| 08/22/2018 | 5.0      | **Updates:**  
  - Patch XU*8.0*679: Electronic Signatures—Added note after Figure 1 concerning electronic Signature Block restrictions.  
  - Reformatted document to follow current Office of Information and Technology (OIT) documentation standards and style guidelines. | Existing Product Intake Program (EPIP) Technical Writer |
| 02/27/2015 | 4.0      | Converted document to MS-Word 2007 format and incorporated *some* format changes from the ProPath User Guide Template. | Infrastructure Technical Writer, Oakland, OIFO  |
| 01/11/2005 | 3.0      | **PDF 508 Compliance**—The final PDF document was recreated and now supports the minimum requirements to be 508 compliant (i.e., accessibility tags, language selection, alternate text for all images/icons, fully functional Web links, successfully passed Adobe Acrobat Quick Check). | Infrastructure Technical Writer, Oakland, OIFO  |
| 09/27/2004 | 2.0      | Reformatted document to follow ISS styles and guidelines, no other content updates made.  
Reviewed document and edited for the “Data Scrubbing” and the “PDF 508 Compliance” projects.  
**Data Scrubbing**—Changed all patient/user TEST data to conform to HSD&D standards and conventions as indicated below:  
  - The first three digits (prefix) of any Social Security Numbers (SSN) start with “000” or “666.”  
  - Patient or user names are formatted as follows: PDXPATIENT,[N] or PDXUSER,[N] respectively, where the N is a number written out and incremented with each new entry (e.g., PDXPATIENT, | Infrastructure Technical Writer, Oakland, OIFO  |

Orientation

How to Use this Manual

Throughout this manual, advice and instruction are offered regarding the use of the Patient Data Exchange (PDX) software within Veterans Health Information Systems and Technology Architecture (VistA) system.

Most of the PDX option documentation found in this manual contains the following components:

- **Introduction**—The Introduction gives a detailed description of the option, its use, and any special instructions.
- **Process Chart**—The Process Chart illustrates the flow of the option, step-by-step, and shows the various choices allowed at each prompt.
- **Examples**—An example of what may appear on the screen while using the option and an example of any output produced by the option are provided.

The process charts in this manual do *not* contain documentation of the system’s response to erroneous input. In certain instances, in order to preserve the integrity of previously entered data, the system does *not* allow the entry of a caret (^). This also may *not* be documented.

The options in this manual appear in the same order in which the main menu usually appears on the screen. Since the menu may be changed by the site and all users do *not* have all options, the menu structure shown in this manual may be different from the one seen by every user.

Intended Audience

The intended audience of this manual is the following stakeholders:

- Patient Data Exchange (PDX) end-users.
- Product Support (PS).
- System Administrators—System administrators at Department of Veterans Affairs (VA) sites who are responsible for computer management and system security on the VistA M Servers.
- Enterprise Program Management Office (EPMO)—VistA legacy development teams.
- Information Security Officers (ISOs)—Personnel at VA sites responsible for system security.
Disclaimers

Software Disclaimer

This software was developed at the Department of Veterans Affairs (VA) by employees of the Federal Government in the course of their official duties. Pursuant to title 17 Section 105 of the United States Code this software is not subject to copyright protection and is in the public domain. VA assumes no responsibility whatsoever for its use by other parties, and makes no guarantees, expressed or implied, about its quality, reliability, or any other characteristic. We would appreciate acknowledgement if the software is used. This software can be redistributed freely provided that any derivative works bear some notice that they are derived from it.

CAUTION: Kernel routines should never be modified at the site. If there is an immediate national requirement, the changes should be made by emergency Kernel patch. Kernel software is subject to FDA regulations requiring Blood Bank Review, among other limitations. Line 3 of all Kernel routines states:

Per VHA Directive 2004-038, this routine should not be modified.

CAUTION: To protect the security of VistA systems, distribution of this software for use on any other computer system by VistA sites is prohibited. All requests for copies of Kernel for non-VistA use should be referred to the VistA site's local Office of Information Field Office (OIFO).

Documentation Disclaimers

The appearance of external hyperlink references in this manual does not constitute endorsement by the Department of Veterans Affairs (VA) of this Web site or the information, products, or services contained therein. The VA does not exercise any editorial control over the information you may find at these locations. Such links are provided and are consistent with the stated purpose of the VA.
Documentation Conventions

This manual uses several methods to highlight different aspects of the material:

- Various symbols are used throughout the documentation to alert the reader to special information. Table 1 gives a description of each of these symbols:

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image" alt="NOTE/REF" /></td>
<td>NOTE/REF: Used to inform the reader of general information including references to additional reading material.</td>
</tr>
<tr>
<td><img src="image" alt="CAUTION/DISCLAIMER" /></td>
<td>CAUTION/DISCLAIMER: Used to caution the reader to take special notice of critical information.</td>
</tr>
</tbody>
</table>

- Descriptive text is presented in a proportional font (as represented by this font).
- Conventions for displaying TEST data in this document are as follows:
  - The first three digits (prefix) of any Social Security Numbers (SSN) will begin with either “000” or “666”.
  - Patient and user names are formatted as follows:
    - `<Application Name/Abbreviation/Namespace>PATIENT,<N>`
    - `<Application Name/Abbreviation/Namespace>USER,<N>`
  
    Where:
    - `<Application Name/Abbreviation/Namespace>` is defined in the Approved Application Abbreviations document.
    - `<N>` represents the first name as a number spelled out and incremented with each new entry.

For example, in Patient Data Exchange (PDX) test patient and user names would be documented as follows:

```
PDXPATIENT,ONE; PDXPATIENT,TWO; PDXPATIENT,THREE; …
PDXPATIENT,14; etc.
PDXUSER,ONE; PDXUSER,TWO; PDXUSER,THREE; … PDXUSER,14; etc.
```
• “Snapshots” of computer commands and online displays (i.e., screen captures/dialogues) and computer source code, if any, are shown in a non-proportional font and may be enclosed within a box.
  o User’s responses to online prompts will be bold typeface and highlighted in yellow (e.g., <Enter>).
  o Emphasis within a dialogue box will be bold typeface and highlighted in blue (e.g., STANDARD LISTENER: RUNNING).
  o Some software code reserved/key words will be bold typeface with alternate color font.
  o References to “<Enter>“ within these snapshots indicate that the user should press the <Enter> key on the keyboard. Other special keys are represented within <> angle brackets. For example, pressing the PF1 key can be represented as pressing <PF1>.
  o Author’s comments are displayed in italics or as “callout” boxes.

NOTE: Callout boxes refer to labels or descriptions usually enclosed within a box, which point to specific areas of a displayed image.

• This manual refers to the M programming language. Under the 1995 American National Standards Institute (ANSI) standard, M is the primary name of the MUMPS programming language, and MUMPS will be considered an alternate name. This manual uses the name M.

• Descriptions of direct mode utilities are prefaced with the standard M “>“ prompt to emphasize that the call is to be used only in direct mode. They also include the M command used to invoke the utility. The following is an example:

> D ^XUP

• All uppercase is reserved for the representation of M code, variable names, or the formal name of options, field/file names, and security keys (e.g., the XUPROGMODE security key).

NOTE: Other software code (e.g., Delphi/Pascal and Java) variable names and file/folder names can be written in lower or mixed case.

Documentation Navigation
This document uses Microsoft® Word’s built-in navigation for internal hyperlinks. To add Back and Forward navigation buttons to your toolbar, do the following:
1. Right-click anywhere on the customizable Toolbar in Word (not the Ribbon section).
2. Select Customize Quick Access Toolbar from the secondary menu.
3. Select the drop-down arrow in the “Choose commands from:” box.
4. Select All Commands from the displayed list.
5. Scroll through the command list in the left column until you see the Back command (circle with arrow pointing left).
6. Select/Highlight the Back command and select Add to add it to your customized toolbar.
7. Scroll through the command list in the left column until you see the Forward command (circle with arrow pointing right).
8. Select/Highlight the Forward command and select Add to add it to the customized toolbar.
9. Select OK.

You can now use these Back and Forward command buttons in your Toolbar to navigate back and forth in your Word document when clicking on hyperlinks within the document.

NOTE: This is a one-time setup and is automatically available in any other Word document once you install it on the Toolbar.

How to Obtain Technical Information Online

Exported VistA M Server-based software file, routine, and global documentation can be generated through the use of Kernel, MailMan, and VA FileMan utilities.

NOTE: Methods of obtaining specific technical information online will be indicated where applicable under the appropriate section.

Help at Prompts

VistA M Server-based software provides online help and commonly used system default prompts. Users are encouraged to enter question marks at any response prompt. At the end of the help display, you are immediately returned to the point from which you started. This is an easy way to learn about any aspect of VistA M Server-based software.

