1 Purpose

The purpose of this Install guide is to provide instructions for the deployment of the PRE MOCHA Server application build on a WebLogic (application) Server.

The following instructions detail the steps required to perform an installation of a release for the MOCHA software when an existing release is already deployed. These steps assume a fresh installation has been completed, and there is an existing MOCHA Server Application up and running which will be replaced by the WebLogic Build.

This is a two-step process: first, remove the old release (build), and then deploy the new PRE MOCHA Server application build.
This page intentionally left blank
2 Un-Deploy Old MOCHA Server Build

The following steps detail how to un-deploy the MOCHA Server build:

1. Open and log into the WebLogic console. This is located at: http://<Deployment Machine>:7001/console.

2. Within the **Domain Structure** panel in the left column of the WebLogic console, click the **Deployments** node. For reference, see Figure 2-1.

![Domain Structure](image1)

*Figure 2-1: Domain Structure*

3. Within the **Change Center** panel in the left column of the WebLogic console, click **Lock & Edit**. For reference, see Figure 2-2.

![Change Center](image2)

*Figure 2-2: Change Center*

4. WebLogic will now display the panel **Summary of Deployments** in the right column of the console, where all deployments for the WebLogic domain are listed. For reference, see Figure 2-3.
5. Select the previously deployed MOCHA (Server) deployment, click Stop, and then select Force Stop Now from the drop-down list box.

6. WebLogic will now display the panel Force Stop Application Assistant in the right column of the console for confirmation to start servicing requests. For reference, see Figure 2–4: Force Stop Application Assistant.

7. Click Yes in the Force Stop Application Assistant panel in the right column of the WebLogic console.

8. WebLogic now returns to the Summary of Deployments panel in the right column of the console. For reference, see Figure 2–5.
9. Verify that the State of the MOCHA deployment is Prepared.

10. Select the previously deployed MOCHA deployment, and then click Delete.

11. WebLogic will now display the panel Delete Application Assistant in the right column of the console for confirmation to start servicing requests. For reference, see Figure 2-6.

12. Click Yes in the Delete Application Assistant panel in the right column of the WebLogic console.

13. WebLogic now returns to the Summary of Deployments panel in the right column of the console. For reference, see Figure 2-7.
14. Verify that the MOCHA deployment is deleted and no longer present.

15. Within the Change Center panel in the left column of the WebLogic console, click Activate Changes. For reference, see Figure 2-8.
3 Deploy New MOCHA Server Build

The following steps detail the deployment of the MOCHA Server application Build on WebLogic application Server.

1. Open and log into the WebLogic console. This is located at: http://<Deployment Machine>:7001/console.

2. Within the Domain Structure panel in the left column of the WebLogic console, click the Deployments node. For reference, see Figure 3-1.

![Figure 3-1: Domain Structure](image)

3. Within the Change Center panel in the left column of the WebLogic console, click Lock & Edit. For reference, see Figure 3-2.

![Figure 3-2: Change Center](image)

4. Click Install found in the Deployments panel in the right column of the WebLogic console. For reference, see Figure 3-3.
5. WebLogic will now display the panel Install Application Assistant in the right column of the console, where the location of the MOCHA Server deployment will be found. For reference, see Figure 3-4.

![Figure 3-3: Deployments](image)

![Figure 3-4: Install Application Assistant](image)

6. Select the MOCHA deployment; select the MOCHA Server-> mocha-server-1.1.01.1420.ear file.

   a) If the MOCHA Server build for deployment has already been transferred to the Deployment Machine, navigate to the deployment file location using the links and file structure displayed within the Location panel within the Install Application Assistant in the right column of the console. For reference, see Figure 3-5.
b) If the MOCHA Server build for deployment has not been transferred to the Deployment Machine:

1. Click on the upload your file(s) link in the Install Application Assistant panel in the right section of the console. For reference, see Figure 3-5.

2. Click the Deployment Archive Browse to see the Choose file dialogue used to select the Deployment Archive.

3. Click Next in the Upload a Deployment to the admin server panel in the right column of the WebLogic console to return to the Locate deployment to install and prepare for deployment panel within the Install Application Assistant. For reference, see Figure 3-6.

Figure 3-5: Locate Deployment to Install and Prepare for Deployment

Figure 3-6: Upload a Deployment to the Admin Server
7. Once the MOCHA Server build for deployment is located and selected, click Next.

8. WebLogic will now display the panel Choose targeting style within the Install Application Assistant in the right column of the console. Leave the default value selected, Install this deployment as an application, and click Next. For reference, see Figure 3-7.

![Choose Targeting Style](image)

**Figure 3-7: Choose Targeting Style**

9. Within the Install Application Assistant in the right column of the console, WebLogic will now display the panel Select deployment targets, where the Deployment Server will be selected as the target in the next step. For reference, see Figure 3-8.

![Select Deployment Targets](image)

**Figure 3-8: Select Deployment Targets**

**NOTE:** Select part of cluster and select mocha1, 2, 3,
10. For the Target, select the Deployment Server. For example, LocalPharmacyServer.

11. Click Next.

12. Within the Install Application Assistant, WebLogic will now display the panel Optional Settings in the right column of the console, where the name of the deployment and the copy behavior are chosen. For reference, see Figure 3-9.

![Figure 3-9: Optional Settings](image)

13. Enter the Name for the deployment. For example, MOCHA.

14. Verify that the following default option for Security is selected:

   DD Only: Use only roles and policies that are defined in the deployment descriptors.
15. Verify that the following default option for Source accessibility is selected:
   Use the defaults defined by the deployment's targets.

16. Click Next.

17. Within the Install Application Assistant in the right column of the console
   WebLogic will now display the panel Review your choices and click Finish,
   which summarizes the steps completed above. For reference, see Figure 3-10.

   ![Install Application Assistant](image)

   **Figure 3-10: Review Your Choices and Click Finish**

18. Verify that the values match those entered in Steps 6 through 17 and click Finish.

19. WebLogic will now display the panel Settings for MOCHA, in the right column of the
   console, where the values previously entered are available as well as a setting to change the
   deployment order. For reference, see Figure 3-11.
20. Leave all the values as defaulted by WebLogic and click **Save**.

21. **Within the Change Center panel** in the left column of the WebLogic console, click **Activate Changes**. For reference, see Figure 3-12.

22. **Within the Domain Structure panel** in the left column of the WebLogic console, click the **PRE > Deployments** node. For reference, see Figure 3-13.
23. WebLogic will now display the panel Summary of Deployments in the right column of the console, where all deployments for the WebLogic domain are listed. For reference, see Figure 3-14.

24. Select the previously deployed MOCHA deployment, click Start, and then select Servicing all requests from the drop-down list box.

25. WebLogic will now display the panel Start Application Assistant in the right column of the console for confirmation to start servicing requests. For reference, see Figure 3-15
26. Click Yes in the Start Application Assistant panel in the right column of the WebLogic console.

27. WebLogic now returns to the Summary of Deployments panel in the right column of the console. For reference, see Figure 3-16.

28. Verify that the State of the MOCHA deployment is Active.
4 Backout Plan

The following steps detail the Backout plan of the MOCHA Server application on WebLogic application Server.

1. Un-deploy MOCHA Server 1.1.01 build (mocha-server-1.1.01.1420.ear file) as detailed in Section 2.

2. Deploy MOCHA Server 1.1 build (mocha-server-1.1.00.001.ear file) as detailed in Section 3.
