Preface

The purpose of the Library package at the local VA Medical Center is to facilitate the automation of manual serial title check-in and distribution, the integration of scattered data into a single title record, and the extension of on-line staff access to holdings and services.

The purpose of the Library package on FORUM is to maintain centralized data integrity and to allow for the request of Interlibrary Loan items.

The Technical Manual is designed to acquaint system users with the organizational structure and functions of the local Library module. Additional information on installation, security, and other requirements are also included.

Introduction

Library V. 2.5 provides support to a variety of administrative activities in a VA Medical Center concerning serials. As the name implies, the Librarians will be the greatest users of this software and will reap the greatest benefits. Patients can also benefit from the Library package through Interlibrary Loan.

Functionally, the Library module has three organizational elements that reside as different components of the software. The three functional components are:

- Interlibrary Loan on FORUM
- Serials Authority Files on FORUM
- Serials Processing at local medical center libraries
Introduction
Orientation

This section of the Technical Manual provides a detailed functional overview of each part of the Library package and how they work together. Read this overview section in its entirety to help gain an understanding of how this integrated system performs.

Library Package on FORUM

The FORUM module of the Library package serves several major needs.

1) Maintain basic serial information
2) Allow interlibrary loan of materials
3) Maintain listings of networked audiovisuals

The first feature of the programs on FORUM allow the National Librarians to input and maintain consistent information on serials. Serial titles are entered specifying pertinent information about the serial such as title, frequency of issue, etc. Once the serial has been entered into the Library module on FORUM, the local medical center libraries have the capability of obtaining that information by requesting information about serial titles to be transmitted to their local files for utilization.

The second feature on FORUM is the ability to request interlibrary loan of materials from one local medical center to another. Holdings for each library station are maintained on FORUM for this purpose and for updating the National Library of Medicine's SERHOLD data for their interlibrary loan module, DOCLINE.

Library Package at Local VAMCs

The Library package module at local VA medical centers serves several major needs; checking in serials, maintaining local holding records, and renewal of serials material. Please review the Library package User Manual for more information about this module of the Library package.
Integration

A new functionality in Library V. 2.5 is the transmission of Library information from the master files on FORUM to the local library station and information from the local library station to FORUM. At this time, only serial and associated information are transmitted from one component to another.
Implementation and Maintenance

Operating Specifics

This section addresses specific information that is needed to determine whether your facility can run Library effectively. The information presented here includes sizing, equipment requirements, journaling, routines, and external/internal relations with other DHCP packages.

Library V. 2.5 introduces new functionality to maintain consistency of specific Library files. As part of the installation, the local files will be edited by removing non-utilized titles and by standardizing certain nationally controlled files. These files include:

- 680.1 - Publisher
- 680.2 - Frequency
- 680.5 - Title Authority
- 680.8 - Indexing Sources
- 680.9 - Prediction Pattern

General Information

1. **Namespace:** The Library Package has been assigned LBR as its namespace. For all Library routines, the next letter(s) in the routine name also provides guidance as to the module to which that routine belongs. The breakdown of the Library internal namespaces is as follows.

   - LBRL: InterLibrary Loan
   - LBRN: Library National Update
   - LBRT: Library TAF Update
   - LBRY: Library Serial Functions

2. **Package Dependencies:** The following package versions must be installed for Library V. 2.5 to function properly.

   - Kernel: 7 or higher
   - VA FileMan: 19 or higher
   - IFCAP: 5 or higher
   - Generic Code Sheet: 2.0 or higher

3. **Library File Range:** The Library package numberspace is 680 through 689.99.
Sizing Information

The National Librarians in Togus, ME provide the entries made in the five main Library files.

File #680.1 Publisher
File #680.2 Frequency
File #680.5 Title Authority
File #680.8 Indexing Sources
File #680.9 Prediction Pattern

In addition, the sites ran %ZTBKC to obtain the block count for the associated globals. The files that are maintained by the VA Medical Centers are as follows.

File #680 Local Serials
File #681 Library Disposition
File #682 Library Issue

Other files maintained by the VA Medical Centers are as follows.

File #680.3 Subject
File #680.4 Name
File #680.6 Library Site Parameters

Temporary File #682.1 Library Transactions will fluctuate the most, depending on the amount of download requests and local serial title entries.

The Library Issue file represents the most active and fastest growing Library file. As a result, it is estimated Library will require the following (block sizes are for MSM).

^LBRY(680) 1 block per entry
^LBRY(681) 1/3 block per entry
^LBRY(682) 1/3 block per entry
^LBRY(682.1) 2/3 block per entry

Please note these are an estimate of what is necessary for only a subset of the dynamic files of Library. There is no information available at this time to project the disk storage requirements of the Library package.
Recommended Equipment

This is the basic equipment needed for a library station. Other equipment may also be needed depending upon the size and number of library employees there are.

1 CRT for the Chief Librarian
1 CRT for Patron Access
1 CRT for the Serial Technician
1 Dot Matrix Printer (for printing routing slips, reports, etc.)

Default Printers

There is one default printer location associated with the Library package. This printer will be associated with a device number on your DHCP system. You may be able to use the same printer for multiple types of outputs (e.g., routing slips and reports).

Routine Mapping

Routine mapping may vary depending on how the Library package is used at a site. However, it is not necessary that the Library routines be mapped.

Global Journaling

It is recommended that the LBRY global be journaled at the local medical center level.

Translation Tables

The LBRY global should be translated to allow access in a distributed operating system environment. This global contains the Library Serials module files. All globals are accessed by all users and all local Library data is stored in ^LBRY.

