Seasonal Flu

What You Need to Know

This information from the U.S. Department of Veterans Affairs (VA) is for VA staff, veterans, their families, and their friends. It describes facts on seasonal influenza (flu).

Each year in the U.S., the flu causes more than 226,000 hospitalizations and about 36,000 deaths.

Common Seasonal Flu Symptoms:
- Fever (Usually High)
- Cough
- Runny Or Stuffy Nose
- Sore Throat
- Feeling Tired Or Weak
- Headache
- Muscle Or Body Aches
- Stomach Symptoms (Mostly In Children)

A flu shot* is the best way to protect yourself against seasonal influenza (flu).

* Note: Flu vaccine is available as both a shot and a nasal spray.

Getting A Flu Shot Can:
- PROTECT you, your family, and your friends from the flu
- PREVENT severe illness and even death

Seasonal flu is a respiratory illness that:
- Is caused by flu viruses that can change each year
- Spreads easily
- Occurs each year during fall, winter, and spring

How does the flu spread?
- When a person with the flu sneezes, coughs, talks, or laughs, the flu virus can spread into the air as droplets from their mouth or nose. These droplets can spread to people and surfaces within 3 to 6 feet.
- The flu virus can spread to your hands if you touch anything that has the virus on it. If you then touch your eyes, nose, or mouth, you can get the flu.
How is seasonal flu treated?

- By getting rest
- By using fever reducers like Acetaminophen (e.g., Tylenol®) or Ibuprofen (e.g., Advil® or Motrin®)**
- By drinking fluids
- By taking antiviral drugs as Needed (From your healthcare provider)
- By taking antiviral drugs as Needed (From your healthcare provider)
- By drinking fluids

** Brand names included in this information are provided as examples only. Their inclusion does not mean that these products are endorsed by VA or any other Government agency. Also, if a particular brand name is not mentioned, this does not mean or imply that the product is unsatisfactory.

The best way to stop the flu is to GET A FLU SHOT EACH YEAR

Who should get a flu shot?

- Anyone who wants to reduce the risk for becoming ill with flu! Especially:
  - Adults aged 50 and older
  - Anyone who lives in community living centers with other people (e.g., nursing homes and domiciliaries)
  - Anyone with ongoing health problems
  - Children aged 6 months through 18 years
  - Women who will be pregnant during flu season
  - Healthcare workers and caregivers, including household contacts

Who should NOT get a flu shot?

- People who have a severe allergy to chicken eggs
- People who are sick with a fever (recover before getting a flu shot)
- People who have had Guillain-Barré Syndrome (GBS) within 6 weeks of getting a flu shot
- Children aged less than 6 months
- People who have had a severe reaction to a flu shot in the past
- People who were vaccinated for the flu this season

Can a flu shot give me the flu?

NO. Some people get minor body aches, a headache, or a low-grade fever, but this is NOT the flu. If these problems occur, they begin soon after the shot and usually last 1 to 2 days. Most people have none of these symptoms.

There is no live virus in the flu shot so you cannot get the flu from a flu shot.

Almost all people who get the flu shot have no serious problems from it.

The flu virus can live on surfaces, such as countertops and door knobs, for 24-48 hours.

How can I protect myself from seasonal flu?

- Get vaccinated (flu shot or nasal spray) each year in fall or winter
- Avoid people who are sick
- Clean hands often
- Keep hands away from face
- Cover coughs and sneezes
- Illness can start 1 to 4 days after exposure
- Illness from flu can:
  - Make other health problems worse
  - Cause pneumonia
  - Lead to death (mostly in those age 65 and older)
- People may be able to spread the flu virus to others 1 day before they feel sick and up to 5 days after getting sick
- The best way to stop the flu is to GET A FLU SHOT EACH YEAR
