.4.5 Step 5
Enter the source of revenue for the "seller", the source of funds that are providing the funds for this transaction. Enter the transaction type for the transaction. Refer to the FMS procedures manual for a list of transaction types. Enter a description of the seller if you like.

--- Enter SELLER information ---
SELLER REVENUE SOURCE: ???
Required for governmental refund documents. Blank otherwise.
SELLER REVENUE SOURCE: SF03
SELLER ACCOUNTING TRANSACTION TYPE: ???
Required on original entry if Transaction Type on header is blank. Enter the transaction type that is appropriate for the dollar amount being entered for the ticket payment.
SELLER ACCOUNTING TRANSACTION TYPE: 03
SELLER DESCRIPTION:

--- Enter BUYER information ---

2.3.4.6 Step 6
Enter the cost center and sub-cost center for the "buyer," the receiver of the funds, at the Buyer Cost Center: prompt. Cost centers allow Fiscal staff to create total expense records for a section or service. Enter the budget object code classification for the buyer at the Buyer Budget Object Code (BOC): prompt. Enter the accounting transaction type. Add a description for the buyer if you like. Budget Object Codes and Transaction Types are listed in the FMS procedure manual.

BUYER COST CENTER: ???
System-maintained. Derived from CAN code.
BUYER COST CENTER: 806100
BUYER SUB COST CENTER:
BUYER BUDGET OBJECT CODE (BOC): 2660
BUYER ACCOUNTING TRANSACTION TYPE: ???
Required on original entry if not entered in the header portion of the document. Enter the transaction type appropriate for the accounting model desired for this line.
BUYER ACCOUNTING TRANSACTION TYPE: 03
BUYER DESCRIPTION:

2.3.4.7 Step 7
Add another transaction line if you like. Confirm the line number, and enter the dollar amount of the transaction. Remember, the total of all transactions must equal the amount you entered at the Document Total Dollars: prompt. Enter the seller and buyer information. Press the Enter key at the Select Line: prompt when you have finished entering transactions for the code sheet.

Select LINE: 2
ARE YOU ADDING '2' AS A NEW LINE (THE 2ND FOR THIS GENERIC CODE SHEET)? y
### 2.3.4.8 Step 8

The system will display the code sheet data. You can transmit the code sheet (FMS document) you just created, edit the code sheet, delete it, retain it in the records for editing later, or print it. Enter 1 to transmit the code sheet. Enter another FMS segment name at the Select Generic Code Sheet Transaction Type/Segment Name: prompt to enter another FMS code sheet, or press the Enter key to return to the Generic Code Sheet Menu.

6 Chapter reports menu

6.1 Introduction

The Reports Menu allows users to create reports of code sheets and the status of code sheets and batches.

6.2 Batches Waiting to be Transmitted

6.2.1 Introduction

This option creates a report of the batches and code sheets that are ready for transmission. The user can also print the data in these code sheets.

6.2.2 Step 1

Select Reports Menu from the Generic Code Sheet Menu.
Select Batches Waiting to be Transmitted from the Reports Menu.
Enter a Station Number. Enter the batch type at the Select Generic Code Sheet Batch Type Name: prompt for the type of code sheet you want to create. If you do not know the batch type, enter three question marks at the prompt and the system will list the available batch types. You may see a detailed listing of all of the code sheets in the batch, or just a listing of the code sheet identification numbers. You may also print the code sheet.

Select Generic Code Sheet Menu Option: REPorts Menu

Batches Waiting to be Transmitted
Code Sheets Ready for Batching
Status of all Batches

Select Reports Menu Option: Batches Waiting to be Transmitted

Select STATION NUMBER (* TO EXIT): WASHINGTON,DC//       DISTRICT OF COLUMBIA

Station: WASHINGTON,DC  (#688)

Select GENERIC CODE SHEET BATCH TYPE NAME: FEE BASIS - IFCAP
Batch Type: FEE BASIS - IFCAP
Do you want a detailed listing? NO// Y  (YES)
Do you want to print the code sheet? NO// Y  (YES)