Security Keys

LBRYNLM  This security key should be assigned to those persons designated as SERHOLD coordinators.
Implementation and Maintenance

**Bulletins**

The following bulletins are used in the Library package.

**LBRYFORUM**  This bulletin is to notify the appropriate Library users when transactions have been received from the national librarians on FORUM.

**LBRYLTF**  When a local serial title transaction is received from a VAMC, the national library group wishes to receive a message.

**Mail Groups**

Before installation, the mail groups LBRYUPDT and LBRYFORUM should have been created. Messages pertaining to the outcome of the installation are directed to the mail group LBRYUPDT. Incoming messages from FORUM are also directed to this mail group.
Routine Descriptions

The Library routines use the namespace LBR. For all Library routines, the next letter(s) in the routine name also provides guidance as to the module to which that routine belongs. The breakdown of the Library internal namespaces is as follows.

- LBRL InterLibrary Loan
- LBRN Library National Update
- LBRT Library TAF Update
- LBRY Library Serial Functions

List of Routines with Functional Summaries

The following routines are exported with Library V. 2.5.

- LBRLM Create ILL mail
- LBRLP Borrower reports
- LBRLP0 ILL Print options con't-Lender reports
- LBRLP1 Collection usage report
- LBRLP2 ILL statistical reports
- LBRLP3 Summary statistics report
- LBRLP31 Summary statistics report con't
- LBRLP4 AV usage report
- LBRLP5 Print options con't-av usage report
- LBRLP6 X-ref for File 687, Field 687.06,.01
- LBRLP7 Network AV enter-edit
- LBRLPRG Purge completed ill requests
- LBRLSITE Edit library site data
- LBRLT ILL request is complete/returned
- LBRNCNV1 Library National File cleanup
- LBRNCNV2 National files cleanup (cont.)
- LBRNCNV3 Check after TAF update
- LBRTCNV1 Pre-init program
- LBRTCNV2 Post-init program

Routine Descriptions
File List

This section of the Library package Technical Manual provides a File List (by Number) with brief descriptions of the data stored there and a listing of all files with their associated VA FileMan security access.

File List (By Number)

Warning: Do NOT use VA FileMan to edit any of the files directly! Using FileMan will compromise system integrity. Please use the menu options.

680  LOCAL SERIALS
This file contains the list of titles at the local VA Medical Center library. Information that is title specific and unique to each local VA library is found here. The information contained in this file is holdings, purchasing, subject, and status of title.

680.1  PUBLISHER
This is a nationally controlled file. This file contains a list of publishers for all titles in the Title Authority file. Addresses and phone numbers can also be found in this file.

680.2  FREQUENCY
This is a nationally controlled file. This file contains the frequency information that a title may be issued.

680.3  SUBJECT
This file is a list of locally created subjects used to indicate the types of articles found in a journal.

680.4  NAME
This file contains names and services for all donors, requestors, and routing recipients.

680.5  TITLE AUTHORITY
This is a nationally controlled file containing information for all journal titles that have been cataloged by the Librarians in Togus, ME. This is the master serial list.

680.6  LIBRARY SITE PARAMETERS
This file contains information about the library using the Local Serials module. The name for the library, whether automatic printing is desired, and the computer address for the printer in the library used to print routing slips or reports are some of the entries in this file.

680.7  LBRY ITEM PLACEMENT LOCATION
This file is a list of places where journals the library receives are to be located.

680.8  INDEXING SOURCES
This is a nationally controlled file containing a list of abstracting and index sources that can be associated with a journal.

680.9  PREDICTION PATTERN
This is a nationally controlled file containing information used to predict what the journal date, volume, and issue will be for the title about to be checked-in.
File List

681 LBRY DISPOSITION
This file contains all the copy specific information for any locally received title. Some of the data maintained in this file are the copy number or Table of Contents, who the vendor is, and who the list of recipients are if this copy is routed.

681.1 COUNTRY OF PUBLICATION
This file contains the country where the title was published.

682 LBRY ISSUE
This file contains all the check-in information about each journal date for any local title at a library.

682.1 LIBRARY TRANSACTIONS
This file contains transactions that are being sent to FORUM or being received from FORUM. They may be purged when they have been completed.

687 NETWORK AUDIOVISUALS CATALOG
This file contains information about audiovisuals that Central Office purchases and distributes to the field.

687.1 AUDIENCE
This file contains information about users for the Network Audiovisuals Catalog.

688 LIBRARY ADP DIRECTORY
This file is a database of the ADP hardware and software in VALNET libraries.

689 INTERLIBRARY LOAN (ILL)
This file contains all interlibrary loan transactions.

689.1 LIBRARY STATION
This file contains information about individual library stations.

689.2 LIBRARY HOLDINGS
This file contains a record of each library station's holdings information on FORUM that is used for the Interlibrary Loan module and for the National Library of Medicine's SERHOLD system.

File Protection

The Library package contains files that are nationally controlled and generally carry a high level of file protection with regard to Delete, Read, Write, and LAYGO access. Local data files do allow Delete, Read, Write, and LAYGO access. The data dictionaries for any Library file should NOT be altered.

The package has three (3) levels of VA FileManager file protection enabled on its files.

1. None - where no special security is enabled
2. # - Site Manager access
3. @ - Programmer access to files
### Files with Security Access

File List
Exported Options

Option List by Name

Name: LBRY ADDR EDIT
Type: run routine  Routine: LBRYADR
Menu Text: Edit Station Address (NEW)
This menu option will allow a library station to edit their address and fax
numbers but only view other stations.

