How to Use this Manual

This manual provides instructions on the use of VPS 1*4 remote procedure calls (RPC) to access Veterans Health Information Systems and Technology Architecture (VistA) as a data source for VHA Point of Service (Kiosks).

Intended Audience

The intended audience of this manual is the following stakeholders:

- Product Development (PD) VistA legacy development teams.
- Information Resource Management (IRM) system administrators at Department of Veterans Affairs (VA) sites who are responsible for computer management and system security on VistA M Servers.
- Information Security Officers (ISOs) at VA sites responsible for system security.
- Health Product Support (HPS) Information Technology (IT) Specialists who provide application support to VA end-users.

Legal Requirements

There are no special legal requirements involved in the use of VPS 1*4 RPCs.

Disclaimers

This manual provides an overall explanation of VPS 1*4 functionality. This guide does not attempt to explain how the overall VistA programming system is integrated and maintained.

DISCLAIMER: The appearance of any external hyperlink references in this manual does not constitute endorsement by the Department of Veterans Affairs (VA) of this Website or the information, products, or services contained therein. The VA does not exercise any editorial control over the information you may find at these locations. Such links are provided and are consistent with the stated purpose of this VA Intranet Service.

Documentation Conventions

The following symbols are used throughout this document to alert the reader to special information.

- **NOTE/REF:** Used to denote general information including references to additional reading material.

- **CAUTION / RECOMMENDATION / DISCLAIMER:** Used to caution the reader to take special notice of critical information.
Snapshots of computer online displays (screen captures) and computer source code are shown in non-proportional font and are enclosed within a box. User responses to displayed prompts are bold italic typeface. Software reserved words are displayed in bold font.

References to “<Enter>” within the screen captures indicate that the user should press the <Enter> key on the keyboard. Other special keys are represented within <> angle brackets and indicate the user should press the indicated key on the keyboard. For example, <PF1> directs the user to press the PF1 key on the keyboard.

The following conventions are used to display test data:

- Social Security Numbers (SSN) for test patients are prefixed with five zero digits e.g. 000009999.
- Patient names are formatted as [Application Name]PATIENT,[N] e.g. VPSPATIENT, ONE.
- User names are formatted as [Application Name]USER[N] e.g. VPSUSER, ONE.

This guide refers to the M programming language as M. Under the 1995 American National Standards Institute (ANSI) standard, M is the primary name of the MUMPS programming language, and MUMPS is considered an alternate name.

**Commonly Used Terms**

*Table 1: Commonly Used VPS 1*4 Terms*

<table>
<thead>
<tr>
<th>Term</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Client</td>
<td>A single term used interchangeably to refer to a user, the workstation (i.e., PC), and the portion of the program that runs on the workstation.</td>
</tr>
<tr>
<td>Component</td>
<td>A software object that contains data and code. A component may or may not be visible.</td>
</tr>
<tr>
<td>GUI</td>
<td>The Graphical User Interface application that is developed for the client workstation.</td>
</tr>
<tr>
<td>Host</td>
<td>The term Host is used interchangeably with the term Server.</td>
</tr>
<tr>
<td>Server</td>
<td>The computer where the data and the RPC Broker remote procedure calls (RPCs) reside.</td>
</tr>
</tbody>
</table>

**Technical Information Online**

Project documentation for VPS Kiosks may be found in the Technical Services Project Repository (TSPR). Other online technical information from M Server-based software file, routine and global documentation may be generated using Kernel, MailMan and VA FileMan utilities.

**Help Prompts**

There are no online help prompts provided for VPS 1*4.
Data Dictionary

Technical information on VistA M Server-based files is stored in the VA FileMan Data Dictionary. The VA FileMan List File Attributes option on the Data Dictionary Utilities submenu may be used to view the attributes of VistA M Server files.

Assumptions

This guide is written with the assumption that the reader is familiar with:

- Kernel – VistA M Server software
- Remote Procedure Call (RPC) Broker – VistA Client/Server software
- VA FileMan data structures and terminology – VistA M Server software
- Microsoft Windows
- M programming language

1 Introduction

The VPS 1*4 Technical Manual provides descriptive information and instruction on the use of VPS 1*4 Remote Procedure Calls (RPCs) within VA’s Veterans Health Information Systems and Technology Architecture (VistA) environment. This document is intended for systems managers—Information Resource Management (IRM) personnel who are responsible for implementing and maintaining this software, application programmers, and developers. It acquaints system managers with the software structure and functionality of the VPS RPC routines and files that comprise this software.