Obtaining Data Dictionary Listings

Technical information about VistA M Server-based files and the fields in files is stored in data dictionaries (DD). You can use the List File Attributes option on the Data Dictionary Utilities submenu in VA FileMan to print formatted data dictionaries.

REF: For details about obtaining data dictionaries and about the formats available, see the “List File Attributes” chapter in the “File Management” section of the VA FileMan Advanced User Manual.
Assumptions

This manual is written with the assumption that the reader is familiar with the following:

- VistA computing environment:
  - Kernel 8.0 Installation and Distribution System (KIDS)
  - VA 22.2 data structures and terminology
  - MailMan 8.0
- M programming language

Reference Materials

Readers who wish to learn more about PDX should consult the following:

- *Patient Data Exchange (PDX) Installation Guide & Release Notes*
- *Patient Data Exchange (PDX) Technical Manual*
- *Patient Data Exchange (PDX) Security Guide*
- *Patient Data Exchange (PDX) User Manual (this manual)*

VistA documentation is made available online in Microsoft® Word format and in Adobe® Acrobat Portable Document Format (PDF). The PDF documents *must* be read using the Adobe® Acrobat Reader, which is freely distributed by Adobe® Systems Incorporated at the following Website: [http://www.adobe.com/](http://www.adobe.com/)

VistA documentation can be downloaded from the VA Software Document Library (VDL) Website: [http://www.va.gov/vdl/](http://www.va.gov/vdl/)

VistA documentation and software can also be downloaded from the Product Support (PS) Anonymous Directories.
1 Introduction

This is the user manual for the Veterans Health Information Systems and Technology Architecture (VistA) Patient Data Exchange (PDX) software. It is designed to introduce users to the PDX system and provide guidelines and assistance for effective use of the PDX functions.

Patient Data Exchange (PDX) manages the transfer of patient information (demographics, episodes of care, medications, and diagnostic evaluations) between VA facilities using the MailMan electronic mail utility. Once transferred, this information can be combined with pertinent local information and assembled into a coherent composite record.

Requests for PDX data can be processed manually or automatically. For requests to be processed manually, the site would have to be a member of the Release Group and meet the requirements for automatic processing. Records determined to be “sensitive” and those that exceed the maximum time and occurrence limits for Health Summary components may not be returned automatically and will be held for manual processing.

REF: For a list of the Health Summary components supported by PDX, see “Appendix C—PDX Transaction Statuses.”

PDX 1.5 uses the List Manager utility extensively. The List Manager is a tool designed to display a list of items. It allows you to select items from the list and perform specific actions against those items.

REF: For help in using the List Manager utility, if necessary, see “Appendix A—List Manager.”

The software provides numerous system reports (current transactions and work load), which allow predefined and customizable sorts.

The following is a brief description of the major options and menus contained in the PDX software:

- **Request PDX for Patient**—This option is used to electronically request PDX data for a selected patient from another VA facility(s).
- **Unsolicited PDX**—This option is used to send PDX information to a remote site without having first received a request.
- **Process External PDX**—This option is used to process PDX requests received from other VA facilities that do not meet the criteria for automatic processing.
- **Load/Edit PDX Data**—This option allows you to load or edit data fields in your PATIENT file with data from your PDX file.
- **Display PDX Data Menu**—This menu allows you to display or print PDX data for a selected patient by either transaction or user who requested the information.
• **System Reports Menu:**
  - **Requires Processing Report**—This option is used to print a report of all PDX requests that require manual processing.
  - **Current Transactions Report Menu**—The options on this menu allow you to print reports of PDX transactions on file by several different sorting methods.
  - **Work Load Reports Menu**—The options on this menu allow you to print work load reports of PDX transactions on file by several different sorting methods.

• **PDX Edit Files Menu:**
  - **Add/Edit Fields to Encrypt**—This option provides the ability to encrypt selected data fields in the PDX transmission.
  - **Edit Maximum Limits for Automatic Processing**—This option is used to edit the maximum time and occurrence limits that your site is willing to allow for automatic processing of a PDX transaction.
  - **Add/Edit Outgoing Group**—This option is used to create outgoing groups and add/edit/delete remote facilities in those groups.
  - **Edit Parameter File**—This option is used to set up site specific PDX parameters.
  - **Add/Edit Segment Group Options**—These three options are used to create segment groups (selected group of data segments).
  - **Add/Edit Release Group**—This option is used to enter/edit facilities into the release group for automatic processing of PDX requests.

• **Purging Menu**—These three options provide purging capabilities by default age, user defined age, or user defined date.

1.1 **Software Management**

All users of the PDX software *must* set up an electronic signature in order to use the software. This can be accomplished through the Edit Electronic Signature Code option of the User’s Toolbox menu.

As an optional security measure, this software provides the ability to encrypt data using existing data encryption methods. Sites wishing to encrypt certain fields will have to turn the flag on through the Edit Parameter File option and add those fields to the VAQ - ENCRYPTED FIELDS (#394.73) file.
2 Software Operation

All users of the PDX software must set up an electronic signature in order to use the software. This may be accomplished by entering “TBOX” at your main menu and selecting the Edit Electronic Signature code option.

NOTE: The signature code must be 6-20 characters in length and contain no control or lowercase characters.

An example of what may appear on the screen when using the option is shown in Figure 1.

Figure 1: Edit Electronic Signature code Option—Sample User Dialogue

<table>

| OFFICE PHONE: | 555-5555 |

| ENTER NEW SIGNATURE CODE: |

NOTE: If the SIGNATURE BLOCK PRINTED NAME and SIGNATURE BLOCK TITLE fields are disabled at your site, contact your supervisor to request entry of your name and title.

2.1 Implementation

A release group can be defined in the VAQ - PARAMETER (#394.81) file through VA FileMan. Data is returned automatically, upon request, for sites you specify. A VAQ UNSOLICITED RECEIVED mail group can also be set up through VA FileMan. Members of this mail group will receive MailMan bulletins upon receipt of an unsolicited request or when a PDX request received by your site requires manual processing.

REF: For further instruction on implementation of this software, including the setup of the release group and mail groups, see the “Installation Guide” section of the PDX Release Notes & Installation Guide.
2.2 PDX Options

2.2.1 Request PDX for Patient

2.2.1.1 Introduction

The Request PDX for Patient option electronically requests PDX (Patient Data Exchange) data for a selected patient from another VA facility. Information can be retrieved from any VA facility running the PDX 1.5 software.

Once the PDX request is received at the remote site (the site you from which are requesting the data), it is stored in their PDX files where it remains until it is processed automatically (if your site is defined in the remote site’s release group and the request meets criteria for automatic processing), or manually through the Process External PDX Request option.

Once processing is complete, the data is returned to you electronically. You will also receive a MailMan bulletin when the request has been processed and returned by the remote site. A sample bulletin is provided in the example section of this option documentation.

When a PDX request is created, an entry is made in the VAQ - TRANSACTION (#394.61) file and a request number is automatically assigned. This is the transaction number for this request.

You can select numerous domains from which to request the data and the particular data segments you wish to request from each domain. Segment groups, which may be set up through other PDX options, can be used during the request. These groups contain predefined data segments and allow you to request numerous segments with one entry. The proper format must be used when entering the request domain(s). Two question marks (??) be entered at the domain prompt for a list of network addresses shown in the required format.

If there is no entry in the PATIENT (#2) file for the selected patient and you choose to proceed, you will be prompted for the patient’s social security number (SSN) and date of birth (DOB). Any information entered/edited through this option is changed in the PDX files only. The PATIENT (#2) file is not affected. An entry is made in your VAQ - WORKLOAD file for each request made.

Time and occurrence limits can be placed on applicable data segments. These limits determine how far back the system searches for the component and the number of occurrences of that component the system reports. Default values for these fields can be set through the Edit Parameter File option.
### 2.2.1.2 Process

The process chart in Table 2 shows the steps and prompts involved in using the Request PDX for Patient option.

<table>
<thead>
<tr>
<th>Step</th>

2.2.1.3 Example

Figure 2 and Figure 3 are examples of what may appear on your screen while using the Request PDX for Patient option followed by a sample of the type of MailMan bulletin (Figure 4), which may be received when the request is processed at the remote site. The remote user name, in this case, indicates that this request was processed automatically. If processed manually, this field would show the name of the user at the remote site who processed the request.

2.2.2 Unsolicited PDX

2.2.2.1 Introduction

The Unsolicited PDX option sends unsolicited PDX (Patient Data Exchange) information to a remote site(s). A remote site is any other VA facility with which data is exchanged. The patient selected must be in your PATIENT file.

When the data is received at the remote site, members of the VAQ UNSOLICITED RECEIVED mail group, defined through VA FileMan at the remote site, will be notified via MailMan that an unsolicited PDX has arrived from your site. A sample bulletin is provided in the example section of this option documentation.