Name: LBRY ADMIN RECIPIENTS
Type: run routine  Routine: ART^LBRYRPT0
Menu Text: Administrative Titles with Recipients
This report lists all the "Administrative" titles and their recipients.

Name: LBRY ADMINISTRATIVE TITLES
Type: run routine  Routine: LAT^LBRYRPT0
Menu Text: Local Administrative Titles
A report of all administrative titles arranged alphabetically under the
location where they are housed.

Name: LBRY ADP FACILITIES
Type: run routine  Routine: LBRYADP3
Menu Text: Library ADP Facility Overview
Select this option to display an overview of ADP equipment and software which
is being used at a particular VALNET location.

Name: LBRY ADP HARDWARE
Type: run routine  Routine: LBRYADP2
Menu Text: Library ADP Hardware in VALNET
Compiles a list of ADP equipment available at a particular VALNET library.

Name: LBRY ADP REPORTS
Type: menu  Routine:
Menu Text: Library ADP Directory Information
Menu option to select for 'VIEW' access by all VALNET facilities in order to
make use of the Library ADP Directory information.

Name: LBRY ADP SOFTWARE APPLICATIONS
Type: run routine  Routine: LBRYADP
Menu Text: Library ADP Software/Applications
Used to enter the 'applications' specific to a particular facility using
certain software packages in their library activities.

Name: LBRY ANY FIELD EDITED
Type: run routine  Routine: LBRYHD1
Menu Text: TAFs with any changes
Allows editing any part of a record in the Title Authority File of the
Library package.

Name: LBRY BIBLI EDIT
Type: run routine  Routine: HOL^LBRYEDI
Menu Text: Holdings Setup
Information about the holdings, subjects, categories, retention decisions and
union list codes are entered or edited at this option.
Exported Options

Name: LBRY BRF CKIN SETUP
Type: run routine  
Routine: LBRYLST
Menu Text: Library Title Setup
This option allows setting up or editing a title being used in the library package. All copy specific information is also entered here for a new Local Serials entry.

Name: LBRY COPY EDT
Type: run routine  
Routine: LBRYCSE
Menu Text: Copy Specific Edit
Specific information about individual copies of a serial is added, edited or removed using this option.

Name: LBRY COUNTRY EDIT
Type: run routine  
Routine: COU^LBRYFEDR
Menu Text: Country of Publication File Setup
Allows entry of the country of origin for a new periodical title being added to the Title Authority File of the Library package.

Name: LBRY COUNTRY PRINT
Type: run routine  
Routine: COU^LBRYFRP2
Menu Text: Country of Publication File Listing
Produces listing of entries in the Country of Publication file which is used as a pointer for the Title Authority File of the Library package.

Name: LBRY COUNTRY QUERY
Type: run routine  
Routine: COU1^LBRYQRY
Menu Text: Country of Publication File Query
This option is to display data on a selected country where a title is published.

Name: LBRY DHCP ACCESS
Type: run routine  
Routine: DHCP^LBRYADP3
Menu Text: DHCP Access
Used in the early years of DHCP to designate whether or not a VA Library had DHCP access. Reported as part of the Library ADP Directory entry for the facility.

Name: LBRY DONOR TITLES
Type: run routine  
Routine: LDT^LBRYRPT0
Menu Text: Local Donor Titles
A report that displays all the donors with those titles they have donated to the library.

Name: LBRY DROPPING
Type: print  
Routine:
Entry Action: W @IOF,!!!,?IOM-27/2,"Considering Dropping Report",!!,"This report will take some time before printing. Suggest you queue it after"!,"hours."!!,
Menu Text: Considering Dropping this Title
This report displays all titles which sites are CONSIDERING DROPPING. The station code is also displayed.

Name: LBRY DROPPING ONLY
Type: print  
Routine:
Entry Action: W @IOF,!!!,?IOM-26/2,"Definitely Dropping Report",!!,?IOM-48/2,"This report will take some time before printing."!!,
Menu Text: Definitely Dropping this Title
This report displays all titles which sites are definitely DROPPING and have not entered a LAST ISSUE for the title. The station code is also displayed.
Exported Options

Name: LBRY DUPLICATE TITLES SEARCH
Type: run routine         Routine: DTS^LBRYFRP2
Menu Text: Duplicate Titles Search report
         Produces a report of duplicate periodical titles found in the Title Authority
         File of the Library package.

Name: LBRY FINANCE EDIT
Type: run routine         Routine: PIE^LBRYEDI
Menu Text: Purchasing Information Edit
         Use this option to enter or edit the funding source(s) or costs for any
         active title.

Name: LBRY FOR-YOUR-INFORMATION
Type: run routine         Routine: FYI^LBRYRPT
Menu Text: For-your-information titles
         A report of all the titles which have text in the FOR-YOUR-INFORMATION field.

Name: LBRY FORUM MAIN
Type: menu               Routine:
Entry Action: W @IOF
Menu Text: Library Main Menu
         This menu option is to be assigned to those librarians who need to maintain
         the nationally controlled files on FORUM.

Name: LBRY FREQUENCY EDIT
Type: run routine         Routine: FRE^LBRYFEDR
Menu Text: Frequency File Setup
         Allows enter/edit of a pattern of frequency of issue for periodicals in the
         Title Authority file of the Library package.

Name: LBRY FREQUENCY PRINT
Type: run routine         Routine: FRE^LBRYFRP2
Menu Text: Frequency Pattern File Listing
         Produces a report of the entries established for frequency of issue file.
         Points to the Title Authority File of the Library package.

