Data Source and Methods

• Data for this analysis come from the 2014 American Community Survey (ACS) Public Use Microdata Sample
  • The ACS is an ongoing survey that provides annual data on the social and economic characteristics of the U.S. population.
  • The ACS uses a series of monthly samples to produce annually updated data for the same small areas (census tracts and block groups) formerly surveyed via the decennial census long-form sample.

• The universe for this analysis is the civilian population 17 years and older living in the United States and Puerto Rico
  • This universe includes a weighted estimate of 19.4 million Veterans, of which 1.6 million were women.
  • The universe includes a weighted estimate of 251.4 million civilian population, of which 232 million were non-Veterans.

• All comparative statements have undergone statistical testing and are significant at the 90-percent confidence level.
  • A “statistically significant difference” simply means there is statistical evidence that there is a difference; it does not mean the difference is necessarily large, important or significant in the usual sense of the word.
  • A “no statistically significant difference” means that there is statistical evidence that there is no difference in the comparative percentages/rates.

• For more information about the ACS, see: http://www.census.gov/acs/www/
Veteran and Non-Veteran Comparisons

Veterans = 19,386,589
Non-Veterans = 231,986,987
Male Veterans on average are older than non-Veteran men. In 2014, the median age of male Veterans was 64 and the median age of male non-Veterans was 41.

**Age Distribution of Men**  
(in percent)

- **Male Veterans**
  - 17 to 24: 1.3
  - 25 to 34: 6.4
  - 35 to 44: 8.4
  - 45 to 54: 13.7
  - 55 to 64: 18.7
  - 65 to 74: 27.0
  - 75 to 84: 16.6
  - 85 and older: 7.8

- **Male Non-Veterans**
  - 17 to 24: 17.3
  - 25 to 34: 19.7
  - 35 to 44: 18.1
  - 45 to 54: 18.3
  - 55 to 64: 15.5
  - 65 to 74: 7.4
  - 75 to 84: 2.9
  - 85 and older: 0.6

As with male Veterans, a lower percentage of female Veterans were in the youngest age group—17 to 24 years old than their non-Veteran counterparts. These are the ages when most men and women would still be serving in the military and would not yet have become Veterans. The median age of female Veterans was 49 and female non-Veterans was 46 in 2014.

Male Veterans were more likely to be married and less likely to have never married compared with non-Veteran men. Female Veterans were more likely to be widowed than non-Veteran women.
A higher percentage of male Veterans were in management and professional occupations compared with male non-Veterans in 2014. These include occupations such as engineers, educators, doctors, and various types of managers. The percentage of male Veterans working for local, state, or Federal government was about twice that of male non-Veterans.

Note: (1) “All Other” includes Farming, fishing, and forestry; construction, extraction, maintenance, and repair.
(2) No significant difference between Veteran and male non-Veteran by self-employed.
The percentage of female Veterans working in management and professional occupations was about 7 percentage points higher than that of non-Veteran women in 2014. A lower percentage of female Veterans worked in service occupations, such as food service, janitorial, and child care, than female non-Veterans. About 36 percent of female Veterans worked for local, state, or Federal government, compared to 16 percent of female non-Veterans.

Notes:
(1) “All Other” includes Farming, fishing, and forestry; Construction, extraction, maintenance, and repair. (2) There was no statistical significant difference between female Veterans and non-Veterans by production and transportation.
Both male and female Veterans were more likely to have a combination of public and private health insurance coverage compared with their non-Veteran counterparts. The high percentage of male Veterans in this category was likely due to Medicare, use of VA health care and second career after retirement than non-Veterans. Male and female Veterans had lower uninsured rates than non-Veterans in 2014.

In 2014, a lower percentage of both male and female Veterans lived below 100 percent of poverty compared with their non-Veteran counterparts.

Poverty Level Distributions
(in percent)

There is no statistical difference in percentages between women Veterans and women non-Veterans in the 200 to 299 percent poverty level.

Source: U.S. Census Bureau, American Community Survey PUMS, 2014
Prepared by the National Center for Veterans Analysis and Statistics
In 2014, both male and female Veterans who worked year-round and full time had higher median earnings than their non-Veteran counterparts. Veterans of both sexes also had higher personal incomes than non-Veterans.

**Median Earnings of Year-Round Full-Time Workers by Sex and Veteran Status**

- **Male Veterans**: $52,666
- **Male Non-Veterans**: $46,989
- **Female Veterans**: $44,884
- **Female Non-Veterans**: $37,965

**Median Personal Income by Sex and Veteran Status**

- **Male Veterans**: $35,993
- **Male Non-Veterans**: $27,297
- **Female Veterans**: $29,776
- **Female Non-Veterans**: $16,691

“Earnings” refer to salary, wages, and self employment income.
“Year-round full-time(YRFT) refers to employment of 50 or more weeks per year and 35 or more hours per week. Median earnings are calculated for the YRFT employed population with earnings greater than zero.

“Income” refers to the total of earnings and other sources of income such as pension, Supplement Security Income, public assistance, etc. Median Income is calculated for the total population with personal income greater than zero.

Summary of Veteran and Non-Veteran Comparisons

According to data from the 2014 American Community Survey, male Veterans were older, more likely to be White non-Hispanic, more likely to be married, less likely to be uninsured, less likely to live below poverty, and had higher personal incomes than male non-Veterans. Employed male Veterans were more likely to work in management and professional occupations, and more likely to work for local, state, or Federal governments than their non-Veteran counterparts. Male Veterans who worked year-round and full-time earned about $6,000 more than similar non-Veterans. Some differences between male Veterans and non-Veterans may be attributable to age. The median age of male Veterans in 2014 was 64 years while the median age of male non-Veterans was 41 years.

A lower percentage of female Veterans were in the youngest age group—17 to 24 years old than female non-Veterans. These are the ages when most men and women would still be serving in the military and would not yet have become Veterans. The median age of female Veterans was 49 and female non-Veterans was 46 in 2014. Female Veterans were more likely to be Nonwhite non-Hispanic, more likely to be widowed, less likely to be uninsured, less likely to live below poverty, and had higher personal incomes than female non-Veterans. Employed female Veterans were more likely to be in management and professional occupations, less likely to be in sales or service occupations, and more likely to work in local, state, or Federal government than female non-Veterans. Female Veterans who worked year-round and full-time earned about $7,000 more than similar non-Veterans.
The largest living cohort of male Veterans served during the Vietnam Era (August 1964 to April 1975) while the largest living cohort of female Veterans served during Post 9/11 (September 2001 or later).

Compared with male Veterans, female Veterans were more likely to have completed some college, a Bachelor’s degree, or an advanced degree, be enrolled in college, more likely to have a service-connected disability rating, less likely to use VA health care at all but more likely to use only VA health care, have no earnings or income, and live in poverty.

Employed female Veterans were more likely to work in management and professional occupations than employed male Veterans.

Some differences between male and female Veterans may be attributable to age as male Veterans are significantly older than female Veterans. The median age of male Veterans was 64 years in 2014, compared with 49 years for female Veterans.