You may select numerous domains and the particular data segments you wish to send to each domain. Segment groups, which may be set up through other PDX options, can be used during the request. These groups contain predefined data segments and allow you to request numerous segments with one entry. The proper format must be used when entering the domain(s). Two question marks (??) can be entered at the domain prompt for a list of network addresses shown in the required format.

An entry is made to your VAQ - WORKLOAD file for each unsolicited PDX sent.

Time and occurrence limits can be placed on applicable data segments. These will determine how far back the system will search for the component and the number of occurrences of that component the system will report. Default values for these fields can be set through the Edit Parameter File option.

A word processing field is provided for any comments you may wish to include with the transaction.
2.2.2.2 Process

The process chart in Table 3 shows the steps and prompts involved in using the Unsolicited PDX option.

2.2.3 Process External PDX

2.2.3.1 Introduction

The Process External PDX option is used to process PDX requests received from other VA facilities that were not processed automatically. Members of the VAQ MANUAL PROCESSING mail group at your site will be notified of these requests via MailMan.

When this option is selected from the PDX menu, any requests in your VAQ - TRANSACTION (#394.61) file with a status of “PDX Request from remote facility that requires manual processing” will be displayed with the following information.

- Entry number—Numerical order of requests that require manual processing
- Transaction number—Assigned by receiving facility, unique identifier of the transaction
- Patient name, patient ID, patient date of birth, domain of requesting facility, segments requested, date/time of request
- Reason request needs manual processing, which include:
  - Bad input or no input, error.
  - Patient not found (not currently used).
  - Ambiguous patient.
  - Sensitive patient.
  - Domain not in work group.

Requests that have “ambiguous patient” for the reason request needs manual processing can only be processed as “not found”. A mail bulletin will be sent to the remote site informing them of this. A sample of the bulletin can be found in the Example section of this option documentation.

The user selects each PDX request and determines if the data should be released or the request rejected. Once this determination has been made, you will be prompted to enter an optional release/reject comment. This comment will appear in the MailMan bulletin the requestor at the remote site will receive notifying them that the PDX has been processed and returned or rejected.
### 2.2.3.2 Process

The processing chart in Table 4 shows the steps and prompts involved in using the Process External PDX option.

2.2.4 Load/Edit PDX Data

2.2.4.1 Introduction

The Load/Edit PDX Data option allows you to compare and load data fields in your PATIENT (#2) file with data from your PDX file. The information in your PDX file is data that was received from other sites’ PATIENT (#2) files.

Once the patient is selected, all sites from which you have received PDX data for the selected patient will be displayed. If an entry does not exist in your PATIENT (#2) file for the selected patient, you may upload the basic information needed to enter the patient. The remainder of the data should be entered through the ADT portion of the MAS software.

If an entry already exists in your PATIENT (#2) file for the selected patient, the system looks for differences. The fields where differences are found are displayed with the headings “- PATIENT FILE -” showing the entry from your PATIENT (#2) File and “- PDX File -” showing the entry from the PDX file. The entries must be identical for the system to recognize them as the same. For example, if the MOST RECENT LOCATION OF CARE field is Buffalo in the PATIENT (#2) file and Buffalo, NY in the PDX file, the system would see this as a difference. Each data field showing a difference should be examined to determine if the PDX data is the most current and that you are sure you wish to place this data in your PATIENT (#2) file.

NOTE: The extractions for PDX 1.0 and PDX 1.5 are different and some fields may be in different formats.
After you attempt to upload the data, the Load/Edit screen is redisplayed. The first part of the
screen lists all the fields that could not be uploaded due to these fields not passing the criteria for
uploading. You should attempt to upload these fields again. Due to the data fields that were
uploaded on the first attempt now being in place, you may be more successful in uploading the
remaining data elements. A list of the fields that remain after the second attempt should be
printed. You may then try entering these fields through the PIMS Registration option, Load/Edit
Patient Data.

Rated disabilities or other eligibility codes must be entered through the Update HINQs to the
Patient file option of the HINQ software. Missing or ineligible information or any other data you
are not successful in uploading through PDX must be entered through the Load/Edit Patient Data
option of the Registration menu in ADT.

For multiple fields, the data from your PDX file will be ADDED to the data in your PATIENT
file. Existing data will remain intact.

You must hold the VAQ LOAD security key to access this option.

2.2.4.2 Process

The process chart in Table 5 shows the steps and prompts involved in using the Load/Edit PDX
Data option.

Enter your Signature Code: <CODE> <Enter> SIGNATURE VERIFIED.
2.3 Display PDX Data

2.3.1 Display PDX by Transaction

2.3.1.1 Introduction

The Display PDX by Transaction option allows you to display or print PDX data for a selected patient by transaction.
You first choose the entry you wish displayed. If two question marks (??) are entered at the first prompt, you will be presented with three groups from which to choose an entry:

- All patients with PDX transactions.
- Patients for whom request results have been received.
- Patients for whom you have unsolicited PDX transactions.

You can then display selected segments of data or all segments for that entry.

If the data segment could not be extracted from the remote facility, the following message is displayed:

**Transaction did not contain information for segment**

This will typically occur when the data segment is a Health Summary Component that is not active at the remote facility. In some cases, it may also indicate that a nonfatal error occurred while extracting the data. You may wish to contact the remote facility to determine if the data can be extracted, and request that this information be sent to you in an Unsolicited PDX.

### 2.3.1.2 Process

The process chart in Table 6 shows the steps and prompts involved in using the Display PDX by Transaction option.

### 2.3.2 Display PDX by User

#### 2.3.2.1 Introduction

The Display PDX by User option allows you to display or print PDX data for a selected patient by user who requested the information.

Upon entering the option, the PDX 1.5 “Display By Requestor” screen will appear. This lists all the PDX requests by the user accessing the option. An entry is chosen from this list. Selected segments of data or all segments for this entry may then be chosen for display.

If the data segment could not be extracted from the remote facility, the following message is displayed:

**Transaction did not contain information for segment**

This will typically occur when the data segment is a Health Summary Component that is not active at the remote facility. In some cases, it may also indicate that a nonfatal error occurred.
while extracting the data. You may wish to contact the remote facility to determine if the data can be extracted, and request that this information be sent to you in an Unsolicited PDX.

2.3.2.2 Process
The chart in Table 7 shows the steps and prompts involved in using the Display PDX by User option.

## 2.4 System Reports

### 2.4.1 Requires Processing Report

#### 2.4.1.1 Introduction

The Requires Processing Report option is used to print a report of all PDX requests that require manual processing.

The transaction number, patient name, patient ID, date of birth, date requested, the individual who made the request, and the facility making the request are provided for each transaction. You *must* hold the VAQ RPT security key to access the System Reports menu.

**NOTE:** Due to the brevity of this option, a process chart has *not* been provided.
2.4.1.2 Example

Figure 18 is an example of what may appear on your screen while using the Requires Processing Report option.

Figure 18: Requires Processing Report Option—Sample User Dialogue

Select System Reports Option: Requires <Enter> Processing Report
DEVICE: <Enter> LAT RIGHT MARGIN: 80// <Enter>

PDX Requests That Require Manual Processing SEP 1,1993 14:37 PAGE 1

Transaction #: 1152
Patient: HARRIS, EDWARD
Patient ID: 098-76-0987
Date of Birth: 07-09-43
Requested On: SEP 1, 1993 08:23
Requested By: PDXUSER, FIFTEEN
Facility: SAN DIEGO VAMC

Transaction #: 1158
Patient: PDXPATIENT, SEVENTEEN
Patient ID: 000-17-1717
Date of Birth: 10-10-33
Requested On: SEP 1, 1993 08:32
Requested By: PDXUSER, FIFTEEN
Facility: SAN DIEGO VAMC

2.4.2 Sort By Remote Facility

2.4.2.1 Introduction

The Sort By Remote Facility option is used to print a report of all PDX transactions on file by the remote facility. Transactions with the following statuses will be excluded.

- PDX request from remote facility being processed automatically
- PDX request from remote facility that requires manual processing
- Acknowledgement for receipt of unsolicited PDX by remote facility

The following information will be provided for each transaction on the report, if applicable:

- Transaction number
- Patient name
- Patient ID
- Date of birth
- Transaction status
- Requested segments
- Requested on
- Requested by
- Requesting facility
- Released on
- Released by
- Releasing (remote) facility

Your facility will be the requesting facility unless the transaction status is “Unsolicited PDX that was transmitted from local facility”. In that case, your facility would be the releasing facility.

This report may be quite lengthy. It is recommended you queue the report to a printer during off hours.

You must hold the VAQ RPT security key to access the System Reports menu.