Name: LBRY FREQUENCY QUERY
Type: run routine         Routine: FRE1^LBRYQRY
Menu Text: Frequency Pattern File Query
         This option is to display data on a selected frequency.

Name: LBRY GAPS LIST
Type: run routine         Routine: LGL^LBRYRPT
Menu Text: Local Gaps List
         A report of all titles with GAPS information or all titles with no GAPS
         information.

Name: LBRY HIST CHK-IN
Type: run routine         Routine: LBRYHIS
Menu Text: History of Check-in
         Displays the receipt, check-in history and disposition of a journal issue.
         It includes Category, Status, Location and Action/Comments information.

Name: LBRY HOSP SERV
Type: run routine         Routine: SERV^LBRYHSF
Menu Text: Hospital Service File
         Allows for viewing services and data.
Exported Options

Name: LBRY INDEX EDIT
Type: run routine  
Routine: ISS^LBRYFEDR
Menu Text: Indexing Sources Setup
Allows the entry/edit of new Indexing and Abstracting sources as well as a short identifier code for each.

Name: LBRY INDEX PRINT
Type: run routine  
Routine: IND^LBRYFRP2
Menu Text: Indexing Sources File Listing
Provides a report of all the authorized Index Sources to be used in the Title

Name: LBRY INDEX QUERY
Type: run routine  
Routine: IND1^LBRYQRY
Menu Text: Indexing Sources File Query
This option is to display data on a selected indexing source.

Name: LBRY ISS EDIT
Type: run routine  
Routine: ISS^LBRYFEDR
Menu Text: Indexing Sources Setup
Allows entry or edit of new or existing Index Source for periodical titles found in the Title Authority file of the Library package.

Name: LBRY ISSN SEARCH
Type: run routine  
Routine: ISS^LBRYFRP2
Menu Text: ISSN Search Report
Produces a periodical title listing with ISSN, and SERLINE Unique Identifier. Report can be ranged by ISSN, then by title. It is useful for determining whether there are duplicate ISSN numbers in the file.

Name: LBRY ITEM PLACEMENT LOCATION
Type: run routine  
Routine: LBRYLIPL
Menu Text: Item Placement Location Entries
Allows creating or modifying the LBRY ITEM PLACEMENT LOCATION file entries. This is the file with the list of locations where incoming copies will be placed.

Name: LBRY LISTING
Type: menu  
Routine:
Entry Action: S IOP=$I D ^%ZIS K IOP W @IOF
Menu Text: National Files Printout
This menu option contains reports for the National Librarians.

Name: LBRY LOCAL HOLDINGS PRINT
Type: print  
Routine:
Menu Text: Local Holdings Listing from the TAF
Library option used to compile a particular facility's journal holdings from the Union List of Periodicals (ULP).

Name: LBRY MANAGER
Type: menu  
Routine:
Entry Action: W @IOF I $D(LBRYPTR) D ^LBRYASK W @IOF
Exit Action: K LBRYCLS,LBRYPTR
Menu Text: Library Management
Assign to the Library Chief--access to all available Library options.

Name: LBRY MEDICAL SUBSCRIPTIONS
Type: run routine  
Routine: MSC^LBRYRPT0
Menu Text: Medical Subscriptions with Cost
A report of all "Medical" titles with cost information arranged by subject.
Name: LBRY MEDICAL TITLES
Type: run routine   Routine: MED^LBRYRPT0
Menu Text: Local Medical Titles
A report of all titles designated as "Medical". The list may be sorted by title or subject.

Name: LBRY MICROFILM
Type: run routine   Routine: LMT^LBRYRPT
Menu Text: Local Microfilm Titles
A report of microfilm holdings arranged either by title or the name of the vendor.

Name: LBRY MISSING DATA SEARCH
Type: run routine   Routine: MDS^LBRYFRP2
Menu Text: Missing Data Search Report
Produces a report ranged by title, for any item record which has any null fields.

Name: LBRY MISSING ISSUE
Type: run routine   Routine: MIL^LBRYRPT
Menu Text: Missing Issues List
This report lists all titles which have missing issues within a specific period of time.

Name: LBRY MISSING LAST ISSUE
Type: run routine   Routine: MLI^LBRYFRP2
Menu Text: Missing Last Issue Report
Produces a report of titles where the 'Last Issue' field value is 'null'.

Name: LBRY MISSING NLM
Type: run routine   Routine: LBRYMNLM
Menu Text: Missing NLM Abbreviation Report (NEW)
This report finds and prints all titles that are missing the NLM Abbreviation.

Name: LBRY MISSING R-T-R
Type: run routine   Routine: ORR^LBRYRPT
Menu Text: Outstanding Routed to Return Issues
A report of all titles which have been routed and are not yet returned to the library.

Name: LBRY MISSING STN
Type: run routine   Routine: LBRYMSTN
Entry Action: W @IOF
Menu Text: Missing Library Station Data Report (NEW)
This program goes through the Library Station file and for the appropriate fields, displays the ones that do not have any data filed.

Name: LBRY MISSING TCN
Type: run routine   Routine: LBRYMTCN
Menu Text: Missing Title Control Number Report (NEW)
This report will find all titles in the Title Authority file that do not have a Title Control Number. This TCN is needed for SERHOLD reporting.

Name: LBRY MONTHLY STATISTICAL
Type: run routine   Routine: LBRYSTA
Menu Text: Library Monthly Statistical Report
A monthly cumulative numerical report on various aspects of serial activity.
Exported Options

Name: LBRY MORE PRINT  
Type: menu  
Routine:  
Entry Action: S IOP=$I D ^%ZIS K IOP W @IOF  
Menu Text: More National Files Reports  
This menu option contains more reports for the National Librarians.