DEVICE:   LAT    RIGHT MARGIN: 80//
6.2.3 Step 2
The system will generate the 'Generic Code Sheet List,' which will list the batch number and the code sheets in the batch. Enter another batch type at the Select Generic Code Sheet Batch Type Name: prompt, or press the Enter key to return to the Reports Menu.

```
GENERIC CODE SHEET LIST                        SEP 9,1994 15:25 PAGE 1

COUNT 2

Batches Waiting to be Transmitted
Code Sheets Ready for Batching
Status of all Batches

Select Reports Menu Option:

### 6.4 Status of all Batches

#### 6.4.1 Introduction

Batches have one of two status- transmitted or not transmitted. The following routine lists the status of all batches.

#### 6.4.2 Step 1

Select Reports Menu from the Generic Code Sheet Menu.
Select Status of all Batches from the Reports Menu.

Batch Code Sheets
Create a Code Sheet
Keypunch a Code Sheet
Maintenance Menu ...
Reports Menu ...
Stack Menu ...
Transmit Code Sheets

Select Generic Code Sheet Menu Option: Reports Menu
6.4.3 Step 2
Enter a station number. Enter the batch type at the Select Generic Code Sheet Batch Type Name: prompt for the type of code sheet you want to create. If you do not know the batch type, enter three question marks at the prompt and the system will list the available batch types.

6.4.4 Step 3
The system will create a "Generic Code Sheet Transmission Record List", listing the system identifier of each batch, the batch number, the date of transmission, and the Mailman message number of the message that reported the transmission of the batch. The system identifier is a three-character code assigned to each batch type. The Generic Code Sheet package uses the system identifier to maintain batch records. Batches with a date in the Date Given to Mailman column and a message number have been transmitted. If the information in the Date Given To Mailman column and the Message Number column is missing from a code sheet, that code sheet has not been transmitted. After printing or displaying the report, the system will return to the Reports Menu.
7 Chapter Stack Menu

7.1 Introduction

The Stack Menu is a new menu of options that manage stacks of Financial Management System (FMS) code sheets. The Generic Code Sheet system does not assign FMS code sheets to batches; instead, the system adds these code sheets to a special file called a stack file, which allows the system to transmit the code sheets as a single file in a form that FMS can interpret.

7.2 Retransmit Stack File Document

7.2.1 Introduction

This option allows users to retransmit FMS code sheets. Users will use this option if FMS rejects the stack entry for a code sheet or an entire stack.

7.2.2 Step 1

Select Stack Menu from the Generic Code Sheet Menu.

Batch Code Sheets
Create a Code Sheet
Keypunch a Code Sheet
Maintenance Menu ...
Reports Menu ...
Stack Menu ...
Transmit Code Sheets

Select Generic Code Sheet Menu Option: Stack Menu

Retransmit Stack File Document
Stack Status Report

Select Stack Menu Option: Retransmit Stack File Document

7.2.3 Step 2

Enter the number of the stack you want to retransmit at the Select Stack Document for Retransmission: prompt. If you do not know the stack number, enter three question marks at the prompt and the system will list the available stack numbers.

Select Stack Document for Retransmission: ???

CHOOSE FROM:
AO-68AO0430
AO-68AO58
AO-68AO77
AT-68AO13456
AT-68AO23414
AT-68AO90123
7.2.4 **Step 3**
The system will display the current status of the stack you selected and ask if you want to retransmit the stack if it has already been transmitted. If you transmit the stack, the system will change the status of the stack to "Transmitted." Enter another stack number at the Select Stack Document for Retransmission: prompt or press the Enter key to return to the Stack Menu.

Current Status: TRANSMITTED

Do you want to retransmit this document now? NO// Y (YES).......  
NEW Status: TRANSMITTED

Select Stack Document for Retransmission:

Retransmit Stack File Document
Stack Status Report

Select Stack Menu Option:

7.3 **Stack Status Report**