**NOTE:** Due to the brevity of this option, a process chart has not been provided.

### 2.4.2.2 Example

Figure 19 is an example of what may appear on your screen while using the Sort By Remote Facility option followed by an example of the output (Figure 20).

2.4.3 Sort By User That Generated Request

2.4.3.1 Introduction

The Sort By User That Generated Request option is used to print a report of all PDX transactions on file alphabetically by the user who generated the request. Transactions with the following statuses will be excluded:

- PDX request from remote facility being processed automatically
- PDX request from remote facility that requires manual processing
- Acknowledgement for receipt of unsolicited PDX by remote facility

The following information will be provided for each transaction on the report, if applicable:

- Transaction number
- Patient name
- Patient ID
- Date of birth
- Transaction status
- Requested segments
- Requested on
- Requested by
- Requesting facility
- Released on
- Released by
- Releasing (remote) facility

Your facility will be the requesting facility unless the transaction status is “Unsolicited PDX that was transmitted from local facility”. In that case, your facility would be the releasing facility.

This report may be quite lengthy. It is recommended you queue the report to a printer during off hours.

You must hold the VAQ RPT security key to access the System Reports menu.

NOTE: Due to the brevity of this option, a process chart has not been provided.
### 2.4.3.2 Example

2.4.4 Sort By Patient’s Name

2.4.4.1 Introduction

The Sort By Patient’s Name option is used to print a report of all PDX transactions on file alphabetically by the patient’s name. Transactions with the following statuses will be excluded:

- PDX request from remote facility being processed automatically.
- PDX request from remote facility that requires manual processing.
- Acknowledgement for receipt of unsolicited PDX by remote facility.

The following information will be provided for each transaction on the report, if applicable:

- Transaction number
- Patient name
- Patient ID
- Date of birth
- Transaction status
- Requested segments
- Requested on
- Requested by
- Requesting facility
- Released on
- Released by
- Releasing (remote) facility

Your facility will be the requesting facility unless the transaction status is “Unsolicited PDX that was transmitted from local facility”. In that case, your facility would be the releasing facility.

This report may be quite lengthy. It is recommended you queue the report to a printer during off hours.

You must hold the VAQ RPT security key to access the System Reports menu.

**NOTE:** Due to the brevity of this option, a process chart has not been provided.
2.4.4.2 Example

2.4.5 Sort By Date Received

2.4.5.1 Introduction

The Sort By Date Received option is used to print a report of all PDX transactions on file by date the request was received. Transactions with the following statuses will be excluded.

- PDX request from remote facility being processed automatically.
- PDX request from remote facility that requires manual processing.
• Acknowledgement for receipt of unsolicited PDX by remote facility.

You may sort for a date range or print all transactions. If you accept the default value of FIRST at the initial prompt, all transactions will be printed. If you wish to sort for a date range, enter a date at this prompt.

The following information will be provided for each transaction on the report, if applicable:

• Transaction number
• Patient name
• Patient ID
• Date of birth
• Transaction status
• Requested segments
• Requested on
• Requested by
• Requesting facility
• Released on
• Released by
• Releasing (remote) facility

Your facility will be the requesting facility unless the transaction status is “Unsolicited PDX that was transmitted from local facility”. In that case, your facility would be the releasing facility.

This report may be quite lengthy. It is recommended you queue the report to a printer during off hours.

You must hold the VAQ RPT security key to access the System Reports menu.

NOTE: Due to the brevity of this option, a process chart has not been provided.
2.4.5.2 Example

2.4.6 Sort By User That Released Information

2.4.6.1 Introduction

The Sort By User That Released Information option is used to print a report of all PDX transactions on file alphabetically by the user who released the information. Transactions with the following statuses will be excluded.

- PDX request from remote facility being processed automatically.
- PDX request from remote facility that requires manual processing.
- Acknowledgement for receipt of unsolicited PDX by remote facility.

The following information will be provided for each transaction on the report, if applicable:

- Transaction number
- Patient name
- Patient ID
- Date of birth
- Transaction status
- Requested segments
- Requested on
- Requested by
- Requesting facility
- Released on
- Released by
- Releasing (remote) facility

The user who released the information will be PDX Server if the transaction was automatically processed.

Your facility will be the requesting facility unless the transaction status is “Unsolicited PDX that was transmitted from local facility”. In that case, your facility would be the releasing facility.

This report may be quite lengthy. It is recommended you queue the report to a printer during off hours.

You must hold the VAQ RPT security key to access the System Reports menu.

NOTE: Due to the brevity of this option, a process chart has not been provided.

2.4.7 Sort By Requesting Date

2.4.7.1 INTRODUCTION

The Sort By Requesting Date option is used to print a report of all PDX transactions on file by the date the transaction was requested. Transactions with the following statuses will be excluded:

- PDX request from remote facility being processed automatically
- PDX request from remote facility that requires manual processing
- Acknowledgement for receipt of unsolicited PDX by remote facility

You can sort for a date range or print all transactions. If you accept the default value of **FIRST** at the initial prompt, all transactions will be printed. If you wish to sort for a date range, enter a date at this prompt.

The following information will be provided for each transaction on the report, if applicable:

- Transaction number
- Patient name
- Patient ID
- Date of birth
- Transaction status
- Requested segments
- Requested on
- Requested by
- Requesting facility
- Released on
- Released by
- Releasing (remote) facility

Your facility will be the requesting facility unless the transaction status is “Unsolicited PDX that was transmitted from local facility”. In that case, your facility would be the releasing facility.

This report may be quite lengthy. It is **recommended** you queue the report to a printer during off hours.

You **must** hold the VAQ RPT security key to access the System Reports menu.

**NOTE:** Due to the brevity of this option, a process chart has not been provided.

2.4.8  Sort By Status of Transaction

2.4.8.1  Introduction

The Sort By Status of Transaction option is used to print a report of all PDX transactions on file by transaction status. Transactions with the following statuses will be excluded.

- PDX request from remote facility being processed automatically
- PDX request from remote facility that requires manual processing
- Acknowledgement for receipt of unsolicited PDX by remote facility

The statuses will appear in the following order on the output.

- Requested patient could not be uniquely identified at remote facility
- Requested patient could not be found at remote facility
- PDX transmission that is currently being received
- Requested information was not released by remote facility
- PDX request
- Requested information was returned
- Request to transmit message using previous version
- Unsolicited PDX that was transmitted from local facility
- Acknowledgement for receipt of unsolicited PDX by remote facility
- Unsolicited PDX

The following information will be provided for each transaction on the report, if applicable:

- Transaction number
- Patient name
- Patient ID
- Date of birth
- Transaction status
- Requested segments
- Requested on
- Requested by
- Requesting facility
- Released on
- Released by
- Releasing (remote) facility
Your facility will be the requesting facility unless the transaction status is “Unsolicited PDX that was transmitted from local facility”. In that case, your facility would be the releasing facility.

This report may be quite lengthy. It is recommended you queue the report to a printer during off hours.

You must hold the VAQ RPT security key to access the System Reports menu.

NOTE: Due to the brevity of this option, a process chart has not been provided.

2.4.8.2 Example

2.4.9 Sort Criteria Defined By User

2.4.9.1 Introduction

The Sort Criteria Defined By User option is used to print a report of all PDX transactions on file where the sort criteria is determined by the user.

Several different levels of sorting may be selected through this option. You may enter two question marks (??) at the SORT BY prompt for a list of the available fields by which you may
choose to sort the report. If you accept the default value of FIRST at a prompt, all values will be printed. If you wish to sort for a range of values, enter a value instead of accepting the default.

The following information will be provided for each transaction on the report, if applicable:

- Transaction number
- Patient name
- Patient ID
- Date of birth
- Transaction status
- Requested segments
- Requested on
- Requested by
- Requesting facility
- Released on
- Released by
- Releasing (remote) facility

Your facility will be the requesting facility unless the transaction status is “Unsolicited PDX that was transmitted from local facility”. In that case, your facility would be the releasing facility.

This report may be quite lengthy. It is recommended you queue the report to a printer during off hours.

You must hold the VAQ RPT security key to access the System Reports menu and the VAQ RPT USER security key to access this option.

NOTE: Due to the brevity of this option, a process chart has not been provided.
2.4.9.2 Example

Figure 33 through Figure 37 are examples of what may appear on your screen while using the Sort Criteria Defined By User option followed by an example of the output.

2.5 Work Load Reports

2.5.1 Sort By Date

2.5.1.1 Introduction

The Sort By Date option is used to print a work load report of all PDX transactions on file by the date/time the work was performed.

The following information will be provided for each transaction on the report, if applicable:

- Date/time work performed
- Type of work done
- User who performed the work
- Patient name
- Patient ID
- Remote facility

The remote facility will always be the external facility.