Name: LBRY NATIONAL EDIT

All the things needed to maintain the Library package Nationally controlled files. These files are:  
Title Authority File  
Publisher File  
Frequency File  
Indexing Sources File  
Prediction Pattern File  
Country of Publication File  
Library Site File

Name: LBRY NATIONAL REPORTS  
Type: menu  
Routine:  
Entry Action: S IOP=$I D ^%ZIS K IOP W @IOF  
Menu Text: National Files Reports  
Enter level menu option designed for the first site which used the Serials Module on a PC (Dallas, TX).

Name: LBRY NAV AUDIENCE ENTER  
Type: run routine  
Routine: AUD^LBRYHSF  
Menu Text: Audience File Enter/Edit  
This option is used to enter or edit audiovisual audience types.

Name: LBRY NEEDED PREDICTIONS  
Type: run routine  
Routine: SNP^LBRYFRP2  
Menu Text: Search for Needed Predictions Report  
Produces a report ranged by title where the record has an open 'Last Issue' date and NO prediction pattern. Indicates which titles should be researched for possible prediction patterns.

Name: LBRY NEW LOCAL TITLES  
Type: run routine  
Routine: NLT^LBRYRPT0  
Menu Text: New Local Titles  
A report of all titles which the local library had to enter into the Title Authority File.

Name: LBRY NEW SERLINE LIST  
Type: run routine  
Routine: NSL^LBRYFRP2  
Menu Text: New SERLINE Report  
This option prints a report of titles in the Title Authority File (680.5) with the SERLINE unique identifier number.

Name: LBRY NEW TAF PRINT  
Type: run routine  
Routine: LBRYHD  
Menu Text: New Titles in TAF Report  
Produces a report (for use of the "national librarians") of new title records entered in the Title Authority File (TAF) for a specific range of dates.
Name: LBRY NLM DATA
Type: run routine  
Routine: LBRYHSP
Menu Text: Print Formatted SERHOLD Data
This option is to print out all titles and stations which have properly formatted SERHOLD data.

Name: LBRY NLM EDIT
Type: run routine  
Routine: LBRYREGN
Entry Action: W @IOF
Menu Text: Edit SERHOLD Schedule
This menu option is to allow the SERHOLD coordinator to set up and maintain the regional schedule for producing the SERHOLD tape.

Name: LBRY NLM GLOB
Type: run routine  
Routine: LBRYNLMT
Entry Action: W @IOF
Menu Text: Generate SERHOLD Data Global
This menu option is to be used to generate the holdings data by region into a temporary global that is to be sent to St. Louis to be put on a 9-track tape before being sent to NLM.

Name: LBRY NLM MAIN
Type: menu
Routine:
Entry Action: W @IOF
Menu Text: SERHOLD Manager
This is the main menu option for the SERHOLD coordinator to maintain schedule and produce tapes.

Name: LBRY NLM MISS
Type: run routine  
Routine: LBRYNLMP
Menu Text: Missing SERHOLD Data
This option prints out all titles and their stations which are missing the specialized NLM SERHOLD format for a detailed holdings statement.

Name: LBRY NLM TAPE
Type: 
Routine: TP^LBRYTAPE
Entry Action: W @IOF
Menu Text: Create SERHOLD Tape for NLM
This menu option is to be used by the person who will be creating the SERHOLD tape from the special scratch global. LBRY NLM GLOB must be run first.

Name: LBRY NOTES SEARCH
Type: run routine  
Routine: NSE^LBRYFRP2
Menu Text: Notes Search Report
Produces a report of titles that contain data in the 'General Notes', 'Synonym', 'Formerly', and 'Continued By' fields for comparison purposes.

Name: LBRY OVERVIEW
Type: action
Routine:
Entry Action: S XQH="LBRY MANAGEMENT" D EN^XQH
Menu Text: General Library Package Information
Help information about Library package.

Name: LBRY OVERVIEW #2

Menu Text: Patron Requests for the Local Library
Use this option for any online requests to the local library.

Name: LBRY PATRON SUBJECT
Type: run routine    Routine: SLJ^LBRYRPT1
Menu Text: Subject List of Journals Available
Produces list of journals available in the Library, sorted by Subject.

Name: LBRY PATRON TITLES
Type: run routine    Routine: JTA^LBRYRPT1
Menu Text: Journal Title Availability Inquiry
Allows user to do a 'look-up' as to the availability of selected periodical
titles in the local library.

Name: LBRY PATRONS REPORTS
Type: menu    Routine: W @IOF
Entry Action: W @IOF
Menu Text: Reports for Patrons
Entry level for patrons to access information about periodical titles in the
local library.

Name: LBRY PPR EDIT
Type: run routine    Routine: PPR^LBRYFEDR
Menu Text: Prediction Pattern File Setup
This option is used to create or modify prediction patterns in the Prediction
Pattern File. Prediction patterns are used to check in serials titles at the
local medical center level.

Name: LBRY PPR PRINT
Type: run routine    Routine: PPF^LBRYFRP2
Menu Text: Prediction Pattern File Listing
This option is used to print a report of prediction patterns.

Name: LBRY PPR QUERY
Type: run routine    Routine: PPF1^LBRYQRY
Menu Text: Prediction Pattern File Query
This option is to display data on a selected prediction pattern.
**Name:** LBRY PPWT  
**Type:** run routine  
**Routine:** PPT^LBRYFRP2  
**Menu Text:** Prediction Pattern with Titles Report  
This option is used to display the prediction pattern information associated with a particular title from the Library package.