7.3.1 **Introduction**
This option will allow you to create a report of all FMS code sheets for a transmission status that you define, e.g., all transmitted code sheets, all code sheets rejected by FMS, etc.

7.3.2 **Step 1**
Select Stack Menu from the Generic Code Sheet Menu. Select Stack Status Report from the Stack Menu.
7.3.3 Step 2
Enter the first and last transaction code you want the system to list on the report. Enter the date of the oldest document you want the system to list on the report. The system will list several stack features you can choose to list on the report. You may choose as many as you like. For example, enter "A" at the Select Status(s) to display: prompt to create a report that lists all stacks accepted by FMS on or after the date you specified.

START with TRANSACTION CODE: FIRST//
END with TRANSACTION CODE: LAST//
Print documents created after DATE: JAN 1,1993//T-2 (AUG 22, 1994)

Select one of the following:
Q - QUEUED FOR TRANSMISSION
M - MARKED FOR IMMEDIATE TRANSMISSION BY EVENT
T - TRANSMITTED
E - ERROR DURING TRANSMISSION
A - ACCEPTED BY FMS
R - REJECTED BY FMS
N - TRANSMITTED WITH NO CONFIRMATION MESSAGE RETURNED

Select STATUS(s) to display: TRANSMITTED

Select one of the following:
Q - QUEUED FOR TRANSMISSION
M - MARKED FOR IMMEDIATE TRANSMISSION BY EVENT
T - TRANSMITTED
E - ERROR DURING TRANSMISSION
A - ACCEPTED BY FMS
R - REJECTED BY FMS
N - TRANSMITTED WITH NO CONFIRMATION MESSAGE RETURNED

Select STATUS(s) to display:
SELECTED STATUS(s) to display:
ERROR DURING TRANSMISSION

7.3.4 Step 3
Answer Y at the Print Description of Event?: prompt to print a description of the process that generated each code sheet. Answer Y at the Print Document Code Sheets?: prompt to print the actual code for each code sheet.
The system will create a "GCS Stack File Status Report," listing each code sheet of the type and time range that you specified. After listing all of the code sheets, the system will list the number of code sheets in the report and return to the Stack Menu.

---

**Print DESCRIPTION of event? NO//Y (YES)**

8 chapter 8 Transmit Code Sheets

8.1 Introduction

The 'Transmit Code Sheets' option transmits a batch (group) of code sheets to a central computer for processing.

Note: Do not attempt to use this option to transmit FMS code sheets. FMS code sheets are transmitted from a special file called a stack file as they are created. If you want to retransmit an FMS code sheet or determine the status of a code sheet, use the options in the Stack Menu.

8.2 Step 1
Select Transmit Code Sheets from the Generic Code Sheet Menu. Enter a station number.

8.3 Step 2
Enter the batch type at the Select Generic Code Sheet Batch Type Name: prompt for the type of code sheet you want to create. If you do not know the batch type, enter three question marks at the prompt and the system will list the available batch types. The system will display the Internet address that will receive the batch transmission and the Mailman message number, and will return to the Generic Code Sheet Menu.

Select GENERIC CODE SHEET BATCH TYPE NAME: Fee Basis - IFCAP
Batch Type: FEE BASIS - IFCAP

</tr>
</tbody>
</table>

Select Maintenance Menu Option: Purge Transmission Records/Code Sheets
Select STATION NUMBER (^ TO EXIT): WASHINGTON,DC// DISTRICT OF COLUMBIA 688
Station: WASHINGTON, DC (#688)

9.3 Step 2
The system will ask you if you want to delete all code sheets in the system, or just the code sheets of a particular type. If you answer N at the prompt, enter the code sheet type that you want to delete at the Select Generic Code Sheet Batch Type Name: prompt, or enter three question marks to see a list of available code sheet types.

DO YOU WANT TO DELETE ALL TYPES OF CODE SHEETS? NO// (NO)
Select GENERIC CODE SHEET BATCH TYPE NAME: ???

CHOOSE FROM:
- ACCOUNTS RECEIVABLE
- CONSULTING/ATTENDING
- DIETETICS
9.4 Step 3
Enter the number of days previous to todays date that you want to retain code sheets. For example, if you enter 30 at this prompt, the system will delete all code sheets older than 30 days. Enter an output device.