You may sort for a date range or print all transactions. If you accept the default value of FIRST at the initial prompt, all transactions will be printed. If you wish to sort for a date range, enter a date at this prompt.
This report may be quite lengthy. It is recommended you queue the report to a printer during off hours.

You must hold the VAQ RPT security key to access the System Reports menu.

**NOTE:** Due to the brevity of this option, a process chart has not been provided.

### 2.5.1.2 Example

**Figure 38** is an example of what may appear on your screen while using the Sort By Date option followed by an example of the output (Figure 39).

2.5.2 Sort By Remote Facility

2.5.2.1 Introduction

The Sort By Remote Facility option is used to print a work load report of all PDX transactions on file by the remote facility. Within that sort, the transactions are listed by the date/time the work was performed.

The following information will be provided for each transaction on the report, if applicable:

- Date/time work performed
- Type of work done
- User who performed the work
- Patient name
- Patient ID
- Remote facility

The remote facility will always be the external facility.

This report may be quite lengthy. It is recommended you queue the report to a printer during off hours.

You must hold the VAQ RPT security key to access the System Reports menu.

NOTE: Due to the brevity of this option, a process chart has not been provided.

2.5.4 Sort Criteria Defined By User

2.5.4.1 INTRODUCTION

The Sort Criteria Defined By User option is used to print a work load report of all PDX transactions on file where the sort criteria is determined by the user.

Several different levels of sorting may be selected through this option. You can enter two question marks (??) at the SORT BY prompt for a list of the available fields by which you may choose to sort the report. If you accept the default value of FIRST at a prompt, all values will be printed. If you wish to sort for a range of values, enter a value instead of accepting the default.

The following information will be provided for each transaction on the report, if applicable:

- Date/time work performed
- Type of work done
- User who performed the work
- Patient name
- Patient ID
- Remote facility

The remote facility will always be the external facility.

This report may be quite lengthy. It is recommended you queue the report to a printer during off hours.

You must hold the VAQ RPT security key to access the System Reports menu and the VAQ RPT USER key to access this option.

NOTE: Due to the brevity of this option, a process chart has not been provided.
2.5.4.2 Example

2.5.5 Sort By Type of Work Done

2.5.5.1 Introduction

The Sort By Type of Work Done option is used to print a workload report of all PDX transactions on file by the type of work that was performed. Within that sort, the transactions are listed by the date/time the work was performed.

The following information will be provided for each transaction on the report, if applicable:

- Date/time work performed
- Type of work done
- User who performed the work
- Patient name
- Patient ID
- Remote facility

The remote facility will always be the external facility.
This report may be quite lengthy. It is recommended you queue the report to a printer during off hours.

You must hold the VAQ RPT security key to access the System Reports menu.

**NOTE:** Due to the brevity of this option, a process chart has not been provided.

### 2.5.5.2 Example

2.6 PDX Edit Files

2.6.1 Add/Edit Fields to Encrypt

2.6.1.1 INTRODUCTION

The Add/Edit Fields to Encrypt option allows the user to select data fields to be encrypted in the PDX transmission. Four fields from the PATIENT (#2) file and two fields from the PRESCRIPTION (#52) file are sent with the software. Sites may wish to encrypt other data fields that contain patient identification information. An incrementing number is used to uniquely enter each field requiring encryption. If a plus sign (+) is entered at the Select VAQ - ENCRYPTED FIELDS Encrypt Field: prompt, the system will automatically determine the incrementing number.

The Encrypt Fields site parameter must be set to YES in order to correctly use this option. You must hold the VAQ EDIT FILE security key to access the Add/Edit Fields to Encrypt option.

NOTE: Due to the brevity of this option, a process chart has not been provided.