1.1 Product Overview

VPS 1*4 provides RPCs that extends VetLink integration with multiple VistA packages, and increases the data extracted from the facilities’ patient-related files. The RPCs either extract data from associated
VistA files or enhance the output and initiate print jobs through established VistA and/or VetLink mechanisms. VistA patch VPS 1*4 focuses on the following four (4) functional areas:

1. **Clinical Reminders Integrating Kiosks (CRIK) (Phase 1):** VPS 1*4 integrates clinical reminders into Kiosk/VetLink. VPS 1*4 retrieves system level National Clinical Reminders from associated VistA files for presentation to clinic staff through the staff-facing Kiosk client.

2. **VPS Enhanced Get Patient Demographic:** VPS 1*4 expands the patient data provided to VetLink to include patient safety and behavioral flags, laboratory orders, consult requests, eligibility history and expanded demographic data.

3. **Specimen/Wristband Label (VistA Printing Phase 2):** VPS 1*4 integrates VistA printing capabilities into VetLink. VPS 1*4 RPCs accept wristband patient information and patient specimen label information from VetLink and create VistA print jobs directed to clinic network printers.

1.2 **Namespace Conventions**

VPS is the namespace assigned to VPS 1*4.

2 **Implementation and Maintenance**

The *VPS 1*4 Installation Manual* provides detailed information regarding the installation of VPS*1.0*4.

2.1 **Site Parameters**

No site specific parameters are provided or required for VPS 1*4.

2.2 **Site Printer Configuration**

Printers used to print patient labels and wristbands are required to be configured as network printers. Sites should perform the following steps to verify and/or modify the label and wristband printer configurations for label and wristband printers to be used by VPS.

To configure the label and/or wristband printers for VPS use WRITE access to DEVICE file #3.5 is required. If you do not have WRITE access to this file, please contact your local IRM to request the needed DEVICE file edits.
1. At the EVE menu, and select FM VA FileMan option

   Core Applications ...
   Device Management ...
   FM VA FileMan ...
   Manage Mailman ...
   ...
   ...
   Capacity Planning ...

   Select Systems Manager Menu <TEST ACCOUNT> Option: FM

   VA FileMan Version 22.0

   Enter or Edit File Entries
   Print File Entries
   Search File Entries
   Modify File Attributes
   Inquire to File Entries
   Utility Functions ...
   Data Dictionary Utilities ...
   Transfer Entries
   Other Options ...

   Select VA FileMan <TEST ACCOUNT> Option:

2. Select Inquire to File Entries option:

   Select VA FileMan <TEST ACCOUNT> Option: Inquire to File Entries

3. Enter DEVICE FILE at the OUTPUT FROM WHAT FILE: prompt

   OUTPUT FROM WHAT FILE: REMOTE PROCEDURE// DEVICE
   OUTPUT FROM WHAT FILE: REMOTE PROCEDURE// 3.5 DEVICE (420 entries)

   Select DEVICE NAME:

4. Enter the name of the label printer or wristband printer you that may need to be configured at the Select DEVICE NAME prompt. This should be the name of a printer that has been setup and is in use at your facility. These instructions are not intended for configuring a “new” printer not currently in service.

   Select DEVICE NAME: ZZ$CWPR replace with your label printer name or wristband printer name

   ANOTHER ONE:
   STANDARD CAPTIONED OUTPUT? Yes// <ENTER>
   Include COMPUTED fields: (N/Y/R/B): NO// B
   DISPLAY AUDIT TRAIL? No// NO <ENTER>

   NUMBER: 1160
   NAME: ZZ$CWPR
   ASK DEVICE: NO
   SIGN-ON/SYSTEM DEVICE: NO
   ASK HOST FILE: NO

   LOCATION OF TERMINAL: /tmp
If the $I parameter contains |TCP|9100 as shown in step 4 in the example above, no further configuration is required and you may exit FileMan.

If the $I parameter does not contain |TCP|9100, then modify the $I, TYPE, OPEN PARAMETERS, and QUEUING fields for the device (label or wristband printer using the FileMan Edit Option (example shown in section 2.2.1) or the EVE Device Management Option (example shown in section 2.2.2).
2.2.1 Device File Edits using FileMan

At the EVE menu, and select FM VA FileMan option

Core Applications ...
Device Management ...
FM VA FileMan ...
Manage Mailman ...
.
.
Capacity Planning ...

Select Systems Manager Menu <TEST ACCOUNT> Option: FM

VA FileMan Version 22.0

Enter or Edit File Entries
Print File Entries
Search File Entries
Modify File Attributes
Inquire to File Entries
Utility Functions ...
Data Dictionary Utilities ...
Transfer Entries
Other Options ...