```
Enter the number of days you wish to retain code sheets:  (0-999999): 365//
I will now delete all code sheets and associated records which were created before DEC 12, 1993 for station 688.
OK to continue? YES//   (YES)
DEVICE: HOME// ;;9999  LAT
>> please wait <<
```

9.5 Step 4
The system will print or display the "Code Sheet/Transmission Record Deletion Transcript." This transcript will list the station, the batch types being deleted, and the user name. The system will list the identification numbers of the batches it deletes, followed by the code sheets that it deletes. After rebuilding the stack file, the system will return to the Maintenance Menu.

```
CODE SHEET/TRANSMISSION RECORD DELETION TRANSCRIPT DEC 12, 1994@14:33:19  PAGE 1

11 chapter 11 technical overview

11.1 Introduction
This chapter explains how the Generic Code Sheet system performs its functions. The section below lists the major data components of the Generic Code Sheet System and how they interact.

11.2 Data Components

11.2.1 The Code Sheet File
The Generic Code Sheet system uses a code sheet file, 2100 GENERIC CODE SHEET, to define the data fields for applications that use the Generic Code Sheet system. The Generic Code Sheet system uses VA FileMan to manage data entry and code sheet file retrieval.

11.2.2 The Batching Routine
The Generic Code Sheet system uses a routine to assign code sheets to a batch and prepare batches for transmission by extracting the data elements from the physical fields within the code sheet. This routine records and reformats the data elements into the format required by the receiving system.

11.2.3 The Batch Transmitting Routine
The Generic Code Sheet system uses a routine to transmit batches of code sheets. This routine copies the code sheet data into a VA Mailman message addressed to the network queue.

11.2.4 The Code Sheet Management Subsystem
The Generic Code Sheet system uses a subsystem to record the generation, batch assignment, and transmission history of all code sheets.

11.3 Related Documentation
This document is one of a suite of documents that refer to the Generic Code Sheet system and its superordinate systems. To understand the structure and function of the Generic Code Sheet system, read the Generic Code Sheet User Manual, the Generic Code Sheet Technical Manual, the VA MailMan Technical Manual, and the VA FileMan Manual.
11.4 Functional Description

The Generic Code Sheet System uses file 2100 GENERIC CODE SHEET to store the fields and the actual code sheets. Fields ranging from .001 to 51 are reserved for system use. Fields numbered from 52 to 99 are reserved fields used for multiple types of code sheets (generic fields, i.e., STATION NUMBER, etc.). A request should be made to the GECS REQUEST mail group on FORUM for approval to create fields in this range. Fields for specific packages (i.e., Dental Service, etc.) should use fields in the number range dependent on the responsible ISC. For example, the global node used to store Dental Code Sheets for the Washington ISC would be DENTDAS2, where DENT is the namespace, DAS is the system identifier, and the Washington ISC code is 2. The entire global node would be "^GECS(2100,DA,"DENTDAS2",'. If all the fields cannot be placed on this node, use the same node name concatenated with a character of the alphabet starting with the letter 'A'. For example: DENTDAS2A, DENTDAS2B, DENTDAS2C, etc. The following table indicates the available field number for each ISC:

<table>
<thead>
<tr>
<th>ISC</th>
<th>Fields 100 to 199</th>
<th>Fields 1000 to 1999</th>
</tr>
</thead>
<tbody>
<tr>
<td>Albany ISC</td>
<td>fields 100 to 199</td>
<td>fields 1000 to 1999</td>
</tr>
<tr>
<td>Washington ISC</td>
<td>fields 200 to 299</td>
<td>fields 2000 to 2999</td>
</tr>
<tr>
<td>Birmingham ISC</td>
<td>fields 300 to 399</td>
<td>fields 3000 to 3999</td>
</tr>
<tr>
<td>Chicago ISC</td>
<td>fields 400 to 499</td>
<td>fields 4000 to 4999</td>
</tr>
<tr>
<td>Salt Lake City ISC</td>
<td>fields 500 to 599</td>
<td>fields 5000 to 5999</td>
</tr>
<tr>
<td>San Francisco ISC</td>
<td>fields 600 to 699</td>
<td>fields 6000 to 6999</td>
</tr>
<tr>
<td>Dallas ISC</td>
<td>fields 700 to 799</td>
<td>fields 7000 to 7999</td>
</tr>
</tbody>
</table>

Specific input templates pertaining to a package should be set up in the following format: package namespace, SPACE, batch type followed by the ISC code number, SPACE, a description. For example, the Dental Service Code sheets input template would be defined by 'DENT DAS2 01 TRANSACTION TYPE CODE SHEETS' where DENT is the namespace for the Dental Package, DAS is the system identifier, 2 is the Washington ISC code, and 01 TRANSACTION TYPE CODE SHEETS is the description.