**Name:** LBRY PUBLISHER EDIT  
**Type:** run routine  
**Routine:** PUB^LBRYFEDR  
**Menu Text:** Publisher File Setup  
This option is used to create publishers for use in the Title Authority File.

**Name:** LBRY PUBLISHER PRINT  
**Type:** run routine  
**Routine:** PUB^LBRYFRP2  
**Menu Text:** Publisher File Listing  
This option is used to print a report of the publishers in the Publisher File.

**Name:** LBRY PUBLISHER QUERY  
**Type:** run routine  
**Routine:** PUB1^LBRYQRY  
**Menu Text:** Publisher File Query  
This option is to display data on a selected publisher.

**Name:** LBRY PURGE  
**Type:** run routine  
**Routine:** LBRYPG  
**Menu Text:** PURGE Journal Date/s from a Title  
This will remove selected Journal Date/s from the Local Serials database for the title selected.

**Name:** LBRY RECIPIENTS  
**Type:** run routine  
**Routine:** REC^LBRYRPT  
**Menu Text:** List of Recipients  
A report that generates a list of titles with the recipients, individual recipients with all the titles they receive or all the Table of Contents with the recipients.

**Name:** LBRY REPRINT ROUTING  
**Type:** run routine  
**Routine:** LBRYRRS  
**Menu Text:** Reprint Routing Slips  
Allows the reprinting of routing slips for a selected time frame. This is useful in case of printer malfunction.

**Name:** LBRY RMV SER TITLE  
**Type:** run routine  
**Routine:** LBRYRST  
**Menu Text:** Remove Serial Title from Database  
THIS OPTION WILL COMPLETELY ERASE A TITLE FROM THE LOCAL SERIALS FILE. USE WITH EXTREME CAUTION AS THERE CAN BE NO RECOVERING OF ANY DATA AFTER THIS OPTION IS USED.

**Name:** LBRY ROUTING LIST ENTRIES EDIT  
**Type:** run routine  
**Routine:** LBRYRLE  
**Menu Text:** Name Entries  
Correct, modify, add or delete entries in the Routing List Entries file in the library package.

**Name:** LBRY RTN FRM ROUTING  
**Type:** run routine  
**Routine:** LBRYRET  
**Menu Text:** Return from Routing  
Used to indicate that a journal issue has been returned from a routing sequence and is ready to be shelved in the library collection.

A report with information about any VA Library.

Name: LBRY UNION LISTS
Type: run routine
Routine: TUL^LBRYRPT0
Menu Text: Titles by Union Lists
A report that displays those serials which are included in various union lists.

Name: LBRYFSRV
Type: server
Routine: LBRYFSRV
Menu Text: LIBRARY (FORUM) TRANSACTION SERVER
This is the server to handle the transactions that FORUM library package will receive.
Exported Options

**Name:** LBRYSEND  
**Type:** run routine  
**Routine:** LBRYFSND  
**Menu Text:** SEND LIBRARY TRANSACTIONS  
This program is the program to schedule the Task Manager to run after hours to process and transmit the library transactions.

**Name:** LBRYSRV  
**Type:** server  
**Routine:** LBRYSRV  
**Menu Text:** NEW LIBRARY SERVER  
New library package server

**Menu Structure and Option Definitions**

The following pages display the exported Library package options listed by menu. The primary menus are:

- Interlibrary Loan Menu (on FORUM)
- Serial Maintenance Menu (on FORUM)
- Library Manager Menu on (Local)
- Serial Technician Menu (Local)
- Patron Options (Local)

Locally, the Chief Librarians would be assigned the LBRY MANAGER menu and the Library Technicians would be assigned the LBRY SER TECH menu. For the national package on FORUM, LBRY FORUM MAIN is assigned to the national librarians and LBRL ILL & MAILMAN is assigned to general users.

The following are the non-parented options excluding menu options.

Archiving and Purging

Archiving

Archiving within the Library package is currently only being done on the Interlibrary Loan file residing on FORUM.

Purging

The Library package contains options that allow manual purging or background purging.

At the local medical center level, there are three options that allow purging. The local level also contains the Purge Library Transactions option that should be scheduled in Task Manager for weekly purging of completed Library transactions. The Purge Journal Date/s from a Title option is used to manually remove check-in information from a select serial title. A local library station also has the Remove Serial Title from Database option. This option allows manual removal of a serial title and all associated disposition and check-in information.

Callable Routines

There are no callable routines in the Library package.
External Relations

Your system must be running Kernel V. 7 or higher and VA FileMan V. 19 or higher in order for you to successfully operate Library V. 2.5.

Library V. 2.5 contains two fields in the New Person file (#200) for the FORUM side of the package. File #200 is not in the normal file number range for the Library Package. These fields are the SECURITY ACCESS LEVEL field (#120000) and the LOCATION FIELD (#120001). These fields are needed for Library FORUM user sign-ons.

Library V. 2.5 has references to other files that are also not in the normal file number range for the Library package. Some fields point to the Vendor file (#440), Service/Section file (#49), Domain file (#4.2), State file (#5), New Person file (#200) and the MailMan Message file (#3.9).
Internal Relations

There are no current internal relations within the Library package. All menu options are independent and can stand alone.

Package-wide Variables

LBRYCLS and LBRYPTR are package-wide variables for use in the Library package.