Select VA FileMan <TEST ACCOUNT> Option: Enter or Edit File Entries

INPUT TO WHAT FILE: DEVICE/<ENTER>
EDIT WHICH FIELD: ALL/ $I
THEN EDIT FIELD: TYPE
  1 TYPE
  2 TYPE-AHEAD
CHOOSE 1-2: 1
THEN EDIT FIELD: QUEUING
THEN EDIT FIELD: OPEN PARAMETERS
THEN EDIT FIELD: <ENTER>

Select DEVICE NAME: ZZ$CWPR /tmp /tmp/output.txt
$I:/tmp/output.txt//TCP|9100
TYPE: HOST FILE SERVER// NETWORK CHANNEL
QUEUING: 0 ALLOWED
OPEN PARAMETERS: "WNS"//("<printer ip address>":9100:"ACS"::512:512)

You will edit the values of the $I, TYPE, QUEUING, OPEN PARAMETERS fields in the DEVICE file for the printer that VPS will use to print patient labels or wristbands.
## 2.2.2 Device File Edits using Device Management Option

### Device File Edits using device management option

From the EVE menu select the Device Management Option

<table>
<thead>

You will edit the values of the $1, TYPE, QUEUING, OPEN PARAMETERS B fields in the DEVICE file for the printer that VPS will use to print patient labels or wristbands.

3 Files

3.1 VistA M Server Files

VPS 1*4 retrieves data from VistA M Server files owned and maintained by packages external to VPS. The following table lists the VistA M Server files and global references used by VPS 1*4 RPCs.

Table 2 VistA M Server Files Accessed by VPS 1*4

<table>
<thead>
<tr>
<th>FILE NAME AND NUMBER</th>
<th>GLOBAL REFERENCE</th>
</tr>
</thead>
<tbody>
<tr>
<td>ANNUAL MEANS TEST #408.31</td>
<td>^DGMT(408.31)</td>
</tr>
<tr>
<td>BILLING PATIENT #354</td>

</tr>
</tbody>
</table>
### 4 Global Translation, Journaling and Protection

There are no VPS 1*4 VistA M Server files for which VPS is the custodial owner. Consequently, global translation, journaling and protection is not required.
## 5 Routines

*Table 3 VPS1*4 VistA Routines*

<table>

### Detailed VPS 1*4 RPC Information

Details on the input parameters and the output produced by each of the VPS 1*4 RPCs may be obtained from a FileMan inquiry to the REMOTE PROCEDURE file # 8994.

### 6 Exported Options

There are no VistA M Server options exported with VPS 1*4. However, VPS 1*4 requires the VPS KIOSK INTERFACE context (option menu).

### 7 Archiving and Purging

#### 7.1 Archiving

There are no archiving procedures needed for VPS 1*4 RPC components.

#### 7.2 Purging

There are no purging procedures needed for VPS 1*4 RPC components.

### 8 Callable Routines

VPS 1*4 does not provide callable VistA M Server callable routines.

### 9 External Interfaces

There are no interfaces to VPS 1*4 RPCs other than those provided by the VistA M Server and VistA RPC Broker.
10 External Relations

The following minimum package versions are required:

- VA FileMan V. 22.0,
- Kernel V. 8.0,
- Kernel Toolkit V. 7.3,
- CPRS V. 29,
- PXRM V. 2.0.18,
- RPC Broker V. 1.1
- VPS*1.0*2

Sites should verify that all patches to these packages have been installed.

11 Internal Relations

There are no internal relations for VPS 1*4.

12 DBIA Agreements

The VistA Database Administrator (DBA) maintains a list of Integration Agreements (IAs) or mutual agreements between custodial owners allows the use of internal entry points or other software-specific features that are not open for unrestricted use.

12.1 DBIA Agreements – Custodial Package

1. Sign on to FORUM system
2. Go to the DBA Menu
3. Select the Integration Agreements Menu option
4. Select the Custodial Package Menu option
5. Choose the Active by Custodial Package Option
6. When prompted for a package, enter VA Point of Service (Kiosks)
7. All current IAs to which VA Point of Service (Kiosks) is custodian are listed.

12.2 DBIA Agreements – Subscriber Package

1. Sign on to the FORUM system
2. Go to the DBA Menu
3. Select the Integration Agreements Menu option
4. Select the Subscriber Package Menu option
5. Select the Print ALL by Subscriber Package Option
6. When prompted with “Select PACKAGE NAME,” enter VA Point of Service (Kiosks)
7. When prompted with “START WITH SUBSCRIBING PACKAGE,” ENTER **VA Point of Service (Kiosks)**

8. All current IAs to which VPS VA Point of Service (Kiosks) is a subscriber are listed

13 **Package-wide Variables**

There are no package-wide variable associated with VPS 1*4.

14 **SAC Exemptions**

There are no SAC Exemptions for VPS 1*4.

15 **Software Product Security**

15.1 **Security Management**

No security keys required for used of VPS 1*4 RPCs.