2.6.1.2 Example

Figure 49 is an example of what may appear on your screen while using the Add/Edit Fields to Encrypt option.

```

2.6.2 Edit maximum limits for automatic processing

2.6.2.1 INTRODUCTION

The Edit maximum limits for automatic processing option is used to edit the maximum time and occurrence limits that your site is willing to allow for automatic processing of a PDX transaction. The limits entered here for each data segment will be compared to the limits contained in the request from the remote site. If a requested data segment’s limits are over this maximum, the request will require manual processing.

If the request requires manual processing, the members of the VAQ MANUAL PROCESSING mail group will receive the PDX REQUEST REQUIRES PROCESSING mail bulletin. An example of this bulletin is contained in the Example section of this option documentation.

You must hold the VAQ EDIT FILE security key to access this option.

NOTE: Due to the brevity of this option, a process chart has not been provided.

2.6.2.2 Example

Figure 50 is an example of what may appear on your screen while using the Edit maximum limits for automatic processing option.

2.6.3 Add/Edit Outgoing Group

2.6.3.1 Introduction

The Add/Edit Outgoing Group option is used to create outgoing groups and add/edit/delete remote facilities in those groups. A site may create as many outgoing groups as it deems necessary.

Creating outgoing groups allows for expeditious sending of PDX requests as they may be sent to many remote facilities with one entry, the outgoing group name.
### 2.6.3.2 Process

The process chart in Table 8 shows the steps and prompts involved in using the Add/Edit Outgoing Group option.

**Table 8: Add/Edit Outgoing Group Option—Process Chart**

2.6.4 Edit Parameter File

2.6.4.1 Introduction

The Edit Parameter File option is used to set site-specific PDX parameters. Your site should be the only entry in this file. You must hold the VAQ EDIT FILE security key to access this option. Table 9 lists the PDX parameters with a brief description:

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>DOMAIN</td>
<td>The electronic mail address of the facility or primary division.</td>
</tr>
<tr>
<td>LIFETIME OF DATA</td>
<td>The number of days the PDX will be valid. The PDX will be flagged for purging after this time and will not be displayed when using display options. Fifteen (15) days is the recommended time.</td>
</tr>
<tr>
<td>ENCRYPT FIELDS</td>
<td>(YES/NO) A YES entry will allow encryption of selected data fields through the Add/Edit Fields to Encrypt option. The recommended response is NO.</td>
</tr>
</tbody>
</table>

**NOTE:** When processing, this field is overwritten by the setting at the requesting facility. For example, if
<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>ENCRYPTION METHOD</td>
<td>The method of encryption to use for PDX requests and unsolicited PDXs. This field is only relevant when the ENCRYPT FIELDS field is set to YES. There is only one encryption method available at this time: Kernel Hashing.</td>
</tr>
<tr>
<td>DEFAULT TIME LIMIT</td>
<td>The default number of days/months/years you are asking the remote system to search back through a patient's data (your system on unsolicited requests). It consists of a number and letter (e.g., 30D, 6M, 1Y). This parameter will only apply to applicable data segments predetermined by the system.</td>
</tr>
<tr>
<td>DEFAULT OCCURRENCE LIMIT</td>
<td>The default number of occurrences of a data segment you are asking the remote system to report (your system on unsolicited requests). For example, if a 5 is entered, the system will report the five most recent occurrences of that segment. This parameter will only apply to applicable data segments predetermined by the system.</td>
</tr>
</tbody>
</table>

2.6.5 Add/Edit Segment Group - Private

2.6.5.1 Introduction

The Add/Edit Segment Group - Private option is used to enter/edit private segment groups. A private segment group is one that only the person who created it can use when requesting PDX data.

A segment group is a group of selected data segments. It may contain any number of the currently available data segments. All segment groups will automatically contain the PDX*MIN data segment, which is the minimal amount of patient data necessary to add a patient to the data base.

Data segments are comprised of Health Summary, Means Test, Copay, and specially created PDX components.

NOTE: It should be noted that some segments may contain overlapping information. You may not add/edit/delete the data within the data segments.

Time and occurrence limits can be placed on applicable data segments selected for the segment group. These will determine how far back the system will search for the component and the number of occurrences of that component the system will report. The initial default values for these fields are set through the Edit Parameter File option.

Creating segment groups allows for expeditious requesting/sending of information as numerous data segments may be requested/sent by one entry, the segment group name.

2.6.5.2 Process

The process chart in Table 11 shows the steps and prompts involved in using the Add/Edit Segment Group - Private option.

2.6.6 Add/Edit Segment Group - Public

2.6.6.1 Introduction

The Add/Edit Segment Group - Public option is used to enter/edit public segment groups. A public segment group is one that can be used by any user when requesting PDX data. You must hold the VAQ EDIT FILE security key to access this option.

A segment group is a group of selected data segments. It may contain any number of the currently available data segments. All segment groups will automatically contain the PDX*MIN data segment, which is the minimal amount of patient data necessary to add a patient to the data base.

Data segments are comprised of Health Summary, Means Test, Copay, and specially created PDX components.

NOTE: It should be noted that some segments may contain overlapping information. You may not add/edit/delete the data within the data segments.

Time and occurrence limits can be placed on applicable data segments selected for the segment group. These will determine how far back the system will search for the component and the number of occurrences of that component the system will report. The initial default values for these fields are set through the Edit Parameter File option.

Creating segment groups allows for expeditious requesting/sending of information as numerous data segments can be requested/sent by one entry, the segment group name.
2.6.6.2 Process

The process chart in Table 12 shows the steps and prompts involved in using the Add/Edit Segment Group - Public option.

2.6.6.3 Example

Figure 55 is an example of what may appear on your screen while using the Add/Edit Segment Group - Public option.

![Figure 55: Add/Edit Segment Group - Public Option—Sample User Dialogue](image-url)
2.6.7 Add/Edit Release Group

2.6.7.1 Introduction
The Add/Edit Release Group option is used to enter/edit facilities into the release group for automatic processing of PDX requests. If the requesting facility is contained in the release group, the PDX request will be automatically processed. If not, the request will be placed in a queue to be manually processed. All requests pertaining to patients with “sensitive” records and those that exceed the maximum time and occurrence limits for Health Summary components are manually processed.

Only one release group exists per site. Through this option, the site may select how many and which facilities are in their release group.

You must hold the VAQ EDIT FILE security key to access this option.

*i* NOTE: Due to the brevity of this option, a process chart has not been provided.

2.6.7.2 Example
Figure 56 is an example of what may appear on your screen while using the Add/Edit Release Group option.

Figure 56: Add/Edit Release Group Option—Sample User Dialogue

| Remote Facility: | REDACTED// |
| Remote Domain: | REDACTED.VA.GOV. |

2.6.8 Add/Edit Segment Group - All

2.6.8.1 Introduction
The Add/Edit Segment Group - All option is used to enter/edit public and private segment groups. A private segment group is one that only the person who created it can use when requesting PDX data. A public segment group is one that can be used by any user when requesting PDX data. You must hold the VAQ EDIT FILE security key to access this option.

A segment group is a group of selected data segments. It may contain any number of the currently available data segments. All segment groups will automatically contain the PDX*MIN data segment, which is the minimal amount of patient data necessary to add a patient to the data base.
Data segments are comprised of Health Summary, Means Test, Copay, and specially created PDX components.

**NOTE:** It should be noted that some segments may contain overlapping information. You may *not* add/edit/delete the data within the data segments.

Time and occurrence limits can be placed on applicable data segments selected for the segment group. These will determine how far back the system will search for the component and the number of occurrences of that component the system will report. The initial default values for these fields are set through the Edit Parameter File option.

Creating segment groups allows for expeditious requesting/sending of information as numerous data segments may be requested/sent by one entry, the segment group name.

### 2.6.8.2 Process

2.7 Purging

2.7.1 Purge Using Default Age

2.7.1.1 Introduction

The Purge Using Default Age option is used to purge PDX transactions and their associated data based on the value found in the PDX parameter, LIFETIME OF DATA. The Purger automatically adds three days to the parameter value. Once transactions are older than this value, they are flagged for purging and automatically purged when this option is used. The recommended value for the LIFETIME OF DATA parameter is **15** days.

The date the last status was assigned to the transaction is the date used in determining when transactions will be flagged for purging.

The only prompt is for a requested start time for the purge. Once the start time is entered, a message will be displayed indicating the task has been queued. The task number is also displayed. This number should be used if it becomes necessary to cancel the task through the TaskMan User Toolbox utility.

If the task is stopped before completion and/or if certain transactions could not be purged, a mail bulletin will be sent notifying the members of the VAQ PDX ERRORS mail group.

You must hold the VAQ PURGE security key to access the Purging menu.
NOTE: The purging process may be quite time consuming and should be queued to run during off hours.

NOTE: Due to the brevity of this option, a process chart has not been provided.

2.7.1.2 Example

Figure 58 is an example of what may appear on your screen while using the Purge Using Default Age option. An example of the PDX TRANSACTIONS COULD NOT BE PURGED mail bulletin is also provided below.

![Figure 58: Purge Using Default Age Option—Sample User Dialogue]

2.7.2 Purge Using User Defined Age

2.7.2.1 Introduction

The Purge Using User Defined Age option is used to purge PDX transactions and their associated data based on an age entered by the user.

You will be prompted for the number of days to use for purging. The Purger automatically adds three days to the user-entered value. Once transactions are older than this value, they are flagged for purging and automatically purged when this option is used. The default value displayed with the prompt is the entry in the PDX site parameter, LIFETIME FOR DATA.

The date the last status was assigned to the transaction is the date used in determining when transactions will be flagged for purging.
The second prompt is a requested start time for the purge. Once the start time is entered, a message will be displayed indicating the task has been queued. The task number is also displayed. This number should be used if it becomes necessary to cancel the task through the TaskMan User Toolbox utility.

If the task is stopped before completion and/or if certain transactions could not be purged, a mail bulletin will be sent notifying the members of the VAQ PDX ERRORS mail group.

You must hold the VAQ PURGE security key to access the Purging menu.

**NOTE:** The purging process may be quite time consuming and should be queued to run during off hours.

**NOTE:** Due to the brevity of this option, a process chart has not been provided.

### 2.7.2.2 Example

*Figure 59* is an example of what may appear on your screen while using the Purge Using User Defined Age option. An example of the PDX TRANSACTIONS COULD NOT BE PURGED mail bulletin is also provided below.

2.7.3 Purge Using User Defined Date

2.7.3.1 Introduction

The Purge Using User Defined Date option is used to purge PDX transactions and their associated data based on a date entered by the user.

You will be prompted for the date to use for purging (date must be before three days ago). Transactions older than this value will be automatically purged when this option is used.

The date the last status was assigned to the transaction is the date used in determining when transactions will be flagged for purging.

The second prompt is a requested start time for the purge. Once the start time is entered, a message will be displayed indicating the task has been queued. The task number is also displayed. This number should be used if it becomes necessary to cancel the task through the TaskMan User Toolbox utility.

If the task is stopped before completion and/or if certain transactions could not be purged, a mail bulletin will be sent notifying the members of the VAQ PDX ERRORS mail group.

You must hold the VAQ PURGE security key to access the Purging menu.

NOTE: The purging process may be quite time consuming and should be queued to run during off hours.

NOTE: Due to the brevity of this option, a process chart has not been provided.

2.8 Mail Groups and Bulletins

2.8.1 Mail Groups

There are three mail groups associated with the PDX software.

- **VAQ MANUAL PROCESSING**—Members of this group will receive notification when a PDX request received at their site requires manual processing.

- **VAQ PDX ERRORS**—Members of this group will receive notification of purging errors and errors in transmission of PDX transactions.

- **VAQ UNSOLICITED RECEIVED**—Members of this group will receive notification when an unsolicited PDX transaction is received at their site.
2.8.2 Bulletins

The mail bulletins contained in the PDX software will have one of five different subjects. These bulletins are described below along with an example of each.

2.8.2.1 PDX Request Requires Processing

This bulletin is generated when a PDX request is received at your site that requires manual processing. Members of the VAQ MANUAL PROCESSING mail group will receive this bulletin. The four reasons a request would require manual processing are as follows:

- Sensitive patient
- Domain not in mail group
- Ambiguous patient
- Maximum time and occurrence limits exceeded by {#} segments

**Figure 61: PDX Request Requires Processing—Sample Bulletin**