On-Line Documentation

The Library package has menu options that may be used to review the help frames that have been created by the Library Expert Panel to serve as On-Line Documentation. On FORUM, the menu option is Help for Library Options. At the local medical center level, the options are General Library Package Information, and General Serials Control Information.
## Glossary

**Administrative Category**
Titles purchased by Library Service which are maintained by an individual or office other than the Library Service. These materials must be (1) critical to the successful accomplishment of official duties; and (2) consulted by an individual or office on a daily basis.

**ADP**
Automated Data Processing

**Alpha-numeric**
String of characters and numbers which cannot be all numbers or start with punctuation.

**AOBC**
American Overseas Book Company is the FY88, 89, and 90 periodical procurement vendor. It is currently the default answer to the Vendor prompt.

**ASCII**
American Standard Code for Information Interchange. ASCII translates each character on the computer keyboard into a number. The characters are the letters of the alphabet, the numerals, punctuation characters, and some other special codes.

**CAT**
Category. Refers to a code designating the VALNET type of a journal title (e.g. (M)edical, (G)eneral, (R)esearch, (A)dministrative, (P)atient Health Education).

**Core**
1 -- Any journal title identified by district or regional libraries as being basic to the provision of information at the local level.

2 -- The collection of VA-developed programs (specific to MAS, Pharmacy Service and Laboratory Service) which are run at VA Medical Centers.

**CRT**
Cathode Ray Tube. A piece of computer hardware that looks something like a television screen. Also call a Video Display Terminal (VDT).

**Data**
Information entered for the computer to store and retrieve.

**Database**
A collection of data related to a specific subject, such as the Title Authority file, consisting of different data fields, such as ISSN, National Library of Medicine (NLM) unique identifier number, etc.

**Date or Date/Time Field**
Examples of Valid Dates for Input:

- JAN 22 1957 or 22 JAN 57 or 1/22/57 OR 012257
- T (for Today), T+1 (for Tomorrow), T+2, T+7, etc.
- T-1 (for Yesterday), T-3W (for 3 weeks ago), etc.
- If the year is omitted, the computer uses the CURRENT YEAR. You may omit the precise day, as: JAN 1957
Glossary

**Default**
A response or answer inferred and displayed by the computer for the user to accept or override. It is identified by double slash marks (//) immediately following the response. This allows the option of accepting the default answer or entering another answer. To accept the default, simply press the enter (or return) key. To change the default answer, type in another response.

**Device**
1 -- A hardware input/output component of a computer system (e.g., CRT, printer).

2 -- The printer to which the file, record, or report is routed.

In answer to the "Device:" prompt, simply type the number of the device where it is to print.

**DHCP**
Decentralized Hospital Computer Program is the name for the project that develops software and installs, maintains and updates compatible computer systems in VA medical facilities.

**Disposition**
Local - Action to be taken when a serial copy is received, (e.g. routed, routed and returned, or shelved).

FORUM- Action to be taken when a local serial record is received by National Librarians, (e.g. accepted as new entry, corrected entry, or rejected entry).

**Edit**
To change or modify data stored in a field.

**Enter**
By pressing the (continue) or (return) or (enter) key, it tells the computer to execute the instructions or commands to store the information typed.

**Field**
A data element in a file. For example, TITLE and SUBJECT are fields in the Local Serial file.

**File**
A collection of records that all pertain to some particular set of objects or events (e.g., Publisher file, Subject file, Local Serials file, etc.).

**File Manager**
A set of MUMPS (or M) routines used to create/modify files; enter, edit print and sort/search related data in files; generate reports; and document file structures. This database manager is also referred to as FileMan.

**FORUM**
This is a system developed and maintained to provide a national centralized communications system for use within the Department of Veterans Affairs. Some centralized Library Package options reside on FORUM.

**Free Text**
1 -- A string of characters which may contain any combination of numbers, letters, and/or symbols in the ASCII character set.

2 -- One of several types of fields in FileMan, composed as above, and with a minimum and maximum number of allowable characters for field length.
Glossary

Halt A command entered at any Select XXXXXXX Option prompt to exit the computer system.

Hardware The physical or mechanical components of a computer system such as CPU, CRT, disk drives, etc.

HOR Holder of Record. The VALNET library designated within a medical district or region to house specific periodical titles necessary for filling ILL requests, as determined by participating Library Services. The site will acquire, maintain, an lend/photocopy current and retrospective issues/articles from these titles.

ID NUM Identification number assigned to each serial's issue listed in chronological order; used for actions concerning specific issues.

Inactive Term used to designate that the serial title has been cancelled, ceased publication, or been renamed but is still maintained in the collection.

Indexed Field Field for entering indexing sources for titles (e.g., Abridged Index Medicus (AIM), Excerpta Medica (EM), Index to Dental Literature (IDL)).

Integrated Automated Library System (ILS) A system in which all automated library functions are processed against a single master bibliographic file. The first module in the VA ILS system is the Serials Control Module.

ISSN International Standard Serial Number. A unique identifier assigned to each serial publication. The nine-character code consists of four numerical digits, a hyphen, and four more digits (the last character may be the letter X).

Item Placement Location (IPL) Indicates actual location of a serial title (e.g., Medical Library, Workroom, Research, etc.). Services holding administrative titles should be included in this file.

Journal Date Refers to the journal issue date as it is printed on the journal issue.

Kernel A set of software utilities which form the foundation of the VA DHCP. These facilities provide data processing support for the application packages developed within the VA. They are also the tools used in configuring the local computer site to needs of the hospital. The components of this operating system include: File Manager, Menu Manager, Task Manager, MailMan, Device Handler, Log-on/Security, and other specialized routines.