15.2 **Mail Groups and Alerts**

There are no mail groups or alerts provided in VPS 1*4 RPCs.

15.3 **Remote Systems**

15.3.1 **Connections**

There are no direct remote system connections to VPS 1*4 RPCs. Access to VPS 1*4 run routines is provided through the VistA RPC Broker and the underlying VistA M Server.

15.3.2 **Remote Data Views**

Remote Data views are not supported by VPS 1*4 RPCs.

15.4 **Interfaces**

There are no non-VA products embedded in or required by VPS 1*4 RPCs, other than those proved by the underlying operating system and VistA RPC Broker.

15.5 **Electronic Signatures**

There are no electronic signatures used or required by VPS 1*4 RPCs.

15.6 **Security Keys**

No security keys are exported with the RPC Broker software.
15.7 File Security
There are no VistA M Server data files for which VPS 1*4 is the custodial owner.

15.8 Official Policies
As per the Software Engineering Process Group/Software Quality Assurance (SEPG/SQA) Standard Operating Procedure (SOP) 192-039—Interface Control Registration and Approval (effective 01/29/01), application programmers must not alter any HealthvteVistA Class I software code.

### 16.1.1 Glossary

**Table 6: Glossary**

<table>
<thead>
<tr>
<th>Term</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>Access Code</td>
<td>The unique sequence of characters assigned to the user by the site system manager. The access code in conjunction with the verify code is used to identify authorized users.</td>
</tr>
<tr>
<td>Application</td>
<td>A collection of computer programs and files developed specifically to meet the requirements of a user or group of users.</td>
</tr>
<tr>
<td>Archive</td>
<td>The process of moving data that is no longer actively used to a separate storage for long-term retention.</td>
</tr>
<tr>
<td>Computerized Patient Record System (CPRS)</td>
<td>A suite of clinical applications in VistA that provide access to a patient’s Electronic Medical Record (EMR).</td>
</tr>
<tr>
<td>E-VPS</td>
<td>The set of VistA patches implementing features identified by VHA Point of Service (Kiosks) Phase II Enhancement VPS 1*4.</td>
</tr>
<tr>
<td>Field</td>
<td>A data element in a file.</td>
</tr>
<tr>
<td>FileMan</td>
<td>The VistA database manager.</td>
</tr>
<tr>
<td>Global</td>
<td>A collection of variables (fields) stored on disk that persist beyond routine or process completion. M VistA Server Globals are records stored in structured data files by M.</td>
</tr>
<tr>
<td>Kernel</td>
<td>A set of utilities that support data processing on VistA M Servers.</td>
</tr>
<tr>
<td>Kiosk</td>
<td>Implementation of a kiosk server at one TCP/IP domain.</td>
</tr>
<tr>
<td>M</td>
<td>Massachusetts (General Hospital) Utility Multi-Programming System, formerly known as MUMPS.</td>
</tr>
<tr>
<td>Option</td>
<td>Commands presented to a computer user by an applications. Typically, options are presented on a menu and have specific entry and exit actions.</td>
</tr>
<tr>
<td>Purge</td>
<td>The action/process of deleting a file or data from a file.</td>
</tr>
<tr>
<td>Procedure</td>
<td>A re-useable part of a computer program that performs a single function.</td>
</tr>
<tr>
<td>Required Field</td>
<td>A field which must have a data value entered by the user or passed as a parameter to computer program or subroutine.</td>
</tr>
<tr>
<td>Reminder Definition</td>
<td>Pre-defined sets of findings used to identify patients that should receive tests or treatments specific to diagnosed patient conditions. Reminder definitions specify criteria such as diagnoses, procedures, health factors, medications, or demographic variables used to identify affected patients.</td>
</tr>
<tr>
<td>RPC</td>
<td>Remote Procedure Call is an inter-process communication protocol that allows invocation of a program subroutine or procedure to execute in shared network space.</td>
</tr>
<tr>
<td>Routine</td>
<td>A set of commands and arguments related, stored and executed as a single M program.</td>
</tr>
<tr>
<td>Security Key</td>
<td>A keyword which makes specific options accessible to an authorized user.</td>
</tr>
<tr>
<td>Remote Procedure</td>
<td>A remote procedure is a procedure that can be executed by another program executing on a remote computer or another program process area.</td>
</tr>
<tr>
<td>Verify Code</td>
<td>A unique code which server as a second level of user authentication for accessing a VistA M Server.</td>
</tr>
<tr>
<td>Term</td>
<td>Definition</td>
</tr>
<tr>
<td>-------</td>
<td>---------------------------------------------------------------------------</td>
</tr>
<tr>
<td>VetLink</td>
<td>The VPS Kiosk application composed of a kiosk client used by VA patients and staff to connect to a kiosk server.</td>
</tr>
</tbody>
</table>