```
Subj: PDX REQUEST REQUIRES PROCESSING  [#112899] 02 Sep 93 13:24  27 Lines

```
2.8.2.2 Results of PDX Request

This bulletin is generated after the remote site takes action on your PDX transaction. Users who were specified to receive notification at the time the request was made will receive this bulletin. The bulletin will inform you whether your request has been processed and returned or has been rejected by the remote site. Except for those patients who are deemed “sensitive”, the requested data will be contained in the mail bulletin if it was so specified during the request.

2.8.2.4 PDX Transaction Could Not Be Purged

This bulletin is generated when either or both of the following occur:

- Process of purging the PDX data is stopped before completion.
- Purge has completed and certain transactions were found that could not be purged.

Members of the VAQ PDX ERRORS mail group will receive this bulletin.

Figure 64: PDX Transaction Could Not Be Purged—Sample Bulletin

2.8.2.5 Unable to Send Messages

These bulletins are generated when an error occurred during transmission of the PDX transaction. Members of the VAQ PDX ERRORS mail group will receive the first bulletin while the person generating the transaction will receive the second bulletin.

3 Appendix A—List Manager

The List Manager is a tool that displays a list of items in a screen format and provides the following functionality:

- Browse through the list.
- Select items that need action.
- Take action against those items.
- Select other List Manager actions without leaving the option.

Actions are entered by typing the names or abbreviations at the “Select Action” prompt. Actions can be preselected by separating them with semicolons (;). For example, “AL;CI” (Appointment Lists; Checked In) will advance through the two actions automatically.

Entries may be preselected in the following manner:

- CI=1 will process entry 1 for check-in
- CI=3 4 5 will process entries 3,4,5 for check-in
- CI=1-3 will process entries 1,2,3 for check-in

In addition to the various actions that may be available specific to the option you are working in, List Manager provides generic actions applicable to any List Manager screen. You can enter two question marks (??) at the “Select Action” prompt for a list of all actions available.

Table 16 lists the generic List Manager actions with a brief description. The abbreviation for each action is shown in brackets [] following the action name. Entering the abbreviation is the quickest way to select an action.

</tbody>
</table>

- **Description:**
  - This component contains information from MAS, Pharmacy, and Dietetics software. It provides a list of all known food, drug and environmental allergies or adverse reactions (e.g., hay fever).
  - This component contains clinical warning notes entered using the Generic Progress Note software. No time or maximum occurrence limits apply to this component. Clinical Warnings are a type of progress note, which includes clinical information to which clinicians need to be alerted. If this component is printed out on a CRT, information will include title, text of note, electronic signature block, and date posted. If the printout is to another device type, information will include electronic signature block and date posted to ensure security of information.
Component Name: CRISIS NOTES
Display Name: Crisis Notes
Abbreviation: CN
Time Limits Apply:
Max Occurrences Apply:
Description: This component contains crisis notes entered using the Generic Progress Note software. No time or maximum occurrence limits apply to this component. Crisis Notes are a type of progress note that contains important information for anyone who deals with a patient. If this component is printed out on a CRT, information will include title, text of note, electronic signature block, and date posted. If the printout is to another device type, information will include electronic signature block and date posted to ensure security of information.

Component Name: DIETETICS
Display Name: Dietetics
Abbreviation: DI
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information from the Dietetics software. Time and occurrence limits apply to this component. Data presented include: diet orders, start/stop dates, type of service (e.g., tray); nutritional status, date assessed; supplemental feedings, start/stop dates; tube feedings, start/stop dates, strength of product, quantity ordered, and daily dosages.

**NOTE:** When a time limit is selected, the data presented reflects orders initiated within the time period.
Component Name: LAB BLOOD AVAILABILITY
Display Name: Blood Availability
Abbreviation: BA
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information from the Blood Bank module of the Lab software. Time and occurrence limits apply to this component. Data presented include: patient blood type (whether or not units have been assigned), unit expiration date, unit ID#, blood product(s), cross-match results, last known location, and a flag for autologous units.

NOTE: An asterisked date (e.g., * 10/10/90) indicates that the unit is due to expire within the next 48 hours.

Component Name: LAB BLOOD TRANSFUSIONS
Display Name: Blood Transfusions
Abbreviation: BT
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information from the Blood Bank module of the Lab software. Time and occurrence limits apply to this component. Data presented include: transfusion date and abbreviated blood products [with total number of units transfused for each, e.g., RBC (2)]. A key of the abbreviations is presented at the bottom of the display to help identify any unfamiliar blood products.
Component Name: LAB CHEMISTRY & HEMATOLOGY
Display Name: Chem & Hematology
Abbreviation: CH
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information extracted from the Lab software. Time and maximum occurrence limits apply to this component. Data presented include: collection date/time, specimen, test name, results (w/ref flag: High/Low/Critical), units, and Reference range. Comments will also be conditionally displayed, depending on the value of the DISPLAY COMMENTS ON LABS Health Summary Site Parameter. Results that include comments will be indicated with the symbol !!, in the event that the parameter is set to 0 or NO.

Component Name: LAB CUMULATIVE SELECTED
Display Name: Lab Cum Selected
Abbreviation: SCLU
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information extracted from the Lab software. Not only do time and maximum occurrence limits apply to this component, but the user is allowed to select any number of atomic Lab tests. Data presented include: collection date/time, specimen, test names with results and reference flags in columnar (horizontal) format.

Component Name: LAB CUMULATIVE SELECTED 1
Display Name: Lab Cum Selected 1
Abbreviation: SCL1
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information extracted from the Lab software. Not only do time and maximum occurrence limits apply to this component, but the user is allowed to select as many as seven atomic Lab tests. Data presented include: collection date/time, specimen, test names with results and reference flags in columnar (horizontal) format.
Component Name: LAB CUMULATIVE SELECTED 2
Display Name: Lab Cum Selected 2
Abbreviation: SCL2
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information extracted from the Lab software. Not only do time and maximum occurrence limits apply to this component, but the user is allowed to select as many as seven atomic Lab tests. Data presented include: collection date/time, specimen, test names with results and reference flags in columnar (horizontal) format.

Component Name: LAB CUMULATIVE SELECTED 3
Display Name: Lab Cum Selected 3
Abbreviation: SCL3
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information extracted from the Lab software. Not only do time and maximum occurrence limits apply to this component, but the user is allowed to select as many as seven atomic Lab tests. Data presented include: collection date/time, specimen, test names with results and reference flags in columnar (horizontal) format.

Component Name: LAB CUMULATIVE SELECTED 4
Display Name: Lab Cum Selected 4
Abbreviation: SCL4
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information extracted from the Lab software. Not only do time and maximum occurrence limits apply to this component, but the user is allowed to select as many as seven atomic Lab tests. Data presented include: collection date/time, specimen, test names with results and reference flags in columnar (horizontal) format.
Component Name: LAB CYTOPATHOLOGY
Display Name: Cytopathology
Abbreviation: CY
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information extracted from the Cytopathology module of the Lab software. Time and maximum occurrence limits apply. Data presented include: collection date/time, accession number, specimen, gross description and microscopic exam (both word processing fields), ICD diagnoses, and SNOMED fields: topography, disease, morphology, etiology, and procedures.

Component Name: LAB MICROBIOLOGY
Display Name: Microbiology
Abbreviation: MIC
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information extracted from the Microbiology module of the Lab software. Time and maximum occurrence limits apply. Data include: collection date/time, site/specimen, Parasite Report, organism(s), Mycology Report, Bacteriology Report, Mycobacteriology Report, Gram Stain Result, Culture and Susceptibility, Antibiotic Serum Level, and remarks.

Component Name: LAB MICROBIOLOGY BRIEF
Display Name: Brief Microbiology
Abbreviation: BMIC
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information extracted from the Lab software. Time and maximum occurrence limits apply to this component in addition to collection date/time, test name, specimen, report status, Culture and Susceptibility, Antibiotic Serum Level, and test results.
Component Name: LAB ORDERS
Display Name: Lab Orders
Abbreviation: LO
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information extracted from the Lab software. Time and maximum occurrence limits apply. Data presented include: collection date (either actual or expected), lab test, provider, accession, date/time ordered, specimen, and date/time results available.

Component Name: LAB ORDERS BRIEF
Display Name: Brief Lab Orders
Abbreviation: BLO
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information extracted from the Lab software. Time and maximum occurrence limits apply. Data presented include: collection date/time, lab test name, specimen, urgency, and order status (e.g., ORDERED, COLLECTED, PROCESSING, COMPLETE).

Component Name: LAB SURGICAL PATHOLOGY
Display Name: Surgical Pathology
Abbreviation: SP
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information extracted from the Surgical Pathology module of the Lab software. Time and maximum occurrence limits apply. Data presented include: collection date/time, accession number, specimen, gross description and microscopic exam (both word processing fields), ICD diagnoses, and SNOMED fields: topography, disease, morphology, etiology, and procedures.
Component Name: LAB TESTS SELECTED  
Display Name: Lab Tests Selected  
Abbreviation: SLT  
Time Limits Apply: yes  
Max Occurrences Apply: yes  
Description: This component contains information extracted from the Lab software. Not only do time and maximum occurrence limits apply to this component, but the user is allowed to select any number of atomic Lab tests. Data include: collection date/time, specimen, test name, result, units and reference range.