11.5 Namespace Conventions

The namespace used for all routines is 'GECS', with file numbers ranging from 2100 to 2101.7.
11.6 Key Variables
Key variables for the package are as follows:

GECS, GECSA, GECSC, GECSSYS

11.7 Security Keys
This version of the Generic Code Sheet Package uses the security key GECS SETUP to
determine if a user is allowed to access the 'Initialize a Code Sheet Type' option.

11.8 Globals
All data is stored in the GECS global. Files are extracted from this global as follows:

2100  Generic Code Sheet
2101.1 Generic Code Sheet Batch Type
2101.2 Generic Code Sheet Transaction Type/Segment
2101.3 Generic Code Sheet Transmission Record
2101.4 Generic Code Sheet Template Maps
2101.5 Generic Code Sheet Counter
2101.6 Generic Code Sheet Lock
2101.7 Generic Code Sheet Site

It is recommended that you maintain a journal of the ^GECS global.

11.9 Routines
Virtually all the routines in the Generic Code Sheet Package are designed to be called by
other packages. Specific entry points are described in the User Manual. Routines that
make calls to other packages are as follows:

GECSA, GECSBATC GECSE, GECSE1, GECSETUP, GECSPURG, GECSSITE,
GECST, GECSTRAN, GECSU, GECSX1, GECSX5
11.10 Resource Requirements
There are nineteen routines in the system, occupying 40899 bytes (40.90 DSM blocks). Space required for data will vary with the size and number of code sheets created by a specific package. No special equipment is required to run the Generic Code Sheet Package.

11.11 Internal/External Relations

11.11.1 Internal Relations
All options are independent of one another and can stand alone.

11.11.2 External Relations
The Generic Code Sheet Package requires the following versions (or later versions) of the listed DHCP packages:

   A. Kernel Version 5.01
   B. VA FileMan Version 17.32
   C. MailMan Version 3.2
12 chapter  development issues

12.1 Introduction
This chapter explains how to define a code sheet. It is intended for developers.

12.2 Step 1
Prepare the fields for the code sheet by using the 'Modify File Attributes' option of FileMan. The fields will go into File 2100, Generic Code Sheet. Each field will correspond to a data block on the actual code sheet. Use field numbers and global nodes assigned to the application and ISC. Also, use any necessary output transforms for massaging the data to fit the data block of the actual code sheet. All output transforms MUST contain a check for data in the variable GECSOT in order for the input template maps to build correctly. For example: I $D(GECSOT) S Y=+Y. Here is an example of setting up the fields associated with the following dental code sheet:

<table>
<thead>
<tr>
<th>column #</th>
<th>123456789012345678901234567890</th>
</tr>
</thead>
<tbody>
<tr>
<td>data</td>
<td>DENT460061594JONES,RICHARD</td>
</tr>
</tbody>
</table>

where columns 1-4 always is the type DENT
columns 5-7 is the station number
columns 8-13 is the date in the form MMDDYY
columns 14-26 is the patient name (last, first)

Replace
XEXECUTABLE 'HELP:
Select FIELD: 2001 DATE
ARE YOU ADDING A NEW FIELD (THE 192ND)? Y (YES)
```
Next, create an output transform on the PATIENT NAME field:

```markdown
Select OPTION: 6 UTILITY FUNCTIONS
MODIFY WHAT FILE: GENERIC CODE SHEET// 2100 GENERIC CODE SHEET
Select UTILITY OPTION: OUTPUT TRANSFORM
Select FIELD: 2003 PATIENT NAME
PATIENT NAME OUTPUT TRANSFORM: I $D(GECSOT) S Y=Y_$E("[13 SPACES HERE]"),$L(Y)+1,13
```

### 12.3 Step 2 - Create The Input Template
Create an input template for the code sheet using the 'Enter or Edit File Entries' option. The fields in the input template correspond to the fields set up in step 1 above and must conform to the naming convention described in the Technical Overview Section of the Technical Manual. They should appear in the order in which they appear in the actual code sheet. If the input template is modified after the template map is built, the template map should be rebuilt (use the option 'Build Template Maps' in the Generic Code Sheet System).
12.4 Step 3 - Add Options to the Options File

Add the options for your package to the OPTION File (19) that will be used for the generation and transmission of code sheets for your package. Use VA FileMan and enter the options in your assigned package namespace. Make the option type either MENU or ACTION. For action options, you MUST set the variable GECSSYS to the selectable batch type. Make a call for the option to the appropriate label in the GECSCALL routine.

14 chapter legal requirements
At present, there are no specific legal requirements pertaining to the Generic Code Sheet Package.
Legal Requirements
15 GLOSSARY

Batch Priority
The batch priority indicates the priority of transmission of the code sheet within the patch. A code sheet with a batch priority of 3 will be transmitted (in the same batch) before a code sheet with a batch priority of 4.

Batch Type
The batch type is set in which the code sheet definitions are grouped. For example, the code sheets for Medicine are all grouped under the batch type ‘MEDICINE’. Security prevents unauthorized users from accessing code sheets outside of their selectable batch type.

Batching
Batching is the method for grouping a set of code sheets into a set. The group of code sheets can then be transmitted within the same message. Batching is usually done by ‘batch type’ (service) or by ‘system identifier’ (AMIS).

Configuration
A particular selection of hardware and software resources that are tailored to provide optimum usage of ADP systems. This includes the type of CPU, type and number of Disk Drives, type and number of terminals, amount of main storage and so on.

Control Characters
The result of pressing the CTRL key and a letter key simultaneously.

Data
The information (facts, numbers, and symbols) entered into the system for processing and/or storage.

Device
Any part of the computer system other than the central processing unit, memory, or their associated structures. A device can be a physical piece of equipment, such as a terminal or a line printer, or a logical piece of equipment.

DHCP
The Decentralized Hospital Computer Program.

FileManager
Also known as FileMan. A set of MUMPS routines used to enter, maintain, access and manipulate related data in a file. It is the basic system used by all VA applications in creating all the files.
<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Global</td>
<td>Either a simple global variable or global array stored on a disk. See Global Variable.</td>
</tr>
<tr>
<td>Global Variable</td>
<td>A variable which is stored on disk, usually as part of a global array.</td>
</tr>
<tr>
<td>MailMan</td>
<td>An electronic mail, teleconferencing, and networking system which is an integral part of the Kernel.</td>
</tr>
<tr>
<td>MUMPS</td>
<td>Massachusetts General Hospital Utility Multiprogramming System. Also known as M. This is the computer language used by all VA DHCP applications.</td>
</tr>
<tr>
<td>Namespace</td>
<td>A naming convention followed in the VA to identify various applications and to avoid duplication. The namespace is used as the prefix for all routines and globals used by the application.</td>
</tr>
<tr>
<td>Package</td>
<td>A set of MUMPS routines, files, documentation and installation procedures that support a specific function within DHCP.</td>
</tr>
<tr>
<td>Purging</td>
<td>Purging is the process of removing old code sheets and batches from the system. This only removes the data associated with a code sheet or batch number and NOT the actual definition of the code sheets or batches.</td>
</tr>
<tr>
<td>Routine</td>
<td>A collection of lines, saved, loaded, called, or overlaid as a single unit. A set of computer instructions or symbolic statements combined to perform a task.</td>
</tr>
<tr>
<td>Security Key</td>
<td>Functions very much like your house or office key. Certain options may be locked with a key and that key assigned only to authorized users.</td>
</tr>
<tr>
<td>Site Configurable</td>
<td>A term used to refer to features in the system that can be tailored according to the needs of particular sites.</td>
</tr>
<tr>
<td>System Identifier</td>
<td>The system identifier is a three character code that identifies the code sheet type. For example, AMS represents Amis code sheets, NSY represents staffing management code sheets, WGE represents wage survey code sheets, etc.</td>
</tr>
</tbody>
</table>
**Transaction Type/Segment**  The transaction type/segment is the name of the actual code sheet. For example, 223 would be the MAS AMIS 223 code sheet, etc.

**Transmission**  Transmission is the process of electronically sending a batch of code sheets to a specified location through the VA network mail system.