Keyword A significant word contained in a journal title which may be used to retrieve a specific record.

Library Supporting Files (LSF) A section of the Serials Control Module at the local medical center level containing the files for Item Placement Location, Name Entries, and Subject Setup.
### Glossary

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Local Serials</strong></td>
<td>The local database of titles which, when created, allows check-in, the establishment of holdings and purchasing data, and the production of reports and statistics.</td>
</tr>
<tr>
<td><strong>MDP</strong></td>
<td>Mail Delivery Point (e.g. 142D, 136, etc.)</td>

<tr>
<td><strong>MUMPS (M)</strong></td>
<td>Massachusetts General Hospital Utility MultiProgramming System. This is the computer language the Library Serials Package is written in.</td>
</tr>
<tr>
<td><strong>Name Entries File (NEF)</strong></td>
<td>A file of names of 1) person and/or locations used for routing within the library package, 2) requestors, and 3) donors.</td>
</tr>
<tr>
<td><strong>Operating System</strong></td>
<td>The innermost layer of software that communicates with the hardware. It controls the overall operations of the computer, such as assigning places in memory, processing input, and output. One of its primary functions is interpreting MUMPS computer programs into language the hardware can understand.</td>
</tr>
<tr>
<td><strong>Option</strong></td>
<td>A menu item that is invoked by the user.</td>
</tr>
<tr>
<td><strong>Override</strong></td>
<td>To write new data to a field, thus replacing the existing data.</td>
</tr>
<tr>
<td><strong>Package</strong></td>
<td>A set of MUMPS routines, files, documentation and installation that support a specific function within the DHCP (e.g., IFCAP, Library System, etc.)</td>
</tr>
<tr>
<td><strong>Placement</strong></td>
<td>Identifies where the journal will be kept after check-in and/or routing. It refers to the Item Placement Location (IPL).</td>
</tr>
<tr>
<td><strong>Port</strong></td>
<td>An outlet in the back of the printer into which terminals and other peripheral hardware can be connected.</td>
</tr>
<tr>
<td><strong>Program</strong></td>
<td>A set of MUMPS commands and arguments, created, stored, and retrieved as a single unit in MUMPS.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>-------------------------------------------</td>
<td>-------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>Prompt</td>
<td>The question or statement (e.g., &quot;Select...&quot;) displayed by the computer which requires a response from the user.</td>
</tr>
<tr>
<td>Queuing</td>
<td>The scheduling of a process/task to occur at a later time. Queuing is normally done if a task takes a lengthy amount of computer time to process. Usually this is done in conjunction with printing and is scheduled after normal business hours.</td>
</tr>
<tr>
<td>Return</td>
<td>See &quot;Enter&quot;</td>
</tr>
<tr>
<td>Routine</td>
<td>In MUMPS, a computer program is frequently referred to as a routine.</td>
</tr>
<tr>
<td>Serials Control Module</td>
<td>One section of the integrated library system which includes full bibliographic and holdings information for each serial title, as well as binding, claiming, check-in, routing, funding source information and reports.</td>
</tr>
<tr>
<td>SERLINE</td>
<td>SERials onLINE. File maintained by the National Library of Medicine (NLM) containing bibliographic records of biomedical serials.</td>
</tr>
<tr>
<td>Site Manager (IRM)</td>
<td>The one person who takes responsibility for the control and management of computer resources at each medical center. Site managers have certain responsibilities both prior to the installation of computer equipment and after the system is fully operational.</td>
</tr>
<tr>
<td>Site Parameters</td>
<td>Refers to specific characteristics in the system that can be modified to meet the needs of individual locations.</td>
</tr>
<tr>
<td>Stopword</td>
<td>A term which has been designated as unsearchable, for example: of, in, the, etc.</td>
</tr>
<tr>
<td>Task Manager</td>
<td>A part of Kernel which allows programs or functions to begin at specified times or when devices become available. See &quot;Queuing&quot;.</td>
</tr>
<tr>
<td>Title Authority File (TAF)</td>
<td>Database of titles with bibliographic information taken from the VA Union List of Periodicals with selected general titles added.</td>
</tr>
<tr>
<td>ToC</td>
<td>Table of Contents. Refers to Table of Contents Service in which library routes a photocopy of a journal's table of contents to interested staff.</td>
</tr>
<tr>
<td>UCMP</td>
<td>Union Catalog of Medical Periodicals of the Medical Library Center of New York. Facilitates resource sharing among libraries by maintaining records of the holdings for various libraries and by publishing union lists.</td>
</tr>
<tr>
<td>Ulrich's</td>
<td>Annual publication (Bowker) listing periodicals published throughout the world; includes titles which have ceased or suspended publication. Entries are classified by subject and include bibliographic information.</td>
</tr>
</tbody>
</table>
**Glossary**

| **Union List** | A bibliographic listing of books, journals, and/or AVs from several libraries which are available for loan. This listing also includes information on the individual holdings of each library. |
| **Vendor** | The source from which a journal is ordered, e.g. AOBC. |
| **Word Fragment** | The truncation of a word, usually done to allow for variant endings and plurals. |
| **Word-Processing Field** | Data is entered using individual input lines rather than whole blocks of text. There is no pre-established format for the text. Text is typed in response to the numbered prompts (1>, 2>, 3>). Each prompt represents a line of text. Lines of text entered will not necessarily display the same way on the computer screen or when printed. This means that the format on the screen as the user enters the text is not the same as when it prints on a printer or at a terminal. After entering the text, the package will provide several editing and formatting options. |