**NOTE:** This component corresponds to the vertical format for the Lab software cumulative reports.

Component Name: MAS ADMISSIONS/DISCHARGES  
Display Name: Admission/Discharge  
Abbreviation: ADC  
Time Limits Apply: yes  
Max Occurrences Apply: yes  
Description: This component contains information from the MAS software. Time and occurrence limits apply to this component. Data presented include: date range of admission, ward, length of stay (LOS), last treating specialty, last provider, admitting diagnosis text, bed section, principal diagnosis, diagnosis for longest length of stay (DXLS), and secondary ICD diagnoses.
Component Name: MAS ADT HISTORY
Display Name: ADT History
Abbreviation: ADT
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information extracted from the MAS software. It can only be used with MAS Version 5 and up. Time and maximum occurrence limits apply. Data presented include: movement date, movement type (ADM=Admission, TR=Transfer, TS= Treating Specialty, DC=Discharge), movement description, specialty, and provider.

Component Name: MAS CLINIC VISITS FUTURE
Display Name: Fut Clinic Visits
Abbreviation: CVF
Time Limits Apply:
Max Occurrences Apply:
Description: This component provides a listing from the MAS scheduling module that contains future clinic visit dates, the clinic visited, and the appointment type.

Component Name: MAS CLINIC VISITS PAST
Display Name: Past Clinic Visits
Abbreviation: CVP
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information from the MAS scheduling module. Time and occurrence limits apply to this component. Data presented include: past clinic visits, dates, and a visit status (e.g., NO SHOW, INPATIENT VISIT).

NOTE: Cancellations and Unscheduled Visits are shown.
Component Name: MAS DEMOGRAPHICS
Display Name: Demographics
Abbreviation: DEM
Time Limits Apply:
Max Occurrences Apply:
Description: This component contains the following patient demographic data (if available) from the MAS software: address, phone, county, marital status, religion, period of service, POW status (Y or N), branch of service, combat status (Y or N), eligibility code, current (verified) eligibility status, service connected %, eligible for care (Y or N), next of kin (NOK), NOK phone number and address.

Component Name: MAS DEMOGRAPHICS BRIEF
Display Name: Brief Demographics
Abbreviation: BDEM
Time Limits Apply:
Max Occurrences Apply:
Description: This component contains information from the MAS software. It provides brief patient demographic information including: address, phone number, and eligibility code (e.g., service connected 50-100%).

Component Name: MAS DISABILITIES
Display Name: Disabilities
Abbreviation: DS
Time Limits Apply:
Max Occurrences Apply:
Description: This component provides information from the MAS software about a patient’s eligibility code and eligibility status (Verified), and rated disabilities, including the disability percentage and whether the disability is service connected or non-service connected.
Component Name: MAS DISCHARGE DIAGNOSIS
Display Name: Discharge Diagnosis
Abbreviation: DD
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information extracted from the MAS software. Time and occurrence limits apply to this component. Data presented include: Date range of admission through discharge, length of stay (LOS), Principal diagnosis, diagnosis for longest length of stay (DXLS), and secondary ICD discharge diagnoses.

**NOTE:** This component provides discharge diagnoses coded in the MAS PTF file. The occurrence limits are determined by the occurrence of admissions.

Component Name: MAS DISCHARGES
Display Name: Discharges
Abbreviation: DC
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information extracted from the MAS software. Time and occurrence limits apply to this component. Data presented include: date of discharge, DXLS, bedsection, disposition type, disposition place, and outpatient treatment flag.

**NOTE:** The occurrence limits are determined by the occurrence of admissions.
Component Name: MAS PROCEDURES ICD CODES
Display Name: ICD Procedures
Abbreviation: PRC
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains MAS coded procedures, by admission, extracted from the MAS software. Time and occurrence limits apply to this component. Data presented include: procedure date, procedure name, and ICD-9CM procedure codes.

NOTE: The occurrence limits are determined by the occurrence of admissions.

Component Name: MAS SURGERIES ICD CODES
Display Name: ICD Surgeries
Abbreviation: OPC
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains MAS coded surgeries, by admission, extracted from the MAS software. Time and occurrence limits apply to this component. Data presented include: surgery date, procedure name, and ICD-9CM procedure codes.

NOTE: The occurrence limits are determined by the occurrence of admissions.
Component Name: MAS TRANSFERS
Display Name: Transfers
Abbreviation: TR
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information extracted from the MAS software. Time and occurrence limits apply to this component. Data presented include: transfer date, type, destination, and provider (when available).

NOTE: The occurrence limits are determined by the occurrence of admissions.

Component Name: MAS TREATING SPECIALTY
Display Name: Treating Specialty
Abbreviation: TS
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information extracted from the MAS software. Time and occurrence limits apply to this component. Data presented include: treating specialty change date/time, new treating specialty, (admission date), and provider.

NOTE: The occurrence limits are determined by the occurrence of admissions.
Component Name: MEDICINE SUMMARY
Display Name: Medicine Summary
Abbreviation: MED
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information extracted from the Medicine software. Time and maximum occurrence limits apply. Data presented include: procedure date/time, medical procedure name, and result (e.g., normal, abnormal, borderline).

NOTE: This component is a summary of procedure statuses.

Component Name: ORDERS CURRENT
Display Name: Current Orders
Abbreviation: ORC
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains current orders from the OE/RR software. Since the OE/RR software integrates all orders for the ancillary services, the orders will be reported in most recent orders first sequence without concern for the ancillary software the order originated from/for. Current orders are defined as those orders with an OE/RR order status other than discontinued or expired. The component information includes item ordered, OE/RR order status, start date, and stop date. OE/RR order status abbreviations include “blank”=Active, “c”=Complete, “dc”=Discontinued, “e”= expired, “?”=Flagged, “h”=Hold, “i”=incomplete, “p”=pending, “s”=scheduled.
Component Name: PHARMACY INTRAVENOUS
Display Name: IV Pharmacy
Abbreviation: RXIV
Time Limits Apply: yes
Max Occurrences Apply:
Description: This component contains IV orders extracted from the Pharmacy software. Only time limits apply. Data presented include: start date, stop date, drug (additives), dose, status, solutions and infusion rates.

NOTE: If no time limit is defined, only active IV orders are reported. If a time limit is defined, all IV orders that have an expiration or cancel date within the time limit range are reported.

Component Name: PHARMACY OUTPATIENT
Display Name: Outpatient Pharmacy
Abbreviation: RXOP
Time Limits Apply: yes
Max Occurrences Apply:
Description: This component contains information from the Outpatient Pharmacy software. Only time limits apply. Data presented include: drug, prescription number, status expiration/cancellation date (when appropriate), quantity, issue date, last fill date, refills remaining, provider, and cost/fill (when available).

NOTE: This component is formatted similar to the Short Medication Profile. If no time limit is defined, all orders are reported. When a time limit is defined, all outpatient pharmacy orders that have an expiration or cancel date within the time limit range are reported.

Description: This component contains information from the Mental Health and Generic Progress Notes softwares. Time and maximum occurrence limits apply. Data presented include: Progress note date/time, title, author and last correction date/time. Only those notes that have been signed with an electronic signature or (for generic progress notes) electronically marked signed on chart will be listed.

Component Name: RADIOLOGY IMPRESSION
Display Name: Radiology Impression
Abbreviation: RI
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains impressions from the Radiology software. Time and maximum occurrence limits apply. Data presented include: study date, procedure(s), status, and radiologist’s impression (narrative). Only radiology impressions that have been verified are reported.

Component Name: RADIOLOGY IMPRESSION SELECTED
Display Name: Sel Rad Impression
Abbreviation: SRI
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains impressions from the Radiology software. Time and occurrence limits apply. Data presented include: study date, procedure(s), status and radiologist’s impression (narrative) for the procedures selected by the user (e.g., CHEST 2 VIEWS -PA & LAT). Only radiology impressions that have been verified are reported.
Component Name: RADIOLOGY PROFILE
Display Name: Radiology Profile
Abbreviation: RP
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information from the Radiology software. Time and maximum occurrence limits apply. Data presented include: study date, procedure(s) with status(es), report status, staff radiologist, resident radiologist, and the narrative fields modifier, history, report, and impression. Only radiology profiles that have been verified are reported.

Component Name: RADIOLOGY STATUS
Display Name: Radiology Status
Abbreviation: RS
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains procedure statuses from the Radiology software. Time and maximum occurrence limits apply. Data presented include: request date/time, status, procedure, scheduled date/time, and provider name.

Component Name: SURGERY REPORTS
Display Name: Surgery Reports
Abbreviation: SR
Time Limits Apply: yes
Max Occurrences Apply: yes
Description: This component contains information from the Surgery software. Time and maximum occurrence limits apply. Data presented include: surgery date, surgeon, surgery report status, pre-operative diagnosis, post-operative diagnosis, surgeon’s dictation, current procedural terminology operation code and text. Only surgery reports that have been verified are reported.

5 Appendix C—PDX Transaction Statutes

The following are the statuses that can be assigned to PDX transactions:

- Requested patient could not be uniquely identified at remote facility
- PDX request from remote facility being processed automatically
- Requested patient could not be found at remote facility
- PDX request from remote facility that requires manual processing
- PDX transmission that is currently being received
- Requested information was not released by remote facility
- Acknowledgement for receipt of PDX request by remote facility
- PDX request
- Requested information was returned
- Request to retransmit message using previous version
- Unsolicited PDX that was transmitted from local facility
- Acknowledgement for receipt of unsolicited PDX by remote facility
- Unsolicited PDX
